Evaluation designs are presented for these work components of the Improving Teaching Competencies Program (ITCP): (1) developing, implementing, and evaluating a strategy for disseminating selected ITCP instructional systems in Individually Guided Education (IGE) schools; (2) developing, implementing, and evaluating a strategy for disseminating ITCP instructional systems in the Florida Teacher Center network; and (3) planning, implementing, and evaluating three regional workshops using selected ITCP instructional systems. The first section of the report contains: (1) the context for this evaluation, including purpose, constraints, and primary audiences; (2) a description of the dissemination/diffusion strategies being evaluated; (3) objectives of the strategies; (4) questions to be answered in this evaluation; and (5) sequencing and emphasis of the evaluation. The second section includes descriptions of evaluation investigations to be conducted, the designs, variable emphasis, and means of data collection. The third section contains a plan for providing the information obtained. Contained in the appendices are: (1) worksheets summarizing the evaluation questions, sources of information, instrumentation, and analysis suggestions; (2) time schedules for various evaluation activities; (3) complete descriptions of contents of training to be conducted; and (4) preliminary drafts of instruments. INTRODUCTION

The Field Relations and Dissemination Work Unit (FRDWU) of the Improving Teaching Competencies Program (ITCP) has the following work components to complete: (1) developing a Technical Assistance Unit (TAU), (2) developing a conceptual model to guide dissemination and diffusion of ITCP instructional systems and other programs or products with similar aims and formats, (3) developing, implementing and evaluating a strategy for disseminating selected ITCP instructional systems in Individually Guided Education (IGE) schools in collaboration with the Wisconsin Research and Development Center, (4) developing, implementing and evaluating a strategy for disseminating ITCP instructional systems in the Florida Teacher Center network, (5) planning, implementing and evaluating three regional workshops using selected ITCP instructional systems, and (6) serving in a field relations capacity to set up field test sites for the Social Conflict and Negotiative Problem Solving instructional system of the ITCP. In addition, the FRDWU is participating in Inter-Lab Consortium activities designed to explore different ways to increase utilization of products of several research and development efforts.

The purpose of this report is to present evaluation designs for work components 3, 4 and 5. These three components represent initial efforts by the FRDWU to examine alternative ways of dissemination/diffusion of the instructional systems of ITCP.¹

A conceptual model designed to serve as a guide for current and future dissemination and diffusion activities of the ITCP has been developed.²

The three strategies this evaluation design addresses (the regional workshop,

---

¹Factors leading to the selection of these alternatives and more complete descriptions are provided on pp 4-8.
the Individually Guided Education (IGE) Network intervention and the Florida Teacher Center (FTC) Network intervention) are examples of the second and third categories of strategies proposed in the conceptual paper by Arends:

2. Market workshop experiences using intact instructional systems to individuals

3. Provide training of trainers and technical assistance using intact instructional systems to institutions and agencies wishing to adapt and use components of ITCP curriculum.

Related evaluation designs for other dissemination/diffusion activities include: Evaluation Design for the Establishment of a Technical Assistance Unit in the Improving Teaching Competencies Program (June 1976) and Evaluation Design for Preparing Educational Training Consultants: A Field Experiment (April 1976).

This report is divided into three main sections and includes several appendices. The first section describes: (1) the context for this evaluation, including its purpose, constraints and the primary audiences, (2) a description of the dissemination/diffusion strategy being evaluated, (3) objectives of the strategies, (4) questions to be answered in this evaluation, and (5) sequencing and emphasis of the evaluation. The second section includes descriptions of evaluation investigations to be conducted, the designs, variable emphasis, and means of data collection. The third section contains a plan for providing the information obtained. Contained in the appendices are (1) worksheets summarizing the evaluation questions, sources of information, instrumentation, and analysis suggestions, (2) time schedules for various evaluation activities, (3) complete descriptions of contents of training to be conducted, and (4) preliminary drafts of instruments.

Ibid., p. 19
Context of the Evaluation

Purpose of the Evaluation

In many ways the dissemination strategies being evaluated represent the best judgments of project personnel and outside consultants at this time. Since these types of dissemination activities are relatively innovative, the information base on how to proceed is insufficient. Therefore, the primary purpose of the evaluation design is to provide information related to the feasibility of each strategy based upon initial implementation efforts. Specifically, the results of this evaluation will provide (1) a complete description of each strategy used and the rationale for various program components, (2) an indication of the degree to which the dissemination/diffusion objectives have been achieved, and (3) a greater understanding of the degree to which selected variables appear to influence effectiveness. In many ways this design is similar to a context evaluation which provides information on the needs, problems and opportunities of a system so better planning decisions can be made.

Several constraints impinge upon this evaluation design. The first constraint is the short time-span between implementation of each strategy and the end of the funding cycle. Since this severely limits the ability to detect actual achievement of dissemination/diffusion objectives, continued data collection efforts are proposed beyond the November 30, 1976 date. The second constraint is the relatively low information base which exists regarding these dissemination/diffusion strategies. Because of this condition, the evaluation should be viewed as important in the identification of hypotheses which will need further study.

The evaluative information about these strategies
to the needs of three audiences.

