Designed to encourage Native American students in Colorado and New Mexico to pursue health careers, this handbook presents the following information: (1) statistics documenting the need for American Indian health professionals; (2) current career opportunities in the health professions (descriptions of the many health fields and descriptions of professional practice and health service agencies, including such careers as environmental aide, school health, research, occupational therapist, etc.); (3) preparing for the health professions (secondary school preparation, college level training and preparation, admission into the health professions schools, special Indian programs, and financial planning); (4) where to obtain additional assistance (counseling and advice, additional sources of information, recommended reading list, and glossary). Among the more important specifics presented in this handbook are: lists of professions requiring and those not requiring a college degree; lists of new and emerging health professions; a selected list of four-year colleges and universities in the Southwest and Rocky Mountain states; a list of New Mexico technical-vocational schools; a list of organizations offering special Indian programs; a budget for first year students at U.S. medical schools (estimated minimum expenses for 1975-76); and information on grants, scholarships, etc. (JC)
The All Indian Pueblo Council and the New Mexico/Colorado Intertribal Health Authority gratefully acknowledges the cooperation of the Association of American Indian Physicians (AAIP), Norman, Oklahoma. Portions of this handbook were taken from the AAIP Health Career Handbook, the U.S. Department of Labor Health Careers Guidebook, Educational Assistance for Native Americans published by the University of California, Berkeley, and the Health Career Director of the Health Manpower Council of Northeastern California.

Programs, addresses and requirements listed in this handbook are subject to change.
FOREWORD

A Special Message to Native American Students in New Mexico and Colorado

During the last few years, the All Indian Pueblo Council, has had the goal of assisting Indian students in entering careers in medicine, dentistry, nursing, mental health, and many other allied health careers. Our Health Careers Recruitment Program, our Scholarship Program and this handbook are a few examples of the many efforts we are making to assist you in entering a career in the health field.

A big problem you may encounter is to decide what career to go into, but the main thing to remember is to start early. The first year of high school is not too early to start thinking about your likes, dislikes, school subjects in which you do well, hobbies and other special interests. Make a list, write down special activities and interests.

Discuss your thoughts with your school guidance counselor, the AIPC Health Careers Recruitment Program or anyone who has experience in the field you are interested in, such as your dentist, doctor, or teacher. Most people are happy to tell you about the good and bad points of their career.

Use your school and community libraries, or write to national organizations to find about the requirements in the way of training, experience, etc., in the field you are interested in.

Remember, even after you make a decision about your career you can always change your mind. So don't worry, the main thing is that now you have a direction which you can follow.

A career in health can be an awesome commitment, but it can also be a challenge and an exciting opportunity. Few Indian health professionals would trade it for another career. Indian students enrolled in colleges, universities, and technical training schools across the country will tell you about the importance of their education and of their commitment to the well-being of our people.

Many American Indian students have graduated from health career training programs and many more are enrolled today. When you graduate, your future will include an interesting, well-paying job, with an opportunity for advancement, and a chance to make decisions that affect the lives and health of your fellow people.

The All Indian Pueblo Council encourages you to choose a career in the health field. You are to be congratulated for considering a career in health. We hope this handbook can be of some assistance to you making decisions within that field. And whatever your decision, best of luck in the future!

Stanley Tenerio
Chairman
New Mexico/Colorado Intertribal Health Authority

Delfin J. Lovato

PART I.
THE NEED FOR AMERICAN INDIANS
AS HEALTH PROFESSIONALS

At the present time more than four million professionals serve the health needs of the entire United States population. Their work is an ancient calling to safeguard health and help people enjoy life. Their methods, however, are often modern. Indeed, within the past 10 to 15 years the concept of health care has changed; it is viewed as the right of every citizen, and recently enacted federal legislation has generated an unprecedented demand for medical services. Unfortunately, there aren't enough trained Indian health workers in New Mexico and Colorado — doctors, nurses, dentists, therapists and others — to fill this demand, adding thereby to the ever-increasing health manpower shortage.

This shortage has long been acute among the American Indian peoples, who number nearly one million persons nationally and over 40,000 in Albuquerque Area.

The need for competent, dedicated and educated people to provide professional health care is obvious. Nevertheless, the numbers of Indian personnel in the various professions and allied health professions is still too small.

The health status of Southwestern Indians is also a reason to consider health as a career. From the standpoint of health status, the Albuquerque Area Indian Health Service reports the Indian people of the Albuquerque Area are still many years behind the general population of the United States with a high incidence of influenza-pneumonia, gastroenteric diseases, skin diseases, and an accumulated backlog of conditions; such as, congenital malformations, orthopedic conditions and mental health problems. There are, as well, a large number of elective surgeries in New Mexico that have had to be held in abeyance because of insufficient funds, facilities, or trained personnel. In addition, many Indian patients require rehabilitative services that could be best performed by trained Indian health professionals.

The 1970 U.S. Census reported 750,572 American Indians in the nation and 190,110 over 16 years of age in the working force. In 1974, there were 72 American Indian physicians beginning first year enrollment in schools of medicine in the United States or only 0.5 percent of the total enrollment. The total enrollment of American Indians (all four years) in medical schools in the 1974-1975 school year was only 159 Indians out of a total of 53,554 students in the United States. American Indians account for only 0.3 percent of the total enrollment.

In the Southwest enrollment of American Indians in medical schools 1973-1974 academic year was also too low. The University of New Mexico reported 5 American Indians, the University of Colorado 7, the University of Arizona 3, the University of Oklahoma 7, Baylor University 1, and the University of Texas 2. A total of 6 American Indian students were enrolled in schools of osteopathy (0.3%) in the United States.
In 1973-1974 the total number of American Indians enrolled in schools of dentistry in the United States was 33 (0.2 percent). In the Southwest, there were 2 American Indians enrolled at the University of Texas and 4 at the University of Oklahoma.

In the 1971-1972 academic year, there were only 2 American Indian students enrolled in schools of optometry in the United States. The number of active Indian optometrists in the United States was only 13 in 1973. You can see the need.

Conclusions

Looking at these statistics and according to all standards there are not really enough licensed and educated Indian people as are required to raise the health levels of our population group. According to federal government statistics, as reported by the Association of American Indian Physicians, recent estimates of the following health professions are as follows:

<table>
<thead>
<tr>
<th>Career Category or Area</th>

The need for American Indians to become health professionals is enormous. The need becomes emphasized even more by the future needs of the Indian community. Nearly every undertaking in Indian life — education, housing, employment, transportation, art, or other — can be accomplished to a greater degree by a healthy people. For this reason alone the need for American Indians as health professionals is deserving of everyone's fullest concern.

The role of the Indian health professional within the community is expected to be equally emphatic. In the minds of the community, the physician, dentist, nurse, or technician will be much more than an individual administering the arts of his profession; he will be the key provider to the entire well-being of the community. As health professionals, American Indians will be looked to just as the medicinemen of old. You will be expected to demonstrate and provide the highest quality of life — spiritually, physically, emotionally, and according to the finest values of the community.
Can I Enter a Career in the Health Professions?

Yes! Without a doubt. In the last few years, Pueblo Indians have made tremendous strides in gaining access to training in the various health fields. Some of your classmates may already be thinking about a future in medicine, chemistry, nursing, pharmacy, physical therapy, or mental health. You can too. During the 1974-1975 school year, there were many Pueblo Indians enrolled in health and allied health careers in colleges and universities. For example . . .

—13 Pueblo Indians enrolled in universities listed their major as medicine
—35 Pueblo Indians were majoring in nursing
—24 Pueblo Indians were taking Psychology as a major
—11 Pueblo Indians were Biology majors
—3 Pueblo Indians were taking Dietetics courses
—2 Pueblo Indians were planning to enter careers in veterinary science.
—8 Pueblo Indians had Dentistry planned for a career
—8 Pueblo Indians were majoring in "Pre-Med" in college
—2 Pueblo Indians were in Veterinary science, 2 in Physical Therapy, 1 in Pharmacy, and 1 in X-Ray Technology
PART II.

CAREER OPPORTUNITIES
IN THE HEALTH PROFESSIONS

The business of health is everybody's business and the career of a health professional touches nearly every aspect of our daily lives. As a field of service, the health professions are among the oldest and most diversified known to man. The opportunities for a successful career are vast, and unlimited. Whether in patient care, disease prevention, public education, epidemic control, research, or administration, there is a great need for talented and dedicated men and women. Some may enjoy the mysteries of science and myth. Others have the gift of understanding. Some like to do things with their hands, while others like to instruct and teach. For American Indians, especially, there are many opportunities in the health fields.

SECTION A. THE HEALTH FIELDS

The health professions include many fields of service and specialty—far too many to describe in this small handbook. Yet they all basically relate to one another and serve to support the highest possible standard of health within the community. Some require skills seldom used by others, while others concentrate on specific aspects of their chosen field. Training requirements after high school, vary widely from as little as 81 hours for an Emergency Medical Technician (Ambulance Attendant) to as much as 8 years or more for a doctor.

Medicine

Opportunities continue to abound in this ancient calling. Whether in private practice, research, administration, public health, teaching or military service, the career as a doctor of medicine is extremely fulfilling. The career is demanding, as the services of the physician are always necessary. With modern facilities and highly trained skills the physician performs his practice of medicine, as the professional concerned with both preventive and restorative medicine.

The profession requires of its members many skills, including intelligence, ability to make independent judgments, a willingness to accept personal responsibility, and the capacity to make decisions. The profession also requires considerable physical and emotional strength. Those who select this profession should be very good students. Indeed, study continues throughout the life of one's career, for to be a good physician is to be a good student, adding constantly to one's knowledge and professional capability. Physicians must be especially well-trained in the sciences and they must also be in good health; Not only the study of the profession, but the practice of medicine demands one's constant attention.

Doctors most often deal with pleasant circumstances. Yet, the physician's work may occasionally require him to work in difficult situations. However, a good doctor must be able to deal effectively with all situations. For those with special talents, the career of medicine is extremely rewarding.
Many also find special rewards through concentration in a field of special interest. These 34 recognized specialty areas include:

- Anesthesiology
- Colon and Rectal Surgery
- Dermatology
- Family Practice
- Internal Medicine
- Neurological Surgery
- Obstetrics and Gynecology
- Ophthalmology
- Orthopedic Surgery
- Otolaryngology
- Pathology
- Pediatrics
- Physical Medicine
- and Rehabilitation
- Plastic Surgery
- Preventive Medicine
- Psychiatry and Neurology
- Radiology
- Surgery
- Thoracic Surgery
- Urology

There are, in addition, many other health careers which play an equally important role.

OTHER HEALTH CAREERS

Dietitian

The dietitian is educated to provide nutrition care to individuals and groups and to apply the principles of management to planning and directing food service programs. There are four major areas of specialization in dietetics. These are food administration, nutrition care, education, and research.

Nutritionist

The nutritionist is an educator concerned with teaching people about normal nutrition and with helping special groups of people develop meal patterns related to their particular needs. Often these are groups with special problems—the aged, families living on a limited income, or young mothers with their first babies.

Physician Assistant

The term physician assistant is used in reference to such new health professionals as physician assistant, child health associate, Medex, physician associate, family nurse practitioner, and others.

The American Medical Association officially defines a physician assistant as "a skilled person qualified by academic experience and practical on-the-job training to provide patient service under the supervision and direction of a licensed physician who is responsible for the performance of that assistant."

The physician assistant is trained to effectively assist primary care physicians in their medical activities. Under the supervision of a licensed physician, the physician assistant is expected to improve the physician's services by performing medical or surgical tasks. Such procedures would include patient histories, physical examinations, diagnostic and therapeutic procedures, follow-up care, and patient teaching and counseling.
The potential job market for the graduate physician assistant is a bright one. Graduate and student PAs who are members of the American Academy of Physicians' Assistants (the professional organization representing graduates and current students of recognized PA programs) may take advantage of the National Employment Listing Service it offers.

As a professional member of the health care team, the newly graduated physician assistant may expect to earn an economically attractive salary of $12-14,000 per year.

