ABSTRACT

Every test intended for use in federally-funded research on children or youth during fiscal year 1975 was placed on a list. The list eventually comprised the titles of 1,570 instruments. The question pursued was whether there would be any relationship between an instrument's quality and the frequency with which it was used. For measures of quality the numerical ratings published by the UCLA Center for the Study of Test Evaluation were used. As a measure of usage the number of times an instrument was mentioned in 3,538 research proposals was conducted. There did not appear to be a positive relationship between the quality of tests and their frequency of use. A preference for the better rated instruments was particularly evident with tests of academic achievement. More equivocal results appeared in tests of vocational skills and intelligence, though in certain respects researchers were definitely using the better of those available in these two categories. The anomaly was in the categories of reading tests and tests of personality where the higher rated of the tests had no better chance of being utilized than those judged to be of poor quality. Particular areas such as in reading and personality where the higher rated tests were less likely to be used might point to the need for special attention when choosing instruments for future research.

The work upon which this publication is based was
performed pursuant to Contract HEW-105-76-1120 with
the Department of Health, Education, and Welfare.

Executive Summary

Every test intended for use in FY '75 Federally-funded research on children or youth was placed on a list. The list eventually comprised the titles of 1,570 instruments. Some were mentioned by many principal investigators in their proposals; others were mentioned by only one. Some tests were highly respected instruments; others were not. The question we wished to pursue was whether there would be any relationship between an instrument's quality and the frequency with which it was used. For our measures of quality we utilized the numerical ratings published by the UCLA Center for the Study of Test Evaluation. For our measure of usage we counted the number of times an instrument was mentioned in 3,538 research proposals on children or youth which are currently being sponsored by the Federal government.

There does appear to be a positive relationship between the quality of tests and their frequency of use. But the degree is not equally as strong from one test category to another. A preference for the better rated instruments is particularly evident with tests of academic achievement. More equivocal results appear in tests of vocational skills and intelligence, though in certain respects researchers are definitely using the better of those available in these two categories. The anomaly lies in the categories of reading tests and tests of personality, where the higher rated of the tests have no better chance of being utilized than those judged to be of poor quality.

It is not our point to suggest that all sponsored researchers should be using the same instruments. But the fact that there are particular areas such as in reading and personality where the higher rated tests are less likely to be used might point to the need for special attention when choosing instruments for future research.

INTRODUCTION:

Collection of Test Names

Each project proposal funded by 23 Federal agencies during FY '75 provided data for an analysis under the direction of the Interagency Panels for Research and Development on Early Childhood and for Research and Development on Adolescence. The information garnered from the 3,538 proposals formed the basis for the Third Annual Report on adolescence research and the Fifth Annual Report on early childhood research.¹ These reports discussed in some detail the patterns of Federal interests in subjects such as cognitive development, physical handicaps, career education, day care, etc.

However, in addition to noting the subject matter of each funded proposal, the coders working at the agencies were requested to note the title of any instrument mentioned in the proposal which was intended for use as a test or measure. No effort was made to exclude titles which were developed for use only in one particular project--such as attitudinal questionnaires or tests under construction. Consequently, if it had a "name," it was recorded. This paper is a review and a brief analysis of this list.

1

Hertz, Thomas W., and Mann, Ada Jo., Toward Interagency Coordination: FY '75 Federal Research and Development Activities Pertaining to Early Childhood. Washington, D.C.: Social Research Group, The George Washington University, December, 1975; and Heyneman, Stephen P., Toward Interagency Coordination: FY '75 Federal Research and Development Activities Pertaining to Adolescence. Washington, D.C.: Social Research Group, The George Washington University, December, 1975.

From these proposals 1,570 instrument names were noted and alphabetized. The first task was to discover which among them were referenced in the test bibliographic literature, for not only did we wish to know which titles were being utilized by particular research projects, but also where one might turn for a published description. We gathered 33 different test bibliographies and began the process of looking up each title until we came upon a reference for it.² The more widely known and comprehensive bibliographies were consulted first: e.g., Buros, Hoepfner, Chun et al., Robinson et al., etc. If a title was found in one, its volume and page number were noted for future reference, and we then went on to the next test title. Thus, we have not located every citation of every test title, but have differentiated those with at least one reference citation from those with none.

One peculiarity of the data from the proposals is that the official names for tests are not always used, and it was not rare to get three, four or even five different titles for the same test. Some judgment was required to identify tests by an acronym, with a word or two missing, or with an author's name misspelled. Each title was looked up by both the test name and the author's name.

