A 40-item questionnaire designed to investigate the variety and scope of developmental mathematics courses (DMC) offered at colleges and universities throughout the United States was administered to a selected sample of two- and four-year colleges in October 1974. The 104 respondents represented 21 states. Most (58%) of the colleges responding reported total student enrollments of 3,000 or less. Almost all the colleges (96%) expressed a need for DMC and offered developmental programs in English (86%), reading (89%), and mathematics (91%). Most of the colleges (70%) had had DMC for two to ten years and offered one (28%) or two (24%) different DMC courses. The areas covered were arithmetic (84%), elementary algebra (89%), geometry (35%), and trigonometry (34%). Most DMC classes (66%) were held in a regular classroom, but some (32%) used a math lab. The instructional methods used most frequently were lecture method (55%), programmed book instruction (54%), supplemental tutoring (37%), and workbooks or worksheets (29%). The principal grade awarded to students was the traditional letter grade. Regardless of the grading system used, most colleges (66%) offered some form of credit for DMC. Other results are reported, previous research studies in the field are reviewed, recommendations are made, and the survey instrument is appended. (DC)
THE AMERICAN MATHEMATICAL ASSOCIATION OF TWO-YEAR COLLEGES

SURVEY OF DEVELOPMENTAL MATHEMATICS COURSES AT COLLEGES IN THE UNITED STATES

SUBMITTED TO AMATYC DEVELOPMENTAL MATHEMATICS COMMITTEE OCTOBER 1975

BY CHAIRMAN OF SURVEY SUBCOMMITTEE

PROFESSOR JAMES BALDWIN
MORASS COMMUNITY COLLEGE
GARDEN CITY, N. Y.

This document has been reproduced exactly as received from the person or organization originating it. Points of view or opinions stated are not necessarily represented by the National Institute of Education.
Sub-Committee of Developmental Mathematics Committee responsible for report:

James Baldwin        Chairman of sub-committee
Juliana Corn
Carmine DeSanto
Alice Berridge
Frank Greene

Other members of Developmental Mathematics Committee of AMATYC who assisted in development of this study:

Mike Totoro
Robert Rosenfeld
Dennis Christy

A complete listing of all members of the Developmental Mathematics Committee appears in the appendix.

The chairman of the sub-committee responsible for this report would like to thank all those who participated in the development and completion of this study. Without the assistance from many individuals this project would not have been successful.

INTRODUCTION

The purpose of this study is to report the results of a questionnaire administered to a selected sample of two- and four-colleges throughout the United States. This questionnaire was designed to study and investigate the variety and scope of developmental mathematics courses.

Within the last decade many institutions of higher education have changed significantly from educating the elite to educating the populous. For some selective colleges and universities this has meant the development of an open admissions policy of admitting all students who have earned a high school degree.

Colleges have always had some underprepared students. These students were handled through their adult education or general studies program until the students had completed the necessary prerequisites. Since the number of underprepared students was generally small, traditional methods of instruction were used, with little concern for the efficacy of those methods. Now that increasingly large percentages of freshmen classes need remediation, the "sweep the problems under the rug" attitude is no longer possible. The educators of today
recognize that these students were not academically oriented during their elementary and secondary school years, and that they bring with them a legacy of content deficiencies, poor study habits, bad self images, diffused goals and unsuccessful learning experiences.

Taking the lead in the instruction of these underprepared students have been the two-year college institutions. These community colleges, as most are called, tend to be more responsive to the needs of the general population.

HISTORY OF THE NATIONAL COMMITTEE

Many mathematics educators at the two-year colleges have felt a concern for the quality and success of instruction, particularly in remedial or developmental areas. A number of statewide associations of two-year college mathematics educators have been formed in the past few years, to serve as forums for the exchange of ideas and techniques, theories and applications in mathematics education. In April, 1974, at a national convention sponsored by the MATYC Journal, delegates took a further step toward improved communications at the two-year college level. This convention, established a permanent national study group concerned with the improvement of remedial-developmental mathematics--The National Committee on Developmental
Mathematics of the AMATYC (American Mathematics Association of Two-Year Colleges). Informal discussions among the many delegates assembled for the convention revealed the widely-held view that a nation-wide survey of the state of developmental (Remedial, preparatory) mathematics would be a good way to begin assessing the problem. A subcommittee, chaired by Prof. James Baldwin, prepared a questionnaire which was sent to colleges throughout the United States in October, 1974. An effort was made to send the questionnaire to members of the National Committee and to other faculty recommended by the Committee at specific colleges. The responses (104) were accumulated by January, 1975 and provided representation from 104 different colleges from 21 states.

PREVIOUS STUDIES

To establish a frame of reference for the study, it might be helpful to examine some of the previous research in the field.

In 1973, a survey of the remedial mathematics programs at the two-year colleges of the City University of New York was completed by Prof. Barbara A. Muir. A questionnaire was administered to the chairperson or coordinators of remedial mathematics to determine the pedagogical

---

methods for teaching remedial math courses. (Remedial math was defined as courses teaching arithmetic and elementary algebra). She found that there was little uniformity among the eight units in approach and methods. There was variation in placement procedure: some units used standardized exams, all different; some used self-designed placements tests. Three methods of instruction were prevalent: classroom lecture-deomnstration, classroom programmed instruction and laboratory programmed instruction. Video-tapes and tutoring were used as supplements to the teaching procedures. A great diversity of textbooks was evident even when the same general teaching methods was used in different colleges. Four of the eight colleges did not offer credit for remedial courses.

The author raises the significant question as to whether the attrition rate is higher and the attendance lower when courses are not credited. She was also concerned with the lack of a systematic evaluation of the effectiveness of the various programs. The very diversity of the CUNY efforts seems to require a uniform yardstick of the comparison according to Prof. Muir. She advocates the establishment of regular communication among the units of CUNY regarding innovation and successes.

