The instructional materials packet contains 15 units of sequential activities designed to teach blind secondary students to read standard print through the use of the Optacon, an optical-to-tactile converter manufactured by Telesensory Systems, Inc. The materials help the teacher monitor student progress on a unit to unit basis; diagnose reading difficulties and prescribe appropriate learning activities; and provide a variety of reading experiences for the student, such as alternative typefaces, formats and subject matter. Each unit contains line by line or lesson by lesson instructions for the teacher and materials to be used by the student. Many units are followed by criterion exercises to evaluate student learning. Word attack skills, equipment orientation, and recognition of upper and lower case letters and numerals are among the content areas of the units. (CL)
OPTACON INSTRUCTIONAL MATERIALS

(Secondary Level, Grades 9-12)

Acknowledgements

During the development of these materials, AIR project staff received much helpful advice and feedback from the participating educators in the schools. They not only maintained logs of student progress, but also shared their ideas and experiences for improvement of the materials. Accordingly, we would like to thank the administrators and Optacon teachers in the following schools for their continued understanding and cooperation during this two year project.

Azuza Unified School District, California
Berkeley Unified School District, California
Campbell Union Elementary School District, California
Campbell High School District, California
Chula Vista City School District, California
Cincinnati Public Schools, Ohio
Florida School for the Deaf and the Blind, Florida
Houston Independent School District, Texas
Logan School, Pennsylvania
Overbrook School for the Blind, Pennsylvania
Palo Alto Unified School District, California
Perkins School for the Blind, Massachusetts
Salem Public Schools, Oregon
San Diego Unified School District, California
Tulare County Department of Education, Visalia, California

In the early stages of materials development, we appreciated the continued cooperation of the pilot students and their parents, who regularly travelled to AIR for work on the Optacon after the normal school day was done.

Finally, we would like to acknowledge our gratitude for the pleasant working relationship that we enjoyed with the USOE Project Officer, Dr. Max Mueller, Bureau of Education for the Handicapped. Without his continued support, these revised materials could not have been made available.
Goals and Objectives

The broad goal of the American Institutes for Research/Optacon instructional materials package is to provide an interesting, efficient, and educationally sound framework at the elementary and secondary levels by which blind students can learn to read standard print via the Optacon, an optical-to-tactile converter manufactured by Telesensory Systems, Inc.*

By using these materials the teacher will be able to:

- allow each student to progress at his own rate;
- integrate drill and practice of numerals and letters with the reading of meaningful material in sentence form;
- diagnose particular learning difficulties and prescribe appropriate learning activities within the materials;
- give the student a role in deciding when he wants to assume independence in tracking and other equipment operation skills;
- provide a variety of reading experiences for the student, including alternative typefaces, formats and subject matter;
- monitor the progress of the student on a unit-by-unit basis as well as at the end of the course.

*Telesensory Systems, Inc., 1889 Page Mill Road, Palo Alto, California 94304.
Development of the Instructional Materials

These instructional materials are the product of a research study* to evaluate the educational potential of the Optacon in the elementary and secondary grades. As such, they have been systematically developed to build upon the knowledge and experience of many sources and individuals.

Initially, a comprehensive review of existing instructional strategies for the teaching of reading was undertaken, with a number of nationally prominent approaches being examined in detail to determine what rationales and techniques might be applicable and feasible in the research study.

Second, the developers were afforded an opportunity to study the approaches employed in prior materials developed for use with the Optacon, including those developed by the manufacturers of the Optacon, Telesensory Systems, Inc., and those developed by Mr. Gale Lutz, San Diego Unified Schools, during a Title VI project.

Third, the proposed instructional strategy was laid before a panel of experts representing the fields of research and instructional design, special education, and remedial reading. Valuable inputs were obtained from:

- Dr. Robert Gagné, Florida State University, past President of the American Educational Research Association and author of numerous major papers and texts on the optimization of learning.
- Professor Philip Hatlen, San Francisco State University, nationally prominent leader in the training of teachers of the blind and co-author of the text Blind Children Learn to Read.
- Professor Mary Herman, San Francisco State University, specialist in the teaching of reading, particularly remedial reading, and joint appointee in special education at the University.

As the initial set of instructional materials were created they were tried out with pilot students, at the elementary and secondary levels, who were unfamiliar with the Optacon. They were also checked with students who were familiar with the device.

Finally, the present instructional materials were revised to take into account the learning experiences of over 81 students who were involved in the research study during the first year as well as comments and suggestions of their teachers. These participants were in some 15 residential schools or public school districts.

Although the research project is now completed, these materials are being made available to districts that are instituting courses of instruction in the Optacon. It should be pointed out that in order to be successful, such programs require resources in addition to instructional materials. It is recommended that administrators and teachers plan the following elements of the program before beginning Optacon instruction:

- The definition of criteria for selecting those students who will most benefit from Optacon instruction.
- The scheduling of regular class periods for instruction.
- The full preparation of teachers in the use of the equipment and materials.
- The consideration of the student's future use of the skill, once he has learned to read with the Optacon.

Some guidance in the selection of students, scheduling of classes, and training of teachers can be found in the final report of the AIR research project, prepared in September, 1974. Planning for future application of Optacon skills is, of course, dependent on the availability of equipment for the student. Information about purchase of Optacons can be obtained from the manufacturer, Telesensory Systems, Inc. Other funding sources, such as state rehabilitation services, agencies for the visually handicapped, or private philanthropic organizations, should be considered in helping the student to plan for and utilize his newly developed skill.
The course consists of 15 units. Units 1-14 are meant to be used sequentially and are designed to:

- introduce the student to the Optacon device and to the tactile "window" through which the images will be sensed, as well as basic tracking and machine adjustment techniques;
- develop the student's mastery of numeral recognition;
- develop the student's mastery of upper and lower case letter recognition;
- develop the student's word attack skills and the reading of meaningful material;
- increase reading speed through recognition of letter patterns that occur frequently and through self-practice with paragraphs of increasing length;
- prepare the student for reading selected type styles often encountered in typed or printed copy;
- familiarize the student with a variety of reading formats that may be encountered in daily living;
- extend the student's opportunities for reading a variety of print materials, including functional reading (e.g. dictionaries), pleasure reading (e.g. magazines), and educational reading (e.g. school texts);
- integrate the skills of reading print with other skills the student is developing, such as storytelling and typing;
- familiarize the student with the controls and adjustments possible on the Optacon in order that he can set and operate the device independently in new situations.

Unit 15 is an optional unit to be used as needed for remediation or special help at any time during training.
The instructional materials have been organized with two major principles in mind. First, learners will do best if they enjoy what they are doing, experience success and are given an early opportunity to apply character recognition to meaningful reading. Second, the teacher who is working with the individual learner(s) is in the best position to guide them through the learning materials in a flexible manner, being responsive to their particular needs and abilities.

The developers of this course have built into the lessons certain options which give the teacher needed flexibility in dealing with individual differences among students. In general, though, it is recommended that the teacher:

- develop an atmosphere of challenge and opportunity to which the student looks forward each day;
- provide positive reinforcement by telling the student what he is doing right more often than what he is doing wrong;
- tell the student how the materials are organized and what is expected of him as he progresses through each lesson and unit so that he has a clear picture of his goal;
- avoid letting the student get "hung up" on words he may find difficult; on the other hand, give him ample time to try for recognition before prompting him;
- be alert to expressions of interest that indicate a readiness to become independent of the tracking aid;
- be alert to patterns of mistakes that can indicate which portion(s) of the remediation and special help unit might benefit the student;
- share with the student the things that are done in setting up the equipment and materials for each lesson so that he will be better able to do this on his own as soon as he is ready.
Each unit is composed of several lessons. Each lesson is intended to add to the skills already acquired in previous lessons. For example, the use of numerals as line identifications in each lesson helps the student avoid losing his place, and also gives him repeated practice in recognizing the numerals.

Similarly, as letters are introduced they are practiced in upper case, then lower case, then in a mixture of the two. Thus, letter practice is accomplished at the same time as new information is gained.

Finally, once letters have been learned they will reappear in subsequent lessons so that recognition skills are maintained for letters learned in earlier units. Since the letters introduced earliest in the course are typically those which occur most frequently in the English language (with a few exceptions) this means the student will get the most practice with letters he will encounter most often.

Each page is laid out in a way that prevents the student from getting lost—even when the teacher is not physically present. The student is instructed to come down (with the camera) from the top of the page until he feels a line. He follows this left, to its end, then down to line one. At the end of each line and each lesson he is signalled to STOP with a mark which activates all the vibrators in the Optacon. This prevents his wandering off the page or looking for more instructional material. This pattern is maintained through Unit 9. Beginning with Unit 10 these tracking cues are gradually phased out, since the student must learn to become independent of such cues in any unstructured reading he will do in the future.

As support to these lessons, a thermoform sheet is included on which the numerals, letters or punctuation used in the lesson appear in raised outline. These are in the same type style as the lesson material. The student should be given an opportunity to feel each letter as he first encounters it.
Unit 1 familiarizes the student with the Optacon itself. Units 2-9 typically begin with the introduction of three or four new characters. The new characters are interspersed with characters learned in prior lessons or prior lines. The student is thus given practice in character recognition without context cues. The student should be asked to name each letter in the first four or five lines.

The next few lines give practice with recognizing the new characters as components of words, starting with short words and moving to longer words. (In these word practice lines the word is read aloud, not the characters within the words.) The word lists have been designed to cover several grade levels. Thus, students in the fourth or fifth grade may not be able to read all of the longer words. Take the student only as far as you feel he is capable of going. Teachers may find it advisable to give prompts on some of the longer words, especially for younger children or ones who may have spelling difficulties.

Notice particularly that on each of the numeral and letter lessons there are a series of dots between two of the lines about midway on the page. These dots are not meant to be "read" by the students. Rather, they tell the teacher which materials are for drill and practice (above the dots) and which are enrichment materials (below the dots). If the student has no difficulty with drill material, it is not mandatory that he read all the enrichment section. However, the enrichment material is designed to provide practice in reading sentences with emphasis on the letters just learned, as opposed to simple letter recognition, so there are advantages to reading all of each lesson.

Punctuation is not treated as a separate study unit. Rather, it is introduced gradually in the context of the basic lessons. The teacher should explain the new punctuation at the time it first occurs.

Each unit contains line-by-line or lesson-by-lesson instructions for the teacher, followed by the instructional material to be used by the student. The teacher instructions are not meant as a script that must be followed.
verbatim, but rather as a guide and as an explanation of the rationale underlying the instructional materials. In general, the teacher should tell the student what his learning objective is for each lesson, and for each line within a lesson.
Use of Criterion Exercises

Following each of the basic Units 2 through 9 (numbers and letters of the alphabet) is a page of Criterion Exercises. When the learner and the teacher believe he is ready, the student can "challenge" the first criterion exercise at the top of the page. For most students this will probably occur after both drill and enrichment materials have been studied. Some students who want to move through the materials more rapidly might prefer to challenge the first criterion exercise as soon as they have finished the drill portion of the three lessons in the unit.

Note that two criterion exercises are provided for each unit. Both exercises follow the same format. In the criterion exercises for Unit 2, the first two lines contain all the numerals in scrambled order. The third line has a series of two-digit numbers. The fourth line has five simple arithmetic problems with the answers left blank. The student should read the problems silently, and respond with the correct answer.

In the criterion exercises for Units 3 through 9, the first line of each exercise contains the upper case letters learned in the unit, and the second line contains the lower case letters. The third and fourth lines contain ten words using the newly learned letters. Some of these words are capitalized.

The student should be asked to read the lines in sequence. If the student can complete the first exercise to the criterion level recommended for the unit, he should go on to the next unit without attempting the second criterion exercise. If he falls short of an acceptable criterion level on the first exercise, and if it appears that he would benefit from more drill and practice, then the student should go back for more work in the unit before attempting the second criterion exercise. However, he should not repeat the entire lesson or unit. Instead, he should practice only on the lines within the unit containing the characters with which he has a problem. When he is ready to try again, he should use the second criterion exercise, again attempting to reach an acceptable criterion level.
No absolute standards must be met by the student before he can be "graduated" into the next unit. Rather, this is a judgment call to be made by the teacher in the light of the motivational needs of the student and the type and frequency of errors made. (Remember that the student will receive further practice in the materials in later lessons. He should receive encouragement and not feel defeated.)

Criterion exercises after Unit 9 are varied to fit the content and format of each unit. Directions for using these exercises are found in the Teacher Instructions for the unit.

Note that if the camera is not aligned properly, the student will often miss the letter. The teacher should avoid scoring the student as "wrong" on character recognition if his real need is for better tracking.

If the student continues to have difficulty after further practice, he may need to work in Unit 15, the unit on remediation and special help. In particular, he should use the portion of that unit which deals with the pattern of problem he is encountering. That is, the problem may be one of differentiating "look alike" letters (for example, c or o), or of certain types of letters (for example, letters containing diagonals), or of size (for example, recognizing large upper case letters but having trouble with small lower case letters).

If the trouble is due to spelling or some other subject matter outside the scope of the materials, it is expected that the teacher would provide appropriate help.

Remember, the criterion exercises are not meant to hold students back, but rather to provide a way for the teacher and student to assess the level of skill developed and to focus more specifically on any special needs of the student.
Use of the Optacon Equipment

When a student (or the parent) is first introduced to the Optacon, it is important that he be properly prepared for the experience. In particular, he should be told that he will feel a slight tingling sensation on his finger. Emphasize that this is not an electrical shock, but merely the action of vibrating pins or rods. To ensure that the first experience is a mild one, the intensity setting on the Optacon should be set close to zero; when the student's finger is in place the intensity can be raised gradually so that he becomes accustomed to the vibrating sensation. At first the student may want to work with the Optacon for only a short period of time, but he will soon build a tolerance for the tactile stimulation.

During rest breaks, blind students may have a natural tendency to explore the Optacon equipment with their fingers. Teachers should not allow the student's inquisitive nature to lead to attempts to disassemble or otherwise jeopardize this precision equipment.

Be sure that the student is in a comfortable position for his lessons. For example, the heights of tables and chairs should allow him to rest his arms comfortably on the table. Encourage the student to find his own most comfortable side-by-side placement of the Optacon and the tracking aid, remembering that the Optacon should be on the left.

