"If the learner hasn't learned, the teacher hasn't taught." The CRT coordinator has the responsibility for providing his CRTs with the necessary information that will enable them to convey their skills and knowledge to others.

There are several state CCOE personnel who are available to travel to a local district for the purpose of providing a training program for CRTs. Such training programs can be accomplished in three or four clock hours.

Another plan for solving the problem of providing CRTs with effective instructional methods will find the CRT coordinator himself providing instruction to his CRTs in a short series of hard-hitting group sessions.

A third, but time-consuming option, for training the trainer is a process of individualized instruction provided by the coordinator. There are certainly other strategies, not the least of which might be development of an individualized, programmed instructional package designed for these purposes. Regardless of the strategy selected, however, it must be remembered that most CRTs hold down full-time jobs in addition to this new venture into the realm of education. Their cooperation must be nurtured and their desire to be of community service reinforced from the beginning. Acquisition of effective techniques of instructing others will be sought by most, but the coordinator may be inviting sudden waning interest if he attempts to require too many tedious hours of "learning how to tell people about the thing I know best".
In any event, an inservice instructional program should be offered sometime during the second or third week of the school term. After some ten or twelve days of coping with the problem of conveying to others "that which one knows best", many CRTs will have reached a learning-readiness stage.

To assist in this instruction the following pages are provided for the CRT coordinator. The theory of vocational education is critical to any vocational instructional program. That theory is well summarized in "Prosser's 16 Theorems of Vocational Education". (The 16 Theorems are worthy of review by all vocational educators as well as by those who are new to the business.)

More educational information that will be useful to a coordinator in providing instruction to his CRTs will be found in the accompanying item entitled "Some Facts That Affect the Teaching Process".

The five "stick figure" pages that complete this section of the manual may be useful to the CRT in the actual instruction of his student trainee as well as useful to the coordinator in training the CRT.
PROSSER'S SIXTEEN THEOREMS ON VOCATIONAL EDUCATION
a Basis for Vocational Philosophy

Dr. Charles A. Prosser, first National Director of Vocational Education, developed and publicized the following sixteen theorems in the early days of vocational education development in this country as a basis for sound and successful programs. Many attempts have been made throughout subsequent years to re-phrase or update these statements, without success. There are certain minimum standards without which one may not reasonably expect to operate a program of vocational education and be effective generally in programs of either preparatory or extension education. There is little reason to believe that these basic standards have changed materially since the early development of the program. For this reason, these sixteen theorems are being quoted with a short interpretation supplementing each theorem.

1. "Vocational education will be efficient in proportion as the environment in which the learner is trained is a replica of the environment in which he must subsequently work."

This theorem dictates that the type, kinds, amount, use and arrangement of space, materials, equipment and supplies for a preparatory program should be a replica of those in employment. It has a bearing upon the length of time devoted to skill development necessary to approximate industrial practice. It has implications for quality and quantity production expected. It has direct implications for teacher-learner ratios. It relates directly to the efficiency with which a student transfers from school to employment.

2. "Effective vocational training can only be given where the training jobs are carried on in the same way with the same operations, the same tools and the same machines as in the occupation itself."

The implications of this statement are that instructors must have recent employment experience in order to be skillful in the use of the latest equipment and must make use of the same types of tools and equipment as would be currently found in employment; and, use live work or work identical to that provided in employment for instructional experience rather than pseudo or so-called project work. Emphasized here is that the skills taught should follow the same basic practices as industrial employers would expect, and learners should be able to move from the training situation to employment situation with little need for adjustment.

3. "Vocational education will be effective in proportion as it trains the individual directly and specifically in the thinking habits and the manipulative habits required in the occupation itself."

Two important education factors are implied in this statement. First - thinking habits, which implies that the scientific or
problem solving approach is being developed in students; and second - that manipulative skills be performed with sufficient repetition that habit formation takes place. This, in turn, has implication for the length of class periods and for the total length of courses. There is also an implication here for a major aspect of the occupation, namely the technical related content where knowledge and facts are as essential for thinking, as tools are for productive work.

"Vocational education will be effective in proportion as it enables each individual to capitalize his interest, aptitudes and intrinsic intelligence to the highest possible degree."

This theorem has direct implication to class size, to individualized instruction, to instructional methods, to effective guidance and selection of learners, and to the promotional plans for the program. Here also, is that each specific occupation may well have its own unique requirements for admittance. For example, the depth and ability in mathematics could vary considerably between various occupations as would the physical and other characteristics of individuals.

"Effective vocational education for any profession, calling, trade, occupation or job can only be given to the selected group of individuals who need it, want it and are able to profit by it."

Vocational education is not for everyone and this statement implies that those admitted should be carefully selected through effective guidance procedures and should be potentially successful as future productive workers. Persons should be selected on the basis of their own interests and aptitudes, and on the basis of their being potentially a successful employee following preparation.

"Vocational training will be effective in proportion as the specific training experiences for forming right habits of doing and thinking are repeated to the point that the habits developed are those of the finished skills necessary for gainful employment."

This statement effects one of the most crucial requirements for successful vocational preparation. Few people could be prepared to perform skillfully some work without having spent sufficient time in performing the variety of skills required so that habit formation may take place to the end that they can practice these skills at a future date. The direct implication here is for adequate lengths of time during the day, and for an adequate period of time in months to cover the skill and technical development essential for effective employment as a productive worker.

"Vocational education will be effective in proportion as the instructor has successful experience in the application of skills and knowledge to the operations and processes he undertakes to teach."
The implication in this case is that a teacher cannot teach
that which they do not know; and, since the subject matter for
a vocational teacher is composed of the skills and knowledge
of the occupation, it would follow that teachers who are recogn-
ized as highly competent workers themselves through actual
successful employment experience would be most desirable for a
vocational program. The recency of any such experience is also
of utmost importance if learners are to be prepared for current
expectations of employers; and thus, the recency of work ex-
perience of the potential vocational teacher is implied in this
theorem.

8. "For every occupation there is a minimum of productive ability
which an individual must possess in order to secure or retain
employment in that occupation. If vocational education is not
carried to that point with that individual, it is neither person-
ally nor socially effective."

We see in the above statement a direct bearing upon the pro-
ficiency expected of learners who wish to find their place in
the world of work. Vocational education must prepare the in-
dividual to meet the employment requirements of employers.
Again, to meet these employment requirements requires con-
siderable preparation which relates to the length of the
period, day or year required for the particular offering.

9. "Vocational education must recognize conditions as they are and
must train individuals to meet the demands of the "market" even
though it may be true that more efficient ways of conducting the
occupation may be known and that better working conditions are
highly desirable."

Vocational education programs can never exist as merely
courses in a school system, but must be considered a
community-wide project. Therefore, this statement implies
the dire need for the use of craft committees; for instruc-
tors with recent employment experience; and for a program
that is geared to existing opportunities in the community,
the area or the state. Instruction beyond immediate needs
is encouraged, but not at the cost of basic current needs
of employers.

10. "The effective establishment of process habits in any learner will
be secured in proportion as the training is given on actual jobs
and not on exercises or pseudo jobs."

This theorem emphasizes again the need for practical, live
work on which learners may practice developing the skills
essential to an occupation. Learner, cannot obtain the feel
for the kind of work that will be done in employment when
working on pseudo jobs or so-called projects. The work per-
formed must be as identical and as up to date as possible
with current practice in employment situations.
11. "The only reliable source of content for specific training in an occupation is in the experiences of masters of that occupation."