In Fall, 1974, the New York State Association of Two-Year Colleges through its Curriculum Committee, chaired by Dorothy Buerk, completed a survey of math programs for
underprepared students at two-year institutions of New York State. All the colleges surveyed attempted to deal with new students who were underprepared for a variety of reasons. "Under-prepared" students were defined as those unable to do basic arithmetic and elementary algebra. The majority of the colleges used high school scores to determine which students required remediation, although some used interviews, ACT or SAT scores. The estimates of the percent of underprepared students ranged from 10 to 50% in half the colleges surveyed, with the others being unsure of the numbers. Depending on the school, the remedial courses carried no credit, non-degree credit, degree credit or degree credit as an elective.

Instructional methods used were lecture-discussion, audio-visual, audio-tutorial, team teaching, CAI, supplementary peer tutoring, programmed instruction and laboratory assistance methods. Half the schools estimated that at least 60% of their remedial students go on to regular colleges courses. They all used regular math faculty who either chose, or were assigned to these classes. About one-third the schools offered counseling services for their remedial students. In the opinion of the interviewees, the students' major obstacles to learning math was their dislike of math, poor study habits and poor high school experience with math.

About one-quarter of the respondents felt that their school's remedial programs were weak. Others felt that their program's greatest asset was the concern for students, and the provision which enabled students to progress in their skills at their own pace. Almost all of the respondents felt that knowing about other programs, talking with other faculty and getting new ideas would be of help to them in bettering their efforts.

In 1973, Prof. James Baldwin\(^3\) completed a survey of remedial mathematics programs in New York State which investigated the relationship between the present status of remedial mathematics programs and the ideal remedial mathematics program, as perceived by chairpersons. A two-part questionnaire was administered to chairperson of each two-year college mathematics department in New York State. Questions relating to placement procedures, program facilities, grading methods, credit policies, tutoring facilities, educational background of remedial staff and general goals were asked in each section. Correlations between related questions were calculated.

Although only 38% of the schools used a placement examination, 71% of the chairpersons felt it ought to be used. On the other hand, there was agreement to grant credit for remedial courses, but not to assign these credits.

\(^3\) Baldwin, James, "A Study of Remedial Mathematics in the Two-Year Community Colleges of New York State" - unpublished
to meet the college's mathematics requirement. There was a high correlation between the present and ideal status of the educational background of the instructors whose main responsibility was remedial mathematics. Most of the chairpersons felt that the current background of their staffs, at least an MA in mathematics or mathematics education was entirely suitable for staff qualifications.

Tutoring by student peers was and ideally should be the most popular way of handling tutoring. Although the most prevalent extra facility for remedial programs was programmed books, the ideal most favored was study laboratories and smaller classrooms. The type of grades administered were pass-fail or a variation thereof. A significant number of respondents who gave no credit for the remedial courses, indicated a desire to give elective credit, but such credit should not be used to fulfill mathematics requirements.

Most of the correlations were significant, indicating a contentment among the respondents. Prof. Baldwin points out that the chairperson completed the questionnaire and would be less apt to be critical of a program he/she was administering or might have originated. He suggests that an evaluation or comparison system should be devised to determine what aspects of remedial programs are successful.

There are other attempts at assessing the state of remedial mathematics which are presently in progress. For
example Prof. Pin Tung Chang of the University System of Georgia is in the process of evaluating his system's efforts. Prof. Karl Lindberg of Wayne State University is doing a national survey at the college level.
GOALS OF THE PRESENT STUDY

In light of the studies previously mentioned, it was felt that some basic issues needed to be investigated in regard to developmental mathematics on a country wide level with the information gathered and analyzed, the committee hopes to clarify some of the problems in this area, suggest some guideposts for further experimentation and serve as a clearinghouse for colleges throughout the country.

This study considered each of the following questions:

1. How many two year college in the United States recognize the need for Developmental Mathematics Courses (DMC)?
2. What areas are taught in the DMC?
3. What department administers the DMC?
4. How are the students chosen for the DMC?
5. Is the DMC required of all students found to be mathematically deficient and must they successfully complete it before going on?
6. What diagnostic procedures are used in the DMC?
7. What is the physical setting of the DMC?
8. What is the learning pace?
9. What are the primary instructional methods?
10. What instructional aids are available for DMC?
11. What is the grading system for the DMC?
12. What is the credit system?
13. What textbooks are used and what home-made materials?
14. What staff is involved in the DMC (instructors, tutors, clerical and counseling) and how are they assigned?
15. How many students enrolled in the DMC go on to other college mathematics courses and how many successfully complete this next one?

16. What formal evaluation of the DMC has been done by the school?

17. What are the strengths of the DMC and how does the school feel it should be improved?

For each fixed alternative question, the percentage of respondents choosing a response was given.

In the appendix, all responses to open-ended questions and any additional information which was sent by the respondents, is summarized.
RESULTS.

Indicated below is each question and the percentage of respondents who indicated a particular fixed alternative choice. Those questions not included below were open-ended questions and the complete results from these appear in the appendix.

1. How many full time students attend your college during a regular semester or quarter?
   Between 0 and 1000: 19%
   Between 1001 and 3000: 39%
   Between 3001 and 5000: 18%
   Over 5001: 21%
   No Response: 3%

2. What areas of instruction offer developmental programs at your college?
   English: 86%
   Reading: 89%
   Mathematics: 91%
   Other: 24%

3. Approximately what percentage of your students must enroll in developmental programs in more than one area of instruction?
   0-20%: 57%
   21-40%: 15%
   41-60%: 10%
   61-80%: 4%
   81-100%: 1%
   No Response: 13%

*more than one response was given by some respondent
4. Is there a need for DMC at your college?
Yes 96%
No 2%
No Response 2%

5. Do you have a DMC?
Yes 91%
No 5%
No Response 3%

6. For how many years has your college had a DMC?
Less than 2 years 7%
2-5 years 31%
5-10 years 39%
More than 10 years 15%
No Response 8%

7. What areas of mathematics are taught in your DMC?
Arithmetic 84%
Elementary Algebra 89%
Geometry 35%
Trigonometry 34%
Other 29%

8. How many different DMC do you offer?
One 28%
Two 24%
Three 12%
Four 12%
Five 14%
No Response 10%
9. What percentage of your full time students are enrolled in DMC?