In this way, we created two initial lists: one which we labeled as "referenced"; a second we labeled as "non-referenced." The non-referenced

²See Appendix I for the titles of these bibliographies.

titles can be found in Appendix II, along with the frequency of their use. In all, 1,086 titles were put on our non-referenced list. Most were mentioned in only one project proposal, having, therefore, a frequency of one. It is presumed that many of these measures were being developed by the project's principal investigator and may appear in future test bibliographies.

On the other hand, there were 484 titles which we have located in one of the reference bibliographies. With respect to this "referenced" list, our first task was to acquire some indication of their purpose. For this, we adopted the classification scheme utilized by O.K. Buros in his book Tests In Print. Over one hundred categories of test subjects (intelligence, achievement, attitudes, etc.) are to be found in his table of contents, and appear as Appendix III.

Frequency of Use

Out of the 484 referenced test titles, 203 (42 percent) were measures of character and personality; 64 (13 percent) were measures of intelligence; and 65 (13 percent) were measures of reading ability. Academic achievement batteries, tests of vocational skills, speech and hearing problems, and sensory-motor abilities accounted for approximately 25 (5 percent) each. These figures are displayed for each test subject category in Table 1.

However, having a large number of test titles in a subject category does not necessarily indicate that the tests in that category were utilized more often. For example, the few academic achievement batteries (5% of the

titles) accounted for over a fourth of all tests and measures used (26%) (Table 2), and intelligence test titles (13%) accounted for almost a third of test usage (32%). Conversely, though the 203 character and personality test titles made up 42 percent, their application accounted for half of that, only 21 percent of the frequency. In sum, though there were fewer academic achievement and intelligence test titles than character and personality, titles in the former two categories tend to be used more frequently.³

Ratings of Test Quality

Though informed and helpful opinion concerning tests could be found in all of the bibliographies cited in Appendix I, we have chosen the ordinal ratings of test "quality" which have been published⁴ by the Center for the Study of Evaluation (CSE) at UCLA. To the best of our knowledge, this was the only source which attempted to evaluate tests by ranking them numerically and it is their numerical ranking which we wish to utilize.

³

The frequency of each referenced test title in each subject category can be found in Appendix IV.

⁴

Hoepfner, Ralph; Nummedal, Susan G.; and Stern, Carolyn, Eds. CSE ECRC Preschool/Kindergarten Test Evaluations, Los Angeles, Calif.: UCLA Graduate School of Education, 1971; Hoepfner, Ralph (Ed.) CSE Elementary School Test Evaluation. Los Angeles, Calif.: UCLA Graduate School of Education, 1970; Hoepfner, et al. (Eds.) CSE Secondary School Test Evaluations: Grades 7 and 8. Los Angeles, Calif.: UCLA Graduate School of Education. 1974; Hoepfner, et al. (Eds.) CSE Secondary School Test Evaluations: Grades 9 and 10. Los Angeles, Calif.: UCLA Graduate School of Education. 1974; Hoepfner, et al. (Eds.) CSE Secondary School Test Evaluations: Grades 11 and 12. Los Angeles, Calif.: UCLA Graduate School of Education. 1974; Hoepfner, et al. (Eds.) CSE-RBS Test Evaluations: Tests of Higher-Order Cognitive, Affective, and Interpersonal Skills. Los Angeles, Calif.: UCLA Graduate School of Education, 1972.

Of the four categories of quality specified by CSE, we have elected to consider the two entitled (A) Measurement Validity, and (B) Normed Technical Excellence.⁵ With respect to Measurement Validity, CSE broke the concept down into two subcategories and then added them to make a total (A). We have simply recorded the rating in each of these subcategories accorded every test evaluated by CSE. Since each CSE volume pertained to a particular age level of children, tests were often noted in more than one. This posed a problem since we wanted only one rating for each test. When multiple ratings did occur, we noted each rating and then averaged them for each category of test quality. When a test title happened to have subtests rated separately (and this occurred frequently), we chose the summary ratings for the title; if no summary existed, then we first noted each subtitle's rating in each of the six CSE volumes, and then averaged them all so as to eventually produce one rating score for each quality category for each title.

