This instructor's guide, designed for use with the curriculum, Plant Operations for Wastewater Facilities, represents a two-year wastewater technology instructional program based on performance objectives designed to prepare undergraduate students to enter occupations in water and wastewater treatment plant operations and maintenance. This document, part D of five parts, covers the topics of Sludge Dewatering, Solids Disposal and Effluent Disposal. In this guide, the topics and ideas are presented as a series of modules, organized around 16 general objectives common to all processes. The module begins with a statement of purpose which explains what the student will be studying. Next, all the objectives of the module and code numbers keyed to a computerized list of instructional resources are listed. Also included in each module are a glossary of verbs and sections on learning and testing conditions, acceptable performance, instructor activity and student activity. Recommendations on evaluation techniques are included. (BT)

Preface

Since 1970 Charles County Community College, Clemson University, Greenville Technical College and Linn-Benton Community College have been working together to prepare undergraduate students to enter occupations in water and wastewater treatment plant operations and maintenance. Through their efforts a two-year wastewater technology instructional program based on performance objectives has been developed and implemented.

Through a grant from the Environmental Protection Agency called Criteria for the Establishment of Two-Year Post High School Wastewater Technology Programs (CEWT) the four colleges set up program criteria and curriculum guidelines which are available in two volumes:

Program Implementation Procedures
Volume II: Curriculum Guidelines, Criteria for Establishment and Maintenance of Two-Year Post High School Wastewater Technology Programs

As a result of the implementation of the instructional program at Charles County Community College, Greenville Technical College and Linn-Benton Community College, six guides for instructors based on the course descriptions in Plant Implementation Procedures and the general criterion behaviors of Volume II have been prepared. Plant Operations for Wastewater Facilities, printed in five parts, is the second in the series which includes:

Volume I  Introduction to Environmental Technology
Volume II  Plant Operations for Wastewater Facilities
Volume III  Laboratory Control for Wastewater Facilities
Volume IV  Management and Supervision Procedures for Wastewater Facilities
Volume V  Process Interaction for Wastewater Facilities
Volume VI  Advanced Waste Treatment

ACKNOWLEDGEMENTS

Since the beginning of the project many persons at the four cooperating institutions, as well as outside consultants have participated in the development of this program. Their efforts which have provided source material for this guide have been acknowledged in the volumes to which they made major contributions. Plant Operations for Wastewater Facilities has been written and produced by:

Technical Staff

K. C. Stoakes, Instructor, Environmental Technology Department, Linn-Benton Community College
John F. Wooley, Instructor, Environmental Technology Department, Linn-Benton Community College
John W. Carnegie, Chairman of Environmental Technology, Linn-Benton Community College
Fred L. Delvecchio, Director of Operator Training, Environmental Systems Engineering, Clemson University
John H. Austin, Professor and Head, Environmental Systems Engineering, Clemson University

Editorial and Production Staff

Ada Louise Steirer, Freelance Editor, Clemson, South Carolina
Marie N. Sims, Project Secretary, Environmental Systems Engineering, Clemson University
Charlotte Holmes, Typing Services, Clemson, South Carolina
Jan Willis, Editorial Assistant, Environmental Systems Engineering, Clemson University
Eleanor McLasky, Typist, Environmental Systems Engineering, Clemson University
Roma Norton, Typist, Environmental Systems Engineering, Clemson University
Linda Flagg, Proofreader, Environmental Systems Engineering, Clemson University

Figure 1: Relationship of general criterion behaviors (performance objectives) to the general categories and composite model plant (CMP).
Performance Objectives

When the treatment plant operators, educators, consultants and representatives from professional water pollution control organizations came together to develop an effective instructional program, they recommended the use of performance or behavioral objectives because such objectives clearly outline:

1. What the student is expected to do as a result of the instructional program.
2. The conditions under which the student shall do it.
3. The standard of performance.

COMPOSITE MODEL PLANT

First, they developed a composite model plant (CMP) of twenty-two process units which is really many wastewater treatment plants in one model. Such a mix of process units seldom occurs in a treatment plant, but if a student becomes competent in the operation and management of the CMP he should be able to perform successfully in any treatment plant.

TASK ANALYSIS

Next, to ensure that the materials were specifically tailored to what the operator does on the job, a task analysis was conducted. They found that the tasks which an operator performs fell into seven general categories which were further divided into 37 tasks or general behaviors. (See figure 1, page vi.) The tasks were organized under:

1. Normal Operation Procedures. These include routine operating activities that do not vary significantly from day to day and that are designed to keep the plant functioning within a normal range of values. For example, the employee conducts routine samplings of the primary sludge and inspects pumping equipment and the wastestream to verify that the process is functioning properly.

2. Abnormal Operation Procedures. These include activities of the plant employee that result from unusual and undesirable conditions of the wastestream. The abnormal procedures enable the plant employee to recognize when the wastestream is abnormal and to return it to an acceptable, normal condition. An abnormal wastestream results when a normal operation procedure is not properly applied, a corrective maintenance procedure is needed or management/supervisory procedures are poor. For example, the plant employee should recognize that a black septic primary sludge sample is an abnormal condition of the wastestream and take appropriate action.

3. Preventive Maintenance Procedures. These include routine maintenance activities of the plant employee which prevent major equipment breakdown and subsequent corrective maintenance. For example, the employee would lubricate bearings and other moving parts, replace worn components and adjust components of the primary sludge pumps.
4. Corrective Maintenance Procedures. These include maintenance activities of the plant employee that usually result from the breakdown or malfunction of a unit of equipment or a component. For example, the employee would notice whether the primary sludge pump is malfunctioning and know when and how to correct the disorder or when and how to refer the problem to plant maintenance personnel.

5. Laboratory Control Procedures. These include special and routine activities relating to laboratory analysis, the specification of sampling procedures and locations and the general management of the laboratory facilities. For example, the employee would collect primary sludge samples and conduct the analyses.

6. Systems Interaction Procedures. These include activities of the plant employee which relate the functioning of specific units of equipment to other process units and to the system as a whole. For example, the employee would determine how the effective functioning of the primary sludge pumps relates to digester performance.

7. Management/Supervisory Procedures. These include activities relating to employment practices, record keeping, plant operation policy and the establishment of a constructive and realistic rapport between the plant and the community it serves. For example, the employee would keep records on primary sludge pumping, keep an inventory of spare parts and evaluate the adequacy of maintenance procedures by shift personnel.

CURRICULUM DESIGN

After deciding what process equipment an operator must operate and maintain, and finding out what an operator does through the task analysis, they listed the objectives a student must master to successfully operate a treatment plant. For example, the student will describe and perform the normal inspection procedure for the primary sedimentation unit including frequency of inspection, conditions to look for and the actions he should take.

INSTRUCTOR'S GUIDES

The next step was the design of manuals to guide the instructor. In the guides varied learning activities and imaginative innovations which produce more learning than traditional teaching methods are emphasized. The instructional suggestions do not need to be followed slavishly, but should be modified and improved as much as possible.

The instructor's goal is to achieve the objectives of the curriculum by selecting activities which suit the student's needs and help him to master all the information and skills in the course. The most effective learning occurs when the student is a participant in the learning process, not a spectator.

An instructor should use learning activities which approximate the situations which the student will meet in the treatment plant. If it is not possible to teach in a treatment plant, simulated situations should be set up in the workshop or classroom so that the student can solve rather than discuss problems. Group discussion stimulated by visual materials is an effective learning technique. Lecturing, however, is inefficient. Because the student is not actively involved during a lecture, the instructor should use lectures sparingly.
Introduction to Modules of Instruction

In this instructor's guide the topics and ideas are presented as a series of modules, organized around the general objectives stated in the course descriptions for Plant Operation I, II, III and IV and the In-Plant Practicum which are found in the Program Implementation Procedures of the CENW Program. Each module is designed to help the instructor plan a course of study for the operation of a treatment process using the CMP process unit. Each module is organized around sixteen objectives common to all processes.

The modules in Plant Operations for Wastewater Facilities are arranged in the order in which the CMP process units occur in the treatment plant. Each process is identified by a letter of the alphabet and the process unit is described in the heading of the module. If the instructor uses the modules in consecutive order, he and his students will follow the treatment of the wastestream from collection to its discharge into the receiving waters. Each module is designed so it can be used as a minicourse in a treatment process. Instructors are urged to group the modules to suit their individual curriculum needs and instructional situations.

Material in the modules can easily be adapted for courses which upgrade the training of operators in normal operation procedures, abnormal operation procedures, preventive maintenance procedures or corrective maintenance procedures by grouping the appropriate objectives from all the modules. For example, an instructor could develop a course in corrective maintenance by grouping objectives 11 and 12 from each module.

INSTRUCTIONAL PROCESS UNITS

Each module assumes that the composite model plant unit will be used for instruction in the process. If the recommended unit is not available, an alternate process unit may be substituted and the instructional materials adapted. The recommended CMP units and alternate units for all the processes are listed in table 1, page 4. Two modules on sludge dewatering are included because it is impossible for a student to master operation of this process by learning to operate one process unit. Remember, however, that a student will be more adequately prepared to work in almost any treatment plant if he is trained on the CMP unit. When it is not possible to use the recommended unit, students should be informed about the operation and function of the unit and hands-on training should be conducted on the best alternate unit available.

PURPOSE OF THE MODULES

The modules in Plant Operations for Wastewater Facilities help the student to learn how to operate all the process units in the wastewater treatment plant. Normal operation, abnormal operation, preventive maintenance and corrective maintenance procedures are included. When the course is completed, he will know why each unit is...

important to the treatment plant and how it affects and interacts with other process units in the treatment system.

STUDENT PREREQUISITES

Completion of Introduction to Environmental Technology and courses in basic mathematics and biology qualify the student to enter the course in Unit Operations for Wastewater Facilities. Concurrent courses in basic chemistry and laboratory control are suggested. (See pages 7 to 19 of Program Implementation Procedures.)

TERMINAL OBJECTIVE:

When the student has completed the modules of instruction in this course, he should be able to do the following for each of the processes in the treatment plant:

1. Identify the process unit.
2. Describe the process unit in technical and nontechnical terms.
3. Describe the safety procedures for the process unit and explain how the procedures protect employees and visitors.
4. Identify the components of the process unit. Explain the purpose of each component, how the component works and why it is important.
5. Describe the normal operation procedures for the process unit components.
6. Perform the normal operation procedures for the process unit.
7. Describe and perform the start-up and shut-down procedures for the process unit.
8. Describe the abnormal operation procedures for the process unit.
9. Describe the preventive maintenance procedures for the process unit.
10. Perform the preventive maintenance procedures for the process unit.
11. Describe the corrective maintenance procedures for the process unit components.
12. Perform the corrective maintenance procedures for the process unit components.
13. Perform the safety procedures for the process unit and demonstrate how they protect employees and visitors.
14. Compare other process units to the composite model plant unit.
15. Name and locate the components of the process unit. Name and select reference materials which explain the normal operation procedures, the purpose of each component, how the component works and why it is important.
16. Perform the abnormal operation procedures for the process unit.

RESOURCES

The listing of instructional resources suggests materials now available to instructors to accomplish the desired performance in the student.

Instructional materials 1 to 1866 are keyed to the reference, Instructional Materials Available which is available from:

Office of Water Program Operations
US Environmental Protection Agency
Washington, DC 20460
Two companion volumes to Instructional Materials Available, also available from EPA, offer suggestions for selecting audio-visual equipment:

Selecting Audio-Visual Equipment
Selecting Instructional Media and Instructional Systems

The following journals list addresses of companies from whom literature about the process units which they manufacture can be obtained:

"Environmental Science and Technology"
1155 Sixteenth Street, N.W.
Washington, DC 20036

"Water and Sewage Works"
434 South Wabash
Chicago, IL 60605

"Water and Wastes Engineering"
666 Fifth Avenue
New York, NY 10019

If suitable materials are not available, instructors are urged to develop their own resources.

FORMAT OF THE MODULES

The module begins with a statement of purpose which explains what the student will be studying. Next, all the objectives of the module and code numbers keyed to a computerized list of instructional resources are listed for the instructor's convenience.

Objectives. Each module includes sixteen objectives which bring the student to the performance level required by the terminal objective. The knowledge and skills demanded of the student become more complex as he progresses through the sixteen objectives in a module. He begins by identifying components and learning facts about the components and processes. He uses these facts to develop concepts and ideas. Finally, he relates the concepts and ideas to each other so that he can make decisions about plant procedures.

