Cost Effectiveness; *Educational Programs; Exceptional Child Education; General Education; *Handicapped Children; Information Dissemination; *Program Descriptions; Special Education; *State Programs; Success Factors

Elementary Secondary Education Act Title III; Elementary Secondary Education Act Title IV; ESEA Title III; ESEA Title IV; *New Jersey

Contained in the catalogue are descriptions of 16 New Jersey public school regular and special education programs which have been shown to be successful, cost effective, and exportable. Considered are such aspects as essential program elements, goals, evaluation design, costs, dissemination services, and contact information. Among programs described are an individualized adapted physical education program for handicapped children, a diagnostic-prescriptive reading program for grades K-3, a high school government course, a humanities program for grades K-6, an educational and health program for pregnant students, and a learning center approach and prescriptive teaching workshop regarding mainstreaming of special education students. Among four appendixes is a list of projects funded for national dissemination in states other than New Jersey. (CL)

EDUCATIONAL PROGRAMS THAT WORK

VOLUME I: A CATALOGUE OF DEMONSTRATION SITES OF SUCCESSFUL EDUCATIONAL PROGRAMS DISSEMINATED THROUGH THE NEW JERSEY ELEMENTARY AND SECONDARY EDUCATION ACT, TITLE III, IV-C PROGRAM

The programs described in this catalogue have been validated as successful, cost-effective, and exportable by the standards and guidelines of the United States Office of Education. Their dissemination is carried out through funding from the Elementary and Secondary Education Act, Titles III and IV.

Educational Programs that Work, Volume II will contain descriptions of educational programs developed in states other than New Jersey, approved by the U.S. Office of Education for national dissemination, and available to New Jersey educators.

The programs described in the 1975-76 edition of Educational Programs that Work, Volume I have been successfully developed and field tested by local public schools in New Jersey in cooperation with the Department of Education. They have been validated as successful, cost-effective, and exportable by the standards and guidelines of the United States Office of Education. As a result they are funded by the Department of Education to offer dissemination services and materials to educators throughout the state.

During the coming year educators in every New Jersey district will receive invitations to attend workshops organized by the Division of Research, Planning, and Evaluation and the Educational Improvement Centers at which information about these programs and their dissemination services and materials will be presented. Information will also be available in Interact and at many conferences and conventions for educators throughout the year. Additional information will always be available from the project staffs, the EIC's, and the Department of Education.

I hope that the availability of the materials prepared by the project staffs and the training and consultation that they can provide to district staffs will assist you in your efforts to augment your educational programs.

Fred G. Burke
Commissioner of Education
State of New Jersey
FOREWORD

PROGRAMS THAT WORK AND T. AND E

Under the proposals for a "thorough and efficient" educational system, the State Department of Education in New Jersey is developing a School Approval Process. This proposed process is an education management model which might be described as "participatory accountability." This School Approval Process places the constitutional responsibility for a thorough and efficient education on each individual school district in New Jersey. Each district will be setting its educational goals and performing an educational assessment according to guidelines established by the State Department.

It is anticipated that as local districts set goals and assess achievement levels, "discrepancies" or gaps between aspirations and achievement will be discovered. As these educational discrepancies are discovered by the parents, administrators and teachers of a district, they may want to select new programs to support their educational improvements.

The State Department of Education plans to develop four Educational Improvement Centers across the state. These EIC's will serve as depositories of innovative programs and practices. Members of local districts will be able to visit these centers and to choose among many program ideas. The EIC's will be developing "program libraries" in which information and training materials on innovative programs will be stored.

A special set of these programs will include the validated Title III programs. Many of these programs have been developed in New Jersey by local districts who have been guided and assisted by the R&D process which has been developed in the Division of Research, Planning and Evaluation. This process has involved many hours of dedication, hard work and creativity by staff members of both the State Department and many local districts. The developers of these programs that work must be commended for their innovative contributions to educational improvement. We look forward to their leadership as we proceed to support the modernization of educational practices under the constitutional mandate of a "thorough and efficient" education.

Your comments about, and interest in, these Educational Programs that Work will be welcomed.

Gary Gappert
Assistant Commissioner
Division of Research, Planning, and Evaluation
Staff members of the Research and Development unit of the Project Center are responsible for the organization, management, and evaluation of the Elementary and Secondary Education Act, Titles III and IV-C program in New Jersey. They may be called upon for technical assistance in the design, field testing, and dissemination of educational programs. The office’s telephone numbers are (609) 292-3010/6036/8454 and (609) 396-5251/5291.

INTRODUCTION

This catalogue contains descriptions of sixteen educational programs developed in New Jersey public schools and validated by the standards and guidelines of the United States Office of Education as successful, cost-effective, and exportable. Of these programs, twelve are funded for the 1975-76 academic year through the Elementary and Secondary Education Act, Titles III and IV to offer complete dissemination services and materials to educators who are interested in learning about them, seeing them in operation, and replicating them wholly or in part in a new site. An additional four projects will be able to supply written and/or audio-visual materials to interested parties. The purpose of this catalogue is to bring these New Jersey educational programs that work to the attention of educators and laymen concerned with education.

A development and dissemination effort in education. The purposes of the Elementary and Secondary Education Act, Titles III and IV include the development and dissemination of innovative educational programs. The New Jersey Department of Education receives an annual appropriation which is allocated on a competitive basis to local school districts to underwrite the development of new programs. In addition, the department's staff provides the staffs of local districts consultation in planning and field testing innovative programs in the development stage. Programs receive funding from one to three years with the expectation that local Boards of Education will assume support of successful programs.

Following development, the next step is for successful ideas and programs to be widely replicated thus fulfilling the second purpose of the enabling legislation. The dissemination of New Jersey programs within the state began in 1972 along with similar efforts in other states. Statewide efforts were augmented in 1974 through a national dissemination network established by the U.S. Office of Education through ESEA, Title III, Section 306 funding. This means that New Jersey educators now have the opportunity to make use of successful development efforts from throughout the nation. Educational Programs that Work, Volume II contains descriptions of programs from other states whose materials and services are available to New Jersey educators.

Both statewide and national dissemination efforts are based upon a consumer protection policy which assures potential users that these programs have improved students' learning and/or attitudes toward themselves or school. To be eligible for dissemination each New Jersey program must be validated as explained above. For national dissemination, programs must be endorsed by the Dissemination Review Panel of the U.S. Office of Education.

To date twenty-one New Jersey programs have been validated. These programs are listed in Appendix A. Approximately one hundred programs have been endorsed for national dissemination including eleven New Jersey programs. Of these programs, approximately sixty are funded for dissemination in 1975-76. Appendix B lists the New Jersey programs approved for national dissemination and Appendix D lists out-of-state programs funded for national dissemination in the current year.
Dissemination formats and approach. For the New Jersey projects three basic dissemination formats are used. The most common is the establishment of a successful program's originating district as a demonstration site where interested persons may see the program in operation, examine its materials, and receive training in its implementation. The cost of the dissemination effort is supported by ESEA, Titles III and IV. There is no charge to the staffs of districts who receive these training and consultation services but the adopting districts are responsible for the costs incurred by their own staffs to take the training and implement the program. To be eligible for training potential adopter districts must give evidence of their intent to use the training and willingness to respond to questionnaires about the use and impact of the program. The written and audio-visual materials of the validated programs are available at cost. These dissemination services and materials are described fully in this catalogue.

At this writing three validated programs are affiliated with New Jersey colleges. The training offered by one is accredited by two colleges. The curriculum content of two others is included in courses in several colleges. In addition, most projects include practicum and student teachers in their work during their development and dissemination years. In these ways information about successful educational programs is being made available to persons receiving undergraduate and graduate training in education.

Finally, in some cases, program materials are appropriate for commercial publication under copyright to the originating district's Board of Education and under terms and conditions approved by the New Jersey Commissioner of Education. Royalties accrue to the local Board of Education and may be used for continued development efforts. A portion of one program follows this format. Staffs of other programs are seeking commercial publishers.

A complete discussion of the statewide dissemination program will be found in Pathways to Success, A Manual for the Dissemination of Successful Educational Programs (1974) which is available upon request from the Division of Research, Planning, and Evaluation.

In its first year the dissemination effort on behalf of out-of-state programs focused on bringing into New Jersey project staffs from other states to give orientation workshops and their returning to provide training and follow-up consultation for districts that made a commitment to implement the programs. There is no charge to adopter districts for these orientations, training, and consultation services. Materials are available either free or at cost from the project staffs.