The two subcategories of Measurement Validity are labeled by CSE as (1) "Content and Construct" quality, and (2) "Concurrent and Predictive" quality. The first, as they explained it, is a rating given to each test

⁵ The other two categories were omitted because they were designed to help the classroom teacher or educational administrator (e.g., "examinee appropriateness"). Since test ratings varied between their appropriateness for preschool and high school, and since our population of government research principal investigators would have to make these decisions for their own particular range of subjects under study, we decided to use only the Validity and Technical Excellence categories. Based upon universally acknowledged principles of empirical testing, these latter categories seemed most apropos for tests and measures used in adolescence and early childhood research since these are not limited to education, but span the full gamut of the social and biological sciences.

with respect to the percent of the test's goal actually assessed, the percentage of test items belonging in the test goal area, the empirical procedures for selecting test items, its theoretical support, the existence of divergent validity, factor analytic scores and the availability of experimental data. All of these items were added up and each test given a rating ranging between 0 and 10, called "Content and Construct" quality.

"Concurrent and Predictive" quality is a rating based upon two facts: (1) the strength of the criterion correlation measures reported by the test authors or publishers, and (2) the strength of this validation correlation across time periods. From this subcategory, each test could receive a rating of between 0 - 5. Thus, total (A) ratings of Measurement Validity contained a range between 0 - 15. This is illustrated by the examples portrayed in Figure 1.⁶

Normed Technical Excellence is broken down into six subcategories, and their total. The first three are evaluations of reliability: "Test-Retest Stability," "Internal Consistency," and "Alternate Form." These are followed by subcategories called "Replicability," "Range-Coverage," and "Score Gradation." The "Stability" subcategory reflects the level of correlation between test scores over time spans of one month or more. The consistency of items as measured by split-half, Kuder-Richardson or alpha coefficients make up the subcategory labeled "Internal Consistency." The reliability of "Alternate Forms" of a test is evaluated by scoring the level of its alternate form correlation coefficients. If a test's procedures are standardized, such as in administration, scoring and interpretation, and if the characteristics are replicable of the groups upon which the standardization has been

⁶The CSE definition of each evaluation category can be found in Appendix V.

based, then the test would be rated high in "Replicability." The "Range-Coverage" subcategory evaluates the adequacy of the ceiling and floor of the score distribution. The category of "Score Gradation" is a check on the capacity of a test to discriminate between groups, such as between centiles, grade equivalents or mental ages. The Normed Technical Excellence ratings are then totaled and would elicit a score ranging from 0 to 15 (Figure 1).

Test Quality and Its Relationship to Test Usage

The question we wish to pursue is this: Is there any relationship between the frequency with which a particular test or measure is cited by principal investigators in Federally-sponsored research proposals and the published ratings of its quality? A response to this question can be derived from the correlations displayed in Tables 3 and 4.

Table 3 illustrates the intercorrelations between each of the eleven indices of a test's quality. There is considerable variability, ranging from a low coefficient between the test's replicability and its stability ($r=.01$) to the high relationship between a test's range and its score gradation [$r=.85$ ($p < .01$)]. As might be expected, each of the summary categories (A), (B) and (A+B) elicit very strong coefficients with the variables from which they are derived.

The bottom row in Table 3 contains the coefficients between the summary measure of quality and frequency of use. By and large they are all positive, though of varying strengths and levels of statistical significance. The lowest was the relationship between frequency and concurrent and predictive quality ($r=.02$), but rather marked and significant relationships appear between frequency of

use and a test's range, internal consistency, score gradation and two of the three summary measures ($r=.17$ and $.16$). Thus, taking all the 230 tests and measures mentioned in Federally sponsored proposals on children and youth and evaluated by CSE, *there does appear to be some relationship between a test's quality and its frequency of use.*⁷

However, when tests are broken down into categories of subject matter, differences emerge in the tendency to use high quality instruments (Table 4). For example, among the 19 batteries of academic achievement, strong and statistically significant correlations can be found with two summary measures of quality: Total A [$r=.48$ ($p<.01$)] and Total A+B [$r=.49$ ($p<.01$)]. This would indicate that in the case of achievement batteries, those rated the highest were generally mentioned more frequently in project proposals. But among tests of vocational skills, the impression is not so clear. Very strong and statistically significant relationships appear between frequency and content and construct quality, and also between frequency and internal consistency. But though consistently positive, none of the relationships with the three summary measures are statistically significant.

