History, structure, legal bases, and planned reforms of the educational system of Venezuela are discussed. The conflicting roles of church and state in administering education have been reconciled within the past two decades, with resultant increases in enrollment and government financing. Curriculum regulation, coordination, and supervision are centralized within the Ministry of Education, and implementation, evaluation, and technical aspects of programs are managed by eight regional offices. Private education exists separately. The present educational structure begins with a pilot preschool program being extended throughout the country. Following completion of the six-year primary school, students enter the three-year basic cycle of secondary school and continue to a diversified cycle of either two years for general/academic education or two to three years for technical or normal training of primary and preschool teacher preparation. At the higher education level, qualified students enter either a five-year university program, a four-year program at a teacher-training institute, or a course in a polytechnic or technical junior-college-type institution. Approximately 80% of the students preparing for university study specialize in the sciences. Elements of the 1976-80 educational plan emphasize development of human resources and physical facilities and more effective financing of public education. (Author/AV)
THE COUNTRY AND THE PEOPLE

Location: Northern coast of South America.

Size: 352,150 square miles.

Main Subdivisions: Twenty States, a Federal District, 2 Federal Territories, and 72 islands administered as Federal Dependencies.

Official Language: Spanish.

People: Predominantly Mestizo (persons of mixed European and Indian heritage), with smaller percentage of un-hexed African, Indian, and European inhabitants (especially Spanish, Italian, and Portuguese).

Literacy: 84.4 percent (1970 estimate).

Religion: 96 percent Roman Catholic.

THE BASIC SYSTEM

Venezuela is currently a dramatic case study of planned pedagogical renovation following a large and rapid increase in school enrollments. During the decade of the 1960's, priority was given to expanding educational facilities and opportunities to outlying districts; in the 1970's emphasis has been placed on educational reform, including administrative decentralization, diversification of intermediate and higher education, and initiation of a nationwide preschool program.

History

Even though education has been highly prized by Venezuelan society, it is only within the past 2 decades that schooling has become physically, socially, and financially accessible to the masses. Before 1958, educational growth was hindered either by repression during dictatorial regimes or by political conflicts during periods of more freedom. At the close of the 1950's an estimated 40 percent of school-age children were not receiving formal education, a majority of those in attendance did not complete the third grade, and over...
one-third of the population was classified as illiterate.

It was not until 1936, when political conditions within the country began to focus sufficient attention on educational issues, that a modern system had evolved. During that year a number of factors and forces were unleashed. Political parties, workers' organizations, and the Venezuelan Federation of Teachers were organized. The National Pedagogical Institute was founded and, most importantly, a firm commitment to reform education was embodied in political programs. Between 1936 and 1945 some improvement in education was made, but in general the political events of these years did not favor implementation of many of the newer positions on educational goals.

Because schooling had traditionally been under the auspices of the Roman Catholic Church, many educational reformers at this time also assumed anticlerical attitudes. School issues were thus clouded by religious differences and a desire to limit the Church's authority in Venezuelan life. Nevertheless, by 1945 the Catholic Church controlled most of the normal schools, almost half the secondary schools, and a large portion of the primary schools. From 1945 to 1948 rapid growth of public education sharply reduced this relative importance of Catholic schooling but not without bitter religious conflict. Then, under the dictatorship of Marcos Pérez Jiménez, which lasted from 1952 until 1958, the situation was reversed. Public education stagnated. Private education once again became dominant, although under strong governmental supervision.

Since the presidency of Romulo Betancourt (1958-1963), major religious antagonism has subsided. The growth of public education is no longer viewed as an anti-Church movement. Rather, much of the recent growth and reform in Venezuelan education has been endorsed by Church authorities. Private education continues to exist on all levels, but public education is planted firmly as the major system.

Structure

Venezuelan education is officially composed of six branches: Preschool, primary, secondary, technical, teacher-training, and university. The inherited limitations of this structure, traditionally characterized by rigidity and inflexibility, are giving way to more positive innovation. Under the 1969 reform plan, the basic system was reorganized to accommodate the growing demands of mass education for a technological society. Whereas the former educational structure channeled students into divergent programs following completion of a 6-year primary school, the present system delays career choices until the 10th year of study. With added options at the higher education level, the educational pyramid has thus been opened for a greater number of people.