In the current year the dissemination of both New Jersey and out-of-state projects will continue as before while emphasizing the establishment of training capabilities among the staff of the Educational Improvement Centers that, in turn, will provide long-term dissemination potential for successful programs. This effort will supplement the previous close working relationship between the Educational Improvement Centers and the statewide and national dissemination efforts of the Division of Research, Planning, and Evaluation.
Special acknowledgement must be made of the extent to which the Union Township Board of Education has made its facilities available to the Department of Education for workshops and conferences to foster this dissemination program. Their cooperation has been invaluable.

Dissemination Impact

During the three years of the statewide dissemination program sixty percent of the New Jersey districts as well as many nonpublic schools have either purchased the materials of the New Jersey projects and/or implemented one or more of the programs. Approximately 90,000 students throughout the state have received instruction in at least one of the validated programs as a result of their continuing use in the originating districts and their implementation in adopter sites. After one year of national dissemination New Jersey projects are being implemented in twenty-five states other than New Jersey.

Projects from Ohio, Minnesota, Utah, Missouri and Alabama were introduced to New Jersey educators during the past year. Currently approximately thirty New Jersey districts plan to implement one of these projects. It is anticipated that some of these districts will, in turn, become demonstration sites so that these projects will become available for continued dissemination within the state.

Evaluation reports of both the statewide and national dissemination efforts are available upon request from the Division of Research, Planning, and Evaluation.
SECTION I: SUCCESSFUL EDUCATIONAL PROGRAMS WHOSE STAFFS OFFER COMPLETE DISSEMINATION SERVICES AND MATERIALS TO INTERESTED EDUCATORS

Resource materials produced by validated New Jersey programs and available to interested educators.
Academic Advancement Program: Mathematics
Morristown, New Jersey

OVERVIEW

The Academic Advancement Program: Mathematics is an individualized instructional program for grades six through eight that can be used for remediation in grades nine through eleven. On the basis of diagnostic tests, students' mastery of basic mathematical skills is determined. Using this information, teachers introduce students to new mathematical skills and concepts which reflect their developmental levels. As students learn new information, they progress to more difficult work. Instruction is individualized. Students move through the work at a rate commensurate with their developmental level.

The materials used in the program are commercial textbook materials and consumables reassembled into skill sequences. The materials are broad enough in scope to meet the needs of a wide range of student abilities. However, it is an open program which is designed to be adapted to the needs of the particular population it serves by either adding to or changing the commercial materials used or including teacher developed materials.

AAP: Mathematics serves 217 students of all developmental levels in the Frelinghuysen Junior School and 160 students who require compensatory instruction in the ninth through eleventh grades of the Morristown High School. The program was developed to accommodate the wide range of developmental levels among students in the Morris School District that resulted from the merger in 1972 of two previously separate districts to achieve racial integration.

To complement this program of individualized instruction, teachers have developed a record keeping system and several styles of room arrangements which give students privacy for independent work and free teachers for the primary task of instruction.

ESSENTIAL ELEMENTS OF THE PROGRAM:

The program's replication in another site is defined by use of the mathematics skill development sequence in at least one grade for individualized instruction on a diagnostic-prescriptive basis.

GOALS, EVALUATION DESIGN, AND RESULTS

Goal #1

To increase the average learning rate in mathematics of at least 60% of the participants by at least 25%.
The Stanford Achievement Test: Intermediate II Level, 1964 Edition, forms X and Y were used to measure achievement of the goal. A total score was determined by averaging the grade level scores from three subtests: Arithmetic Computation, Arithmetic Concepts, and Arithmetic Applications. Each of these subtests has a range from 2.0 to 12.9 in grade level norms.

The pretest was used as a baseline to establish an average learning rate by dividing the grade level score by the number of months of school instruction beyond kindergarten. An expected score at post-test time was calculated by increasing the average learning rate by 25% as prescribed by the goal. The percent of the participants in grades 7 through 12 exceeding the expected score was 67%.

Goal #2

To show that learning in mathematics for junior high school students is not adversely affected when classroom units are changed from homogeneous group instruction units to individualized instruction in heterogeneous units.

The Iowa Tests of Basic Skills (1971 edition) are used in the district-wide testing program. There are two subtests (Mathematics Concepts and Mathematics Problem Solving); a total mathematics score is reported.

All sixth and seventh grade students in the Frelinghuysen School were pretested and posttested with the Iowa Test of Basic Skills. The AAP group and control group are not significantly different on the pretest or posttest at either grade level.
COSTS

The bulk of the ESEA, Title III development grant from 1972 through 1975 was used for staff and curriculum development. Replication costs will vary with the staff and curriculum resources of potential consumer districts. Provision must be made for the preparation of instructional materials prior to the beginning of the school year. The cost of the initial acquisition of materials may be as much as $10.00 per student. Most districts, however, will be able to use many materials that are already on hand. New purchases may be provided for through a reallocation of current expenditures.

DISSEMINATION SERVICES AND MATERIALS

The project has been funded by ESEA, Title III to offer visitation opportunities and dissemination materials and training services to interested educators. A brochure describing the project is available free of charge. The following materials are available free of charge or at cost as designated:

- Final Project Report Free of Charge
- Replication Manual for the Classroom Teacher Price to be determined
- Administrator’s Guide Price to be determined

The project staff will offer training sessions to the staffs of districts that sign a commitment to replicate the program’s essential elements. There is no charge for the services of the project staff. Consumer districts are responsible for costs incurred by their staffs for training and the installation of the program.

Inquiries about the project and its dissemination plan should be made to the project director. Project materials should be ordered from the project director.

Project ACTIVE:
All Children Totally Involved in Exercising
Oakhurst, New Jersey

OVERVIEW

Project ACTIVE is designed to meet the widespread need for individualized physical activity programs for handicapped children. The project staff trains teachers of special education, physical education, and recreation to prescribe individualized activities for children from prekindergarten through grade 12, evidencing low motor ability, low physical vitality, mental retardation/learning disabilities, postural abnormalities, nutritional deficiencies, breathing problems, motor disabilities/limitations, or visual/auditory problems.

Teacher training programs have been conducted in New Jersey for three years for approximately 500 educators. As a result, seventy-six districts, and fourteen private schools now use the program with approximately 10,000 students. The program is included in courses of five New Jersey teacher training institutions.

In 1974 the competency based teacher training program and the motor activity program were endorsed by the Dissemination Review Panel of the U.S. Office of Education for national dissemination. During the 1974-75 academic year districts in five other states made commitments to take the training and install the motor activity program.

ESSENTIAL ELEMENTS OF THE PROGRAM

A replication of Project ACTIVE is defined by the following instructional requirements and implementation options.

Instructional requirements:

- two classes per school
- sixty minutes of instruction per week
- sixteen weeks per year
- utilization of the individualized/personalized ACTIVE learning process

Implementation may be in any one or a combination of these areas:

- Low motor ability
- Low physical vitality
- Nutritional deficiencies
- Postural abnormalities
- Breathing problems
GOALS, EVALUATION DESIGNS, AND RESULTS

Goal #1

All public/private school physical educators, special educators and recreators participating in the training program will demonstrate proficiency in providing individualized physical education programs for handicapped children in their respective schools. The minimum level of performance will be the demonstration of the ability to perform 80% of the competencies (20 of 25) listed in the Teacher Performance Chart.

Eighty of the teachers trained in 1973-1974 were pre-and posttested by project staff on the locally developed Teacher Cognitive-Psychomotor Test. The teachers' demonstration of twenty out of twenty-five competencies was the standard of success. All eighty teachers achieved the 80% level of mastery on the twenty-five competencies. Therefore Goal #1 was achieved above expectation. It can be concluded that the training activities were successful in producing demonstrable skills in the participants.

Goal #2

Students with motor response problems, or handicapping conditions, who are prescribed motor activity programs commensurate with their individual needs for a minimum of sixty minutes per week will achieve motor performance scores significantly superior to students who participate in traditional physical education, plus classroom activities, or solely classroom activities during comparable time periods. [Note: Handicapping conditions are defined as mental retardation (educable), perceptual impairment, neurological impairment, or emotional disturbance.] Traditional physical education is defined as participation in individual, dual, or group games which do not consider the needs of each child.

Evaluation Design

Three research studies were conducted. The subjects in the experimental groups were matched on the basis of age, sex and pre-test Motor Ability Indexes. (Note: The Jersey City group was not matched.) Both the experimental and control groups were pre- and post-tested over a six-month period of time via the Township of Ocean Motor Ability Test. Data were analyzed by t-tests and Analysis of Covariance. This evaluation effort was conducted in 1973-74.