A glossary of verbs which follows this introduction defines the verbs used in the objectives so that the instructor is aware of what he is instructing the student to do and so that his evaluation of the student is based solely on what is stated in the objective.

Conditions. The conditions define the circumstances under which the student performs and is evaluated and lists the information, equipment and assistance to which the student will have access. The best available learning and testing conditions should be used. A process unit in a treatment plant or workshop has more impact on the students than photographs and drawings. For example, if the student is to be given a process unit, unit components, photographs or diagrams of a unit, the instructor should provide a process unit. If a process unit is not available, he would use components of the unit in combination with photographs of those components which he does not have available. Line drawings and diagrams should not be used if photographs and manufacturers' illustrations are available.

Acceptable Performance. The acceptable performance expands the objective and details the steps a student must follow to reach the objective. To move on to the next objective, at least 70% of each step or category must be mastered with no repeated errors between modules. For example, no student can complete the course of study if he consistently fails to give attention to moving parts as he
performs safety procedures or to describe the odor as he evaluates the characteristics of the wastestream. In this section the instructor will find the main topics of his lesson plan and for the evaluation of the student's performance.

**Instructor Activity.** The instructor should get to know his class by working with small groups and with each student. He should encourage students to learn from each other as they work together. He should involve the student in the instructional and learning process. Instructional activities are paired numerically with student activities.

**Student Activity.** This is a listing of activities which the student will take part in, in order to accomplish the specified performance.

**EVALUATION TECHNIQUE**

The instructor may use or adapt the learning activities listed under instructor activity and student activity as evaluation techniques. The technique chosen should reflect what the objective asks the student to do. For example, if a student is asked to describe, the evaluation technique is a description. The student should be evaluated under the conditions and to the performance level required for each objective.
Glossary of Verbs

The glossary of verbs is included here so that the instructor will know exactly what the student is being asked to do to meet his objective. Notice the difference, for example, between the meanings of identify and name. When a student is asked to identify, the instructor is providing the name of the thing to be identified. But, when the student must name something, he must supply the name.

The list includes all the verbs from the objectives and the acceptable performance sections of all the modules, as well as some verbs used in the instructor and student activities.

To make use of as suitable, fitting or relevant.

To inspect and ascertain the condition of, especially in order to determine that the condition is satisfactory.

To express an opinion or attitude about what has been seen or heard.

To examine the character or qualities of, especially for the purpose of discovering resemblances or differences.

To give thought to with a view to purchasing, accepting or adopting.

To alter or adjust to bring to some standard or required condition.

To illustrate or explain in an orderly and detailed way with many examples, specimens and particulars.
DESCRIPTION
To represent by words written or spoken for the knowledge or understanding of others, to transmit an image of the identifying features, the nature and characteristics of objects, events and actions.

DEVELOP
To produce or generate.

DISCUSS
To talk about, to present in detail, to exchange views or information about.

EVALUATE
To examine and make a judgment about quality, significance, amount, degree or condition of.

EXPLAIN
To make plain or clear, to present in detail.

IDENTIFY
To establish the identity of, pick out or single out an object in response to its name by pointing, picking up, underlining, marking or other responses.

INDICATE
To state or express without going into detail.

INSPECT
To view closely and critically, to determine quality or state, to detect errors or otherwise appraise.

LIST
To enumerate or specify.

LOCATE
To stipulate the position of an object in relation to other objects.

APPLICATION
Describe the safety procedures for the screening and grinding unit.

Develop a picture file of first stage digestion units.

Discuss treatment plant case histories.

Evaluate the wastestream for abnormal conditions.

Explain the purpose of each component, how the component works and why it is important.

Identify the components of the chlorination unit.

Indicate whether the process unit is used for secondary sedimentation.

Inspect a treatment plant.

List routine calculations for the pond stabilization unit.

Locate the components of the trickling filtration unit.
DEFINITION

NAME
To supply the correct name, in oral or written form, for an object, class of objects, persons, places, conditions or events which are pointed out or described.

OBSERVE
To pay careful, directed, analytical attention to.

PERFORM
To carry out an action or pattern of behavior. (Implies an act for which a process or pattern of movement has already been established, especially one calling for skill or precision, or for the assignment or assumption of responsibility.)

POINT OUT
To indicate the position or direction of, especially by extending a finger toward the thing so indicated, to direct someone’s attention to.

RECOMMEND
To mention or introduce as being worthy of acceptance, use or trial, to advise.

SELECT
To choose something from a number or group usually by fitness, excellence, or other distinguishing feature.

APPLICATION

Name the components of the primary sedimentation unit.

Observe the thickening process during a plant tour.

Perform the normal operation procedures for the grit removal unit.

Point out characteristics which distinguish the first stage digestion unit from other units.

Recommend procedures to correct the unsafe conditions.

Select the reference materials and tools needed to perform the corrective maintenance.
PURPOSE: In this module the student will learn to perform all the activities in the objectives as they apply to a vacuum filter unit with cloth. READ PAGES 1 TO 11 BEFORE USING THIS MODULE.

OBJECTIVES:

14a.1 Identify the sludge dewatering unit.
14a.2 Describe the sludge dewatering process in technical and non-technical terms.
14a.3 Describe the safety procedures for the sludge dewatering unit and explain how the procedures protect employees and visitors.
14a.4 Identify the components of a sludge dewatering unit. Explain the purpose of each component, how the component works and why it is important.
14a.5 Describe the normal operation procedures for the sludge dewatering unit components listed on page 17.
14a.6 Perform the normal operation procedures for the sludge dewatering unit.
14a.7 Describe and perform the start-up and shut-down procedures for the sludge dewatering unit.
14a.8 Describe the abnormal operation procedures for the sludge dewatering process.
14a.9 Describe the preventive maintenance procedures for the sludge dewatering unit.
14a.10 Perform the preventive maintenance procedures for the sludge dewatering unit.
14a.11 Describe the corrective maintenance procedures for the sludge dewatering unit components listed on page 17.
14a.12 Perform the corrective maintenance procedures for the sludge dewatering unit components.
14a.13 Perform the safety procedures for the sludge dewatering unit and demonstrate how they protect employees and visitors.
14a.14 Compare other sludge dewatering units to the vacuum filter unit with cloth (composite model plant unit 0).
14a.15 Name and locate the components of the sludge dewatering unit listed on page 17. Name and select reference materials which explain the normal operation procedures, the purpose of each component, how the component works and why it is important.
14a.16 Perform the abnormal operation procedures for the sludge dewatering unit.

OBJECTIVE 14a.1: Identify the sludge dewatering unit.

CONDITIONS: Given a unit, a model of a unit or a photograph of a unit.

ACCEPTABLE PERFORMANCE: The student will:

- Indicate whether the process unit is used for sludge dewatering.

INSTRUCTOR ACTIVITY: 1. Point out characteristics which distinguish the sludge dewatering unit from other process units.

STUDENT ACTIVITY: 1. Develop a picture file of sludge dewatering units. Mark distinguishing characteristics.

OBJECTIVE 14a.2: Describe the sludge dewatering process in technical and nontechnical terms.

CONDITIONS: Given photographs of the sludge dewatering unit.

ACCEPTABLE PERFORMANCE: The student will:

- Describe the sludge dewatering unit, explaining the meaning of vacuum filtration.
- Describe the purpose of sludge dewatering.
Describe how sludge dewatering affects:
- solids disposal
- pumping and piping
- effluent disposal

INSTRUCTOR ACTIVITY:
1. Use diagrams, photographs and slides to describe sludge dewatering.
2. Describe the sludge dewatering process during a plant tour. React to the student's description of the process.

STUDENT ACTIVITY:
1. Describe the sludge dewatering process while viewing photographs, diagrams and slides.
2. Observe and describe the sludge dewatering process during a plant tour.

OBJECTIVE 14a.3:
Describe the safety procedures for the sludge dewatering unit and explain how the procedures protect employees and visitors.

CONDITIONS:
Given a list of operation and maintenance procedures.

ACCEPTABLE PERFORMANCE:
The student will:
Describe the safety procedures for the sludge dewatering unit, commenting on:
- High-risk activities
  - removing debris from channels
  - working with switches in automatic position
- Sources of danger
  - acid wastes
  - caustic wastes
  - chemical slurries
  - deep wells
  - electrical equipment
  - explosive gases
  - moving parts
  - open doors and covers
  - slippery walks
  - toxic gases
  - welding torches
Safety equipment
- belt guards
- fire-fighting equipment
- first-aid kit
- lockout tags and keys
- proper lighting
- protective clothing
- railings
- stair safety treads
- ventilation system

Explain how the procedures protect employees and visitors.

INSTRUCTOR ACTIVITY:
1. Discuss treatment plant case histories.
2. Describe the conditions in a plant and ask for evaluation.
3. Describe the safety procedures for each operation and maintenance procedure.
4. Prepare slides of sources of danger and high-risk activities.

STUDENT ACTIVITY:
1. Read case histories and comment on employee safety procedures.
2. Evaluate conditions which the instructor has described. Suggest remedies.
3. Role play operation or maintenance procedures. Select proper safety equipment and name the sources of danger and high-risk activities. Develop a manual of safety procedures for the sludge dewatering unit.
4. Identify sources of danger and high-risk activities pictured in slides.

OBJECTIVE 14a.4:
Identify the components of a sludge dewatering unit. Explain the purpose of each component, how the component works and why it is important.

CONDITIONS:
Given a sludge dewatering unit, unit components or a diagram, model or photographs of a unit and a list of components.
ACCEPTABLE PERFORMANCE: The student will:

Identify components of the sludge dewatering unit and associated equipment:
- agitator
- air receiver
- blower
- chemical conditioner
- chemical feeder
- conveyor belt
- drum
- filter media
- filtrate pump
- fire-fighting equipment
- first-aid kit
- mixing tank
- oil valve
- piping
- roller
- rotometer
- scraper
- sludge pump
- vacuum gage
- vacuum pump
- valve

Explain the purpose of each component, how the component works and why it is important.

INSTRUCTOR ACTIVITY:
1. Point out and name components in diagrams, photographs or models.
2. Arrange photographs or models of components in the workshop for student identification.
3. Point out and name components during a plant tour.
4. Question the students about the purpose of each component, how the component works and why it is important.

STUDENT ACTIVITY:
1. Identify the components which the instructor names on diagrams, photographs or models.
2. Identify the components at stations in the workshop in writing.
3. Identify components during a plant tour.
4. Explain the purpose of each component, how the component works and why it is important.

OBJECTIVE 14a.5: Describe the normal operation procedures for the sludge dewatering unit components listed above.

CONDITIONS: Given a sludge dewatering unit or slides or photographs of a sludge dewatering unit, a list of components of the unit, a checklist of characteristics and a normal operation procedures manual.
ACCEPTABLE PERFORMANCE: The student will:

Describe the characteristics of each component which the operator checks to determine whether the component is functioning normally, commenting on:
- color
- pressure
- corrosion
- sound
- flow
- temperature
- motion
- vacuum
- odor
- vibration
- position

Name the sense or indicator which monitors each characteristic.

Explain how often the characteristics of each component must be checked and why the component must be checked on this schedule.

Describe what an operator does if the characteristics of a component indicate that it is not functioning normally, including:
- making adjustments
- deciding about corrective maintenance
- reporting to supervisors
- reporting in written records

Explain why a component's characteristics must be returned to normal.

Describe routine sampling for the sludge dewatering process.

List routine calculations for the sludge dewatering process.

Describe routine procedures for recording data.

INSTRUCTOR ACTIVITY:

1. Describe the characteristics of the components of the sludge dewatering unit.
2. Describe the normal operation procedures for the sludge dewatering unit. Use color pictures.
3. Describe the normal operation procedures during a slide show of components of the sludge dewatering unit.
4. Describe and explain the normal operation procedures during a plant tour. Listen to the student's description of the procedures.

STUDENT ACTIVITY:

1. Develop a checklist, listing the components of the
OBJECTIVE 14a.6:

1. Observe and describe the normal operation procedures during a plant tour.

2. Develop a manual of normal operation procedures.

3. Describe the normal operation procedures during a slide show of components of the sludge dewatering unit.

4. Observe and describe the normal operation procedures during a plant tour.

OBJECTIVE 14a.6: Perform the normal operation procedures for the sludge dewatering unit.