Typically, the Optacon will be angled to the right slightly, in the same direction as the student's left arm when placed in a resting position on the table top. The tracking aid will generally be angled to the left, the same direction as his right arm when at rest. The diagram on the next page shows a typical learning station.
Typical Learning Station

A  Leather-cased Optacon Electronics
B  Shoulder Strap
C  Camera or Light Probe, with Zoom
D  Cable
E  Tactile Array (Index Finger)
F  On-Off, Threshold and Intensity Controls
G  Visual Display
H  Tracking Aid (as used in the Research Study)
I  Tracking Aid Guide Bar-Camera Attachment
The way in which the student places his hand in the Optacon is especially important. The left index finger should lie flat on the tactile array and be stable. "Scrubbing" movements should be discouraged, as well as heavy pressure on the array. Also watch that the student's left thumb does not inadvertently move the threshold knob on the front of the Optacon as this will affect the tactile image.

At first, the teacher will lightly guide (control) the student in tracking of lines. As the student begins to do his own tracking the teacher will need to alert him when he drifts off the line and picks up only a part of the letter. The instruction to the student should be in terms of camera movement. Thus, tell him to "push the camera up a little" if only part of the letter shows at the top of the display. Similarly, tell him to "pull the camera down a little" when the image is too low in the display.

"Adequate" alignment of the camera on the line of print necessarily is a matter requiring teacher judgment. Some letters can be recognized without a perfect alignment. In any case, the teacher should point out the normal height relationships of upper case letters, lower case letters, and those letters such as "p" which extend downward from the line of type. The Optacon settings for image size should be set so that the three variations in letter height all fall within the normal field of view, as seen on the Visual Display.

Teachers should be thoroughly familiar with the Equipment Instruction Manual provided by the manufacturer in order to properly use and care for the equipment. Most important, the Optacon should be maintained with a full battery charge. Daily use of the battery charger is highly advisable since the Optacon is operated only by the battery and never from direct current, even when the equipment is plugged into an outlet. The Optacon can be left plugged into the charger at all times, but at a minimum it should be recharged two hours for each hour of use.
Before beginning each lesson, the teacher should make the following equipment checks:

- Make sure that the invert switch is in the normal position.

- Make sure the battery is fully charged by depressing the battery check button--if the pitch rises or remains the same, the battery is well charged; if the pitch falls, the battery needs recharging (the battery charger should not be plugged into the Optacon during this test).

- Perform a row and column check of the Visual Display and tactile array. The row and column check is done in the following way:

  1. Turn on the Visual Display and the Optacon.
  2. Place the camera on a straight printed line (to be found at the top of the student instruction pages in this manual).
  3. Push the magnification button all the way back toward the cable end of the camera and adjust the threshold control so that a single horizontal line appears on the Visual Display.
  4. Turn the intensity knob fully clockwise so that you can easily feel the horizontal line on the vibrators.
  5. Slowly move the camera up or down over the horizontal line. Watch the Visual Display to see that each row is completely lit and feel for unbroken vibrating rows on the tactile array.
  6. Turn the page so that the line is vertical and move the camera back or forth over the line, watching for lit columns on the Visual Display and vibrating columns on the tactile array.
It is important to know that the Visual Display and tactile array do not always correspond—for example, all the lights in the Visual Display may be operating, but there may be weak or missing vibrators in the tactile array, and vice versa. In the event that the equipment is not operating properly, you should perform the troubleshooting procedures recommended in the manufacturer's equipment instruction manual. If the problem persists, you should contact the manufacturer.

Optimum reading with the Optacon depends on correct adjustment of the three controls for magnification, intensity, and threshold. Since this is information the student should learn, it is presented in Unit 1, Lesson 1.
Some teachers may have several candidates for Optacon instruction who are available only during a limited time of the day. It is possible to teach several students simultaneously by attaching several Optacons together in a "master-slave" mode. Special cables are available from the manufacturer for this purpose. Below is a list of steps to be followed in connecting three Optacons.

1. Plug the Visual Display into the wall (3-pronged outlet only). Do not turn it on.

2. Using a master/slave cable (one that has three ends), plug the short end into the cable that comes out of the Visual Display. Note: Due to the male and female connections on the master/slave cable, there is only one way this can be accomplished.

3. Plug the other end of the short cable into the back of the master Optacon. The master Optacon should be turned off.

4. Using the second master/slave cable, plug the short end into the long cable coming from the master Optacon.

5. Plug the other end of the short cable into slave Optacon #1.

6. Plug the long cable into the back of slave Optacon #2.

7. Unscrew the fastener which holds the camera in place in the master Optacon. The cameras on slave Optacons #1 and #2 should be loosened and placed on the table. (They will not be used.)

8. Turn on the Visual Display and the master Optacon.

9. Place the camera on clearly typed copy (carbon ribbon is suggested). Make appropriate adjustments for height of letter, threshold and intensity.

10. On both slave Optacons, turn the threshold knob to medium (be sure it is not turned all the way down to zero).

11. Turn on slave Optacon #1 and adjust the intensity knob to where it feels best.

12. Turn on slave Optacon #2 and repeat the intensity adjustment.

13. If you find it necessary to unplug or rearrange equipment, turn the equipment off before changing any plugs.
14. Your Optacon configuration should look like this:

**Configuration for Placement of Master/Slave Equipment**

![Diagram of Optacon configuration]

**Note:** In this drawing, the battery charger is not plugged in. Each Optacon should be plugged into a battery charger which in turn is plugged into an AC wall outlet. They can be left plugged in at all times, along with the Visual Display, if you have four wall outlets available near the table. If you only have two outlets on the wall then two of the Optacons will have to be charged over night every night, while the other Optacon and Visual Display remain plugged in during the day.
Note that a "master/slave" arrangement implies that one (or more) students will be receiving tactile images over which they have little control. That is, they may control the intensity but cannot control the magnification, threshold or tracking. In effect, they become dependent on what the student at the "master" Optacon is doing. While this approach has some obvious drawbacks, especially where students on the "master" and "slave" machines are of sharply differing ability, there can be advantages as well. Most noticeably, students of comparable skill can help each other to recognize cues, can take turns in operating the "master" and doing the tracking, and can build speed by making a game out of rapid recognition.

In the event that a teacher does decide to teach several students at once she should still maintain a focus on meeting individual needs. Frequently, extra practice will have to be given to one student and not the other. Similarly, as students progress at different rates they should no longer be forced to study the same lessons purely for administrative convenience.

As a general rule, when students have demonstrated their ability to track independently they should each use a separate Optacon. Of course, they can still study simultaneously under the teacher's general supervision.
The design and structure of these instructional materials take into consideration many suggestions made during the course of a national study, conducted by the American Institutes for Research, concerning the educational potential of the Optacon*.

Certain highlights of that research and experiences gained during that study may be helpful to the teacher as she begins to work with novice Optacon students:

- Students with high intelligence and tactile ability (as measured by a Tactile Kinesthetic Form Discrimination Test) should achieve the best reading rates and should do so with very high accuracy. Braille ability is not necessarily indicative of a good Optacon learner.

- Students at both elementary and secondary levels can learn the Optacon and can do so singly or in groups of two or three.

- Cross age tutoring, blind-to-blind instruction and other special training configurations seem to be viable.

- Attained reading rates will vary widely. After about 50 hours of study some individuals may be reading as slow as 5 WPM while others may be reading at 30 WPM. Even where the rates are not very rapid, however, the students may be reading quite accurately. While slower reading rates may not be adequate for bulk reading, they may be quite satisfactory for a number of reading applications. Therefore, slower students may still feel a sense of accomplishment, and deservedly so.

- Since periods of discouragement and fatigue may occur from time to time, a positive attitude and motivation should be cultivated. Teachers should try to develop a feeling of "I can do it" and should take pains not to introduce a skeptical tone if early student efforts seem to be laborious. In any case, the beginning student should not be misled into thinking that this is a skill that will be learned in minutes. Patience and persistence will pay off.

The building of Optacon skills is directly correlated with the amount of time devoted to study. Additional study time, during free periods or at home, should be encouraged after initial training is well underway. Conversely, summer vacations and other temporary interruptions in the study pattern do not seem to lead to large-scale forgetting of the tactile patterns and tracking skills.

Now it is time to begin instruction. Good luck to you and to your students!
**Teacher Instructions**

**Lesson 1: Equipment Orientation**

Begin formal instruction by familiarizing the student with the main features of the Optacon and tracking aid. (A more extensive treatment of equipment operation and utilization is given in Unit 13, when students are preparing to function independently of the teacher.) In order to cover the main points of familiarization, without omission, the following steps are recommended.

- Place the Optacon and the tracking aid in front of the student, so that the Optacon is to the left of the tracking aid and in front of the student's left hand, and the tracking aid is in front of the student's right hand. If there is a Visual Display box, this is usually set behind the Optacon and the tracking aid so that it is visible to the teacher but well out of the student's way.

- Guide the student's hands over each of the pieces of equipment, telling him the name and purpose of each, and letting him become familiar with where each item is located and how each is angled with respect to the table top.

- Help the student find a comfortable position for use of the Optacon. Make sure that tables and chairs are the right height for the student. Encourage him to find a comfortable placement of the Optacon and tracking aid in front of him, aligned with his arms as they rest naturally on the table.

- Show the student how to open the leather case on the Optacon. Guide his hands over the camera and the bolt on the left that secures the camera for storage. Then remove the camera from the compartment by unscrewing the bolt and carefully lifting the camera out. Explain what you are doing to the student.
Then replace the camera and let the student remove it by himself.

- For this exercise, use line 1 of the lesson on page 33. Line 1, on which the letter "0" has been printed, will be used for demonstrating the correct adjustment of the Optacon for reading. Help the student grasp the camera in a way that will be stable and comfortable for him. (Although you will be tracking for the student during the first few lessons, he should have practice in holding the camera.) The rollers should be flat on the surface of the page, and the camera should be at a right angle to the line of print. The student should hold the camera naturally and in a relaxed manner. Be sure the student's index finger is not resting on the magnification button as he grasps the camera. Show the student the aperture of the camera, and explain that this is the part of the equipment that "sees" the printed page and sends signals to his left hand.

- Show the student where the off-on switch is, and have him turn the Optacon on. Explain that he will hear a buzz when using the device. (Make sure the normal-invert switch on the back panel is in the "normal" position for reading black print on white paper.)

- Help the student place his left hand in the opening of the Optacon, with the index finger lying flat on the grooved plate. The tip of his finger should be in a position to feel the top row of vibrating rods. Caution the student against pressing down hard with the finger, but be sure it is in good contact with the grid.

- Next, explain that there are adjustments that make the images clear and easily read. The first adjustment is for intensity. Position the camera on the "0" on line 1, page 33, being sure
the intensity on the Optacon is set close to zero. Tell the student that he will feel a slight tingling sensation on his finger. Make it clear that this is not an electrical shock, but the action of tiny rods that vibrate or move quickly. Gradually increase the intensity so that the student will become accustomed to the vibrating sensation. At first the student may object to the tingling feeling, but he will soon build a tolerance for the tactile stimulation. Let the student select an intensity setting that is most comfortable for him. (Be sure the intensity is high enough so there are no "holes" or dead spots in the tactile array.) Tell him to note the position of the raised dot on the front of the knob. He can use this dot to check the intensity setting each time he reads.

- Have the student move the camera very slightly from left to right and up and down. Have him concentrate on how this changes the image under his index finger. Have him practice correcting (reversing) the direction of the camera movement when it seems as though he is about to lose the tactile image.

- Show the student the zoom adjustment button on the top of the camera. Explain that if he slides the button up, away from himself, the image that he is feeling will get larger. With the camera on the "0" have him push the knob all the way to the top of the camera.

- Next, show him the control that adjusts for thickness of the image (threshold). Since he has made the "0" larger he should turn the control to the left, counterclockwise, to put the image in proportion by reducing the width. Now have him reduce the size of the image and increase the width. The "0" should appear unbroken and either one row of lights thick or two rows of lights thick, depending on student
preference. Encourage the student to practice using these controls. They will be very important to him later as he begins to read materials in different typefaces.

- Next, have the student practice putting the camera away. Show him the screw on the left side of the ledge where he places his hand while reading with the Optacon. Explain that this is the part he will have to line up with the hole on the end of the camera. Have him find the round part of the screw on the outside of the Optacon. Show the student how to hold the camera in the palm of his right hand while he loosely wraps the wire around his fingers. Tell him to slip the wire off his fingers, and push it into the back of the ledge. Have him move the camera around until he feels the end of the screw match up with the hole on the end of the camera. Tell him to turn the screw clockwise, towards himself, until it is tight.

- Finally, show the student how to attach the leather straps to the case. Ask him to find the two metal snaps on each side of the case, as well as the leather loops in front of the snaps. Have him take the ends of the strap and push them through the leather loops. He may have to help the strap through the loop with his fingers, since sometimes the snaps catch on each other. Tell him to line up the snaps and push them in, one at a time, until they catch. Check that the strap is not twisted, and be sure that all four snaps are secure before telling him to pick up the Optacon by the straps. Have the student put the strap over his head so that it is hanging on both sides of his neck. It would be a good idea to leave the Optacon on your desk as he does this. Next, have him put his left arm through the strap so that the Optacon will be hanging on his right shoulder. Tell him to pick up the Optacon with his hands
as he stands up, then lower it to his body. Advise him that the Optacon should hang towards the center of his body rather than to the side so that it will be less likely to bump into things.

Lesson 2: Field Practice

The purpose of Lesson 2 is to orient the student to the tactile field of the Optacon by presenting him with the different shapes to be found in letters. Page 33 includes vertical and horizontal lines, and page 34 emphasizes circles and diagonals. In this lesson you should track over the lines for the student, after reading aloud or paraphrasing the instructions. The following numbered statements correspond to line numbers on pages 33 and 34. As necessary, use the thermoform sheets of raised letters to teach the student the concepts of "vertical," "horizontal," "circle," and "diagonal."

During this lesson, be alert that the student seats his hand and finger properly in the Optacon. It is particularly important that the left index finger be flat and fairly stable on the tactile array. Watch also that the student's left thumb does not inadvertently move the threshold knob on the front of the Optacon.

Before beginning the lesson, set the intensity low, and adjust the magnification on the camera so that the box on line 2 is just within the display field on the Visual Display.

Say:

Line 2. Put your left hand in the opening of the Optacon, with your index finger lying flat in the groove. The shape you are feeling now is like a filled-in box. As you learn to use the Optacon, you will feel this box at the end of each line. It will mean to "stop" and go back to the next line of instruction.
Line 3. Here is the shape of an empty box. Try to get the top near the tip of your finger. Remember to keep your finger down flat. Can you feel both the top and the bottom of the box? Can you feel both sides at once? Can you feel the box shape? The next shape is the filled-in box, telling you to stop and go to the next line.

