Three separate studies of gifted Grossmont Union High School District students indicated that: (1) gifted students enrolled in special courses score higher in grade point averages and on SAT tests than gifted students who aren't so enrolled; (2) gifted students enrolled in special courses win significantly more scholarships and honors than gifted students who aren't so enrolled; (3) gifted students enrolled in special courses have higher and more definite educational goals than gifted students who aren't so enrolled; and (4) presently enrolled gifted students, their parents, and their teachers are pleased with existing programs and student progress, and desire program expansion. Numerous data tables are included. (Author)

Study # 2

Results of Surveys given to Random Samples of Gifted Enrolled, Their Parents, and Their Teachers

(Total enrolled - 428)

Percentage of student responses indicating satisfaction with academic progress on 2 different surveys

Survey # 1  N of sample = 134  76%
Survey # 2  N of sample = 109  74%

Percentage of parent responses rating their child as "improved" or "much improved" in academic skills and attitudes

N of sample = 111  84%

Percentage of students evaluating their teachers as "strong" or "outstanding"

N of sample = 178  84%

Percentage of student responses evaluating their course work as "good" or "excellent"

N of sample = 121  90%

Percentage of students evaluated by their teachers as showing "increase" or "marked increase" in academic performance

N of sample = 164  85%
Study # 3

Comparison of response to Questionnaire by Enrolled and Unenrolled Gifted

(N=41) (N=30)

1) Percent receiving 3 or more scholarships or awards

- Enrolled 74
- Unenrolled 5

2) Percent planning to attend a 4 year college or university

- Enrolled 66.7
- Unenrolled 45

3) Percent planning to spend 5 or more years in higher education

- Enrolled 66.7
- Unenrolled 35

4) Percent electing not to attend college

- Enrolled 7
- Unenrolled 27

5) No significant differences were revealed in number and sources of friends, school activities, or attitudes toward peers.
Background of the studies

Students who score at or above 132 on an individually administered IQ test are identified as "gifted" by California State Law and are eligible to participate in state-funded programs. In 1975-76, 428 identified students participated in gifted course offerings in the Grossmont Union High School District. 284 identified students did not participate for reasons which included schedule conflicts, parental and/or student choice, and lack of available programs.

Purpose of the studies

Study #1 had two purposes:

a) to compare the achievement of enrolled and unenrolled gifted graduates to determine if program participation affects performance.

b) to provide objective data for measuring the achievement of students who have been enrolled in gifted programs.

Study #2 was designed to survey:

a) the attitudes of enrolled gifted about their academic progress, their teachers, and their course work.

b) the attitudes of parents toward the gifted program presently operating in the Grossmont District.

c) teachers of the gifted as to whether student progress and achievement are appropriate for the ability of the gifted

Study #3 was designed to compare responses of enrolled and unenrolled gifted graduates in regard to:

a) attitudes toward peers, school, teachers, and self.

b) numbers of activities and hours spent therein.

c) numbers of scholarships and awards earned.

d) educational aspiration beyond high school.
Conclusions drawn from the three studies will serve as an evaluation of the gifted program of the Grossmont Union High School District, as well as a guide for counselors, parents, and students.

Design of Study #1

The academic records of all 133 identified gifted 1976 graduates were studied. 74 had been enrolled in gifted courses for one year or more during grades 9-12; 59 had not been so enrolled. Grade point averages, SAT scores, and participation in advanced classes other than gifted classes were compared. Advanced classes were defined as academic classes which are generally not required for college entrance although enrollment is encouraged. These classes were third and fourth year foreign language, English IV or equivalent elective, Physics, Advanced Chemistry, Advanced Biology, Algebra II, Advanced Senior Math, Math Seminar, and Calculus.

32 of the 59 unenrolled gifted attended schools at which no programs were offered. Their records were compared to ascertain if the gifted at such schools performed better than the total unenrolled group.