Biomedical Engineer

The biomedical engineer applies theory from the physical sciences (chemistry, physics, geology) and technology from science and industry to the solution of problems in medicine and the life sciences (physiology, biochemistry, biophysics, cytology, neurophysiology).

All aspects of engineering are finding application in human biology and medicine. Many of the current efforts fall within the following areas:
- The development of new instruments for use in medical and surgical care or in research.
- The invention and perfecting of devices to repair or compensate for parts of the human body that do not function properly or that have suffered damage as a result of disease or accident.
- The adaptation of computer technology to serve a wide range of specialized requirements in the health services and in health research.
- The application of engineering theory and methods in medical and biological research—in studies, for example, of the structure of the living organism and the mechanisms through which the human body maintains itself in good running order.

Optometrist

An optometrist, doctor of optometry (O.D.), is educated and trained to examine eyes to detect vision problems. He may prescribe eyeglasses or contact lenses, as needed, or he may recommend other optical treatment to preserve or to improve eyesight. If evidence of eye disease or injury is observed, he refers the patient to an ophthalmologist for diagnosis or treatment.

Speech Pathologist and Audiologist

The goal of speech pathologists and audiologists is to help children and adults with speech problems to communicate as nearly normally as possible.

Following are some of the types of problems with which the speech pathologist and audiologist work: lisping, cleft palate, impaired hearing, talking difficulties resulting from cerebral palsy, talking difficulties resulting from emotional or physical disturbance or retardation.

In speech disabilities which have a physical cause, the clinician may need to work with physicians and dentists. When the disorder is emotional in origin.
he may need to cooperate with a psychiatrist or a psychologist. A vocational counselor may be brought in if the speech problem is a handicap to employment. Other professional people with whom the speech pathologist and audiologist work are the public health nurse, the social worker, and the school teacher.

Dentistry

The dental professions likewise offer unlimited opportunities. The dentist and his staff are primarily concerned about the oral health condition of the public and assist individuals in preserving their teeth. The dentist is trained in the diagnosis and treatment of the oral cavity and associated parts. He is also trained in the restoration of defective or missing teeth and tissue, and very actively emphasizes prevention of dental problems.

Dentist

The modern dentist must be able to work with other people. He will often receive the assistance of a dental hygienist, a dental assistant and the dental laboratory technician. Virtually, no American Indians work in these fields yet.

As with medicine, the opportunities extend from private practice (most often selected) to research, teaching, public health education and/or administration. The training, aptitudes and skills required of this profession are similar to those of medicine, except, the dental profession necessarily requires exacting coordination of the eyes and hands.

The eight recognized specialties in dentistry are:
- Endodontics (root treatment).
- Oral Pathology (diseases of the mouth).
- Oral surgery (surgery of the mouth).
- Orthodontics (teeth straightening).
- Pedodontics (children's dentistry).
- Periodontics (treatment of the tissues or gums supporting the teeth and the underlying bone).
- Prosthodontics (making of artificial teeth or dentures).
- Public health dentistry (preventing and controlling dental diseases and promoting dental health through community efforts).

Whether the dentist selects private practice, an institutional position or public health service, he will find the investment in dentistry a good one.

Dental Hygienist

The dental hygienist provides dental services, dental health education, and nutritional counseling to patients. This is the only dental auxiliary occupation requiring a license.

Primarily, the hygienist provides oral hygiene services: cleaning and polishing teeth, providing diagnostic aids for the dentist, instructing in dental health education, and applying topical agents such as fluorides to the teeth.
The hygienist works under the supervision of a licensed dentist.

The majority of dental hygienists are employed in dental office practice; others are employed in public schools, State and local health clinics, hospitals, industry, and voluntary health agencies. The dentist in general practice or specialty practice depends on the hygienist to provide dental services and dental health education.

Dental Assistant

Today's busy dentist often needs one or more dental assistants. It is the assistant's job to greet patients, make them comfortable, and prepare them for examination, treatment, or surgery. She/he also sees to it that instruments are sterilized and ready for use, and assists the dentist while the patient is in the dental chair. In some offices, the assistant prepares solutions, mixes fillings and cement, and assists the dentist in taking and processing X-ray films. She/he also answers the telephone, makes appointments, orders supplies, handles business transactions, keeps patients records, sends out monthly statements, and maintains tax records.

Dental Laboratory Technician

It is the responsibility of the dental laboratory technician to make and repair such dental restorations as dentures, crowns, bridges, and inlays, under the direction, or according to the prescription, of a licensed dentist. This work requires the most painstaking craftsmanship.

The dental laboratory technician has become a specialist in his own right. His skills in the use of many instruments and techniques, together with his help in designing and developing new equipment and methods, enables him to complement the skills of the dentist in the same manner as the work of the pharmacist complements that of the physician, or the work of the optician that of the eye specialist.

Pharmacy

The pharmacist is a key member of the health services team. The skills of the pharmacist require his knowledge and understanding of the chemical composition and properties of all drugs, and how to prepare medicine. The field is rapidly expanding with great opportunity; as many as 75 percent of today's drugs were unknown only 10 years ago.

The area of pharmacy that an individual will choose depends upon his own personal goals, abilities, knowledge and personality. If he enjoys working with the public on a day-to-day basis, then retail pharmacy may be his choice; most pharmacy graduates practice in retail pharmacy and work in drug stores or supermarkets. In addition to meeting the public prescription needs and medical needs, the pharmacist's duties may extend beyond the pharmacy into government, drug abuse programs, and many other areas. With his frequent and close contact with the public, the pharmacist is often the first health professional to come in contact with a person seeking medical help. His concern with the research, development, control and distribution of drugs makes him a vital member of his community.

Unlike his retail counterpart, the hospital pharmacist is mainly
Veterinary Medicine

Veterinary medicine is an autonomous profession, with over 30,000 doctors of veterinary medicine in North America, having its own system of education, licensure, and organization. As the profession has advanced scientifically and its members have become more numerous, the affairs of veterinary medicine have become increasingly complex. Not only are veterinarians actively engaged in primary health care delivery (diagnosis, treatment, and control of diseases among animals), but they are also key members in the nation's medical, public health, research and military teams.

Demands for veterinary medical services continue to rise. A recent report estimates that North America will need 44,000 veterinarians, or almost half again today's number, by 1980. Yet there are only two Native American veterinarians.

Veterinary medical schools require a minimum of either two or three years of pre-veterinary college work. Students must then complete four years of professional study at an accredited college of veterinary medicine. Graduates receive a doctor of veterinary medicine (D.V.M.) or veterinary medical doctor (V.M.D.) degree, and must then pass a rigid licensing examination before they can practice in any specific state.

The curriculum at a veterinary medical school is in many respects similar to that offered in medical schools. In fact, in some of the basic courses such as bacteriology, immunology, histology, and others the material is virtually identical in all fields of medicine. Only in the advanced courses do medical concepts and applications begin to be more specifically confined to the various species of domestic animals.

The veterinary medical profession provides certain unique services and knowledge that are indispensable to America and not duplicated by any other health profession. Some examples are: animal models of disease (comparative medicine), environmental health, food animal production, public health, animal research, and companion animal care.

Because the veterinarian is the backbone of our livestock industry, he is one of the most needed health professionals of the Indian people today.

Osteopathy

The educational principles and professional practice of osteopathic medicine are based on a system of therapy developed by its founders toward the end of the 19th century. This system stresses the importance of body mechanics to the health of the person and emphasizes the use of manipulation to detect and correct faulty body structure. In dealing with illness and injury, osteopathic medicine makes major use of manipulative therapy, combining it with the use of drugs, operative surgery, physical therapy, and other methods, depending on the individual diagnosis.

There are seven colleges of osteopathic medicine accredited by the American Osteopathic Association. Their graduates receive the degree of doctor of osteopathy (D.O.). Minimum entrance requirements for all seven colleges are three years of pre-professional college work in an accredited
college or university. Though specific entrance requirements vary among the
colleges of osteopathic medicine, in general they require that the undergrad-
uate college (pre-professional) training should include chemistry, biology,
physics, and English. The colleges urge prospective students to begin these
subjects while they are still in high school.

Most members of the osteopathic medical profession are in private
practice. The potential advantages of working independently and of increasing
one’s income with years and experience should be weighed against
disadvantages such as long and unpredictable hours.

Podiatry

The podiatrist is a professionally trained footcare practitioner whose
services supplement the medical care provided by the physician. Within his
own field, the podiatrist is an active member of the health team. Since three
out of four people have foot troubles, a very important need in health services
is being filled by podiatry.

The podiatrist diagnoses and treats diseases and deformities of the feet, or
tries to prevent their occurrence. The problems he deals with range from a
simple corn to foot difficulties requiring special shoes or foot appliances. He
consults with other medical specialists concerning further medical treatment.

Podiatrists must be alert to a patient’s general health, too. Sometimes a
disease like diabetes or hardening of the arteries will produce symptoms in the
feet or legs. If the patient is not already under the care of a physician, the
podiatrist will urge him to get medical treatment promptly. In turn, people
with diseases that affect the feet may be sent by their physicians to a
podiatrist for auxiliary care.

PUBLIC HEALTH PROFESSIONS

The numerous public health professions are specialty careers developed to
emphasize particular needs of the public at large, or its distinctive groups, such
as Indian tribes. In nearly all instances, the public health professionals work
with representatives of the other health fields serving the important public
health needs. While the professionals do not directly deal in patient or
individual health care, they are concerned about common and genuine matters
inherent in the health condition of the public.

The public health professions commonly include hospital administration,
health education, environmental health, sanitation, epidemiology, and public
health administration.

The public health administrator is the administrator of organizations
engaged in the delivery of health care services on a local, state, or reservation
basis. His responsibilities include the direction of program planning and
development, fiscal management, personnel, and other executive functions.
Many other members of the public health professions serve at his direction.

Hospital Administrator

The hospital administrator is another public health official; he is the chief
executive responsible for the orderly function and operation of the entire hospital and its programs. He establishes procedures and provides the supportive services necessary to the professionals and patients using the hospital. The hospital administrator must be capable of executive leadership and well equipped with organizational skills. Those American Indians considering a health career and who have considerable skills at organization, but who do not prefer the field of medicine, would perhaps find this field most appropriate to their skills.

**Health Educator**

It is the function of the health educator to give people the facts about health and disease so they will act for their own well-being and that of their families.

The health educator tells people about the dangers of smoking so they will be persuaded to quit, the importance of regular health checkups so they will get them, the hazards of overweight so they will eat sensibly, and the importance of polio "shots" so they will get them.

The health educator may talk directly to the patient he hopes to influence. He also may work through a wide variety of intermediaries in the community — teachers, club leaders, health officers, public health nurses, trade-union program directors, Scout leaders, community group leaders, and others. Through these intermediaries he reaches a much larger audience than he would by himself. There is, however, another reason for working through them. These are "opinion molders"; they have a personal relationship with those being educated and are therefore likely to have a greater influence with them.

**Sanitarian**

The sanitarian's basic duty is interpretation and enforcement of tribal, city, State, Federal, or other laws regarding sanitary standards, in food, water supply, garbage disposal, sewage disposal, housing maintenance, and so on.

The sanitarian plays an important role in obtaining community action for better health through environmental health control. He is in a position, for example, to promote and help to secure such improvements as water supply extension, improved sewage disposal, safer recreational areas, and more hygienic conditions in nursing and convalescent homes. In addition, he must be alert to the host of new sanitary problems created as the population increases in his community. With his technical training and experience, the sanitarian is equipped to recognize and anticipate sanitation hazards. It is part of his responsibility to call these problems, and his recommendations, to the attention of government bodies, tribal leaders, civic groups, and the general public.

In many ways, the close relationship between the American Indian peoples and their environment would make these professional areas natural careers for some individuals. Understandably, many American Indians have found satisfying health careers in these professions.
responsible for meeting the drug needs of the patient during his stay in the hospital. Here the pharmacist has a wide range of responsibility, in-service teaching and drug consultation with other health professionals. The hospital pharmacist has the opportunity of working with the doctors on a more personal level, and provides a very important contribution to the hospital health team. Other areas that may be of interest are public health pharmacy, pharmaceutical research, manufacturing and marketing.