Line 4. Here is a vertical line. A vertical line is a line that runs up and down. Tell me each time a vertical line passes your finger.

Line 5. Some of the shapes that you will feel now are single vertical lines. Others are in pairs. Tell me which of the vertical lines are in pairs.

Line 6. The shapes you will feel now are paired vertical lines. One of the lines in each pair is shorter than the other one. Of each pair, which line is shorter, the first one or the second one?

Line 7. Here is a horizontal line. A horizontal line is a line that runs from side to side. Tell me each time a horizontal line passes your finger.

Line 8. Some of the shapes you will feel now are single horizontal lines. Others are in pairs. Tell me which of the horizontal lines are in pairs.

Line 9. The shapes you will feel now are paired horizontal lines. One of the lines in each pair is shorter than the other one. Of each pair, which line is shorter, the top one or the bottom one?

Line 10. Here is a row of boxes. Some of the boxes have a side missing. Tell me each time you find one that is missing a side. Which side is missing?
Line 11. Here is another row of boxes. Tell me each time you find one that is missing a top or a bottom. Which is missing, the top or the bottom?

Line 12. Here is part of the box you just felt. It is a vertical line with a horizontal line at the bottom. Some of the shapes don't have a line attached at the bottom. Tell me which ones don't have a bottom line.

Line 13. Here is a vertical line with a horizontal line at the top. Tell me which ones are missing tops.

Line 14. Tell me which vertical lines have horizontal lines at the top and which ones have horizontal lines at the bottom.

(The teacher should now replace page 33 with page 34 on the tracking aid.)

Line 15. Here is a circle. Tell me each time a circle passes your finger.

Line 16. Here are some more circles. Some of these circles are by themselves and some of them are in pairs. Tell me which of the circles are in pairs.

Line 17. Here are some more circles. Some of them are taller than others. Tell me when the circles are taller than the first circle.

Line 18. On this row are more circles. Some of them are open on one side. Tell me which ones are open.

Line 19. Here is another row of circles. Some of these circles have vertical lines sticking up on the left side. Tell me which circles have lines sticking up.

Line 20. Here is another row of circles. This time some of them have vertical lines sticking down on the left side. Tell me which ones have lines sticking down.
Lesson 3: Tracking Orientation

The purpose of this lesson is to acquaint the student with the various parts of the tracking aid, and to let him try out the aid in some simple exercises. Tracking is a difficult motor skill that will be more easily mastered after the student has gained some skill in letter recognition. Therefore, at first you should track for the student. However, as soon as the student indicates the desire, and has some awareness of how to correct for mistracking, he should be allowed to track for himself. (When this occurs may vary widely among individuals.)

Three models of tracking aid are available from the manufacturer. On Model T1-B, the camera is attached to the aid by means of a long metal bar...
attached to the right side of the plate: On Models T2-A and T2-B the camera is fitted into a plastic template placed over the page to be read. The following general instructions apply to either type of aid.

- Have the student explore the tracking aid. Ask him to find the top, bottom, left and right sides if he seems hesitant.
- Attach the camera to the tracking aid, explaining what you are doing. Let the student feel the camera and the aid. Then detach the camera and guide the student in attaching it again. Then demonstrate to him how the camera is detached.
- With the camera fastened to the tracking aid, let the student practice moving it across the page, and up and down the page. Explain that the aid will help him to stay on the line while he is reading, as well as to find a new line.
- Show the student the rollers on the bottom side of the camera. Explain that these rollers will help him move the camera straight across the page when he is ready to become independent of the tracking aid.
- Remove page 35 from the manual, and show the student how a page of lesson material is placed on the tracking aid. Show him how to align the sheet so that it is not crooked.
- Have the student find the top of the page with his right hand while he is holding the camera. Then have him put his left hand in the Optacon, ready to feel the vibrators.

Say to the Student:

Find the top of the page. Pull the camera down until you feel a line going across your finger. This line is near the top of the page and it goes from one side of the page to the other. Move the camera to
the left along this line until you feel a smaller line that runs up and down. This line tells you that this is the place to pull the camera down (towards yourself). If you pull the camera straight down a very short distance, you will feel two dots. Keep pulling the camera down very slowly and you will soon feel a shape that is a zero. (Note: It may be necessary to guide the student's hand the first time he attempts this exercise. If so, guide the student and then let him do it on his own until he has some degree of confidence.)

(Note: Lines 1-3 are practices for positioning the camera. During these practices try to get the student to think about where he is feeling the sensation on his finger. If the student seems to be having difficulty with any of the exercises, have him repeat them as many times as necessary.)

The following instructions correspond to line numbers on page 35.

Say to the Student:

Line 1. Begin with the camera on the zero. As you move the camera to the right, you will feel a series of short horizontal lines. Keep these lines centered so that you feel them vibrating in the middle of your finger. If you drift either too far up or too far down you will feel a solid line, also. Try to track all the way across the page without touching either of the solid lines.

(Help the student locate the second line by returning to the beginning of line 1 and dropping down. After each exercise help the student locate the next line.)

Line 2. As you move to the right you will again find the short lines. This time they are near the bottom of the zero. Keep these lines low as you track so that you feel them vibrating near the bottom of the pins. Again, if you drift up or down you will feel a solid line above or below the dotted line. Track
across the page keeping the dotted lines low and trying not to touch the solid lines.

Line 3. This exercise is the same as the first two, but this time the short lines are near the top of the zero. Track across the page trying not to touch the solid lines.

Line 4. This is a practice tracking across short symbols with different shapes. Try to keep the symbols in the middle of the vibrating pins.

Line 5. This is a practice tracking across tall symbols. Try to keep the tops of these tall symbols near the top of the vibrating pins without losing part of the image. Some of the spaces between these symbols are longer.

Line 6. On this line some of the symbols are tall and some of them are short. Most of the symbols have no spaces between them. Track across the line, trying to keep the tops of the tall symbols near the top of the vibrating pins.

Line 7. This is the same type of practice as the last one, but the symbols are spaced farther apart. Track across this line.

Line 8. Some of the symbols on this line have descenders (a stem hanging down). The other symbols on the line are both tall and short. Find the first symbol that has a descender. Track across the line by positioning the symbols so that the tops of tall symbols are near the top of the vibrating pins and so that you are not cutting off the descenders.

Line 9. This is the same type of practice as the last line, but the symbols are spaced farther apart. Keep the camera positioned so that you don't cut off the descenders. Track across this line.
The next three exercises are practice in tracking across open spaces. Each line begins with a zero. Try to track straight across the page and find the zero on the other side without losing your place. If you drift up or down you will find a straight line. If you come to a line going straight up and down, you have gone too far to the right. Now try it again on the next two lines. The empty spaces will keep getting longer and longer.

(Explain to the student that this lesson has been for practice. Tell him that you will track for him at first, but that he should let you know when he feels ready to track for himself.)
UNIT 1 - INTRODUCTION TO THE OPTACON
Lesson 1: Equipment Orientation (first line only)
Lesson 2: Field Practice (begin with second line)
UNIT 1 - INTRODUCTION TO THE OPTACON
Lesson 2: Field Practice
UNIT 1 - INTRODUCTION TO THE OPTACON
Lesson 3: Tracking Orientation

Secondary Level
Teacher Instructions

A major option is open to the teacher at this point. The intent of this unit is to introduce the nine numerals and then give reinforcement in their use in later units, where lines are numbered. However, Unit 2, which teaches numerals, can be deferred until a later point in training if the teacher and student prefer to gain exposure to the numerals through the context of line numbering. As an additional option, the enrichment material (below the dotted lines) may be bypassed until a later time.

If the decision is made to teach numerals now, then at a minimum the drill and practice portion of all three lessons within the unit should be covered as well as the criterion exercise which follows.

[Note: Beginning with this unit, and continuing through Unit 9, each line of instruction begins with a number, followed by a short horizontal line. These numbers and lines are tracking cues for the student. On each new page, he should learn to pull the camera down from the top of the page and then left along the guide line. He should pull the camera down slowly, past the two dots, until he finds the line number. Then he should follow the horizontal line to the right to find the new letter or word.]

Lesson 1: 0, 1, 2, 3

The numerals 0, 1, 2, and 3 are taught in this lesson.

On line 1, there is a series of zeros, with one X used as a distractor. Ask the student to identify the characters by saying whether each is a zero or not. He does not have to name the different symbol.

In the middle of line 1, there are three widely spaced dots. This is the mark used to separate one learning task from another. The second half of line 1 teaches the numeral 1. Here again, a series of ones is presented,
with a zero used as a distractor. Ask the student to identify whether each character is a 1 or not.

Line 2 is the same as line 1, except that the numerals 2 and 3 are to be taught.

On line 3, the numerals 0 through 3 are presented in scrambled order. Ask the student to read each numeral.

Line 4 begins the enrichment material. This line consists of three simple problems in addition. Explain the "plus" and "equals" signs to the student.

Line 5 has three simple problems in subtraction. Explain the "minus" sign to the student.

On line 6 the student should be asked to identify the numbers which have paired digits--that is, 11, 33, and 22.

On lines 7 and 8, ask the student to read the whole numbers.

Lesson 2: 4, 5, 6

The numerals 4, 5, and 6 are taught in this lesson.

On lines 1 and 2, the student should identify the characters being taught in each set.

On line 3, ask the student to read each numeral.

Enrichment material begins with line 4. There are three series of numerals; within each series, one of the numerals is out of sequence. Ask the student to identify the misplaced numeral.

Lines 5 and 6 contain simple addition and subtraction problems. On line 7 ask the student to find the ages of people older than himself.

Line 8 contains whole numbers, fractions and decimals. Explain how to recognize fractions and decimals, and ask the student to find whole numbers.
Lesson 3: 7, 8, 9

The numerals 7, 8, and 9 are taught in this lesson.

On lines 1 and 2, the student should identify the characters being taught in each set.

On line 3, ask the student to read each numeral.

Enrichment material begins with line 4. The first half of this line has a local telephone number. Point out the use of the hyphen. The second half of line 4 has a long distance number. Point out the use of parentheses to indicate the area code.

On lines 5 and 6 are simple arithmetic problems.

On line 7, ask the student to find the numbers that are more than 50.

On line 8, ask the student to find the year that is famous in American history.

Criterion Exercise, Unit 2

On lines 1 and 2 ask the student to read each numeral aloud. (Acceptable criterion is 26 of 32.)

On line 3, ask the student to read the two-digit numbers. (Acceptable criterion is 7 of 10.)

On line 4, ask the student to answer the five simple math problems. (Acceptable criterion is 3 of 5.)

The second criterion exercise is scored similarly, but is used only if further study of numerals was necessary.
UNIT 2 - NUMERALS
Lesson 1: 0, 1, 2, 3
UNIT 2 - NUMERALS
Lesson 2: 4, 5, 6

Secondary Level
UNIT 2 - NUMERALS
Lesson 3: 7, 8, 9
UNIT 2 - NUMERALS
Criterion Exercise

Secondary Level
Teacher Instructions

Beginning with this unit and proceeding through Unit 9, depending on learning performance the teacher and student may opt to bypass some of the enrichment materials within the lessons (words and sentences below the dots). Or, if the enrichment materials are read with relative ease, the teacher and student may opt to bypass lesson 3 (practice with mingled upper and lower case) within a given unit. In no case should any skipping of whole units occur since the introduction of letters is incremental and cumulative. Remember that any decision to bypass should be a function of the student's demonstrated skills, need for practice, and interests. Hopefully, the teacher can present the enrichment material and lesson 3 activities as opportunities and as educational games rather than as drudgery.

Lesson 1: Upper Case ATRE

The letters A, T, R, and E are taught in this unit.

On lines 1 through 4, the student should identify the characters being taught in each set.

On line 5, ask the student to read each letter.

Lines 6 and 7 are a series of simple words, from one to three letters long. Important: Throughout this lesson and all other lessons, try to foster the habit of reading whole words, rather than separate letters.

Line 8 is for enrichment, and consists of a short sentence. Have the student read the sentence.

Lesson 2: Lower Case atre

This lesson follows the same format as Lesson 1, except that lower case letters (a, t, r, e) are being taught.
Lesson 3: ATRE, atre Mixed

Lesson 3 provides practice in reading mixed upper and lower case letters.

On line 1 the student should read the letters and tell whether they are upper or lower case.

On lines 2 and 3, the student should read the words and tell whether or not they are capitalized.

Enrichment is on line 4 and consists of a short sentence. Have the student read the sentence.

Criterion Exercise, Unit 3

On lines 1 and 2, tell the student to name all the letters. (Suggested criterion level is 26 or more correct.)

On lines 3 and 4, tell the student to read the whole words. (Suggested criterion level is seven words correct out of the ten.)

Depending on student performance and your judgment, go on to the next unit or go back into Unit 3 for additional practice. Remember, individual differences and motivational factors should be considered when making this judgment. If more practice is required, administer the second criterion exercise to the student when you feel he is ready.
UNIT 3 - LETTERS (A,T,R,E)
Lesson 1: Upper Case A,T,R,E

Secondary Level
UNIT 3 - LETTERS (A,T,R,E)
Lesson 2: Lower case a,t,r,e
1 — Eat Tree
2 — at eat Ear tea Tree
3 — are A Rear Treat tar
4 — Art ate at a rare rate.
UNIT 3 - LETTERS (A,T,R,E)
Criterion Exercise

Secondary Level
Teacher Instructions

By this unit most students will have advanced to a point where they are tracking for themselves with the help of the tracking aid. If not, then the teacher may want to concentrate on tracking practice before going on to the new letters I, H, O, S.

The same options for bypassing within the lessons exist in Unit 4 as they did in Unit 3.

Note: Beginning with this lesson the student will be introduced gradually to punctuation marks. No special instructions have been written to teach punctuation, since students easily learn punctuation marks in the context of the sentence or paragraph.

Lesson 1: Upper Case IHOS

The letters I, H, O, S are taught in this unit.

On lines 1 through 4, the student should identify the letters being taught in each set.

Line 5 presents a series of scrambled letters, including those learned in the previous lesson. The student should read each letter.

Lines 6 through 9 contain words ranging from two to five letters in length. The student should read each word. Discourage him from reading each letter out loud.

Enrichment begins at line 10. Lines 10, 11 and 12 are short sentences for the student to read. Note that the period is used for the first time in these sentences.
Lesson 2: Lower Case ihos

This lesson follows the same format as Lesson 1, except that lower case letters are being taught.

Enrichment begins at line 10. Lines 10, 11 and 12 are short sentences for the student to read.

