Community Colleges; *Educational Researchers; Inservice Education; *Institutional Research; *Junior Colleges; *Organization; Research Needs; Research Problems; *State Surveys

A survey was conducted in an effort to determine the state of development of institutional research in Ohio public two-year institutions. A questionnaire mailed to the chief administrative officer at each campus yielded a response rate of 84%. Results of the survey showed: (1) at least 84% of the two-year campuses have or may be served by an institutional research office; (2) 62% of the autonomous campuses had institutional research offices; (3) the educational backgrounds of those responsible for institutional research was generally strong, although most had only one to five years of research experience; (4) only six of the two-year campuses had a person responsible for institutional research on a full-time basis, while 32% of the campuses required less than 25% of a staff member's time in the research function; (5) approximately 300 studies were conducted annually at two-year campuses and respondents indicated significant interest for further studies related to curriculum, instruction, goals and objectives, public relations, and community studies; and (6) priorities for institutional research were identified as determination of future and immediate needs and identification of institutional strengths and weaknesses, but preparation of descriptive reports, while low in priority, was the second most time-consuming function. "The key to effective administration is the ability of the president and those who work with him to ask the right questions and then to find the right answers. But the right answers to the right questions, whether they are specific in relation to a given institution or whether they are more comprehensive, must take into account all the relevant, factual data—the kind that only institutional research can provide."—A. J. Brumbaugh, Research Designed to Improve Institutions of Higher Learning, American Council on Education, Washington, D. C. 1960.

RE: Needed Information for the Research Conference

As I am sure you are aware that the Ohio Board of Regents is co-sponsoring a three day meeting on March 9, 10 and 11 in Columbus Ohio, on Institutional Research in the Two-Year Colleges. I trust that representatives of your institution will be in attendance at this meeting.

To assist me in planning for this meeting, I have asked Dr. Francis Hazard to prepare the attached one page Questionnaire regarding the Extent of Institutional Research that is presently being conducted on the Two-Year Campuses.

This Bench Mark Study can be completed by you in just a few minutes. I very much appreciate you returning this to Dr. Hazard by February 18, 1977.

STATUS SURVEY OF INSTITUTIONAL RESEARCH
OHIO'S TWO-YEAR CAMPUSES

SUMMARY

The purpose of this survey was an attempt to determine the present state of development of institutional research in the public two-year campus institutions of Ohio. The development of institutional research in the two-year campuses of Ohio is of vital concern to the Ohio Board of Regents and to the individual institutions.

The method used in this study was a survey instrument which was mailed to the chief administrative officer at each campus. Follow up telephone calls were utilized to obtain a response of 84% of Ohio's institutions which operate fifty-five campuses which have a two-year role and mission. Since this was an initial survey, only basic questions about the development of the institutional research function on each campus were explored.

The results of the survey showed that at least 84% of the two-year campuses have or may be served by an office of institutional research.

Fifteen (62%) of Ohio's autonomous two-year institutions had offices of institutional research while eight (33%) did not. All responding universities with responsibility for two-year campuses indicated having established a separate centralized office to coordinate institutional research for the two-year campuses under their jurisdiction. Yet three regional campuses indicated having established an office of institutional research.

Educational background of those responsible for institutional
research on Ohio's two-year campuses is generally strong, since most hold a Masters Degree or higher. However, their years of experience in research is relatively low since most have less than one to five years. At least half of the institutional research officers report to the Chief Executive Officer of their institution. Perhaps one of the best measures of commitment to the institutional research function on Ohio's two-year campuses is indicated by the amount of time devoted to the function. Only six of the two-year campuses have a person responsible for institutional research on a full time basis, whereas, 32% spend less than 25% of the person's time to the institutional research function.

The survey indicated that an aggregate of approximately 300 studies are being conducted on Ohio's two-year campuses annually. Further, there was significant interest in the number of additional studies which respondents recommended should be done. There was interest for increased studies of curriculum, instruction, goals and objectives, public relations, and community studies. The extent of research being conducted suggests that a potential exists for the sharing of research findings. The amount of time and relative importance assigned to the various research functions helped to identify priorities of survey respondents. The top priority in consumption of time and importance was "the determination of immediate and future needs." On the other hand, the preparation of descriptive reports ranks number two in consumption of time; but ranked number five in relative importance. Similarly, the "identification of strengths and weaknesses of the...
institution" holds high importance (number 2) yet receives less time (number 7).