Results of Study #1

The results of the first study revealed several differences in achievement, although the mean IQ scores of the two groups were remarkable similar (enrolled mean = 138.15, unenrolled mean=138.22.) The median score of the two groups showed the unenrolled group to be two IQ points higher than the enrolled group (enrolled median = 135, unenrolled = 137.)
It should be noted that the majority of identifying IQ tests are given in grade 2. If the two groups were individually tested today the results might differ markedly. Nonetheless, it is important for this study to note that the actual IQ scores existing for the two groups both slightly favor the unenrolled as potential achievers.

1. Mean GPA of 74 enrolled gifted graduates compared to that of 59 unenrolled graduates revealed an average difference of .497 of a grade point in favor of the enrolled group.
   Mean GPA enrolled 3.726
   Mean GPA unenrolled 3.222
   .497 net difference

2. The number of 4.0 graduates differed with the enrolled having 10 more.
   In the enrolled group 12 or 16%
   In the unenrolled group 2 or 3%

3. 90% of the enrolled gifted had GPA's above 3.5 versus 36% of the unenrolled:
   In the enrolled group 67 of 74
   In the unenrolled group 20 of 59

4. The range of GPA's differed, showing that the lowest GPA of the enrolled groups was .80 of a grade point higher than the lowest GPA of the unenrolled group:
   Enrolled GPA Range 2.84-4.0 range = 1.16
   Unenrolled GPA Range 2.04-4.0 range = 1.96

5. Mean verbal score of the enrolled gifted was 53.931 points higher than for the unenrolled:
   Mean SAT Verbal score enrolled 565.143
   Mean SAT Verbal score unenrolled 511.212
   net difference in points 53.931

6. Mean SAT Math scores were even more disparate:
   Mean SAT Math score enrolled 626.00
   Mean SAT Math score unenrolled 546.06
   net difference in points 79.94

7. 70 of 74 enrolled gifted students took the SAT test (90%) compared to 33 of 59 unenrolled students (56%).
8. The mean number of advanced classes other than gifted classes selected by the enrolled group was 3.066, for the unenrolled group .899. Specific numbers of students electing advanced classes were:

<table>

<tr>
<td>7</td>
<td>2</td>
<td>7</td>
</tr>
</tbody>
</table>

9. 27 of 74 (36%) of the enrolled gifted took four or more advanced classes other than gifted classes compared to 3 of 59 (.5%) of the unenrolled group.

10. With the exception of the SAT Math score, the records of the unenrolled gifted at schools with programs didn't differ notably from those of the enrolled gifted at schools without programs.

| Mean SAT Math score unenrolled at schools with no program | 573.529 |
| Mean SAT Math score of unenrolled at schools with gifted program | 546.060 |

Net difference in points: 27.469

It should be noted though, that this score of the unenrolled is 52.471 points lower than the enrolled score.

Design of Study #2

Evaluation forms were given to six random samples of enrolled students, their parents, and their teachers. Two self-evaluation forms were given to students, one program evaluation form was given to parents, one teacher evaluation and one course evaluation were given to students, and 39 teachers were asked to evaluate the academic progress of 167
randomly selected students. Responses were tallied and converted to percentages of total responses to each item. The forms themselves, with the percentages for each item, can be found in the appendix.

Results of Study #2

1. 154 enrolled students evaluated themselves on degree of improvement in several academic and social areas as "improved" or "much improved" an average of 76% of the time.

Sample items: (Students were asked to compare themselves to where they were one year prior)

<table>

Design of Study #3

Questionnaires were sent to all 133 gifted graduates of 1976. 74 had been enrolled in gifted courses for one year or more in grades 9 - 12, 59 had not been so enrolled. Questions regarding career and educational plans, peers, teachers, friends, educational influences and aspirations, self-satisfaction, scholarship and awards, and community and school activities were asked. The term "gifted" was never mentioned, to avoid biasing answers.

30 of the 59 unenrolled gifted (49.5%) and 41 of the 74 enrolled (55.5%) responded.