This statement reaffirms the need for occupational analysis as the basic method for curriculum development. It also emphasizes the importance of effective involvement of representative occupational advisory committees in assisting in curriculum planning. The occupationally competent instructor must utilize both these resources in the construction of his detailed course content.

12. "For every occupation there is a body of content which is peculiar to that occupation and which practically has no functioning value in any other occupation."

This statement has direct implication to the close coordinated instructional program between the related technical construction and the skill development phase of the program. The application of mathematics and scientific principles to problems of the vocation should be the emphasis rather than teaching segregated subject matter courses which may or may not have direct relationship to the needs of the student. So-called broad or general areas of instruction in the subject matter unrelated to the problems at hand will have little benefit to the development of a competent worker.

13. "Vocational education will render efficient social service in proportion as it meets the specific training needs of any group at the time that they need it and in such a way that they can most effectively profit by the instruction."

This statement emphasizes the desire on the part of an individual to learn, in that vocational education should provide what the learner wants at the time he wants it, and in relation to his own recognized needs. This theorem has particular emphasis to the extension programs for employed workers since they will not use their own time to attend courses unless they are reaping direct benefits of immediate use from such attendance.

14. "Vocational education will be socially efficient in proportion as in its methods of instruction and its personal relations with learners it takes into consideration the particular characteristics of any particular group which it serves."

This theorem implies that there is no single set of general characteristics such as school grades, I/Qs or other such characteristics that should be used as a basis for projecting vocational success; but rather by knowing the individual student's interests, aptitudes and abilities, he can usually be guided into successful vocational experiences or guided away from enrolling in occupations for which he is unsuited.
15. "The administration of vocational education will be efficient in proportion as it is elastic and fluid rather than rigid and standardized."

Here the implication is for flexibility within the framework of sound standards which support good vocational education rather than maintaining a rigid and inflexible plan. Vocational educators should be always alert to possible improvement and willing to work toward continually adjusting the programs in light of changing employment requirements.

16. "While every reasonable effort should be made to reduce per capita cost, there is a minimum below which effective vocational education cannot be given, and if the course does not permit of this minimum of per capita cost, vocational education should not be attempted."

Preparation for employment is generally more costly than general education, whether it be at the skilled, para-professional (technical), or professional level. This additional cost is usually dependent upon the space, equipment, materials, and the necessity for smaller class size than would be true of normal academic programs of instruction. However, this statement directly implies that it is better not to attempt a vocational program than to operate it below the economic level that would lead to success. Vocational education is not cheap education, but it is economically sound to provide it.

If every vocational educator responsible for programs of instruction would only maintain this list of sixteen theorems in front of them and make a serious effort to meet these goals, the result would, in almost every instance, be sound, quality vocational education. The more nearly a vocational program can approach the full realization of these theorems in its operation, the higher the quality program will be. Any attempt to disregard any one of these basic and fundamental concepts can only result in undermining and destroying the program of vocational education for the citizens of the community.

Source of original statements:
SOME FACTORS THAT AFFECT THE TEACHING PROCESS

TEACHING IS A PROCESS IN WHICH:

The teacher plans, presents, tests, and thereby helps learner to understand information or develop a skill.
The learner develops new knowledge, new qualities, and new abilities and is able to apply them to a trade situation.

Even though the learner will not learn unless he takes an active part, the instructor is primarily responsible for success. "If the learner hasn't learned, the instructor hasn't taught."

1. The good instructor makes the most effective possible use of the learner's senses.
   a. Men learn faster by seeing and hearing than by hearing alone.
   b. Men learn still faster when doing or saying is added to seeing and hearing. It is doing which makes learning permanent.

2. The good instructor designs his lesson and course to take advantage of the three principles of learning.
   a. Readiness. You learn a thing when you feel a need for it. You must be interested. Conditions must be right.
   b. Effect. You must get satisfaction out of learning. Satisfaction comes from the success you have in learning the job. The more certain you are of success, the greater the desire to learn.
   c. Practice. You like to repeat those things you have learned to do well, so practice becomes a pleasure rather than drudgery. The more you do a thing, the better you are able to do it.

3. People differ in many ways, and these differences affect:
   a. The reasons they have for wanting to learn something. An argument that convinces one person of the need for a lesson may not convince another.
   b. The speed and thoroughness at which each person learns. A teaching approach that works with one person may not work with another. That is why it is important to make frequent checks to see if individuals are learning, re-teaching as needed, using varied approaches to get the job done.

4. The instructor must remember that adults:
   a. Usually can see relationships between what they know and what they are studying. If an instructor knows a learner's background, he may be able to discuss the lesson in terms the learner already understands.
   b. Are usually active learners and need a chance to apply what they are learning.
   c. Are serious, almost always seeking a specific goal.
   d. Are less inclined to be impulsive and need time to think processes and problems through.

</table>
COMPLIMENTING AND CORRECTING LEARNERS

A sincere compliment can help make learning more effective. Correction, on the other hand, can block progress if it is not done properly.

These suggestions will help the instructor handle both corrections and compliments.

1. Avoid criticism. Nobody likes to be criticized, and most men want to learn; therefore, avoid criticism in the sense of "bawling out" a man for having done something wrong. Instead, show him how he could have done it better.

2. Compliment before you correct. Always find something on which to compliment a man before you correct him. It will make him more receptive to your correction. Make sure the compliment is sincere.

3. Let the trainee correct himself. When the trainee is induced to correct himself, the factor of unpleasantness is almost entirely eliminated. First compliment, then ask the trainee if he can think of anything he could have done that would have made his performance better. If he can't think of anything, you will have to make a suggestion.

4. Don't overdo correcting. Good instructors exercise restraint when correcting. They know that if they correct every little thing a man doesn't do quite right, they'll make him nervous, damage his self-confidence, and instead of being a help, their corrections will be harmful and annoying.

5. Don't correct in front of others. This, the worst kind of criticism, is embarrassing and demoralizing.

6. Don't be too quick to blame the trainee. If he doesn't do something right, the fault may lie in your methods of teaching.

7. Encourage the trainee. Compliments are an essential part of teaching. They encourage learning. Use judgment and do not overdo compliments. They can be spaced to serve as a steady support for the trainee's morale. There should be a good basis for all compliments, but a man doesn't have to do a perfect job to deserve a compliment. Improvement or progress, even though slight, is a basis for a sincere compliment.