Membership in one or more professional associations concerned with research is low compared to the number of two-year institutions in Ohio. Respondents expressed a desire for in-service training programs for institutional research staff on follow up studies, research design and methodology, sharing studies, characteristics and organizing an office of institutional research.

In conclusion this survey shows that there is much diversity in the status of institutional research among the two-year campuses of Ohio. A few institutions have well-established offices of institutional research with qualified professional staff and the necessary clerical help. However, little more than one-third have established offices of institutional research on individual two-year campuses and few have allocated resources to employ qualified professionals for the institutional research function as it applies to the research needs of the campus in the local community where it operates.

For the two-year campuses to reach their potential, it would appear that more attention, commitment, planning, developing, directing, and nurturing of persons who are interested in the advancement of institutional research in the two-year campuses should take place for the sake of improved management, planning, evaluation, and accountability in Ohio’s two-year institutions.
PREFACE

This survey of the status of Institutional Research on the two-year campuses of Ohio was initiated during February, 1977. Impetus for the survey came from interest by the Ohio Board of Regents in encouraging institutional research in the two-year colleges. The survey was further stimulated and reported at a March 1977, institutional research conference for two-year campuses held in Columbus, Ohio. The conference was sponsored by The Ohio Board of Regents, Educational Testing Service, College Entrance Examination Board, The American Association of Community and Junior Colleges, and The American Educational Research Association, Special Interest Group for Community/Junior College Research, North Central Region.

It was assumed that the encouragement of institutional research would assist The Ohio Board of Regents in collection and use of data for its management information system and state-wide planning, and would also assist the respective campuses in their management, planning, evaluation, and accountability activities.

The need for educational and institutional research for two-year campuses becomes evident in times when roles change, public support and understanding becomes increasingly critical and institutional maturation is sought in an orderly and efficient manner. In preparing for the future, Ohio's two-year campuses must and will rely more upon institutional research to guide their development and vitality.

Although the functions of an institutional researcher are comprehensive, the primary function includes doing some of the types of
studies listed below. For the purposes of this study it is assumed that some of these studies and reports will be accomplished on every two-year campus even in the absence of a centralized office of institutional research or a person so titled.

1. **Outcomes or Evaluation Studies:** program or curriculum evaluation; student success, retention, academic achievement, student follow-up/placement studies; academic accreditation or multi-program mission achievement; teaching effectiveness; effectiveness of media, materials, or methods; other outcome or evaluation studies.

2. **Descriptive Studies:** HECIS, Ohio Board of Regents and other externally required reports; student characteristics profiles; faculty characteristics; faculty load, student-teacher ratio; or class size reports; salary/fringe benefit studies, descriptions of applications; attrition, graduation, or the equivalent; information supporting the budgeting process; opinion samplings; other descriptive studies.

3. **Planning Studies:** enrollment projections; space utilization and/or needs; strategies to increase effectiveness of funds utilization; resource allocation or cost-effectiveness studies; devising simulation models of institutional dynamics; other planning or operational studies.

4. **Policy Studies:** institutional long range plans; analysis of economic and/or social conditions affecting the college; goal-setting; effects of proposed policy changes; other policy studies.

The intent of the survey was not to evaluate the institutional research function on the two-year campuses, but rather to set a benchmark study to determine the status of institutional research for Ohio's two-year campuses. Planning by The Ohio Board of Regents frequently requires collection of information and reports from the two-year campuses. Hence, it is essential that the institutional research capabilities of the two-year campuses be considered.
Response to the survey was excellent, and much interest was generated in the State of Ohio. Because of great diversity among the several types of campuses which offer two-year programs under a variety of organizational and governance arrangements, one must be cautious in interpreting results of the survey. It is hoped that this brief report will be useful to the two-year campuses of Ohio in assessing their institutional research efforts or in planning the establishment of an institutional research office. If this study succeeded in stimulating the reader’s inquiry and concern about institutional research on and for Ohio’s two-year campuses, its goal will have been largely satisfied.

Conclusions and observations drawn by the author do not necessarily represent those of The Ohio Board of Regents nor of individual institutions participating in the survey.