Evaluation Results

- T-test for Matched Groups, significant at the 0.05 level, one-tailed (Twp. of Ocean)
- Wilcoxon Matched-Pairs Signed-Rank Test, significant at the 0.05 level, one-tailed (Asbury Park)
- Analysis of Covariance, significant at the 0.05 level, one-tailed, two separate studies, male and female (Jersey City)
Under the experimental conditions that existed, it was concluded that:

- Physical education activities prescribed on the basis of individual needs will improve the motor ability performance of students evidencing low motor ability, mental retardation, neurological impairment, perceptual impairment, or emotional disturbance.

- Physical education activities prescribed on the basis of individual needs will improve the gross body coordination, balance/postural orientation, eye/hand coordination, eye/hand accuracy, and eye/foot accuracy of students evidencing low motor ability.

- Physical education activities prescribed on the basis of individual needs will improve the gross body coordination, balance/postural orientation, and eye/foot accuracy of students evidencing mental retardation, neurological impairment, perceptual impairment, or emotional disturbances.
Goal #3

Students with handicapping conditions who are prescribed physical activity programs commensurate with their needs for a minimum of two, thirty-minute or three, twenty-minute periods per week will achieve psychomotor performance scores significantly superior to students who participate in traditional physical education, plus classroom activities or solely classroom activities.

Evaluation Design

All subjects were matched on the basis of age, sex, handicapping condition and pre-test scores. Both experimental and control groups were pre and post tested over a four to six-month period. The Wilcoxon Matched-Pairs Signed-Rank Test, a non-parametric statistical technique, was applied to the data in each of the nine studies. The .05 level (one-tailed) was selected to determine significance. This evaluation effort was conducted in 1974-75.

Evaluation Results

- Four of the five physical fitness studies were significant at or beyond the 0.01 level in favor of individualized instruction. (In the fifth study, a T of "8" or less was needed for significance; the T-value attained was "9").

- The two nutritional studies supported the value of individualized instruction at, or beyond, the 0.01 level. (The same data were analyzed twice — in terms of body weight and bone structure.)

- The two posture studies were significant at, or beyond, the 0.01 level in favor of individualized instruction.

- The breathing problems study was significant beyond the 0.01 level in favor of individualized instruction.

Thus, nine of the ten analyses revealed that individualized instruction was superior to group instruction in the attainment of psychomotor skill development.

COSTS

The project’s development and training costs were funded through an ESEA, Title III grant.

Teacher training sites and pupils for the practicum experiences have been provided by institutions of higher learning and public and private agencies. Districts implementing the program receive all test directions, test forms, and consultant service free of charge. Implementing districts are required to purchase program supplies (maximum of $250.00) and manuals prepared by the project staff.
DISSEMINATION SERVICES AND MATERIALS

A brochure which describes the project and a report on the project's evaluation may be obtained free of charge from the project director. Visitation opportunities are also available to educators who wish to see the program in operation.

In New Jersey the project staff will continue to offer both the complete forty-hour workshop and the mini-workshops on two or three topics several times and in several locations throughout the state beginning in January, 1976. In states other than New Jersey both types of workshops will also be available. To be eligible for these workshops participants must agree to implement the program and furnish the project director with test data. The project staff will offer consultation to persons trained including help with the preparation of prescriptions and the analysis of test data. There is no charge for the services of the project staff. Consumer districts are responsible for costs incurred by their staffs for training and the installation of the program.

The project staff has prepared the following materials which may be purchased at cost. Checks or purchase orders should be made out to Township of Ocean Board of Education and accompany orders for materials. Orders should be mailed to the project director.
Development and Adapted Physical Education: A Competency-Based Teacher Training Manual

Breathing Problems
Test, assessment, prescription and evaluation procedures for teachers

Motor Disabilities/Limitations
Test, assessment, prescription and evaluation procedures; student and teacher learning experiences, resource tasks and activities for teachers

Low Motor Ability
An individualized program for enhancing low motor/perceptual motor performance (186 pages)

Low Physical Vitality
Test, assessment, prescription and evaluation procedures; resource tasks and activities for teachers

Nutritional Deficiencies
Test, assessment, prescription and evaluation procedures; resource tasks and activities for teachers

Postural Abnormalities
Test, assessment, prescription, and evaluation procedures; resource tasks and activities for teachers

Filmstrip-tape: “Competency-Based Teacher Training Program” $5.50

Filmstrip-tape: “Individualized-Personalized Teaching” $5.50

Inquiries about the project and its dissemination services and materials should be addressed to the project director.

Township of Ocean School District
Dow Avenue
Oakhurst, New Jersey 07755
(201) 229-4100, Extension 260
Dale Avenue Project
Paterson, New Jersey

OVERVIEW

The Dale Avenue Project is a comprehensive developmental skills hierarchy for early childhood education, prekindergarten through third grade. The skills are written as performance objectives, sequentially ordered, in listening, naming, observing, speaking, perceptual motor skills, writing and motor skills, classification, mathematics, encoding-decoding, and seriation. On entering the Dale Avenue School each student is given diagnostic tests to assess the level of his or her skill development. As a result of the testing the teachers know the level of each student’s ability in the ten skill areas. Students work on one skill at a time in each area of the Performance Objectives. They are taught in small or large groups, or individually, depending upon need. They begin learning a new skill in each area only after mastering the previous one. As students move from one grade to the next, their skill mastery record moves with them. Teachers can therefore maintain the continuity of the curriculum’s developmental sequence for a five year period of time.

The developmental skills of the Dale Avenue Performance Objectives can be taught with virtually any curriculum materials. For example, skills in listening, speaking, naming, and observing can be taught in social studies lessons about community helpers. Students may learn seriation and mathematics skills while running a grocery store in the classroom. Classification skills may be developed in science lessons. And the encoding-decoding skills can be incorporated into a standard reading program. Teachers develop lessons to teach specific skills and vary the activities as students master the skills that they are working on and move onto more difficult ones.

In addition, the Dale Avenue curriculum includes a reading program which folds together all of the Performance Objective skill areas. For the first forty-five minutes of each day students work in homogeneous groups on specific skills in any area in which they need special teaching or reinforcement. This program prevents students from incurring developmental lags in any skill area which, in turn, would hamper their reading abilities.

The parents of the Dale Avenue School’s students have a strong organization. They volunteer to be teacher aides, work in the library, conduct guests through the school, and inform the community about the program. During the program’s developmental period, a Parent Coordinator was a salaried member of the development staff.

The development of the Dale Avenue Project was funded from 1970 through 1973 by the New Jersey Elementary and Secondary Education Act, Title III program. In 1973 the project was endorsed for national dissemination by the Dissemination Review Panel of the United States Office of Education. This program was developed with an urban population but during two years of dissemination, 1973-74 and 1974-75, has been implemented in districts of widely varying characteristics including rural and suburban both in New Jersey and other states.
ESSENTIAL ELEMENTS OF THE PROGRAM

The program's replication in another site is defined by 1) use of the Dale Avenue Performance Objectives as a pre and post diagnostic test of student skill development, 2) use of the Performance Objectives as the basis of students' curriculum through the third grade, 3) the forty-five minute per day reading program, and 4) the parent program.

GOAL, EVALUATION DESIGN, AND RESULTS

Goal

To bring the average academic performance, including I.Q., of urban, educationally disadvantaged students up to the national norm and maintain this gain for three years.

Evaluation Design

A random sample of students in the prekindergarten classes of 1969-70 and 1970-71 formed the experimental group. Their progress through the Performance Objectives was evaluated during the three years of the project's ESEA, Title III developmental grant. There were four control groups for the experimental classes at each grade level and during each year of the project's development. At each grade level two of the control groups were from educationally disadvantaged populations and two were from educationally advantaged populations. The scores of the experimental and control groups on the Peabody Picture Vocabulary Test (PPVT) were compared for each year of the project's development. In addition, the skill level of the experimental group was measured on the Stanford Achievement Test and the Performance Objectives themselves.

Evaluation Results

The test data indicated that the Dale Avenue students made significant gains in their I.Q. measures from entrance into prekindergarten, when the mean I.Q. was in the low eighties, through kindergarten and then maintained I.Q.'s at the national norm through the first and second grades. Although the project's development concluded in 1972-73, measures of a random sample of students on the PPVT were taken in 1973-74 and 1974-75 to ascertain students' progress. The testing showed that the mean I.Q. of the second and third grade students remained at the national norm.

The test data also indicated that the Dale Avenue students did not attain I.Q. scores as high as those of the educationally advantaged control groups. Significant differences in favor of the Dale Avenue students, however, were found between the experimental groups and the educationally disadvantaged control groups in the same grades.