1. Personnel in the Field Relations and Dissemination Work Unit
within ITCP and the marketing staff of Northwest Regional Educational
Laboratory (NWREL) for possible revisions and/or extensions of
dissemination/diffusion strategies for Lab products

2. Other product developers and disseminators who may potentially
use the results of the evaluation in designing dissemination/
diffusion strategies for their systems

3. Members of the National Institute of Education (NIE) who monitor
the progress and assess the quality of output from the ITCP and
the Field Relations and Dissemination Work Unit

Description of the Dissemination Strategies

Three different dissemination/diffusion strategies have been selected
by the Field Relations and Dissemination Work Unit for field trials during
fiscal year 1976. The descriptions which follow include:

1. Details of planned activities
2. Factors leading to selection of each strategy
3. Relationship of each strategy to the conceptual model

Individually Guided Education Network Intervention

The purpose of this strategy is to develop, implement and evaluate
an approach for disseminating selected ITCP instructional systems into
IGE schools by providing training to personnel in the Midwest IGE Institute
in collaboration with the Wisconsin R & D Center. The Midwest IGE Institute
is the dissemination agency for IGE-related program elements. Workshops
will be provided in two ITCP instructional systems without major modifica-
tion (Interpersonal Communications IPC and the first week of Preparing
Educational Training Consultants: Skills Training PETC-I). A two-day

5A complete description of these instructional systems including intended
users, main emphasis, intents (contents, main activities, provisions for
use, conditions for use and cost range) is provided in Appendix C.
A micro-lab will be conducted to enable participants to gain an awareness of the other instructional systems developed by ITCP. In addition, a three-day training session will be provided to instruct the trainees to install, adapt and apply the ITCP instructional systems in IGE schools.

A number of factors led to the selection of this network intervention. First, NWREL has worked with the Wisconsin R&D Center in providing training in ITCP instructional systems for the past four years. This training was viewed as helpful for facilitating the needed changes in schools that were implementing the Individually Guided Education programs. Also, the Wisconsin R&D Center and NWREL are working together on the Inter-Lab Consortium dissemination activities. Other reasons that made this strategy attractive were as follows: short lead-in time needed for implementation, strategy maintained fidelity of products, little additional development required, inexpensive to implement, multiplier effect of "each one teach one" maintained and the strategy capitalized on using existing personnel capabilities in ITCP and the marketing office at NWREL.

The Individually Guided Education Network Intervention is an example of the third category of dissemination and diffusion strategies outlined in the conceptual paper.

Provide training of trainers and technical assistance using source intact instructional systems to institutions and agencies wishing to adapt and use components of ITCP curriculum. . .

The ITCP has more experience with this type of strategy than any other of the seven categories presented in the conceptual model. In general, the success of this strategy is in terms of the extent to which the new curricula is implemented and incorporated by the user institution or agency.

6Op. Cit., p. 19
Florida Teacher Center Network Intervention

The purpose of this strategy is to develop, implement and evaluate a strategy for disseminating ITCP instructional systems in the Florida Teacher Center Network by providing training and technical assistance to personnel in selected teacher centers in the Tampa Bay area. A one-week workshop will be provided in Preparing Educational Training Consultants (PETC-I). In addition, some instruction will be provided to prepare participants to assume the role of trainer in their home setting.

The decision to select the Florida Teacher Center Network was based on many of the same factors that were identified as important to the decision of working with the IGE network. Previous working relationship with faculty in teacher training institutions have resulted in a number of instructional systems being offered as courses either on a preservice or inservice basis in the State of Florida. Also, Florida Teacher Centers were formed several years ago with a legislative authorization of $5.00 per student for support of their activities. Representatives from ITCP made presentations on their systems at this time to FTC personnel and many felt that these systems responded directly to inservice training needs of Florida teachers. The selection of instructional systems is dependent upon a needs assessment by teachers. ITCP systems will be listed in a catalog of possible training opportunities for teachers this coming year. The opportunity for extensive additional training in cooperation with the Teacher Centers was a major reason for selection of this dissemination alternative. The other factors that were identified as important to the IGE decision and also are applicable to this decision are as follows: short-lead-in time needed, fidelity of products.

7A complete description of this instructional system is provided in Appendix C.
maintained, no additional development needed, low cost, multiplier
effect of "each one teach one" maintained and no additional staff
necessary for implementation.

The Florida Teacher Center Network is another example of the third
category of dissemination and diffusion strategies outlined in the
Arends paper (1976). (See pages 5, 6 for a description of this category,
ITCP experience with this type of strategy and criteria for success.)

Regional Workshop Intervention

The purpose of this strategy is to develop, implement and evaluate
an approach for disseminating selected ITCP systems by providing workshops
in three different locations (Denver, Portland and San Francisco). Direct
mailing is used to announce workshop topics and dates. A tuition charge
has been selected to defray the costs in conducting the workshops. The
three instructional systems selected for these workshops include: Denver,
*Interpersonal Communications*; Portland, *Group Process Skills*; and
San Francisco, *Interpersonal Influence*. 

The implementation of this strategy represents a departure from
previous approaches used to disseminate instructional systems developed
by ITCP. Several factors influenced the selection of this alternative.
First, this method has been used successfully by a number of training
organizations, e.g., National Training Laboratories, American Education
Research Association. Second, the strategy allows for individuals to
decide to participate independent of an agency commitment. The ITCP
has in the past received requests from individuals wishing to
participate in various instructional systems, however, the ITCP has not

---

8Complete descriptions of these systems are presented in Appendix C.
up until this time provided the opportunity. Other factors that influenced the selection of this strategy include: no additional development work required, the fidelity of the products maintained, cost reimbursed through tuition fee, multiplier effect of "each one teach one" maintained, and no additional staff required to implement the strategy.

The Regional Workshop concept is an example of the second category of dissemination and diffusion strategies outlined in the conceptual model.

Market workshop experiences using intact instructional systems to individuals

This strategy, if successful, would sell ITCP products and give opportunity for persons to have a "hands-on" experience with ITCP instructional systems. The focus is on creating an awareness of ITCP products and developing a readiness for more sustained training in the future. The success of this strategy is the extent to which the strategy can be self-supporting as well as lead to more requests for products, additional training, and consultation or technical assistance.