Acknowledgement: Appreciation is expressed to the Chancellor, and the Vice Chancellor for Two-Year Campuses, The Ohio Board of Regents, for encouragement and support of this study. The author is grateful for the assistance of Dr. Ivan J. Lach, Assistant Secretary for Research and Analysis, The Illinois Community College Board, in development of the survey instrument. Credit is also due those who responded to the survey.
INTRODUCTION

Historically, most two-year institutions have not included extensive statements about research in their role and mission documents because this function had been reserved largely for major universities. In fact, this may be one of the reasons why two-year campuses have been relatively slow in establishing professional staff for the investigation of their problems by research methods. On the other hand, a strong case may be made for institutional research on the two-year campuses to the extent that it assists in management, planning, evaluation, and institutional operations.

Reporting requirements of outside agencies demand the collection of data from each campus. The fact that each campus is accredited separately imposes a requirement for self studies. Further, Ohio's two-year institutions are committed to local community service. This requires that local community-needs studies be conducted on a continuing basis. Finally, there is frequent interest on the part of faculty and administration on the individual two-year campuses to study needs, potentialities, and possibilities for improvement which can be aided by research in the development of improved management and instructional delivery systems and related support services.

The development of institutional research in behalf of the public two-year campuses of Ohio is of vital concern to the Ohio Board of Regents and others interested in the well-being of two-year college
programs in Ohio, and generally, those interested in the advancement of two-year college research. This initial survey was an attempt to determine the present status of institutional research on and for the public two-year campuses. Only basic questions about the institutional research function at each campus were explored.

In interpreting the data presented in this report, one must take into account several important characteristics about the mix of two-year colleges of Ohio. As they are organized today, the two-year campuses of Ohio are relatively new institutions being either reorganized or founded since the passing of several legislative acts in the early 1960's. The primary difference among institutions lies in their organizational governance. Ohio has five types of two-year campuses. Among the fifty-five public campuses with two-year missions in Ohio, 24 operate as autonomous institutions and 27 which are university affiliated. Among the autonomous institutions, there are five community colleges (one with three campuses) and 19 technical or general and technical colleges, one with two campuses. Eight universities operate a total of 23 two-year campuses that are classified as regional campuses, branches, technical or general and technical colleges. Additionally, the Universities of Akron, Cincinnati, Toledo, and Youngstown operate two-year urban community and technical colleges. Additionally, the University of Cincinnati designates a University College with a two-year role and mission.

Perhaps the greatest diversity among institutions relative to research activity, is the variance of size among the two-year institutions.
Head count enrollments range from a few hundred students in the rural areas of the state to a multi-campus community college in Cleveland with enrollment of nearly 28,000. Diversity also exists in the wealth of the regions served by the various two-year campuses. In several communities, one may find both a university regional campus, and a technical or a general and technical college located on the same campus, each with its own buildings and staff but serving a different role and mission. Altogether the above factors provide for a great deal of variety and contrast among the two-year campuses of Ohio. Thus, it may be concluded at the outset that organizational arrangements for the institutional research function on the two-year campuses will vary greatly.

There is some dilemma in speaking of Ohio's two year campuses whether it be in terms of those which are autonomous, one of which has three campuses (Cuyahoga Community College); when speaking of university affiliated campuses which are removed from the parent institution; or when speaking of two-year community and technical urban colleges located within a city university. For purposes of this paper, the terminology will generally be construed to mean two-year institutions, each of which operates in performance of a two-year role and mission within any one of several governance auspices.

The method used in this study was a survey instrument which was mailed to the chief administrative officer at each two-year institution. Follow up telephone calls were utilized to obtain responses from a majority of the two-year institutions in Ohio. Responses were
received from all five community colleges, 18 of the 19 technical or
general and technical colleges, 17 of the 23 university branch/regional
campuses and two out of three university community and technical colleges.
Responses were also received from eight out of ten universities which
operate two-year campus programs. Thus, 42 of 50 (84%) two-year campus
institutions responded to this survey.