The results of the Stanford Achievement Tests showed that the first and second grades in the Dale Avenue School were performing at grade level in reading and mathematics. Their mean scores in the Performance Objectives showed gains in the skill areas of listening, naming, speaking, writing and motor skills, classification, mathematics, encoding-decoding, and seriation. By the end of the second grade students were able to perform all of the perceptual motor skills.
Continued testing in 1973-74 and 1974-75 with the Stanford Achievement Tests showed that students in the third grade were at the national norm in reading and mathematics and also that in 1974-75 the fourth grade students who had followed the Performance Objectives for their first five years in school maintained reading and mathematics scores at the national norm. It should be noted that the fourth grade students were dispersed among schools throughout Paterson and followed a variety of educational programs.

COSTS

The major portion of the ESEA, Title III development grant for this project covered the salaries of the developmental staff including two full time testers and the Parent Coordinator.

The cost of replicating the program is basically that of staff training, follow-up supervision, and evaluation. Provision must be made for the continuing help, encouragement, and support of staff. After the initial startup investment for staff training, the program’s maintenance cost should not require an increase in the current operating expenses of most districts. Some districts may find that the use of the Performance Objectives will reduce the students’ need for remediation. This, in turn, should decrease operating expenditures.

DISSEMINATION MATERIALS AND SERVICES

The Dale Avenue School has been funded by the ESEA, Title III as a demonstration site where visitors may see the program in action, examine its materials, and talk to the staff. One day per week is set aside for visitors. Limited visitation opportunities are also available in the Plainfield and Trenton public schools. Complete information about visitation opportunities may be obtained from the project director.

The overview brochure which describes the project is available free of charge. A 28½ minute color film, narrated by Gary Merrill, entitled “What comes after ten, Tasha?”, gives a visual description of the project in action and may be borrowed free of charge from the project. The film may also be borrowed for one week from the N.J. State Museum film lending library, West State Street, Trenton, N.J. 08625. To use the museum’s services one should request a special card to submit the order. This is available from the museum which given this film #12082.

For educators who sign a commitment to replicate the program, the Dale Avenue Project staff offers a 2½ day training program plus follow-up consultation. There is no charge for the training services. To be eligible for training a district must show evidence of intent to use the information and willingness to answer questionnaires to evaluate the use and results of the program’s replication. Inquiries about training should be sent to the project director.
The following materials were prepared by the project staff and are available at cost.

| Dale Avenue Performance Objectives Manual (68 pgs.) and Teacher's Guide (72 pgs.) (sold only as a unit) | $8.00 for both |
| Manual on Special Area Performance Objectives — Art, Home Economics, Music and Physical Education (72 pgs.) | 2.50 |
| Learning Activities for the Dale Avenue Performance Objectives (267 5" x 8" cards boxed for easy reference.) | 15.00 |
| Test Manual to Accompany the Performance Objectives (116 pgs.) | 3.50 |
| Record Book for Recording individual Student Progress (36 pgs.) | 1.50 |
| Administrator's Guide (88 pgs.) | 3.50 |
| Final Project Report (96 pgs.) | 2.50 |

Checks or purchase orders should be made payable to:
Educational Improvement Center — South and mailed with an order for materials to: The Dale Avenue Project, c/o Project Center, Division of Research, Planning, and Evaluation, Department of Education, 225 West State Street, Trenton, N.J. 08625.

Glassboro's Right to Read Program
Glassboro, New Jersey

OVERVIEW

The project staff has developed a reading program for kindergarten through grade three that is used in two elementary schools whose approximately 750 students are 82% White and 18% Black. During 1972-73 and 1973-74 the reading instructional levels of these children were raised an average of 1.5 years per eight month instructional period. The development of this program began in 1971-72 and was carried out through a Right to Read grant from the United States Office of Education from 1972 to 1974.

This Right to Read program has two essential elements. The first is a comprehensive assessment of student reading competencies, staff capabilities in the teaching of reading, and parental interest in reading programs. On the basis of this assessment, a program of staff development, reading instruction, and parental and community support is drawn up and put into operation. Both the assessment and program development are the responsibility of a Local Unit Task Force appointed by the superintendent and comprised of district staff members and community representatives.

Upon entering the program each child receives a teacher administered diagnostic battery of reading tests. Teachers use the test results to ascertain each child’s instructional reading level according to an array of reading skills for kindergarten through grade three. Teachers then write individual instructional sequences for each child which they follow either on a one-to-one basis or with small groups of children who are at the same developmental stage. Each child progresses at an appropriate rate for his developmental level.

Staff members inaugurated this program and carry it out on the strength of a staff development program directed by the Reading Coordinator. Among the topics covered are the development of instructional materials and classroom management procedures which complement the individualization of reading instruction.
As a result of community interest in the program an organization of parent volunteers has been formed. Members volunteer to serve as classroom aides and reading tutors.

In 1974 this project was endorsed for national dissemination by the Dissemination Review Panel of the U.S. Office of Education. The project's dissemination in New Jersey is part of the total state Right to Read effort of the Division of Curriculum and Instruction, Department of Education. The project staff can accommodate a limited amount of dissemination work in states other than New Jersey.

GOAL, EVALUATION DESIGN, AND RESULTS

Goal

A growth rate of 1.5 years in reading achievement during an eight month instructional period will result from the placement of each child at his or her instructional level of reading and individualized teaching of reading at that level.

This program involves all teachers and all children in the primary unit, i.e. Academy Street School and J. Harvey Rodgers School. It was an experiment without a control group. Both schools are K-3. Approximately 750 children and 25 teachers in two schools have been involved in the program. Schools are ungraded levels K-3.

Children were given pre and posttests to assess individual gains, identify average gain levels, and describe growth among groups in the two schools. For the 1972-73 school year, The Classroom Reading Inventory, published by the William Brown Company of Dubuque, Iowa was used. The testing yielded the primary finding that in 1972-1973 there was an average gain of 2.14 years among children of all reading levels. Students, therefore, exceeded the goal.

In the program's second year, 1973-74, a decision was made to change from The Classroom Inventory to the Houghton-Mifflin Informal Reading Inventory for the evaluation, because the Houghton-Mifflin IRI instructional level findings are more compatible with the array of skills design used by the project. The instrument was unavailable for pretesting in 1972. Pretesting with this instrument occurred in September, 1973 and posttesting in April, 1974. The average gain across all instructional levels was 1.52 years. Thus in both development years the program achieved its goal.

COSTS

The bulk of the development grant was used for staff training. Replication costs will be primarily those of staff development. Provision must be made for on-going staff supervision and support. Costs for materials should be covered through a reallocation of current expenditures, and should not increase current budget levels.
DISSEMINATION SERVICES AND MATERIALS

The Glassboro public schools have been funded by ESEA, Title III as a demonstration site where visitors may see the program in operation and talk to participating staff. Requests for a visit and/or a program brochure should be made in writing to the Reading Coordinator. The project staff has prepared the following materials which will be available in the fall, 1975 at cost. Checks or purchase orders should be made out to the Glassboro Board of Education and accompany an order for materials. Order forms are available from the project staff.

Filmstrip—Tape: “Every Child Has the Right to Read: An Overview of the Glassboro Right to Read Project”

Program Planning Guide: The Glassboro Right to Read Project

Program Implementation Guide: The Glassboro Right to Read Project

Parent and Community Manual

The project staff is available to New Jersey districts that are part of the state Right to Read program for the following workshops:

I Project Overview: Glassboro Right to Read Program

II Developing the Plan for a Right to Read Program: The Glassboro Experience (offered in two parts)

III Reading Skills Array: K-6

IV Use of the Diagnostic Battery to Assess Student Skill Level in Reading and Reading Related Skills: K-6

V Diagnostic-Prescriptive Teaching: Planning Materials and Classroom Organization

VI Role of Paraprofessionals: The Glassboro Experience

VII Record Keeping

There is no charge for the training services of the project staff. The project staff is available on a limited basis to work with districts in states other than New Jersey who make a commitment to replicate the entire program and evaluate its implementation. For further information about the project and its dissemination materials and services please contact the Reading Coordinator.

Individulized Language Arts:
Diagnosis, Prescription and Evaluation
Weehawken, New Jersey

OVERVIEW

Authorities in the language arts agree that educators need to develop more effective methods of analyzing students' writing, and to prescribe and apply individualized instructional techniques to teach greater writing facility. This project was designed to meet this critical need. The project's rationale is that linguistics, the study of language, provides knowledge which can be translated into techniques for improving selected aspects of writing instruction. These techniques can be blended with a language-experience approach, so that the language, feelings, and ideas of students can be used to promote motivation, precision, and control. Furthermore, such instruction uses writing activities in all parts of the curriculum and can be organized within a diagnostic-teaching framework. Teachers and students can thus have continuous diagnosis of the writing needs, prescription of relevant methodology, and evaluation of results.

