Several intermediate performance objectives and corresponding criterion measures are listed for each of 24 terminal objectives for a basic secondary level service station attendant course. The materials were developed for a two-semester course (2 and 3 hours daily). The specialized classroom and shop experiences are designed to enable the student to develop basic competencies in the operation of an automotive service station with emphasis on sales, service, recordkeeping, safety, preventive maintenance, product display, customer relations, cooling systems, electrical systems, and lubrication. The titles of the 24 terminal objectives are Orientation, Safety, Human Relations, Island Sales, Daily Sales Records, Hand Tools and Measurements, Parts and Service Manuals, Lubrication Service, Motor Oil, Filters, Tires and Tire Service, Wheels and Wheel Balance, Basic Electricity, Engine Theory and Design, Tune-Up Electrical, Carburetion, Cooling Systems, Exhaust, Brakes, Suspension and Shock Absorbers, Vehicle Appearance, Station Housekeeping, Merchandising, and Air Conditioning. (This manual and 54 others were developed for various secondary level vocational courses using the System Approach for Education (SAFE) guidelines.) (BD)

TIME BLOCK: 2 and 3 hours daily

COURSE DESCRIPTION

Specialized classroom and shop experiences designed to enable the student to develop basic competencies in the operation of an automotive service station with emphasis on sales, service, record keeping, safety, preventative maintenance, product display, customer relations, cooling systems, electrical systems, and lubrication. Students are encouraged to participate in the activities of the Vocational Industrial Clubs of America.
Syllabus of Terminal Objectives

1.0 Orientation
2.0 Safety
3.0 Human Relation
4.0 Island Sales
5.0 Daily Sales Records
6.0 Hand Tools and Measurements
7.0 Parts and Service Manuals
8.0 Lubrication Service
9.0 Motor Oil
10.0 Filters
11.0 Tires and Tire Service
12.0 Wheels and Wheel Balance
13.0 Basic Electricity
14.0 Engine Theory and Design
15.0 Tune-Up Electrical
16.0 Carburetion
17.0 Cooling Systems
18.0 Exhaust
19.0 Brakes
20.0 Suspension and Shock Absorbers
21.0 Vehicle Appearance
22.0 Station Housekeeping
23.0 Merchandising
24.0 Air Conditioning

TOTAL __________________________

Instructions:

To convert raw score to grade, multiply points by 10 and divide by number of areas student is scored.
Upon completion of this program, 70% of the students will qualify in one or more of three skill levels with a proficiency of 75%.
(measures attached)

1. Island sales and service
2. Bay mechanic
3. Station management

Levels to be determined by testing vehicle compiled by instructor and craft committee:

Although most students can achieve a measure of success in one or more of the skill levels, certain prerequisites are necessary.

1. Have history of regular attendance
2. Pass instructor devised test to evaluate math and reading comprehension
3. Agreement of student and parents to obtain necessary clothing and supplies
**COURSE**  SERVICE STATION ATTENDANT

**TERMINAL PERFORMANCE**
**OBJECTIVE NO.** 1.0

The student will demonstrate familiarity with: Course Objective, Class and Shop Procedures, and Career Opportunities in the Oil and Automotive Service Industry, as evidenced by answers to written criterion questions with a proficiency of 80%.

The student will demonstrate knowledge and understanding of course objectives by identifying two or more levels in which he may qualify.

The student will demonstrate knowledge of course benefits by selecting correctly five of the following benefits that apply to this course:

1. All class work
2. Learn by doing
3. Preparation for a job
4. Job placement service
5. Plenty of homework
6. Go to lunch early
7. Always wear dress clothes

TPO 2.0 - SERVICE STATION ATTENDANT

SAFETY

1. What is meant by the phrase "necessary hazard".

2. Which of the following best describes good service station housekeeping.
   a. clean and neat
   b. disposal cans for waste
   c. a place for everything
   d. everything in place
   e. all of these

3. Answer the following true or false.
   a. Spilled grease or oil should be removed from the floor after each shop session.
   b. Greasy rags should be kept in a box ready for laundry.
   c. The first step in safety practices is to recognize the hazards.
   d. Stations are required by law to operate a safe shop.
   e. Back injuries are usually the result of falls.

4. In the space provided list the type of extinguisher to be used on the following types of fire.
   a. electrical
   b. fabric
   c. gasoline
   d. wood
Upon completion of instructions and classroom discussion 90% of the students will demonstrate, with a 75% or better proficiency level, knowledge of benefits resulting from good student to student and employee-employer relations by answering written criterion questions.

