Twenty-six public interest research groups (PIRGs) were surveyed on aspects of their organizations. Key findings include: (1) most PIRGs concentrate primarily on public interest issues rather than campus-specific issues; (2) most have four or fewer full-time staff and annual budgets of less than $50,000; (3) most are supported by six or fewer campuses with a mandatory fee at their largest supporting campus; (4) all the PIRGs surveyed felt that other consumer action groups are favorable toward them; (5) many have encountered opposition from special interests; and (6) most see their resources and activities increasing. The Minnesota Public Interest Research Group stands first in the number of campuses from which it collects (16) and second in size of its annual budget and full-time staff. In dollar amounts, the University of Minnesota is the second largest contributing campus to a PIRG, second to Queens College.

University of Minnesota

Abstract

Twenty-six public interest research groups (PIRGs) were surveyed on aspects of their organizations. Key findings include: Most PIRGs concentrate primarily on "public interest" issues rather than "campus-specific" issues. Most have four or fewer full-time staff and annual budgets of less than $50,000. Most are supported by six or fewer campuses with a mandatory fee at their largest supporting campus. All the PIRGs surveyed feel that other consumer action groups are favorable toward them. Many have encountered opposition from "special interests," and most see their resources and activities as increasing. The Minnesota Public Interest Research Group stands first in the number of campuses from which it collects (16) and second in the size of its annual budget ($163,723) and full-time staff (12). In terms of dollar amount, the University of Minnesota is the second largest contributing campus to a public interest research group ($108,664 in 1975-76, second to the $110,000 collected at Queens College).
A Profile of Public Interest
Research Groups
Ronald P. Matross
Student Life Studies & Planning
University of Minnesota

This study describes aspects of Public Interest Research Groups in the United States and Canada. It was conducted for the Regents of the University of Minnesota to help them compare the Minnesota Public Interest Research Group (MPIRG) with other Public Interest Research Groups.

Public Interest Research Groups (PIRGs) are research and advocacy agencies controlled and funded by college students for the purpose of representing the interests of students and the general public on environmental, social, and consumer issues. Their activities include the development of research reports, lobbying in state legislatures, and the initiation of lawsuits. The concept of PIRGs was developed by Ralph Nader, the consumer advocate, in the early 1970s as a means of channeling student activism toward social change. Most PIRGs are similar to traditional student organizations such as student government in that they are funded by students but dissimilar in that they are chartered corporations independent of individual colleges and universities. PIRGs are typically organized with a state board and staff and local chapters at individual colleges.

State and local PIRGs have contracted with individual colleges and universities to have the institution collect money from its students. The collection methods vary with the institution. One funding method is to
allocate part of the student activities fee collected at the university or college to the PIRG. Another is to charge a separate mandatory PIRG fee for all students, allowing for a later refund for students who do not wish to pay it. Two other systems involve a checkoff at registration. Under a positive checkoff system, students do not pay the PIRG fee unless they indicate that they do wish to pay it. With a negative checkoff, students pay the fee unless they indicate they do not wish to pay it. Many of the colleges using a checkoff system also permit students to obtain a refund at a later time.

The activities of PIRGs have created controversy in several states. For example, the Minnesota Public Interest Research Group has taken stands on such highly politicized issues as logging and mining in wilderness areas, the dumping of wastes in Lake Superior, and the ethics of the hearing aid industry. Critics have charged that colleges and universities compromise their neutrality on such issues by collecting PIRG fees. They argue that students should not be charged for activities on issues not directly and obviously connected to colleges and universities. They suggest that PIRGs should seek money only through fund raising drives, as do other social action groups. Other critics are willing to support the concept of a PIRG fee but question the mandatory and negative checkoff fee systems. They suggest that these collection mechanisms are not as voluntary as a positive checkoff, i.e., they capitalize on student apathy by requiring that a student exert an effort not to pay. Critics suggest that a positive checkoff system in which the effort must be exerted to pay the fee is more voluntary and allows a greater freedom of choice than do other systems. In reply, PIRGs have asserted that negative checkoff systems
allow complete freedom of choice and are fairer than the mandatory fees charged for other student activities.

The debate over the present negative checkoff MPIRG fee at the University of Minnesota provides the immediate context for the data presented. To aid in their deliberations, the Regents of the University of Minnesota requested that the Office for Student Affairs gather descriptive information about other PIRGs. The survey focused on statewide (not local chapters) and asked the following questions:

How old are they?