The project staff has devised a method for teachers, grades 1-12, to analyze students' writing, and guidelines, procedures, strategies, and specific examples of how to teach writing. The teaching methodology also includes ways for teachers to develop and reinforce other language arts skills. The approach is basically one of discovery. It can be used with either graded or non-graded classes. It can be employed with almost any kind of classroom organization.

Students' writing development is traced by three samples, taken at three intervals during the year. The evaluation of the samples is based on criteria suggested by language arts experimentation and the Weehawken teachers. The evaluation pinpoints each student's current strengths and needs. Writing instruction is related to speaking, listening, and reading activities, as well as to the student's ideas and feelings.

The program is used in grades 1 to 12 throughout the Weehawken public schools. The student population is highly mobile and includes many students for whom English is a second language. The program's methods and materials were developed cooperatively by the project staff, Weehawken administrators, and faculty members, and the students themselves. In Weehawken the program has completely replaced writing workbooks and textbooks. As a result, it may be fully integrated into any curriculum. The program is fully explained and illustrated with examples in a teacher's manual. No additional reference materials are required.

In 1974 the project was endorsed by the Dissemination Review Panel of the United States Office of Education for national dissemination. As a result of two years of dissemination this program is currently used by many districts in New Jersey and some in other states. Adopter districts serve rural, suburban and urban populations.
ESSENTIAL ELEMENTS OF THE PROGRAM

The program's replication in another site is defined by 1) diagnosis of students' writing needs, 2) establishing in priority order local objectives for students' writing, 3) prescriptive teaching according to the techniques described in the program's manual, 4) evaluation of students' progress, and 5) using the writing program in content and skill areas such as science, reading, etc.

GOAL, EVALUATION DESIGN, AND RESULTS

Goal

Students will learn to write syntactically more sophisticated and longer sentences as a result of the Weehawken system of diagnosis, prescription and evaluation.

The evaluation procedure was based on a statistical evaluation of random samples of papers written eight months apart by Weehawken students in grades 3 and 6. This part of the evaluation was compared to that of control groups in a nearby district. Further, an evaluation was also made of continuing Weehawken students in grades 4 and 7. The evaluation was made according to eleven criteria selected from research and teachers' diagnoses.

Five criteria were adapted from the work of Dr. Kellog Hunt of Florida State University, a nationally known expert in language arts research, who has shown how the syntax in children's writing changes with maturation. The remaining criteria came from the Weehawken teachers themselves who were using the compositions for their own diagnoses of the student's strengths and needs in writing. These criteria represented what the teachers considered to be the major needs of the Weehawken students as a whole.

The evaluation showed that the Weehawken students learned to write longer, richer, and more varied sentences. A simple or complex sentence, or an independent clause inside a compound sentence, is what Dr. Hunt calls a "T-unit" or "thought-unit." He has discovered that the average number of words per T-unit is the most significant score in correlating students' writing ability with grade level. On this vital score the sixth graders registered a gain of over 45% in a single year, which put them well ahead of both the control group students and the youngsters whom Dr. Hunt, himself, had studied. The Weehawken students were also writing longer dependent clauses. They were using more series of words and word groups to convey greater amounts of information. They were moving parts of their sentences around to a larger extent to vary their writing style and give better emphasis to the most important words and phrases.

Above all, the students tended to write a higher proportion of complex and compound sentences and fewer simple sentences. The ability to combine simple sentences into complex and compound sentences is one of the surest signs of growth in writing. This ability showed itself even at the third grade level. And, in most cases, it was accompanied by a better grasp of punctuation and of correct spelling.
The evaluation disclosed that the Weehawken students had progressed in three ways: They had gained longitudinally with respect to most of the criteria. They had also shown considerably greater improvement than the control group students taught by traditional methods. And, finally, they had scored far better on the relevant criteria than had students in Dr. Hunt's research population. This last point is especially impressive, for the young writers whom Hunt studied were middle class children for whom English was the first language. The Weehawken students, on the other hand, include a large number of students for whom English is a second language.

The follow-up study in the program's second year indicated that these same students have generally continued to show improvement in their writing.

The compositions themselves also showed growth in important aspects of writing which cannot be measured. The students' vocabulary, for instance, was rich and varied, and impressive for its maturity even in the lower elementary grades. It was also well organized. The stories revealed a clear sense of purpose and sequence.

COSTS

The bulk of the ESEA, Title III development grant for this project covered the stipends for the project staff. Consultant help was provided by Professors Ted Lane and Edwin Ezor of Jersey City State College, and several members of the district staff: the Elementary Education Supervisor, the head of the high school English department, and principals.
The cost of replicating the program is basically that of staff training and follow-up supervision. Provision must be made for continuing help, encouragement, and support of staff. The manual written by the project staff is available at cost. Materials to introduce the program (file folders, duplicating papers, etc.) can probably be absorbed within present budgets. Savings may be realized if the district staff decides to discontinue using special workshops or textbooks to teach writing as is the case in the Weehawken system.

DISSEMINATION MATERIALS AND SERVICES

General information about the program may be obtained from an overview brochure which is available free of charge from the project director. The following materials prepared by the project staff are available at cost. Checks or purchase orders should be made payable to the Weehawken Board of Education and accompany an order for materials to the project director.

Individualized Language Arts: $1.00
A Prospectus (19 pages)

Teacher's Resource Manual $12.50 for the first copy
(309 pages) Additional copies, $10.06

The project staff offers a two day training session plus follow-up consultation to educators who make a commitment to replicate the program. There is no charge for the training services of the project staff. For information about the program and its dissemination services and materials please contact the project director in writing.

CONTACT PERSON

Jeanette Alder, Project Director
Principal, Roosevelt School
Louisa Place
Weehawken, New Jersey 07087
Institute for Political and Legal Education
Margate, New Jersey

OVERVIEW

Under the direction of the staff of the Institute for Political and Legal Education (IPLE), high school teachers and students in twenty-seven New Jersey districts have participated in a year long social studies program to examine voter education, New Jersey state and local government, and individual rights. Each unit of study involves classroom work, often including the participation of persons active in government or politics, and work in the community that may take students to local or state legislative bodies. The IPLE staff conducts the initial training required by teachers entering the program who are asked to bring one of their students to the training program also. These students can subsequently act as resources for their teachers. The Institute also provides supplementary programs throughout the year for all participating teachers and all of their students. These activities include four Saturday workshops addressing critical aspects of the curriculum plus a three day Model Congress that supplements the government unit. The Institute staff has prepared resource materials for both teachers and students which are available at cost.

The program was designed to prepare high school students to fulfill the legal and political responsibilities which they may assume at the age of eighteen. These responsibilities include voting, eligibility for political office, and entering into legal contracts. The need for the program was established through a survey of a randomly selected group of six hundred New Jersey high school students which revealed that 81% of the students did not know how to register to vote or how to use a voting machine; 67% did not know how their local governing body functioned; 45% did not know how a piece of legislation became state law; and 79% had never met elected officials of any level of government.

In 1974 the Institute's program was endorsed by the Dissemination Review Panel of the U.S. Office of Education for national dissemination. The program is disseminated widely in New Jersey and after one year of national dissemination to many other states as well.
ESSENTIAL ELEMENTS OF THE PROGRAM

The program's replication by a district is defined by the use of the curriculum as specified below and by participation in at least three annual workshops and the three day Model Congress. Districts from states other than New Jersey that wish to adopt the program must provide among themselves or through an outside agency for the annual workshops and Model Congress.

Curriculum

The curriculum should be implemented in one or more of the following three units, each to comprise the number of components specified:

I Voter Education
   (5 out of 7)
1. Voter Registration
2. Canvassing
3. Campaigning
4. Simulated Election
5. Issue analysis center
6. Election information center
7. Campaign registration center

II State Government
   (5 out of 8)
1. Local government study
2. County government study
3. State government study
4. Lobbying
5. Social research
6. Community project
7. Simulations
8. Model Congress

   (5 out of 6)
1. Foundations of law
2. Fair trial vs. free press
3. Free speech
4. Case studies
5. Moot courts
6. Simulations

These units may be adopted and/or adapted in any of the following combinations: I; I and II; I and III; II and III; I, II, and III.

Each unit includes class work, participation in seminars, volunteer activity in the community, and inclusion of resource persons from the community in classroom activities.
Annual workshops and Model Congress

The following activities are scheduled in 1975-76 for the students and teachers of New Jersey districts that are part of the Institute's program.