8. Be prompt with your compliments or corrections. Make them immediately following the trainee's performance. Don't do it an hour later or the next day. It is especially important to compliment a person at the end of the day—it sends him home with the feeling of success, makes him feel that you were of help, and that working with you is worthwhile.
YOU CAN INSTRUCT IF YOU WILL:

1. PREPARE THE LEARNER
2. PRESENT THE LESSON
3. APPLY THE LESSON
4. EVALUATE YOUR TEACHING

“If the learner hasn’t learned, the teacher hasn’t taught.”
PREPARE THE LEARNER

1. PUT HIM AT EASE
2. FIND OUT WHAT HE ALREADY KNOWS
3. SHOW HIM HOW AND WHERE IT WILL HELP
4. CREATE A DESIRE TO LEARN
PRESENT THE LESSON

1. PLACE THE LEARNER IN CORRECT POSITION

2. TELL, SHOW, DEMONSTRATE, QUESTION

3. PRESENT, STEP, BY STEP, PROGRESSIVELY

4. STRESS KEY POINTS

5. EMPHASIZE SAFETY FACTORS
APPLY THE LESSON

1. Have learner put the information or skill to use

2. Learners must participate

3. Prevent or correct errors

4. Insist on performance to match industrial practices

5. Commend good work
EVALUATE YOUR TEACHING

1. CHECK OR TEST PERFORMANCE
2. BE SURE HE KNOWS
3. RE—TEACH IF NECESSARY
4. FOLLOW—UP
5. EVALUATE AND IMPROVE YOUR TEACHING TECHNIQUE
TEACHER CERTIFICATION

In order to assist in the maintenance of the vocational integrity of the CRT program, planners and developers of the strategy have been in complete agreement that, among other safeguards alluded to throughout this manual, the CRT coordinator would hold a current, valid, Washington State Vocational Certificate. In addition to holding a current certificate, the potential coordinator must also enroll in an instructional program that speaks to techniques of coordination of a cooperative vocational education offering, and which deals specifically with the techniques of conducting a CRT program along the lines of the model described within this manual.

Furthermore, in order for a local school district to be eligible for state and federal reimbursement under any vocational education program, the responsibility of that program must lie with a vocationally certificated individual. Standards for certification of vocational teachers are available through the Certification Office of the Coordinating Council for Occupational Education or through the Assistant Superintendent of Vocational Education in the Office of the State Superintendent of Public Instruction.
COMMUNITY ENDORSEMENT AND SUPPORT

During the two years in which the LTF Program was being piloted, many unsolicited and solicited endorsements and testimonials were received by the Coordinating Council for Occupational Education and by the three school districts in which the program operated. These endorsements came in several forms. Many were oral, but a large number were supplied in written form. A representative sample from community trainers, school administrators and students is provided on the following pages.

The first four endorsements were taken from tape recordings of local school officials who were asked to express their opinions of the program in connection with the preparation of a slide-tape documentary developed by CCOE staff for public information purposes. The tapes were used in the documentary with permission of the speakers and are quoted here in an attempt to establish at least some small exposure to the potential implications that the program has, not only for better education, but also for improved school-community relations.
Comment of Mr. Roland Florz, Superintendent, Methow Valley School District:

"In my opinion, the CRT program is probably the best tool that has been devised so far. I can see it as an avenue for making skill education available for students that could not ever in any other way have it. I feel it should be made available to all the high schools. In respect to the school-community relationships, the experience we've had in just this one year with CRT has built a rapport between the school and the community -- at least, the community experienced.

Comment of Mr. Dean Farley, Superintendent, Darrington School District:

"The people of Darrington have expressed a desire for more Vocational Education in their school district, and being a small school, the CRT program has provided those vocational opportunities for the students who desire to do something different than the traditional classroom or academic program. I'm sold on the program. Even if the state does not fund the program, we're going to continue to operate it. We feel we're doing a lot of good for a lot of students; and we hope to continue with the program.

Comment of Mr. Harold Oxwol, Principal, Goldendale High School:

"I think it is an excellent program for kids. It gives them an opportunity to prepare for a jobable skill in a wide range of vocational areas. It makes it possible for us to take part in a Cooperative program and it would be prohibitively expensive to finance a broad vocational program that would meet the needs of the students. I feel this is better than a Cooperative program because the areas of training are as numerous as the vocations within the community. We've had enthusiastic support not only from the staff and students, but from the community as a whole.

Comment of Mr. Robert Boy, CRT Coordinator, Goldendale High School:

"The student interest in the CRT program is greater than in any other program that we have at Goldendale High School. The student progress in this program has been excellent. Each student develops an entrance skill and some students are discovering that they would like to receive additional training and go on to a specialization. They take the training on a one-to-one basis and are able to help the student immediately if the student doesn't understand."
October 19, 1973

Mr. Dennis Young  
Methow Valley Schools  
Twisp, Washington

Dear Dennis:

Community Resources training is an education program that really gets results in our school district. In the Methow Valley, there are very few things to "motivate" our young people. Historically, those born here have wasted their time during the public school years. They felt destined to work in a sawmill or in the woods, and many believed it foolish to consider anything else.

Now through CHI and your other vocational training programs the youth are being motivated to learn other skills. They are beginning to look beyond the tree-tops to careers in fields such as meat-cutting, auto mechanics, printing, retail merchandising, food services, taxidermy, and many others.

I urge you to do everything possible to retain and expand the CHI program, and we shall support you in this effort.

Respectfully,

Jack L. Stoner
Jack L. Stoner
SUBJECT: Community Resource Training
Methow Valley Schools - 1973

As a small business operator I am very impressed with the need for this type of a training program for high school students.

In the first place it is a voluntary choice by the student, with the advice and help of a qualified person to further his education in the direction he most likely would put forth his best effort. This, of course, makes everyone's time and effort well spent.

I feel also this approach helps all students attitudes. The student on the C.R.T. program would no doubt put forth his best effort. The other students desiring further education would not be held back or restricted. This also can make the instructor's do a better job by realizing the receptiveness of his students which would demand his best efforts.

The other asset to this vital program is the fact of job realization - quite often thinking about a specific job, skill, or position can be misrepresented easily. The personal contact of the particular situation will either increase or decrease the students inclination for the situation. There again, saving everyone's time and effort - especially the the student's and a future employer.

I still find it very hard to hire people qualified for my business needs and I am convinced the program could help very much.

Eldene Johnson
General Contractor
Methow General Service Co., Inc.
Twisp, Washington 98856
J. D. Stearns, Principal  
Goldendale High School  
Goldendale, Wash. 98620  

Dear Mr. Stearns:

The purpose of this letter is to relate to you the success of the Community Resource Training (CRT) Program in my view as an industrial laboratory supervisor.

In brief review, Jeff Pangle, a student at Goldendale High School, has been engaged in a program of training as a laboratory technician in our laboratory for this school year. During this time he has gained experience in the unique analytical procedures of the aluminum industry and has become quite able in general laboratory skills. At this point he has a level of competence which might be expected of a trained junior laboratory technician.

As proof of this competency I am pleased to relate that effective May 6, 1974 Mr. Pangle has been hired as a laboratory technician in this laboratory on a part-time basis until the end of the school year. During the summer he may be employed full time.

While it is impossible to speak for all potential employers; I feel that Mr. Pangle would, if he desired, be able to obtain full time, permanent employment as a laboratory technician upon graduation from High School, and immediately upon employment would be able to give to any employer a good measure of his salary dollar.

We are quite pleased with the outcome of this specific case of the CRT program and will be more than happy to take part in such programs in the future.

Very truly yours,

C. E. Browning  
Spectrographic Supervisor
Student Evaluation
of the CRT Program

I feel that the CRT Program is adding a great deal to my high school education. I believe that it's a program that is finally helping prepare students for their future lives.

In my Course as a Nurses' Aide, I am learning what my future as a Nurse is going to hold. You learn about the fun and the not-so-fun sides of your hopeful career before you throw away all the money it would take to further your education only to find out you just weren't suited for it.