Goals and Objectives

The goals and objectives for these three dissemination strategies are divided into two categories: (1) the IGE and FTC Network interventions, and (2) the Regional Workshop intervention. The combination of the two network interventions is appropriate since these two strategies are similar in purpose and structure. A separate set of objectives is proposed for the Regional Workshop because of its emphasis on a different set of variables and differing expectation as to the level of achievement regarding dissemination outcomes.
IGE/FTC Network Intervention. Two major objectives are proposed for the IGE and FTC interventions.

1. Obtain greater understanding of the feasibility of this strategy as a means of disseminating ITCP instructional systems. As a result of these activities, the Field Relations and Dissemination Work Unit will be able to determine the following:
   a. Whether the approach appears generalizable to other networks
   b. What the major needs, problems and opportunities are in collaborative efforts such as these
   c. Whether the dissemination objectives have been achieved or the degree to which this strategy leads to the following:
      1. Knowledge of available products by participants
      2. Spread of knowledge of products from participants to others
      3. Use of products in IGE and FTC schools as a direct or indirect result of participant involvement in these sessions
      4. Degree to which product use is viewed as helpful to solving problems in IGE and FTC schools
      5. Further training in package use because strategy includes process of training "trainers" in midwest and southeast region (multiplier effect)
      6. Further training by participants in packages other than those used in training sessions

2. Obtain greater understanding of the variables which may affect the feasibility of this strategy as a means of disseminating ITCP instructional systems. As a result of these activities, the Field Relations and Dissemination Work Unit will have some indication of the degree to which the following classes of variables appear to be important considerations:
   a. Characteristics of participants
   b. Characteristics of schools
   c. Characteristics of the instructional system used
   d. Characteristics of the actual training received

Regional Workshop Intervention. Three objectives have been identified relating to the use of the Regional Workshop concept as a means of disseminating ITCP instructional systems.

1. Obtain greater understanding of the feasibility of this strategy as a means of disseminating ITCP instructional systems. As a
result of these activities, the Field Relations and Dissemination Work Unit will be able to determine the following:

a. What are the needs, problems and opportunities in conducting Regional Workshops

b. Whether the dissemination objectives for the workshops have been achieved or the degree to which this strategy leads to the following:

1. Further training in other packages by participants
2. Agency use of products which can be directly or indirectly linked to workshop participation
3. Communication of lab products to others that can be traced to workshop participation

2. Greater understanding of the degree to which each workshop was effectively implemented as planned.\(^9\)

3. Greater understanding of the variables which affect the feasibility of offering regional workshops as a dissemination alternative. As a result of these activities, the FRDWU should have an initial understanding of how the following variables affect decisions to attend workshops:

a. Location
b. Tuition cost and total participant cost
c. Workshop content
d. Time offered

Evaluation Questions

This section includes the major questions to be answered in the evaluation work described in this report. These questions form the basis of the evaluation studies described in the second section and are keyed to each study in the evaluation worksheets that are provided in Appendix A. Since separate objectives have been identified for the IGE and FTC intervention as well as the Regional Workshops, separate listings of associated evaluation questions will also be provided.

\(^9\)The ability to attract participants will determine if workshops are offered; emphasis will shift to Objective 3 if workshops are cancelled.
IGE/FTC Evaluation Questions. Evaluation questions for the IGE and FTC intervention have been sorted into two major categories. These two categories correspond to the categories of objectives described on pages 9 and 10. In addition, evaluation questions relating to each subobjective are grouped together, thereby clarifying the relationship between the objectives and questions to be addressed.

Questions relating to the feasibility of this strategy as a means of disseminating ITCP instructional systems.

a. Whether the approach appears generalizable

1. To what degree do the IGE and Florida Teacher Centers serve as a good example of networks to be tapped for use?

2. To what extent are there a number of similar networks available in which the dissemination strategy can be tested?

3. How are characteristics of this network similar to others?

b. What the major needs, problems and opportunities are in collaborative efforts such as these

4. What are the antecedents and transactions involved in developing and implementing these collaborative relationships?

5. What factors inhibit collaborative efforts such as these?

6. What are the crucial elements of a successful collaboration effort of this nature?

7. What are the "spin offs" from these efforts?

8. To what degree would personnel from both institutions actively seek other collaborative arrangements?

9. To what degree are prior working relationships a necessary ingredient to entry into networks?

10. What are the characteristics of participants and organizers?

c. Whether the dissemination objectives have been achieved

11. To what degree are participants more knowledgeable about lab products as a result of their involvement?

12. To what degree is there greater use of lab products in IGE and Teacher Center schools which can be traced to involvement in these sessions either directly or indirectly?
13. To what degree did persons trained, train others?

14. To what degree did training in these products lead to future training by same participants in other products?

15. To what degree are products sold?

Questions relating to the understanding of the variables which may affect feasibility of strategy.

a. Characteristics of participants

16. To what degree are participants in positions to advise or influence budget allocation?

17. To what degree do participants have job responsibilities which include identification of needs and products which address these needs? Does job include influencing others in this regard?

18. To what extent are participants influential in their school context?

19. To what degree are participants committed to planned change as a means of problem solving?

20. To what extent do participants have high-priority problems which Lab products address?

21. To what degree do participants come to sessions with or without previous exposure to Lab products?

22. In what ways does the team approach provide additional incentive for use of products when participants return to jobs?