As a matter of interest, a National survey of junior college
institutional research, conducted by Swanson in 1964, found that fewer
than 20 percent of the two-year colleges had formally organized
programs of institutional research and fewer than one-third of the
colleges surveyed had plans for evaluating their research programs. In
1968, another national survey was conducted for the same purpose under
the auspices of the U.S. junior college leadership program. Findings
of that study reported only 23 percent of the participating institutions
had personnel employed to coordinate institutional research. In thirty-nine percent of the institutions no regular staff member had the re-
sponsibility for coordinating institutional studies. In other institutions,
this responsibility was the task of an administrator. The study also
revealed no relationship between the amount of institutional research
and the institutional variables of age and/or type of control. The
institutional variables of enrollment size, staff size, and budget
correlated significantly with the number of studies reported by the
institutions. *

---

16
A 1976 survey of 240 of the nation's two-year colleges reported at the Princeton Presidents Conference that 55% had an Institutional Research Office. This would indicate that the research office is an increasingly significant function among two-year institutions.
MOST OF OHIO'S TWO-YEAR CAMPUSES ARE SERVED BY AN OFFICE 
OF INSTITUTIONAL RESEARCH

Results of the survey show that at least 84% of the two-year 
campuses have or may be served by an office of institutional research. 
Below, on Table 1, a tabulation of the responses from the autonomous 
institutions indicates that 15 (62%) had offices of institutional 
research while eight (33%) did not. 

Among the autonomous institutions which did not have established 
offices of institutional research compared to those which did have an 
established office, both groups contained large and small enrollments, 
and were both rural and urban areas. 

While responses were received from 19 of 27 university related 
two-year campuses, only three indicated having established an office 
of institutional research of a regional campus. However, of the ten 
universities with two-year campus programs, all eight who responded to 
the survey indicated that the research function for their two-year 
campuses was served by the Research Office of the parent institution. 

None of the universities indicated having established a separate 
centralized office of institutional research for the two-year campuses 
under their jurisdiction. None-the-less all indicated that much re-
search is conducted by a variety of individuals and offices. The Kent 
State University Division of Regional Campuses employs a staff member 
whose title includes research responsibility for the regional campuses. 
Kent State Regional Campuses also employ an Associate Dean for Planning.

STAFFING OF INSTITUTIONAL RESEARCH OFFICES

An attempt to determine the extent of the commitment to institutional research in terms of personnel at the various two-year campuses of Ohio, revealed that only a few institutions committed more than one professional and one clerk or paraprofessional to the function of institutional research. In most cases, the institutional research function is being handled on a part-time basis using clerical help on a one-to-one ratio with professional staff assignment. Table II shows results to this particular item in the survey from 42 respondent two-year campuses.

TITLES OF PERSONS RESPONSIBLE FOR INSTITUTIONAL RESEARCH

An analysis of the persons responsible for institutional research on Ohio's two-year campuses reveals that eight institutions had the title of Director of Institutional Research or similar which clearly indicated that most of the individuals' responsibilities were connected with institutional research. At seven other campuses, the person had a combined title which implied that his duties included institutional research in addition to another area of responsibility. Among the remaining institutions, the person responsible for the kinds of activities which are generally defined within the function of institutional research, had a title which implied another function such as Director, Assistant to the President, Dean of Instruction, etc.

EDUCATIONAL BACKGROUND OF THE PERSON RESPONSIBLE FOR INSTITUTIONAL RESEARCH ON OHIO'S TWO-YEAR CAMPUSES

Table IV illustrates the academic preparation, area of specialization, and years of experience of the professional staff among the 18 two-year campuses with established offices of institutional research. It may be noted that one-half hold the terminal degree and the other half hold the Masters or more. It is significant that the experience level of those responsible for research on the two-year campuses is relatively low, a majority having experience five years or less. Table IV also indicates the background of 40 respondents to the survey.

*Response Incomplete
IMMEDIATE SUPERVISORS OF PERSONS RESPONSIBLE FOR INSTITUTIONAL RESEARCH ON OHIO'S TWO-YEAR CAMPUSES.

In Ohio's two-year institutions, a majority of respondents, 25, who are responsible for institutional research are under the immediate supervision of the President of the College, or the Chief Executive Officer. On twelve campuses, the institutional research person reported to other administrators. The Association for Institutional Research recommends that the institutional researcher should report to an administrator who has campus wide responsibilities. Practice on most Ohio's two-year campuses is consistent with this recommendation.