4. grade of material |
TPO 3.0 - SERVICE STATION ATTENDANT
LUBRICATION SERVICE EVALUATION SHEET*

1. Safety

Student observed all measures in:

- a. spotting of vehicle on hoist
- b. lifting vehicle
- c. safety locks usage
- d. eye protection
- e. compressed air usage
- f. lowering vehicle
- g. clearing hoist from vehicle
- h. removal of vehicle

2. Materials

Students correct usage of materials

- a. chassis grease
- b. bearing grease
- c. penetrating oil
- d. motor oil
- e. transmission fluids
- f. door ease
- g. graphite
- h. gear oil

3. Equipment

Student utilization of necessary equipment

- a. pressure guns
- b. squirt guns
- c. oil pumps
- d. spray guns
- e. air guns

*Observation and utilization is criterion for grading; efficiency is not to be a factor.
TPO 8.0 - SERVICE STATION ATTENDANT

LUBRICATION SERVICE

On assigned vehicle service as indicated below:

1. place vehicle on hoist
2. lubricate chassis
3. lubricate body
4. complete necessary record forms
5. remove vehicle and relocate on parking lot
MOTOR OIL

Student will recognize differences in motor oil grades and their application, and demonstrate knowledge by 90% of students scoring 75% or better on teacher constructed test.

The student will demonstrate his knowledge of various types of wheel balancers by recognizing balancing procedure for each of three types with a proficiency level of 80%.

A. In the blanks provided, name the type of balancer the statement is referring to.
1. The balancer that has a counter balancer attached to the wheel is a ________________ balancer.
2. The balancer that is used by placing the wheel assembly on an up-right pivot rod is called a ________________ balancer.
3. A magnetic pick-up is used to measure amount of out-of-balance. This balancer is ________________ balancer.

B. Answer the following True or False.
1. If a wheel is balanced while on the vehicle it has been spinned balanced.
2. Normally spin balancing can be accomplished using only two weights.
3. Bubble balancing requires the use of only two wheel weights.
4. Never remove old wheel weights until wheel has been rebalanced.
5. When balancing wheel on vehicle, wheel should never be raised less than two inches while spinning.
TPO 12.0 - SERVICE STATION ATTENDANT

WHEELS AND WHEEL BALANCE

1. On assigned vehicle, balance right front wheel using hunter balance, and following procedures out-line instructions. Tire must be balanced to plus or minus one-half ounce.

2. Remove left front wheel and bubble balance following prescribed procedure accurate to plus or minus one-half ounce.

3. Using electronic balance, balance right rear wheel following prescribed procedure, accurate to plus or minus one-half ounce.

4. Describe briefly the difference in the rotating action of dynamic out-of-balance as opposed to static out-of-balance.

5. Explain briefly why it is desirable to split the total static weight when balancing with all types of balancers.
Upon completion of instructions, 90% of the students will demonstrate knowledge of direct current, circuits and energy storage by responding correctly to 75% of the questions on a criterion test devised by the instructor.

The students understanding of battery operation will be demonstrated by correct response to True-False test by scoring 75%.

Given statements and multi-choice words, students understanding of basic circuits will be demonstrated by identifying descriptive words with 75% proficiency.

Answer the following statements True or False.
1. A battery stores electricity.
2. The automotive battery produces electricity by a chemical process.
3. The fluid used in the battery is properly called electrolyte.
4. The battery fluid is a mixture of sulphuric acid and water.
5. Recharging the automotive battery is accomplished by reversing the chemical action.

Select and underline the multi-choice word that will make a true statement from the following.
1. No electrical current will flow, unless a circuit is
   a. broken
   b. completed
   c. open
   d. dead

2. Resistance in a circuit is correctly measured in
   a. watts
   b. amps
   c. volts
   d. ohms

**SERVICE STATION ATTENDANT**

**BASIC AUTOMOTIVE ELECTRICITY**
TPO 13.0 - SERVICE STATION ATTENDANT

BASIC AUTOMOTIVE ELECTRICITY

Using engine electrical circuits hand-out complete the following assignment.

1. Connect with the correct colored line all the components of the:
   a. cranking system
   b. charging system
   c. 1. ignition primary
      2. ignition secondary

2. Indicate and explain to the class the current movement in the circuit of your choice.
Students will demonstrate knowledge of engine theory and design as relating to the automotive service industry by 90% responding to instructor devised test with a proficiency of 75%.