On line 10, note that the apostrophe is used in a contraction.

Lesson 3: IHOS, ihos Mixed

This lesson provides practice in reading mixed upper and lower case letters.

On line 1, the student should read the letters and say whether they are upper or lower case.

On lines 2 and 3, the student should read the words and say whether or not they are capitalized.

Enrichment begins on line 4. Lines 4, 5 and 6 consist of short sentences which make up a short story. A character named Art, who is a born loser, is introduced.

Criterion Exercise, Unit 4

Follow the same directions as for Unit 3.
1 - III/II/II/I
2 - HHHHHHHHH
3 - OOOHOIOHOIO
4 - SSOSOSHIOS
5 - IAIOTSHERTSHAIOE
6 - OH IS SO TO IT AT
7 - HIS HAS TOO SEE THE
8 - THIS HAIR HERE THAT
9 - STATE HORSE THEIR OTHER
10 - I HEAR HIS HORSE.
11 - HE HEATS THE TOAST.
12 - SHE ATE HOT ROAST.
UNIT 4 - LETTERS (I, H, O, S)
Lesson 2: Lower case i, h, o, s
1 — SisHhoO Ii OshS o HI

2 — Or she head. I Store this

3 — Has is other There sheet oh

4 — Art has a hot stereo.

5 — He tests it. The stereo has a short.

6 — Art is sore.
UNIT 4 - LETTERS (I, H, O, S)

Criterion Exercise
Some students may be ready at this point to begin tracking independently of the tracking aid. The teacher should accede to the student if an interest is expressed along these lines, but should establish rather quickly whether this will substantially impede the student's progress. When the student begins freehand tracking the teacher should loop the student back through Unit 1, Lesson 3, and develop his freehand skills before continuing to learn new letters.

Lesson 1: Upper Case DLUN
The letters D, L, U, N are taught in this unit.

On lines 1 through 4, the student should identify the letters being taught in each set.

On line 5, the student should read each letter.

Lines 6 through 8 contain words from two to five letters long for the student to read.

Enrichment material, lines 9 through 12, is a short poem. Note that the exclamation point is used at the end of line 12.

Lesson 2: Lower Case dlun
This lesson follows the same format as Lesson 1, except that lower case letters are being taught.

Enrichment material, lines 9 through 12, is a short poem. In lines 10 and 11, the comma is used. The broken sentence is also introduced—that is, the sentence continues from one line to the next.
Lesson 3: DLUN, dlun Mixed

This lesson is for practice in reading mixed upper and lower case letters.

On line 1, the student should read the letters and say whether they are upper or lower case.

On lines 2 and 3, the student should read the words and say whether or not they are capitalized.

Enrichment, lines 4 through 7, consists of some comments about drill and practice.

Criterion Exercise, Unit 5

Follow the same directions as for Unit 3.
UNIT 5 - LETTERS (D,L,U,N)

Lesson 1: Upper Case D,L,U,N

: 1 — D D D / D D / D / D ■
: 2 — L L L D D L L L ■
: 3 — U U U L D U L U U ■

1 - Use truth not send Dirt Learn
2 - Tell under land noon drill hunt
3 - To tell the truth, letter drill
4 - is hard and dull. On the other hand,
5 - one needs to learn letters
6 - in order to read.
UNIT 5 - LETTERS (D,L,U,N)
Criterion Exercise

UNIT 5 - LETTERS (D,L,U,N)
Teacher Instructions

Lesson 1: Upper Case CGMF
The letters C, G, M, and F are taught in this unit.

On lines 1 through 4, the student should identify the letters being taught in each set.

On line 5, the student should read each letter.

On lines 6 through 9, the student should read each word.

Enrichment material, lines 10 through 13, consists of some advice about how to increase reading rates. Note the use of contractions in lines 10 and 13.

Lesson 2: Lower Case cgmf
This lesson follows the same format as Lesson 1, except that lower case letters are being taught.

Enrichment material is on lines 9 through 13. It consists of a compound sentence in which the semicolon is used.

Lesson 3: CGMF, cgmf Mixed
This lesson gives practice in reading mixed upper and lower case letters.

On line 1, the student should read the letters and say whether they are upper or lower case.

On lines 2 and 3, the student should read the words and say whether or not they are capitalized.
Enrichment material, lines 4 through 8, is a metaphor. Note that the hyphen is used on line 6.

Note: Lesson 3 of this unit (and subsequent units) no longer uses any extra spacing within words. However, ten pitch spacing will continue to be used in lessons 1 and 2 for drill material.

Criterion Exercise, Unit 6

Follow the same directions as for Unit 3.
UNIT 6 - LETTERS (C,G,M,F)
Lesson 1: Upper Case C,G,M,F
UNIT 6 - LETTERS (C,G,M,F)  
Lesson 2: Lower case c,g,m,f
According to Uncle Mac, the game of life is a strange thing. It has no half-time, innings or time out. And all of us are on the team, regardless of our scoring record!
UNIT 6 - LETTERS C,G,M,F
Criterion Exercise
Teacher Instructions

Lesson 1: Upper Case WPKQ

The letters W, P, K and Q are taught in this unit.

Lines 1 through 5 are for letter recognition.

Lines 6 through 8 contain words for the student to read.

Enrichment material is on lines 9 through 13, and consists of some comments about tracking.

Lesson 2: Lower Case wpkq

This lesson follows the same format as Lesson 1. Enrichment material, lines 9 through 12, consists of a short poem about words. Quotation marks are used on lines 10 and 11.

Lesson 3: WPKQ, wpkq Mixed

This lesson gives practice in reading mixed upper and lower case letters.

On line 1, the student should read the letters and say whether they are upper or lower case.

On lines 2 and 3, the student should read the words and say whether or not they are capitalized.

Enrichment material, lines 4 through 9, consists of new versions of two old proverbs, as well as a tongue twister replete with Q's, P's and W's. Note that the colon is used in lines 4 and 8.

Criterion Exercise, Unit 7

Follow the same directions as for Unit 3.
UNIT 7 - LETTERS (W,P,K,Q)
Lesson 1: Upper Case W,P,K,Q

1. WWW/W/W/W/W
2. PPPWPPPWWPP

12 — w e o f t e n k e e p l o c k e d u p i n o u r m i n d.

UNIT 7 - LETTERS (W,P,K,Q)
Lesson 2: Lower case w,p,k,q
1 — Q k p P K w q Q w K W q P k p W

2 — Pan quick when now Keep look

3 — Would know poor Quiet down Upon

4 — Here are two little known quotes:

5 — A wheel that squeaks is a pain in the neck;

6 — perhaps the man who plows a straight furrow

7 — is stuck in a rut.

8 — Here's a new tongue twister:

9 — Quick chicken pluckers make work for pillow packers.
UNIT 7 - LETTERS (W,P,K,Q)
Criterion Exercise
Lesson 1: Upper Case YBV

The letters Y, B and V are taught in this unit.

Lines 1 through 4 are for letter recognition.

Lines 5 through 8 contain words for the student to read.

Enrichment material is on lines 9 through 12 and consists of short sentences about caring for the Optacon.

Lesson 2: Lower Case ybv

This lesson follows the same format as Lesson 1. Enrichment material, lines 9 through 14, consists of a short poem about how people and things are different. Note the question mark at the end of line 14.

Lesson 3: YBV, ybv Mixed

This lesson gives practice in reading mixed upper and lower case letters.

On line 1, the student should read the letters and say whether they are upper or lower case.

On lines 2 and 3, the student should read the words and say whether or not they are capitalized.

Enrichment material, lines 4 through 8, consists of a short progress report to the students.

Criterion Exercise, Unit 8

Since Units 8 and 9 each teach three letters, rather than four as in previous units, lines 1 and 2 on the criterion exercises are shorter.

On lines 1 and 2, the acceptable criterion level is 19 or more letters correct. On lines 3 and 4, the acceptable criterion level is seven words correct out of ten.
UNIT 8 - LETTERS (Y,B,V)
Lesson 1: Upper Case Y,B,V

Secondary Level
UNIT 8 - LETTERS (Y,B,V)
Lesson 2: Lower case y,b,v

---
1 — y y y / y / y y / y
2 — b b b y b b y y b b

8 — Very Bead yet berry Love
Teacher Instructions

Lesson 1: Upper Case JXZ

The letters J, X and Z are taught in this unit.

Lines 1 through 4 are for letter recognition.

Lines 5 through 7 contain words for the trainee to read.

Enrichment material, lines 8 through 12, is a series of short sentences.

Lesson 2: Lower Case jxz

This lesson follows the same format as Lesson 1. Enrichment material, lines 8 through 11, consists of more information about the Optacon.

Lesson 3: JXZ, jxz Mixed

This lesson gives practice in reading mixed upper and lower case letters.

On line 1, the student should read the letters and say whether they are upper or lower case.

On lines 2 and 3, the student should read the words and say whether or not they are capitalized.

Enrichment material, on lines 4 through 11, is a short story. The word that has been underlined on line 5 for emphasis. On lines 8 and 10, quotation marks have been used to indicate irony. Alert the student that a new symbol, the dollar sign, appears on line 11.

Criterion Exercise, Unit 9

The scoring for this criterion exercise is the same as for Unit 8.
1. JJ / JJ / JJ / J

2. XXX J X J X J X J X

3. ZZZ X Z J X Z J Z

5. OX JOB JAM FOX ZOO MIX JUG

6. JAR TAX ZERO JACK FIZZ EXTRA

7. JUST ZOOM LAZY JUICE EXPECT

8. SIX BEES BUZZED AROUND THE JAR OF JAM.

9. I EXPECT TO GET A ZERO ON THE NEXT QUIZ.

10. REX TOLD A CRAZY JOKE ABOUT A ZEBRA.

11. JANE FIXED A CAKE MIX FROM A BOX.

12. IN MEXICO, LIZARDS LIVE IN THE JUNGLE.
UNIT 9 - LETTERS (J,X,Z)
Lesson 2: Lower case j,x,z

---

1 - j jj / jj / jj /  
2 - x x x j x j x x x  
3 - z z z j z x z x j z

6 - joke jump fuzz next crazy  
7 - excited dozen jacket frozen  
8 - you should expect to adjust the zoom lens  
9 - on the camera for different sizes of print.  
10 - with just a little experience, you can read  
11 - letters that are extra large or extremely small.  

---

Secondary Level
Life can be a puzzle, and hardly ever what you expect.

My brother Joe found that out. Last June he won a free pizza as a prize on a quiz show. He was so excited that he called a friend, and they went right down to the pizza parlor. Joe's "prize" was a six-inch pizza, plain, with no junk on it. His friend wanted the jumbo-size with everything, plus something fizzy to drink. So Joe's "free" pizza cost him $4.75, plus tax.
1 — X Z X J J Z X Z J Z X Z  ■

6 — X Z X J Z X J X Z J Z J  ■

7 — ooze jury X-ray fox Zone  ■

8 — Joe zebra expert jail Joy  ■
The remaining six units and related criterion exercises are different in format and purpose from the nine units just completed. Units 1 through 9 were designed to familiarize the student with the Optacon, to teach number and letter recognition, and to provide some experience in reading meaningful material printed in letter gothic typeface. Beginning with Unit 10, the instructional material is designed to offer the student a wide variety of realistic reading experiences, as well as to reinforce what he has already learned. Thus, Unit 10 provides the opportunity of increasing reading speed through practice with common words and letter combinations. Unit 11 gives practice in reading different typefaces, such as italics and a typeface similar to that found in most books. Unit 12 contains exercises in reading a variety of new formats. In Unit 13, the student receives more advanced instruction in operating the Optacon in situations outside of the classroom. Unit 14, Free Reading, introduces the student to such things as the dictionary, pamphlets, and the newspaper. Unit 15, which is optional, is intended as remedial help for those students who have difficulty with letter recognition.

The criterion exercises for Units 10 through 13 are designed to measure such skills as reading speed, tracking ability, and the ability to read different kinds of typefaces. As in criterion exercises for Units 2 through 9, there are no hard and fast rules for "passing" scores. However, some recommended criterion levels are given for each exercise to help in making the judgment about whether the student needs more practice in each unit.

A special feature of these final units should be noted. They have been designed so that they may be studied by the student independently, with minimal supervision from the teacher. Therefore, tracking cues are gradually phased out in these units. Note also that instructions for using the units are often addressed to the student and incorporated in the instructional materials.
Teacher Instructions

Lesson 1: Recognizing Common Words

This lesson gives the student practice in reading the 400 most frequently used words and numerals in typical reading material. The words are based on a rank list of frequencies shown in J. Carroll, P. Davis and B. Richman, Word Frequency Book, Boston: Houghton Mifflin Co., 1971. The list has been divided into four groups of 100 words each. Tell the student that he will find a dotted line across the page after each 100 words. Emphasize that practice with these word groups will help his reading speed. Note that tracking cues and extra spacing have been phased out after line 4.

Lesson 2: Self-Timed Reading

Lesson 2 has four reading selections, ranging in length from 25 to 200 words. Note that there is a dotted line separating each passage, and that the side headings have been underlined.

The passages are meant to provide the student with a self-check on reading speed. Introduce the lesson as a self-check, a kind of challenge he can try over and over. Explain to the student that if he reads at 5 words a minute, he'll reach STOP on the newspaper horoscope in just 5 minutes. If he reads at 10 words a minute, he will reach STOP on the history textbook selection in 5 minutes. By reading at 20 words a minute, he will reach STOP in Aesop's Fables in 5 minutes. Finally, by reading at 40 words a minute, he will reach STOP in the adaptation from A Christmas Carol in 5 minutes.

Lesson 3: Letter Patterns

This lesson provides practice in recognizing frequent letter patterns, as a way to build reading speed.
Page 89 contains letter patterns that begin words. Tell the student that the first letter combination will be sh and that the last letter combination will be gl. Encourage him to read each line as quickly as possible, using the letter combinations as context cues.

Page 90 provides more practice in pattern recognition at the beginning of words. Tell the student that the first letter combination is ra and the last letter combination is out.

Page 91 contains letter patterns that commonly end words. Tell the student that the first letter combination is ed and the last letter combination is ity.

Page 92 provides practice in pattern recognition within words. Tell the student that the first letter combination is oo and the last letter combination is li.

Page 93 provides practice in pattern recognition at various places within words. Tell the student that the first letter combination is ea and the last letter combination is se.

Criterion Exercise, Unit 10

There is no recommended criterion level for these exercises, but they do provide a simple test of reading speed. Each line consists of a 10-word sentence. Using a stopwatch, time how many seconds it takes the student to read each line. You may check for comprehension by asking what the sentence was about.
1 — Here are four groups of words and numbers to practice.