At six of the fifty two-year campuses in Ohio, the person responsible for institutional research devoted 75 to 100 percent of his time to that function. Only 20 percent of the responding institutions reported devoting more than half of a person's time to the research function. On the other hand, 32 percent indicated spending less than 25% of the person's time to the institutional research function, even though these persons were designated as being responsible for that function. Table VI shows the tally of responses in terms of Ohio's fifty two-year campuses.

INSTITUTIONAL RESEARCH STUDIES CONDUCTED ON OHIO'S TWO-YEAR CAMPUSES

Table VII presents an aggregate of respondents' estimates of research studies which have been conducted within the past two years together with opinions on the number which should be done. It may be observed that the extent of studies being conducted is both comprehensive, and significant in terms of volume. Although it is difficult to interpret the meaning of respondents' suggestions for the number of studies which should be done, one might assume that there is a feeling of need for increased research in the areas of curriculum, instruction, goals and objectives, public relations, and community studies. Suggestions in addition to those listed on the survey instrument included: academic employment, co-op employment, information services, advising, student nurse selection, institutional characteristics, and relationships between branch campuses and parent institutions.

Although the issue of dissemination and implementation of the results of research studies was not explored in this study, there is great potential, if means can be developed to share the results of some 300 studies which institutions accomplish in Ohio on an annual basis. Several respondents indicated both the need for more research and for the sharing of research findings and routine reports among campuses. Sharing of findings would not only reduce duplication and overlap, but would also lead to improved quality of research.

RANKING OF INSTITUTIONAL FUNCTIONS

Respondents were asked to indicate the relative amount of time spent by their college and the relative importance the respondent placed upon each function shown in Table VIII. Institutional research functions were then listed in priority order in accordance with those which required the most amount of time on the part of the institution conducting the research function.

For most functions, it may be seen that the respondents judgment about the relative importance of the function corresponds to the relative amount of time spent on the function. The "determination of immediate and future needs" is deemed most time consuming and also the most important. On the other hand, there are exceptions. While the preparation of descriptive reports ranks Number 2 in consumption of time, it holds lower rank (Number 5) in relative importance. Similarly, the "identification of strengths and weaknesses of the institution holds high importance (Number 2) yet receives less time (Number 7).

Several respondents indicated that so much time was required in the preparation of routine reports and compiling of data that less than a desired amount of time remained for research which was thought to be more important to the institution. This observation is corroborated in the ranking according to time spent on each function as indicated in the top four institutional research function activities.

MEMBERSHIP IN PROFESSIONAL RESEARCH ORGANIZATIONS

Membership in one or more professional associations primarily concerned with research is indicated in Table IX. These memberships are generally held most frequently by respondents who indicated having established offices of institutional research on their campus. As Ohio's campuses increase activity and commitment to the research function in a more organized and coordinated fashion, it may be anticipated that those active in the research process will seek the benefits of membership in the professional organizations.

DESIR ED IN-SERVICE RESEARCH TRAINING

Respondents expressed a desire for in-service training programs for institutional research staff covering several topics. These are listed in priority order in Table X. The highest priority concerned "methods of conducting follow-up studies;" followed by "basic research design and methodology," and "sharing of two-year college research studies." These were followed by interest in "organizing an institutional research office" and "statistical methods." It would appear that opportunity exists for institutional research in-service training which might be accomplished by the professional organizations, the institutions of higher education, or by a consortia arrangement among the two-year campuses under leadership of The Ohio Board of Regents.

30
The results of this survey show that there is much diversity in the status of the institutional research function among the two-year campuses of Ohio. Several institutions have well established offices of institutional research with adequate professional staff and clerical help. The survey indicates that at least 84% of Ohio's two-year campuses are served by an office of institutional research. As many as 62% of the autonomous institutions indicated the presence of established offices of institutional research. Universities responsible for campuses with two-year missions indicated that the research function for those campuses and programs was served by the research office of the parent institution. However, none of the universities indicated having established a separate centralized office of institutional research for the two-year campuses under their jurisdiction. Three regional campuses indicated having established an office of institutional research.