Relationships between the summary measures of quality and the frequency of intelligence test usage is also equivocal: all are positive but none

⁷ The correlation coefficients displayed in Tables 3 and 4 are all based upon the Spearman formula. This formula computes a non-parametric statistic whose significance depends neither upon a normal distribution, nor upon the metric quality of an interval scale. Though the distribution for each of the totals (A, B and A+B) met parametric assumptions of normality, and elicited larger coefficients using the Pearson formula, we chose to use only Spearman coefficients, and so be consistent throughout.

statistically significant. By contrast, quite strong and significant coefficients do appear between intelligence tests and the quality of their replication, range, and score gradation. Given the disparaging feelings commonly expressed about intelligence tests, from these data one can say that at least researchers are not using the worst more frequently and with respect to certain criteria of quality, they are quite definitely using the better of those available.

In the case of sensory-motor skills, only eight of the test titles mentioned in Federal research proposals are also evaluated. The coefficients are uniformly positive with many being quite strong. But more titles would have to be correlated before the figures could be trustworthy.

The anomaly lies in the latter two categories: tests of personality and tests of reading. Reading tests are quite numerous; 65 titles appeared in the proposals and one out of every ten projects included a test of reading within it. Nevertheless, despite the common interest in gauging reading skills, there appears to be less relationship with quality than with any other test category. With respect to tests of personality, an additional query might be raised, for though no coefficient is statistically significant, in most categories of quality there seems to be a negative relationship with frequency of use. If our data on the Federally sponsored usage of reading and personality tests are representative of research in general, then at the very least they would indicate (particularly in the case of personality tests) that the higher rated indices have no better chance of being utilized than those of poor quality.

Summary and Implications for Policy

These data indicate three things. First, taken as an undifferentiated unit, the better tests in general are used more often. But, second, this generalization is more true of some categories of tests than others. It is more true of achievement batteries, tests of vocational skills and tests of intelligence, in that order. Third, particular problems appear in the use of tests of reading and of personality. In these latter two categories the higher quality tests are not used more often.

It is evident that the normal process of selecting tests, in which researchers choose the one they think is best, works more efficiently in some test categories than others. In some subjects there is more agreement on measurement definitions, more communication between researchers, and consequently producing fewer titles to choose from. This would pertain more to the field of academic achievement research than to personality.

The Interagency Panels may be able to serve a useful purpose with these data. Because the Panels house the collection of the most current and the most complete information on test usage, they could extend the function they now perform for ongoing research and research findings, to tests in particular. Now the Panels can answer a question from consumers in the field or from government agencies as to which tests are used more often. This in itself is valuable and unique. Furthermore, the test information can assist in efforts to encourage greater accumulation of research findings, for as this paper has tried to demonstrate, the Panels can point out not only which tests are used more frequently, but which categories of tests might be especially deserving of attention in terms of quality.

(4)	3417	School Attitude Survey: Feelings I Have About School (Burks)
(2)	3419	School Motivation Analysis Test (Sweney et al.)
(2)	3433	Self-Esteem Inventory
(1)	3438	Shipley Hartford Vocabulary and Abstraction Test
(0)	3439	Shipley Institute of Living Scale for Measuring Intellectual Impairment
(3)	3443	Sixteen Personality Factors Questionnaire (Cattell et al.)
(1)	3444	Slosson Drawing Coordination Test
(1)	3460	SRA Junior Inventory Test
(3)	3474	State Trait Anxiety Inventory (Spielberger et al.)
(1)	3475	Stern Activities Index
(1)	3479	Student Attitude Inventory (Anderson & Western)
(1)	3481	Study of Values (Allport, Vernon, Lindzey)
(1)	3482	Survey of Interpersonal Values (Gordon)
(1)	3483	Survey of Personal Values (Gordon)
(8)	3489	Tennessee Self-Concept Scale (Fitts)
(6)	3503	Thomas Self-Concept Values Test

8. NONPROJECTIVE (Continued)

F	SRG No.	Title
(1)	3504	Thorndike Dimensions of Temperament
(1)	3507	Tri-Cultural Attitude Scale (Zirkel)
(1)	3511	Value Survey
(2)	3517	Walker Problem Behavior Identification Checklist
(1)	3525	Weigl-Goldstein-Scheerer Color Form Sorting Test