2 — They are the 400 words and numbers you will read most often.

3 — If you learn to recognize these words and numbers quickly,

4 — it will save time when you read for pleasure.

Common words 1 to 100:

the of and a to in is you that it he for was on are as with his they at be this from I have or by one had not but what all were when we there can an your which their said if do will each about how up out them then she many some so these would other into has more her too like him see time could no make than first been its who now people my made over did down only way find use may water long little very after words called just where most know

Common words 101 to 200:

get through back much before go good new write our used me man too any day same right look think to o around another came come work three word must because does part even place well such here take why things help put years different away again off went old number great tell men say small every found still between name should Mr home big give air line set own under read last never us left end along while might next sound below saw something thought both few those always looked show large often together asked house don't world going want

UNIT 10 - BUILDING READING SPEED
Lesson 1: Recognizing Common Words
UNIT 10 - BUILDING READING SPEED
Lesson 1: Recognizing Common Words
1 — Here are some paragraphs to check your reading speed. They come from different kinds of reading material. Try to read each selection in five minutes. How fast can you read?

25 words from a newspaper horoscope:

Keep at whatever you are doing since you seem to be close to what you want to achieve. This is a day for fast action. STOP.

50 words from a history textbook:

The earliest homes in New England were simple cottages with wooden sides. The roof was made of leaves and branches. There was a dirt floor. Holes were cut in the boards for windows and doors. The window spaces were covered with oiled paper. The furniture was made from split logs. STOP.

100 words from Aesop's Fables:

A farmer was once driving a heavy load along a very muddy way. At last he came to a part of the road where the wheels sank halfway into the mud, and the more the horses pulled, the deeper the wheels sank. So the farmer threw down his whip, and knelt down and prayed to Hercules the Strong. "Oh Hercules, help me in my hour of need," the farmer said. But Hercules appeared to him, and said: "Tut, my good man, don't sprawl there. Get up and put your shoulder to the wheel. The gods help them that help themselves." STOP.
After several turns around the room, Scrooge sat down again. As he threw his head back in the chair, his eyes happened to rest upon a bell that hung in the room. It was with great surprise and fear that he saw this bell begin to swing. It swung so softly at first that it made hardly a sound; but soon it rang out loudly, and so did every bell in the house. All at once the bells stopped. Then he heard a clanking noise, deep down below, as if somebody were dragging a heavy chain over the floor in the cellar. The cellar door flew open with a booming sound. Then he heard the noise much louder, on the floor below, then coming up the stairs, then coming straight toward his door. "It's humbug still!" said Scrooge. "I won't believe it." He grew pale when, without a pause, it came on through the heavy door and passed into the room before his eyes. As it came in, the flame in the fireplace leaped up. "What do you want with me?" Scrooge whispered. "Much," said the ghost. "Who are you?" asked Scrooge. "Ask me who I was," the ghost replied. STOP.
1—Here are some letter patterns that often start words. The
2—letter patterns are repeated three times, followed by four
3—words that use the pattern. You can increase your reading
4—speed if you learn to read these letter patterns quickly.

sh sh sh shoe shut shove shape
th th th this that there those
st st st stop store steam state
sp sp sp spin span spun spool
tr tr tr trip trap trot treat
ti ti ti tilt tired tight
ch ch ch chop chin chair chest
wh wh wh who what where which
dr dr dr drip drop drive drove
gr gr gr grab grip grand great
pl pl pl plan play place plant
ri ri ri ripe ring rinse riddle
bl bl bl blow blew black blast
cl cl cl clip clap clear clean
sl sl sl slip slap slide slant
fl fl fl flag flop flame float
gl gl gl glue glob glass glide
Here are some more letter patterns that often start words.

See how quickly you can read the words.

- ra ra ra rat rain rapid rather
- la la la lay last later labels
- ro ro ro rot roof roast rooster
- he he he her heal heart heater
- in in in into inform inside include
- en en en enter entire enjoy envelope
- un un un undo until unless unclear
- re re re reply remove remark receive
- de de de deny delay decide define
- be be be beg best behind between
- pre pre pre prefer prepare present pretend
- pro pro pro profit proper provide promise
- con con con confuse concern content control
- com com com coming complete compare combine
- dis dis dis discuss dislike disturb display
- out out out outer outlaw outside outgrow
Here are some letter patterns that are often used at the end of words. See how quickly you can read the words.

- ed  ed  ed  bed  fled  hunted  shared
- en  en  en  men  ten  when  widen  shorten
- er  er  er  over  newer  blacker  whiter
- et  et  et  get  wet  pet  regret
- ly  ly  ly  fly  daily  slowly  quietly
- gh  gh  gh  rough  tough  enough  though
- ow  ow  ow  cow  grow  throw  below
- ce  ce  ce  ace  face  brace  place
- ck  ck  ck  pick  deck  slick  chick
- nk  nk  nk  pink  hunk  think  chunk
- nt  nt  nt  hint  pint  want  blunt
- nd  nd  nd  bend  find  trend  grind
- mp  mp  mp  bump  dump  thump  chump
- ng  ng  ng  wing  sing  hang  clang
- ne  ne  ne  one  fine  plane  throne
- ing  ing  ing  sing  ring  eating  cooking

- el el el sell belt spell fellow
- te te te step often after steal
- il il il will fill still until
- li li li clip flip alike climb

UNIT 10 - BUILDING READING SPEED
Lesson 3: Letter Patterns
You have practiced reading letter patterns that start:

words, end words, and are within words. Here are some:

patterns that appear in all three places. See how:

quickly you can read them.

e a e a e a ear each early eating easy break

clean cream real hear steal peach tea idea flea

drive, over wave never even every seven save

de le le legs left least letter able stale

pale table lemon alley please flew sleep piglet

se se se seat see search sent seldom pose rose

nose hose those these wiser rise
1 — I heard a loud noise from the house next door.  ■

2 — How do you know that they don't like each other?  ■

3 — Each summer we go to the lake for two weeks.  ■

4 — She sent him to the store for a dozen eggs.  ■

5 — The little boy said he would run away after lunch.  ■

6 — When the clock strikes noon it is time to leave.  ■

7 — He seems to feel the world owes him a living.  ■

8 — The old man was sound asleep in his rocking chair.  ■
Teacher Instructions

In this unit the student will have practice in two common typefaces: delegate (a style used in textbooks) and light italics. Instructions to the student have been included as part of the unit; thus, it may be used as an independent reading exercise. However, as a new alphabet is introduced at the beginning of each lesson, the teacher should go through all the letters with the student and discuss how they differ from the letter gothic typeface previously learned. Be prepared to monitor and assist the student as he goes through the practice material. Note that tracking cues have been phased out in this unit.

Lesson 1: Book Style

Lesson 1 introduces the student to delegate typeface. The first page of this lesson contains number and letter drill, short words, and some quotations from the literature. At the bottom of the page, the alphabet has been printed in letter gothic for possible comparison.

Note that delegate typeface differs from letter gothic in three important respects:

1. The delegate letters have serifs at extremities (compare h's).
2. The delegate letters have variable thickness at some points (compare v's).
3. The delegate letters are sometimes a different shape (compare g's).

The student may need help in adjusting the Optacon settings or otherwise compensating for these differences.

The second page of Lesson 1 contains meaningful material in paragraph form for extra reading practice with the delegate typeface.
Lesson 2: Italic Type

Lesson 2 is designed the same way as Lesson 1, except that light italics typeface is used. While the teacher should introduce italics as being "similar" to other typefaces, except that italics are slanted, there are some differences between light italics and the other typefaces presented so far that should be pointed out. The most noticeable of these differences occur in the lower case f, y, w, v, l and i. Encourage the student to look for similarities among the various typefaces, and to read for context. An alphabet has been printed in letter gothic at the bottom of the page for purposes of comparison.

The second page of Lesson 2 contains meaningful material in paragraph form for extra reading practice with light italics typeface.

Lesson 3: Practice with Typefaces

The first page of this lesson consists of an American folk song, which is printed in both delegate and light italics. This gives the student practice in reading italics that are embedded in regular print, as is usually the case.

Italics are used for the title of the folk song, for verb forms, and for contractions. In this sense, the practice materials could be presented as an English lesson.

The second page of this lesson consists of a mystery story in which italics have been used for the dialogue.

Criterion Exercise, Unit 11

For this unit, the criterion exercises are similar to those for Units 3 through 9; that is, they consist of scrambled letters and short words. The following criterion levels are recommended:
Exercise 1:
Lines 1 and 2: Read correctly 26 or more of the 32 letters.
Lines 3 and 4: Read correctly seven of the ten words.

Exercise 2: (if required)
Lines 5 and 6: Score the same as lines 1 and 2.
Lines 7 and 8: Score the same as lines 3 and 4.

If the student does not reach criterion level on these exercises, make careful note of the particular typeface that is causing him difficulty. Additional practice in the unit should concentrate on that typeface.

Note: The transition from gothic (non-serif) to serif typefaces is a difficult task for some readers. Since most materials are printed in typefaces with serifs, students may feel discouraged when they finish the manual and begin their free reading. If this happens, you should help the student select material at first that is similar to the typeface in this manual. Pay particular attention to finding material that is printed in sharp, clear letters with clear separation between letters and lines.

It is important, at this point in learning to read with the Optacon, that the student be encouraged to read about those things that interest him the most. However, he will quickly lose interest in reading at all, if what he selects is too difficult from the standpoint of typeface or format. Until he becomes more proficient, you should be prepared to guide his selection of material.
Not everything you read will be printed in the same type as the one you have been learning. This lesson will give you practice in the type of letters usually found in textbooks. First you will read numbers, then all the letters of the new alphabet in capitals and small letters. Next, you will read some common words. Last of all, there are some sentences written by famous people. See how well you can read these sentences. If you have trouble, the type of letters you first learned about are printed near the bottom of the page so you can compare them with the new letters.

UNIT 11 - ADDITIONAL TYPEFACES
Lesson 1: Book Style
This page will give you more practice in the type of print usually found in books. It's a short mystery story. If you can't solve the mystery, the solution is written just below the heavy horizontal line at the bottom of the story.

The Boy Who Foretold the Future

"Yeah, I need an after-school job," the tall, muscular teenager told Sara. "I could lift boxes or books or something." "Have you worked before?" Sara asked. "Yeah, but the guy got scared because--well, you look like the kind of old lady I can tell. I got this kind of--like a gift, see? I dream stuff and it comes true. Well, I used to work nights in Glixon's Garage. Just keep an eye out, don't let nobody come in, that kind of stuff. Well, this night I have a dream that old Glixon is gonna fall down a flight of stairs. He's not a bad guy, and I know what I dream that way comes true. So, I go to the phone and call his house and his old lady is real uptight and tells me he can't come to the phone because--you guessed it--he fell down the cellar stairs. Well, naturally, I told her that I'd called to warn him about that, and that I was sorry I didn't get to the phone on time. She was real nice, but you know what? The next day old Glixon comes hobblin' in on crutches, and fires me! It wasn't my fault--I did the best I could--"

"Did you really?" Sara said. "I'm sorry, but I don't think you'd fit in here too well, either. I'm afraid we'll have to stick with hiring people we can trust."

Why didn't Sara trust the teenager?

To dream that his boss was going to fall downstairs, the night watchman had to be sleeping on the job--not a good recommendation.

(Reprinted from Mini-Mysteries, by Julia Remine Piggin; with permission of the publisher, Scholastic Book Services.)
In this lesson you will learn letters printed in italic typeface. Italic letters slant to the right. Italic letters are often used to show words that are more important, or to show that someone is being quoted. First you will read numbers, then all the letters of the italic alphabet in capitals and small letters. Next you will read some common words. Last of all, there are some sentences written by famous people. Near the bottom of the page, the type of letters you first learned about are printed so that you can compare them with the italic letters.

The of and to in that Was they From One all can Your what Said each About how then she just Many like People over long After most Know Six square place well such Lazy

Education has produced a vast population able to read but unable to distinguish what is worth reading. (George Trevelyan, English Social History)

He had been kicked in the head by a mule when young, and believed everything he read in the Sunday papers. (George Ade, The Slim Girl)

What you don't know would make a great book. (Sydney Smith, Recipe for Salad)

You can cover a great deal of country in books. (Andrew Lang, To the Gentle Reader)
This page will give you more practice in reading italic letters. It tells two anecdotes about famous men.

The great scientist, Albert Einstein, was a man of few words. Several years ago he was invited to a banquet. He was a special guest, and was expected to make a speech. When the time came for his speech, he got up and said, "Ladies and gentlemen, I'm sorry but I have nothing to say." Then he sat down.

The other dinner guests were surprised. They started to whisper among themselves. Then Einstein got up and said, "In case I do have something to say, I'll come back."

Six months later Einstein wrote to his friend who had given the dinner. He said, "Now I have something to say." So his friend gave another dinner, and Einstein made his speech.

Alfred Hitchcock, director of movie mystery thrillers, once stepped into a New York hotel elevator with a friend and immediately began talking as though continuing a conversation:

"So I turned on the light, and there was this girl in the middle of the floor. Her throat was slit and there was a great puddle of blood. Beside the body was a knife. I was in a spot. If I called the police, there'd be a nasty row, and if I didn't somebody would find me there. So I took out my handkerchief and carefully . . . ."

At this point the elevator stopped at Hitchcock's floor and he quietly stepped off with his companion, leaving everybody in the car goggle-eyed.
Here is a famous American folk song. You may already know it.

The Big Rock Candy Mountains

In the Big Rock Candy Mountains,
There is a land that's fair and bright,
Where the handouts grow on bushes
And you sleep out every night,
Where the boxcars all are empty
And the sun shines every day--
Oh, the birds and the bees and the cigaret trees,
The rock-and-rye springs where the whangdoodle sings,
In the Big Rock Candy Mountains.

In the Big Rock Candy Mountains,
All the cops have wooden legs,
And the bull dogs all have rubber teeth,
And the hens lay softboiled eggs.
The farmer's trees are full of fruit,
And the barns are full of hay.
Oh, I'm bound to go where there ain't no snow,
Where the sleet don't fall and the wind don't blow,
In the Big Rock Candy Mountains.

In the Big Rock Candy Mountains,
The jails are made of tin,
And you can bust right out again
As soon as they put you in.
There ain't no shorthanded shovels
No axes, saws, or picks--
I'm a-going to stay where you sleep all day--
Oh, they boiled in oil the inventor of toil
In the Big Rock Candy Mountains.