*13. Are DMC required of all students determined to be mathematically deficient?
   
   Yes 4%
No, it depends on students' major 15%
No, no one is required but strongly suggested 29%
No 45%
No Response 7%

*14. How many mathematics courses are required of liberal arts and humanities students after completion of DMC?

   Zero 37%
   One 36%
   Two 17%
   Three 6%
   More Than Three 0
   No Response 4%

15. Prior to enrolling in other college mathematics courses, must the DMC be passed successfully by those students enrolled in it?

   Yes 52%
   Yes, if the student has a science or technology major 5%
No, students may enroll concurrently in other math courses

Other
No Response

*16. Once a student is placed in DMC what diagnostic procedures are used?

Student must complete all topics in DMC
Placement exam is used to diagnosis
Pre-test at the beginning of each topic is used to diagnosis
No Response

*17. Does the required content of the DMC differ for each student, depending on the student’s major course of study?

Yes
No
Other
No Response

*18. Where do students enrolled in DMC report for instruction?

Regular classrooms
Math lab on assigned days
Math lab on any day student chooses
Other
No Response

*19. Does the student set his/her own pace for learning?

Yes, entirely up to student
Yes, with certain constraints imposed by the program
No
No Response
20. From the instructional methods listed below choose those that best describe your DMC.

- Lecture Method: 55%
- Discussion Groups: 11%
- Emphasis on Audio Visual Aids: 11%
- Audio Tutorial Method: 24%
- Team Teaching: 4%
- Extensive Tutoring: 20%
- Supplemental Tutoring: 37%
- Computer Assisted Instruction: 4%
- Programmed Books Instruction: 54%
- Keller Plan: 13%
- Group Work: 8%
- Work Books or Work Sheets: 29%
- Open Book Examinations: 1%
- Small Classes: 26%
- Individual Attention: 44%
- Open Laboratories: 26%

A comprehensive development program for many other areas of instruction as well as mathematics: 5%

21. Does your college have any of the following facilities specifically for DMC?

- Movies: 14%
- Slides: 30%
- Audio Tapes: 57%
- Electronic Calculators for use in DMC: 26%
- Mathematical Gadgets: 6%
Mathematical Games 4%
Computer use in DMC 8%
Specific library for DMC 10%
Laboratories for DMC 37%

*22. What type of grades are given in the DMC?

Letter 66%
Numerical 3%
Pass - Fail 14%
Incomplete 14%
Pass no credit 8%
Pass partial credit 2%
Some variation of pass incomplete 14%
Student's choice 1%

31. If your response to question 30 is yes, then is this person given release time?

- Yes: 15%
- No: 23%
- No Response: 62%

32. Are there counselors available for students enrolled in DMC?

- Yes, there are counselors specifically for students enrolled in DMC: 13%
- Yes, we may refer students to college counselors: 66%
- Yes, but only for placement: 5%
- No: 13%
- No Response: 4%

33. Approximately what percentage of the students enrolled in DMC go on to other college mathematics courses?

- 81-100%: 9%
- 61-80: 16%
- 41-60: 14%
- 21-40: 19%
- 0-20: 5%
- I do not know: 37%

34. What percentage of the students enrolled in DMC successfully complete their next mathematics course?

- 81-100%: 6%
- 61-80: 17%
- 41-60: 12%
- 21-40: 14%
- 0-20: 4%
- I do not know: 47%
35. What percentage of the students who enrolled in DMC have gone on to complete the first two years of college?

- 81-100%: 2%
- 61-80: 11%
- 41-60: 10%
- 21-40: 8%
- 0-20: 5%
- I do not know: 64%

36. Which of the following do you believe are the greatest strengths of your DMC?

- Concern for students: 72%
- Small class sizes: 28%
- Programmed material: 23%
- Students self paced: 44%
- Peer tutoring: 23%
- Giving credit for DMC: 22%
- Testing only for mastery: 13%
- Students are not isolated in special classes: 9%
- Modula system: 9%
- Other: 4%

37. Has there ever been any formal evaluation of your DMC?

- Yes: 14%
- No: 72%
- No Response: 14%
38. Are you satisfied with your DMC?
   Yes
   Yes, but it should be improved
   No, and it should be dropped as a course offering
   Undecided
   No Response

39. and 40. are open ended responses.
DISCUSSION OF RESULTS

The majority (58%) of colleges responding had between 0 and 3000 students enrolled. Almost all the colleges (96%) expressed a need for DMC and offered developmental programs in English (86%), Reading (89%), and Mathematics (91%).

Most of the colleges (70%) have had DMC for 2 - 10 years and offer one (28%) or two (24%) different DMC courses. The areas covered are arithmetic (84%), elementary algebra (89%), geometry (35%), and trigonometry (34%). Only a small percentage (0 - 20%) of full and part time students at over sixty percent of the colleges are enrolled in DMC.

The mathematic department is the principal agent administering DMC in the majority of colleges (64%). The most popular methods used to choose students for DMC were high school grades in mathematics (53%), interviews (45%), teacher referral (44%), and student volunteering (53%).

Very few colleges (4%) actually required enrollment in DMC if a student was found to be mathematically deficient. Many colleges strongly suggested it (29%) or said it depends on the student's major (15%). However, if a student was enrolled in DMC he was required to pass it successfully in most colleges (52%) and usually (36%) enroll in one course after completion of DMC. Many colleges (37%), do not require any
course after DMC is complete.