23. Can participants be released to conduct training?

b. Characteristics of schools

24. In what ways do budget problems prevent utilization of any products which have cost requirements?

25. To what extent do budget limitations rule out Lab product selection?

26. In what ways do IGE or FTC developed processes and products compete for limited resources? What are the critical competitors for limited dollars?

27. What is the degree to which IGE and FTC schools have perceived needs which Lab products address?

28. In what ways do IGE and Teacher Center schools have mechanisms for staff development which hinder or facilitate use of products and required training?
c. Characteristics of the instructional system used

29. To what degree is a compatible philosophy of products and networks a necessary prerequisite?

30. To what degree are requirements for Lab product use (prior participant training) a hinderance or asset to use in networks?

d. Characteristics of the actual training received

31. What is the rationale behind training format, selection of products used, and time allocation?

32. To what degree are the objectives for the sessions accomplished?

33. To what degree are the sessions well organized and delivery effective?

34. To what degree are accommodations conducive to effective training?

35. (For IGE only) In what ways will choice of options affect degree to which objectives are achieved?

36. (For IGE only) Is the two and one-half day design an effective way to provide instruction on adaptation?

37. (For IGE only) To what degree is the microlab an effective way to communicate information on other lab products?

Regional Workshop Evaluation Questions. The evaluation questions for the Regional Workshop intervention have been sorted into three major categories. These three categories correspond to the categories of objectives described on pages 9-10. In addition, evaluation questions relating to each sub-objective are grouped together, thereby clarifying the relationship between the objectives and questions to be addressed.

Questions relating to the feasibility of this strategy as a means of disseminating ITCP instructional systems.

a. What are the needs, problems and opportunities in conducting Regional Workshops such as these

1. What are the antecedents and transactions involved in developing and implementing the regional workshop interventions?

2. What rationale is presented for implementing decisions regarding promotion, time, location, content and cost for participants?
3. In what ways do the outcomes of this endeavor support or reject the previous planning work on the regional workshops concept?10

4. What are the characteristics of participants, in terms of role, previous experience with ITCP programs, degree to which they personally paid for training?

5. To what degree was location, time, content, and cost a factor in participants' decisions to attend?

6. What can be learned from other institutions such as the National Training Laboratories and the American Education Research Association regarding recruitment and selection of participants, location, time, cost and content of training?

7. What is the degree to which the content and context of other institutions' use of regional workshops are comparable to NWREL's endeavors?

b. Degree to which dissemination objectives were achieved

8. What is the nature of further participant training in other Laboratory packages?

9. To what degree do participants "train" others in product use?

10. To what degree do agencies or individuals receive information on Lab products which can be traced either directly or indirectly to participant involvement in workshops?

11. To what degree are products and/or services sold to individuals or organizations as a result of previous workshop participation?

Questions relating to degree to which workshops were effectively implemented as planned.

12. Was the session well organized and delivery effective?

13. What is the degree to which accommodations were conducive to effective training?

14. What is the degree to which training objectives were accomplished?

---

10See report advocating use of Regional Workshops by S. Rath, Marketing the Improving Teaching Competencies Program Training Systems, December 1975.
Questions relating to greater understanding of the variables which affect the feasibility of offering regional workshops as a dissemination alternative.  

15. To what degree does the location of the workshop affect decision?  
16. To what degree does the time of the workshop affect decision?  
17. To what degree does the content of the session affect decision?  
18. To what degree does cost (tuition, travel, lodging) affect decision?  

Sequence and Emphasis of the Evaluation  

Constraints for this evaluation, such as the evaluation staff allocation and the short time-frame between interventions and end of funding cycle, will influence the degree to which the 37 questions for the IGE and FTC intervention and the 18 questions for the Regional Workshops are addressed. In addition, some of the evaluation questions that can be answered in this time-frame are more future oriented than others. Table 1 identifies the following questions: (1) those which can and will be addressed this funding cycle, (2) those which can and may be addressed during the funding cycle, (3) those which can only be addressed on a superficial basis during this cycle, and (4) those which can only be answered in future evaluation efforts.

---

11 The primary focus of these evaluative questions is to determine why those recruited chose not to attend.

<sup>b</sup>Questions 1-18 for the Regional Workshops can be found on pages 13-15.
METHODS OF OBTAINING THE EVALUATION INFORMATION

This evaluation will be conducted to collect information on the feasibility of three dissemination strategies. This section contains descriptions of investigations to be conducted, different data collection methods that will be used, the purpose of the activity, and when appropriate, samples, analysis and standards will be suggested. The same format that was used for presenting the objectives and evaluation questions will be used here since different means of data collection are projected for the IGE/FTC network intervention and the Regional Workshop intervention.

IGE/FTC Network Intervention

As previously indicated, the purpose of this strategy is to design, implement and evaluate an approach for disseminating selected ITCP instructional systems into IGE and FTC schools by providing training in the Midwest IGE network and FTC network. To collect the needed information, the following three interrelated investigations will be conducted. Each of these investigations are a part of the larger design being presented in this document. They are reported here as separate activities to emphasize correspondence to distinct evaluation questions. Appendices A and B outline in greater detail the sequence of activities for each evaluation investigation, data sources, means of data collection and analysis suggestions.