CONDITIONS: Given a sludge dewatering unit, the manual of normal operation procedures which the student has developed for the sludge dewatering unit and basic references.

ACCEPTABLE PERFORMANCE: The student will:

- Check and evaluate the characteristics of each component, explaining his actions.
- Perform the procedures which an operator follows if the characteristics of a component indicate that it is not functioning normally.
- Perform the routine sampling.
- Perform the routine calculations.
- Perform the routine record keeping.

INSTRUCTOR ACTIVITY:

1. Observe the student demonstrating normal operation procedures in a dry run in a treatment plant.
2. Observe the student performing normal operation procedures in a treatment plant.

STUDENT ACTIVITY:

1. Demonstrate the normal operation procedures in a dry run in a treatment plant.
2. Perform and explain the normal operation procedures in a treatment plant.
OBJECTIVE 14a.7: Describe and perform the start-up and shut-down procedures for the sludge dewatering unit.

CONDITIONS: Given a mock-up, model or photograph of a sludge dewatering unit and a sludge dewatering unit with the manufacturer's operation manual.

ACCEPTABLE PERFORMANCE: The student will:

Start up and shut down a sludge dewatering unit, following the manufacturer's instructions.

INSTRUCTOR ACTIVITY:

1. Demonstrate and perform the start-up procedures in a treatment plant.
2. Demonstrate and perform the shut-down procedures in a treatment plant.
3. Observe the student performing the start-up procedures in a treatment plant.
4. Observe the student performing the shut-down procedures in a treatment plant.
5. Observe the student as he evaluates his start-up procedures.
6. Observe the student as he evaluates his shut-down procedures.

STUDENT ACTIVITY:

1. Describe the start-up procedures in a dry run in a treatment plant.
2. Describe the shut-down procedures in a dry run in a treatment plant.
3. Perform the start-up procedures in a treatment plant.
4. Perform the shut-down procedures in a treatment plant.
5. Evaluate the operation of the sludge dewatering unit to determine whether correct start-up procedures have been used. Use the normal operation procedures manual which the student has developed. (See objective 1.4.)
6. Evaluate the operation of the sludge dewatering unit to determine whether correct shut-down procedures have been used. Use the normal operation procedures manual which the student has developed. (See objective 1.4.)
OBJECTIVE 14a.8: Describe the abnormal operation procedures for the sludge dewatering process.

CONDITIONS: Given a wastestream in a treatment plant or color photographs of a wastestream, a checklist of the conditions of the wastestream and plant records and reference materials.

ACCEPTABLE PERFORMANCE: The student will:

Evaluate the wastestream for abnormal conditions, commenting on:
- alkalinity level
- filterability pH
- flow sludge density

Describe the cause and effect of the abnormal condition.

Explain how often the condition of the wastestream must be checked.

Describe what an operator does if he observes abnormal conditions, including:
- operational changes
- reporting to supervisors
- sampling procedures

Describe how the actions of the operator will improve the condition of the wastestream.

INSTRUCTOR ACTIVITY:

1. Describe and explain the abnormal conditions of the wastestream illustrated in color pictures.
2. Describe and explain the abnormal operation procedures illustrated in pictures and described in plant records and case histories.
3. Describe and explain the abnormal operation procedures during a slide show.
4. Describe and explain the abnormal operation procedures during a plant tour. Listen to the student's description of the procedures.

STUDENT ACTIVITY:

1. Evaluate and explain the abnormal conditions of the wastestream which are illustrated in color pictures.
2. Describe and explain the abnormal operation procedures illustrated in pictures and described in plant records and case histories.
3. Describe and explain the abnormal operation procedures in a class discussion after a slide show.
4. Evaluate and explain the condition of the wastestream during a plant tour. Describe and explain the abnormal operation procedures.

OBJECTIVE 14a.9:
Describe the preventive maintenance procedures for the sludge dewatering unit.

CONDITIONS:
Given a sludge dewatering unit or pictures and drawings of a sludge dewatering unit and reference materials, including:
- inspection records
- manufacturer’s maintenance guides
- plant drawings and specifications
- preventive maintenance schedule

ACCEPTABLE PERFORMANCE:
The student will:
Describe these preventive maintenance procedures for the sludge dewatering unit:
- Cleaning
  - blower
  - chemical conditioner
- chemical feeder
- conveyor belt
- mixing tank
- pumps
- filtrate
- sludge
- vacuum
- roller
- scraper
- Lubrication
  - scraper
  - vacuum gage
- valve
- chemical conditioner
- painting
- agitator
- air receiver
- Oil valve
  - blower
- pumps
  - filtrate
  - sludge
  - vacuum
  - Mechanical adjustment
  - mixing tank
- agitator
- piping
INSTRUCTOR ACTIVITY:
1. Describe and explain the preventive maintenance procedures for the sludge dewatering unit.
2. Describe and explain the preventive maintenance procedures during a slide show.
3. Describe and explain the preventive maintenance procedures during a plant tour.

STUDENT ACTIVITY:
1. Develop a preventive maintenance schedule and a manual of preventive maintenance procedures.
2. Observe, describe and explain the preventive maintenance procedures during a slide show.
3. Observe, describe and explain the preventive maintenance procedures during a plant tour.

OBJECTIVE 14a.10: Perform the preventive maintenance procedures for the sludge dewatering unit.

CONDITIONS: Given a sludge dewatering unit and tools and reference materials, including:
- inspection records
- manufacturer's maintenance guides
- plant drawings and specifications
- preventive maintenance schedule
ACCPETABLE PERFORMANCE:  The student will:

Select the reference materials and tools needed to perform the preventive maintenance procedures.

Apply the preventive maintenance schedule for the sludge dewatering unit, explaining his actions.

Perform the procedures which an operator follows when a component needs preventive maintenance, explaining his actions.

INSTRUCTOR ACTIVITY:

1. Set up simulated situations in the workshop.
2. Observe student inspection of a treatment plant.
3. Observe the student performing the preventive maintenance procedures in a treatment plant.

STUDENT ACTIVITY:

1. Small groups of students perform the preventive maintenance procedures in simulated situations in the workshop.
2. Inspect a treatment plant. Evaluate and explain the preventive maintenance procedures.
3. Perform and explain the preventive maintenance procedures in a treatment plant.

OBJECTIVE 14a.11: Describe the corrective maintenance procedures for the sludge dewatering unit components listed on page 17.

CONDITIONS: Given a sludge dewatering unit or a mock-up, photographs or drawings of a sludge dewatering unit, the manual of operation procedures which the student has developed for the sludge dewatering unit, tools and reference materials, including:

catalogue of replacement parts
equipment catalogues
manufacturer's maintenance guides

ACCEPTABLE PERFORMANCE: The student will:

Describe how an operator evaluates each component of the sludge dewatering unit for corrective maintenance, commenting on:

color
flow
corrosion
motion
OBJECTIVE 14a.12: Perform the corrective maintenance procedures for the sludge dewatering unit components.

CONDITIONS: Given a sludge dewatering unit or unit components, the operation procedures manual which the student has developed, tools and reference materials, including:
- catalogue of replacement parts
- equipment catalogues
- manufacturer's maintenance guides
- manufacturer's operation manual

INSTRUCTOR ACTIVITY:
1. Describe and explain the corrective maintenance procedures for the sludge dewatering unit, using diagrams and pictures.
2. Describe and explain the corrective maintenance procedures during a slide show.
3. Describe and explain the corrective maintenance procedures during treatment plant tours.

STUDENT ACTIVITY:
1. Describe and explain the corrective maintenance procedures in situations described or pictured by the instructor.
2. Describe and explain the corrective maintenance procedures during a slide show.
3. Observe, describe and explain the corrective maintenance procedures during a treatment plant tour.

Explain why a component has malfunctioned.
Name the reference materials and tools needed to perform the corrective maintenance.
Describe what an operator does when he discovers a malfunction, including:
- evaluation of capabilities of plant personnel to perform the procedures
- selection of replacement parts
- record keeping
Describe how the operator corrects the malfunction.
ACCEPTABLE PERFORMANCE: The student will:

Evaluate the components of the sludge dewatering unit for corrective maintenance, explaining why a component has malfunctioned and commenting on:
- color
- corrosion
- flow
- motion
- odor
- position
- pressure
- sound
- temperature
- vacuum
- vibration

Select the reference materials and tools needed to perform the corrective maintenance.

Perform the procedures which an operator follows when a component malfunctions, including:
- evaluation of capabilities of plant personnel to perform the procedures
- selection of replacement parts
- record keeping

Correct the malfunction.

INSTRUCTOR ACTIVITY:
1. Set up simulated situations in the workshop.
2. Observe the student as he evaluates the components in a treatment plant.
3. Observe the student performing the corrective maintenance procedures in a treatment plant.

STUDENT ACTIVITY:
1. Small groups of students perform and explain the corrective maintenance procedures in simulated situations in the workshop.
2. Evaluate the components for corrective maintenance.
3. Perform and explain the corrective maintenance procedures in a treatment plant.

OBJECTIVE 14a.13:
Perform the safety procedures for the sludge dewatering unit and demonstrate how they protect employees and visitors.

CONDITIONS:
Given a list of operation or maintenance procedures, the student’s manual of safety procedures, tools and safety equipment.
ACCEPTABLE PERFORMANCE: The student will:

- Identify hazardous conditions in the sludge dewatering unit, commenting on:
  - high-risk activities
  - sources of danger
  - safety equipment

- Explain how the procedures protect employees and visitors.

- Recommend corrective procedures and correct the unsafe condition.

INSTRUCTOR ACTIVITY:

1. Set up simulated situations in the workshop.
2. Observe the student as he evaluates the safety conditions in a treatment plant.
3. Observe the student performing the safety procedures in a treatment plant.

STUDENT ACTIVITY:

1. Evaluate safety conditions in simulated situations and recommend corrective procedures.
2. Evaluate safety conditions in a treatment plant and recommend corrective procedures.
3. Perform the safety procedures in a treatment plant.

OBJECTIVE 14a.14: Compare other sludge dewatering units to the vacuum filter unit with cloth (composite model plant unit 0).

CONDITIONS: Given a process unit and reference materials, including:
- equipment catalogues
- laboratory reports
- manufacturer's bulletins
- manufacturer's operation manuals
- plant maintenance and operation records

ACCEPTABLE PERFORMANCE: The student will:

- Compare composite model plant unit 0 with:
  - a continuous feed centrifuge
  - a vacuum filter unit with coil
Consider:
availability of replacement parts
capital costs
dependency on surrounding environment
ease of repair
efficiency
flow-handling capabilities
maintenance costs
nuisance to neighbors
operational costs
operational skills
personnel requirements
reliability
resistance to upset
sensitivity of controls
space requirements
waste-handling capabilities

INSTRUCTOR ACTIVITY:
1. Prepare a chart for tabulation of information about the units.
2. Compare composite model plant unit 0 with the other units.
3. Help the student to collect information for reports on the advantages and disadvantages of each unit.

STUDENT ACTIVITY:
1. List information about the units on a chart.
2. Compare the units in a panel discussion.
3. Write a report on the advantages and disadvantages of each unit.

OBJECTIVE 14a.15: Name and locate the components of the sludge dewatering unit listed on page 17. Name and select reference materials which explain the normal operation procedures, the purpose of each component, how the component works and why it is important.

CONDITIONS: Given a sludge dewatering unit, unit components or a diagram, model or photographs of a unit and reference materials, including:
contractor's plans of the sludge dewatering unit
manufacturer's maintenance guides
operation and maintenance manuals
The student will:

Name and locate the components of the sludge dewatering unit.

Name and select reference materials which explain the normal operation procedures, the purpose of each component, how the component works and why it is important.

INSTRUCTOR ACTIVITY:

1. Point out components of the sludge dewatering unit on diagrams, photographs or models.
2. Listen to the student naming the components and the applicable reference materials during a plant tour.
3. Name and display the reference materials which describe the sludge dewatering unit and normal operation procedures.

STUDENT ACTIVITY:

1. Name the components which the instructor points out on diagrams, photographs or models.
2. Name the components which the instructor points out during a plant tour and name the reference materials which apply to the components.
3. Name and select the reference materials which describe the sludge dewatering unit and normal operation procedures.