Some college (22%) used placement exams for diagnosis procedures, others (27%) used a pretest at the beginning of each unit, but most (47%) required students to complete all topics.

Most classes (66%) of DMC were held in regular classrooms, however, some (32%) used a math lab.

The instructional methods used most frequently were lecture method (55%), programmed book instruction (54%), supplemental tutoring (37%), and workbooks or work sheets (29%). The facilities used most frequently were audio tapes (57%), laboratories (37%) and slides (30%).

The principal grade awarded to students was the traditional letter grade (66%). Some colleges did offer pass-fail or pass-incomplete or some variation of the pass-fail-incomplete option. Regardless of the type grade, most college (66%) offered some form of credit for DMC.

The size of the DMC is close to the traditional class-size with a student faculty ratio of between 10-1 to 30-1.

Very few (39%) colleges used paraprofessional or secretaries to assist in DMC, however, many (43%) used two year college students as tutors.

Release time was very seldom (15%) given to the faculty responsible for administering DMC. Also, very few college (13%) offered counseling services specifically for DMC.

Approximately a quarter of the colleges stated that
students enrolled in DMC go onto other college mathematics courses and successfully complete their next mathematics course. However, on all the question involving some sort of evaluation of the success of the program the overwhelming response was "I don't know". This lack of evaluation was reflected again in the question as to whether there was ever any formal evaluation of their program. The overwhelming response (72%) was "No".

When asked to choose the greatest strength of the DMC in the respondents college the responses were: concern for students (72%), student self paced (44%), small class sizes (28%), programmed material (23%), and peer tutoring (23%).

When asked if the respondent were satisfied with their DMC, approximately forty percent stated they were. An equal number stated that they desired some improvement.
CONCLUSIONS

1. DMC has existed at most colleges for over two years.

2. There is a definite need for developmental mathematical programs.

3. The major areas studied by students were arithmetic and elementary algebra.

4. At most colleges, the percentage of students involved with DMC was less than 20%.

5. The mathematics department principally administered DMC.

6. High school math grades were the principal predictor used for DMC.

7. Most colleges cannot or do not require DMC; however, once a student enrolled in DMC, the student must pass the DMC.

8. Most colleges require students to complete all topics of DMC regardless of major.

9. The principal room used for DMC were regular classrooms.

10. Most programs allowed for some student self-paced learning.

11. The most popular instructional method was lecture and programmed books.

12. The most popular facility was audio tape.

13. Traditional letter grades were used to evaluate students.

14. There usually was some form of credit given for DMC.

15. Instructors were usually assigned to DMC, rather than volunteering or being hired specifically for DMC.

16. Very few colleges used paraprofessionals or secretaries to assist in DMC.

17. Tutoring by other two-year college students was very popular.

18. If an individual other than the math department chairmen administered the DMC, he did not usually receive release time.
19. Very few colleges used counselors specifically for DMC.
20. Evaluation for existing programs was just about non-existent.
21. Many colleges would like to improve their DMC.
RECOMMENDATIONS

1. Remedial - Development Programs should continue to emphasize arithmetic and elementary algebra.

2. More cooperation with other departments should be instituted in order to educate the total student.

3. Placement procedures should be expanded to include more than just high school math grades and should include placement tests.

4. DMC should be required for all mathematically deficient students. However, students should be required to complete only those topics he/she needs.

5. Self-paced instruction should be controlled; it may be necessary to set guidelines so the student does not put off math for other more pressing (paced) courses.

6. Audio visual material should be used.

7. An alternative grading system should be considered.

8. Regular college credit for DMC should be granted.

9. Paraprofessionals should be used for record keeping so as to free instructors for small group instruction.

10. Tutoring should continue to be handled by two-year college student peers.

11. Release time for administrators of DMC should be granted.

12. Formal evaluation of programs should be performed.

13. A training program for instructors of DMC; i.e. teacher training for DMC should be instituted.
RECOMMENDATIONS, cont.

14. An advisory committee should be formed to provide input to other colleges as to how to bring new innovations into their DMC.

15. An advisory committee should be formed to provide input to other colleges as to how to perform the best evaluations of their own programs.
RESPONSES INDICATED AS "OTHER"

Question 2 What areas offer developmental programs?
1. Science Laboratory
2. Chemistry
3. Writing
4. Growth and development (psychology)
5. Study Skills Course
6. Biology
7. Speech
8. Social Science
9. English
10. Reading

Question 7 What areas of mathematics are taught in DMC?
1. Slide Rule/
2. Metric System
3. Desk Calculator
4. Logarithm
5. Basic Statistics
6. Probability
7. Technical Algebra
8. Technical Trigonometry
9. Intermediate Algebra
10. Any math a person is interested in taking.

Question 12 How are students chosen for DMC?
1. Recruited by preparedness program for disadvantaged students
2. Can only "advise" a student to take a course
3. Counseling and administrative referral
4. Comparative guidance and placement test
5. Combination of many above
6. Departmental screening examination administered in Introductory College Math I. On basis of their achievement on this test, some students are advised to take DMC.

Question 15 Must DMC be passed prior to enrolling in another math course?
No, but DMC must be passed by end of following semester.

Question 17 Does the required content of DMC differ for each student?
No, not right now, however we are moving in that direction.

Question 18 Where do students report for instruction?
Learning Resource Center.

Question 30 Is your DMC administered by one person other than your department chairman?
Basic Studies department administers program.
Question 36  What do you believe are your greatest strengths in your DMC?

1. Individualized program for each student.
2. Two methods of instruction.
3. Flexibility of program.
4. Carrying out remediation with topics unfamiliar to the student (such as statistics).
5. Integrated approach with many departments.
6. Individualized tutoring.
7. Concern for students.
8. Small class size.
Responses to Question 24 & 25

Questions 24-25: What instructional material do you use in DMC?