The first study, a context evaluation, is designed to provide information on the feasibility of the strategy based upon initial implementation efforts. Specifically, one purpose of this investigation is to describe and make judgments regarding the needs, problems and opportunities of collaborative efforts such as these. The second purpose is to obtain judgments as to the generalizability of this approach to
other networks. Descriptions and judgments regarding needs, problems, and opportunities will be obtained by the following means: (1) review of written documentation, (2) informal interviews with FRDWU staff, and (3) a questionnaire for organizers of training sessions. Judgments regarding generalizability will be obtained by identifying a small number of persons familiar with networks nationally and asking for their opinions.12

The third purpose of this study is to determine the degree to which the dissemination objectives have been achieved. Assessment will consider short and long-term effects. One short-term assessment point will occur as close to the end of this funding cycle as possible. The means of data collection is a review of the Contact Report Forms which includes a tracer system of additional communication between the Technical Assistance Unit and anyone who was involved in the IGE/FTC dissemination strategy.13 Another short-term assessment point will occur following each training session when participants will be asked about their intentions to train others, to participate in additional training, etc. A description of the types of additional communication that occurs and numbers involved as well as a description of participants' intentions will be the only indicators of achievement of the dissemination objectives during this funding cycle.

The long-term estimates of achievement will include: (1) a review of the Contact Report Forms up until September 1977, (2) a followup questionnaire to participants requesting information on actual rather

---

12A small group of 5-8: Possible members are Kathleen DeVaney, Director of the National Teachers' Centers Network, Staff of the Local Problem Solving unit at NIE and David Crandall of the National Diffusion Network.

13This design is delineated in Evaluation Design for the Establishment of a Technical Assistance Unit in the Improving Teaching Competencies Program. May 1976.
than intended training of others, additional training for self, etc., and (3) an analysis of a log which participants will be asked to keep on their training efforts and problems that occur.

The second study will focus on understanding the factors that influence the feasibility. Four categories of factors have been identified that could influence the degree to which the dissemination objectives are achieved, i.e., participants themselves, the schools, the instructional systems, and the actual training received. A short-term and long-term study of these factors is proposed. The short-term emphasis that will be completed before the end of the funding cycle is on the quality of the actual training received. One purpose of this short-term study is to determine if the training was as effective as previous training in the same instructional systems. This information will tell us if we need to continue further study of the effects of the training sessions themselves or the achievement of the dissemination objectives. Standards from previous evaluations of similar systems will be used to make judgments regarding the quality of the training received. Two means of data collection will feed into this process: (1) an evaluator-observer will be present at each training session and will make judgments as to the overall quality and the degree of deviation from established procedures, and (2) a participant questionnaire will request perceptions of quality. Another purpose of this short-term investigation is to assess the quality of the newly developed set of activities designed to instruct participants on means of adapting materials, and to create awareness of other available ITCP systems. Similar means of data collection will feed into making these judgments; however, the availability of relative standard is impossible since this is the first time these materials will be used.
The long-term study will include an initial assessment of the effects of the participants, conditions in schools and the instructional systems themselves on the achievement of proposed dissemination objectives. The primary means of data collection will include: (1) followup questionnaire of participants, (2) analysis of log notation participants will be asked to maintain on their training, adaptation and associated problems, and (3) review of Contact Record Forms over the past year, 9/1/76 - 9/1/77.

Regional Workshop Intervention

As previously indicated, the purpose of this strategy is to develop, implement and evaluate an approach for disseminating selected ITCF instructional systems, e.g., offering a series of Regional Workshops to individuals. To collect the needed information, the following three interrelated investigations will be conducted. Each of these investigations is a part of the larger design being presented in this document. They are reported here to emphasize correspondence to distinct evaluation questions. Appendices A and B outline in greater detail the sequence of activities for each evaluation investigation, data sources, means of data collection and analysis suggestions.

The first study, a context evaluation, is designed to provide information on the feasibility of this strategy based upon initial implementation efforts. Specifically, one purpose of this investigation is to describe and make judgments regarding the needs, problems and opportunities of conducting Regional Workshops. This study will include an analysis of the planning and structuring decisions made in regard to the workshops, the degree of compatibility of results from the initial implementation efforts with those projected in Rath (1975), and an
understanding of the characteristics of participants who received training. Means of data collection include: (1) informal interviews with FRDWU staff, (2) review of documents, and (3) Participant Background Information Questionnaire. Another purpose of this investigation is to analyze other institutions' use of the regional workshop concept. The means of data collection for this aspect of the context evaluation include: (1) information telephone interviews, (2) literature search, and (3) review of documents, e.g., evaluations sent by personnel from other institutions. The final purpose of the context evaluation is to assess the degree to which dissemination objectives have been achieved. Short-term indicators of achievement will be collected before the end of this funding cycle. The means of data collection that will be used in making this judgment include: (1) a review of the Contact Record Forms that trace continued communication between the Technical Assistance Unit and regional workshop participants and (2) results from participant questionnaire on items relating to intentions to train others, receive additional training themselves, etc.

Long-term indicators of achievement will include: (1) a review of the Contact Report Forms up until September 1977 and (2) results from a participant followup questionnaire requesting information on actual rather than intended efforts in training others or receiving additional training themselves.

The second study is a product evaluation to determine if the Regional Workshop training was as effective as previous training in the same instructional systems. This information will tell us if we need to continue further study of the influence of the training sessions themselves on the achievement of the dissemination objectives. Standards from previous evaluations of similar systems will be used to make
judgments regarding the quality of the training received. Two means of data collection will feed into this process: (1) an evaluator-observer will be present at each training session and will make judgments as to the overall quality and the degree of deviation from established procedures, and (2) a participant questionnaire on perceptions of quality.

The third study examines factors that influence the feasibility of offering Regional Workshops. This study differs from the study on factors proposed for the IGE/FTC intervention. In the former study, the focus is on a greater understanding of the variables that influence whether the dissemination objectives are achieved. In this study, the focus is on greater understanding of factors that influence the feasibility of recruiting persons for Regional Workshops rather than looking at the effects of this strategy in terms of achievement of dissemination objectives. Four variables which could have been influential have been selected for study, i.e., location, time, content, and cost. The primary means of data collection for this study will be a telephone interview with a stratified random sample\(^{14}\) of persons who were sent brochures describing the workshop but chose not to attend.