The present educational structure is organized on a 6-3-2-5 pattern, with a pilot-operated preschool program being extended throughout the country. Following completion of the 6-year primary school, students enter the 3-year basic cycle of the secondary school and continue to a diversified cycle of either 2 years for general/academic education or of 2 to 3 years for technical or normal training (primary and preschool teacher preparation). At the higher education level qualified students may enter a university program (usually 5-year), a 4-year program at a teacher-training institute, or a course in a polytechnic or technical-junior college type institution.

Paralleling the basic system, a full-range parasystem operates for adults who have not completed their education or who desire to update their knowledge. Likewise, special education schools for the deaf, mentally retarded, and visually impaired are administered by the Ministry of Education.

Legal Basis and Requirements

The Constitution of January 23, 1961, guarantees free education in all official schools and provides for a compulsory period of schooling between ages 7 and 14. The Law of Education of 1955, the Law of Universities of 1958, and the University Reform Law of 1971 set forth the basic principles guiding Venezuelan education. Other recent significant legislation includes the 1969 decrees to restructure education (Nos. 120 and 136), decree No. 72 aimed at regionalizing educational administration, decrees No. 197, 198, and 250 creating new forms of student evaluation.

1 In Venezuela, the term "educación secundaria," literally "secondary education," refers to the general/academic track of second-level schooling. This report, however, will use the term as it corresponds to U.S. educational terminology: that is, the level of schooling between the elementary and higher education years. "Educación secundaria" is referred to as "general/academic track."
Revised Structure of Venezuelan Education

and the 1972 decree No. 905 establishing a national committee for educational television. In addition, the Labor Law obliges industries situated more than 2 kilometers outside a town to maintain schools for the children of their employees. Industries with less than 100 employees, however, are exempt.

Administration

Administrative control of education is shared by the Ministry of Education and eight regional offices. Curriculum regulation, coordination, and supervision as well as educational planning are centralized within the Ministry of Education; but the implementation, evaluation, and technical aspects of programs are the responsibility of the regional offices. With the exception of universities, public schools are managed by agencies of the national, State, or local government. On the national level only special schools (e.g., military academies) have been organized outside the Ministry of Education’s sponsorship. Most universities are self-governing under the principle of autonomy reinstated in 1958. Private schools manage their own internal affairs, but are subject to inspection and supervision by the Ministry. Their curriculum is normally identical to that of public institutions.

Enrollments

As of July 1973, about one-fourth of the total population was attending school, and of this group about two-thirds were in the elementary grades. Private enrollments accounted for less than 15 percent of total enrollment, but for almost 20 percent of the secondary day enrollment and almost 22 percent of university enrollment.

Unofficial Government statistics for July 1974 report that primary school day attendance is estimated at 2,764,412; secondary day attendance at 584,053; and total higher education attendance at 138,669.

Enrollment at all levels has increased drastically since 1958. Between 1958 and 1961 primary school enrollment increased from 57 percent of the age group to 86 percent, and in July 1973 was estimated at 84 percent. The 2 percent decrease from 1961 resulted from a number of factors, one of which was the smaller number of repeaters since initiation of the 1969 reform plan. As of July 1973, an estimated 51.2 percent of primary school students were enrolled in grades that corresponded to their age level; 26.2 percent in grades above their age level; and 22.6 percent in grades below their age level. Night school enrollments comprised a little over 7 percent of total elementary enrollments.

At the secondary level, total daytime growth was estimated at 152.2 percent from 1964 to 1973, with enrollment in the basic cycle increasing 135.8 percent and in the diversified cycle 226.2 percent. For the school year ending in 1973, it was estimated that 49.5 percent of daytime secondary students were enrolled in grades that corresponded to their age level; 27.4 percent in grades above their age level; and 23.1 percent in grades below their age level.

At the higher education level enrollment growth is equally impressive. In 1949 enrollment was estimated at 5,800—less than 5 percent of present estimates and slightly over half the current number of students sent abroad for higher education training. Between 1973 and 1974 unofficial enrollment increase is estimated at 13 percent.