***** SIGNIFICANCE = 0.0089
Conclusions of Study #1

For the groups studied:

1. Enrolled gifted students earned higher GPA's than the unenrolled, scoring an average of .497 of a grade point higher. This difference is especially impressive in light of the finding that enrolled gifted are far more likely to include difficult advanced classes in their schedules. Comparing GPA's based solely on the typical classes selected by the unenrolled gifted would reveal a greater difference between the two mean scores in favor of the enrolled. It can be stated with certainty that taking gifted classes does not adversely affect GPA scores; Indeed, indications are strong that taking such classes increase the likelihood of a high GPA score. 90% of the enrolled gifted versus 36% of the unenrolled had GPA's above 3.5, and the lowest GPA among enrolled was .80 of a grade point higher than the lowest unenrolled GPA.

2. Mean SAT Verbal and Math scores are both higher for the enrolled group than for the unenrolled, an average of 54 points higher on the verbal section of the test, 80 points higher on the math portion. Based on these data positive benefits in test performance can be predicted for those who enroll in gifted classes.
3. 56% of unenrolled students versus 97% of enrolled students took the SAT test. Since this test is required for admittance to the University of California, Stanford, Cal Tech, USC, Harvard, MIT, and other prestigious four-year colleges and universities, it can be theorized that the enrolled gifted are more likely to plan to apply to such institutions. This may also imply a definite vocational goal for the enrolled gifted. (Neither group had any students who took the ACT, an optional test choice at some colleges).

4. Enrolled gifted averaged 3 advanced class choices other than gifted classes as opposed to an average of one such choice by the unenrolled. The study shows that 36% of enrolled took four or more such classes, as opposed to .5% of the unenrolled. Enrolled gifted are considerably more likely to elect advanced classes.

5. Since mean and median IQ's of the groups differed only slightly, and surprisingly in favor of the unenrolled group, IQ differences can be eliminated as an explanation of the widely differing results.

6. Considering only the portion of the study which deals with the achievement of the enrolled gifted, one can state that students in the Grossmont Union High School District's gifted program are achieving well both in grades and on standardized tests.
7. Extracted data on the unenrolled at schools with no programs revealed no significant difference between the records of the two groups of unenrolled. Comparing their records to those of enrolled gifted yielded the same differences as those mentioned in 1-4. This seems to refute the argument that the motivated gifted, who could be found in schools without special programs, presumably do as well without special programs as the gifted who have such opportunities. This was not true for the 1976 graduates; the gifted who participated in programs did appreciably better.

Conclusions of Study #2

1. Enrolled gifted students are generally very pleased with their academic progress, their teachers, and the quality of their courses.

2. Parents of enrolled gifted are pleased with the quality of programs being offered, feel they are of positive benefit to their youngsters both academically and motivationally, and favor the expansion of the kind and number of gifted courses.

3. Teachers of the gifted in Grossmont District are generally pleased with the academic and personal progress of their students and believe that student progress and achievement are commensurate with ability.
Conclusions of Study #3

1. A highly significant difference existed between the enrolled and unenrolled in scholarships and awards won; 74% of the enrolled gifted won 3 or more important scholarships or awards versus only 5% of the unenrolled. (Degree of significance = .0089).

2. 66.7% of the enrolled gifted, compared to 45% of the unenrolled, planned to attend a 4-year college or university right after high school. This suggests more definite vocational goals among the enrolled gifted and corroborates the finding of Study #1. Also, it can be noted that 27% of the unenrolled gifted planned to work after high school, with no mention of other educational plans, versus only 6.7% of the unenrolled.

3. 66.7% of the enrolled versus 35% of the unenrolled planned to spend more than 4 years in higher education. This indicates that the enrolled gifted are more likely to aspire to the professions which require advanced training.

4. The enrolled gifted evaluated their teachers significantly higher when comparing them to teachers at other schools (degree of significance = .05). They
also were more likely to attribute their educational progress to teachers in their added comments. This indicates a higher regard for teacher competency among the enrolled.