In many ways, the career of a pharmacist builds upon certain aspects of traditional Indian healing practices and the use of certain herbs. Those interested in these practices might find a career in pharmacy extremely exciting.

Nursing

Nursing is by far the health career selected by the largest number of people. The opportunities available to American Indians in this career are both considerable and varied, whether as an aide, an orderly, a Licensed Practical Nurse, a Registered Nurse or a specialist in an auxiliary area of advanced nursing.

In the hospital, the professional nurse will have overall responsibility for the patient's nursing needs as prescribed by the physician. This care may include the changing of linen, feeding, bathing, giving medication, and other direct patient-care activities. Other nurses may have responsibilities of supervision and in-service teaching. In private practice, nurses may also assist in the clinic or the physician's office with the preparation of patients for diagnosis, performing miscellaneous bookkeeping or business skills, and assisting the physician administer medications or dress wounds.

Other nursing fields include public health or field health nursing. Field health nurses go into the home, the school, and industry. Some industries and schools employ their own nursing staff to provide first aid treatment, conduct screening programs, and provide health education services.

The field of nursing also has its clinical specialties. For example:
- Family Nurse Practitioners provide "primary care" similar to that provided by a family doctor.
- Pediatric nurses specialize in caring for children.
- Obstetric nurses care for mothers and new babies.
- Psychiatric and mental health nurses care for mentally ill.
- Rehabilitation nurses care for patients with chronic and disabling conditions.
- Medical-surgical nurses care for patients before, during and after surgery, and in most types of illness.

Depending upon the nursing skills desired, the educational requirements beyond high school may range from one to six years. The R.N. programs normally require three or four years and the Baccalaureate program is strongly recommended. Some clinical specialists require considerable specialty training beyond the R.N. degree, in addition to some experience. Working conditions in nursing vary, but the career does not lend itself to standard business hours. Nursing must continue around the clock, and one's personal responsibilities will require careful arrangement to accommodate this important, although unusual, schedule.
Indeed, the public health careers, collectively, have witnessed a considerable American Indian enrollment during recent years. Considerable opportunity prevails and the need is unlimited. For those individuals anxious to work more with groups of people, this may be the appropriate health career. Some of the public health careers can be initiated with a college education. The master’s of public health (M.P.H.) degree, however, is strongly recommended and often required. The training is so important in these fields that one often finds doctors of medicine, dentistry and veterinary medicine returning to school to obtain the M.P.H.

SECTION B. PROFESSIONAL PRACTICE & HEALTH SERVICE AGENCIES

Whatever health field an individual selects for his professional career, as an American Indian he will experience considerable opportunity to practice his profession in a variety of distinct but alternate ways, through a variety of agencies, and in a host of different locations. To assist each individual develop most completely his own appropriate health career plans, it is important that these alternatives be described.

Private Practice

Many health professionals offer their specialty to the public through private practice. The doctor, for example, often has a private practice and serves most of his patients at that office or at a private clinic, which may be affiliated with a nearby hospital. In many instances, hospitals in this country are privately administered as well. This form of practice in some ways allows for the professional to provide his services in a manner most appropriate with his personality and style. Private practice necessarily involves the features of any business such as finance, purchasing, record keeping, etc.

Usually, the doctors are not salaried and frequently earn as much or as little as the practice in their office can produce. While the private practice of medicine, dentistry, and veterinary medicine is very common, this form of service has been generally absent from the reservation communities. American Indians considering a health career may wish to consider this mechanism for the practice of their profession.

Public Practice

This practice is well-known to much of Indian America, since the Public Health Service and the Indian Health Service operate in this manner. In these programs professionals are usually salaried, and their services are provided through a predetermined program. County programs, veteran’s hospitals, and state institutions are examples of this service. Although many people are not acquainted with private practice, a large number of health professionals work in this manner, and public agencies have numerous programs in the public health professions. Compared to private practice, public practice is perhaps more common to the members of the American Indian community.
Community Health Departments

As the official health agency for a particular city or county, the local health department is charged with protecting the community health through such measures as safeguarding the purity of food and water supply; promoting and providing innoculations for various diseases; controlling mosquitoes, vermin, rats, and other disease-carrying animals; controlling communicable diseases; controlling possible contamination or disease from sewage or air pollution; educating the public on disease control and health maintenance; providing maternal and child welfare clinics; providing some services for mental health and mental retardation.

In addition, the local health department acts as a connecting link, relating local public health activities to those of the State health department, and through the State, to the U.S. Public Health Service. Because its responsibility covers the entire community, the health department also serves as a center for health information and health education. It is the local outpost in a nationwide fact-gathering system through which health statistics are compiled. The department also has the responsibility for keeping the local population informed about new health developments and encouraging them to use new services.

Behind these services are a number of supportive services. One is the public health laboratory. Its activities include, for example, testing for the sources of communicable disease, traces of radiation, and causes of pollution in air, water, or food. In the larger health departments, the laboratories are also engaged in research.

In the local health department, many opportunities are open to physicians, dentists, nurses, veterinarians, sanitary engineers, statisticians, educators, nutritionists, and environmental aides.

Environmental Aide

The environmental aide assists professional personnel and technicians in carrying out prevention, control, and service programs. He performs routine tasks under supervision. The aide is usually a high school graduate and receives on-the-job training in various environmental protection activities. An estimated 101,000 aides were employed in 1970 in public water supply and waste water collection and treatment, industrial waste disposal, solid waste collection and disposal, community sanitation and rodent control activities, industrial safety, air pollution control, and recreational management.

School Health

School health covers a wide area. It is concerned with maintaining a safe and healthful school environment — in the classroom, laboratory, library, lunchroom, gymnasium, school grounds, and athletic field. It is concerned with preventing accidents and meeting health emergencies.

It takes responsibility for a variety of preventive and protective services
— from checking on requirements about immunization against certain communicable diseases to the administering of sight and hearing tests. It is constantly on the alert, through the teachers and the school nurse, for the first sign that an individual student may be getting sick. It also is responsible for health education.

Of the school health specialists, school nurses are the most familiar, but others would include school physicians, dietitians and nutritionists, school dentists and dental hygienists, psychologists, social workers, mental health specialists, and those who provide services for exceptional children. In the community at large, school health also has close cooperative relationships with all other health agencies as well as with parents' organizations and other community groups.

Frequently, the sponsor of school health programs is the school itself, whether public or private. Further information about these opportunities could be obtained from the school itself. This entire area is extremely underdeveloped throughout the American Indian community and will undoubtedly experience considerable growth in the near future.

Research

Many different organizations are involved in health research. Universities, especially those with strong programs in the health professions, are major health research centers. Such programs can draw upon all the university resources in the physical, biological, and social sciences as well as in medical and health practice. University teaching hospitals and other large hospitals are also involved. On public health problems, State health departments and some local health departments carry on a wide range of projects.

The major Federal agency for health research is the Public Health Service, operating mainly through the National Institutes of Health. In 1971 the United States spent $3 billion for medical research, of which two-thirds came from the Federal Government.

Rehabilitation

The purpose of rehabilitation is to help people disabled by illness or accident to make a place for themselves as useful workers, family members, and citizens. Accomplishing this requires a wide assortment of services. Medical care is needed to overcome or to compensate for the disability; training to prepare the individual for a suitable occupation, and guidance to help him get established in a job and keep it.

Providing the right combination of services is often a complicated task. The problems involved in rehabilitation have to do with every kind of disability — crippling diseases and accidents, disabling chronic conditions, like tuberculosis or heart disease, loss or limitation of sight, speech, and hearing, or mental illness.

Members of the rehabilitation team include the physician, vocational
rehabilitation counselors, occupational therapists, nurses, physical therapists, orthotists and prosthetists, psychologists, social workers, speech pathologists, and audiologists. Also, consultation to disabled homemakers or specialized therapy is offered by corrective therapists, educational therapists, manual arts therapists, music therapists, and recreational therapists. These highly skilled members of the health service team assist in the treatment of numerous disorders through such therapeutic techniques as exercise, massage, application of heat, light and water or use of mechanical and scientific devices.

**Occupational Therapist**

When the patient is referred by the physician, the therapist makes an evaluation to determine the current level of functioning and to learn more about the patient as a person — his likes and dislikes, hopes and fears, experiences and expectations. After making the evaluation, the therapist can decide which activity would appeal to the patient and have most value for him. The extent and speed of progress is very much dependent on the therapist's professional judgment.

Incapacitated people often resist help because of resentment about their disability and for other psychological reasons. This calls for insight and understanding.

Many factors enter into the decision as to the type of therapy used: the nature of the patient's disability, the patient's physical and emotional condition, temperament, short-term and long-term goals of the therapy, and so forth.

The kinds of challenges presented are illustrated by the following examples:

Would learning to type help develop hand coordination for the injured airplane mechanic? Once the therapist has gained his interest, he responds eagerly, and the use of a practical skill helps him improve and return to work earlier.

Would weaving be the most beneficial activity for the woman with arthritic fingers? If this would help her to achieve a sense of progress in the doing and at the same time benefit her therapeutically, the answer would be “yes.”

**Orthotist and Prosthetist**

The prosthetist and orthotist work closely with the physician, surgeon, and therapist to provide total rehabilitation services for the disabled. The prosthetist makes and fits artificial limbs, while the orthotist makes and fits orthopedic braces to support weakened body parts or to correct physical defects, such as spinal malformations. Both work from the physician's prescription, to make devices giving the patient maximum comfort and function. Their work begins after consultation with the patient and with careful and accurate measurements. With this information, they design a device that will meet the individual needs of the patient, constructing it from various materials such as plastic, leather, wood, steel, and aluminum.
Physical Therapist

The physical therapist is a professionally trained member of the health team, including physicians, nurses, and other specialists. His job is to help patients overcome their disability through therapeutic exercise, massage, and the use of heat and cold. To carry out his tasks, he must have detailed knowledge of human anatomy and physiology and know what steps may be taken to correct disease and injury.

Physical Therapist Assistant

The physical therapist assistant is a skilled technical health worker who assists the physical therapist in patient treatment programs and in other activities necessary to the operation of a physical therapy service. He must graduate from a 2-year college with an associate degree in physical therapy.

At the moment, eight States have amended their physical therapy practice acts to include physical therapist assistants.

Medical Social Worker

In working closely with physicians, therapists, nurses and other specialists, medical and psychiatric social workers concentrate their efforts at solving all types of personal or family problems associated with illness, thus paving the way for early recovery and maximum rehabilitation. Gathering and interpreting pertinent information about the individual patient's social situation and his pattern of adjustment is the job of the medical social worker. This information guides the physician in his understanding and treatment of the illness.

The medical social worker is skilled in helping a patient and his family handle personal problems that result from severe or long illness or disability. The problem is usually social, emotional, or financial — or all three. But, whatever its nature, it can be severe enough to retard recovery and prolong convalescence. The patient who makes the best response to medical treatment is usually the one who is easiest in his mind. Thus the services of the medical social worker are an integral part of the patient's total treatment.

"I'll lose my job now that this bad heart means I can't carry heavy loads anymore," says one patient. The medical social worker can help him select a job which is satisfactory to him and which the physician agrees will not be overtaxing.

"I can't sleep for worrying about where the children can live," says a hospitalized mother. Again this is a problem for the medical social worker who knows the family circumstances.

Clinical Psychologist

This is the name used to identify the psychologist who works in the hospital, clinic, or similar medical setting. He assists in the diagnosis and
treatment of individuals with mental and emotional problems and illnesses. He
designs and conducts research either alone or in conjunction with physicians or
other social scientists. Though the emphasis may differ a good deal from one
position to another, all clinical psychologists have this in common — they apply
their scientific knowledge of human behavior to the care and treatment of the
handicapped and the disturbed. Their purpose is to help the individual who is
maladjusted or a misfit to learn new and better habits of behavior, so that he
can find a more satisfactory way of living.