Oh, come with me, and we'll go see
The Big Rock Candy Mountains.
The mystery story on this page will give you more practice in reading delegate and italic type. Notice that italic letters are used for the dialogue. The solution to the mystery is printed below the thick horizontal line.

The Case of the Telltale Typing

The body of the victim had been examined by the police and taken to the morgue. Officers Smart and Wood were left in the small office of the dead man, writer Adam Evans. Officer Smart said, "Adam wrote crime stories, you know. He also gambled away his earnings and never paid his debts."

Wood said, "He must have refused to pay once too often--and died for it. According to his landlady, only two men called on him today--Joe Albers and Buzz Stuart--and both of them run gambling houses that Evans was known to visit."

Officer Smart said, "I already questioned them. Both admit that Evans owed them money. And they both admit coming here this afternoon, but they each said Evans already had the knife in him when they got here."

There was a sheet of paper in Evans' typewriter, with the strange line of typing: u93 qog34s i8003e j3

"I think Evans typed out his killer's name," Wood said. "The doctor said he might have lived a couple of minutes after the knife went in."

Smart studied the message for several minutes. Then he snapped his fingers, sat down at the typewriter, and typed out the message that Evans intended to leave.

Who killed Evans?

Joe Albers was the murderer. Evans had started typing with his fingers on the wrong row of keys. By typing one row lower, the message is: "joe albers killed me."

Teacher Instructions

Lesson 1: Personalized Language Experience

This lesson is built upon the language experience approach to the teaching of reading. This approach has been used in different forms since the early 1900's for both remedial and enrichment reading with a variety of students. It is designed to make both the content and language of reading lessons become relevant to the student's own experience. A variety of techniques may be used; however, the basic strategy is that the students dictate their own stories, poems, or articles. These are transcribed and returned to the student to become the reading lesson. Alternatively, students can read stories they have typed themselves.

This approach can overcome a major objection to typical reading lessons, particularly reading lessons for the beginner, i.e. that the material is often irrelevant and boring to the student. By using his own language and selecting his own content, the student can create lessons that are meaningful to him. The concepts and the vocabulary are self-selected from the student's own oral repertoire and working language pattern.

The personally dictated selection also allows the learner to concentrate on reading. The distraction of unfamiliar syntax, words whose meanings are obscure to the student, etc. are minimized.

To the blind student whose sensory experience differs from that of sighted readers, the personalized approach offers unique advantages in developing individualized learning materials and in helping the student to discover his potential.

It is not necessary to complete all exercises in this lesson. The teacher should feel free to use this lesson--enter it and exit from it--as a means of enhancing and sustaining motivation.
Materials Required

1. A typewriter that will turn out clean black copy. A carbon ribbon is preferred. Ideally, the letter gothic typeface used in the Optacon materials would be used. This typeface is available on the IBM Selectric typewriter, by purchasing an appropriate head or ball. If the student has completed the supplementary unit on other typefaces, then any of the standard typefaces can be used. A primary typewriter can be used provided the requirement of clean black copy is met.

2. White bond paper.

3. An audio recording device, e.g. a cassette recorder, tape recorder, etc. The recorder should be one that the student can operate to record his own story.

Orientation

First, orient the student to the purpose and nature of the personalized language experience. Most students take to this quite readily. In the materials, exercise 1 is a poem written by another blind student. Let the student read this poem with the Optacon to ease his concern about what and how long the self-dictated material should be. Then discuss related topics of interest to the student, topics he might record.

Student Dictation

Usually any moderately quiet corner of the classroom can be used for student dictation. The students may need some
orientation to the use of the microphone, recorder, the playback and erase mechanisms, etc. Most students enjoy dictating their own materials and this phase usually presents no problem.

Transcribing

Transcribing into type should be completed as soon as practicable, by the next day if possible. Interest will be higher with prompt feedback. Furthermore, the student's memory of the material provides unique reading cues--while the material is still fresh in his mind.

During transcribing, care should be taken to preserve the content and syntax used by the student. This is not the place to change grammatical habits. Keep punctuation and other format changes to the minimum, consistent with the story. A block paragraph format (no indentation) is preferable.

If the student has typing skill or is taking a typing class, it may be feasible for him to transcribe his own recording. This could be used as a check on the accuracy of his typing.

The transcribed materials should be proofed by the experienced teacher for readability on the machine.

Exercise 1: Assist the student to read the poem on page 111. Encourage the student to make up any kind of poem he or she wishes. Limericks and non-poems will do. Keep the requirements loose. Suggest that the student can dictate several short verses or more than one short poem if desired. Poems lend themselves to more than one reading at a session. It may be useful to assist the student to attempt a more expressive reading of the poem on re-reading it.
Exercise 2: On page 112 there is a statement and a short poem expressing one blind student's opinion on long hair. After reading this opinion, encourage the student to express his or her own opinion on hair length. Disagreements with the author may stimulate an involved "letter to the editor."

If you are unable to elicit interest in hair, try one of the following topics: Dress codes in school, why parents should be less (or more) strict, what this school needs, or do students have too much homework? Suggest other topics from your own and the student's imagination.

Exercise 3: Encourage the student to make up stories that are fun for others to read. This will lead to a good collection of Optacon practice materials in a very short time. Page 113 contains some suggested story titles.

Exercise 4: In this exercise the student is encouraged to write a conversation between two well-known personalities. During transcription, be sure that each person's part of the conversation begins on a new line, flush with the left margin. Use quotation marks when appropriate in the text. Do not add "he said" or other words that the student might have omitted.

In general, these conversations should be kept short and "punchy" to maintain student interest.

Lesson 2: Special Tracking Skills

This lesson presents several new formats that require special tracking skills. Since this is the kind of reading material the student is likely to encounter in real life, work closely with him on this lesson. Give some opportunity to experiment, but offer guidance and help in finding the lines of print. Note that there are dotted lines separating each exercise. Below are brief instructions which you should give to the student.
1. The first exercise is for practice with a list that is printed in columns. There are three vertical columns of numbers with a word after each number. Read number 1 and the word that follows it. Then move the camera back to number 1 and down to the next line to find number 2. Continue in this way until you come to the end of the column (that is, there are no more numbered lines in the column). To find the next column in the series, again move the camera back up to number 1. Then move the camera across the page until you find the next number, in this case it would be number 5. Continue reading this column, and then find and read the third column.

2. The second exercise gives some practice in reading a table. The table is a puzzle, with three horizontal rows of numbers and three vertical columns of numbers. There is one number missing. Read the instructions, then try to solve the puzzle.

3. The third exercise is a table of contents. You need not read every word, but read the instructions and see if you can answer the question. Note that the capital W in "Writing" is shaped like two V's.

4. The last exercise in this lesson is a short poem in free verse form in which the lines are not even. Read the poem. It begins with "I" and ends with "me."

Criterion Exercise, Unit 12

The first criterion exercise for this unit is designed to test the student's ability to track, as well as to recognize words and numerals. The second exercise tests the ability to locate typing errors for those students who do their own typing and who proofread with the Optacon.
The first exercise consists of four lines from the table of contents for the Braille Book Review. The student is to read each line and tell you the page number for each heading. Score each line in the following way:

0 if the student cannot find the number
1 if the student finds the number but reads it incorrectly
2 if the student finds the number and reads it correctly

An adequate criterion level is a score of 6 for these four lines (out of a possible total score of 8). If it appears that the student needs more practice in the unit, be sure to analyze the scores to determine if errors are due to tracking or to character recognition. For example, scores of 1 would indicate that the student is tracking correctly but making mistakes in numeral recognition. Scores of 0 would indicate tracking problems. Select appropriate material (tracking or numeral) for review and practice.

Exercise 2 consists of four lines of typewritten copy. There are two typing errors in each line. Tell the student to read each line and locate the typing errors. Score as follows:

0 if the student found no errors on the line
1 if the student found 1 error on the line
2 if the student found 2 errors on the line

The criterion level is a total score of 6 out of a possible score of 8. If the criterion level is not reached, the student should have more practice in proofreading his own typing.
On this page is a poem written by an Optacon student. Read the poem, and then read the instructions that come after it.

The Telephone
Although it makes my mother groan
I like to use the telephone.
I called the operator one lonely day,
And said, "Get me the President right away."

"Hello Lyndon, where is John?"
"I'll get him in a minute, please hold on."
I sat and waited for over an hour,
Then discovered he was lunching with Eisenhower.

When my father saw the bill that week,
He gave a large and horrible shriek.
He yanked the cord out of the wall
And said, "You'll never make another call."

So Alexander Bell I'll always adore,
Though I can't use the telephone any more.

What did you think of the poem? Make up a poem of your own. Dictate the poem and your teacher will see that it is typed so that you can read it. Or, if you know how to type, you might want to type your own poem.
An Optacon student writes about teen-age hairstyles below. What do you think of his opinion? After you read his opinion, be sure to read the instructions that follow it.

**Long Hair, Short Hair, In-Between Hair**

"Get your hair out of your food."
"Will you please comb that mop on your head?"
"It isn't my fault that your opponent pulled your hair in your wrestling match. It's as long as Pinocchio's nose!"
"Bill, come here, quickly. John's got his hair caught in the electric fan again!"

These are what mothers are saying to thousands of hopelessly hairy teenagers each day.

My opinion.

I am against long hair. In the first place, you can't tell the boys from the girls. In the second place, if you have long hair you'll have trouble in athletics. Let's just leave it the way it was meant to be.

If you have long hair,
Cut it off right now,
You'll look pretty cut,
And less like a nut.

---

How would you answer this student? Dictate your answer and have it transcribed. You might use it for an English assignment.
Here are four titles for short stories. Pick one of these titles or make up one of your own and write a short story:

1. The Day the School Disappeared
2. Aunt Doris and the Tiger
3. Little Joe in Viet-Nam
4. The Rock Concert Mystery

Dictate the story and have it typed or type it yourself. After you proofread the story for errors with your Optacon, you might want to use it for an English assignment.
Think of two people who might have an interesting conversation if they met. Imagine how their conversation would go. Dictate your version of it. Here are two pairs of people who might have an interesting conversation:

1. Sitting Bull and Robin Hood
2. Abraham Lincoln and Charlie Brown

Pick one of these pairs and make up a conversation. Or, select a pair of your own and make up their conversation. It might be fun to pick two persons in your school to write about, and submit your story to the school paper.
Below is a list of 12 of the products sold by the American Foundation for the Blind:

1. clocks  
2. timers  
3. scales  
4. watches  
5. radios  
6. cards  
7. puzzles  
8. slates  
9. frypans  
10. knives  
11. games  
12. saucepans

Below is a Magic Square Puzzle similar to those which originated in ancient Egypt. The object is to arrange the numbers from 1 to 9 in rows so that each row--horizontal, vertical, and diagonal--adds up to 15. What number belongs in the empty square?

```
8 1 6
3   7
4 9 2
```

5 - Edward closed the door and went quickly to the desk.

6 - He opened the drawer and took out a gun.

7 - Turning slowly, he pointed the gun at the man across the room.

8 - Just then, there was a knock at the door.
Teacher Instructions

The purpose of this unit is to prepare the student for more independent use of the Optacon outside of the classroom. In Lesson 1 you will help him learn how to make some simple equipment checks, such as were covered previously in General Instructions to the Teacher, under "Use of the Optacon Equipment." In Lesson 2, the student will have practice in adjusting the controls for extra large and extra small print, and for reading white on black print.

Lesson 1: Equipment Checks

Tell the student he is now ready to begin checking the equipment for himself. Emphasize the importance of taking good care of the Optacon so that it will deliver clear, readable print. Be sure the following points are covered:

1. The Optacon should never be dropped or handled roughly.

2. The equipment can be damaged by heat; it should never be placed where the temperature is hotter than 115° F.

3. The camera cable contains many small wires. If the cable is twisted or bent, the tactile array may not work correctly.

4. Care should be taken that foreign objects, dust or dirt do not get into the tactile array. Be sure that the hands are clean when reading, and that the finger used for reading does not have lotion or hand cream on it. Keep the finger dry from perspiration.

5. It is best to store and ship the Optacon in the wooden shipping case, and to carry it in its leather traveling case when traveling outside the classroom.

6. Be careful that foreign objects, dust or dirt do not get into the camera. The two small lamps in the camera section can be kept clean by carefully wiping them with a soft tissue.

7. It's a good idea to use some kind of leather preservative on the leather carrying case so that it will look better and last longer.
Next, work through the three following equipment checks with the student:

**Battery check:** Put the student's finger on the red battery check button on the back of the Optacon. Tell him that the Optacon should not be plugged in while checking the batteries. With the Optacon turned on have him turn the camera on its side so that the vibrators are buzzing. Have him press the battery check button. Explain that the pitch of the buzzing rises if the battery is well charged, and that it drops if the battery is run down. He should keep the battery charged up by plugging the Optacon into the wall at night whenever possible. It is not possible to over-charge the battery. If the batteries are worn down to a point where the Optacon will not operate, the batteries must be recharged before the Optacon can be used. It will not run just by being plugged into the wall.

**Cable check:** Have the student lay the cable straight out on the table, and feel for any sharp bends or cuts by moving his hands along its length. If the cable is obviously damaged, it should be returned to the manufacturer for repair. Impress on the student the importance of not twisting the cable, as this will break the wires and affect the image in the tactile array.

**Row and column check:** Using the horizontal line on page 122, show the student how to perform a row and column check. Refer to the section on General Instructions to the Teacher for the step-by-step procedure.

**Lesson 2: Special Adjustments**

Tell the student that print will often come in different sizes and that in this lesson he will be using the controls of the Optacon to adjust for these differences. Then, using page 122, go through the following exercises.

**Line 1.** There is a normal lower case "o" on this line. If necessary, have the student adjust the camera for normal print.

**Line 2.** Tell the student he will now practice adjusting the Optacon so that he can read letters that are smaller than normal.
Ask him to make the necessary adjustments and tell you what line 2 says. (The zoom button should be slid forward, and the threshold adjustment knob should be turned counterclockwise.)

Line 3. This time the print is larger than normal. Have the student adjust for this type style and tell you what is written on the line. (The zoom button should be slid back, and the threshold knob turned clockwise.)

Line 4. Tell the student that he usually will be reading dark type that is printed on light paper. Sometimes, though, he may want to read something that is light type printed on dark paper. In order to read this he will have to move the normal-invert switch to the right as he reaches over the machine. The student should feel behind the Optacon to change the position of the switch rather than turning the Optacon around. Tell the student that on line 4 he will find a section that has light type on a dark background. Ask him to change the switch and read what it says. Have him return the switch to the normal position after he has finished.