RESPONSES TO QUESTION 39

39. **How would you improve your DMC?**

<table>
<thead>
<tr>
<th>Code</th>
<th>Response</th>
</tr>
</thead>
<tbody>
<tr>
<td>2</td>
<td>More Audio tutorial materials and less students/section.</td>
</tr>
<tr>
<td>3</td>
<td>More Audio Visual materials - some calculators.</td>
</tr>
<tr>
<td>4</td>
<td>Smaller class size.</td>
</tr>
<tr>
<td>6</td>
<td>Complete material; use of calculators for specified units; paraprofessional use.</td>
</tr>
<tr>
<td>8</td>
<td>By offering alternative modes of instruction, specifically scheduled lectures, and small group discussions.</td>
</tr>
<tr>
<td>11</td>
<td>Go to individualized instruction.</td>
</tr>
<tr>
<td>13</td>
<td>More 1 - 1 tutoring.</td>
</tr>
<tr>
<td>15</td>
<td>More individualized learning packages developed by the department—more objective testing.</td>
</tr>
<tr>
<td>17</td>
<td>More research on accomplishments.</td>
</tr>
<tr>
<td>18</td>
<td>Offer students other options such as closed circuit T.V. monitors, whole course on cassette tapes.</td>
</tr>
<tr>
<td>19</td>
<td>Give the option of taking it on a computer assisted basis; e.g. Plato at Univ. of ILL.</td>
</tr>
<tr>
<td>20</td>
<td>Employ Audio-Titorial methods available. Self-paced through Keller Plan (tried successfully but opposed and dropped by the department for various reasons).</td>
</tr>
<tr>
<td>21</td>
<td>It should be required of some students and not voluntary.</td>
</tr>
<tr>
<td>23</td>
<td>Rewrite some of the material, make better use of lab, paraprofessional, and student tutors. It's a little early to get more of an idea.</td>
</tr>
<tr>
<td>27</td>
<td>Smaller student-instructor ratio. Would like para-professional help with clerical work.</td>
</tr>
<tr>
<td>28</td>
<td>Perhaps introduce more of a self-paced character to the course.</td>
</tr>
<tr>
<td>30</td>
<td>Keller Plan approach, with coordinator, lab, and tutoring assistance, using a pretest and follow up study on the validity of the exam.</td>
</tr>
<tr>
<td>32</td>
<td>We would like to offer more alternatives, especially to those with reading problems. We are thinking of buying or making video-tapes which students could use in an open lab. We plan to hire paraprofessionals to assist the instructor. We may teach a course in a laboratory situation where we would use manipulative materials—pattern and fraction blocks, bundling sticks, counters, hand calculator, tangram puzzle, road maps and map measure, meter sticks and scales. We may use the Computational Skills Development Kit from SRA for drill and diagnosis.</td>
</tr>
<tr>
<td>Code</td>
<td>Response</td>
</tr>
<tr>
<td>------</td>
<td>----------</td>
</tr>
<tr>
<td>33</td>
<td>It is primarily a fundamental algebra course and I'm convinced that more appropriate subject matter could be found for the typical student who is a non-science, terminal student that will not go to a senior institution.</td>
</tr>
<tr>
<td>34</td>
<td>Add more equipment; smaller student to teacher ratio; small (4 to 5) discussion groups; larger library of alternate material.</td>
</tr>
<tr>
<td>36</td>
<td>Need better text - more tutorial assistance.</td>
</tr>
<tr>
<td>37</td>
<td>Administratively it needs improvement. Tutors and paraprofessionals have not been hired in the amount of quality that funds are available for. The present instructors must give their time as lab assistants because there are none (or not qualified) to handle lab.</td>
</tr>
<tr>
<td>41</td>
<td>Change the programmed courses to lecture drill courses.</td>
</tr>
<tr>
<td>42</td>
<td>Develop with section.</td>
</tr>
<tr>
<td>47</td>
<td>I would self pace next mandated DMC course so students could continue with it even in mid semester. I would (and will) improve material in algebra.</td>
</tr>
<tr>
<td>48</td>
<td>More audio-visual tutorial aide at spots which have proven to be especially difficult problem areas for a number of students.</td>
</tr>
<tr>
<td>49</td>
<td>Reduce class size, in house proved video tapes.</td>
</tr>
<tr>
<td>50</td>
<td>We need to obtain develop better text material to individualize instruction more.</td>
</tr>
<tr>
<td>51</td>
<td>Provide more review modules with appropriate pre &amp; post test.</td>
</tr>
<tr>
<td>52</td>
<td>We will continue to improve by offering some individualized instructors option to regular course assignment.</td>
</tr>
<tr>
<td>54</td>
<td>Group discussions and mini-lectures over certain topics, currently difficult to arrange.</td>
</tr>
<tr>
<td>56</td>
<td>Greater flexibility, greater adaptability to student needs.</td>
</tr>
<tr>
<td>58</td>
<td>I would like a functional lab and more help and all would be okay. There is too much to do.</td>
</tr>
<tr>
<td>59</td>
<td>Emphasis on mastery learning; coordination with other developmental courses in the first semester.</td>
</tr>
<tr>
<td>60</td>
<td>Need to deal more with the fear of Math and creative Math activities. Need to deal better with individual pacing without isolating.</td>
</tr>
<tr>
<td>61</td>
<td>Give it credit, offer it both as lecture and IPI, student given option to choose between pass-fail or letter grades, have access to larger lending library, more facilitators, instructional materials needs improvement, issue grade of incomplete for students who do not attain all the required objectives, teach mini-courses that help students understand math concepts specifically related to other courses; i.e., refreshers.</td>
</tr>
</tbody>
</table>
63 Need released time to complete preparation and continue revision of materials constructed to enable students to succeed more satisfactorily by using materials adapted to needs and pace of learning.