During the early 1960's emphasis was placed primarily on school expansion, often at the expense of qualitative considerations. In the mid-1970's, a more balanced expansion program is underway. Enrollment growth is planned in relation to population density, accessibility to the various educational levels, and the demands of a growing technological economy.

3. For example, schools of music, plastic arts, and the like. These schools do not necessarily correspond to any given level of education.

**Source:** adapted from *Memoria y Cuenta que el Ministro de Educación presenta al Congreso Nacional de la República de Venezuela en sus sesiones de 1974*, vol. II. Caracas: Ministry of Education, 1974, p. 67.

### Financing

The extent of educational rehabilitation in Venezuela is evidenced by contrasting the educational budgets over the past years. In 1958 the total budget for education represented a little over 7 percent of the national budget; in 1964, 16.7 percent; and in 1973, 25 percent. For fiscal year 1975, the budget is in excess of 4,000 million bolivares (1 bolivar equals $0.23), over three times the budget for 1965.

The Ministry of Education consistently gives the largest single financial allotment to elementary and normal education, although the percent difference compared to other levels of education has decreased since 1968, as can be seen from the following percentages of the education budget:

<td>100.0</td>
</tr>
</tbody>
</table>

Within each budget category, salaries and related expenditures generally account for the greatest item expenditure, averaging over 48 percent of the total 1974 budget.

Although education is financed jointly by federal, State, and municipal authorities, the prime contributor is the Federal Government through the Ministry of Education. In 1973 the Ministry's share amounted to 75 percent, whereas the States and municipalities contributed only 18 percent. The remaining 7 percent was expended by other national Ministries, especially the Ministry of Public Works for construction of school buildings and the Ministry of Defense for maintenance of military academies.

### Academic Calendar

The academic year legally extends from September 16 to the final examination period at the end of July. Aside from the 6-week summer vacation, schools are closed on Sundays, from December 20 to January 6, from Good Friday to Easter Sunday, on Shrove Monday and Tuesday, and on national holidays.

### Language of Instruction

Spanish is the official language of instruction, although the study of English as a second language is required at the secondary level.
Grading System

The Venezuelan grading system employs two scales—one for nonacademic achievements (such as social adjustment) and one for academic subjects. The former runs from A to E; the latter is composed of 20 points, with 10 points or more considered a passing mark. The numerical value and the word value of the academic grading scale are as follows:

<table>
<thead>
<tr>
<th>Numerical Value</th>
<th>Word Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>19–20</td>
<td>Sobresaliente</td>

</tr>
<tr>
<td>10–12</td>
<td>Regular</td>
</tr>
<tr>
<td>5–9</td>
<td>Deficiente</td>
</tr>
<tr>
<td>1–4</td>
<td>Muy deficiente</td>
</tr>
</tbody>
</table>

Final grades during preschool years consist solely of short comments. During the first 5 years of primary school, final grades are calculated by summing daily averages, but beginning with the sixth year and continuing through the secondary level, they are based on a combination of daily averages (60 percent) and final examinations (40 percent). A student who maintains a grade of 16 or better is exempt from final examinations.

ELEMENTARY EDUCATION

Elementary education comprises preschools for children aged 4 through 6 and primary schools for children aged 7 through 12. Both public and private institutions are maintained, although only 11 percent of primary students are enrolled in private schools.

Preschools

Preschool education is not compulsory and until recently was not considered a priority area for public support. In October 1969, however, Venezuela began piloting a preschool program designed to strengthen the intellectual capabilities of students entering primary school. The project is being extended nationwide and will reach rural as well as urban areas. Curriculum consists of language arts, mathematics, science, social studies, art, music, and physical education. Instruction takes an integrated approach, emphasizes student participation, and provides for field experiences. Additionally, since February 1973, preschool educational television programming has been supplementing classroom instruction. The television program entitled “Soposucrentes” serves as an agent of cultural socialization and introduces basic learning skills to the homebound student.

Primary Schools

Primary education is free and compulsory. In accordance with the 1955 Law of Education, the objectives are to provide the student with the fundamental skills of the society, to develop individual and social habits that facilitate the pupil’s integration into adult life, and to equip the student for further study. In addition, the curriculum and teaching methodology promoted since 1969 aim to instil critical and creative thinking habits, as well as to foster positive attitudes towards continued learning, aesthetic values, wholesome recreation, family life, humanity, and the use of leisure time. Starting with the first grade in 1969 and continuing to the sixth grade in 1971, these latter objectives were incorporated into the curriculum through updating the courses and revising prescribed learning experiences.