9. PROJECTIVE N=21; F=118

(38)	3077	Bender-Gestalt Test
(1)	3113	Children's Projective Pictures of Self-Concept (McNamara, Potterfield, Miller, Arnold)
(20)	3166	Draw-A-Person (Urban)
(1)	3184	Figure-Drawing Test
(1)	3227	Human Figure Drawing Test (Koppitz)
(2)	3230	Incomplete Sentence Test (Spache)
(2)	3239	Interpersonal Checklist (Leary)
(2)	3255	Kent-Rosanoff Free Association Test
(1)	3288	Make A Picture Story (Schneidman)
(2)	3314	Missouri Children's Picture Series (Sines, Pauker, Sines)
(19)	3409	Rorschach
(1)	3412	Rotter Incomplete Sentence Blank
(6)	3436	Sentence Completion Blank (Lachman)
(1)	3477	Stroop Color-Word Test
(0)	3495	Test of Family Attitudes (Jackson)
(13)	3501	Thematic Apperception Test (Murray)
(1)	3502	This I Believe Test (Harvey)
(1)	3508	Twenty Statements Test (Who Am I? Who Are You? (Kuhn, McPartland, Bugental, Zelen)
(2)	3519	Washington University Sentence Completion Test (Loevinger, Wessler, Redmore)
(3)	3531	Word Association Test (Brown, Berko)
(1)	3533	Word Relations

10. ENGLISH N=6; F=5

F	SRG No.	Title
(1)	3266	Language Arts Achievement Tests
(3)	3301	Metropolitan Primary (Handwriting Scale)
(0)	3362	Picture Story Language Test (Myklebust)
(1)	3348	Pacific Tests of English Attainment & Skills
(0)	3373	Preschool Self-Concept Picture Test (Woolner)
(0)	3529	Wisconsin Language Usage Test

14. SPELLING N=2; F=2

(1)	3064	Arizona Articulation Proficiency Scale (Barker)
(1)	3274	Lincoln Diagnostic Spelling Test

15. VOCABULARY N=1; F=1

(1)	3515	Vocabulary Survey Test (Monroe)
-----	------	---------------------------------

18. MUSIC N=2; F=2

(1)	3246	Iowa Tests of Musical Literacy
(1)	3321	Musical Aptitude Profile (Gordon)

19. FOREIGN LANGUAGES N=1; F=3

(3)	3131	Common Concepts Foreign Language Test (Banathy, Zintz, et al.)
-----	------	---

20. ENGLISH (FOREIGN LANGUAGE) N=4; F=9

(4)	3135	Comprehensive English Language Tests for Speakers of English as a Second Language (Harris, Palmer)
(2)	3163	Diagnostic Test for Students of English as a Second Language (Davis)
(1)	3214	Harris Oral Rating Form for Rating Language Proficiency in Speaking and Understanding English
(2)	3303	Michigan Test of Aural Comprehension (Upshur, Spaan, Thrasher)

21. FRENCH N=1; F=1

(1)	3191	French Reading Test
-----	------	---------------------

28. SPANISH N=1; F=2

<u>F</u>	<u>SRG No.</u>	<u>Title</u>
(2)	3364	Pimsleur Spanish Proficiency Test

29. INTELLIGENCE N=1; F=2

(2)	3125	Cognitive Style Test (Sigel)
-----	------	------------------------------

30. GROUP (INTELLIGENCE) N=25; F=265

(4)	3056	American College Testing Program Examination
(2)	3057	Analysis of Learning Potential (Durost, Gardner, Madden, Prescott)
(2)	3083	Black Intelligence Test of Cultural Homogeneity (BITCH) (Williams)
(35)	3084	Boehm Test of Basic Concepts
(2)	3101	California Short-Form Test of Mental Maturity
(11)	3102	California Test of Mental Maturity
(3)	3124	Cognitive Abilities Test (Thorndike, Hagen, Lorge)
(1)	3127	College Board Scholastic Aptitude Test
(117)	3141	Cooperative Inter-American Series
(1)	3145	Cooperative School and College Ability Tests (Cooperative Tests and Services)
(1)	3148	Culture Fair Intelligence Test (Cattell, Cattell)
(17)	3202	Goodenough-Harris Drawing Test
(2)	3206	Graduate Record Examination
(13)	3279	Lorge-Thorndike Intelligence Test
(2)	3323	National Merit Scholarship Qualifying Tests
(14)	3345	Otis Lennon Mental Ability Test
(3)	3346	Otis Quick-Scoring Mental Ability Test
(1)	3368	Preliminary Scholastic Aptitude Test/ National Merit Scholarship Qualifying Test
(21)	3379	Progressive Matrices (Raven)
(1)	3380	Proverbs Test (Gaier, Heilbrun)
(1)	3397	Raven's Intelligence Tests