---
\(^{14}\)Actual numbers and sampling procedures will be dependent upon total numbers of brochures sent out as well as the number and location of workshops cancelled because of an insufficient amount of participants.
REPORTING PROCEDURES

The information generated as a product of this evaluation will be summarized in three major reports and a series of minor documents. Expected completion dates for major reports are as follows:

1. Interim Evaluation Report on the IGE and FTC network intervention to be completed by November 30, 1976. This report will include the following information:
   a. Results of the context evaluation
   b. Results of the short-range study on the achievement of dissemination objectives
   c. Results of the effects of the training sessions themselves

2. Final Evaluation Report on the IGE and FTC network intervention to be completed by November 30, 1977. This report will include the following information:
   a. Results of the long-range study on the achievement of dissemination objectives
   b. Results of the long-range study examining variables influencing achievement of dissemination objectives

3. Interim Evaluation Report on the Regional Workshop intervention to be completed by November 30, 1976. This report will include the following information:
   a. Results of the context evaluation
   b. Results of the short-range study on the achievement of dissemination objectives
   c. Results of the effects of the training sessions themselves
   d. Results of study examining reasons for decisions not to attend workshops offered

4. Final Evaluation Report on the Regional Workshop intervention to be completed by November 30, 1977. This report will include the following information:
   a. Results of the long-range study on the achievement of the dissemination objectives

Reports 2 and 4 are dependent upon securing additional funds beyond November 1976.

Appendix C:

Descriptions of ITCP Instructional System Used in Training
Title: Interpersonal Communications (IPC)

Intended Users

Primarily, Interpersonal Communications has been designed for the following role groups: teachers, administrators, supervisory and coordinating personnel, and preservice education students. The instructional system can also be used with high school students and parent groups.

Main Emphases

Interpersonal Communications is an experiential instructional system. It provides (a) information about the process of communication, (b) opportunities for participants to increase their interpersonal communication skills and (c) experiences for understanding one's own styles of communication.

Intents/Contents

An Interpersonal Communications workshop provides participants with knowledge and skills generally applicable to:

1. Face-to-face communication
2. Individual styles of communicating
3. Group and organizational factors which affect communication
4. Continued improvement of one's communication skills

During the workshop, exercises include: (a) paraphrasing, (b) behavior description, (c) describing feelings, (d) nonverbal communication, (e) the concept of feedback, (f) matching behavior with intentions, (g) communicating under pressure and (h) communication patterns in the school building.
Main Activities

There are 20 instructional sessions that comprise an IPC workshop. Each session involves the participants in practicing communication behaviors, learning ways to recognize these behaviors, and receiving feedback concerning their use. The system includes films, theory papers, written exercises, observation activities, and self-evaluative guides.

Provisions for use

A. Format: Workshop

B. Personnel Required:

One experienced trainer or a team of qualified trainers for 12-36 participants (materials provided for multiples of 6).

C. Product Components:

Required: 1 trainer's manual per trainer
1 set of participant materials per participant
9 16 mm films
1 audiotape

Optional: Field Test and Outcome Milestone Report for Interpersonal Communications (1974)
Summary of Interpersonal Communications Field Test and Outcome Milestone Report (1975)

D. Other Resources:

1 film projector
1 tape recorder
Newspaper, felt pens, masking tape
A large room (preferably carpeted) with movable tables and comfortable chairs
Beverages and refreshments in the room

E. Related Products:

This program is related to Social Conflict and Negotiative Problem Solving, Research Utilizing Problem Solving, Interpersonal Influence, Preparing Educational Training Consultants I, II and III.
F. Time Span:

There are 20 sessions which require approximately 30 hours to complete. Whenever possible training should be covered in five consecutive days or two sessions of 2 ½ days held within two weeks.

Conditions of Use

Although there are no prerequisites, participants must be present for every session of the workshop since the exercises are sequential and cumulative.

Cost Range

Leader's Manual: Interpersonal Communications (396 pages, loose leaf and three-hole punched) $19.95 each

Participant Materials (342 pages, loose leaf and three-hole punched) $12.95 per set

By Charles Jung, Rosalie Howard, Ruth Emory and René Pino

Audiovisual Instructional Materials
$275.00 per set of nine 16mm sound films and one audiotape

Above prices plus shipping charges

Optional evaluation reports are available for $5.00 each

Client groups must consider

1. Cost for trainers, 5 days
   plus travel expenses and per diem

2. Release time for participants, 5 days

Adaptability

Easily adapted by qualified trainers to meet the needs of users other than educational personnel and to fit into differing time constraints.

Title: Interpersonal Influence (INF)

Intended Users

Primarily, Interpersonal Influence has been designed for the following role groups: teachers, administrators, supervisory and coordinating personnel, and preservice education students. The instructional system can also be used with high school students and parent groups.

Main Emphases

Interpersonal Influence is an experiential system which provides (a) information about the basic concepts of influence processes, (b) opportunities for participants to practice influence skills and to identify their characteristic styles of interpersonal influence.