OBJECTIVE 14a.16: Perform the abnormal operation procedures for the sludge dewatering unit.

CONDITIONS: Given a wastestream in a treatment plant and reference materials, including:
- industrial waste records
- operation logs
- operator manuals
- plant performance guides

ACCEPTABLE PERFORMANCE: The student will:

Evaluate the wastestream for abnormal conditions, commenting on:
- alkalinity level
- filterability pH
- flow sludge density
Select the references he needs to return the wastestream to normal.
Perform the abnormal operation procedures.

INSTRUCTOR ACTIVITY:
1. Observe the student as he evaluates the wastestream in a treatment plant.
2. Describe the references needed to correct abnormal conditions of the wastestream.
3. Observe the student performing the abnormal operation procedures in simulated situations and in a treatment plant.

STUDENT ACTIVITY:
1. Evaluate the wastestream in a treatment plant.
2. Select the references needed to correct abnormal conditions of the wastestream.
3. Perform the abnormal operation procedures in simulated situations or in a treatment plant.

<<<<<<>>>
PURPOSE: In this module the student will learn to perform all the activities in the objectives as they apply to a continuous feed centrifuge unit. READ PAGES 1 TO 11 BEFORE USING THIS MODULE.

OBJECTIVES:

14b.1 Identify the sludge dewatering unit.
14b.2 Describe the sludge dewatering process in technical and non-technical terms.
14b.3 Describe the safety procedures for the sludge dewatering unit and explain how the procedures protect employees and visitors.
14b.4 Identify the components of a sludge dewatering unit. Explain the purpose of each component, how the component works and why it is important.
14b.5 Describe the normal operation procedures for the sludge dewatering unit components listed on page 34.
14b.6 Perform the normal operation procedures for the sludge dewatering unit.
14b.7 Describe and perform the start-up and shut-down procedures for the sludge dewatering unit.
14b.8 Describe the abnormal operation procedures for the sludge dewatering process.
14b.9 Describe the preventive maintenance procedures for the sludge dewatering unit.
14b.10 Perform the preventive maintenance procedures for the sludge dewatering unit.
14b.11 Describe the corrective maintenance procedures for the sludge dewatering unit components listed on page 34.
14b.12 Perform the corrective maintenance procedures for the sludge dewatering unit components.
14b.13 Perform the safety procedures for the sludge dewatering unit and demonstrate how they protect employees and visitors.
14b.14 Compare other sludge dewatering units to the continuous feed centrifuge unit (composite model plant unit 0).
14b.15 Name and locate the components of the sludge dewatering unit listed on page 34. Name and select reference materials which explain the normal operation procedures, the purpose of each component, how the component works and why it is important.
14b.16 Perform the abnormal operation procedures for the sludge dewatering unit.

RESOURCES: 3 116 120 125 141 143 144 307 308 309 316
            317 320 321 324 421 459 511 551 552 553 554
            937 990 1033 1034 1399

OBJECTIVE 14b.1: Identify the sludge dewatering unit.

CONDITIONS: Given a unit, a model of a unit or a photograph of a unit.

ACCEPTABLE PERFORMANCE: The student will:
Indicate whether the process unit is used for sludge dewatering.

INSTRUCTOR ACTIVITY: 1. Point out characteristics which distinguish the sludge dewatering unit from other process units.

STUDENT ACTIVITY: 1. Develop a picture file of sludge dewatering units, mark distinguishing characteristics.

OBJECTIVE 14b.2: Describe the sludge dewatering process in technical and nontechnical terms.

CONDITIONS: Given photographs of the sludge dewatering unit.

ACCEPTABLE PERFORMANCE: The student will:
Describe the sludge dewatering unit.
Describe the purpose of sludge dewatering.
Describe how sludge dewatering affects:
solids disposal
pumping and piping
effluent disposal
INSTRUCTOR ACTIVITY:
1. Use diagrams, photographs and slides to describe sludge dewatering.
2. Describe the sludge dewatering process during a plant tour. React to the student's description of the process.

STUDENT ACTIVITY:
1. Describe the sludge dewatering process while viewing photographs, diagrams and slides.
2. Observe and describe the sludge dewatering process during a plant tour.

OBJECTIVE 14b.3: Describe the safety procedures for the sludge dewatering unit and explain how the procedures protect employees and visitors.

CONDITIONS: Given a list of operation and maintenance procedures.

ACCEPTABLE PERFORMANCE: The student will:
Describe the safety procedures for the sludge dewatering unit, commenting on:
- High-risk activities
  - removing debris from channels
  - working with switches in automatic position
- Sources of danger
  - acid wastes
  - caustic wastes
  - chemical slurries
  - deep wells
  - electrical equipment
  - explosive gases
  - moving parts
  - open doors and covers
  - slippery walks
  - toxic gases
  - welding torches
- Safety equipment
  - belt guards
  - ear plugs
  - fire-fighting equipment
  - first-aid kit
  - lockout tags and keys
  - proper lighting
Safety equipment (continued)
- protective clothing
- railings
- stair safety treads
- ventilation system

Explain how the procedures protect employees and visitors.

INSTRUCTOR ACTIVITY:
1. Discuss treatment plant case histories.
2. Describe the conditions in a plant and ask for evaluation.
3. Describe the safety procedures for each operation and maintenance procedure.
4. Prepare slides of sources of danger and high-risk activities.

STUDENT ACTIVITY:
1. Read case histories and comment on employee safety procedures.
2. Evaluate conditions which the instructor has described. Suggest remedies.
3. Role play operation or maintenance procedures. Select proper safety equipment and name the sources of danger and high-risk activities. Develop a manual of safety procedures for the sludge dewatering unit.
4. Identify sources of danger and high-risk activities pictured in slides.

OBJECTIVE 14b.4: Identify the components of a sludge dewatering unit. Explain the purpose of each component, how the component works, and why it is important.

CONDITIONS: Given a sludge dewatering unit, unit components or a diagram, model or photographs of a unit and a list of components.

ACCEPTABLE PERFORMANCE: The student will:

Identify components of the sludge dewatering unit and associated equipment:
- belt conveyor
- chemical conditioner
- blower
- chemical feeder
- centrifuge
- fire-fighting equipment
INSTRUCTOR ACTIVITY:
1. Point out and name components in diagrams, photographs or models.
2. Arrange photographs or models of components in the workshop for student identification.
3. Point out and name components during a plant tour.
4. Question the students about the purpose of each component, how the component works and why it is important.

STUDENT ACTIVITY:
1. Identify the components which the instructor names on diagrams, photographs or models.
2. Identify the components at stations in the workshop in writing.
3. Identify components during a plant tour.
4. Explain the purpose of each component, how the component works and why it is important.

OBJECTIVE 14b.5:
Describe the normal operation procedures for the sludge dewatering unit components listed on page 34.

CONDITIONS:
Given a sludge dewatering unit or slides or photographs of a sludge dewatering unit, a list of components of the unit, a checklist of characteristics and a normal operation procedures manual.

ACCEPTABLE PERFORMANCE:
The student will:
Describe the characteristics of each component which the operator checks to determine whether the component is functioning normally, commenting on:
- color
- pressure
- corrosion
- sound
- flow
- temperature
- motion
- vacuum
- odor
- vibration
- position
Name the sense or indicator which monitors each characteristic.

Explain how often the characteristics of each component must be checked and why the component must be checked on this schedule.

Describe what an operator does if the characteristics of a component indicate that it is not functioning normally, including:
- making adjustments
- deciding about corrective maintenance
- reporting to supervisors
- reporting in written records

Explain why a component's characteristics must be returned to normal.

Describe routine sampling for the sludge dewatering process.

List routine calculations for the sludge dewatering process.

Describe routine procedures for recording data.

INSTRUCTOR ACTIVITY:

1. Describe the characteristics of the components of the sludge dewatering unit.
2. Describe the normal operation procedures for the sludge dewatering unit. Use color pictures.
3. Describe the normal operation procedures during a slide show of components of the sludge dewatering unit.
4. Describe and explain the normal operation procedures during a plant tour. Listen to the student's description of the procedures.

STUDENT ACTIVITY:

1. Develop a checklist, listing the components of the sludge dewatering unit and their normal characteristics.
2. Develop a manual of normal operation procedures.
3. Describe the normal operation procedures during a slide show of components of the sludge dewatering unit.
4. Observe and describe the normal operation procedures during a plant tour.

<<<<<<>>>>>>
OBJECTIVE 14b.6: Perform the normal operation procedures for the sludge dewatering unit.

CONDITIONS: Given a sludge dewatering unit, the manual of normal operation procedures which the student has developed for the sludge dewatering unit and basic references.

ACCEPTABLE PERFORMANCE: The student will:
- Check and evaluate the characteristics of each component, explaining his actions.
- Perform the procedures which an operator follows if the characteristics of a component indicate that it is not functioning normally.
- Perform the routine sampling.
- Perform the routine calculations.
- Perform the routine record keeping.

INSTRUCTOR ACTIVITY:
1. Observe the student demonstrating normal operation procedures in a dry run in a treatment plant.
2. Observe the student performing normal operation procedures in a treatment plant.

STUDENT ACTIVITY:
1. Demonstrate the normal operation procedures in a dry run in a treatment plant.
2. Perform and explain the normal operation procedures in a treatment plant.

OBJECTIVE 14b.7: Describe and perform the start-up and shut-down procedures for the sludge dewatering unit.

CONDITIONS: Given a mock-up, model or photograph of a sludge dewatering unit and a sludge dewatering unit with the manufacturer's operation manual.

ACCEPTABLE PERFORMANCE: The student will:
- Start up and shut down a sludge dewatering unit, following the manufacturer's instructions.
INSTRUCTOR ACTIVITY:
1. Demonstrate and perform the start-up procedures in a treatment plant.
2. Demonstrate and perform the shut-down procedures in a treatment plant.
3. Observe the student performing the start-up procedures in a treatment plant.
4. Observe the student performing the shut-down procedures in a treatment plant.
5. Observe the student as he evaluates his start-up procedures.
6. Observe the student as he evaluates his shut-down procedures.

STUDENT ACTIVITY:
1. Describe the start-up procedures in a dry run in a treatment plant.
2. Describe the shut-down procedures in a dry run in a treatment plant.
3. Perform the start-up procedures in a treatment plant.
4. Perform the shut-down procedures in a treatment plant.
5. Evaluate the operation of the sludge dewatering unit to determine whether correct start-up procedures have been used. Use the normal operation procedures manual which the student has developed. (See objective 1.4.)
6. Evaluate the operation of the sludge dewatering unit to determine whether correct shut-down procedures have been used. Use the normal operation procedures manual which the student has developed. (See objective 1.4.)

OBJECTIVE 14b.8: Describe the abnormal operation procedures for the sludge dewatering process.

CONDITIONS: Given a wastestream in a treatment plant or color photographs of a wastestream, a checklist of the conditions of the wastestream and plant records and reference materials.

ACCEPTABLE PERFORMANCE: The student will: Evaluate the wastestream for abnormal conditions, commenting on:
alcalinity
filterability
flow
level
pH
sludge density

Describe the cause and effect of the abnormal condition.

Explain how often the condition of the wastestream must be checked.

Describe what an operator does if he observes abnormal conditions, including:
- operational changes
- reporting to supervisors
- sampling procedures

Describe how the actions of the operator will improve the condition of the wastestream.

INSTRUCTOR ACTIVITY:

1. Describe and explain the abnormal conditions of the wastestream illustrated in color pictures.
2. Describe and explain the abnormal operation procedures illustrated in pictures and described in plant records and case histories.
3. Describe and explain the abnormal operation procedures during a slide show.
4. Describe and explain the abnormal operation procedures during a plant tour. Listen to the student's description of the procedures.

STUDENT ACTIVITY:

1. Evaluate and explain the abnormal conditions of the wastestream which are illustrated in color pictures.
2. Describe and explain the abnormal operation procedures illustrated in pictures and described in plant records and case histories.
3. Describe and explain the abnormal operation procedures in a class discussion after a slide show.
4. Evaluate and explain the condition of the wastestream during a plant tour. Describe and explain the abnormal operation procedures.