Most of the institutions recognize the importance of the institutional research function and are engaged in research activities that play a vital role in the operation and administration of the two-year campuses. In addition, a high degree of interest was indicated by the respondents in research activities and functions which are typically performed by a two-year college office of institutional research. Several respondents from institutions without coordinated or centralized offices of research indicated a need for establishment of an office and greater
institutional research activity. Awareness of the need for institutional research is high, especially for local campus concerns. On the other hand, several of the smaller autonomous campuses indicated that a lack of resources prevented commitment to any significant amount of research activity. Similarly, several university affiliated campuses felt that an insufficient amount of attention and concern for local research needs was evident from the parent campus.

It appears that much potential exists for the expansion of the institutional research function in Ohio's two-year institutions. For those vitally interested in institutional research, a concern for improved quality is equally important to expanded quantity. It also appears that the universities are challenged to address the research needs of their individual two-year campuses. It is also apparent that The Ohio Board of Regents could render additional service to the individual institutions by increasing its feedback of studies and data collected from the respective institutions. Perhaps a future survey can better identify both the quantitative extent of research on Ohio's two-year campuses and also examine the quality of institutional research in Ohio's two-year campuses. Most importantly, encouragement, leadership and commitment must be provided to assure that two-year campus needs for localized institutional research are served.

32

20.
RECOMMENDATIONS

(1) Ohio's two-year institutions should increase operational and philosophical commitments to the research function.

(2) The Ohio Board of Regents should continue its leadership in fostering and encouraging two-year college institutional research.

(3) Where no organized research office nor an individual designated to coordinate the research function exists, two-year campuses should assign an individual to coordinate institutional research studies, data collection and reports. Smaller campuses could begin by assigning an individual on a part-time basis.

(4) Increased institutional research activity should be developed at most of Ohio's two-year campuses to address individual campus needs regardless of institutional size, organization, or governance.

(5) Where research resources are insufficient for a small campus to accomplish quality research, arrangements and mechanisms should be developed to conduct studies critical to institutional operations, management, and evaluation. Examples are: student placement and follow up, program evaluation, institutional goals inventory, enrollment projections, community needs, etc.

(6) In-service training programs for researchers should be developed under any of several auspices: The Ohio Board of Regents; the state, regional, and national professional research organizations; the universities; and outside consultants.

(7) A state professional organization for two-year college research should provide for comprehensive membership of all who are interested in, and would benefit by, sharing in research of interest to the two-year institutions.

(8) Consumers and producers of research pertinent to two-year campuses should utilize the training, literature and contacts available in the professional research organizations.
A SURVEY OF THE CURRENT STATUS OF INSTITUTIONAL RESEARCH ON OHIO'S TWO-YEAR CAMPUSES

Campus ________________________________ Date ________________________________

Name of Respondent ____________________________________________

Title of Respondent ____________________________________________

See instructions on the back of this instrument.

1. Has your institution established an office for the Institutional Research function? Yes ______ No ______ If yes, year ______

2. Is your research office singularly responsible for multi-campus research activities? Yes ______ No ______ (If yes, indicate number ______; and names of each campus ______)

3. Please indicate how many staff of each type are employed in your Institutional Research Office?

   Professional  Paraprofessional  Clerical

   Full-time ______ ______ ______
   Part-time ______ ______ ______
   (more than 20 hrs./week) ______ ______ ______
   (20 hrs. or less per week) ______ ______ ______

4. What is the name and title of the person primarily responsible for Institutional Research?

   Name ____________________________________________
   Title ____________________________________________

5. Specify the educational background of the person responsible for institutional research.

   1. Highest degree ______
   2. Area of specialization ______
   3. Years of experience in IR ______

6. Whom does the person responsible for Institutional Research report to?

   1. President/Director/Campus Dean ______
   2. Vice President/Assoc. Director ______
   3. Dean of Instruction ______
   4. Assistant to the President ______
   5. Dean of Business ______
   6. Dean of Student Services ______
   7. Other (please specify) ______

7. What percentage of time does the person responsible for institutional research devote to the Institutional Research function?

   1. 75 to 100% ______
   2. 50 - 75% ______
   3. 25 - 49% ______
   4. 0 - 24% ______

8. How many Institutional Research studies have been conducted at your campus in each of the areas below within the past 2 years and how many should be conducted? Number Done  Should Be Done

   1. Admissions, Registration & Enrollment ______ ______
   2. Students ______ ______
   3. Administration ______ ______
   4. Curriculum ______ ______
   5. Physical Plant ______ ______
   6. Finance ______ ______
   7. Instruction ______ ______
   8. Faculty ______ ______
   9. Goals and Objectives ______ ______
   10. Public Relations ______ ______
   11. Community ______ ______
   12. Other (Specify) ______ ______

9. For each of the functions of Institutional Research listed below, indicate the relative amount of time spent by your college and the relative importance you place on the function.