Saturday workshops:
- Campaigns and Canvassing: September
- State Government: November
- Individual Rights (teachers): February
- Collective Bargaining: February
- Individual Rights (students): March

Model Congress, May 1-3, 1976

In addition the Institute staff will offer two supplementary training workshops for students who act as resource persons for their teachers. The workshops will be Parliamentary Procedure and Bill Writing (November) and Community Research Techniques (December).
GOALS, EVALUATION DESIGN, AND RESULTS

Goal #1

After following the Institute's course of study, participating students will score significantly higher on the staff developed Test Of Political Knowledge than they did before entering the program.

The Test of Political Knowledge was administered on a pre and post basis to a representative sample of students participating in the program and control group students following a traditional social studies program. Test scores were analyzed by a two-tailed T-test which showed that the students in the experimental group scored significantly higher on the posttest than did those in the control group. Thus Goal #1 was achieved.

Goal #2

After following the Institute's course of study, participating students will demonstrate a significant positive shift in attitude toward participating in the political and governmental process as measured by the staff developed Inclination to Participate Test.
The test was administered on a pre and posttest basis to a representative sample of students participating in the program and control group students following a traditional social studies program. The test data were analyzed by the Wilcoxon T-test which showed that the experimental group scored significantly better on the posttest than did those in the control group. Thus Goal #2 was met.

COSTS

The bulk of the ESEA, Title III development grant for the Institute covered the cost of developing the curriculum and providing the Saturday workshops for participating students and teachers. The cost of replicating the program is basically that of staff training, participation in the annual IPLE Workshops and the Model Congress, follow-up supervision, materials, and evaluation. The materials developed by the Institute staff are available at cost. Participating districts must provide for the continued assistance, encouragement, and support of staff. After the initial start-up investment for staff training and materials, the program’s maintenance should not require an increase in a district’s current operating expenses.

DISSEMINATION SERVICES AND MATERIALS

The Institute for Political and Legal Education has been funded through ESEA, Title III to provide dissemination services and materials for teachers and students who wish to participate in its programs. General information about the Institute is available upon request. On-site visitations to the classrooms of participating teachers may be arranged for interested persons. Members of the Institute staff are available to visit school districts to explain the program.

A five day training program with follow-up consultations is available to the staffs of districts that sign a commitment to use the program. Each district or school staff will be trained both in group settings and separately to give special reference to individual needs. The training will take place at a state college, in the consumer district, at an Educational Improvement Center, or another site agreeable to all parties.

This training program is also available to districts in states other than New Jersey provided that at least twelve districts are willing to participate and provide among themselves or with an outside agency for the annual supplementary workshops and Model Congress.

There is no charge for the services of the project staff. Consumer districts are responsible for costs incurred by their staffs for training and program installation. The following materials were prepared by the IPLE staff and may be purchased at cost. Checks or purchase orders should be made payable to the Institute for Political and Legal Education and accompany an order.
Voter Education

In the first year of the MOPPET program, the originating district received no outside funding. The lessons were taught largely with materials already available with an additional expenditure of about $200. This point is made to show that almost any school or district can afford to begin to use the lessons.

DISSEMINATION MATERIALS AND SERVICES

Project MOPPET has been funded by ESEA, Title III as a demonstration site where visitors may see the program in action, examine its materials, and receive training and follow-up consultation in its replication. A brochure which gives an overview of the program is available free of charge from the project director. A descriptive film-strip-tape may be borrowed. The project’s materials are available at cost. Checks should be made out to the Woodbridge Board of Education and checks or a purchase order should accompany an order for materials.

**MOPPET Lessons, K-6**

(331 pages)

Separate manuals of the K-3, and 4-6 lessons are available for $6 each.

**MOPPET: How to Do It,**

A Replication Manual

(87 pages)

**MOPPET Training Manual:**

The MOPPET Process

Indepth study of the MOPPET lesson

(200 pages)

During the academic year 1975-76, the MOPPET staff will conduct a series of training workshops in the teaching of all categories of the MOPPET lessons. These workshops will be held in Woodbridge and are open to all interested parties whose districts have made a commitment to implement the program. Limited follow-up consultation is also available from the project staff.

There is no charge for the training and consultation services of the MOPPET. Consumer districts are responsible for the costs of replicating MOPPET in another site. Inquiries about dissemination services and materials should be made in writing to the project director.

OVERVIEW

A total classroom instructional program in pollution control education for elementary, junior high, and senior high is being produced through the Pollution Control Education Center. The program has been designed to develop students' interest in the wise use and preservation of the biosphere and to give them an understanding of the threat that an industrialized society poses to the balance of the ecosystem.

The materials for the elementary grades are being published commercially for national distribution. Materials for the secondary grades are distributed by the Union Township Board of Education. Unit content is varied and includes comprehensive coverage of the topics of solid waste and sewage treatment, and air, water, thermal, marine and seashore, and urban pollution. In other units pupils are actively involved in the critical environmental problems of open lands, wildlife, wetlands preservation, energy conservation, resource management, and community response—all presented in scientifically accurate and socially responsible settings.

Each multi-media instructional kit engages a class in a variety of pupil centered, hands-on, problem solving activities which involve students in practical decisions concerning the appropriate responses they can make as citizens in order to solve environmental problems. The kits include imaginatively illustrated student booklets which relate new ideas to the students’ own experiences. Student investigations provide pupils with the opportunities to have first hand experience with pollution and pollution control processes. These experiences are described on spirit-masters, experiment sheets, and activity cards so that a teacher may readily individualize instruction to meet a class member's specific needs and interests. The material in each kit is designed to be taught as a one or two week unit.

Audiovisuals enable pupils to observe phenomena which cannot be duplicated in the classroom. Filmstrips and film-loops, overhead transparencies, and audio cassettes are included in each kit to aid class discussions of important ideas. A comprehensive teachers' guide enables a teacher to handle the program without specialized training. The guide coordinates all of the elements of a kit. The guide contains an outline of the basic objectives of the unit in terms of "attitudes and values, knowledge and skills." A convenient chart is provided for scheduling the unit's work. Tests based on the material covered in the unit's work are included for appropriate grade levels.

The program is appropriate for inclusion in regular science, health and urban or social studies programs as well as for instruction in environmental science. The program is designed for use by the regular classroom teacher.
In 1974 this program was endorsed for national dissemination by the Dissemination Review Panel of the United States Office of Education and is used by school districts throughout the country.

**ESSENTIAL ELEMENTS OF THE PROGRAM**

The program's use in another district is defined by inclusion of one or more units of study in the curriculum.

**GOAL, EVALUATION DESIGN, RESULTS**

**Goal**

Students in the program will increase their knowledge of topics related to controlling pollution of the environment.

Fourth, fifth, and sixth grade classes in the Union Township schools were used for this evaluation. All classes selected were of heterogeneously assigned pupils. Experimental classes were those who received instruction using the project materials. Two types of control classes were established. The first of these, Control Group A, was given the pretest and posttests and received instruction in the same subject matter as the experimental group. Commercial and trade materials from a variety of publishers were used, but not the project materials. The second control group, Group B, was given only the pretests and posttests and was not given instruction on the subject matter. The tests used were the unit tests developed by the project staff.

The experimental group was significantly higher than comparison Group A on the five unit comparisons. This finding indicates that students who use the project materials learn more about pollution control than do students who receive traditional instruction in the same subject matter but do not use the project materials.

The experimental group was significantly higher than control group B on all five units. This was an expected result since the control group received no instruction on the subject of pollution control. This comparison was necessary, however, to demonstrate that students were not learning about pollution control through other channels.

**COSTS**

The ESEA, Title III development grant covered the cost of staff salaries, including stipends for teachers who contributed written materials, and equipment for the production of materials. Costs to users of the program will be primarily those of the individual units of instruction and, if required, staff training.
DISSEMINATION MATERIALS AND SERVICES

The Pollution Control Education Center in Union is funded by ESEA, Title III as a demonstration site to offer interested persons the opportunity to see the program in classrooms, talk to teachers who participated in its development and now use it as part of the regular curriculum, examine program materials, and receive limited inservice training in the use of the materials.

The following units developed by the project staff have been published as “Priority One: Environment” and are available for purchase from McGraw-Hill, Webster Division. Permission has been granted by the New Jersey Department of Education for the Union Township Public Schools to copyright the materials and receive the royalties from their sale. The royalties are being used to support the curriculum work of the Pollution Control Education Center.
Unit prices for the kits range from $85 to $135. Each kit provides one to two weeks of instruction for one class. The prorated per pupil cost for each unit of instruction can be figured to be $.20 or less per pupil in a school of average size where the kits are used throughout the year. The materials in the kits are reusable.