OBJECTIVE 14b.9: Describe the preventive maintenance procedures for the sludge dewatering unit.
CONDITIONS: Given a sludge dewatering unit or pictures and drawings of a sludge dewatering unit and reference materials, including:
- inspection records
- manufacturer's maintenance guides
- plant drawings and specifications
- preventive maintenance schedule

ACCEPTABLE PERFORMANCE: The student will:
Describe these preventive maintenance procedures for the sludge dewatering unit:
- **Cleaning**
  - belt conveyor
  - blower
  - centrifuge
  - chemical conditioner
  - chemical feeder
  - motor
  - pressure gage
  - screw conveyor
  - sludge pump
  - variable speed drive
- **Painting**
  - blower
  - centrifuge
- **Lubrication**
  - belt conveyor
  - blower
  - centrifuge
  - chemical conditioner
  - chemical feeder
  - motor
  - mixing tank
  - screw conveyor
  - sludge pump
  - variable speed drive
- **Replacement**
  - fire-fighting equipment
  - first-aid kit
  - Wear measurement
  - belt conveyor
  - centrifuge
- **Mechanical adjustment**
  - belt conveyor
  - blower
  - centrifuge

Name the reference materials and tools needed to perform the preventive maintenance procedures.

Explain how often each preventive maintenance procedure must be performed.

Explain how an operator determines whether a component needs preventive maintenance.

Describe what an operator does if a component needs preventive maintenance.

Explain why each preventive maintenance procedure is important.
INSTRUCTOR ACTIVITY:

1. Describe and explain the preventive maintenance procedures for the sludge dewatering unit.
2. Describe and explain the preventive maintenance procedures during a slide show.
3. Describe and explain the preventive maintenance procedures during a plant tour.

STUDENT ACTIVITY:

1. Develop a preventive maintenance schedule and a manual of preventive maintenance procedures.
2. Observe, describe and explain the preventive maintenance procedures during a slide show.
3. Observe, describe and explain the preventive maintenance procedures during a plant tour.

OBJECTIVE 14b.10:

Perform the preventive maintenance procedures for the sludge dewatering unit.

CONDITIONS:

Given a sludge dewatering unit and tools and reference materials, including:
- Inspection records
- Manufacturer's maintenance guides
- Plant drawings and specifications
- Preventive maintenance schedule

ACCEPTABLE PERFORMANCE:

The student will:

- Select the reference materials and tools needed to perform the preventive maintenance procedures.
- Apply the preventive maintenance schedule for the sludge dewatering unit, explaining his actions.
- Perform the procedures which an operator follows when a component needs preventive maintenance, explaining his actions.

INSTRUCTOR ACTIVITY:

1. Set up simulated situations in the workshop.
2. Observe student inspection of a treatment plant.
3. Observe the student performing the preventive maintenance procedures in a treatment plant.
STUDENT ACTIVITY:
1. Small groups of students perform the preventive maintenance procedures in simulated situations in the workshop.
2. Inspect a treatment plant. Evaluate and explain the preventive maintenance procedures.
3. Perform and explain the preventive maintenance procedures in a treatment plant.

OBJECTIVE 14b.11:
Describe the corrective maintenance procedures for the sludge dewatering unit components listed on page 34.

CONDITIONS:
Given a sludge dewatering unit or a mock-up, photographs or drawings of a sludge dewatering unit, the manual of operation procedures which the student has developed for the sludge dewatering unit, tools and reference materials, including:
catalogue of replacement parts
equipment catalogues
manufacturer's maintenance guides

ACCEPTABLE PERFORMANCE:
The student will:
Describe how an operator evaluates each component of the sludge dewatering unit for corrective maintenance, commenting on:
color pressure
corrosion sound
flow temperature
motion vacuum
odor vibration
position

Explain why a component has malfunctioned.
Name the reference materials and tools needed to perform the corrective maintenance.
Describe what an operator does when he discovers a malfunction, including:
evaluation of capabilities of plant personnel to perform the procedures
selection of replacement parts
record keeping

Describe how the operator corrects the malfunction.
INSTRUCTOR ACTIVITY: 1. Describe and explain the corrective maintenance procedures for the sludge dewatering unit, using diagrams and pictures.
2. Describe and explain the corrective maintenance procedures during a slide show.
3. Describe and explain the corrective maintenance procedures during treatment plant tours.

STUDENT ACTIVITY: 1. Describe and explain the corrective maintenance procedures in situations described or pictured by the instructor.
2. Describe and explain the corrective maintenance procedures during a slide show.
3. Observe, describe and explain the corrective maintenance procedures during a treatment plant tour.

OBJECTIVE 14b.12: Perform the corrective maintenance procedures for the sludge dewatering unit components.

CONDITIONS: Given a sludge dewatering unit or unit components, the operation procedures manual which the student has developed, tools and reference materials, including:
- catalogue of replacement parts
- equipment catalogues
- manufacturer's maintenance guides
- manufacturer's operation manual

ACCEPTABLE PERFORMANCE: The student will:
Evaluate the components of the sludge dewatering unit for corrective maintenance, explaining why a component has malfunctioned and commenting on:
- color
- pressure
- corrosion
- sound
- flow
- temperature
- motion
- vacuum
- odor
- vibration
- position

Select the reference materials and tools needed to perform the corrective maintenance.
INSTRUCTOR ACTIVITY:

1. Set up simulated situations in the workshop.
2. Observe the student as he evaluates the components in a treatment plant.
3. Observe the student performing the corrective maintenance procedures in a treatment plant.

STUDENT ACTIVITY:

1. Small groups of students perform and explain the corrective maintenance procedures in simulated situations in the workshop.
2. Evaluate the components for corrective maintenance.
3. Perform and explain the corrective maintenance procedures in a treatment plant.

OBJECTIVE 14b.13:

Perform the safety procedures for the sludge dewatering unit and demonstrate how they protect employees and visitors.

CONDITIONS:

Given a list of operation or maintenance procedures, the student's manual of safety procedures, tools and safety equipment.

ACCEPTABLE PERFORMANCE:

The student will:

1. Identify hazardous conditions in the sludge dewatering unit, commenting on:
   - high-risk activities
   - sources of danger
   - safety equipment

2. Explain how the procedures protect employees and visitors.

3. Recommend corrective procedures and correct the unsafe condition.
INSTRUCTOR ACTIVITY:
1. Set up simulated situations in the workshop.
2. Observe the student as he evaluates the safety conditions in a treatment plant.
3. Observe the student performing the safety procedures in a treatment plant.

STUDENT ACTIVITY:
1. Evaluate safety conditions in simulated situations and recommend corrective procedures.
2. Evaluate safety conditions in a treatment plant and recommend corrective procedures.
3. Perform the safety procedures in a treatment plant.

OBJECTIVE 14b.14:
Compare other sludge dewatering units to the continuous feed centrifuge unit (composite model plant unit 0);

CONDITIONS:
Given a process unit and reference materials, including:
equipment catalogues
laboratory reports
manufacturer's bulletins
manufacturer's operation manuals
plant maintenance and operation records

ACCEPTABLE PERFORMANCE:
The student will:
Compare composite model plant unit 0 with:
a vacuum filter unit with cloth.
a vacuum filter unit with coil.
Consider:
availability of replacement parts
capital costs
dependency on surrounding environment
ease of repair
efficiency
flow-handling capabilities
maintenance costs
nuisance to neighbors
operational costs
operational skills
personnel requirements
reliability
resistance to upset
sensitivity of controls
space requirements
waste-handling capabilities
INSTRUCTOR ACTIVITY:

1. Prepare a chart for tabulation of information about the units.
2. Compare composite model plant unit 0 with the other units.
3. Help the student to collect information for reports on the advantages and disadvantages of each unit.

STUDENT ACTIVITY:

1. List information about the units on a chart.
2. Compare the units in a panel discussion.
3. Write a report on the advantages and disadvantages of each unit.

OBJECTIVE 14b.15:

Name and locate the components of the sludge dewatering unit listed on page 34. Name and select reference materials which explain the normal operation procedures, the purpose of each component, how the component works and why it is important.

CONDITIONS:

Given a sludge dewatering unit, unit components or a diagram, model or photographs of a unit and reference materials, including:
- contractor's plans of the sludge dewatering unit
- manufacturer's maintenance guides
- operation and maintenance manuals

ACCEPTABLE PERFORMANCE:

The student will:

Name and locate the components of the sludge dewatering unit.

Name and select reference materials which explain the normal operation procedures, the purpose of each component, how the component works and why it is important.

INSTRUCTOR ACTIVITY:

1. Point out components of the sludge dewatering unit on diagrams, photographs or models.
2. Listen to the student naming the components and the applicable reference materials during a plant tour.
3. Name and display the reference materials which describe the sludge dewatering unit and normal operation procedures.
STUDENT ACTIVITY:

1. Name the components which the instructor points out on diagrams, photographs or models.
2. Name the components which the instructor points out during a plant tour and name the reference materials which apply to the components.
3. Name and select the reference materials which describe the sludge dewatering unit and normal operation procedures.

OBJECTIVE 14b.16:

Perform the abnormal operation procedures for the sludge dewatering unit.

CONDITIONS:

Given a wastestream in a treatment plant and reference materials, including:
- industrial waste records
- operation logs
- operator manuals
- plant performance guides

ACCEPTABLE PERFORMANCE:

The student will:

Evaluate the wastestream for abnormal conditions, commenting on:
- alkalinity
- filterability
- pH
- flow
- sludge density

Select the references he needs to return the wastestream to normal.

Perform the abnormal operation procedures.

INSTRUCTOR ACTIVITY:

1. Observe the student as he evaluates the wastestream in a treatment plant.
2. Describe the references needed to correct abnormal conditions of the wastestream.
3. Observe the student performing the abnormal operation procedures in simulated situations and in a treatment plant.

STUDENT ACTIVITY:

1. Evaluate the wastestream in a treatment plant.
2. Select the references needed to correct abnormal conditions of the wastestream.
3. Perform the abnormal operation procedures in simulated situations or in a treatment plant.
MODULE 15
SOLIDS DISPOSAL
A multiple hearth incinerator unit
Composite Model Plant Unit P

PURPOSE: In this module the student will learn to perform all the activities in the objectives as they apply to a multiple hearth incinerator unit. READ PAGES 1 TO 11 BEFORE USING THIS MODULE.

OBJECTIVES:

15.1 Identify the solids disposal unit.
15.2 Describe the solids disposal process in technical and non-technical terms.
15.3 Describe the safety procedures for the solids disposal unit and explain how the procedures protect employees and visitors.
15.4 Identify the components of a solids disposal unit. Explain the purpose of each component, how the component works and why it is important.
15.5 Describe the normal operation procedures for the solids disposal unit components listed on page 53.
15.6 Perform the normal operation procedures for the solids disposal unit.
15.7 Describe and perform the start-up and shut-down procedures for the solids disposal unit.
15.8 Describe the abnormal operation procedures for the solids disposal process.
15.9 Describe the preventive maintenance procedures for the solids disposal unit.
15.10 Perform the preventive maintenance procedures for the solids disposal unit.
15.11 Describe the corrective maintenance procedures for the solids disposal unit components listed on page 53.
15.12 Perform the corrective maintenance procedures for the solids disposal unit components.
15.13 Perform the safety procedures for the solids disposal unit and demonstrate how they protect employees and visitors.
15.14 Compare other solids disposal units to the multiple hearth incinerator unit (composite model plant unit P).
15.15 Name and locate the components of the solids disposal unit listed on page 53. Name and select reference materials which explain the normal operation procedures, the purpose of each component, how the component works and why it is important.
15.16 Perform the abnormal operation procedures for the solids disposal unit.

OBJECTIVE 15.1: Identify the solids disposal unit.

CONDITIONS: Given a unit, a model of a unit or a photograph of a unit.

ACCEPTABLE PERFORMANCE: The student will:

Indicate whether the process unit is used for solids disposal.

INSTRUCTOR ACTIVITY: 1. Point out characteristics which distinguish the solids disposal unit from other process units.

STUDENT ACTIVITY: 1. Develop a picture file of solids disposal units. Mark distinguishing characteristics.

OBJECTIVE 15.2: Describe the solids disposal process in technical and nontechnical terms.

CONDITIONS: Given photographs of the solids disposal unit.

ACCEPTABLE PERFORMANCE: The student will:

Describe the solids disposal unit, explaining the meaning of:
- combustion chamber
- furnace

Describe the purpose of solids disposal.
Describe how solids disposal affects pumping and piping.