Already I have experienced some rather trying moments that have almost caused me to change my mind. Such as at my first surgery I fainted and when I woke up I was almost ready to give up and go back to six hours of school filled with P. E. and Home Ec. but after 3 trimesters of one and one half hours of CRT a day I've not only definitely planned on becoming a Nurse but I also feel what I've learned while in the CRT Program will help me in furthering my education.

I've also found that CRT is not only good for helping you plan your future but also for finding employment. After your trainer has spent nine months training you to do a job it is more profitable for someone to hire you to do the job than to hire someone without training.

I can only see one drawback to the program. It does take time from your time at school that could be used to take other classes that you might also need in your future.

Overall I feel the CRT Program is very rewarding and worthwhile to the student participating in the program and also to the trainer that is training him.

### Behavioral Objective Training Plan

**School Name:** Goldendale  
**Course Title:** Clerk/Typist  
**Instructor:**  
**Student:**  

**Overall Behavioral Objective:** The student will satisfactorily demonstrate the below mentioned skills upon completion of this training.

<table>
<thead>
<tr>
<th>Behavioral Objective Competencies Needed</th>
<th>Date of Competency Achievement</th>
</tr>
</thead>
</table>

The student will be able to:

1. Report for training on a punctual basis;
2. Give proper notification of absences from training;
3. Establish a proper, business-like relationship with the supervisor and other office personnel;
4. Demonstrate the ability to file numerically;
5. Demonstrate the ability to file alphabetically;
6. Demonstrate increased proficiency in typing skills
   a. Using a manual typewriter;
   b. Using an electric typewriter;
7. Type correctly the forms used by the office;
8. Type the documents used by the office;
9. Type correspondence correctly;
10. Use the 10-key adding machine;
11. Compile information using files and other records;
12. Post financial information;
13. Use correct follow-up procedures;
14. Develop correct telephone technique when:
   a. Answering the phone;
   b. Taking messages;
   c. Obtaining information by telephone;
15. Greet the office guests and give them basic information;
16. Develop the correct handling skills for recording incoming and outgoing mail;
17. Dress properly for the office situation.

CRT coordinators who have piloted the program have discovered that there is certain information that is essential to some understanding of a student's motivation and desire for enrolling in the program. Such information may also be useful in working with the CRT who will train the student. Information about trainees can be obtained from an application to be filled in by the student. It is recommended that the CRT coordinator use a formal application form as the basis of a personal interview that he would conduct with the student applicant. Furthermore, if the demand for enrollment in the program is heavy and the size of the program is limited, the application form may well serve as one component of a selection process.

There are two forms suggested in the following pages (CRT B-74 and CRT B1-74). The coordinator may find that either one of these forms is compatible with the circumstances that exist in a given district. Some coordinators may choose to redesign one or both of the forms to fit existing conditions.

COMMUNITY RESOURCE TRAINER CONTRACT

It is essential that the Community Resource Trainer and the school understand the nature of the services to be performed by the trainer. Basic activities at least should be detailed in the form of a training agreement. It is recommended that all CRTs agree to and sign the form, CRT C-74, or something very similar. In addition, those Community Resource Trainers who will receive some form of wage or stipend from the school district for services rendered, must be under contract with the district in much the same manner as would be those other lay citizens of the community who might be employed to provide services. Form CRT D-74 has been used successfully. Both forms appear on the following pages.

Compensation paid a trainer may also cover supplies and equipment rental that are necessary for the training program, but that would not otherwise be necessary for the conduct of the trainer's business. It is incumbent upon the CRT coordinator to consult with the local school administration in order to be certain that all local regulations and policies are included in the contractual agreement.
COMMUNITY RESOURCE TRAINING PROGRAM

For All CRT's

Training Agreement

The following Community Resource Trainer representing __________________________ (name of business or firm) agrees to provide training in the basic skills, attitudes, and knowledge deemed necessary for a person to develop a saleable skill at an entry level as a/an __________.

This training will be provided for the following student-learners:____________________________

on a daily basis while school is in session.

The Community Resource Trainer realizes that daily instruction and close supervision of the student-learner is a necessary and essential part of this training. The students' training may be terminated upon notification to the Coordinator by the Community Resource Trainer.

The Community Resource Trainer will consult the Program Coordinator on any problems that arise concerning the performance of the student-learner(s).

The Program Coordinator will assist the Community Resource Trainer with training problems pertaining to the objectives of the training outline. The Program Coordinator will provide assistance in obtaining instructional materials and supplies.

The Community Resource Trainer shall at all times maintain a student-trainer relationship consistent with the provisions of the Department of Labor and Industries.

STUDENT TRAINING AGREEMENT

Although the CRT program is not a traditional vocational cooperative training strategy, it draws upon some of the techniques that have been developed over long years of experience in cooperative education. One of those techniques is the requirement that the student and the school enter into a training agreement. Such an agreement spells out the responsibility that must be assumed by the student in order to assure not only that the educational effort is successful for the student, but that the present and future integrity of the program is protected.

Program integrity is critical if CRT is to serve the needs of future students. One way to help establish integrity of a program is to lay out a standard of reasonable conduct commensurate with the expectations that employers traditionally have of employees—a standard that attempts to assure Community Resource Trainers of appropriately motivated students in return for their instructional effort.

Form CRT E-74 has been used to good advantage in impressing upon trainees the need for attitudes conducive to an effective learning atmosphere. It will be noted that the agreement is signed by the student, the coordinator, and the parent in order that all are aware of the characteristics and requirements of an educational strategy unique among traditional high school offerings.
I AGREE TO ABIDE BY THE FOLLOWING CONDITIONS:

1. To drop all activities which interfere with my successful completion of education and training in the community school program.
2. To maintain proper personal appearance requirements of the course in which enrolled.
3. To be in attendance as required unless excused by the community resource trainer.
4. To maintain proper behavior required for learning to occur for myself and others.
5. To maintain proper business conduct at all times.
6. To abide by any and all rules and regulations, practices and procedures of the community school program not specifically stated above.
7. The student has responsibility for providing his or her own transportation to location.

I UNDERSTAND THAT ANY VIOLATION OF ANY PART OF THE ABOVE AGREEMENT MAY RESULT IN MY BEING DUMPED FROM THE PROGRAM AT THE DISCRETION OF THE INSTRUCTOR.

Signed
Student

I have read and understand the above agreement my son or daughter has entered into as a pre-requisite to acceptance into the community school program of vocational education and training. I grant permission for my son or daughter to be enrolled in this program and will assist in helping my son or daughter to live up to the terms of this agreement. I understand that my son or daughter is enrolled in a high school training program and will receive no financial reward during instructional hours.

CRT COORDINATOR'S CALL REPORT

There are probably as many different call report forms as there are school districts with cooperative vocational education programs. The CRT coordinator will benefit from keeping a record of coordination activities. The next page provides an example of a very simple format (CRT F-74). There are several reasons for keeping a call report file. Chief among these are:

1. The coordinator has a record of conversations with the trainer that relates to student training station problems that might best be solved in a school or classroom setting.

2. The coordinator has a record of trainer comments regarding the student's progress (or lack of it).

3. The coordinator may be called upon to justify his time being spent in the community, outside the school plant. The call report file provides logical documentation on those few occasions when such justification seems most appropriate. (It is not uncommon for some school districts that support vocational cooperative programs to require, as a simple matter of course, regular and periodic submission of coordinator call reports.)