Recommended for Grades 4, 5, and 6 (published spring 1973):

Air Pollution  
Solid Waste Management  
Water Pollution  
Marine and Seashore Pollution  
Thermal Water Pollution  
The Great Swamp

Recommended for Grades 1, 2, and 3 (published spring 1974):

Priority One: Environment Level 1  
Priority One: Environment Level 2  
Priority One: Environment Level 3

The following units will be distributed at cost from the Pollution Control Education Center in the Union Public Schools, in whose name they are copyrighted. A typical purchase price will be $60. The prorated per pupil cost for each unit of instruction will be less than $.15 in a school of average size, where the kits are used throughout the year.

Recommended for the secondary grades (available fall 1975):

The Energy Challenge  
Air Pollution and Your Health  
Protecting Our Water Supplies  
Open Lands and Wildlife

Inquiries about the dissemination services and materials available should be made in writing to the project director.

SEE: Specific Education of the Eye
Union, New Jersey

OVERVIEW

Our population is visually illiterate. Most people are not trained in the skills of seeing. They are unable to perceive fully what they see. Their vision is general rather than specific; thus they perceive only the obvious and usually miss the subtle nuances and relationships which define the uniqueness of an experience. Since awareness precedes learning, the lack of perceptual ability is a deterrent to learning. Project SEE is designed to offset this perceptual hiatus by developing in children the visual skills, and physical and mental discipline requisite to significant, meaningful learning.

The Project SEE staff has developed a program to train the perceptual and analytical skills of elementary school students. The kindergarten and first grade materials have been designed and field tested and are now part of the curriculum in the Union public schools.

The Project SEE lessons are taught by classroom teachers for approximately fifteen minutes each day. The lessons are a series of visuals of which one is introduced in each lesson. The students analyze the visual and its contextual relationships, identify objects in the immediate environment which contains elements of the visual, and replicate the visual. A review lesson takes place at the completion of every four visuals.

For the kindergarten program there is a series of forty visuals. They start with the most elementary single line element and progress to two noninteracting lines, two interacting lines, elements made up of three components, simple shapes, shape-line combinations, and shape-shape combinations. The elements of each visual are placed in a frame so that the students see them as part of a greater totality and analyze them with reference to their position in the frame.

Beginning Visuals of the Kindergarten Program
The thirty visuals for the first grade program contain more difficult and complex elements. Students begin with a review of the last ten visuals of the kindergarten program and then progress to shape within shape combinations, shapes intersecting and overlapping other shapes, and shapes juxtaposed to give the illusion of a third dimension. The students describe the visuals, relate them to the environment, and replicate them as was done in the kindergarten program.

In 1974, this program was endorsed for national dissemination by the Dissemination Review Panel of the United States Office of Education. As a result of three years of dissemination Project SEE is used in over 800 classrooms in approximately twenty-five states.

**ESSENTIAL ELEMENTS OF THE PROGRAM**

The replication of this program in another site is defined as the use of the prescribed instructional program in kindergarten or first grade at least three days per week for approximately fifteen minutes per lesson over a seven month period.

---

Final Visuals of the Kindergarten Program
GOAL, EVALUATION DESIGN, RESULTS

Goal

Students in project classes will show significant growth in visual literacy, that is, their ability to perceive the visual field with greater specificity.

Before the start of the program both experimental and control groups were pretested for comparability. Papers were randomly selected from the total experimental and control groups. The Simkov Perceptual Organization Inventory (SPOI) was used to gather baseline data.

Project and control students were pretested on both the SPOI and the three Knobler scales. The two groups were comparable on the Simkov and on two of the three Knoblers. On Knobler 1, SEE pupils were significantly higher than controls. (The analysis of posttest data allowed for this difference through an analysis of covariance with adjusted means.)

After six months of SEE, project and control classes were again tested. Both the Simkov and Knobler tests were used. An analysis of covariance was performed on posttest data for the Simkov and the three parts of the Knobler scales for fifty-two project and fifty control students. There were significant differences in favor of the project group on all four tests (and sub-tests).

These data indicate that the goal was accomplished by Project SEE during this six month period. Project children scored higher on the criterion referenced, locally developed Knobler Test and Simkov Test as expected.

The second year program was an extension of the first in content. Testing continued among kindergarteners on an experimental and control basis as a check on the first year results. The testing yielded results at a slightly higher level of significance than had been obtained the first year. The number of students in the kindergarten experimental class was 770.

First grader experimental and control groups took the Knobler tests on a pre and post basis. The experimental group consisted of thirty-eight first graders of whom twenty-two had had one year of SEE and sixteen had not. The control group included forty first graders who had not worked with SEE. The SEE experimental group scored significantly better on all three parts of the Knobler scales in posttesting.

COSTS

The ESEA, Title III development grant for this program covered primarily the cost of staff time and materials.

The program’s adoption cost is approximately $20 per classroom for a set of instructional materials including the “Out of Sight” game for one teacher. Per-pupil costs will be reduced if teachers share materials.
DISSEMINATION SERVICES AND MATERIALS

The Union Township public schools are funded by ESEA, Title III as a demonstration site to provide interested educators the opportunity to see the program in action, examine its materials, receive training in its replication, and purchase the materials. A brochure describing the project, order forms for materials, and a final report on the project’s development and evaluation may be obtained free of charge from the project director. Instructional materials are available at cost. Checks or purchase orders should be made out to Project SEE — Union Township Board of Education and accompany an order for materials.

The project staff has prepared the following materials, which are available at cost to interested educators.

* Instructional materials may be considered non-expendable except for the spirit masters and the mimeograph stencils. When necessary, replacements for these components may be ordered separately at the cost of $3.00 for each.

The project’s development staff offers a two-hour training program for educators committed to using the program. Arrangements for the training should be made with the project director. The staff is also available to give orientation presentations to district staffs and to provide follow-up consultation to those using the program. There is no charge for these services.
Inquiries about the program and its dissemination services and materials should be made in writing to the project director.

Senior Elective Program
Rumson-Fair Haven Regional High School
Rumson, New Jersey

OVERVIEW

A new senior elective program was designed by eighteen high school students and six high school faculty members in the summer of 1971. The project was initiated as part of an effort to update curriculum and as a complement to the construction of an open space building to be used exclusively by seniors. The study group made the following recommendations to the Board of Education:

1) Redesign the school calendar from four marking periods to five, called "facets," each to conclude with one of the regular vacation periods.

2) Encourage students to telescope the traditional academic courses into the first three years of high school, thus leaving the senior year primarily for elective courses.

3) Design senior elective courses to reflect student and faculty interests. Electives should vary in length from one to five facets and be graded either pass-fail or with letter grades according to student choice.

4) Encourage seniors to develop independent study projects under the guidance of a faculty member during the middle two or three facets.

5) Assign seniors randomly to small discussion groups or "precepts" led by faculty members whose goals would be to provide support for independent study and contribute to individual understanding through group interaction.

6) Allow seniors the freedom of an open campus whereby they attend classes but need not be present during unscheduled time.

The 1971-1972 school year was devoted to refining these curricular suggestions. Teachers worked on new courses of study. Administrators, department chairmen, guidance counselors and teachers were trained in alternative teaching styles. Preceptors were chosen and students were assigned randomly to them. Students were carefully counseled to make certain that course selections would support anticipated education and vocational pursuits, and a master schedule was drawn up for the new curriculum.

Concurrent with the curriculum revision an open-space building was erected. It consists of five learning areas each of which may be subdivided by flexible, movable partitions. Stacking chairs, arm chairs, study booths, tables and open-offices were selected in keeping with the needs of each department. Learning areas were outfitted with blackboard space, projection screens and storage closets. The senior building with its new curriculum opened in September, 1972, and is now fully supported by the local Board of Education. The program serves approximately 270 students per year.
In 1974 this program was endorsed for national dissemination by the Dissemination Review Panel of the United States Office of Education.

ESSENTIAL ELEMENTS OF THE PROGRAM

The program's replication in another site is defined by:

1) independent study programs
2) mini-courses
3) preceptorials

GOALS, EVALUATION DESIGN, AND RESULTS

In this study, the students totally participating in the alternative program at Rumson-Fair Haven High School were considered the "treatment" group. Students completing a conventional program at a school in another district were the "comparison" group.
The comparison of the students in the two schools shows, that although they are not identical, they are all clearly at the upper end of both the intelligence and socio-economic scales. To the extent that the populations are different, that of the comparison school is slightly higher on both the intelligence and socio-economic scales necessitating a statistical adjustment.