INSTRUCTOR ACTIVITY:
1. Use diagrams, photographs and slides to describe solids disposal.
2. Describe the solids disposal process during a plant tour. React to the student's description of the process.

STUDENT ACTIVITY:
1. Describe the solids disposal process while viewing photographs, diagrams and slides.
2. Observe and describe the solids disposal process during a plant tour.

OBJECTIVE 15.3: Describe the safety procedures for the solids disposal unit and explain how the procedures protect employees and visitors.

CONDITIONS: Given a list of operation and maintenance procedures.

ACCEPTABLE PERFORMANCE: The student will:
- Describe the safety procedures for the solids disposal unit, commenting on:
  - High-risk activities
    - handling hot materials
    - removing debris from channels
    - working with switches in automatic position
  - Sources of danger
    - acid wastes
    - caustic wastes
    - deep wells
    - electrical equipment
    - explosive gases
    - flammable paint
    - heated parts
    - hot ash
    - moving parts
    - open doors and covers
    - slippery walks
    - toxic gases
Safety equipment:
- electrical lockout tags and keys
- fire-fighting equipment
- first-aid kit
- protective clothing
- railings
- safety glasses
- stair safety treads

Explain how the procedures protect employees and visitors.

INSTRUCTOR ACTIVITY:

1. Discuss treatment plant case histories.
2. Describe the conditions in a plant and ask for evaluation.
3. Describe the safety procedures for each operation and maintenance procedure.
4. Prepare slides of sources of danger and high-risk activities.

STUDENT ACTIVITY:

1. Read case histories and comment on employee safety procedures.
2. Evaluate conditions which the instructor has described. Suggest remedies.
3. Role play operation or maintenance procedures. Select proper safety equipment and name the sources of danger and high-risk activities. Develop a manual of safety procedures for the solids disposal unit.
4. Identify sources of danger and high-risk activities.

OBJECTIVE 15.4:
Identify the components of a solids disposal unit. Explain the purpose of each component, how the component works and why it is important.

CONDITIONS:
Given a solids disposal unit, unit components or a diagram, model or photographs of a unit and a list of components.

ACCEPTABLE PERFORMANCE:
The student will:
Identify components of the solids disposal unit and associated equipment:
OBJECTIVE 15.5: Describe the normal operation procedures for the solids disposal unit components listed above.

CONDITIONS: Given a solids disposal unit or slides or photographs of a solids disposal unit, a list of components of the unit, a checklist of characteristics and a normal operation procedures manual.
ACCEPTABLE PERFORMANCE:
The student will:

- Describe the characteristics of each component which the operator checks to determine whether the component is functioning normally, commenting on:
  - color
  - pressure
  - corrosion
  - sound
  - motion
  - temperature
  - odor
  - vibration
  - position

- Name the sense or indicator which monitors each characteristic.

- Explain how often the characteristics of each component must be checked and why the component must be checked on this schedule.

- Describe what an operator does if the characteristics of a component indicate that it is not functioning normally, including:
  - making adjustments
  - deciding about corrective maintenance
  - reporting to supervisors
  - reporting in written records

- Explain why a component's characteristics must be returned to normal.

INSTRUCTOR ACTIVITY:

1. Describe the characteristics of the components of the solids disposal unit.
2. Describe the normal operation procedures for the solids disposal unit. Use color pictures.
3. Describe the normal operation procedures during a slide show of components of the solids disposal unit.
4. Describe and explain the normal operation procedures during a plant tour. Listen to the student's description of the procedures.

STUDENT ACTIVITY:

1. Develop a checklist, listing the components of the solids disposal unit and their normal characteristics.
2. Develop a manual of normal operation procedures.
3. Describe the normal operation procedures during a slide show of components of the solids disposal unit.

4. Observe and describe the normal operation procedures during a plant tour.

OBJECTIVE 15.6: Perform the normal operation procedures for the solids disposal unit.

CONDITIONS: Given a solids disposal unit, the manual of normal operation procedures which the student has developed for the solids disposal unit and basic references.

ACCEPTABLE PERFORMANCE: The student will:
- Check and evaluate the characteristics of each component, explaining his actions.
- Perform the procedures which an operator follows if the characteristics of a component indicate that it is not functioning normally.
- Perform the routine sampling.
- Perform the routine calculations.
- Perform the routine record keeping.

INSTRUCTOR ACTIVITY:
1. Observe the student demonstrating normal operation procedures in a dry run in a treatment plant.
2. Observe the student performing normal operation procedures in a treatment plant.

STUDENT ACTIVITY:
1. Demonstrate the normal operation procedures in a dry run in a treatment plant.
2. Perform and explain the normal operation procedures in a treatment plant.

OBJECTIVE 15.7: Describe and perform the start-up and shut-down procedures for the solids disposal unit.
CONDITIONS: 
Given a mock-up, model or photograph of a solids disposal unit and a solids disposal unit with the manufacturer's operation manual.

ACCEPTABLE PERFORMANCE: 
The student will: 
Start up and shut down a solids disposal unit, following the manufacturer's instructions.

INSTRUCTOR ACTIVITY: 
1. Demonstrate and perform the start-up procedures in a treatment plant.
2. Demonstrate and perform the shut-down procedures in a treatment plant.
3. Observe the student performing the start-up procedures in a treatment plant.
4. Observe the student performing the shut-down procedures in a treatment plant.
5. Observe the student as he evaluates his start-up procedures.
6. Observe the student as he evaluates his shut-down procedures.

STUDENT ACTIVITY: 
1. Describe the start-up procedures in a dry run in a treatment plant.
2. Describe the shut-down procedures in a dry run in a treatment plant.
3. Perform the start-up procedures in a treatment plant.
4. Perform the shut-down procedures in a treatment plant.
5. Evaluate the operation of the solids disposal unit to determine whether correct start-up procedures have been used. Use the normal operation procedures manual which the student has developed. (See objective 1.4.)
6. Evaluate the operation of the solids disposal unit to determine whether correct shut-down procedures have been used. Use the normal operation procedures manual which the student has developed. (See objective 1.4.)

OBJECTIVE 15.8: 
Describe the abnormal operation procedures for the solids disposal process.
CONDITIONS: Given a wastestream in a treatment plant or color photographs of a wastestream, a checklist of the conditions of the wastestream and plant records and reference materials.

ACCEPTABLE PERFORMANCE: The student will:

- Evaluate the wastestream for abnormal conditions, commenting on:
  - flow
  - temperature
  - moisture content
  - volatile content
  - odor

- Describe the cause and effect of the abnormal condition.

- Explain how often the condition of the wastestream must be checked.

- Describe what an operator does if he observes abnormal conditions, including:
  - operational changes
  - reporting to supervisors
  - sampling procedures

- Describe how the actions of the operator will improve the condition of the wastestream.

INSTRUCTOR ACTIVITY:

1. Describe and explain the abnormal conditions of the wastestream illustrated in color pictures.
2. Describe and explain the abnormal operation procedures illustrated in pictures and described in plant records and case histories.
3. Describe and explain the abnormal operation procedures during a slide show.
4. Describe and explain the abnormal operation procedures during a plant tour. Listen to the student's description of the procedures.

STUDENT ACTIVITY:

1. Evaluate and explain the abnormal conditions of the wastestream which are illustrated in color pictures.
2. Describe and explain the abnormal operation procedures illustrated in pictures and described in plant records and case histories.
3. Describe and explain the abnormal operation procedures in a class discussion after a slide show.
4. Evaluate and explain the condition of the wastestream
during a plant tour. Describe and explain the abnormal operation procedures.

OBJECTIVE 15.9: Describe the preventive maintenance procedures for the solids disposal unit.

CONDITIONS: Given a solids disposal unit or pictures and drawings of a solids disposal unit and reference materials, including:
- inspection records
- manufacturer's maintenance guides
- plant drawings and specifications
- preventive maintenance schedule

ACCEPTABLE PERFORMANCE: The student will:

Describe these preventive maintenance procedures for the solids disposal unit:

Cleaning
- ash hopper
- ash pump
- conveyor belt
- fan
- grinder
- motor
- plow
- rake drive motor
- screen
- scrubber

Lubrication
- ash pump
- fan
- gear
- grinder
- motor
- rake drive motor
- roller
- sprocket
- switchgear
- water valve
- Painting

Mechanical adjustment
- ash pump
- bearing
- bubble control
- chain

Replacement
- fire-fighting equipment
- first-aid kit

Cleaning
- conveyor belt
- drive belt
- fan
- gear
- grinder
- motor
- plow
- rake
- rake-cleaner
- rake drive motor
- roller
- sprocket
- switchgear
- water valve
- Painting
- ash hopper
- ash pump
- fan
- motor
- rake drive motor
- fire-fighting equipment
- first-aid kit
Objectives:

1. Describe and explain the preventive maintenance procedures for the solids disposal unit.
2. Describe and explain the preventive maintenance procedures during a slide show.
3. Describe and explain the preventive maintenance procedures during a plant tour.

Conditions:
Given a solids disposal unit and tools and reference materials, including:
- inspection records
- manufacturer's maintenance guides
- plant drawings and specifications
- preventive maintenance schedule

Objective 15.10:
Perform the preventive maintenance procedures for the solids disposal unit.
ACCEPTABLE PERFORMANCE: The student will:

Select the reference materials and tools needed to perform the preventive maintenance procedures.

Apply the preventive maintenance schedule for the solids disposal unit, explaining his actions.

Perform the procedures which an operator follows when a component needs preventive maintenance, explaining his actions.

INSTRUCTOR ACTIVITY:

1. Set up simulated situations in the workshop.
2. Observe student inspection of a treatment plant.
3. Observe the student performing the preventive maintenance procedures in a treatment plant.

STUDENT ACTIVITY:

1. Small groups of students perform the preventive maintenance procedures in simulated situations in the workshop.
2. Inspect a treatment plant. Evaluate and explain the preventive maintenance procedures.
3. Perform and explain the preventive maintenance procedures in a treatment plant.

OBJECTIVE 15.11: Describe the corrective maintenance procedures for the solids disposal unit components listed on page 53.

CONDITIONS: Given a solids disposal unit or a mock-up, photographs or drawings of a solids disposal unit, the manual of operation procedures which the student has developed for the solids disposal unit, tools and reference materials, including:
- catalogue of replacement parts
- equipment catalogues
- manufacturer's maintenance guides

ACCEPTABLE PERFORMANCE: The student will:

Describe how an operator evaluates each component of the solids disposal unit for corrective maintenance, commenting on:
- color
- motion
- corrosion
- odor
INSTRUCTOR ACTIVITY:

1. Describe and explain the corrective maintenance procedures for the solids disposal unit, using diagrams and pictures.
2. Describe and explain the corrective maintenance procedures during a slide show.
3. Describe and explain the corrective maintenance procedures during treatment plant tours.

STUDENT ACTIVITY:

1. Describe and explain the corrective maintenance procedures in situations described or pictured by the instructor.
2. Describe and explain the corrective maintenance procedures during a slide show.
3. Observe, describe and explain the corrective maintenance procedures during a treatment plant tour.

OBJECTIVE 15.12: Perform the corrective maintenance procedures for the solids disposal unit components.

CONDITIONS: Given a solids disposal unit or unit components, the operation procedures manual which the student has developed, tools and reference materials, including:
- catalogue of replacement parts
- equipment catalogues
- manufacturer's maintenance guides
- manufacturer's operation manual
ACCEPTABLE PERFORMANCE: The student will:

Evaluate the components of the solids disposal unit for corrective maintenance, explaining why a component has malfunctioned and commenting on:
- color
- corrosion
- motion
- odor
- position
- pressure
- sound
- temperature
- vibration

Select the reference materials and tools needed to perform corrective maintenance.

Perform the procedures which an operator follows when a component malfunctions, including:
- evaluation of capabilities of plant personnel to perform the procedures
- selection of replacement parts
- record keeping

Correct the malfunction.

INSTRUCTOR ACTIVITY: 1. Set up simulated situations in the workshop.
2. Observe the student as he evaluates the components in a treatment plant.
3. Observe the student performing the corrective maintenance procedures in a treatment plant.

STUDENT ACTIVITY: 1. Small groups of students perform and explain the corrective maintenance procedures in simulated situations in the workshop.
2. Evaluate the components for corrective maintenance.
3. Perform and explain the corrective maintenance procedures in a treatment plant.