4. The coordinator has a record that may be used as the basis for preparing an annual district report on CRT program activities.

5. The coordinator may use the call report as the basis for establishing a file for potential community resource training stations.
STUDENT ATTENDANCE RECORD

The student attendance record may well vary from one school district to another in keeping with local attendance policy. The sample displayed on the next page (CRT G-74) has been used effectively in at least one school district with a CRT program. The purpose of an attendance record is three-fold:

1. It provides the trainer with a record of the number of hours that he has devoted to the training of his student.

2. It assists the coordinator with at least one estimate of progress in terms of hours of training that the student has devoted toward completion of the behavioral objectives.

3. It may provide the school with an attendance record for reporting purposes for state reimbursement. Here again the coordinator is well advised to consult with local school administrators as to local attendance policies and regulations.

THE COMMUNITY RESOURCE LABORATORY
FACILITY/TRAINER DESCRIPTION

It is entirely possible that in a given community there are certain training station sites that would be more appropriate than others. On the occasion that a CRT coordinator might have for touring and/or observing a particular training site, it behooves him to record his impressions of the instructor's qualifications and the training station or laboratory facilities that are available to the student. Such information is valuable to the coordinator in documenting his selection of a particular site when such documentation becomes necessary.

Information about the facility and instructor are valuable aids in informing the student about the station in which he will be learning. Parents may also wish to have some insight into their youngsters' educational environment. The coordinator may wish to update his information about instructor and facility qualifications when changes occur on the training station site. Such records should prove to be invaluable, not only for future reference by the present coordinator, but also for reference by any future coordinators who might be employed by the district.

Coordinators of cooperative education programs have learned the desirability of setting standards for local training stations that are in line with community educational philosophy. The suggested form displayed on the next two pages, CRT H-74, can be useful in serving as the basis upon which local training station standards can be established. In addition to a suggested blank form, a sample which has been filled in will be found. Noteworthy attention should be given to the description of the learning activities, particularly as such activities differ from the statement of behavioral objectives discussed earlier in this manual.
Brief description of instructor's qualifications:

Ms. Jones - Inservice training plus seminar classes in: x-ray techniques for dental assistants, office techniques, and practical management for dental offices.

Ms. Johnson - Inservice training plus seminar classes in: practical management for dental offices, office techniques and x-ray. Also training courses for dental laboratory assistants.

Description of laboratory facilities:

Dr. Smith has a large, well-equipped office with two patient treatment rooms, a dental laboratory, office space and reception room.

Describe the learning activities that will take place:

The following is a partial list of the student's learning activities:

1. The student will be given assignments related to the study of anatomy;
2. The student will be given study assignments related to dental terminology and will apply such terminology;
3. The student will be given assignments applicable experiences to patient record keeping;
4. The student will be involved with the doctor/patient relationship at chairside;
5. The student will be given experiences in the dental laboratory;
6. The student will be given experiences related to x-ray equipment.
7. The student will be given experiences related to telephone communication with patients.

The Community Resource Trainer may find it advantageous to identify the costs that are incurred by his venture into the cause of education. Some will find that there are materials, supplies and equipment rental costs over and above those that are experienced in the normal operation of a business enterprise. The form supplied for this purpose is CRT 1-74. Such documentation may be of value in requesting school district reimbursement for unusual and/or regular additional costs. An accumulation of such information from a number of community resource trainers would go far in establishing the case for strong community support of the program.

STUDENT EVALUATION

It is recommended that CRT student's progress be evaluated by the trainer and the coordinator on at least a quarterly basis. The evaluation should be based upon the pre-established behavioral objectives. It is important that the coordinator explain to the Community Resource Trainer what the basis for evaluation will be with such explanation being made both at the time the student begins his training and at the time that the evaluation is made. It is suggested that the trainer will fill out the evaluation form in the presence of the trainee so that positive and negative comments can be discussed openly. The completed evaluation form should be reviewed by the coordinator and the trainer prior to the coordinator's review with the student. Sample forms, CRT J1-74 and J2-74, are provided for the periodic evaluation.

There should also be an evaluation of the student upon completion of the course that describes the competencies that the trainee has developed. Sample form CRT J-74 is provided for that purpose. On the page following the sample evaluation forms, there will be found a sample Completion Certificate that should be awarded to the student. It is recommended that the awards be made to CRT students in a public or student body meeting.

For students under 18 who will enter employment in hazardous occupations, for which the CRT training has been provided, the Certificate of Completion is absolutely necessary for such students to receive a work permit from the State Department of Labor and Industries. The experience of those who have piloted the CRT program has shown that the Completion Certificate is also a valuable tool for the CRT graduate in
applying for a job because it spells out the nature of the job training and the competencies that have been developed.

In addition to the sample Completion Certificate, the reader will find a sample "Honorary Degree" certificate. This certificate is awarded to those Community Resource Trainers who have given of time and effort to provide local high school students with job entry skills. These certificates may be awarded in a number of ways, from the simple hand delivery by the coordinator to the trainer, to an awards ceremony or appreciation banquet in which the local superintendent or some other school official would present the certificate. (The appreciation banquet might well be planned, sponsored and carried off by the students in honor of their trainers.) Such a ceremony might also be the occasion for awarding of Completion Certificates to the student trainees.

and has achieved these accomplishments identified on the reverse side.

This ______ day of _______.
has achieved the following competencies:
The form on Page 59, CRT K-74, is recommended for use in developing a file of information on potential training stations. Information for this file might be accumulated by the coordinator during a concerted effort to identify possible training stations either prior to enrollment of students or after enrollment has been completed and student training desires are specifically known. The best way to obtain data for this form is through a personal interview; the form may be completed during the initial interview with a potential trainer and made a part of the coordinator's call report file, CRT F-74 (p. 42).

It will be noted that some of the information sought here is also found on Form CRT H-74 (p. 47). The coordinator may wish to consolidate selected information from these two forms to establish one form for local use that provides the necessary data for a complete file on training station sites.

Text and Supply Requirements:

Description of potential training "laboratory" and qualifications of trainer:

______________________________
INSURANCE

Whenever a student leaves the school premises, insurance coverage is a factor that must be seriously considered by the school administration. In the CRT program there is a concern for insurance coverage for the student, for the school, and for the Community Resource Trainer. Placing a student with a trainer off campus negates school liability insurance unless the superintendent contacts the school insurance agent to make him aware of the fact that students are being trained off campus. It is critical that the insurance agent understands that off campus training of students may take place at any time during or outside of the traditional school hours. Unless the school insurance agent is made aware of this extension of the school program into the community, the trainer may become liable for student injuries. It is incumbent upon the coordinator to impress upon the trainer that the trainer is not liable—that the school insurance covers the trainee and that the training situation is, for insurance purposes, considered to be a school classroom. The Community Resource Trainer must have this assurance if he is to be expected to continue his efforts in the training program. The school administration must make certain that the student, Community Resource Trainer and the school district are covered with appropriate insurance.

For students who are receiving training in "hazardous occupations", it is important to know that this designation does not apply to a training situation. "Training" implies that the student will learn the safe way to perform a task rather than discovering safe and unsafe practices through trial and error learning as is too often the case in an actual employment situation. The coordinator must assume the responsibility of analysis.
every training program for unsafe conditions and potential hazards if he is to function in the best interest of his students.