All tests were administered two weeks before graduation to a random sample of sixty-three seniors from Rumson-Fair Haven, and a random sample of seventy-three seniors from the conventional high school.

Goal #1

Rumson-Fair Haven Regional Senior High School students participating totally in the alternative senior year program will achieve as well as students participating in a conventional program in their knowledge and use of social studies concepts.

The Sequential Test of Educational Progress II: Social Studies (1969) was used to test this goal. The rationale for this selection of the social studies area is that it is considered the most "innovative" aspect of the elective program.

The Rumson and control students in another district were compared using an analysis of covariance. On the STEP Social Studies Test no significant difference was obtained, indicating that the two programs were producing the same amount of learning in social studies. The adjusted means slightly favor Rumson-Fair Haven students, although the difference is small.

Goal #2

Rumson-Fair Haven Regional High School Seniors participating totally in the alternative senior year program will significantly exceed students participating in a conventional program in their satisfaction with and interest in their current educational experience.

Two indices of school sentiment were used. The first, Imagine That is a measure primarily of attitudes toward the teaching process experienced. The second, the School Sentiment Index developed by the Instructional Objectives Exchange (IOX) at U.C.L.A., measures general attitudes toward the whole school experience.

On Imagine That, the Rumson-Fair Haven seniors have a significantly higher adjusted mean than high school seniors in a conventional program. The Rumson-Fair Haven seniors feel significantly better toward the teaching that they have experienced in the alternative program. In addition to this, the results on the School Sentiment Index also support the finding that the Rumson-Fair Haven seniors feel better about their school experiences. The Rumson-Fair Haven seniors have a significantly higher adjusted mean than the high school seniors in a conventional program.
COSTS

The bulk of the ESEA, Title III development grant supported the 1971 summer planning work and the costs of a staff development program. Replication costs will vary with the staff and curriculum resources of potential consumer districts. Provision must be made for cooperative planning among students and staff, curriculum revision, and staff preparation. To some extent these costs should be covered by a reallocation of current expenditures.

DISSEMINATION SERVICES AND MATERIALS

The Rumson-Fair Haven Regional High School has been funded by ESEA, Title III as a demonstration site where visitors may see the senior elective program in operation and talk to participating students and staff. Requests for a visit and/or a brochure describing the program should be made to the project director.

For educators who sign a commitment to replicate the program, the Rumson-Fair Haven staff will offer training and follow-up consultation free of charge. Inquiries about training should be made in writing to the project director.

The administrative and teaching staff of the Rumson-Fair Haven Regional High School district have prepared the following materials which are available to interested educators free or at cost. Checks should be made payable to the Rumson-Fair Haven Board of Education and orders for materials should be accompanied by either a check or a purchase order and mailed to the project director.

SECTION II: SUCCESSFUL NEW JERSEY EDUCATIONAL PROGRAMS
WHOSE MATERIALS MAY BE ORDERED.

The four programs described in this section were developed through the New Jersey ESEA, Title III program and have prepared written and audio-visual materials which are available to interested educators. The projects are no longer funded to work with persons newly interested in their programs although some members of the project staffs may be available on a limited basis to discuss their programs with interested educators. In all cases materials may be ordered from the project directors.

A sampling of resource and curriculum materials produced by New Jersey validated projects.
Educational Services for Schoolage Parents
New Brunswick, New Jersey

OVERVIEW

Pregnant teenagers and their offspring are high risk individuals, medically, educationally, and socially. Prematurity, as well as fetal, neonatal, and maternal mortality, occurs with high frequency in this segment of the population. These teenagers often have an academic history of poor motivation, excessive absence, and truancy. Their educational prognosis is, therefore, usually poor. To combat this situation, a program has been developed at New Brunswick's Family Learning Center to provide educational, nutritional, and social services for pregnant students. A critical aspect of this program is the provision for each participant to prepare and eat a nutritious lunch daily as part of the nutritional services.

This program was initiated in 1969 through an ESEA, Title III grant and is now fully supported by the local Board of Education. Approximately 50 students per year are served. The program's evaluation over a three year period showed that 1) the dropout rate among pregnant students was substantially lowered, and 2) that the babies born to participants in the program were significantly above the average birthweight of babies born to teenagers in the state and the nation.

The project staff has prepared an 81 page Resource Manual and an overview filmstrip-tape for use by interested educators. Persons interested in obtaining these materials should contact the project director.

Learning Center: Integrated Alternative to Special Education
Winslow, New Jersey

Learning Center: Integrated Alternative to Special Education, was designed to replace the isolated special education classrooms within the Winslow Township public schools. Students classified as neurologically impaired, perceptually impaired, and educable mentally retarded are not removed from the mainstream of education but, instead, are offered an educational program that includes activities in the regular classroom and supplemental instruction in a learning center. On the average, students spend half of their school day at each site. Their educational program is individualized to meet their specific needs.

The learning centers are equipped with a wide variety of programmed, individualized, and multi-media instructional materials. Each learning center is staffed by a special education teacher, one student intern, and one paraprofessional. This staff is assisted by volunteer parents, college students, and retired persons. The staff and volunteers provide a generous amount of individual attention to the students.

This program is fully described in Resource Room Approach to Mainstreaming: an Implementation Guide. Information about the guide and a brochure describing the project may be obtained from the project director.

Project Open Classroom
Wayne, New Jersey

Project Open Classroom is characterized by the openness of administrators, teachers, and students to new ideas and initiatives, and their sensitivity to and support of other people. Teachers and students are freed from the constraints of time prescribed by a lock-step curriculum. Open classroom doors and halls allow students to move freely, yet with responsibility. Open curriculum choice permits students to work in areas of their interest, when and for the time they wish. The open classroom environment stimulates learning by providing *structure with choice* for both students and teachers.

The project staff recommends teaching strategies to foster individualized instruction such as task cards, learning centers, providing manipulative materials for students, flexible scheduling, and frequent regrouping of students to meet individual needs. The project’s evaluation showed that students in Open Classroom had more positive attitudes and self concepts than did those in the control groups and that children maintained the same rate of cognitive development while in Open Classroom that they had prior to entering the project.

The following materials were prepared by the project staff and may be ordered from the project director.

Checks or purchase orders should be made payable to: Project Open Classroom, Wayne Board of Education and should accompany an order for materials. An overview filmstrip-tape may be borrowed.

Curriculum and resource materials of Project OPEN CLASSROOM which are available at cost.

Prescriptive Teaching Workshop
New Providence, New Jersey

The Prescriptive Teaching Workshop is designed to raise the academic achievement of elementary school students, grades 1 through 5, who are hampered by neurological, language, and perceptual-motor problems. A Prescriptive Teaching Workshop in each of four elementary schools accommodates seriously disabled learners for part of the day. At other times, these students work in regular classrooms with individually prescribed programs. Students whose disabilities are less severe work only in the regular classroom but follow especially prescribed programs. The project's goal is to maintain the disabled learner in the regular classroom situation. The project was developed through an ESEA, Title III grant from 1969 to 1972. It now serves approximately 135 students per year.

The project's evaluation results showed: 1) a significant reduction in the incidence of behaviors associated with personal frustration among participating students and 2) a significant increase in the incidence of student indication of success, adjustment, and a positive attitude toward school.

The project staff has prepared the following materials which are available to interested educators and may be requested from the project disseminator.

APPENDIX A
Validated Educational Programs in New Jersey

In 1913, the U.S. Office of Education instituted a procedure for the validation of educational programs as successful, cost-effective, and exportable. Since that time twenty-one educational programs in New Jersey have been so validated. At the time of publication of this manual the current year's validation process is still in progress and thus this number may soon be increased. Of these programs, those which currently offer complete dissemination services are described in Section I and those whose written and/or audio-visual materials are available to interested persons are listed in Section II.

Pathways to Success, A Manual for the Dissemination of Successful Educational Programs, 1974

Dissemination materials prepared by the staffs of individual programs are available free of charge, or at cost from the project directors and are listed as part of each project’s description.
APPENDIX D

Projects that are Funded for National Dissemination in States other than New Jersey

Fifty-six successful educational programs in states other than New Jersey have been approved by the Dissemination Review Panel of the U.S. Office of Education for national dissemination and funded by USOE through ESEA, Title III, Section 306, to offer dissemination services and materials to interested persons throughout the country. These programs will be described in detail in *Educational Programs that Work*, Volume II (1975).

Persons interested in these programs are invited to contact the program staffs directly, the Educational Improvement Centers: South and Northwest, or the State Dissemination Facilitator Project of the Division of Research, Planning and Evaluation. The appropriate catalogue may be requested from the EIC's or the Division of Research, Planning, and Evaluation.