**Mental Health**

Psychiatry, psychiatric nursing, psychiatric social work, and psychology
are the mental health professional fields which deal with personality problems
and behavioral disorders, especially those involving the emotions. Occupa-
tional therapists and psychiatric aides round out the team for treatment, care,
and research to find out what promotes mental health or causes mental illness.

Generally speaking, most mental health services are provided under the
auspices of some established program, often by various private and public
health service agencies, although there are some examples of private
programs.

**Psychiatric Social Worker**

The psychiatric social worker helps people who are mentally or
emotionally disturbed. He/she works as a member of the mental health team
along with the psychiatrist, the psychiatric nurse, and the psychologist.

When the patient enters the mental hospital or mental health clinic, the
psychiatrist needs to know all about him — his family background the
relationships, his early life, his education, work experience, and social
interests. She/he also needs information on the patient's immediate symptoms
and the events leading to his breakdown. This is where the psychiatric social
worker comes in. Frequently, he/she is the first staff member, except for the
receptionist, to see the patient.

**Hospitals**

Many health professionals work in hospitals. Some hospitals, like the small
rural community hospitals, are nonfederal, short-term, general hospitals, of
which there are nearly 6,000 throughout the United States at the present time.
On the other hand, some hospitals have become complex medical centers, very
strategic in the delivery of quality care to a large community. Larger hospitals
today are very sophisticated and highly departmentalized institutions, whose
concern is not only with the primary task of providing medical care to
individuals, but also with a concern for the training and education of health
professionals, the development of medical research projects, and providing
leadership throughout the community in areas of the various public health interests. Because hospitals play a very major role in the provision of health care, they are one of the nation's largest employers.

Some hospitals or health care treatment facilities are designed for the special needs of patients and treat only patients of those particular conditions such as TB or mental illness. Others are organized to accept patients only of certain ages, such as children's hospitals. Nevertheless, the hospital is only one of numerous institutions, organizations and agencies which sponsor opportunities for the practice of various health professions.

**HOSPITAL CAREERS**

**Diagnostic X-Ray Technologist**

The diagnostic X-ray technologist operates X-ray equipment to make radiographs (on X-ray film) of various parts of the body. These are used by the physician in determining the extent of the patient's illness or injury.

**Nuclear Medicine Technologist**

The nuclear medicine technologist operates radioscopic equipment, such as scintillation detectors and scanners, to produce scanograms and measure concentrations of radioactive isotopes in specified body areas and body products. Radioactive isotopes are administered to the patient by the physician and show up on the scanograms, enabling the physician to make diagnosis and determine treatment.

**Radiation Therapy Technologist**

The radiation therapy technologist operates X-ray therapy machines and may prepare, administer, and measure radioactive isotopes as specified by the radiologist.

**Inhalation Therapist**

The inhalation therapist sets up and operates various types of therapeutic gas and mist inhalation equipment, such as respirators, tents, masks, catheters, cannulas, and incubators. He administers through these devices prescribed doses of medicinal gases and aerosolized drugs to hospitalized patients.

The inhalation therapist receives from the physician a prescription specifying the type of therapy, the type of medication, and the dosage. He must then determine the most suitable method of administering the inhalant, the precautions to be observed, and the modifications that may need to be made in the method in order to comply with the physician's exact requirements.

**Medical Assistant**

The medical assistant is the doctor's "factotum," his "do everything." She combines in one person the role of secretary, receptionist, administrative aide,
clinical aide, and countless other functions. She is the link between the
physician and his patients, his professional associates, and his suppliers of
equipment and medication.

Most medical assistants work in the office of physicians in private
practice. Some work in group practice offices or medical clinics. The remainder
are employed in larger institutions, such as hospitals and research
laboratories.

NEW AND EMERGING HEALTH OCCUPATIONS

Many "new" health occupations have emerged in the past few years. Some
are already well established. Others are still taking shape, with job
specifications, educational requirements, and training programs still to be
worked out.

The term "new" is apt to be misleading. It may cover entirely new
occupations such as "extracorporeal circulation specialist," or it may cover the
offshoots of an existing occupation, as, for example, "physician's assistant." Sometimes it is difficult to draw a sharp line between "new" and "expanding,"
as in the case of "medical technologist" and "nuclear medical technologist."

Whatever the definition, there is no doubt that new occupational titles,
new training programs in schools and hospitals, and new educational
requirements all reflect the tremendous growth and activity in the health field,
and bring with them increased opportunities for a rewarding, secure, and
expanding career in the health field.

Most of these new occupations are at the "aide," "assistant," and
"technician" level — the allied health level, which represents some 85 percent
of all health workers. The supportive health training programs are being
offered mainly in junior colleges, community colleges, and vocational and
technical schools, hospitals, health departments, and so forth. Others, at
professional level, are given at colleges, universities, specialized schools, and
others. Following is a list of some of the new or emerging health occupations
that appear again and again in lists of education and training programs, of
hospital personnel, of Federal, State, and local health department employees,
etc.:

Allergy Environmentalist
Ambulance Emergency Technician
Biomedical Engineering Technician
Cardiovascular Technician
Child Health Associate
Computer Operator in Health Data
Dialysis Assistant
Dietetic Technician
Emergency Health Service Worker
Environmental Engineer/Scientist
Extracorporeal Circulation Specialist

Genetic Assistant
Geriatric Assistant
Intravenous Technician
Mental Health Worker
Nuclear Medicine Technician
Orthopedic Assistant
Physician's Assistant
Podiatric Assistant
Radiopharmacist
Social Rehabilitation Service Worker
Surgical Aide
PART III.

PREPARING FOR THE HEALTH PROFESSIONS

Preparation for the health careers requires considerable planning, care and time. For those Indian students inclined to advance planning, the preparation for the health career should come with considerable ease. For the remainder, however, this preparation must be carefully developed and must include high school and college plans, admissions preparation and financial planning. The results far exceed the effort, because a well-planned career will yield considerable pleasure, satisfaction and service. If possible, the ambition of a health career will become part of one's everyday thinking throughout the high school years.

INTERESTED IN A HEALTH CAREER?

Consider a career in health, and work with and for the Indian people! The following are career possibilities open to you in health fields:

**Requiring College Degree or College Level Training**

- Clinical Social Worker
- Dentist
- Environmental Engineer
- Health Administrator
- Hospital Administrator
- Family Nurse Practitioner
- Nutritionist
- Optometrist
- Physician
- Dietician
- Health Educator
- Podiatrist
- Mental Health Worker
- Physician Assistant
- Sanitary Engineer
- Speech & Hearing Therapist
- Pathologist
- Medical Technologist
- Veterinarian
- ... and MANY others

**No College Degree Needed**

- Ambulance Attendant
- Community Health Aide
- Dental Hygienist
- Dental Assistant
- Dental Technician
- Emergency Medical Technician
- Environmental Health Technician
- Health Education Aide
- Health Information Specialist
- Inhalation Therapy Technician
- Medical Laboratory Technician
- Occupational Therapist
- Medical Assistant
- Licensed Vocational Nurse
- Licensed Practical Nurse
- Psychiatric Aide
- First Aid Specialist
- Family Planning Counselor
- Medical Record Technician
- Para-Medic
- Cytotechnologist
- ... and MANY others
Many of the previously mentioned "No College Degree Needed" jobs require only completion of high school, as they have special on-the-job training and vocational school training available. For the most part, these health careers require one month to two years of school for their particular programs, however, they differ from regular college programs in that: (1) the training is specific to the career desired, such as first aide training for Emergency Medical Technicians, and (2) the skills or knowledge required for the job are often acquired through "on-the-job" training as a regular part of the schooling offered.

SECTION A. SECONDARY SCHOOL PREPARATION

Whether in junior or senior high school, the American Indian student who believes he wants to become a health professional should seek assistance in planning his high school studies. This will permit his fullest development for the college and graduate health programs which lie ahead. Often, the student can obtain this assistance from his advisor or favorite teacher. Generally, his curriculum will emphasize the basic sciences and other courses normally recommended for students planning to enter college.

High school courses normally helpful in the preparation of a health career include English, Physics, Biology, Chemistry, Advanced Mathematics, Social Studies, and a modern foreign language. Most schools offer these courses. If, however, an Indian student learns that his school cannot offer these subjects, he should immediately discuss this with his advisor, his parents, and his community leaders. Every college-bound student may wish to supplement his basic program with various other courses such as speech, typing or business, which will be extremely helpful in any health career.

In addition to one's classwork, the prospective health professional is strongly encouraged to participate in available curricular activities, including science clubs, future physician clubs, Candy Stripers, medical explorer posts, etc. These clubs permit even closer acquaintance with the health professions. Often working with community health professionals, the students learn more about the real work of these people and their profession. If there are no clubs like this in one's school, the interested student may wish to discuss the organization of one with his advisor. More information about such clubs is available from the following organizations:

American Medical Association
535 North Dearborn
Chicago, Illinois 60610

American Academy of Family Physicians
Volkv Boulevard at Brookside
Kansas City, Missouri 64112

HINTS TO HIGH SCHOOL STUDENTS

If You Have Not Yet Decided Your Career . . .

BEGIN NOW TO THINK ABOUT YOUR VOCATIONAL FUTURE. Consider what kind of work you might like to do after completing high school. Examine your likes and dislikes, your general abilities, school subjects in which you do well, special hobbies, or other interests you may have. Make a list: write down these special activities and interests. This may help you to narrow your selection. (Your guidance counselor or the AIPC Health Careers Recruitment Project may already have this information.)

DISCUSS YOUR THOUGHTS AND IDEAS WITH YOUR GUIDANCE COUNSELOR OR THE AIPC HEALTH CAREERS RECRUITMENT COUNSELOR. Although you must do much of the exploratory work yourself and make your own decisions, others can help you. Your guidance counselor is one of these persons. He/she would be of great assistance in counseling as well as providing direction now and after you have decided upon your future goal.

USE YOUR SCHOOL AND COMMUNITY LIBRARIES. Ask your librarian to help you find books, journals, periodicals and other literature which describe and explain the various jobs, occupations, necessary preparation, and related aspects. Some of the references listed in the rest of this handbook should be available. If not, write for the free materials yourself. Build your own miniature library.

TALK WITH VARIOUS PERSONS WHO MAY BE ABLE TO HELP YOU. Parents, friends, teachers, community leaders, educators, students, PHS staff, tribal leaders, library workers, businessmen, college graduates, clergymen, workers, and others may have valuable information and advice to offer. For example, if you think you might like to work as a dental hygienist you should talk to the dentist as well as the hygienist. Both can tell you much. They can also lead you to helpful books and pamphlets.

MAKE YOUR DECISION ABOUT YOUR FUTURE WORK. After you have obtained the information, reviewed it carefully, and considered all aspects, try to "match" your abilities and desires with a position or vocation. For example, if you are interested in health and human anatomy, like to associate with people, and have a desire to help them, you may want to investigate opportunities in nursing. Talk to your school nurse, the community nurse, or someone who can tell you all about nursing.

DISCUSS YOUR CHOICE WITH YOUR GUIDANCE COUNSELOR. He/she should be able to advise and assist you, perhaps provide some tests which reflect your interests and aptitude. He/she might also arrange for you to discuss your future plans with several individuals working in that particular field.

If You Already Have Decided On Your Occupation . . .

SELECT THE SCHOOL OR COLLEGE YOU DESIRE TO ATTEND. The objective here is to select the school which is best for you and your plans. This may be made easier by combining various approaches — it is possible, by visiting the institution to gain the "feel" of it; talking with the Dean of

23

29
Admissions, faculty members, and students; touring the grounds; reviewing pertinent literature and catalogues; discussing this matter with our counselor and teachers to mention a few. If you cannot visit the institution, collect as much information as possible — from libraries, the school, professors, or the AIPC Health Careers Recruitment Project.

AFTER YOU HAVE DECIDED ON YOUR CHOICE OF A SCHOOL, APPLY FOR ADMISSION. You can find out the best time to apply and related procedures from the college Dean. Be certain that all forms are properly completed and submitted at an early date.