In summary, then, with regard to "hazardous occupations", it appears that students under 18 may train in such occupations under strict supervision, but may not be employed in such occupations without evidence (see section of this manual on Student Evaluation and Completion Certificates) of completion of supervised training in the occupation. The specific behavioral objectives for the course must include safety training applicable to the specific job for which the student is being trained.
STATE AND FEDERAL REGULATIONS

There are certain legal constraints that affect cooperative education and other educational activities that find students in training stations outside the school plant. In the State of Washington the applicable legislation, policies and regulations fall within the purview of the State Department of Labor and Industries. There is also some federal legislation that impinges upon student training outside the actual public school site. On the following pages there will be found lists of applicable documents, excerpts from legislation, and information about sources of additional knowledge relative to student concerns.

It must be emphasized that the CRT student on the training station site is under close supervision of a trainer qualified in the occupation for which instruction is being provided, and that the training outline is developed in such a way that there is good assurance that the student will not be involved in productive labor during his training and instructional period. Furthermore, CRT coordinators are urged to work in close cooperation with personnel in the Washington State Department of Labor and Industries. Constant attention to all appropriate rules and regulations are highly desirable in this regard.
TRAINEES

The Supreme Court has held that the words "to suffer or permit to work", as used in the Act to define "employ", do not make all persons employees who, without any express or implied compensation agreement, may work for their own advantage on the premises of another. Whether trainees or students are employees of an employer under the Act will depend upon all of the circumstances surrounding their activities on the premises of the employer. If all of the following criteria apply, the trainees or students are not employees within the meaning of the Act:

(1) the training, even though it includes actual operation of the facilities of the employer, is similar to that which would be given in a vocational school;

(2) the training is for the benefit of the trainees or students;

(3) the trainees or students do not displace regular employees, but work under their close observation;

(4) the employer that provides the training derives no immediate advantage from the activities of the trainees or students, and on occasion his operations may actually be impeded;

(5) the trainees or students are not necessarily entitled to a job at the conclusion of the training period; and

(6) the employer and the trainees or students understand that the trainees or students are not entitled to wages for the time spent in training.

STUDENT TRANSPORTATION

It must be made clear to the student and to the student's parents or guardian that, in the final analysis, the student is responsible for his own transportation to and from the school site and the training station. There are several transportation options that the local district may wish to consider. First is the possible use of a school bus to transport a group of students to and from a common, central location. This option may be considered in order to reduce individual student costs and to retain some measure of school control over student travel. A second option would provide school authorization for students to travel in their own automobiles. A third option would see establishment of a system whereby parents provide transportation of students. A fourth option is the obvious car pool which may be provided by either students or parents.

There are regulations available from the Transportation Office of the State Superintendent of Public Instruction that deal with several of the options listed above. Such regulations provide, under specified conditions, for state reimbursement of transportation costs for educational purposes. The local school administrator should investigate these possibilities. Again, the student should understand that when all else fails, he alone is responsible for transportation to and from his training station.
SOME POSSIBLE AREAS OF OPERATIONAL CONCERN

The area of interpersonal communications is a matter of concern in nearly every human activity. The CRT program does not deviate from the norm in this regard. It is essential that communications lines are open between and among the CRT coordinator, CRT students, Community Resource Trainers, school district administrative staff and school faculty.

CRT coordinators have identified several potential problem areas during the course of the pilot project. Those concerns that seemed to be particularly common or difficult are described below. There are few if any pat solutions, but there are many plausible courses of action that have been born of necessity. A system of communications among CRT coordinators across the state will do much to identify possible effective solutions to some of the problems mentioned below. The CRT coordinator is urged to record action taken, and procedures and techniques used in alleviating common concerns. It is suggested that such a record be made a part of the local coordinators copy of this manual for possible insertion in subsequent editions.

1. Student excuses can be a problem if the student fails to call the coordinator and the CRT steps should be taken to impress upon the student the importance of calling in when absent.

2. There will be times when the Community Resource Trainer will have second thoughts about the responsibility that he assumed when he agreed to become a "School Teacher." On occasion a trainer will call the coordinator, announcing that he is resigning.
immediately. In order to save the program for a particular student, the coordinator must act with all due haste to ward off such an action. Frequently the problem will lie in a misunderstanding or lack of communication between the student and the trainer, but the problem may also reside in a misunderstanding between the trainer and the training agreement with the school.

3. Another source of difficulty may arise when there are student-trainer personality conflicts. There are a number of techniques that a coordinator may use to resolve, or at least alleviate such conflicts.

4. There is a possibility that a trainer may feel that the coordinator is not coordinating. Such a feeling may be real in that the coordinator may inadvertently neglect to call upon a trainer if little or no difficulty has been apparent on the part of the student or his training station. The coordinator should establish a minimum call calendar and make his calendar known to all trainers. Provision will be made for additional calls to be made at any time the student or trainer desire the coordinator's counsel.

5. Lack of student interest in the CRI program may be the result of a communication problem between the coordinator, high school counselor and other school staff. It is the responsibility of the coordinator to keep the counselor, the teachers, the staff and the high school principal informed. The coordinator should consider this as a regular and continuing part of his job, not without knowledge the program on the part of all high school
personnel, it is unreasonable to expect counselors to inform students or to suggest that students inquire about the program.

6. Another potential problem area relates to one of compensation for the trainer. Such compensation may take the form of a stipend or wages or simple reimbursement of the trainer's expenditures for instructional materials over and above normal business expenses. The trainer may, at the outset, be magnanimous to the point of declining any offer of compensation, but during the course of the year, may decide that compensation is a matter for real concern. The coordinator and the school administration must be prepared to act appropriately in order to resolve the problem before a good training station is lost.

7. There will be occasions when the Community Resource Trainer will find it necessary to move to another community during the course of a school term. The coordinator should have a plan that can immediately become operational in an attempt to salvage as much of the training effort as possible and accommodate the needs of the student who has been assigned to train under the URI in question.

8. When the CFT coordinator is working with the trainer during the course of instruction, he may often feel himself in the role of counselor. It is essential that in every contact the coordinator will show and feel real concern for the trainer and his or her instructional problems, and for trainer-student problems that might exist.
9. The CRT coordinator must show and feel the same, personal concern for student-trainer problems. The coordinator constantly must assume the counseling roll when conversing with the student about his relationship with the trainer.

10. A potential problem area can be side-stepped when the coordinator makes it absolutely clear to all parties that confidential information taken from the trainer about the student (or the student about the trainer) will remain confidential. The coordinator and the student both must recognize the confidential nature of some business practices that are indigenous to each training station. Such confidentiality must be impressed upon the student in order to ease potential concerns of the trainer.

11. A program of positive public relations between the coordinator, school, and CRTs will do much to relieve potential problems. It is essential that the coordinator make a point to thank all who have participated in and co-operated with the program at the end of the year—employers, trainers, supervisors, staff administration, faculty, and parents. The Honorary Certificate of Achievement in this manual is one effective way of saying thanks to the downtown facility.