5. The unenrolled were more likely to want to "live high school over again differently", to believe they should have studied harder, to believe their high school didn't offer enough opportunities for leadership, and to remember no significant learning experience in the past 4 years. A small trend is evident in the total results, indicating more dissatisfaction with personal educational progress among the unenrolled. This suggests further study.

6. The results of the study helped to refute some common criticism of gifted programs - that they create snobs, limit friendships, and lessen time for activities. The study revealed no significant differences in:
   a. Number and sources of friends.
   b. Number of and hours spent on school and community activities.
   c. Regard for peers.
   d. Satisfaction with course content, high school atmosphere and their class choices.
   e. Self-concept.
Overall

Study #2 indicates that students, parents and teachers are satisfied with existing programs and student achievement, and that they desire more course offerings.

Studies #1 and #3 indicate there are definite positive benefits associated with program participation. Schools with no programs or infrequent offerings might want to make revisions based on the evidence that such programs do favorably affect student achievement and aspiration. Parents and students should be made aware of the above findings when deciding upon program participation.
Will you please think of yourself at the present time in comparison to last year. As a result of this year's work, please rate yourself on the following items. Place the numbers 1, 2, 3, 4, and 5 on the line following each item according to the scale below:

1. much less  2. less  3. about the same  4. more  5. much more

Will you please think of your child at the present time in comparison to last year. As a result of his participation in the State Study, please rate him on the following items. Place the letters a, b, c, d, and e on the line following each item according to the scale below. You may have difficulty in responding to some of the items. Please make the best estimate that you can.

(a) Much less  (b) Less  (c) About the same  (d) More  (e) Much more

1. Ability to think things through for himself
   
2. Knowledge of subject matter areas (science, social studies, and others he has taken).
   
3. Interest in school
   
4. Ability to see relationships
   
5. Ability to find information
   
6. Ability to work well by himself
   
7. The liking and respect of other pupils for him
   
8. Ability to judge the usefulness of facts
   
9. Ability to get along well with his teacher(s).
   
10. Enjoyment of learning
    
11. Knowledge of arithmetic, spelling and other basic skills.
    
    
13. Ability to accept responsibility.
    
14. Opportunity to make things, experiment, and use ideas.
    
15. Knowledge of his strengths and weaknesses.
    
16. Willingness to do work as a leader.
Summary of Responses to Open-ended Questions

N = 31

17. Has participation in the study helped him? (Yes or No) Please explain.
   29 (Yes) 2 (No)

Some comments: Very bored in regular classes. Greatly widened interest in literature. Looks forward to class with great interest. The atmosphere created by a group of eager learners is tremendous. He now likes to work with other people more. She is more conscious of the world and life. Teachers have been an inspiration. Moved here because of good classes being offered.

18. Has participation created problems for him? (Yes or No) Please explain.
   7 (Yes) 24 (No)

Four comments regarding family differences of opinion stimulated by class readings and discussions, not necessarily negative, just noticed as a factor. Otherwise, mention of problem of learning to plan ahead and budget time wisely. Viewed as a positive learning experience though. Some concern expressed about work load.

19. Would you like to have the program continued? (Yes or No)
   30 (Yes) 1 (No)

Typical comments: Definitely yes. More challenging programs like this are needed. Expand the program for juniors and seniors. There is enduring need for challenging classes. We can't let this material resource go to waste. Happy with addition of more courses.

20. What changes, if any, would you suggest?

No changes were suggested, other than program expansion.

21. What specific changes have you noticed in your child which might be related to his attendance in the program for gifted students?

Typical comments: Reads more and better books. Now thoroughly enjoys learning due to excellent teaching. More relaxed about school and more confident. Has a better attitude toward minorities and less well achieving schoolmates. Has a better understanding of what being gifted means. Is more knowledgeable about career choices and college opportunities.
Please evaluate the course and the teacher. Please give your honest opinion. Do not give your name, but I would like to know the grade you received in the course so I can relate how the course satisfies the needs of students with different abilities.

To the best of your memory, please compare with all other teachers and courses you have had.