FOLLOW-UP. If you do not receive an answer to your letter of application within a reasonable time, follow-up with an appropriate inquiry. The technical school college, or university usually provides the necessary procedures (with a corresponding timetable) for admission, registration, and the like.

SECTION B. COLLEGE LEVEL TRAINING & PREPARATION

For many American Indian students considering a health career a college experience may not be needed if their health career training program does not require college. Some health occupations require only one, two or three years of special training beyond high school. Junior colleges and schools of nursing, for example, offer some of these programs.

The Indian Health Service also offers training in numerous health career areas: Community health representative (CHR), community health medic (CHM), dental assistant, licensed practical nursing, laboratory assistant, and medical records technician’s training are a few. More information about these program areas can be obtained by writing to the nearest IHS area director’s office.

For those students who seek a health career requiring the completion of a college education (as many health careers do), considerable care and commitment must accompany the numerous decisions which must be made, such as: the nature of the college experience, the requirements for the career, the choice of the college, and the curriculum.

Choosing A College Or University

The most difficult decision may be choosing the right college or university. The decision should be made in the early part of the senior year in high school. In reaching this decision, the student needs to carefully weigh numerous factors, including tuition, size, location and quality or type of instruction. Nevertheless, the college selected by the American Indian health careers student should be accredited and able to provide a strong foundation in the natural sciences, social sciences, humanities and communications skills.

Admission application forms are obtained by writing to the Office of Admissions. If the address of a college is unknown, the request will be properly delivered if the name of the college, the city and the state are correctly posted.
on the envelope. The Office of Admissions will normally respond within six weeks and will supply a form to be used in the application for admission. When compared with information obtained about other schools, the choices and the decision often become easier. Following the receipt of these bulletins and admissions application materials, the student should plan to apply to the college or colleges of his choice no later than December 31 for admission into the autumn term of the following school year. Because space is limited and many students will not be admitted, the Indian health career student may wish to apply for admission to as many as two or three colleges, just in case he is not accepted into the institution of his or her first choice.

APPLYING FOR ADMISSION

An application can be requested by letter or phone; you should mention which program you wish to enter, as there may be special forms or information. At this initial contact, information should also be obtained regarding the deadlines for any letters of recommendation, transcripts, required interviews and tests. This is also a good time to request an application for financial aid if it is needed.

Application Form: Read the application form thoroughly before supplying the information. You should complete it neatly and legibly, or type it if possible. All experience which is relevant to the instructional program such as employment or volunteer work should be included. Be sure to list any of your hobbies or activities which might indicate strengths desirable to the program, such as leadership skills, manual dexterity or creativity.

Transcripts: These will be required from any high schools or colleges you have attended. Request that the transcripts be sent to the programs to which you are applying, and after a reasonable time, check to see that they have arrived.

Letters of Recommendation: These should be requested from people who know you reasonably well, such as an employer, a teacher or a counselor. Those writing letters of recommendation should know your goals, plans, and reasons for wanting to attend a particular school. Be sure to check with the Admissions Office after a reasonable time to see if the letters of recommendation have been received.

Aptitude Tests: Tests such as the Scholastic Aptitude Test or the American College Test are often required for admission to a school. The Admissions Office can tell you which tests are required and when they must be taken. High school and community college counselors have the forms necessary for registering for the tests. There are a number of books designed to help people improve their scores on these tests; they are usually available from libraries or bookstores, and you may find them helpful in preparing for your tests. Approximately six weeks after you have taken the test, check with the Admissions Office to insure that your scores have arrived.

Interviews: Although not all instructional programs require interviews, many recommend them. The impression you give in an interview will be an important factor when an admissions committee considers your application.
Before going to the interview, it is important that you think seriously about your goals and how you can achieve them. An interviewer values your ability to express some positive direction for your life.

You should consider the interview as a good opportunity for you to learn more about the instructional program and the requirements for admission. If you learn as much as possible about the program before your interview, this will give you more confidence both in asking questions and in answering them. It is good to be composed and positive about yourself without being overly confident. If you act naturally, are prompt, neat and clean, an interviewer will receive a favorable first impression. After the interview a short note to the interviewer restating your interest in the program is appropriate.

NOTE: Not all schools offer training in all health professions. Check with the AIPC Health Careers Recruitment Project, your high school counselor, high school and university libraries, or by writing the school directly.
SECTION C. ADMISSION INTO THE HEALTH PROFESSIONS SCHOOLS

For the American Indian student seeking the professional health degree, he must continue his education beyond the college level to the level prescribed by the professional school and degree of his preference. Thus, the Indian student seeking to become a physician must become admitted into medical school. Similar advice and procedures apply for other professional disciplines as well. Contrary to rumor or unfounded fears, it is not difficult for a well-qualified American Indian student to gain admission into the professional schools. The college student who is prepared, dedicated and hardworking toward his career will receive favorable consideration by the professional school and the American Indian who meets these same qualifications should expect no serious difficulty gaining admission.

Some schools admittedly have different requirements than others. Some meet their capacity sooner than expected; and some may not be inclined to encourage Indian students as much as others. The student should inquire how many Indian students are enrolled, how much financial assistance is available to Indian students, and what special program the institution provides for Indian students. If the student is unable to determine the experience and interest of the school in dealing with Indian students, he should not hesitate to inquire of the Association of American Indian Physicians or the Association of American Medical Colleges. It is clearly an advantage for some Indian students to attend schools where they will have Indian classmates.

Whatever his choice, each student must realize that his acceptance into the graduate program represents the expectation of the institution that the student will both graduate and become a successful health professional. Likewise, the student should expect that he will successfully graduate from the program and uphold his career responsibilities. The American Indian student planning for his graduate training should apply to the professional school of his choice approximately one year prior to the term for which he intends to enroll. It is also considered valuable to apply to different schools. At the present time, for example, medical students on the average apply to four medical schools each.

Undergraduate Grades

To qualify academically for medical school, the undergraduate student should maintain a good scholastic record. But that does not mean he has to be an "A" student. The vast majority of the freshmen medical students in each of the past five years were "B" students.

Medical school admissions committees are aware that an "A" mark may be more easily obtained in one college than in another. They use scholastic achievement as only one—though an important—yardstick in measuring an applicant's capacity for the study of medicine. When other factors are equal, the student with higher grades clearly has the best chance for acceptance. A recent survey of medical schools showed that the majority prefer to consider only students with grade averages no lower than B-minus.

The admissions committees are equally concerned with the important
personal factors of character, self-reliance, initiative, motivation, perseverance, depth of purpose, breadth of interests and other traits which may not be reflected in grade averages. These personal characteristics are evaluated during interviews and through reports from undergraduate colleges, application forms and autobiographical sketches.

The Medical College Admission Test (MCAT)

Another preparatory step toward gaining entry into medical school is to take the Medical College Admission Test. This test is required for future doctors only. The medical school candidate usually takes the examination during his second or third year in undergraduate college, preferably in the spring of the year before he plans to enter medical school. Given twice annually, the nationally standardized examination is conducted under the auspices of the Association of American Medical Colleges and is required or strongly recommended by nearly all U.S. medical schools. The student should consult with his college counselor or faculty advisor to determine when it is best for him to take the test.

An announcement booklet that contains an application blank and gives information concerning application deadlines, test dates, testing locations and sample questions is prepared annually. It is available through most pre-medical advisory offices and medical school admissions offices. A copy also may be obtained by writing Medical College Admission Test, The Psychological Corporation, 304 East 45th Street, New York, New York 10017.

A student who is well-versed in the liberal arts and sciences should encounter little difficulty with the examination. Consisting of four subtests, it serves to objectively measure scholastic aptitude and achievement. The subtest on Verbal Ability measures knowledge of vocabulary. The Quantitative Ability subtest requires the application of basic mathematical principles. These two subtests measure one’s overall scholastic aptitude.

The science subtest samples the candidate’s store of scientific information and principles found to be important in preparing for the study of medicine. One’s score indicates how much knowledge he has acquired in basic courses in physics, chemistry and biology and how well he is able to apply it. A fourth subtest, General Information, measures overall cultural knowledge, including the social and behavioral sciences.

Scores made on the MCAT do not in themselves determine whether an applicant is admitted to medical school. They simply provide admissions committees with additional important information on the student’s academic capabilities for the study of medicine and permit more thorough interpretation of his college academic record. This makes possible a more accurate prediction of a student’s ability to complete the medical curriculum.

The Admissions Committee

Nearly all health professional schools have established admissions committees composed of faculty members and occasionally students to consider the acceptability of applicants by reviewing all information required by the institution. Normally, these materials include college academic records,
MCAT scores (or comparable graduate health professional examination scores), faculty evaluations and the personal interviews. The American Indian student may find these requirements exhaustive or costly. If he requires further assistance to complete these requirements, he should inquire at the Office of Minority Affairs for the Association of American Indian Physicians' offices or the Health Careers Recruitment Project of the All Indian Pueblo Council. The expense of examination fees, transcript referrals and travel to interviews should not prohibit or obstruct admissions procedures for those who may be in need of special financial assistance.

Admission into the professional schools may be the first time an interview is required of the Indian student. If so, the student should not be apprehensive; the interview is a means whereby the school and the student simply get to know more about each other. The school is afforded the opportunity to clarify information about itself or the student, while the student is offered the same. The interview especially permits the student the opportunity to explain any unique or special aspects of his application. This special information is very helpful to an admissions committee during the process of screening numerous applicants.

SECTION D. SPECIAL INDIAN PROGRAMS

Fortunately, there are many special programs for American Indian students considering or deciding upon a health career. The success of these programs indicates they serve very important functions. For many Indian health professions, the greatest development of their career decision occurred through their participation in these special programs. Indeed, for many American Indian students these special programs have finalized or rapidly advanced their commitment and decision to a health career.

In some instances, the program is designed to identify and to stimulate potential Indian health professionals. Other programs have a primary purpose of introducing the prospective student to the daily experience of the practicing health professional. Still, other programs assist students through concentrated studies of remedial or advanced nature depending upon their level of need. Among the various programs, some are available to students as the seventh grade in high school, while others may only be available to Indians already accepted into medical school. At the present time virtually all programs can provide financial assistance to students accepted into the program who need such support.

Students who might enjoy or need these special programs should inquire and obtain further information by writing the organizations listed below:

Rosebud, South Dakota

SECTION E. FINANCIAL PLANNING

The study of medicine or the health career of one’s choice is an expensive undertaking; in many ways it will be viewed as particularly expensive for American Indian students. Yet, with careful long-range planning, commitment and resolve these health education costs can be met from the resources available to each student. The financial plan appropriate to each student’s needs will, of course, vary from individual to individual. For some, the resources of the family, the tribe and summer employment may be sufficient. Yet, for others, grants, fellowships, awards and scholarships may be utilized. Whatever the plan, it must be carefully and fully developed, taking into consideration the length of the educational program, the degree requirements, the capacity of the student, the financial resources of his family, how much money a person will earn after graduating, and the scholarship abilities of the student. Such planning is of great importance.

Unlike the high schools from which most American Indians graduate, colleges and other institutions of higher learning charge fees and assess costs to each student for his educational program. The relationship established and agreed upon between the school and the student is of a contractual nature, based upon the mutual choices of the student and the school according to established rules and provisions. The rules, fees, and costs are normally described in a bulletin regularly distributed by each school, and each student is billed for his expenses before classes start. When he registered for his classes, the student will complete his financial arrangements with the school. This arrangement usually involves a debt by the student, but it is treated no differently than any other debt.
Fees & Costs

The cost of college and graduate health education is expensive and continues to increase each year. These costs also vary from institution to institution, from state to state, and from curriculum to curriculum. To complete four years of medical school beyond college, the average costs presently range from about $9,000 to $15,000. Tuition alone may range from $220 to $4,200, depending upon residency or the type of school selected (public versus private). While the costs of education to the doctorate health careers in administration, medicine, dentistry, veterinary medicine, podiatry and others are comparable, alternate care choices such as nursing, nutrition, health education, or technical jobs are less costly.