(0)	3454	Southern California Figure-Ground Visual Perception Test (Ayers)
(1)	3455	Southern California Perceptual Motor Tests (Ayers)
(2)	3456	Southern California Sensory Integration Tests (Ayers)
(1)	3465	Standardized Road Map Test of Direction Sense (Money, Alexander, Walker)
(2)	3505	Titmus Vision Tester
(1)	3528	Winterhaven Perceptual Testing (Sultan)

73. MOTOR N=3; F=3

(2)	3275	Lincoln-Osoretsky Test
(0)	3344	Osoretsky Test of Motor Proficiency
(1)	3485	Symbol Digit Modalities Test (Smith)

74. VISION N=3; F=4

(1)	3106	Category Width Scale (Pettigrew)
(1)	3257	Keystone Visual Screening Test
(2)	3318	Motor-Free Visual Perception Test (Colarusso, Hammill)

82. VOCATIONS N=8; F=17

(1)	3090	Burke Inventory of Vocational Development
(2)	3104	Career Development Inventory (Super, Bohn, Forrest, et al.)

82. VOCATIONS (Continued)

F	SRG No.	Title
(9)	3105	Career Maturity Inventory--Attitude Scale (Crites)
(1)	3249	Job Description Index (Smith et al.)
(1)	3250	Job Satisfaction Scale (Johnson)
(1)	3330	New Mexico Career Education Test Series (Healy, Klein)
(1)	3337	Occupational Aspirations Scale (Haller)
(1)	3516	Vocational Planning Inventory (SRA)

83. CLERICAL N=1; F=1

(1)	3120	Clerical Aptitude Test: Acorn National Aptitude Tests (Kobal, Wrightstone, Kunze)
-----	------	---

84. INTERESTS (VOCATIONS) N=9; F=19

(1)	3241	Inventory of Vocational Interests (Acorn National Aptitude Tests)
(1)	3262	Kuder Occupational Interest Survey
(2)	3263	Kuder Preference Record--Vocational
(0)	3338	Occupational Interest Inventory (Lee, Thorpe)
(4)	3340	Ohio Vocational Interest Survey (D'Costa et al.)
(1)	3342	Opinion Attitude and Interest Inventory
(3)	3432	Self-Directed Search Test
(3)	3476	Strong Vocational Interest Blank
(4)	3534	Work Values Inventory (Super)

85. MANUAL DEXTERITY N=3; F=3

(1)	3147	Crawford Small Parts Dexterity Test
(2)	3392	Purdue Pegboard
(0)	3398	Readiness Tests

86. MECHANICAL ABILITY N=3; F=2

(1)	3078	Bennett Mechanical Comprehension Test
(0)	3308	Minnesota Paper Form Board Test (Revised) (Likert & Quasha)
(1)	3310	Minnesota Rate of Manipulation Test

87. MISCELLANEOUS (VOCATIONS) N=1; F=1

F	SRG No.	Title
(3)	3311	Minnesota Satisfaction Questionnaire (Weiss et al.)

102. SPEECH AND HEARING N=1; F=5

(5)	3371	Preschool Language Scale(Zimmerman et al.)
-----	------	--

104. HEARING N=6; F=4

(1)	3086	Boston University Speech Sound Discrimination-- Picture Test (Pronovost, Dumbleton)
(1)	3259	Kindergarten Auditory Screening Test (Katz)
(1)	3276	Lindamood Auditory Conceptualization Test
(0)	3422	Screening Test for Auditory Perception (Kimmell & Wahl)
(1)	3493	Test of Aural Comprehension (Lado)
(0)	3518	Washington Speech Sound Discrimination Test (Prather)

105. SPEECH N=19; F=56

(1)	3085	Boston Diagnostic Aphasia Examination (Goodglass, Kaplan)
(9)	3093	Bzoch-League Receptive Expressive Emergent Language Scale
(1)	3132	Communicative Evaluation Chart from Infancy to Five Years (Anderson, Miles, Matheny)
(2)	3151	Deep Test of Articulation (McDonald)
(1)	3188	Fisher-Logemann Test of Articulation Competence
(3)	3201	Goldman-Fristoe-Woodcock Test of Auditory Discrimination
(5)	3200	Goldman-Fristoe Test of Articulation
(1)	3213	Halstead's Aphasia Screening Test
(4)	3224	Houston Test for Language Development
(13)	3267	Language Facility Test (Dailey)
(1)	3268	Language Modalities Test for Aphasia Wepman & Jones)
(6)	3331	Northwestern Syntax Screening Test (Lee)
(1)	3365	Porch: Index of Communicative Ability