From how many campuses does the PIRG collect money?

How much money did the PIRG collect in the 1975-76 academic year?

Which is the campus making the largest contribution to the PIRG?

How much money was collected at this campus during 1975-76?

What type of fee collection system is used on this campus?

How much is the fee on this campus?

How many full-time employees and part-time employees and volunteers did the PIRG have in 1975-76?

What is the PIRG director's opinion as to whether the resources and activities of the PIRG are generally increasing, decreasing, or staying the same?

Does the PIRG concentrate on public interest issues, primarily on exclusively student issues such as tuition and housing, or does it concentrate on both types of issues about equally?

How have consumer groups in the state viewed the PIRG's projects?

How have special interest groups in the state viewed the PIRG's projects?

What were the PIRG's major projects in 1975-76?
Method

Survey questions were developed by the University of Minnesota Office of the Vice President for Student Affairs in consultation with the secretary of the Board of Regents. Questions were checked and modified as necessary by the Office of Student Life Studies and Planning, a research arm of the Office for Student Affairs. Modifications were not made in the substance of the questions, but only in terms of their readability and technical appropriateness. The Minnesota Public Interest Research Group furnished a list of names and addresses of directors of state PIRGs in the United States and Canada. In December 1976 and January 1977, surveys and follow-up letters were mailed to 33 PIRGs, of whom 26 gave responses.

Results

The following pages present the results of the survey in tabular form, with a description of the findings accompanying the tables.

The largest number of PIRGs were formed in 1971 and 1972. Eight PIRGs including MPIRG were formed in 1971. Eight more were formed in 1972. From 1973 to 1976, eleven more PIRGs have emerged, 11 in 1973, 4 in 1974, 2 in 1975, and 3 in 1976.

The number of campuses each PIRG collected money from ranged from 0 to 16. The two PIRGs not collecting money on campuses were Alaska and Washington. Alaska PIRG is not funded through the state higher education system, and Washington just began in 1976 and had not collected any funds yet.

MPIRG collected money from the largest number of campuses. Four other PIRGs collected money from 11 campuses or more (New York, Massachusetts, New Jersey, Oregon).

The New York PIRG receives over twice as much money from students as any other PIRG. MPIRG ranks second in student funding. Eighteen of the twenty-six PIRGs surveyed received $50,000 or less from students.

Sixteen of the PIRGs said that they had encountered opposition from special interest groups, while the other ten said that they had not.

Table 10

Response to question:

"How have consumer groups in your state viewed your PIRG's projects?"

All responding PIRGs said that consumer groups viewed their projects favorably.
Conclusions

The results of the survey indicate that most public interest research groups concentrate their efforts primarily on "public interest" issues as opposed to exclusively student issues, have budgets of $50,000 or less annually, have full-time staff members of four or fewer, and collect money from six or fewer campuses. Funding systems at the major supporting campuses for PIRGs are most often a variation of a mandatory fee, either a separate refundable fee or part of a student activities fee. Most PIRGs see their resources and activities as generally increasing, and many have encountered opposition to their projects from "special interest" groups. All say that consumer groups in their states are favorable toward their projects.

The Minnesota Public Interest Research Group stands high on the indicators included in the survey. It collects from the most campuses, it has the second largest budget and the second largest paid staff. The main funding source of MPIRG, the University of Minnesota, is the second largest contributor to a public interest research group anywhere in the country.

Caution should be exercised in the interpretations of the findings of this survey. The survey was not designed to address many of the most difficult and controversial issues regarding PIRGs. It was designed not to assess PIRGs but to describe them. For instance, one cannot make clear inferences about student support for PIRGs from the data. The size of contributing campuses, the percentage of students contributing on these campuses, and the reputation of the PIRGs on these campuses are not considered, even though these are all variables relevant to student support. Likewise, one cannot make predictions about an individual PIRG's budget.
size under a different system. For example, one cannot safely predict that a change from a negative to a positive checkoff system at the University of Minnesota would reduce the size of the campus's contribution to MPIRG from the present $108,000 to the $21,000 the Indiana PIRG obtains from students at the University of Indiana. Similarly, the data are neutral with respect to the philosophical issues of whether one funding mechanism is more equitable than another or whether a public university should collect money for advocacy activities.