Intents/Contents

The activities in this instructional system are designed to provide the following competencies:

Ability to identify and explain the major ideas that describe the processes of interpersonal influence

Capability for using guidelines provided to diagnose and analyze forces and effects of influence in selected interpersonal and group situations

Ability to identify and make judgments about one’s characteristic influence styles

Ability to identify extent and nature of one’s own need to influence

Capability for identifying ways in which principles learned and guidelines utilized in the workshop may be applied in settings other than the workshop
Main Activities

There are 20 instructional sessions in an Interpersonal Influence workshop. During the workshop, participants experience a variety of ways in which they may learn about interpersonal influence. There are written definitions, descriptions, some films and tape recordings to illustrate behaviors of present dilemmas. There are times for reflecting on experiences and ways of doing things; times for discussing ideas; techniques for observing and analyzing behavior. There are opportunities to share observations with others and to ask for observations and reactions. There are some simulation, task performance and role playing situations in which participants can try out behaviors.

Provisions for Use

A. Format: Workshop

B. Personnel Required:

One experienced trainer per 12-36 participants

C. Product Components:

Required: 1 trainer's manual per trainer
1 set of participant materials per participant
9 16 mm films
1 audiotape

Optional: Followup Survey of Interpersonal Influence Interim Field Test Participants (1974)
Summary of Interpersonal Influence Interim Field Test and Followup Survey (1975)
D. Other Resources

- 1 film projector
- 1 tape recorder
- Newsprint, felt pens, masking tape
- A large room (preferably carpeted) with movable tables and comfortable chairs
- Beverages and refreshments in the room

E. Related Products:

This program is related to Social Conflict and Negotiative Problem Solving, Research Utilizing Problem Solving, Interpersonal Communications, Preparing Educational Training Consultants I, II and III.

F. Time Span:

The 20 sessions require approximately 30 hours to complete. Whenever possible training should be covered in five consecutive days or two sessions of 2 1/2 days held within two weeks.

Conditions of Use

Although there are no prerequisites for this training, participants must be present for every session of the workshop since the exercises are sequential and cumulative.

Cost Range

Leader's Manual: Interpersonal Influence (237 pages, loose leaf and three-hole punched) $19.95 each

Participant Materials (185 pages, loose leaf and three-hole punched) $12.95 per set

By Ruth Emory and René Pino

Audiovisual Instructional Materials
$240.00 per set of four 16mm sound films and two audiotapes

Above prices plus shipping charges

Optional evaluation reports are available for $5.00 each.

Client groups must consider:

1. Cost for trainers, 5 days plus travel expenses and per diem
2. Release time for participants, 5 days
Adaptability

The printed materials are easily adapted by qualified trainers to meet the needs of users other than educational personnel and to fit into differing time arrangements.

Title: Group Process Skills (GPS)

A skills training workshop

Intended Users

GPS has been designed for the following role groups: teachers, administrators, supervisory and coordinating personnel, and students in teacher preparation.

Main Emphases

The materials used in a Group Process Skills (GPS) workshop have been designed to help participants become more effective members of the organizations to which they belong. The materials emphasize such process skills as communication techniques, problem solving, decision making and goal identification.

Intents/Contents

The Group Process Skills (GPS) program has been developed to provide participants with the opportunities to:

Assess existing and potential problems within an organizational subgroup of which they are a part

Identify small group process skills which they, as an individual, need to improve

Increase their experience with these skills by participation in exercises chosen by the trainers

Integrate learnings for application in their backhome setting

Main Activities

As a group works through the materials under the guidance of the trainer, data is gathered on the group's makeup and use of process skills.
Participants gather much of this data themselves and learn to analyze it. Meanwhile, the trainers use the data to help them diagnose skill needs as well as to select and sequence exercises especially designed to speak to such needs.

Provisions for Use

A. Format: Workshop

B. Personnel Required:

Two experienced trainers per 12-36 participants

C. Product Components:

1 set of instructional strategies for GPS per trainer
1 set of collection of exercises per trainer
1 set of participant materials per GPS participant
Multiple copies of exercises per workshop

D. Other Resources:

Newsprint, felt pens, masking tape, name tags
A large room (preferably carpeted) with movable tables and comfortable chairs
Beverages and refreshments in the room

E. Related Products:

GPS is used as the practicum for Preparing Educational Training Consultants I (PETC-I), a training system designed to prepare individuals to function as "skills trainers."

F. Time Span:

GPS requires approximately 33 hours of training. Whenever possible, training should be covered in five consecutive days.

Conditions of Use

Although there are no prerequisites for this training, participants must be present for every session of the workshop since the exercises are sequential and cumulative.
Cost Range

Collection of Exercises ($31.00)
GPS Instructional Strategies ($6.80)
GP Participant Materials ($5.90)
Duplication options for multiple copies of exercise handouts
  1 set of 138 camera-ready exercise handouts ($11.00)
  12 sets of all exercise handouts ($64.00)
  12 copies of a single exercise handout ($0.50)

Client groups must consider:
1. Cost for trainers, 5 days plus travel expenses and per diem
2. Release time for participants, 5 days

Adaptability

This training system is easily adaptable by qualified trainers to meet the needs of users other than educational personnel and to fit into differing time constraints.

(503) 248-6868
Title: Preparing Educational Training Consultants: Skills Training (PETC-I)

First of the three-part PETC series.

Intended Users

This training system is designed for educators at any level who wish to acquire trainer and consultant skills.

Main Emphases

PETC-I is an experiential instructional system which provides training in such process skills as goal setting, problem solving, communicating, influencing and decision making. The focus of a PETC-I workshop is to prepare participants to function as skills trainers and to conduct group process skills (GPS) workshops.