12. One of the CRT training courses is bound to be completed prior to the completion of a regular school term. The coordinator must be prepared to resolve the problems that develop when the student is in one of the training station upon the date the course is terminated. It is important that the instructor, who is to serve as a consultant to the coordinator, be aware of the student's unit of study and be prepared to assist the coordinator in the assignment of the student at that time.
ADVISORY COMMITTEES

The local vocational education committee is one of the hallmarks of vocational education. It has long been recognized that a working representative advisory committee can serve as the back-bone for the effective operation of a well-planned vocational education program. There are numerous publications that speak to the purpose, establishment and operation of vocational advisory committees. One such publication is produced by the American Vocational Association and is available from Publication Sales, American Vocational Association, 1510 14th Street, N.W., Washington, D.C. 20005. The name of the booklet is The Advisory Committee and Vocational Education. It was published in 1969 and sells for $1.25 per copy with a 10% discount on orders of ten or more. In addition to that booklet, the following pages provide the CRT coordinator with valuable information relative to the utilization of advisory committees. Critical points to be considered in working with local advisory committees are as follows:

1. That they be established in accordance with Washington State requirements for such committees.

2. When an advisory committee meeting is called, the coordinator should have identified a definite purpose for the meeting. The purpose of calling a meeting for the sake of "having a meeting" doesn't pay.

4. Keep advisory committee representatives informed on a regular basis so that they plan on attending regular, well-organized meetings.
b. Provide bulletins, memorandums or other written communication to all members;

c. Consult with individual members between meetings.

Old Capitol Building
Olympia, WA 98504

UTILIZATION OF ADVISORY COMMITTEES

The term "Advisory Committee" refers to the committee or committees appointed by local school authorities in connection with the operation of a local program of vocational education.

PURPOSES AND FUNCTIONS OF ADVISORY COMMITTEES

Advisory committees are organized for the general purpose of making the vocational education program as efficient and effective as possible so that community and trainees may be served to the greatest advantage. Their functions include recommendations and advice to the local school authority on such matters as the following:

1. Establishing standards and selection of trainees.
2. Determining training needs and training possibilities.
3. Determining content and length of course.
4. Determining qualification needed for and selecting instructors.
5. Selecting equipment and instructional materials and establishing specifications for training areas.
6. Establishing public relations and public relative to the program.
7. Counseling, guidance, and placement of trainees.
8. Selecting production work or "real" project to be used as a practical vehicle in obtaining training objectives.
10. Receiving and reporting information and constructive legislation for vocational education on local, state, and federal levels.
11. Serving as the medium through which the community helps the program.
TYPES OF ADVISORY COMMITTEES: GENERAL, INDUSTRY, AND OCCUPATIONAL COMMITTEES

The term "general advisory committee for vocational education" is used here to designate an overall advisory committee which may be utilized by local school authorities in the vocational education program within the geographical area served by the school system. This committee will provide advisory service in determining school system objectives and policy in connection with the types of vocational education services that are needed in the community and the relative emphasis that should be given to the several phases of the program. This committee may also provide a desirable relationship with the public. The committee does not become involved in the details of the specific training functions for an industry or occupation and should never be used instead of industry or occupational committees, but may supplement such committees in the promotion of their interests and responsibilities.

"Representative advisory committees" are sometimes referred to as "industry advisory committees." These committees may be used in suggesting or determining types of training service needed for an industry such as aircraft, machine-tool, shipbuilding, electrical, and restaurant. This type of committee may also be used to supplement craft or occupational committees within an industry. It is not advisable to use this type of committee in planning courses and facilities for training in specific occupations. It may be used, however, in selecting members for craft or occupational committees that do have this responsibility.

"Craft or occupational committees" are those used in planning training for a specific craft or occupation, and are involved with the details of the training program content and length. It is recommended that this type of committee be used wherever possible in planning courses of instruction and particularly where the training is in an apprenticeable craft.

All of these committees come into being through appointment of their members by local school authorities. Apportionment of members to the committees should be based upon the recommendations of the organizations, industries, or groups which they represent.

COMPOSITION OF EACH TYPE OF COMMITTEE

General Advisory Committee for Vocational Education

Since the activities of the general advisory committee for vocational education are largely promotional, it is advisable to have representation from as many as possible of the organizations or groups within the community interested in all phases of vocational education. This committee may consist of as many as 20 or 70 members, kinds of organizations with industrial interests may be represented on the committee include: Central Labor Council, Metal Trades Council, Building Trades Council, State Employment Service, employer associations, Federal and State apprenticeship training agencies, Chamber of
Commerces, veterans' organizations, and service clubs. Any other organized groups which may be helpful in the promotion of the overall program may be included. This committee may have an executive board of four or six members who can meet as frequently as necessary on call of the school authorities to consider matters of urgency pertaining to the vocational program.

Representative Advisory Committees for Industrial Education

Representative advisory committees for industrial education or industry advisory committees should be composed of equal representation from industrial management and labor. Members should be selected by the industrial organizations they represent. These committees will be most effective if their membership is confined to six or eight, with alternates for each position.

Craft or Occupational Advisory Committees

Craft or occupational advisory committees should also consist of equal representation from industrial management and labor (employers-employees), appointed by their respective employers or labor organizations. All members, however, should be qualified either as workers or supervisors in the occupation the committee represents. A committee of six or eight with alternates is most effective.

It is recommended in the case of apprenticeable occupations where "joint management-union apprentice committees," as organized by the Federal Bureau of Apprenticeship or State apprenticeship agencies, have been established that such committees be utilized by school authorities as craft advisory committees. However, their status as school district committees should be established by appointment in this capacity. Utilizing a joint apprenticeship committee in a dual capacity would enable a much higher degree of coordination and cooperation in training in the crafts; for example, pre-apprentice, apprentice, and transplant-extension training. Such committees are especially advantageous in channeling pre-apprentice or preparatory trainees into apprenticeship. The combination eliminates the confusion which often arises when more than one committee is utilized in training for a specific craft or trade. When joint apprenticeship committees are used in this dual capacity, they should clearly understand the difference between their function in the apprenticeship program and their function in connection with the school program.

Some joint apprenticeship committees are also designated as a request could be made to the advisory committees or other trade or industry organizations, and/or trade or industry organizations, if such a committee to serve as an advisory committee. School authorities should consider the craft, such as, "Craft or Occupational Advisory Committee," in the school plan, with a similar plan for the city or town of the school, or in the school, or for the school, or for the town, or for the city, or for the county, or for the state, or for the United States.
Distinction Between School Advisory Committees and Local Joint Apprenticeship Committees

While it is recommended that local joint apprenticeship committees also be used as craft advisory committees to the schools on all school training pertaining to their respective crafts, it should be kept in mind that the functions and responsibilities of the committees in their two capacities are entirely different.

Joint apprenticeship committees are administrative in nature on matters pertaining to apprenticeship standards. They are advisory, only, when being utilized by the schools.

General procedure for using these committees in a dual capacity is to have them meet as joint apprenticeship committees, completing their agenda for this program, and then become craft advisory committees acting on the agenda presented by school authorities on school training problems pertaining to their crafts. This eliminates the necessity for calling the committee out on two separate occasions and also avoids the confusion and misunderstanding which may prevail in the minds of members when administrative matters pertaining to in-school training and those related to school training are being considered.