64 More students who begin the program should successfully complete it. The introduction of the self-paced approach has decreased the attrition, but further improvement should be sought. The program must be continually examined in the effort to improve it.

62 Follow-through and comparison of our lecture and audio-tutorial self-paced sections should be done.

70 More individualization.

71 Administration is not aware of the problem of the disadvantaged. Recommend they read "A Modest Proposal" by Dr. W. Moore.

72 Move to more individualized self-paced approach using a variety of materials and techniques.

Like to offer mini courses but need adequate staff and workable schedules. Also offer advanced courses (Col. Alg., Trig., Cal.) in math lab.

75 Use more proctors. Reduce the student teacher ratio. Use topics directed to specific fields of interest.

76 Not set up for arithmetic, too few students require this type of instruction. Those who don't like audib tutorial method are also a problem. As of now the student is not overworked.

77 A. Improve content
   B. Refine in some areas
   C. Use better qualified personnel
   D. Give students more learning alternatives

78 More care to individual needs.

79 Hope to be able to adapt course content in some DMC courses to specific student major area. Wish to eliminate procrastination so common in programmed courses.

80 A. More personnel
   B. Larger budget
   C. More contact with high schools

81 Develop C or I followed by research then redevelopment based on factual data.

82 A. Get more faculty involved
   B. Produce more short topics, slides and audio
Better diagnostic testing, more individual attention, more use of AV materials followup.

Use computer for testing purpose.

Starting a skills center headed by a coordinator that is funded by grants or school (which they are not willing to do).

More individual help—common for progress nor non-progression.

Continually developing new material, tests, and searching for better texts.

Perhaps greater emphasis on decision making and problem solving with lesson skills.

Increase variation on offerings should include units on metric system, statistics, geometry.

Increased staffing, both instructors and student aids; improved counseling; expanded publicity; would employ lab expert and hand calculators as a learning device to a greater extent that we have done.

We need more visual aids and a better textbook—possibly even a second semester course.

Do more to spot remediation for science students.

Additional help in how to set up courses, how to motivate students, more open lab facilities for student use.

Different text—more use of media.

1. More audio visual aids
2. More competent tutors
3. Fewer students/class
4. More assistance from administration

Develop more programs—utilize new material as they become available—develop new testing programs—develop some of our own material if time and money become available.

By establishing a separate staff to teach the DMC. A staff trained to handle this specific responsibility.

A lab setting should be used with students having access to audio visual aids; paraprofessionals and tutors should be employed.

Provide more options. We now have two: lecture instruction-paced and student paced programs. More materials—audio oriented, etc.

We should go towards more small modular courses—strongly assisted by tutors.
RESPONSES TO QUESTION 40

40. Additional Comments

<table>
<thead>
<tr>
<th>Code</th>
<th>Response</th>
</tr>
</thead>
<tbody>
<tr>
<td>20</td>
<td>There should be considerable improvement during the next year. The college will have a new academic building and the Math Dept. will have a mathematics laboratory equipped with Audio-Visual carrels for the students. It is anticipated that there will be greater use of a self-paced basic remedial course.</td>
</tr>
<tr>
<td>26</td>
<td>We do not have a DMC as such. However, we do have a Learning Center. Superior math students act as tutors to those students (approx. 30%) who are referred by instructors. The Learning Center has quite a bit of A-V material for these math students. Students can get the math tutors on an appointment basis. In the past, some instructors volunteered to counsel students, but not many students have availed themselves of this opportunity. We are working on methods to improve the service at the Learning Center.</td>
</tr>
</tbody>
</table>
| 30   | The faculty have questioned the effectiveness of our program.  
1. Attrition rate?  
2. Purpose of program? filling quotas or offering a service?  
3. No long range plans for an POP program. |
| 78   | We offer traditional course which they must pass to proceed by Department tests. If they are not successful they withdraw from the pace. There are no technical courses here for them to try. |
| 82   | Math center handles the DMC. Help in required courses and Math club. |
| 85   | Please be aware of what I think to be a good and successful program at Wastanauh C.C. in Michigan. |
| 54   | Self-paced programs require students discipline which often times is lacking. This shows in the large numbers who earn incompletes for the quarter. The lack of group discussions which one can encourage in a "lecture" class is non-existent in programmed learning. This we consider a handicap to intellectual growth and motivation to continue the study of mathematics outside of DMC. |
| 62   | Would like the results of your subsequent analysis and compilation. |
| 55   | We are in the process of establishing a developmental skills program on campus, and hopefully will be able to do more with students having arithmetic problems than we have in the past. We have been experimenting with our basis mathematics (elementary algebra) course as to the most effective teaching method: lecture; PSI (Keller Plan); small group; and are very interested in what is working on other campuses. |
| 42   | Would like a copy of final report. |
| 43   | I am interested in films being used in other DMC. |
Our math lab is in its fifth year, it originally had all the gimmicks such as: student-teacher contracts, variable credits, diagnostic exams, pretests and post tests and an abundance of audio material. Each year we have become a bit more traditional. We now require attendance at lectures exception for superior students, we don't use contracts, place little emphasis on the audio material. (If the student has reading problems we send to the reading clinic). We have retained the student tutors, individual exams & open laboratory. If a student wants to proceed faster than the pace of the lectures he is free to do so. A few outstanding students have finished a quarter's work in three weeks. Basically we have learned that in general the type of student taking a DMC does not have the self discipline (with respect to mathematics) to handle independent study in mathematics.

Our arithmetic is going beautifully, with about 1200 students/ year. Our pre-calculus is going well, with about 300 students a year, better prepared, and motivated than those in arithmetic. We have a gap in elementary algebra which we are now preparing to fill.

We are planning to expand our use of computer assisted instruction to provide drill and practice in fundamentals for all sections of DMC. Currently we offer this to only a few sections.

Students should be tested by Diagnostic Test. Then each student results should be analyzed and they should then be placed according to their math needs.