The current curriculum consists of language, mathematics, science, social studies, health, plastic arts, music, physical education, and manual training. Two hours a week of religious instruction are also available, if parents request it. Civic education and the history and geography of Venezuela form a part of the social studies program. Upon satisfactory completion of the primary years, a certificate of completion of primary education is issued. In a limited number of areas, an elementary vocational curriculum replaces the above during the last 3 years of study. Schools that employ this curriculum, known as escuelas artesanales, offer basic instruction in the trades in a minimum amount of time.

Students normally attend class for 27 hours per week from Monday through Saturday noon. Although some metropolitan schools have been forced to run double sessions because of overcrowded conditions, all schools average approximately 1,000 hours of yearly instruction. Where one-teacher rural schools exist, regional schools (nucleos escolares) have been organized to assist the rural teacher in academically related matters and offer instruction not readily available locally.

SECONDARY EDUCATION

Secondary education, known as middle school-
ing in Venezuela, is free in all public schools, but not compulsory if the child has reached age 14. Since 1969 it has consisted of a 3-year basic cycle followed by a 2- to 3-year diversified cycle offering specialization in general/academic, technical, and normal training (elementary teacher training). A primary school certificate is required for admittance, and after completing the course a student receives the bachillerato (or its equivalent), which is necessary for entrance to a higher education institution.

**Basic Cycle**

The newly organized basic cycle (ciclo básico común), uniform for all schools, provides both further enrichment of the general education program of primary schooling and also vocational and career guidance. The objectives are stated as follows: To introduce modern educational content in accordance with the advance of science and technology and the integration of science and culture as an expression of harmony in the world and nature; to provide for individual differences; to develop reflective and critical thinking; and to motivate responsible activity. The academic curriculum averages 23.4 hours of weekly academic instruction plus 2.7 hours of laboratory work over the 3-year period. It consists of Spanish language and literature (4.7 hours), mathematics (3.7 hours), geography and history (5.3 hours), biology (2 hours plus 2 hours of laboratory), chemistry (1 hour plus 0.33 hours of laboratory), physics (1.4 hours plus 0.33 hours of laboratory), English (3.3 hours), art education (1 hour), and social, moral, and civic development (1 hour). Additionally, students take 1 hour of physical education per week and 2 hours of home economics and manual arts in the second and third year. Final examinations are administered in all subjects except the latter two.

**Diversified Cycle**

**General/academic track.**—The general/academic track is the traditional route to the university. Private schools of this track are normally called colegios; public schools, liceos. The general/academic track is designed to continue the general cultural preparation of the basic cycle while introducing further specialization in either the humanities or sciences. It is of 2 years' duration, requires completion of the basic cycle for entrance, and accounts for 68 percent of the total enrollment in the diversified cycle. Students may attend either day classes that begin at 7 a.m. and end at 6 p.m. or evening classes if over age 16. The latter are conducted between 6 p.m. and 11:30 p.m. Private schools enroll a little over one-fourth of the student population. The percentage of males and females in attendance is about equal.

Approximately 80 percent of the students specialize in the sciences and 20 percent in the humanities. Their curriculum is divided between a common core of subjects averaging 11 hours of instruction per week over the 2-year period and specialized subjects averaging 19 and 22 hours per week for science and humanities majors, respectively. The number of hours per week in each subject is as follows:

*Denotes an additional 2 hours of weekly laboratory.
Technical track.—Modeled on the general/academic track, the technical track aims to continue the cultural preparation of the basic cycle and also to prepare middle-level professionals for a number of skill-related careers. It is of 2- to 3-years’ duration and requires completion of the basic cycle for entrance. Unlike graduates of pre-reform technical education programs, graduates receive the bachillerato and are eligible to enter higher education institutions.