OBJECTIVE 15.13: Perform the safety procedures for the solids disposal unit and demonstrate how they protect employees and visitors.

CONDITIONS: Given a list of operation or maintenance procedures, the student's manual of safety procedures, tools and safety equipment.
ACCEPTABLE PERFORMANCE: The student will:
Identify hazardous conditions in the solids disposal unit, commenting on:
- high-risk activities
- sources of danger
- safety equipment

Explain how the procedures protect employees and visitors.
Recommend corrective procedures and correct the unsafe condition.

INSTRUCTOR ACTIVITY:
1. Set up simulated situations in the workshop.
2. Observe the student as he evaluates the safety conditions in a treatment plant.
3. Observe the student performing the safety procedures in a treatment plant.

STUDENT ACTIVITY:
1. Evaluate safety conditions in simulated situations and recommend corrective procedures.
2. Evaluate safety conditions in a treatment plant and recommend corrective procedures.
3. Perform the safety procedures in a treatment plant.

OBJECTIVE 15.14: Compare other solids disposal units to the multiple hearth incinerator unit (composite model plant unit P).

CONDITIONS: Given a process unit and reference materials, including:
- equipment catalogues
- laboratory reports
- manufacturer's bulletins
- manufacturer's operation manuals
- plant maintenance and operation records

ACCEPTABLE PERFORMANCE: The student will:
Compare composite model plant unit P with:
- a Fluidized bed incinerator unit.

Consider:
- availability of replacement parts
- capital costs
dependency on surrounding environment
ease of repair
efficiency
flow-handling capabilities
maintenance costs
nuisance to neighbors
operational costs
operational skills
personnel requirements
reliability
resistance to upset
sensitivity of controls
space requirements
waste-handling capabilities

INSTRUCTOR ACTIVITY:
1. Prepare a chart for tabulation of information about the units.
2. Compare composite model plant unit P with the other units.
3. Help the student to collect information for reports on the advantages and disadvantages of each unit.

STUDENT ACTIVITY:
1. List information about the units on a chart.
2. Compare the units in a panel discussion.
3. Write a report on the advantages and disadvantages of each unit.

OBJECTIVE 15.15:
Name and locate the components of the solids disposal unit listed on page 53. Name and select reference materials which explain the normal operation procedures, the purpose of each component, how the component works and why it is important.

CONDITIONS:
Given a solids disposal unit, unit components or a diagram, model or photographs of a unit and reference materials, including:
contractor's plans of the solids disposal unit
manufacturer's maintenance guides
operation and maintenance manuals
ACCEPTABLE PERFORMANCE: The student will:

- Name and locate the components of the solids disposal unit.
- Name and select reference materials which explain the normal operation procedures, the purpose of each component, how the component works and why it is important.

INSTRUCTOR ACTIVITY:

1. Point out components of the solids disposal unit on diagrams, photographs or models.
2. Listen to the student naming the components and the applicable reference materials during a plant tour.
3. Name and display the reference materials which describe the solids disposal unit and normal operation procedures.

STUDENT ACTIVITY:

1. Name the components which the instructor points out on diagrams, photographs or models.
2. Name the components which the instructor points out during a plant tour and name the reference materials which apply to the components.
3. Name and select the reference materials which describe the solids disposal unit and normal operation procedures.

OBJECTIVE 15.16:

Perform the abnormal operation procedures for the solids disposal unit.

CONDITIONS:

Given a wastestream in a treatment plant and reference materials, including:
- industrial waste records
- operation logs
- operator manuals
- plant performance guides

ACCEPTABLE PERFORMANCE: The student will:

Evaluate the wastestream for abnormal conditions, commenting on:
- flow
- temperature
- moisture content
- volatile content
- odor
Select the references he needs to return the wastestream to normal.
Perform the abnormal operation procedures.

INSTRUCTOR ACTIVITY:
1. Observe the student as he evaluates the wastestream in a treatment plant.
2. Describe the references needed to correct abnormal conditions of the wastestream.
3. Observe the student performing the abnormal operation procedures in simulated situations and in a treatment plant.

STUDENT ACTIVITY:
1. Evaluate the wastestream in a treatment plant.
2. Select the references needed to correct abnormal conditions of the wastestream.
3. Perform the abnormal operation procedures in simulated situations or in a treatment plant.
MODULE 16

EFFLUENT DISPOSAL

A direct reuse system

Composite Model Plant Unit Q

PURPOSE: In this module the student will learn to perform all the activities in the objectives as they apply to a direct reuse system. READ PAGES 1 TO 11 BEFORE USING THIS MODULE.

OBJECTIVES:

16.1 Identify the effluent disposal unit.
16.2 Describe the effluent disposal process in technical and non-technical terms.
16.3 Describe the safety procedures for the effluent disposal unit and explain how the procedures protect employees and visitors.
16.4 Identify the components of an effluent disposal unit. Explain the purpose of each component, how the component works and why it is important.
16.5 Describe the normal operation procedures for the effluent disposal unit components listed on page 71.
16.6 Perform the normal operation procedures for the effluent disposal unit.
16.7 Describe and perform the start-up and shut-down procedures for the effluent disposal unit.
16.8 Describe the abnormal operation procedures for the effluent disposal process.
16.9 Describe the preventive maintenance procedures for the effluent disposal unit.
16.10 Perform the preventive maintenance procedures for the effluent disposal unit.
16.11 Describe the corrective maintenance procedures for the effluent disposal unit components listed on page 71.
16.12 Perform the corrective maintenance procedures for the effluent disposal unit components.
16.13 Perform the safety procedures for the effluent disposal unit and demonstrate how they protect employees and visitors.
16.14 Compare other effluent disposal units to the direct reuse system (composite model plant unit Q).
16.15 Name and locate the components of the effluent disposal unit listed on page 71. Name and select reference materials which explain the normal operation procedures, the purpose of each component, how the component works and why it is important.
16.16 Perform the abnormal operation procedures for the effluent disposal unit.
OBJECTIVE 16.1: Identify the effluent disposal unit.

CONDITIONS: Given a unit, a model of a unit or a photograph of a unit.

ACCEPTABLE PERFORMANCE: The student will:

Indicate whether the process unit is used for effluent disposal.

INSTRUCTOR ACTIVITY: 1. Point out characteristics which distinguish the effluent disposal unit from other process units.

STUDENT ACTIVITY: 1. Develop a picture file of effluent disposal units. Mark distinguishing characteristics.

OBJECTIVE 16.2: Describe the effluent disposal process in technical and nontechnical terms.

CONDITIONS: Given photographs of the effluent disposal unit.

ACCEPTABLE PERFORMANCE: The student will:

Describe the effluent disposal unit, explaining the quality of treatment required for:
- industrial use
- process water
- recreational use

Describe the purpose of effluent disposal.

Describe how effluent disposal affects:
- prechlorination
- screening and grinding
- unit removal
primary sedimentation
trickling filtration
aeration
secondary sedimentation
pond stabilization
thickening
first stage digestion
second stage digestion
sludge conditioning
post-chlorination
sludge dewatering

INSTRUCTOR ACTIVITY:  
1. Use diagrams, photographs and slides to describe effluent disposal.
2. Describe the effluent disposal process during a plant tour. React to the student's description of the process.

STUDENT ACTIVITY:  
1. Describe the effluent disposal process while viewing photographs, diagrams and slides.
2. Observe and describe the effluent disposal process during a plant tour.

OBJECTIVE 16.3:  
Describe the safety procedures for the effluent disposal unit and explain how the procedures protect employees and visitors.

CONDITIONS:  
Given a list of operation and maintenance procedures.

ACCEPTABLE PERFORMANCE:  
The student will:

Describe the safety procedures for the effluent disposal unit, commenting on:
High-risk activities
- removing debris from channels
- working with switches in automatic position
Sources of danger
- acid wastes
- caustic wastes
- deep wells
- electrical equipment
- explosive gases
Effluent Disposal

INSTRUCTOR ACTIVITY:
1. Discuss treatment plant case histories.
2. Describe the conditions in a plant and ask for evaluation.
3. Describe the safety procedures for each operation and maintenance procedure.
4. Prepare slides of sources of danger and high-risk activities.

STUDENT ACTIVITY:
1. Read case histories and comment on employee safety procedures.
2. Evaluate conditions which the instructor has described. Suggest remedies.
3. Role play operation or maintenance procedures. Select proper safety equipment and name the sources of danger and high-risk activities. Develop a manual of safety procedures for the effluent disposal unit.
4. Identify sources of danger and high-risk activities pictured in slides.

OBJECTIVE 16.4: Identify the components of an effluent disposal unit. Explain the purpose of each component, how the component works and why it is important.
CONDITIONS: Given an effluent disposal unit, unit components or a diagram, model or photographs of a unit and a list of components.

ACCEPTABLE PERFORMANCE: The student will:

Identify components of the effluent disposal unit and associated equipment:
- bearing
- channel
- coupling
- filter
- fire-fighting equipment
- pump
- first-aid kit
- valve

Explain the purpose of each component, how the component works and why it is important.

INSTRUCTOR ACTIVITY:
1. Point out and name components in diagrams, photographs or models.
2. Arrange photographs or models of effluent disposal components in the workshop for student identification.
3. Point out and name components during a plant tour.
4. Question the students about the purpose of each component, how the component works and why it is important.

STUDENT ACTIVITY:
1. Identify the components which the instructor names on diagrams, photographs or models.
2. Identify the components at stations in the workshop in writing.
3. Identify components during a plant tour.
4. Explain the purpose of each component, how the component works and why it is important.

OBJECTIVE 16.5: Describe the normal operation procedures for the effluent disposal unit components listed above.

CONDITIONS: Given an effluent disposal unit or slides or photographs of an effluent disposal unit, a list of components of the unit, a checklist of characteristics and a normal operation procedures manual.
ACCEPTABLE PERFORMANCE: The student will:

Describe the characteristics of each component which the operator checks to determine whether the component is functioning normally, commenting on:
- color
- corrosion
- flow
- motion
- odor
- position
- pressure
- sound
- temperature
- vibration

Name the sense or indicator which monitors each characteristic.

Explain how often the characteristics of each component must be checked and why the component must be checked on this schedule.

Describe what an operator does if the characteristics of a component indicate that it is not functioning normally, including:
- making adjustments
- deciding about corrective maintenance
- reporting to supervisors
- reporting in written records

Explain why a component's characteristics must be returned to normal.

Describe routine sampling for the effluent disposal process.

List routine calculations for the effluent disposal process.

Describe routine procedures for recording data.

INSTRUCTOR ACTIVITY:

1. Describe the characteristics of the components of the effluent disposal unit.
2. Describe the normal operation procedures for the effluent disposal unit. Use color pictures.
3. Describe the normal operation procedures during a slide show of components of the effluent disposal unit.
4. Describe and explain the normal operation procedures during a plant tour. Listen to the student's description of the procedures.

STUDENT ACTIVITY:

1. Develop a checklist, listing the components of the effluent disposal unit and their normal characteristics.
2. Develop a manual of normal operation procedures.

3. Describe the normal operation procedures during a slide show of components of the effluent disposal unit.

4. Observe and describe the normal operation procedures during a plant tour.

OBJECTIVE 16.6: Perform the normal operation procedures for the effluent disposal unit.

CONDITIONS: Given an effluent disposal unit, the manual of normal operation procedures which the student has developed for the effluent disposal unit and basic references.

ACCEPTABLE PERFORMANCE: The student will:

- Check and evaluate the characteristics of each component, explaining his actions.
- Perform the procedures which an operator follows if the characteristics of a component indicate that it is not functioning normally.
- Perform the routine sampling.
- Perform the routine calculations.
- Perform the routine record keeping.

INSTRUCTOR ACTIVITY:

1. Observe the student demonstrating normal operation procedures in a dry run in a treatment plant.
2. Observe the student performing normal operation procedures in a treatment plant.

STUDENT ACTIVITY:

1. Demonstrate the normal operation procedures in a dry run in a treatment plant.
2. Perform and explain the normal operation procedures in a treatment plant.

OBJECTIVE 16.7: Describe and perform the start-up and shut-down procedures for the effluent disposal unit.
CONDITIONS: Given a mock-up, model or photograph of an effluent disposal unit and an effluent disposal unit with the manufacturer's operation manual.