To my way of thinking, the wrong questions are being asked:
1. What is a college course in mathematics?
2. How do you cope with DMC courses in which attitude range from 0 to 99 on a scale of 100?
3. How do you apply these questions to a small, liberal arts college with 300 students -- with 1 instructor in maths and part-time assistant instructor?

Many students entering technical programs have need of our services but usually enroll in the tech math sequence with an inadequate foundation. It is difficult to coordinate our activities with those in the tech curricular who prefer to do it their way.

The demand for DMC is clearly evident on our campus, but not only DMC students desire alternatives to traditional classroom lectures. I think we have to take a long hard look at different modes in instruction, throughout the curriculum.

How do you measure motivation? And how can you convince a student who has been conditioned to failure in his experiences with math, that he needs certain skills regardless of his major?

We offer variable credit (1-4) in arithmetic intend to do same with basic algebra.
In our DMC, all students begin with an arithmetic diagnostic test to determine which arithmetic topics, if any, they must cover before proceeding to the next part of the course. Since our DMC is designed to prepare students for one of 4 specific math courses, after they complete any necessary arithmetic review they must choose which of the two math branches of the course they wish to pursue—the modern math branch as preparation for Fundamentals of Math I or Fundamentals of Math II or the algebra branch as preparation for College Algebra or Tech Math I.

Our DMC classes are heterogeneously grouped, with students from both branches of the course in the lab at the same time. Also the math department offers applied math, which is programmed and modularized to cover Auto Tech, Fire Tech, Machine Tech and Environmental Studies. This is run in the math skills lab concurrently with our DMC.

Our DMC algebra students have choices of lecture or lab classes. Within the lab they may choose either printed programmed instructions or audio cassette tape with a work text. Unfortunately, while many of the topics are similar in the lecture text, they are by 3 different authors and therefore are not completely interchangeable.

Putting everything under DMC is difficult for us. We have developed a specific program for very basic mathematics on a modular system. There are 5 modules: whole arithmetic, Fractions, Decimals, Intro to Algebra, Introduction to Geometry, each worth 1 semester hour institutional credit. A student may enroll for 1, 2, or 3 hours initially and is placed in the appropriate modules through placement exam and conference. The material is self-paced. One year successful completion of a module (70 or better on 3 or 4 tests) he receives 1 hour credit. Enrollment is open any time up to the 12th week of the semester. We are currently running 1 day section (21 enrolled) and 1 night section (27 enrolled).

Elementary Algebra & Elementary Geometry are taught as a traditional pattern as 5 and 3 semester have courses respectively. Intermediate Algebra is also offered as a separate 3 semester course but information for it was not included in these responses.
At the first meeting of the National Committee on Developmental Mathematics of the National Mathematics Association of Two-Year College Educators (NAMATYC), a subcommittee was formed and charged with the responsibility of studying present Developmental Mathematics Courses (DMC). The following questionnaire is the beginning of this subcommittee's endeavors. To make this study a success, your cooperation is needed. Please respond to all questions as honestly as you can.

For the purpose of this study Developmental Mathematics Course (DMC) shall mean those Mathematics courses usually taught in high school to prepare students for college. Other words for Developmental Mathematics are Remedial Mathematics, Basic Mathematics, and Preparatory Mathematics.

A. Respondent Information:

Directions: Please use the space provided to indicate the desired information.

Name of respondent ___________________________

College ___________________________  O Four Year College
                                              O Two Year College

Location:  City__________________________  State_________ Zip Code_________

Date ___________________________

B. Background Information on Your College:

Directions: Please check the appropriate response(s).

1. How many full time students attend your college during a regular semester or quarter?
   _____ Less than 500  
   _____ Between 500 and 1,000
   _____ Between 1,000 and 3,000
   _____ Between 3,000 and 5,000
   _____ Between 5,000 and 10,000
   _____ Over 10,000

2. At your college what areas of instruction offer developmental programs?
   _____ English
   _____ Reading
   _____ Mathematics
   _____ Other (please specify)
3. Approximately, what percentage of your students must enroll in development programs in more than one area of instruction?
   - 0-20%
   - 20-40%
   - 40-60%
   - 60-80%
   - 80-100%

4. Is there a need for a DMC at your college?
   - Yes
   - No

5. Do you have a DMC?
   - Yes
   - No

If your response to question 5 is yes please continue answering all the questions. If your response is no there is no need to continue answering the questions below.

6. For how many years, has your college had a DMC?
   - less than 2 years
   - 2-5 years
   - 5-10 years
   - more than 10 years

7. What areas of mathematics are taught in your DMC?
   - Arithmetic
   - Elementary Algebra
   - Geometry
   - Trigonometry
   - Other (please specify)

8. Some colleges offer the topics indicated in question 7 in one DMC. Other colleges prefer to separate the different topics into distinct courses (i.e., one course of elementary algebra, another for geometry, etc.). How many different DMC do you offer? (If possible please attach a brief course description for each course)
   - Four
   - One
   - Five
   - Two
   - Three

47
9. What percentage of your full time students are enrolled in DMC?
   - 0-20%
   - 20-40%
   - 40-60%
   - 60-80%
   - 80-100%

10. What percentage of your part time students are enrolled in DMC?
    - 0-20%
    - 20-40%
    - 40-60%
    - 60-80%
    - 80-100%

11. What department administers DMC?
    - Mathematics department with input from college wide Developmental Committee
    - Mathematics department
    - Developmental studies department
    - Other (please specify)

C. Placement and Related Matters

12. How are students chosen for the DMC?
    - Commercial Standardized Placement Examination
    - Departmental Placement Examination that was validated and checked for Reliability
    - Departmental Placement Examination
    - High School Grades in all courses
    - High School Grades in Mathematics
    - Scholastic Aptitude Test Score (SAT)
    - American College Testing Scores (ACT)
    - Interview
    - Teacher Referral
    - Performance in selected courses
    - Volunteer
    - Other (please specify)
13. Are DMC required of all students determined to be mathematically deficient?
   - Yes
   - No, it depends on the students' major
   - No, no one is required, but the student is strongly suggested to enroll
   - No