   Relative Amount
   Function of Time Spent on

   Relative Importance
   of Function

   1. The preparation of descriptive reports on institution status ______ ______ ______ ______ ______ ______
   2. The identification of strengths and weaknesses in the institution ______ ______ ______ ______ ______ ______
   3. The determination of immediate and future needs ______ ______ ______ ______ ______ ______
   4. Compiling data and other information which might be needed ______ ______ ______ ______ ______ ______
   5. The coordination of intra- and inter-institutional research ______ ______ ______ ______ ______ ______
   6. Master planning ______ ______ ______ ______ ______ ______
   7. The provision of assistance to any staff member, administrator in the planning, execution, and data analysis of studies conducted by them ______ ______ ______ ______ ______ ______
   8. The maintenance of an up-to-date research file of all studies conducted in the institution ______ ______ ______ ______ ______ ______
   9. The periodic communication of briefs and summaries on research just completed or currently in progress ______ ______ ______ ______ ______ ______
   10. Developing or assisting in the development of proposals and grant requests ______ ______ ______ ______ ______ ______
   11. Responding to state, federal, and other required reports ______ ______ ______ ______ ______ ______
   12. Others (please specify) ______ ______ ______ ______ ______ ______

10. Which of the following research organizations do persons responsible for Institutional Research belong to and how beneficial is each organization?

   Organization ______ ______ ______ ______ ______ ______

   1. Association for Institutional Research (AIR) ______ ______ ______ ______ ______ ______
   2. American Educational Research Association (AERA) ______ ______ ______ ______ ______ ______
   3. AERA North Central - Special Interest Group for Community/Junior College Research ______ ______ ______ ______ ______ ______
   4. Ohio Council for Inter-institutional Research ______ ______ ______ ______ ______ ______
   5. Other (Specify) ______ ______ ______ ______ ______ ______

11. Indicate which of the following type of inservice training programs your institutional research staff would like to participate in.

   1. Workshop on methods of conducting follow-up studies ______
   2. Workshop on basic research design and methodology ______
   3. Workshop on statistical methods ______
   4. Seminar for exchanging two-year college research studies ______
   5. Workshop on organizing an institutional research office ______
   6. Others (Specify) ______
INSTRUCTIONS

This survey should be completed by the person responsible for the institutional research function at your college. If you do not have an institutional research position, please forward this survey to your MIS coordinator or person most closely performing the institutional research function on your campus. Although the functions of an institutional researcher are comprehensive, his primary function includes doing some of the following types of studies:

1. **Outcomes or Evaluation Studies:** program or curriculum evaluation; student success, retention, academic achievement; student follow-up/placement studies; academic accreditation or multi-program mission achievement; teaching effectiveness; effectiveness of media, materials, or methods; other outcome or evaluation studies.

2. **Descriptive Studies:** HEGIS, Ohio Board of Regents and other externally required reports; student characteristics profiles; faculty characteristics; faculty load, student-teacher ratio; or class size reports; salary/fringe benefit studies, descriptions of applications; attrition, graduation, or the equivalent; information supporting the budgeting process; opinion samplings; other descriptive studies.

3. **Planning Studies:** enrollment projections; space utilization and/or needs; strategies to increase effectiveness of funds utilization; resource allocation or cost-effectiveness studies; devising simulation models of institutional dynamics; other planning or operational studies.

4. **Policy Studies:** institutional long range plans; analysis of economic and/or social conditions affecting the college; goal-setting; effects of proposed policy changes; other policy studies.

This survey is not an evaluation of the institutional research function on the two-year campuses. Instead, it is a benchmark study to determine the present status of institutional research in Ohio. The Ohio Board of Regents is interested in promoting institutional research in the two-year campuses and needs this basic information for that purpose. Survey findings will be generalized so that responses from no individual institution will be identified. Hence, we hope that you will give this survey your immediate attention. Your time and effort are greatly appreciated.