ACCEPTABLE PERFORMANCE: The student will:
Start up and shut down an effluent disposal unit, following the manufacturer's instructions.

INSTRUCTOR ACTIVITY:
1. Demonstrate and perform the start-up procedures in a treatment plant.
2. Demonstrate and perform the shut-down procedures in a treatment plant.
3. Observe the student performing the start-up procedures in a treatment plant.
4. Observe the student performing the shut-down procedures in a treatment plant.
5. Observe the student as he evaluates his start-up procedures.
6. Observe the student as he evaluates his shut-down procedures.

STUDENT ACTIVITY:
1. Describe the start-up procedures in a dry run in a treatment plant.
2. Describe the shut-down procedures in a dry run in a treatment plant.
3. Perform the start-up procedures in a treatment plant.
4. Perform the shut-down procedures in a treatment plant.
5. Evaluate the operation of the effluent disposal unit to determine whether correct start-up procedures have been used. Use the normal operation procedures manual which the student has developed. (See objective 1.4.)
6. Evaluate the operation of the effluent disposal unit to determine whether correct shut-down procedures have been used. Use the normal operation procedures manual which the student has developed. (See objective 1.4.)

OBJECTIVE 16.8: Describe the abnormal operation procedures for the effluent disposal process.
CONDITIONS: Given a wastestream in a treatment plant or color photographs of a wastestream, a checklist of the conditions of the wastestream and plant records and reference materials.

ACCEPTABLE PERFORMANCE: The student will:

Evaluate the wastestream for abnormal conditions, commenting on:

- acidity
- ammonia nitrogen
- BOD
- chloride
- chlorine demand
- chlorine residual
- COD
- coliforms
- color
- DO
- floating material
- flow
- foam
- grease
- grit

Describe the cause and effect of the abnormal condition.

Explain how often the condition of the wastestream must be checked.

Describe what an operator does if he observes abnormal conditions, including:

- operational changes
- reporting to supervisors
- sampling procedures

Describe how the actions of the operator will improve the condition of the wastestream.

INSTRUCTOR ACTIVITY:

1. Describe and explain the abnormal conditions of the wastestream illustrated in color pictures.
2. Describe and explain the abnormal operation procedures illustrated in pictures and described in plant records and case histories.
3. Describe and explain the abnormal operation procedures during a slide show.
4. Describe and explain the abnormal operation procedures during a plant tour. Listen to the student's description of the procedures.

STUDENT ACTIVITY:

1. Evaluate and explain the abnormal conditions of the wastestream which are illustrated in color pictures.
2. Describe and explain the abnormal operation procedures illustrated in pictures and described in plant records and case histories.
3. Describe and explain the abnormal operation procedures in a class discussion after a slide show.
4. Evaluate and explain the condition of the wastestream during a plant tour. Describe and explain the abnormal operation procedures.

OBJECTIVE 16.9:

Describe the preventive maintenance procedures for the effluent disposal unit.

CONDITIONS:

Given an effluent disposal unit or pictures and drawings of an effluent disposal unit and reference materials, including:
- inspection records
- manufacturer's maintenance guides
- plant drawings and specifications
- preventive maintenance schedule

ACCEPTABLE PERFORMANCE:

The student will:

Describe these preventive maintenance procedures for the effluent disposal unit:

Cleaning
- channel
- filter
- flow-rate control mechanic
- motor
- piping
- pump

Lubrication
- bearing
- coupling
- filter
- flow-rate control mechanic
- motor
- pressure control pump
- valve

Mechanical adjustment
- bearing
- coupling
- filter
- flow-rate control mechanic
- motor
- pressure control pump
- valve

Painting
- channel
Painting (continued)  fire-fighting equipment
motor   first-aid kit
piping   pipe
pump   valve
Replacement   Wear measurement
bearing   bearing
coupling   coupling

Name the reference materials and tools needed to perform the preventive maintenance procedures.

Explain how often each preventive maintenance procedure must be performed.

Explain how an operator determines whether a component needs preventive maintenance.

Describe what an operator does if a component needs preventive maintenance.

Explain why each preventive maintenance procedure is important.

INSTRUCTOR ACTIVITY:
1. Describe and explain the preventive maintenance procedures for the effluent disposal unit.
2. Describe and explain the preventive maintenance procedures during a slide show.
3. Describe and explain the preventive maintenance procedures during a plant tour.

STUDENT ACTIVITY:
1. Develop a preventive maintenance schedule and a manual of preventive maintenance procedures.
2. Observe, describe and explain the preventive maintenance procedures during a slide show.
3. Observe, describe and explain the preventive maintenance procedures during a plant tour.

OBJECTIVE 16.10: Perform the preventive maintenance procedures for the effluent disposal unit.

CONDITIONS: Given an effluent disposal unit, and tools and reference materials, including:
inspection records
manufacturer's maintenance guides
plant drawings and specifications
preventive maintenance schedule
ACCEPTABLE PERFORMANCE: The student will:

Select the reference materials and tools needed to perform the preventive maintenance procedures.

Apply the preventive maintenance schedule for the effluent disposal unit, explaining his actions.

Perform the procedures which an operator follows when a component needs preventive maintenance, explaining his actions.

INSTRUCTOR ACTIVITY: 1. Set up simulated situations in the workshop.

2. Observe student inspection of a treatment plant.

3. Observe the student performing the preventive maintenance procedures in a treatment plant.

STUDENT ACTIVITY: 1. Small groups of students perform the preventive maintenance procedures in simulated situations in the workshop.

2. Inspect a treatment plant. Evaluate and explain the preventive maintenance procedures.

3. Perform and explain the preventive maintenance procedures in a treatment plant.

OBJECTIVE 16.11: Describe the corrective maintenance procedures for the effluent disposal unit components listed on page 71.

CONDITIONS: Given an effluent disposal unit or a mock-up, photographs or drawings of an effluent disposal unit, the manual of operation procedures which the student has developed for the effluent disposal unit, tools and reference materials, including:

- catalogue of replacement parts
- equipment catalogues
- manufacturer's maintenance guides

ACCEPTABLE PERFORMANCE: The student will:

Describe how an operator evaluates each component of the effluent disposal unit for corrective maintenance, commenting on:

- color
- flow
- corrosion
- motion
OBJECTIVE 16.12:

Perform the corrective maintenance procedures for the effluent disposal unit components.

CONDITIONS:

Given an effluent disposal unit or unit components, the operation procedures manual which the student has developed, tools and reference materials, including:
- catalogue of replacement parts
- equipment catalogues
- manufacturer's maintenance guides
- manufacturer's operation manual

INSTRUCTOR ACTIVITY:

1. Describe and explain the corrective maintenance procedures for the effluent disposal unit, using diagrams and pictures.
2. Describe and explain the corrective maintenance procedures during a slide show.
3. Describe and explain the corrective maintenance procedures during treatment plant tours.

STUDENT ACTIVITY:

1. Describe and explain the corrective maintenance procedures in situations described or pictured by the instructor.
2. Describe and explain the corrective maintenance procedures during a slide show.
3. Observe, describe, and explain the corrective maintenance procedures during a treatment plant tour.

Explain why a component has malfunctioned.

Name the reference materials and tools needed to perform the corrective maintenance.

Describe what an operator does when he discovers a malfunction, including:
- evaluation of capabilities of plant personnel to perform the procedures
- selection of replacement parts
- record keeping

Describe how the operator corrects the malfunction.
ACCEPTABLE PERFORMANCE: The student will:

Evaluate the components of the effluent disposal unit for corrective maintenance, explaining why a component has malfunctioned and commenting on:
- color
- corrosion
- flow
- motion
- odor

Select the reference materials and tools needed to perform the corrective maintenance.

Perform the procedures which an operator follows when a component malfunctions, including:
- evaluation of capabilities of plant personnel to perform the procedures
- selection of replacement parts
- record keeping

Correct the malfunction.

INSTRUCTOR ACTIVITY: 1. Set up simulated situations in the workshop.
2. Observe the student as he evaluates the components in a treatment plant.
3. Observe the student performing the corrective maintenance procedures in a treatment plant.

STUDENT ACTIVITY: 1. Small groups of students perform and explain the corrective maintenance procedures in simulated situations in the workshop.
2. Evaluate the components for corrective maintenance.
3. Perform and explain the corrective maintenance procedures in a treatment plant.

OBJECTIVE 16.13: Perform the safety procedures for the effluent disposal unit and demonstrate how they protect employees and visitors.

CONDITIONS: Given a list of operation or maintenance procedures, the student's manual of safety procedures, tools and safety equipment.
ACCEPTABLE PERFORMANCE: The student will:

- Identify hazardous conditions in the effluent disposal unit, commenting on:
  - high-risk activities
  - sources of danger
  - safety equipment

- Explain how the procedures protect employees and visitors.

- Recommend corrective procedures and correct the unsafe condition.

INSTRUCTOR ACTIVITY:

1. Set up simulated situations in the workshop.
2. Observe the student as he evaluates the safety conditions in a treatment plant.
3. Observe the student performing the safety procedures in a treatment plant.

STUDENT ACTIVITY:

1. Evaluate safety conditions in simulated situations and recommend corrective procedures.
2. Evaluate safety conditions in a treatment plant and recommend corrective procedures.
3. Perform the safety procedures in a treatment plant.

OBJECTIVE 16.14: Compare other effluent disposal units to the direct reuse system (composite model plant unit Q).

CONDITIONS: Given a process unit and reference materials, including:
- equipment catalogues
- laboratory reports
- manufacturer's bulletins
- manufacturer's operation manuals
- plant maintenance and operation records

ACCEPTABLE PERFORMANCE: The student will:

- Compare composite model plant unit Q with:
  - an underground disposal system
  - a dilution system
  - an irrigation system
  - an intermittent sand filter unit as used in tertiary treatment.
Consider:
- availability of replacement parts
- capital costs
- dependency on surrounding environment
- ease of repair
- efficiency
- flow-handling capabilities
- maintenance costs
- nuisance to neighbors
- operational costs
- operational skills
- personnel requirements
- reliability
- resistance to upset
- sensitivity of controls
- space requirements
- waste-handling capabilities

INSTRUCTOR ACTIVITY:
1. Prepare a chart for tabulation of information about the units.
2. Compare composite model plant unit Q with the other units.
3. Help the student to collect information for reports on the advantages and disadvantages of each unit.

STUDENT ACTIVITY:
1. List information about the units on a chart.
2. Compare the units in a panel discussion.
3. Write a report on the advantages and disadvantages of each unit.

OBJECTIVE 16.15:
Name and locate the components of the effluent disposal unit listed on page 71. Name and select reference materials which explain the normal operation procedures, the purpose of each component, how the component works and why it is important.

CONDITIONS:
Given an effluent disposal unit, unit components or a diagram, model or photographs of a unit and reference materials, including:
- contractor's plans of the effluent disposal unit
- manufacturer's maintenance guides
- operation and maintenance manuals
OBJECTIVE 16.16: Perform the abnormal operation procedures for the effluent disposal unit.

CONDITIONS: Given a wastestream in a treatment plant and reference materials, including:
- industrial waste records
- operation logs
- operator manuals
- plant performance guides

ACCEPTABLE PERFORMANCE: The student will:
- Evaluate the wastestream for abnormal conditions, commenting on:
  - acidity
  - ammonia nitrogen
  - BOD
  - chloride
chlorine demand  nitrite nitrogen
chlorine residual  odor
COD  oil
coliforms  organic and total Kjedahl
color  nitrogen
DO  orthophosphate
floating material  pH
flow  relative stability
foam  settleable matter
grease  sludge density
grit  suspended solids
ice  turbidity
nitrate nitrogen

Select the references he needs to return the waste-stream to normal.
Perform the abnormal operation procedures.

INSTRUCTOR ACTIVITY:
1. Observe the student as he evaluates the waste-stream in a treatment plant.
2. Describe the references needed to correct abnormal conditions of the waste-stream.
3. Observe the student performing the abnormal operation procedures in simulated situations and in a treatment plant.

STUDENT ACTIVITY:
1. Evaluate the waste-stream in a treatment plant.
2. Select the references needed to correct abnormal conditions of the waste-stream.
3. Perform the abnormal operation procedures in simulated situations or in a treatment plant.