14. How many mathematics courses are required of liberal arts and humanities students after completion of DMC?
   - Zero
   - One
   - Two
   - Three
   - More than three

15. Prior to enrolling in other college mathematics courses, must the DMC be passed successfully by those students enrolled in it?
   - Yes
   - Yes, if the student has a science or technology major
   - No, student may enroll concurrently in other mathematics courses

16. Once a student is placed in DMC what diagnostic procedures are used?
   - Student must complete all topics in DMC
   - Placement examination is used to diagnosis
   - Pre test at the beginning of each topic is used to diagnosis

17. Does the required content of the DMC differ for each student, depending on the students major course of study?
   - Yes
   - No

D. Pedagogy Questions:

18. Where do students enrolled in DMC report for instruction?
   - Regular classrooms
   - Mathematics laboratory on assigned days
   - Mathematics laboratory on any day student chooses
   - Other (please specify)
19. Does the student set his own pace for learning?
   ___ Yes, entirely up to the student
   ___ Yes, with certain constraints imposed by the program
   ___ No

20. From the instructional methods listed below choose those that best describe your DMC. If you offer more than one DMC with different methods for each course please specify which method corresponds to which course. (Choose no more than four responses)
   ___ Lecture Method
   ___ Discussion Groups
   ___ Emphasis on Audio Visual Aids
   ___ Audio Tutorial Method
   ___ Team Teaching
   ___ Extensive Tutoring
   ___ Supplemental Tutoring
   ___ Computer Assisted Instruction
   ___ Programmed Book Instruction
   ___ Keller Plan
   ___ Group Work
   ___ Work Books or Work Sheets
   ___ Open Book Examinations
   ___ Small Classes
   ___ Individual Attention
   ___ Open Laboratories
   ___ A comprehensive developmental program for many other areas of instruction as well as mathematics

21. Does your college have any of the following facilities specifically for DMC?
   ___ Movies
   ___ Slides
   ___ Audio Tapes
   ___ Electronic Calculators for use in DMC
   ___ Mathematical Gadgets (please specify)
   ___ Mathematical Games (please specify)
   ___ Computer for use in DMC
   ___ Specific Library for DMC
   ___ Laboratories for DMC
22. What type of grades are given in the DMC? Note: If different types of grades are given for different DMC or for different students then please specify that information to the right of each appropriate response.

- Letter
- Numerical
- Pass-Fail
- Incomplete
- Pass-No Credit
- Pass-Partial Credit
- Some variation of Pass-Incomplete
- Student's Choice
- Written Statements

23. Is there credit given for DMC? If this depends on student major and/or particular DMC then please specify restrictions to the right of the appropriate responses.

- Yes, but not to meet mathematics degree requirement
- Yes
- No

24. If you use commercially available texts, workbooks or programmed books, please give the title(s) and author(s). (Please specify for each course)

- 

25. If you use instructional material unique to your college please give a brief description.

- 

E. Personnel Questions:

Directions: Please check the appropriate responses.

26. How are instructors assigned to DMC?

- Instructors are hired specifically for DMC
- Instructors volunteer
- Instructors rotate
- Instructors are assigned
27. What is the approximate faculty/student ratio for DMC?
   _____ Between 1-1 and 1-5
   _____ Between 1-5 and 1-10
   _____ Between 1-10 and 1-20
   _____ Between 1-20 and 1-30
   _____ Between 1-30 and 1-40
   _____ Between 1-40 and 1-50
   _____ Over 1-50

28. Do you specifically assign any para-professionals or secretaries to assist instructors with the record keeping involved with DMC?
   _____ Yes
   _____ No

29. Do you hire tutors to assist instructors?
   _____ Yes, two year college students
   _____ Yes, four year college students
   _____ Yes, graduate students
   _____ Yes, (specify)
   _____ No

30. If the DMC is administered by the Mathematics Department, is one person, other than the department chairman, in charge of the program?
   _____ Yes
   _____ No

31. If your response to question 30 is yes, then is this person given release time?
   _____ Yes
   _____ No

32. Are there counselors available for students enrolled in DMC?
   _____ Yes, there are counselors specifically for students enrolled in DMC
   _____ Yes, we may refer students to college counselors
   _____ Yes, but only for placement
   _____ No

33. Approximately what percentage of the students enrolled in DMC go on to other college mathematics courses?
   _____ 80-100%
   _____ 60-80%
   _____ 40-60%
   _____ 20-40%
   _____ 0-20%
   _____ I do not know
34. What percentage of the students enrolled in DMC successfully complete their next college mathematics course?

- 80-100%
- 60-80%
- 40-60%
- 20-40%
- 0-20%
- I do not know

35. What percentage of the students who enrolled in DMC have gone on to complete the first two years of college?

- 80-100%
- 60-80%
- 40-60%
- 20-40%
- 0-20%
- I do not know

36. Which of the following do you believe are the greatest strengths of your DMC? (Check no more than three responses)

- Concern for students
- Small class size
- Programmed material
- Student self-paced
- Peer tutoring
- Giving credit for DMC
- Testing only for mastery learning
- Students are not isolated in special classes
- Modula System
- Other (please specify)

37. Many schools presently have teacher and course student evaluations. However, very few DMC have been formally evaluated by research techniques. Has there ever been any formal evaluation of your DMC? (If such an evaluation is available, please attach. If it is published, please indicate where).

- Yes
- No
38. Are you satisfied with your DMC?
   - Yes
   - No, but it should be improved
   - No and it should be dropped as a course offering
   - Undecided

39. How would you improve your DMC?

40. If you have any additional comments regarding your DMC, please state them here.