At the undergraduate level, the fees and costs of one's education would normally include the following components:

- Tuition
- Board and Room
- Books
- Health Insurance
- Student Activities
- Science Lab Materials
- Lab Equipment Rentals
- (e.g., microscope)
- Travel (to and from home)
- Personal Expenses

Prior to entering the college the student may encounter the first expenses of his health career education. Such expenses may include institution application fees, which accompany an application for admission and which are usually not refundable, and fees for admission to college entrance examinations, often required by some colleges.

Graduate health education costs are also considerable and vary with the level of education and the type of institution. Thus, for example, students in health administration programs at the graduate level may not have to pay laboratory fees and microscope rental costs. On the other hand, students of medicine may not experience the costs of preparing a thesis. On the whole, the costs and fees for the graduate level programs include those same components listed above. In addition, they may include comparable expenses incurred during the process of obtaining admission into the graduate programs, which may include travel expenses for the purposes of interview.
ESTIMATED MINIMUM EXPENSES FOR FIRST-YEAR STUDENTS AT U.S. MEDICAL SCHOOLS (1975-76)*

As an example, the cost ranges revealed by a recent study by the Association of American Medical Colleges pertinent to costs for the study of medicine reveal the following:

<table>
<thead>
<tr>
<th>FIRST-YEAR EXPENSE ITEM</th>

*FIGURES BASED ON DATA PROVIDED FALL 1973 BY 45 PRIVATE SCHOOLS AND 69 PUBLIC SCHOOLS.

**FOUR PRIVATE SCHOOLS BAYLOR, MAYO, PITTSBURGH, AND RUSH REPORT LOWER TUITION FEES FOR RESIDENTS THAN FOR NONRESIDENTS. THE HIGHER FEES FOR THESE SCHOOLS ARE USED IN THE TABLE.

THE FIGURES DO NOT INCLUDE PERSONAL LIVING EXPENSES, WHICH VARY CONSIDERABLY DEPENDING UPON THE LIFESTYLE OF THE STUDENT AND THE ECONOMY OF THE SCHOOL LOCATION. ALSO, LIVING EXPENSES ARE HIGHER FOR MARRIED STUDENTS AND HIGHER YET FOR COUPLES WITH CHILDREN. NOTWITHSTANDING, EACH STUDENT WILL HAVE SOME BASIC LIVING EXPENSES WHATEVER CAREER HE CHOOSES AND WHETHER HE ATTENDS COLLEGE OR NOT.

Financial Aids

Beyond the financial resources available from the family, former employment and part-time employment during school, many students will require additional money to complete their financial arrangements for school. The basic additional sources of these aids are grants and loans.
Grants available for health education expenses are often scholarships, fellowships or other grants-in-aid. In some instances, these grants are given as awards in recognition of student talents. Sometimes these awards are sufficient to cover the costs of an entire four-year program. In other instances, the grants may cover only a portion of the total costs. In the case of such awards, the student must become informed about his possibility of receiving such an award and what requirements he must meet to enter the competition, should he desire. Awards of this nature are sometimes given at rodeo contests, beauty contests, citizenship contests, talent shows and other local contests. Groups such as the local Kiwanis Club, University of Women's Association, Home Extension Services etc., frequently make such awards.

By far the largest group of such grants, however, are the scholarships frequently awarded by the educational institutions themselves or the tribe. Occasionally, local service groups, corporations, state agencies or other special efforts provide scholarship grants. Scholarships are sometimes made in the memory of an individual prominent in the health fields. Sometimes they are named by their sponsor or describe the educational program of the institution. However named, they are offered for a given period of time and are frequently renewable. Such renewal, however, usually requires continued quality performance and the enrollment of the student. This requirement and other requirements usually accompany the offer of a scholarship. If the scholarship is accepted, the student often agrees that he will maintain a specified grade point average and full-time enrollment.

Because scholarship funds are limited and so many students seek this form of assistance, the scholarship offices are often very strict in requiring compliance with the minimal requirements of the grant. If a student is believed to be disinterested or performing poorly, his assistance may be revoked or he may not qualify for renewal. Consequently, because these financial aids are so important, because their availability is limited, and because the scholarship offices of the institutions and the tribes consider the requirements very strictly, it is important that all Indian students realize the serious nature of these commitments.

Another form of grant assistance is the fellowship, usually awarded in the various graduate programs. Fellowships are similar to the scholarships. However, they frequently provide the student with the opportunity to assist in teaching, research, laboratory work or independent study. The assignment of these opportunities is usually an established aspect of the fellowship.

Yet another form of grant assistance, somewhat like the fellowship, is a stipend to support an individual in exchange for his agreement to work for the sponsoring institution following his graduation. Sometimes, these grants are offered as contracts and sometimes they are offered as loans with a forgiveness clause. The Indian Health Service and the Public Health Service, for example, have financial assistance available to support the education of American Indians in health careers, provided they return to the employment of the Indian Health Service for a specified period of time following graduation. For those who plan a health career with the Indian Health Service or who plan a career including IHS training, this opportunity is in many ways a good one.

A comparable opportunity, although somewhat the reverse of the Indian Health Service program, is available to military veterans as a benefit of the "GI Bill." These programs provide financial assistance to veterans.
ALL INDIAN PUEBLO COUNCIL
SCHOLARSHIP PROGRAM

INSTRUCTIONS TO APPLICANTS AND GENERAL INFORMATION
ABOUT THE EDUCATIONAL COLLEGE GRANT PROGRAM:

HOW TO APPLY

Each applicant for an AIPC Scholarship Grant shall request an application
from and submit all application papers to:

All Indian Pueblo Council Scholarship Program
P.O. Box 6507 (1015 Indian School Road, NW)
Albuquerque, New Mexico 87107

A. Please submit the following:

1. Application: Answer all questions applicable to you. Incomplete
   applications will only delay action on your request for funds.
2. Transcript: Have an official transcript of your high school credits sent
   to the address above.
3. American College Test (ACT) Scores: If you have not taken this test,
   you must make arrangements for it with your high school counselor or
   the college to be attended.
4. College Admission: Letter of admission from the college or university
   you plan to attend. (Your scholarship application DOES NOT
   automatically serve as your application for college admission.)
5. Recommendations: Two letters of recommendation. (No relatives)
6. Certificate of Indian Blood: This certificate of Indian blood can be
   obtained at the Census Office at the agency where you are registered.
   (Northern or Southern Pueblos Agency.)

B. Apply for Other Financial Aid:

All new applicants must apply to the university or college you plan to
attend for the financial aid they offer. You can obtain application forms from
the college's Office of Financial Aid. For example: Basic Educational
Opportunity Grant, Supplemental Educational Opportunity Grant, etc.

Nature of Grant Program

The All Indian Pueblo Council has contracted with the Bureau of Indian
Affairs to administer the Scholarship Grant Program. Funds are appropriated
by Congress to aid qualified Pueblo Indian students enrolled at the Southern
and Northern Pueblo Agencies who are in need of financial aid after all sources
of funds have been explored. (Veteran's Benefits, EOG, etc.)
Eligibility Requirements

For an applicant to receive a scholarship grant from the All Indian Pueblo Council, he must meet the following requirements:

1. Must be of ¼ degree or more Pueblo Indian blood, except Laguna and Zuni Pueblos.
2. Must need financial assistance after other sources of funding have been explored. Parents or spouses are expected to provide as much as they reasonably can for the student's expenses.
3. Must have demonstrated the ability to do the school work for which the grant is requested.

Please read the italicized words carefully:

FILING DATE: The deadline for filing applications for the school year beginning in August/September is April 1. A separate application must be submitted for each school year or summer term.

GRANT PAYMENT: Grant checks are sent to the student in care of the Director of Financial Aid at the college. Tuition, fees, on-campus room and board will be billed directly to the All Indian Pueblo Council by the college.

GRANT AMOUNT: The amount of the grant is determined according to individual need and college attending. Grants are made for one college year. (2 semesters, 2 trimesters or 3 quarters.)

COLLEGE GRADES: The student is expected to maintain passing grades with an overall grade point average of 2.0 or better. The student is responsible for arranging with the college records office to furnish the Scholarship Program a copy of their grade report following the END OF EACH TERM. Applications will not be considered without a copy of your latest grades.

NUMBER OF COURSE HOURS: Grantees must be full-time students taking a minimum of 12 semester or quarter hours.

BACCALAUREATE DEGREE: (4 years) Select a school that offers the curriculum for your career goal which leads to a baccalaureate degree. Some majors require 5 to 6 years.

NEW MEXICO AND OUT-OF-STATE SCHOOLS: For New Mexico residents attending state colleges and universities, the Program pays for all expenses as determined by the most recent school catalog. The Program pays up to $1850.00 for out-of-state expenses.

HOUSING: Because campus housing has numerous benefits, all students are encouraged to live on campus. Freshmen and sophomores must live on campus unless married or living with parents. Juniors and seniors may reside off campus in accordance with the housing regulations and policies of the college. The grant allowance will not exceed the amount for on-campus housing costs, except for married students. Room and board payments will be issued on a monthly basis.
PROBLEMS: Each student should present any special problem to the Indian counselor at the college. If the problem cannot be resolved through the college counselors, write or telephone the Scholarship Program at: 505/765-1330, 765-1331, 765-1336.

WITHDRAWALS: Students should not withdraw from school except for the most urgent reasons and only after the scholarship staff has been notified and consulted about any problems. The student will be responsible for charges owed the school if he has an unauthorized withdrawal and does not notify the Scholarship Program. Students dropping any class should also notify the scholarship staff.

COLLEGE ADDRESS: Each student should notify the Scholarship Program of his school address when he arrives at school or of any change of address.

MOTOR VEHICLES: Grant funds cannot be used for financing or maintenance of motor vehicles. In special situations when justified, mileage may be allowed in lieu of room and board upon approval.

SUMMER SCHOOL: If funds are available, grants for summer school will be provided. Preference is given to seniors needing courses to graduate or students needing repeat or remedial courses to maintain in good standing. The deadline is April 1.

LOANS

By far the resource most often used to complete a financial planning program is the student loan. Usually secured from local banking institutions, colleges or other special loan programs established for these purposes, most loans provide for an extended period of repayment and often do not commence repayment until some period following graduation. Since the graduate normally begins a career immediately and starts earning a salary, this method is popular with many students. While it is often one of the last resources considered, it is certainly to be highly preferred to an alternative which might be no school at all, if the reason for that conclusion was the lack of a complete financial program.

HOW TO APPLY FOR ASSISTANCE

Whatever program is most appropriate and available to the student, he must begin early and carefully to complete the necessary arrangements. It will be necessary for each student to:

1. Establish his basic plan;
2. Determine the cost of this education;
3. Evaluate his own abilities to meet all or some of these costs; and
4. Determine what remaining resources may be required to complete his plan on an annual basis.

Working from these estimates, the student should apply for assistance to the respective offices of financial aids approximately eight months prior to the
beginning of his enrollment and, if at all possible, no later than five months prior to this same date. If possible, students are encouraged to apply for financial assistance at the same time that they apply for admission, which would normally take place around December or January for enrollment in autumn.

Using the information of this handbook and other information available, a student should inquire about the availability of financial assistance, the deadline for submitting applications, and the appropriate application form for such assistance. Upon receipt of the information the student should accurately and completely respond to the questionnaire and submit it for consideration. Each student is cautioned to answer every question realistically. His financial plan should neither underestimate or overestimate his needs and resources. To the extent possible, he should provide full information to all questions. Some questions, for example, are asked by the institution because they sometimes have special trust funds available to support only those students who meet the specific conditions of the trust.

SPECIAL CAREER PROGRAMS FOR NATIVE AMERICANS

HOSPITAL INTERNSHIP IN DIETETICS
HIGH SCHOOL OR UNDERGRADUATE

Most training programs are of nine months duration, offered to qualified students intending to become professional dietitians. Both classroom instruction and on-the-job experience are provided. Compensation is provided with no obligation to pursue a career within the Veterans' Administration. College student training may be either summer work experience or required field experience which may or may not be for academic credit. High school student training may be summer employment designed to cultivate the student's interest in the field.