Technical education includes industrial, commercial, administrative, social service, and agrology training. The fields of specialization and duration of studies (in years) within each area of training are as follows:

### Industrial
- Automotive mechanics—3
- Cabinet making—3
- Chemistry—3
- Civil construction—3
- Electricity—3
- Electronics—3
- Heavy machines—3
- Hydrocarbons—3
- Instrumentation—3
- Machine mechanics—3
- Maintenance mechanics—3
- Metal work—3
- Metallurgy—3
- Naval construction—3
- Plastics—3
- Refrigeration—3
- Technical drawing—2

### Commercial
- Accounting—2
- Marketing—2
- Secretarial—2
- Tourism—2

### Administrative
- Budgeting—2
- Organization—2
- Personnel—2

### Social Service
- Child welfare—3
- Nursing—3
- Social work—3

### Agrology
- Animal sciences—3
- Farm mechanics—3
- Fishery—3
- Food technology—2
- Plant science—3

Industrial specialization accounts for almost 50 percent of technical education enrollment. Only in the area of social service (e.g., nursing) do private enrollments exceed public enrollments.

The technical education curriculum is similar to the general/academic curriculum, including both a common core of subjects and specialized subjects that differ according to the field of specialization. Core requirements are identical to those of the general/academic track. For various selected fields, the curriculum requirements in average hours per week for the specialized subjects are as follows:

<table>

*Denotes an additional 2 hours of weekly laboratory.

Private enrollments predominate and account for approximately 64 percent of the total enrollment of the normal track. Because of a lack of resources, many private schools do not comply with the curriculum described in this report. They offer a somewhat shorter course of study based on 1969 regulations. Students under this plan enter a normal school after completion of 1 year of the basic cycle. Their course of study is 4 years and includes both basic cycle and professional subject matter.

TEACHER EDUCATION

Prospective teachers may enter a normal school, a junior college, a pedagogical institute, or a university to achieve their career objective. Normal school training, as previously discussed, prepares for elementary school teaching. The junior colleges offer short, intensive courses usually in the area of special education, and the pedagogical institutes and universities train primarily for secondary and higher education teaching. Entrance to all higher education institutions requires a bachillerato title or its equivalent. The duration of the course at the pedagogical institutes and universities is 4 years except at the Universidad Católica Andrés Bello and at the Universidad de Carabobo, where it is 5 years; and at the Universidad del Zulia where a special...
3-year course in preschool education is offered. Universities generally grant the degree licenciado en educación; the pedagogical institutes grant the title Profesor in a particular major; all other institutions grant the title Maestro (teacher).

At the higher education level the pedagogical institutes graduate about 60 percent of the education majors, most of whom are produced at a single institution, the Pedagógico de Caracas.

University graduates tend to major in the traditional academic fields such as the sciences and humanities, although a few universities have introduced such areas as audiovisual, educational administration, vocational and personal guidance (Universidad de Carabobo) or technical and industrial education (Universidad de Oriente). The pedagogical institutes offer the most varied majors. They include the traditional fields of history, modern languages, social sciences, and physical sciences; the technical fields of industrial arts, mechanics, electricity, and commercial arts; and the pedagogical fields of educational measurements and preschool studies.

**HIGHER EDUCATION**

Government policy in recent years has aimed at greater diversification of higher education programs through creating new institutions and new educational structures. At present, the universities offer 65 different fields of study; the pedagogical institutes, 33; the technological institutes (institutos universitarios de tecnología), 26; the junior colleges (colegios universitarios), 6; and the polytechnics, 5.

Additionally, the National Government is supporting a major overseas study program for students from middle- and low-income families. The Gran Mariscal de Ayacucho Scholarship Program provides for some 40,000 students to be trained in a number of foreign countries, particularly the United States, over the 5-year period from 1975 to 1980. The principal aim of this program is to increase the number of scientific and technological personnel especially in petroleum engineering and petrochemicals, metallurgy and mining, agriculture and animal husbandry, oceanography and fisheries, aeronautics, and shipbuilding. The program supports students at the junior college, undergraduate, and graduate levels.