Explain to the student that:

- The threshold adjustment also may have to be changed in order to read type that is printed on colored paper.

- When reading print on thin paper, such as a telephone book, the camera may respond to print on the back of the page. This problem can be solved by placing a sheet of black paper under the page.

- When reading print on onionskin paper, a sheet of white paper placed under the page will prevent print on other pages from showing through.
Criterion Exercise, Unit 13

A good indication of whether the student has learned to adjust the camera for different sizes of print (height and width) and for reversed print is to try him out. The same thing applies to whether he is aware of the techniques for charging and checking the battery. At first you will want to check on these abilities at school. Later you should give him an opportunity to take the Optacon home overnight. (Be sure he knows how to carry the Optacon, with the shoulder strap over his neck and one shoulder.) Have him take the battery charger as well. The following day, ask him to demonstrate on the criterion exercise, as follows:

Line 1. Tell the student to read this line and do what it says. See if he presses the battery check button. Listen to see if the Optacon has been charged or is run down.

Line 2. This line has larger-than-normal print, requiring adjustments in the threshold and magnification. Simply tell the student to read the line, then observe whether he recognizes the need for adjustment and if he can make these adjustments adequately.

Line 3. This line of bold-faced type will also require some adjustment of the controls. Again, tell the student to read the line and observe whether or not he makes the proper adjustments.

Line 4. This line of white-on-black print will require the student to use the reverse switch. Simply tell him to read the line and make whatever adjustments are necessary on his Optacon.

If the student has difficulty with any of these lines, review the appropriate checking or adjusting procedures with him.
What kinds of people are scientists?

LESSON 2  Swamps and deserts

Music in the Classroom
1 — Show the teacher how you check the battery.

2 — The truth is, drill is dull.

3 — The Man Who Got Away

4 — TALKING BOOK TOPICS
UNIT 14 -- FREE READING

Teacher Instructions

This unit is designed to give the student some familiarity with the kinds of materials he will encounter in his reading outside of the classroom. In selecting these materials the major criterion has been their utility for the independent reader. No concessions have been made for the handicapped student through editing or rewriting, since this unit is intended to be a slice of the real world. Some of the lessons will be more difficult than others, and you should offer assistance when needed. To avoid discouragement, the exercises can be interspersed with reading from a book or magazine that the student has chosen himself. Be sure this student-selected material is printed in clear, readable type with good spacing between letters and lines.

Lesson 1: Reading New Materials

In Lesson 1 some guidelines or principles about printing formats have been given to prepare the student for the following lessons. In the other lessons he is given instructions.

Lesson 2: Tape Recorder Guarantee

This lesson includes words the student may need help with, such as "defective," "guarantee," or "negligence," and he may not realize that Channel Master is the company name. The decoration around the print will also be a new experience for him which may require explanation.

Lesson 3: Using a Card Catalog

If the cataloging system in your school library or the public library is different than the example, this should be explained to the student. If possible, a trip to the library so that the student can examine the card file might be worthwhile.
Lesson 4: Reading a Pamphlet

The student may be puzzled by the way in which this pamphlet is folded. If possible, give him a copy of a real pamphlet, and let him experiment with the way it is folded and with finding the best way to determine if it is right side up.

Lesson 5: Reading a Booklet

The student may require some tracking help in this lesson because of the picture and the map on the page. Also, the student may need to adjust the controls in order to read the different sizes of print in the story and the caption. The title is the maximum size print that can be read with the Optacon.

Lesson 6: Using the Dictionary

As an enrichment exercise, give the student a standard dictionary and help him look up words of his own choosing. Be sure the print is clear and readable, and that there is enough white space between letters and lines.

Lesson 7: Reading the Newspaper

As an enrichment exercise, you might bring a copy of the local newspaper to class. Other reading material can be provided also, such as articles clipped from the paper, magazine articles, and similar materials that might be available in the home or library.

Lesson 8: Using an Index

A good follow-up activity is to have the student use a book or text index to look up something in line with his or her primary interests. Since this is the last lesson in the manual, you will want to shift future reading practice (including the building of speed) to materials of the student's choosing. Encourage the student to use the Optacon frequently in a variety of contexts and compliment him or her on a job well done.

Criterion Exercise

Since this is a unit designed to encourage exploration, there are no criterion exercises for this unit.
By now you have learned to read with the Optacon, using the lessons given to you by your teacher. Now you have a chance to see how well you can read other kinds of things—such as dictionaries and newspapers. Most of your lessons had some lines and numbers that helped you find your place on the page. In free reading there won't be any special guides to help you. However, there are some hints that will make it easier for you. These are listed below in numbered paragraphs.

1 — If you feel print but cannot read any of the letters, you may have the book or paper upside down. There are other ways to find out if something is upside down. One way is if you can feel a period at the start of a sentence. The second way is if you feel quotation marks at the bottom of the line instead of at the top.

2 — Almost everything you read will be printed in lines going straight across the page from left to right. Sometimes you will want to read lists of things, and lists are often printed in rows or columns going from the top to the bottom of the page.

3 — There will always be a blank space at the top of the page. The best way to find the top line is to place the camera at the top edge of the page about halfway between the left and right margins. Then slowly move the camera down the page until you feel some letters. To find the beginning of the line, slowly move the camera to your left until you feel the blank space at the margin. You have already had some practice in doing this in some of your lessons.

4 — You will know when you come to the end of the line because you will feel blank space in the right margin. To find the beginning of the next line, trace back the same way you do in braille, except now you will use the camera instead of your finger.

5 — When you read a short line followed by a lot of blank space, this probably means you have come to the end of a paragraph.
6 — The first line of a new paragraph is usually indented. This means you must move the camera a little to the right before you can find the first word.

7 — Newspapers, dictionaries, and telephone books are printed in columns. In newspapers and some dictionaries the columns are usually separated by a line running from the top to the bottom of the page. When you feel this line it is time to move the camera back to the left. The columns in telephone books and some dictionaries are separated by a blank space. The blank space is also a sign that you should move the camera back to the left.

8 — Many of the things you read will have pictures. There are no rules about where the pictures will be on the page. You may have the camera on a picture if you can feel that the Optacon vibrators are working but they do not make letters. Often, small printed lines just below a picture describe that picture. They are called the caption. Below the caption you will find the regular lines of print to continue your reading.

9 — The next seven lessons will give you some practice in reading special kinds of materials, like the newspaper and the dictionary. We hope you have fun learning to do these new things by yourself. If you have trouble with any of the lessons, be sure to ask your teacher for help.
Sometimes you buy or are given things that come with a warranty or guarantee card inside the box. On the next page, inside the heavy black lines, is a copy of a guarantee for a tape recorder. It tells what the company will do if the tape recorder works poorly before a certain number of days go by. Nearest to the top of the black border is a fancy decoration and below it is the guarantee.

See if you can tell the number of days and what the company will do if the tape recorder doesn't work. Then ask your teacher for your next assignment.
If this product proves defective within 120 days, your dealer will replace it with a new one, instantly, free of charge.

This Channel Master product is guaranteed to be free from defects in material and workmanship under normal use and service for a period of 120 days from the date of purchase. The selling dealer will replace it if examination on his part discloses that it is defective.

This Guarantee does not apply to cabinets, or to any unit which in our judgment has been subjected to misuse, negligence, or has been altered in any way. This Guarantee is in lieu of all other guarantees, expressed or implied, and no representative or agency is authorized to assume for Channel Master Corp. any other liability in connection with this unit.

If this product becomes defective after the guarantee expiration date, it may be returned, insured, to Channel Master, Ellenville, N.Y., 12428, for repair. Enclose check or money order for flat service fee of $10.00. In case of severe physical damage, such as broken cabinet, repair charges may be higher. If so, you will be notified of additional amount before repairs are made. Repaired unit will be returned to you with shipping charges prepaid.

Channel Master Corp.
Ellenville, New York 12428
This lesson will help you learn how to find a book in the library. Every library has a card catalog with separate cards for every book that the library owns. There are usually three sections in the card catalog. In one, books are listed by the last name of the author, in alphabetical order. In another section, books are listed by their titles, also in alphabetical order. In the third section, books are listed by their subject matter, in alphabetical order again. For example, if you want a book about the Civil War, you might find it in the subject catalog under "Civil War" or "U. S. History."

There is one catalog card printed at the bottom of this page. The author's name is at the top of this card. The book title is on the next line. The numbers telling where to find the books are printed in the upper left hand corner of the card. If you want help in finding a book tell the librarian the number and the letter just below the number.

Now, try to read the author's name and book title with your Optacon. Then ask your teacher for your next assignment.
Pamphlets are small folded papers telling about one topic. They are usually handed out or mailed to people free of charge. Their main purpose is to inform the reader about something. When people run for political office they often mail pamphlets to voters. Many medical groups use pamphlets to tell the public about matters related to good health. On the next page there is a pamphlet printed by the American Cancer Society. It tells young people about the harm that can come from smoking. This page has been folded. When you open it up, there are two long, narrow columns of print.

Read the first two columns, and then fold the section on the right over, so that you can read the third column. When you have finished, ask your teacher for your next assignment.
Smoke Cigarettes?

What does smoking cigarettes get you, anyway? If you're especially lucky, and if you smoke about a pack a day, in a year's time you'll suffer a $150 hole in your wallet.

If you're not quite so lucky, you may experience an unpleasant cough, loss of stamina for athletics. These problems can hit you right now—while you're still in your teens—and increase your chances of having disabling illnesses such as heart disease, bronchitis, emphysema. If you start smoking when you are young, these ailments may not hold off until you reach 40 or 50. They can begin affecting you earlier than that.

How smoke harms you

Here's how cigarettes contribute to disease and death: cigarette smoke paralyzes the cilia (tiny hairs lining the bronchial tubes) that sweep foreign particles out of the lungs. Without this protective action, healthy lung tissue can be injured, even destroyed, by particles in the smoke which remain in the lung.

A smoker's chances

Lung cancer is the leading cause of cancer deaths in the U.S. today. Chances that cigarette smokers (as compared with nonsmokers) will die of lung cancer rise sharply the more they smoke. And even with surgery, the most effective treatment for lung cancer we have, only five percent are saved. That's one patient in twenty....

These are some of the physiological facts—what smoking does to you. What is it that smoking does for you?

Puts you in the "in" crowd? Think about that a bit. Are you really more popular because you smoke? There's so much more to becoming part of the crowd—your personality, abilities, and individuality, for instance. Look around, too. Notice how many leaders in your school are nonsmokers. They aren't afraid to act on their own; nor do they need cigarettes as a status symbol, do you?

Makes you more grownup? Think about it. Perhaps it does make you feel more grownup at first, because all the ads and TV commercials tell you how sophisticated smoking is supposed to be. But, again, look around you. Many, many people have stopped smoking in recent years. Ask them why. A wise person weighs the facts about cigarettes and has the courage to say "no, thanks" to an obviously harmful habit.
Facts about cigarette smoking

1. The greatest single cause of preventable death in the U.S.A. today is cigarette smoking.

2. On the average, the life expectancy of a man of 25 (nonsmoker) is six and a half years greater than that of a man who smokes one or more packs a day.

3. The death rate from lung cancer for cigarette smokers is ten times that of nonsmokers.

4. Of 25-year-old men, on the average, twice as many heavy smokers (two packs a day) as nonsmokers will die before 65.

5. Male smokers (10 or more cigarettes a day) between 45 and 54 have death rates from coronary heart disease three times those of nonsmokers.

6. Emphysema, a relatively rare disease a few years ago, is now a major cause of disability. It is a crippler and a killer. It causes the lungs to lose their elasticity. If the disease is unchecked, the effort to breathe eventually becomes a constant, agonizing struggle.
The following page is taken from a booklet called The World Traveler. This page was chosen because it will give you practice in reading in a magazine with pictures and diagrams. The title of the article is at the top of the page. The letters in the title are very large and you may not be able to read them with the Optacon. The title is "Cities grow on waterways." Underneath the title, the top half of the page has a picture on the left side, and the text of the article on the right side. On the bottom half of the page there is a map of the United States.

Read the print on the upper right hand section of the page. Then see if you can find and read the caption under the picture on the left. Next, move the Optacon to the bottom half of the page and try to locate the dark border around the map. Just outside this border, at the bottom of the map, the names of the bodies of water touching the United States are printed. See if you can find the words "Pacific Ocean" at the bottom left hand corner of the map. After you finish this lesson, ask your teacher for the next assignment.
Cities grow on waterways

When the first explorers came to America, there were no roads. They had to travel by boat. They went wherever their boats could take them. They explored land near the oceans, the rivers, and the streams. These waterways were the first highways of America.

More people came. They had to find places for their new homes. Most of them
This exercise will help you learn how to use a dictionary. Read all the instructions in paragraph 1 below before you do anything else.

1 — Page 136 is a sample of Webster's New Elementary Dictionary. The print in dictionaries is usually very small, so you may need to set the zoom on the camera to make the letters larger. You should also know that the lines in dictionaries are printed very close together. It will be hard to read unless you hold the camera very steady and move it slowly. There are two columns of words on the page. The words are printed in alphabetical order. Two words are printed in large type in the upper left-hand and upper right-hand corner of the page. These are like the guide words in your braille dictionary—they help you find the right page when you are looking up a word. Now turn to page 136 and find the guide words and answer these questions: What is the first word on the page? What is the last word on the page? When you think you know, turn back to this page and read paragraph 2.

2 — The guide words are "ginger ale" and "glass." Now turn again to the sample page and find out what glass is made out of. Then read paragraph 3 below.

3 — Glass is made from sand heated with chemicals. Now see if you can find out what a "girth" is by looking in the first column of the page. Then read paragraph 4 below.

4 — A "girth" is a band put around the body of an animal to hold something on its back, like a saddle: Next, see if you can find out what the fate of the "gladiator" was. Hint: It's near the top of the second column. Then come back and read paragraph 5.