Intents/Contents

The general goal of PETC-I is to teach participants to train others in process skills and to facilitate the functioning of small groups. During this process, skills trainers are prepared to:

1. Assess issues and problems within a small group
2. Diagnose skill needs of individuals within the group
3. Identify group priorities for skills training exercises
4. Apply criteria for selecting and sequencing skills training exercises
5. Adapt and conduct skills training exercises
6. Evaluate acquisition of skills
Main Activities

The PETC-I system is a two part workshop. The first part of the program consists of a one week training program during which the PETC-I trainees (skills trainers) study the basic concepts of the instructional system. Also during the first week, the skills trainers are provided with a series of exercises to practice group skills training.

The second part of the workshop is a practicum for the skills trainers. During the practicum the skills trainers form trios; each trio works with a second group of 12 to 24 people. This second training week is referred to as the Group Process Skills (GPS) workshop, and the second set of participants are called GPS trainees. These sessions, which are conducted over a 5-day period, are designed so GPS trainees can obtain training in group process skills from the trio of skills trainers. The techniques and strategies of group process exercises are applicable to any group for whom the materials are new.

Provisions for Use

A. Format: Two-Part Workshop

Part I prepares skills trainers to conduct group process skills exercises

Part II (GPS workshop) allows skills trainers to practice while they conduct a workshop for others in group process skills

B. Personnel Required:

One senior trainer who has completed prerequisites including Interpersonal Communications and Research Utilizing Problem Solving or has had comparable training experience

Parts I and II: Twelve to eighteen skills trainers, materials have been prepared for multiples of three

Part II: Twelve to twenty-four GPS participants per trio of skills trainers
C. Product Components:

Required: Part I: Skills Training

1 set of instructional strategies per senior trainer
1 set of participant materials per skills trainer
1 set of collection of exercises per senior and skills trainer
Multiple copies of exercises per workshop

Part II: Group Process Skills Practicum

1 set of instructional strategies for GPS per skills trainer
1 set of participant materials per GPS participant
Multiple copies of exercises per workshop

D. Other Resources:

Part I: Spacious room with movable and comfortable furniture; chairs and tables for small groups

Part II: A similar room for each team of skills trainers as well as a general meeting room for conferences and access to exercise materials

Facilities for both sessions should be located near refreshment facilities.

Both sessions: Newsprint, felt pens, masking tape, name tags, art supplies

E. Related Products:

This program is related to Social Conflict and Negotiative Problem Solving, Research Utilizing Problem Solving, Interpersonal Communication Interpersonal Influence, PETC-II and PETC-III.

F. Time Span:

Two weeks are required for skills trainers, five consecutive days for Part I and either five consecutive days or two 2 ½ day sessions for Part II.

Part II, the GPS workshop, requires one week of GPS participant time.
Conditions of Use

Prerequisites for PETCH-I skills trainers include Interpersonal Communications and Research Utilizing Problem Solving or comparable experience. There are no prerequisites for GPS participants.

Because this training is cumulative, participants must be present for every session of the workshop.

Cost Range

Part I: Skills Training

1 set of instructional strategies per senior trainer ($8.90)
1 set of collection of exercises per senior and skills trainer ($31.00)
1 set of participant materials per skills trainer ($6.85)
Multiple copies of exercise handouts

Part II: Group Process Skills (GPS) Practicum

1 set of GPS instructional strategies per skills trainer ($6.80)
1 set of GPS participant materials per GPS participant ($5.90)
Duplicating options for multiple copies of exercise handouts
1 set of 138 camera-ready exercise handouts ($11.00)
12 sets of all exercise handouts ($64.00)
12 copies of a single exercise handout ($0.50)

Optional evaluation reports are available for $5.00 each.

Date of Workshop__________________

I. The following questions deal with how you feel about the usefulness of the workshop and learnings, for yourself and for others.

1. How useful do you see the skills and concepts you have learned for training, or consulting with, others in your work situation?

   Extremely useful
   Very useful
   Quite useful
   Barely useful
   Of absolutely no use

   5  4  3  2  1

2. Of what value do you think this workshop experience will be to you in your professional life in the future?

   Of no value at all
   Of relatively little value
   Somewhat valuable
   Very valuable
   Extremely valuable

   1  2  3  4  5

3. In all honesty, how much do you plan to use the ideas, skills and/or materials presented in this workshop as an integral part of your work?

   Extensively
   Often
   Occasionally
   Rarely
   Not at all

   5  4  3  2  1

4. Would you recommend this workshop to a good friend whose interests are like yours?

   Definitely recommend
   Probably recommend
   Undecided
   Probably not recommended
   Definitely not recommended

   5  4  3  2  1

II. In this section, we are interested in your reaction to the workshop as a whole and its overall objectives.

1. How successful do you feel this workshop was in fulfilling your expectations about what you personally might get out of it?

   Not at all successful
   Only slightly successful
   Quite successful
   Very successful
   Extremely successful

   1  2  3  4  5

2. How clear were you on the workshop's overall objectives?

   Very clear
   Somewhat clear
   Neither clear nor unclear
   Somewhat unclear
   Very unclear

   5  4  3  2  1

Log Instructions
The attached notebook is given to you in hopes that you will record descriptions of events, observations and feelings you have that are directly or indirectly related to your participation in the training sessions. The following statements suggest types of information you may want to record. Please feel free to add anything not directly addressed in this list.

1. Description of events which led to or away from training of others in products you were exposed to during these sessions.

2. Feelings about whether these products are responsive to problems which exist in IGE/Teacher Center schools.

3. Descriptions of the ways in which you adapted products for use.

4. The perceived value and/or problems which surfaced when training did occur. The ways in which problems were creatively solved.

5. Description of factors which influenced whether you received additional training in other Lab-developed products.

6. Descriptions of the necessary conditions for use of products in schools, in individuals, in yourself.

7. Descriptions and perceived value of further communications with personnel from ITCP and NWREL.