SUGGESTIONS ON ORGANIZATION AND MANAGEMENT OF GENERAL AND CRAFT COMMITTEES

When a craft advisory committee is first organized, it is advisable to request the respective firms or organizations to submit their nominations of members for staggered terms of tenure. For example, in the case of a three-three craft committee, one member from each side serves for a one-year term, one for a two-year term, and one for a three-year term. All subsequent appointments are for a three-year term. This eliminates the possibility of a complete change of committee members, thus providing the schools with a nucleus of experienced members to the committee at all times. It is well to stress with the respective employer and craft organizations the importance of nominating those representatives who have an interest in the occupation and the time and willingness to carry out their responsibilities as members, including attendance at meetings. When a committee member becomes irregular in attendance at meeting, the school authorities should request a written statement for a replacement. A similar staggered term for members may be arranged in the organization of the general advisory committee for vocational education and for industry advisory committees.

At the first meeting of an advisory committee, a representative of the vocational department of the local school system should serve as temporary chairman. The first order of business should be a discussion of the purposes and functions of the committee and the selection of a permanent secretary to serve for a definite period. It is suggested that one of the officers come from the employee representatives in the case of industry or craft committees.
The agenda should be prepared prior to each meeting and sent to each member far enough in advance to permit consideration of the problems and topics to be discussed by committee members. Attendance at committee meetings is considerably better when members are reminded by telephone just before the meeting. Where possible, it is well, at least once a year, to hold a general meeting of all advisory committees where an open discussion of the total program of vocational education may be conducted. Through such a meeting, members of all committees become better acquainted with the total program and the accomplishments and progress of the specific activities and services. All recommendations and suggestions of a committee should be formal and made a matter of record in the committee minutes. It should also be a part of the committee's responsibility to follow up all recommendations.

UTILIZING THE SERVICES OF ADVISORY COMMITTEES IN PUBLIC RELATIONS

Advisory committees are an excellent medium for publicizing the vocational program and the building of strong public relations. Each member of an advisory committee should be encouraged to carry back to his organization complete information on the objectives and accomplishments of the whole vocational program as well as those of his own specific field. Members of the general committee, as well as of craft committees, are extremely helpful in gaining proper recognition and support for financing vocational programs through their appearance at meetings of the board of education, community organizations, and other groups whose support is essential to the effectiveness of the program.

In some communities, it has been found to be quite beneficial to conduct an "open house" where significant activities and services of the vocational education program may be exhibited to the general public. This type of public relations becomes especially effective when an "open house" committee composed of representatives from the general and craft advisory committees assists school authorities in planning and publicizing the program. Committees may also be helpful in securing newspaper and radio publicity for the vocational program. It is advisable to utilize committee members in connection with special program activities and meetings in which their cooperation and participation will be of interest. Activities of this nature by committee members have a tendency to arouse their enthusiasm and support for the program.

School authorities should not hesitate to take their problems to the advisory committees. Usually, the committees will be ready and willing to assist in every way in bringing about a sound and effective program.

IMPORTANT POINTS TO BE REMEMBERED WHEN WORKING WITH ADVISORY COMMITTEES

Experience in working with advisory committees has emphasized certain working principles and methods that should be kept in mind as a guide to success. The following are presented for consideration:
1. Committees are not administrative in their functions, but are organized for the purpose of advising and counseling with the school authorities on matters concerning the program and making suggestions and recommendations for the guidance of local school authorities with respect to program operation. They should be given a clear understanding of their objectives and responsibilities at the outset of their service.

2. Since members of committees serve on a voluntary basis, they should not be expected to carry out functions in which considerable detail work is involved.

3. School authorities should acquaint committees with the total vocational program including all of the various services.

4. Informational material in the program should be put in the hands of each of the committee members and this material should include pertinent releases and publications of the local board of education, State Superintendent of Public Instruction, and the U. S. Office of Education.

5. Regularly scheduled meetings should be held and special meetings may be called at the request of school authorities, the chairman of the committee, or any three members of the committee.

6. Insofar as possible, committee meetings should be held at the building in which the training program is conducted.

7. Committees working in connection with new programs or courses should meet at least once a month during the first year of operation or until such time as the program is functioning smoothly.

8. All committees should meet not less than four times during the year.

9. All facts pertaining to the phase of the program for which they are particularly responsible should be made available to them.

10. Consultants from industrial organizations and agencies should be made available to the committee in providing specific information that may be needed.

11. A representative of the vocational department of the local school system should be in attendance at all meetings.

12. In programs where supervisors and/or coordinators are employed, the supervisor and/or coordinator responsible for the particular program for which the committee is responsible should be in attendance at all meetings.
13. Instructors should attend committee meetings when requested.

14. Complete information on the financing of the vocational education program should be available to all committees.

15. Information on existing and pending vocational legislation should be provided to all committees and the aid of committees should be solicited in support of constructive new legislation.

16. School officials should maintain a complete file of the minutes of all committee meetings. Copies of minutes should be distributed to all committee members and alternates.

PITFALLS TO BE AVOIDED IN WORKING WITH ADVISORY COMMITTEES

The skill with which the organization and work of advisory committees is managed by the local school authorities will, in a large measure, determine the benefits that may be derived from their use. In this connection, it may be well to keep in mind possible pitfalls that may be encountered if not avoided through recognizing them in advance. School authorities should not:

1. Hand-pick committee members.

2. Permit committees to become administrative in their functions.

3. Conceal facts pertaining to a program from a committee.

4. Enter into labor-management controversies.

5. Fail to keep a copy of the minutes of each meeting on file.

6. Take action within the realm of a committee's advisory function without first consulting with the committee.

7. Start programs before meeting with and consulting the committee involved.

8. Start production projects within the training program before conferring with the interested committee.

HIGH POINTS IN THE INTEREST OF EFFECTIVE INSTRUCTION

1. The objectives of a vocational education program can best be accomplished when the training offered is planned in cooperation with management and labor representatives of the industries served.

2. The full cooperation and support of local industry and its workers can be expected when, and only when, their representatives have had a part in determining training needs, planning, and operating the program through recommendations and suggestions.
3. Committee members will be truly representative of their respective organizations only when they have been selected by such organizations.

4. When more than one committee becomes involved with training for a specific craft or occupation, the overlapping of functions tends to disrupt the efficient operation of the training program, and it is, therefore, advisable to utilize existing committee members whenever possible for advisory purposes in connection with the school program.

5. Any vocational program which attempts properly to serve industry and trainees must have the respect and confidence of the industry served; and the degree to which this respect and confidence exists is a measure of the value of the program.

6. Local advisory committees should be fully informed of their functions and responsibilities at their first meeting in order that they may understand clearly the purposes and limitations of their service to the schools.

7. Advisory committees should be informed that training offered through the preparatory or pre-apprentice courses is designed not to prepare finished workmen but to prepare students for entrance into their jobs as apprentices or learners; and, on this basis, credit for this preliminary training may be arranged.

8. Instructors of vocational subjects should be acceptable to the management and labor representatives on advisory committees from the standpoint of both occupational competence and personal qualities.

9. Craft (or occupational) advisory committees can be used in planning training and courses and also in revising program and courses to meet the changing conditions in industry and requirements of industrial workers.

10. The cooperation and support of industry and industrial workers cannot be secured through the mere appointment of a committee. The committee must be active and functional in the development and maintenance of the program.

11. Experience proves that vocational education can provide the highest degree of service to both industry and trainees only when the training programs are planned and managed with the advisory assistance of management and workers.