5 — It will take some practice to be able to use the dictionary easily. A good way to get this practice is to ask your teacher to help you look up some words that you have thought of yourself. Then ask your teacher for your next assignment.
ginner ale

ginger ale n: a nonalcoholic drink flavored with ginger

ginger-bread \'jin-jar-bred\ n: a molasses cake flavored with ginger

'ginger-ly \'jinjer-\ adj: very cautiously

'gingerly adv: very cautiously

'ginger-snap \'jin-jar-snap\ n: a thin brittle cookie flavored with ginger

ging-ham \'ging-am\ n: a clothing fabric usually of yarn-dyed cotton in plain weave

gip-sy \var of GYPSY

giraffe \jir-a-f\ n: a long-necked spotted mammal of Africa

girl scout n: a member of the Girl Scouts of the United States of America

'give Vgiv \vb gave Vgriv ; given Vgiv-an\ adj: disposed, inclined

given name n: a first name (as John)

giz-zard \giz-zard\ n: a muscular enlargement of the digestive tube (as of a bird) in which food is churned and ground small

gla-cial \glä-shal\ adj: extremely cold

2: of or relating to glaciers

glacier \glä-shar\ n: a large body of ice moving slowly down a slope or over a wide area of land

glad \glad\ adj glad-der; glad-dest 1: happy, joyful

2: bringing or arousing joy (glad tidings)

3: gay, bright

glad-den \glad-n\ vb: to make glad

glade \glad\ n: a grassy open space in a forest

'glad-i-a-tor \glad-\-i-a-tar\ n: one of a pair of armed men forced to fight to the death for the entertainment of the public in ancient Rome

'glad-i-o-lus \glad-i-o-lus\ n, pl glad-i-o-lus or glad-i-o-lus-es: a plant with stiff sword-shaped leaves and spikes of brilliantly colored flowers

'glad-ly \glad-le\ adv: willingly, cheerfully, joyfully

'glad-ness \glad-nas\ n: joy, happiness

'glad-some \glad-som\ adj: giving or showing joy

'glam-o-rous \glam-o-rous\ adj: full of glamour

'glam-our or glam-or \glam-ar\ n: charm or attractiveness especially when it is deceptive

2: alluring or fascinating personal attraction

'glance \glans\ vb glanced; glancing 1: to strike at an angle and fly off to one side

2: to give a hasty look

'glance \glance\ vb glanced; glancing 1: to look fiercely

2: to look from one side to another

'glared vb glaring

2: to glare

'glare v: glance

2: to glare

3: to give a hazy look

'glare \glar\ vb glared; glaring 1: to shine with a dazzling light

2: to look fiercely or angrily

2: to glare

2: to glare

3: to be glaring

'glaze \glaiz\ n: a hard brittle usually transparent substance commonly made from sand heated with chemicals

1: glassy

2: to glaze

3: glassed v

4: glassing vb

5: glazier n

6: glazed adj

7: glazing n
This lesson is for practice in reading from a newspaper. You will probably find it hard to read a newspaper without some help, for several reasons. Newspaper pages are very large. Each page has several stories. There are often drawings, photographs, and ads on the page. There are no set rules about where you will find pictures and ads. Each story will have a headline, which tells briefly what the story is about. Letters in the headlines are larger than letters in the story. The lines are printed close together. Newspaper stories are printed in columns. The stories usually do not go all the way down the page. Instead, stories usually are printed part of the way down a column and then are continued in the next column. The stories on a page are put together something like a big jigsaw puzzle. However, you might like to try reading some parts of the paper, such as the weather report, or the TV programs. If you do, read paragraph 1 beginning on the next line.

1 — The next page has three articles from a typical newspaper. The first is about a college student who is 72 years old. A headline in large print goes across the top of the story on two lines. Below the headline, there are two columns of small print. Turn to the next page and read as much of the story as you like. Then read paragraph 2 on this page.

2 — Next to the college story, in the upper right-hand corner of the page, is a TV schedule. There is a large headline, followed by a list of programs in small print. Try to find out what is on TV at 8 p.m. and which channel it is on. Then read paragraph 3 on this page.

3 — Under the TV schedule is the weather report. Find the high temperature for Tuesday. Then read paragraph 4 on this page.

4 — The high temperature Tuesday will be in the 70's to low 80's. Just below the weather report there is an index to where different sections of the news can be found. See if you can find out the pages where you would find news about sports.

5 — News about sports is on pages 20 through 24. Now ask your teacher for your next assignment.
College education: keeping a promise

FRESNO (AP) — The granddaughter of an illiterate slave will keep a promise made to her grandmother years ago when, at the age of 72, she graduates Friday from Fresno City College.

"It's always been my dream," said Cora Lee Johnson. "I always wanted to go to school because my grandmother, she was a slave and didn't get to go."

So years ago, she promised she would get as much education as she possibly could. But the dream and the promise had to wait — she raised nine children, five earning college degrees of their own.

Picking up in 1972 where she left off decades ago could have been a problem, but Mrs. Johnson says it didn't take her long to catch on again. "I have always had an incentive to learn. I've always been curious about philosophical questions."

Mrs. Johnson has nothing but praise for her fellow students, most young enough to be her grandchildren. "They are just wonderful," she said with a trace of southern drawl. "Much better than people my age. They have life in the right perspective. They see a person as a person."

At her age, education is not aimed at a better job, but simply serves as a means of personal fulfillment. Armed with her two-year degree, Mrs. Johnson now plans to complete work on a bachelor's degree at Fresno State University if she can spare the money from her Social Security check and a Veteran's Administration pension.

Mrs. Johnson says she chose her major — sociology — because "I like dealing with people."

"I think they're all proud of me."

Tonight's Star Programs

4:00 p.m. — KQED Auction. Items up for bidding include wine, an Alaskan cruise, antique Persian rug and the most active stock of Friday, June 7 (ch. 9).

8:00 p.m. — The Waltons. A large corporation planning a health resort offers the Waltons an enormous sum of money for their land (Ch. 5).

9:00 p.m. — Movie: "The Prime of Miss Jean Brodie." Maggie Smith. Drama revolves around an eccentric teacher in a conservative school in Edinburgh and the conflicts she encounters with the headmistress and the two men who love her (Ch. 5).

10:00 p.m. — Dean Martin's Comedyworld. Hosts Jackie Cooper, Barbara Feldon and Nipsey Russell introduce comedians at work in the United States and Great Britain. Also film footage of classic comedy routines (Ch. 4).

10:30 p.m. — The Streets of San Francisco. A multimillionaire philatelist is murdered and it's possible the world's most valuable postage stamp has been stolen (Chs. 7, 11).

11:30 p.m. — Wide World of Entertainment: "Geraldo Rivera: Good Night America." An in-depth portrait of Hugh Hefner and his Playboy empire and a new and incisive interview with actress Jane Fonda (Chs. 7, 11).

1:00 a.m. — Tomorrow. Tom Snyder gets an acupuncture treatment for his sore throat. Discussion of suicide with Dr. Edwin Schneidman of U.S.L.A. (Ch. 4).

Weather

Fair through Tuesday except overcast late tonight and Tuesday morning. High Tuesday in the 70s to low 80s. Low tonight in the upper 40s to mid 50s. Northwest winds 10 to 20 m.p.h. Tuesday afternoon.

Barometer at 8 a.m. 29.85
Humidity at noon 70% (More weather data on page 15.)

This lesson will help you learn how to use books when you want to look something up. Most of the books that you have in school, such as textbooks and encyclopedias, have an index in the back. This index is arranged alphabetically, much like the dictionary. However, instead of word lists, the index has lists of subjects that are in the book. On the next page there is part of an index from a textbook about the Western states. The main subject headings are in dark print. There are other topics in lighter print under the main headings. Suppose you are writing a report about Utah. Using page 140 see if you can find which pages of the book would tell about Utah. Then read paragraph 1 on this page.

1 — The index shows that you could find out about Utah on pages 345 through 349. This index also has some letters in italics next to some of the page numbers. The letter p means that there is a picture on that page. The letter t means that there is a table on that page, and the m stands for map. Can you find the two pages that have maps of Utah on them? Try it, and then read paragraph 2 below.

2 — There are maps of Utah on pages 305 and 346. Now suppose that you want to talk about Utah's climate in your report. See if you can find which page tells about climate. Then read paragraph 3 below.

3 — The climate of Utah is described on page 346. You can use page 140 for more practice in using an index. Even better, you can ask your teacher to help you pick out one of your own textbooks to practice with.

This is the last lesson in your Optacon book. We hope you will continue to read as much as you can with the Optacon. You will find that the more you practice the faster you can read. Good luck.

Teacher Instructions

Purpose of the Unit

The Remediation and Special Help Unit is designed to help those students who are having trouble identifying or discriminating individual letters or characters. It is intended to be an optional unit, for individual learning difficulties. Not every student may need all or even parts of this remedial unit. If the student is able to identify letters adequately using the regular instructional unit, the remedial unit should be bypassed. The unit is designed to be entered at any point that a learning difficulty is encountered, e.g. a particular letter. Few students would need special help for more than a few specific letters or characters.

Organization

The remediation unit is divided into three lessons:

1. Lesson 1, numeral problems, deals with recognizing the numerals and discriminating them from other characters.

2. Lesson 2 (related to basic instructional units 3-9) deals with recognizing the 26 letters of the alphabet and discriminating them from other characters.

3. Lesson 3, special letter problems, deals with the problems of discriminating between pairs of letters that are easily confused. For example, distinguishing between "a" and "e" is sometimes difficult for the learner.

General Instructions

The particular character that the student is having trouble recognizing or discriminating from other characters should be identified during instruction or from the criterion test. Before turning to the remediation unit, it is recommended that the student and teacher work with the thermoform sheets containing raised letters and numerals. Have the student trace the raised letter or numeral, while directing the student's attention to
those pattern features that uniquely identify the letter or numeral in question. Then, find the appropriate lines in this remediation unit for further practice.

While working in this unit, it may be advisable to do the tracking for the student. This will allow the student to concentrate on character recognition.

The remediation activity should focus on the letter or numeral with which the student is having difficulty. Therefore, limit the student's task to identifying the letter or numeral in question only. The lessons provide both easy and more difficult discrimination tasks for each character. The student should not be required to identify the other shapes used as distractors. If the student perceives that these shapes are not the character in question, that is sufficient.

It is desirable to keep the remedial session relatively short or to interpose other activities. Some students may experience a temporary decrease in the ability to feel the characters after concentrating for extended periods. If this occurs, be prepared to go on to another activity.

Lesson 1: Numeral Problems

Lesson 1 offers remediation in numerals, which are presented in the same sequence as they are introduced in Unit 2. The lesson follows a consistent format in which the odd numbered lines deal with the recognition of the numeral in question. The even numbered lines deal with the discrimination of that numeral from other shapes.

The first half of each odd-numbered line begins with three whole numbers. Then four or five parts of the whole number are presented, so that the student may focus on its more distinctive components. This is followed by two whole numerals again.

In the middle of the odd-numbered line there is a colon, which signals a change in the learning task. First, two whole numbers are presented. Then, three components of the number gradually appear, building from left to
right in the same way that tracking reveals the emerging shape of the numeral. Then three whole numbers appear at the end of the line.

Shown below is an example of an odd-numbered line.

The even-numbered lines are designed to help the student discriminate the character from other shapes, once he has been able to recognize it. The line starts with two whole numbers. Then, there is a set of 10 characters, five of which are the number in question and five of which are shapes that are very different and therefore easily discriminable. Here the student should be asked to say whether each character is or is not the number being practiced.

The colon marks the start of a different learning task, as it did in the odd-numbered lines. To the right of the colon there are 10 shapes. Five of these are the number in question. The other five shapes are different but have some similarities to the number in question, and therefore may be easily confused. In this exercise, the number being practiced is presented whole, while the close discriminator is presented first in its distinctive parts and then as a whole character. In the example of the even-numbered line shown below, the 4 has been used as a close discriminator to the 1. Only the part of the 4 that makes it different from the 1 is given at first; then the 4 is gradually completed until at the right of the line both the 1 and the 4 are complete. In this example, the student should be asked to identify only the 1's.
Lesson 2: Letter Problems

Lesson 2, which offers remediation in the 26 letters, follows the same general format as Lesson 1. Letters are presented in the same sequence as they are introduced in the basic units. For example, the first letters dealt with in the remediation unit are A,T,R,E, followed by I,H,O,S. Within a set of letters, capitals are presented first and then the small letters. Each page of Lesson 2 in Unit 15 corresponds with a basic unit of instruction.

Each page of Lesson 2 follows a consistent format in which the odd-numbered lines deal with the recognition of the letter in question. The even-numbered lines deal with the discrimination of that letter from other shapes.

The same rationale explained for Lesson 1 applies to Lesson 2. To summarize briefly:

- The first half of each odd-numbered line presents the whole letter along with distinctive parts of that letter.
- The second half of each odd-numbered line presents the whole letter along with parts of that letter as it would appear gradually during tracking.

On the next page is an example of an odd-numbered line from Lesson 2:
The first half of each even-numbered line presents the whole letter along with shapes that are very different and thus easily discriminable.

The second half of each even-numbered line presents the letter along with shapes that are similar and thus difficult to discriminate. The letter being practiced is presented whole, while the close discriminator is presented first in its distinctive parts and then whole.

Example of an even-numbered line from Lesson 2:

As in Lesson 1, the student's task in Lesson 2 is to identify only the letter being practiced; he should not be required to name the other shapes and letters.

Lesson 3: Discriminating Between Similar Letters

Lesson 3 offers remedial help in discriminating between pairs of letters that are sometimes confused. The paired letters are arranged alphabetically according to the first letter of the alphabet for the pair. For example, the pair "R,A" is located under A. Within the alphabetical sequence, the
capital version of the letters is presented first, followed by the lower case letters.

For each letter pair to be discriminated, two lines of instructional material are given. The odd-numbered line begins with two whole letters. Then, one letter of the pair is presented whole, along with parts of the other letter that distinguish it most readily from the first letter. The part letter is successively presented in more complete form until the entire letter is formed. In the second half of the line, after the colon, the same process is repeated but this time the pair is reversed.

An example of an odd-numbered line in Lesson 3:

<table>
<thead>
<tr>
<th>The letter pair</th>
<th>Second letter presented in parts</th>
<th>The letter pair</th>
<th>Reversed letter pair</th>
<th>Second letter presented in parts</th>
<th>Reversed letter pair</th>
</tr>
</thead>
<tbody>
<tr>
<td>A B</td>
<td>A P C A B A</td>
<td>A B</td>
<td>B A</td>
<td>B A B A B A B A B A</td>
<td></td>
</tr>
</tbody>
</table>

In using the odd-numbered lines, the student should be asked to identify only one of the paired letters at a time. For example, in the line above, the student should be asked to identify which are the A's in the first half of the line. In the second half of the line, the student is asked to identify the B's.

The even-numbered lines in Lesson 3 simply present pairs of letters in random order. These lines are designed for practice, and can also be used as a test of the student's skill in discrimination. For these even-numbered lines, the student should be asked to identify both letters in each line.