**Universities**

The university is the oldest and most important institution of Venezuelan higher education. Except when considered experimental, universities are autonomous; that is, they regulate their internal affairs in the areas of administration, finances, and academics; and as a group are guaranteed at least 1.5 percent of the national budget. Within each university, ultimate authority rests in the university council, which is composed of the rector as chairman, the vice rectors, the secretary of the university, the deans of the faculties, five representatives of the professors, three student representatives, one alumnus, and a representative of the Ministry of Education. Daily operations are headed by the rector assisted by an academic vice rector and an administrative vice rector. The academic functions of teaching and research are carried out by faculties, which are subdivided into schools. A dean directs each faculty.

Education in the national (public) universities is free. Admission requires a bachillerato certificate (or the equivalent), and often an examination, if the faculty to which the student is applying does not consider his or her secondary school preparation adequate for the specialization selected. Undergraduate study normally covers a 5-year period but can be as short as 3 years or as long as 7 years for medical sciences at the Universidad de Oriente.

The licenciado is the usual first university degree, but professional titles are also awarded. In some instances a doctorate is awarded upon completion of a thesis. New graduate study proposals, however, will change the requirements of this latter degree to one of 45 credit hours of postgraduate course study, foreign language competency, and a written dissertation.

**Polytechnical and Technological Institutes**

The polytechnics and institutes of technology operate under control of the Ministry of Education. Polytechnical education is 5 years. Technological education is generally 2 or 2½ years. Both are designed to train high-level technicians. Admission requirements are similar to those of other higher education institutions; namely, the student must possess a bachillerato degree or its equivalent. Upon completion, a professional title is granted—Ingieniero (engineer) in the polytechnics and Técnico Superior (higher technician) in the technological institutes. A selected listing of available programs of study is as follows:

*Polytechnics:* electrical technology, electronics, chemical processes, metallurgy, and mechanical technology.
Technological institutes: administration, agronomy, construction, electricity, animal production, health, insurance, public relations, industrial relations, hotel administration, and tourism.

Junior Colleges

Junior colleges (colegios universitarios) are newly designed experimental institutions. Their purpose is to provide basic university level instruction while preparing students for mid-level professional careers such as data processing, personnel administration, cost budgeting, teacher's aid, and special education therapist. Special arrangements with the Universidad de Simón Rodríguez permit junior college students to transfer to the university after completion of their general studies or upon graduation. For the most part, courses are 3 years in length, but shorter courses are given in certain fields. The title normally obtained is, as in the institutes of technology, Técnico Superior.

Military Academies

Venezuelan military academies have been strongly influenced by U.S. models. An applicant must be Venezuelan by birth, be in good health without physical deformities, possess a good moral character, and have no criminal record. Upon entry the student renounces any previous political affiliations. The 4-year course of study includes, among other subjects, artillery, armor, infantry, and weapon engineering in the Academia Militar de Venezuela; logistics, engineering, and armament in the Escuela Naval de Venezuela; and administration, engineering, and flying in the Escuela de Aviación Militar. The title Oficial is granted after completion of the academy program.

SOME RECENT DEVELOPMENTS

Currently in draft form, the 1976–80 educational plan (part V of Plan de la Nación, Sector Educativo) is a comprehensive statement on human resource development, physical facility development, and the financing of public education. The fundamental aim, as stated in the second draft, is further to democratize and modernize the educational system, especially in frontier and marginal zones, so that it will effectively respond to developmental plans of agriculture and industry and to the social aspirations of the country.

The major reform proposed would restructure and reorganize the formal system. In place of the preschool level, primary level, and basic cycle of secondary education (as described in this report), a 9-year program of studies (educación básica) would be followed by a 2- or 3-year diversified cycle. Compulsory attendance would be from 6 to 16 years of age.

Proposals for higher education emphasize the extension of facilities and opportunities to all regions of the country. They include development of the open university, computer-assisted study by correspondence, and creation of a chain of new institutions throughout the country, e.g., rural universities (Universidades Rurales), technological institutes (Institutos Tecnológicos), and polytechnical institutes (Institutos Politécnicos).

Priority proposals of general developmental character include improvement of the emotional and social climate of the classroom, experimentation with teaching methodology and independent
learning instruments, creation of self-evaluating teaching guides, expansion of inservice teaching training seminars and school visitation programs, establishment of classroom and central libraries, and further development of school-community relations.

The plan concludes with a detailed section on programs and procedures subdivided into three sections: physical resource development, human resource development, and educational efficiency development.
