Summers, Gene F.; And Others

Rural Industrial Development Bibliography

The 186 documents included in this bibliography of rural industrial development constitute nearly 30 years of research effort by scores of social scientists interested in ascertaining the measurable impact of new industry on demographic, economic, and/or social dimensions of rural community life in the U.S. Restricting the meaning of "industrial development" to the location of new manufacturing plants, this bibliography includes documents which report data from an empirical assessment of a new plant site having occurred between 1945 and 1975 and having had measured impacts. Many of these items are part of what is oftentimes referred to as "fugitive literature". Frequency of bibliographic entries increases with the recency of publication. (JC)

* Documents acquired by ERIC include many informal unpublished materials not available from other sources. ERIC makes every effort to obtain the best copy available. Nevertheless, items of marginal reproducibility are often encountered and this affects the quality of the microfiche and hard copy reproductions ERIC makes available via the ERIC Document Reproduction Service (EDRS). EDRS is not responsible for the quality of the original document. Reproductions supplied by EDRS are the best that can be made from the original. *
RURAL INDUSTRIAL DEVELOPMENT BIBLIOGRAPHY

Selected Impact Study Documents

Preface

The selection of documents which follows was generated through nearly thirty years of research effort by scores of social scientists interested in ascertaining the measurable impact of new industry on demographic, economic and/or social dimensions of rural community life in the United States. Many of these items are part of what is oftentimes referred to as "fugitive literature." That is, they are documents which were privately printed; published as Committee Reports or as evaluative statements for the explicit use of governmental agencies; distributed in limited quantities as "Research Reports" or "Working Papers" of academic departments, centers and institutes; and otherwise obscured from the purview of standard bibliographic research tools.

We have spent approximately one year in identifying, locating and securing "hard copy" of each of the 186 documents included in this bibliography. Final selection of a document was made only when several criteria were met, which were as follows.

The document had to report data from an empirical assessment of a new plant siting. By "impact" we were concerned only with measured impacts, not projections of impact in the sense of the term "impact statements" as employed by several contemporary regulatory agencies. Thus, we asked of each document, "Does it report on some aspect of community response to the location of a new manufacturing plant?" Obviously, in doing so we have restricted the meaning of "industrial development" to the location of new manufacturing plants.

The plant location had to have occurred since 1945. This is arbitrary, to be sure. The choice was directed by a concern that we avoid the temporary
and historically unique aspects of rural plant locations intrinsic to the
War effort of the 1940's while also being as inclusive of evidence on re-
cent industrial location experiences. As an examination of the bibliography
will indicate the number of documents included increases with the recency
of its publication. This probably is a function of both the growing concern
for effects of industrial plant locations in rural areas and the rapid de-
cay of fugitive literature. In any event, the frequency of entries increases
with the recency of publication year.

The compilation of the bibliography was supported by the College of
Agricultural and Life Sciences, University of Wisconsin-Madison and by
Research Grant OER-465-G-7(99-7-13280) from the Office of Economic Research,
Economic Development Administration. We wish to acknowledge the assistance
of Professor Steven Kale whose bibliography "The Impact of New or Additional
Industry Upon Rurally Oriented Areas",(Occasional Number Two, March
1973, Bureau of Business Research, College of Business Administration,
University of Nebraska-Lincoln) was valuable to us in the early stage of
our search and secure operation. We wish also to express our deep appre-
ciation to the following Associations who distributed our appeal for in-
formation to their membership lists without fee: American Industrial Devel-
opment Council, American Society of Planning Officials, American Sociologi-
cal Society, National Area Development Institute, National Association of
Councils of Government, Rural Sociological Society, Southern Sociological
Society, American Agricultural Economics Association, and Association of
American Geographers.