To be eligible for an internship, applicants must hold a baccalaureate degree from an accredited institution within five years of date of application and have fulfilled qualifying educational requirements set by the American Dietetic Association. High school students may apply for summer employment at local Veterans' Administration hospitals.

For further information, contact the Personnel Officer or Chief, Dietetic Service, at Local Veterans' Administration hospital.
HOSPITAL INTERNSHIP IN DIETETICS
HIGH SCHOOL OR UNDERGRADUATE

Health Professions Loans — Undergraduate & Graduate

The Health Professions Loan Program is a long-term, low-interest loan to assist students having need for financial assistance to pursue a career as a physician, dentist, osteopath, optometrist, pharmacist, podiatrist, or veterinarian.

The maximum amount you may borrow for an academic year is $3,500 or the amount of your financial need, whichever is the lesser. Each school participating in this program is responsible for selecting the recipients of loans and for determining the amount of assistance the student needs. Students should make application to the school in which they have been accepted for enrollment.

Repayment of the loan begins one year after completion of study. These loans are repayable to the school over a ten-year period which begins one year after you complete or leave school.

For further information, consult the Director of Student Financial Aid at the school where you intend to enroll or contact the Bureau of Health Manpower Education, Division of Physician and Health Professions Education, Bethesda, Maryland 20014.

Practical Nursing Program — Practical Nursing School

Students interested in training as a practical nurse may apply to the National Licensed Practical Nurses Educational Foundation, Inc., for financial assistance. Applicants must have been accepted for admission to a State-approved school of practical nursing in the State where they live, and give evidence of physical, academic and character fitness.

Further information is available from the National Licensed Practical Nurses Educational Foundation, Inc., 250 West 57th Street, New York, New York 10019.

REGISTERED NURSE PROGRAMS — NURSING SCHOOLS

Nursing Student Loan Program

Nursing Student Loan Program: Loans of up to $2,500 per academic year are available to student for full-time or half-time study in schools of nursing. These are low interest loans repayable over a ten-year period; moreover, up to 85 percent of the loan may be cancelled or repaid by the Federal Government if the borrower is employed as a registered nurse under special conditions. Loan recipients are selected by the schools or colleges.

Nursing Scholarship Program: Individual scholarships, not to exceed $2,000 for any school year, are available to assist students of exceptional financial need who require such assistance to attend school. These scholarships are for full-time or half-time study in schools of nursing. Scholarship recipients
are selected by the nursing school.

Additional information about either of these programs, as well as lists of participating schools are available from the Division of Nursing, Bureau of Health Resources Development, Health Resources Administration, 9000 Rockville Pike, Bethesda, Maryland 20014.

The Army Student Nurse Program — Undergraduate

Men and women students in a nationally accredited four or five year college program may become eligible to receive tuition, a salary, and other benefits during their final 24 months in school. Students accepted in the program are enlisted in the U.S. Army Reserve and, upon graduation, are commissioned as first lieutenants. After graduation, they must remain on active duty for three years.

For detailed information, contact your local Army recruiter, or write Nursing Opportunities, U.S. Army Recruiting Command, Fort Sheridan, Illinois 60037.

Navy Nurse Corps Program — Undergraduate

This program provides assistance for junior or senior students enrolled in the National League of Nursing (NLN) accredited college degree programs in nursing. Applications may be submitted after completion of the first semester of the sophomore year. Candidates receive funds for tuition and fees, allowances for books and living quarters and a salary commensurate with the grade in which they serve. Upon graduation, students are commissioned as ensigns in the U.S. Naval Reserve and serve on active duty in the navy Nurse Corps for two years for one year of education assistance or for three years for more than one education assistance year.

For further information, contact a U.S. Navy Recruiting Station or write to Director, Navy Nurse Corps, Bureau of Medicine and Surgery, Navy Department, Washington, D.C. 20390.

The Walter Reed Army Institute of Nursing — Undergraduate

This offers qualified young men and women an opportunity to earn a bachelor of science degree in nursing with nearly all expenses paid by the Department of the Army. The successful applicant attends an approved and regionally accredited four-year college or university of his or her choice for two years and is then assigned to the Walter Reed Army Medical Center to complete the last two years of the program. While at Walter Reed, students enroll at the University of Maryland for the bachelor of science in nursing.

Further information may be obtained from local Army recruiters or by writing to the Office of the Surgeon General, HQ, DA, ATTN: DASG-PTP-N, Washington, D.C. 20314.
Public Health Nurse Traineeships — Registered Nurses

Traineeships covering tuition and fees, an allowance of $500 a year for each dependent and a stipend of $2,400 a year for prebaccalaureate trainees are available to qualified applicants.

Applicants must be U.S. citizens or permanent residents, must be registered nurses, and must intend to pursue a career in Public Health nursing. Applicants must be able to complete the requirements for a baccalaureate degree. If applicants already have a baccalaureate nursing degree, they must be able to complete the requirements for Public Health nursing within twelve months. Application is made to the participating school of nursing.

Nurse Traineeships — Graduate

Traineeships, including tuition fees, an allowance of $42 a month for each dependent and a stipend, depending on level of study and degree of professional experience, are available, primarily at the graduate level, to qualified professional nurses. Long-term and short-term traineeships are available. Traineeships are also available for summer study.

Applicants must be U.S. citizens or permanent residents and be professional nurses graduated from State-approved schools of nursing. For long-term assistance, applicants must be enrolled for full-time study. At the baccalaureate level, applicants must be able to complete their course of study within twelve months and be qualified to pursue graduate study. Application is made to the participating institution or health agency which selects eligible trainees.

For further information, contact individual institutions or agencies or Division of Nursing, Bureau of Health Resources Development Administration, Public Health Service, 9000 Rockville Pike, Bethesda, Maryland 20014.

General Public Health Traineeships — Graduate

Traineeships including tuition and fees, stipends of $2,400 to $3,600 a year (depending on year of study and professional experience), and an allowance of $500 for each dependent are available for graduate or other specialized training in Public Health.

Applicants must be U.S. citizens or permanent residents, have at least a bachelor's degree, and be pursuing a career in Public Health Service. Interested persons apply to a participating institution offering a graduate or specialized Public Health training. Recipients are selected by the institutions.

Advanced Training for Allied Health Professions Personnel — Graduate

Tuition, fees and a stipend of from $2,400 to $3,600 a year and an allowance of $500 for each dependent are available to qualified health professions personnel.

Health professions personnel who are pursuing full-time study for advanced degrees to enable them to teach in their field at the junior college.
college, or university levels or to further specialize in their field are eligible to apply for traineeships. Applicants must be U.S. citizens or permanent residents. Application is made to participating institutions.

**Special Traineeship in Public Health — Graduate**

Traineeships including stipends of from $2,400 to $3,600 a year (depending on year of study and amount of professional experience), tuition and fees are available for postbaccalaureate training in specialized Public Health areas such as environmental health engineering, medical care administration, or other high priority areas.

Applicants must be U.S. citizens or permanent residents who have a bachelor's degree and are pursuing or intending to pursue a career in a specialized Public Health field. Application is made to an institution offering specialized training and participating in the program.

**Public Health Residency Training Awards — Undergraduate and Graduate**

Tuition and fees, an allowance of $500 for each dependent and a stipend of $2,400 a year for prebaccalaureate training and up to $7,000 for postdoctoral training are available to qualified applicants.

Applicants must be U.S. citizens or permanent residents who need graduate or specialized training in order to prepare for a career in Public health or to improve their competency in a Public Health field. Applicants must have a doctor's degree in certain areas, a master's in another, and a bachelor's in still others. Dental hygiene does not require a bachelor's degree.

For further information, contact individual institutions or Division of Associated Health Professions, Bureau of Health Resources Development Administration, Public Health Service, 9000 Rockville Pike, Bethesda, Maryland 20014.

**Grants for Audiology & Speech Pathology Training — Graduate**

Stipends from $3,320 to $6,000, depending on year of study, are available to enable graduates to pursue advanced degrees in audiology and speech pathology.

Applicants must be U.S. citizens, have a bachelor's degree and be enrolled in an accredited graduate program of audiology or speech pathology.

For further information, contact individual VA hospitals or Chief, Audiology and Speech Pathology, Veterans' Administration, Central Office, 810 Vermont Avenue, NW, Washington, D.C. 20420.

**Physician Shortage Area Scholarship Program — Doctoral**

Scholarship grants up to $5,000 per school year can be awarded to students who agree upon completion of professional training to practice
primary care for a period of twelve continuous months for each year for which a grant was awarded in some physician shortage area.

Students who have financial need and live in a physician shortage area and who are willing to return to that area to practice, are given first priority. You must be a U.S. citizen to receive a grant.

Application materials, including lists of physician shortage areas, areas identified as having a substantial portion of migratory agricultural workers, are available in kit form at schools of medicine and osteopathy and the Bureau of Health Resources Development, Health Resources Administration, 9000 Rockville Pike, Bethesda, Maryland 20014.

Grants for Training in Mental Health — Undergraduate & Graduate Nursing

Grants cover stipends for trainees and, in some instances, tuition and fees.

Medical students and undergraduates in psychiatric-mental health nursing are eligible. Short term and full-year grants are available but nurses in the full-year program must be enrolled full-time and plan to study psychiatric-mental health nursing at the master's or professional level.

Training Grants in Mental Health — Graduate

Stipends, tuition and fees, a travel allowance and a dependent's allowance are available to qualified graduate students in a discipline related to mental health.

Applicants must meet the specific requirements of a participating institution and must be pursuing graduate training in some field related to mental health, such as psychiatry, psychiatric nursing, social and biological sciences, and the like. Application is made to the individual institution.

Teaching Grants in Mental Health — Graduate

Stipends are paid to trainees preparing for teaching careers in psychiatry, psychology, social work, psychiatric nursing, and biological sciences and social sciences related to mental health. The amount of a trainee stipend is based upon previous training, individual qualifications, and salaries being paid at the training institute.

Requirements vary for each mental health discipline. Several require doctoral degrees. The grants for social work and psychiatric nursing require master's degrees.
For further information, contact individual institutions or Psychiatry Education Branch, Division of Manpower and Training Programs, National Institute of Mental Health, 5600 Fishers Lane, Rockville, Maryland 20852, or Psychiatric Nursing Education Branch, Division of Manpower and Training Programs, National Institute of Mental Health, 5600 Fishers Lane, Rockville, Maryland 20852.

Traineeships & Internships in Psychology — Graduate

Traineeships, including tuition and fees, of from $2,400 to $2,800 are available to qualified graduate students in psychology. Internships, including stipends, are also available in clinical psychology.

Graduate students enrolled in a doctoral program of clinical, child and developmental, experimental, physiological, or social psychology may apply through a participating institution for a traineeship renewable for up to four years. Students enrolled in a doctoral program of clinical psychology approved by the American Psychological Association may apply through a participating institution for an internship.

For additional information, contact an individual institution or Behavior Sciences Education Branch, Division of Manpower and Training Programs, National Institute of Mental Health, 5600 Fishers Lane, Rockville, Maryland 20852.

Grants for Clinical or Counseling Psychology Training — Graduate

Stipends of from $3,660 to $6,790 and assistantships of from $7,447 to $9,308 are available for graduate students in clinical and counseling psychology.

Students who are enrolled in accredited Ph.D. programs in psychology, who are U.S. citizens, between the ages of 18 and 62, and are recommended by a participating institution, are eligible.

For further information, contact an individual institution or Veterans' Administration Psychology Division (116c), Psychiatry, Neurology, and Psychology Service, Department of Medicine and Surgery, Veterans' Administration, Washington, D.C. 20042.

Preliminary Budget Preparation

A Student Preliminary Budgeting Form is printed on the following page for the student to estimate his budget plans. This form should be retained for future reference after you have completed it. This will save considerable time in the future when making scholarship applications. The left column contains many elements of cost as a reminder to prevent overlooking a significant expenditure. Should other costs exist, the blank lines should be used for additional items. It is important to include everything, so adequate consideration may be given to the exact amount of assistance required.