105. SPEECH (Continued)

F	SRG No.	Title
(0)	3367	Predictive Screening Test of Articulation (Riper & Erickson)
(1)	3403	Reynell Developmental Language Scales
(0)	3405	Riley Articulation and Language Test
(5)	3488	Templin-Darley Tests of Articulation
(2)	3509	Utah Test of Language Development (Mecham et al.)
(1)	3513	Verbal Language Development Scale (Mecham)

106. LEARNING DISABILITIES N=4; F=6

(1)	3295	Meeting Street School Screening Test
(1)	3385	Psychoeducational Inventory of Basic Learning Abilities (Valett)
(1)	3390	Pupil Rating Scale (Myklebust)
(3)	3423	Screening Test for Identifying Children With Specific Language Disability (Slingerland)

Appendix V

CSE Definition of Evaluation Categories

APPENDIX V

CSE Definition of Evaluation Categories

<u>VARIABLE</u>	<u>DESCRIPTION</u>
I. MEASUREMENT VALIDITY (A)	
A. Content and Construct	
1. Content	
(item selection)	Is information provided that indicates that there was a rigorous selection of items and that the behavior domain was carefully sampled?
(% goal assessed)	What percentage of the range of behaviors, achievements, or objectives in the goal category do the items assess?
(% items belonging)	What percentage of the items belong in the goal area or assess any of the behaviors and objectives that comprise the goal?
(empirical item selection)	Were any empirical procedures used for screening or selecting the items?
2. Construct	
(theoretical)	Does the trait, construct, or type of behavior that the test purports to measure have a supportive base in a specified educational, psychological, or learning theory?
(divergent)	Is there evidence that the test is not just a duplication of what is measured by other tests?
(factorial)	Was factor analysis conducted to demonstrate the "purity" of the measured trait or construct?
(experimental)	Has the test been employed in experiments or evaluations with samples of students including, but not more than one year above or below the grade level for which the test was being evaluated?

<u>VARIABLE</u>	<u>DESCRIPTION</u>
B. Concurrent	Are any concurrent validity studies (demonstrating correlation with some criterion measures obtained at the same time as the test) reported or specifically referred to, in which the criteria are related in a meaningful way to the goal behavior to which the test was assigned?
C. Predictive	Are any predictive validity studies (the criterion behavior, usually success at something, is obtained after a stated time interval) reported or specifically referred to, in which the criteria are related in a meaningful way to the goal behavior to which the test was assigned?
II. Normed Technical Excellence (B)	
A. Stability	Does the test exhibit stability over time spans of one month or more as measured by test-retest reliability or by delayed alternate-form reliability?
B. Internal Consistency	Does the test exhibit consistency of items or parts within a test, as measured by split half, Kuder-Richardson, or alpha coefficients?
C. Alternate Form Reliability	What correlation exists between alternate forms of a test, either on a delayed or immediate testing basis?
D. Replicability	Are the procedures of administration, scoring and interpretation standardized so that the results can be duplicated?
E. Range of Coverage	Does the test provide a range of coverage demonstrating the adequacy of the ceiling and floor of score distribution?
F. Score Gradation	Is the ratio of the total number of raw-score units to be the total number of converted scores actually presented of such a magnitude as to enable adequate discrimination among individuals?

Appendix VI

Means, Standard Deviations and Ranges of Quality for Tests in Selected Subject Areas

Test Category	No. of Titles	Quality Mean (Out of 30 Points Possible)	Standard Deviation	Quality Range (0-30 possible)
Academic Achievement Batteries	19	14.2	3.7	7-19
Character and Personality	23	6.7	4.0	1-15
Non Projective	43	7.6	3.1	2-14
Projective	5	3.0	1.7	2-6
Total	71	7.0	3.5	1-15
Spelling	2	10.5	5.0	7-14
Music	2	11.9	2.9	10-14
Foreign Languages	1	15.0	--	--
English	1	5.4	--	--
Spanish	1	6.8	--	--
Intelligence				
Group	16	10.5	3.9	3-19
Individual	19	10.3	4.1	5-19