Now you have an estimate of how much it will cost to go to school. For a more complete guide to how to determine costs, send away for a free copy of "Meeting College Costs in 1975-76." Publications Order Office, College Entrance Examination Board, Box 592, Princeton, New Jersey 08540.
Many of the colleges and universities throughout the country offer scholarships, grants, and financial assistance of various kinds to students. This is applicable to persons studying in health-related areas as it is for those in mineralogy or space technology. If the applicant has special qualifications, a unique background, or is an aspiring student in dire need, assistance of a particular nature may be available. For this reason, especially if the usual sources of funds (BIA, tribe, etc.) are unavailable, Indian students should explore all other types of assistance. This includes financial support from public and private sources such as the federal government, professional organizations, local societies, businesses, foundations, etc. Assistance available through the college also should be pursued. This information sometimes may be obtained by writing to the Dean of Admissions at the college or University listed below. Many institutions carry scholarship and assistance information in their catalogs, although the vast increase in the amount of student aid in recent years has tremendously expanded this literature. For this reason, all of it may not appear in the main catalog. In that case, the Director of Student Aid would probably be the appropriate person to supply the desired information.

A number of colleges and universities offer special scholarships and assistance. A few in the Southwest have been listed here. For more information contact the schools listed below or the Health Careers Recruitment Project, All Indian Pueblo Council, 1015 Indian School Road, NW, Albuquerque, New Mexico 87107.

A FEW POINTERS TO REMEMBER
WHEN SEEKING FINANCIAL ASSISTANCE

1. Start early, well before the school year begins, maybe even the preceding year (early in your high school senior year).
2. Write to many sources. It costs a stamp, a piece of paper, an envelope and your time, but it will be worth it.
3. Address your communications to the “Director of Scholarships or Educational Programs” when you have no specific name or title to write to.
4. Include the fact that you are a Native American right at the start of the letter.
5. Show sincerity of purpose in seeking a higher education; take time when writing and think through what you want to achieve by going to school, and then put it on paper.
6. Remember, the application you submit will be all the reviewers will have to tell them about you, your financial need, and your goals and aspirations. Let yourself shine through.
7. If you have a chance, discuss your goals with your counselor or an older person who might have the same career goals as yourself, and is already working in the field of your choice.
8. Don’t worry about money to go to school. Somewhere you can find it if you search hard enough. Choose your career first, get accepted to a school, and some sort of financial assistance will come your way.

WHERE TO APPLY

The list, to some extent, is endless. Nevertheless, the handbook describes below those various agencies that may be able to provide financial assistance or information about available financial assistance. All possibilities should be carefully considered. Yet, the list is not exhaustive and the student should be mindful of any new or additional resources which may develop from time to time.

Generally, one should seek guidance and counseling in this matter. One should also begin with those institutions perhaps closest to his life — his tribe.
his community organizations, his selected college, his local medical or health agency, his state, his church, etc. Special resources available to American Indian students can be obtained from the following sources:

WHERE TO OBTAIN ADDITIONAL ASSISTANCE

The contents of this handbook are in many ways only the beginning. Much additional assistance will from time to time be required by every student. The level of each new challenge, the circumstances of each student's preparation, and the aspiration fundamental to his career plan will constantly require new forms of assistance. As he progresses, each student will become better informed about additional sources and assistance. Consequently, this handbook will limit its recommendations for additional assistance. From these sources it is anticipated the student will proceed well along the trail to his health professions career.

SECTION A. COUNSELING AND ADVICE

Throughout the time of his health career education each student will require and profit from additional counsel and advice. Every student should be prepared to constantly seek this advice. He should likewise be prepared to use this counsel and consider this advice very carefully. Whether as a graduate, American Indian M.D. contemplating a specialty practice in pediatrics, or whether as a college student considering humanities requirements necessary to a pre-veterinary medicine curriculum, every decision will have serious and frequently lifelong consequences. It is important the fullest consideration, counsel and advice be given every major decision with the fullest possible help of one's friends, family and acquaintances.

One important source of assistance available to the Indian student is the practicing Indian health professional. As one who has gone before others he is incomparably prepared to offer advice. If a student knows such an individual, he should seek additional assistance from him. If a student does not know any such persons, he should feel free to write the Indian professional associations, such as the Association of American Indian Physicians. The members and staff of these organizations will be more than happy to assist. Other American Indian students, especially those studying for a health career, are very important sources of assistance. Frequently, valuable insight can be provided by those who are two, three or even four years ahead of us. Thus, for example, American Indian medical students have pertinent and invaluable advice for Indian college students considering medicine as a career. In nearly every instance, these students have had to consider each issue or problem faced by other students. One should ask them what they did — how they resolved this particular matter. These students will be anxious to help.
Every student should also feel free to solicit the additional counseling resources of the various professional organizations and schools. These institutions are prepared to give guidance and advice; every student should be prepared to seek this counsel, especially when he is uncertain about his choice, his place or other facts pertinent to his future.

All students should particularly understand that these professionals, students, organizations and schools do not usually know about the student or his particular needs unless someone brings them to his attention. Throughout the preparation for one's career, every student must realize that it is up to himself to seek this assistance. And when he receives advice, if it seems unclear, unwise or inaccurate the student should seek additional counsel from yet another source, not only to determine the veracity of the first-given advice but to assure the most careful career development.

There are, of course, many sources of wise counsel. The sources may seem limited or generous depending often upon the circumstances of the student himself. For some, such counsel can be obtained from tribal leaders, parents, public officials, and friends. For others, it may be necessary to seek out professionals who reside within the community; while they may not be trained in a health career they may know something about the student's decision or know others who may be able to provide help. The local minister, school superintendent or businessman may be such a person. Then, too, one may want to obtain additional information from other Indian leaders and professionals. In many ways, these individuals have perhaps had to consider similar or identical problems. Many times they will know another person better qualified to provide assistance.

The Health Careers Recruitment Project of the All Indian Pueblo Council can also provide counseling services to you. Take time to call us or stop by our office at 1015 Indian School Road, NW, Albuquerque, New Mexico. Phone (505) 247-4990.
A Unique Source of Counseling & Assistance . . .

HEALTH CAREERS RECRUITMENT PROJECT
ALL INDIAN PUEBLO COUNCIL

The Health Careers Recruitment Project of the All Indian Pueblo Council was organized to overcome barriers restricting the entrance of Pueblo Indians into health occupations and professions. Young Indian people often live in remote and isolated rural communities where they have difficulty in identifying resources for training and education. They may have extremely limited financial resources on which to rely for financial support for college and technical training. Once enrolled in school or a training program Indian students may need assistance in adapting to a predominantly Anglo culture and institution or they may be discouraged by discrimination or unfamiliar academic demands placed on them. The AIPC Health Careers recruitment Project assists Indian students in overcoming these barriers.

In attempting to overcome these obstacles, the Health Careers Recruitment Project staff counsel students living in 19 Pueblos located across 13,200 square miles of northern New Mexico. Four different languages and several dialects are spoken by the Pueblo people. Few Pueblos are located adjacent to one another and many are located miles from the nearest high school or town. Recruitment activities include on-site contacts with you - the student and staff in your high schools, with similar interests in minority career opportunities. The Project also assists in the planning, coordination and direction of the All Indian Pueblo Council Scholarship Program which offers approximately 450 scholarships to Indian students.

The Health Careers Recruitment Project also participates in high school "career days" throughout the area, and in statewide Indian youth conferences. Through the Project's efforts, many Indian high school students have become members of the New Mexico Health Occupations State Student Organization (HOSSO). The staff consisting of a counselor, an assistant counselor, and a secretary focuses on identifying and counseling individual students interested in health careers or further health occupation training.

The Health Careers Recruitment Project began in February, 1975 as an area Health Careers Recruitment Program under a subcontract from the Association of American Indian Physicians (AAIP), of Norman, Oklahoma (the prime contractor) from the Office of Health Resources Opportunity, Health Resources Administration, DHEW. The original Project ran for a term of 17 months and in July, 1976 it was extended for two more years.
What Are The AIPC Health Careers Recruitment Project Objectives?

- To identify the Indian student's perspective on counseling, career and recruitment programs.
- To identify the Indian student's perspective on the University structure or the training setting.
- To identify the Indian student's perspective in his or her future career role.
- To identify the Indian student's family's understanding of his or her educational progress and career goals.
- To establish a relationship between selected counselors, teachers, Indian students and project staff.
- To provide counselors and teachers with a broader understanding of the Indian students' special background and needs.
- To facilitate the Indian students progress toward reaching his or her career goal.
- To conduct a series of seminars to develop materials helpful to counselors, teachers, and students.
SECTION B. ADDITIONAL SOURCES OF INFORMATION

At many times personal counsel and advice may neither be appropriate, available, accurate or desirable. In such instances, a student may desire to write or call agencies and organizations experienced in the field of his inquiry. Such agencies frequently receive requests for such information and are prepared to assist each student with his various needs. The student may wish to write for further information from the following organizations:

SECTION C. RECOMMENDED READING LIST

To obtain additional information or ideas or inspiration about various health careers, the following reading list is recommended for American Indian students:

- *Becoming A Physician:*
  
  
  
  
  
  Fabricant, Noah D. *Why We Became Doctors* (Grune & Stratton, 1954).
  
  
  *Medical School Admission Requirements* (Association of American Medical Colleges, published annually).
  
  Nours. *Ian E. So You Want to Be a Doctor* (Harper & Brother, 1957).
  
SECTION D. GLOSSARY

A.A. or A.S.
An Associate of Arts or Associate of Science Degree, granted from a two-year community college upon completion of general education requirements and an academic or vocational concentration.

Accredited
Indication that an institution's programs or services meet required standards.

ACT
American College Test; an aptitude test required by certain colleges and universities before admission.

ADA
American Dental Association.

AMA
American Medical Association.

B.A. or B.S.
A Bachelor of Arts or Bachelor of Science Degree, granted from a four-year community college upon completion of general education requirements and an academic or vocational concentration; also known as a baccalaureate degree.

Certification
Recognition granted to an individual who has met certain qualifications determined by a non-governmental agency.

Clinical Experience
Time spent by a student in an actual work setting which is usually part of the instructional program; sometimes referred to as field work.

Curriculum
The group of designated courses which comprise the instructional program.

Didactic
Describes instruction which takes place in the formal classroom; didactic as opposed to practical experience.

General education requirements
The basic course of study most colleges and universities require of all students; usually requires one to two years for completion.

GPA
Grade point average.

GRE
Graduate Record Examination; an aptitude test required by certain graduate schools before admission.
High School equivalency
Generally earned by completing the General Educational Development test (GED) with satisfactory scores; high school counselors can be contacted for test registration forms.

Internship
A period of supervised experience following related classroom instruction.

Licensure
Permission to practice granted to qualified individuals by a governmental agency.

M.A. or M.S.
Master of Arts or Master of Science Degree, granted for graduate work in a specialized area.

Major
The subject area in which a student specializes by completing a certain number of related courses.

Minor
The subject area in which a student completes a number of related courses.

On-the-job training (ojt)
Instruction received through actual experience with personnel who are performing the work, rather than through classroom experience.

Preceptorship
An arrangement which allows the student to work as an assistant or apprentice for an individual practitioner.

Prerequisite
A requirement which must be completed before entry into an instructional program.

Quarter
A length of time of academic instruction, usually lasting 10-12 weeks.

Registration
The listing of qualified individuals on the official roster of a governmental or non-governmental agency.

SAT
Scholastic Aptitude Test: an aptitude test required by certain colleges and universities before admission.

SCAT
School and College Ability Test: an achievement test sometimes required for admission to community colleges or instructional programs.

Semester
A length of time of academic instruction, usually lasting 15-18 weeks.
Specialization
Concentration on a specific area of study which follows the period of basic education; or concentration on a specific area within a general profession.

Stipend
Money paid to the student during training.

Unit
Credit earned for an academic course based on the number of hours in class; quarter units can be converted to semester units by multiplying the number of quarter units by $\frac{2}{3}$; semester units can be converted to quarter units by multiplying the number of semester units by $\frac{3}{2}$.
