This paper provides a review of the articles and documents on the topic of marriage counseling, as identified by a computer search of the ERIC database from November 1966 through December 1979. The materials address the following topics: (1) the history of marriage counseling; (2) counseling techniques including conjoint family therapy, cotherapy and group therapy; and (3) trends such as pre- and post-marital counseling and sex therapy. The field of family therapy is examined in terms of its origins and counseling approaches. Additionally, issues such as the influence of the feminist movement on marriage counseling, training and licensure requirements, and the professional role of counselors are discussed. The complete computer search of annotated ERIC documents and journal articles is also provided as a resource for the user. (HLM)

AN INFORMATION ANALYSIS PAPER
Based on a computer search of the ERIC data base
November 1966 through December 1979

ERIC COUNSELING AND PERSONNEL SERVICES CLEARINGHOUSE
1980
INTRODUCTORY NOTE

For several years ERIC/CAPS has produced Searchlights--computer searches of the ERIC database on topics identified as being of major interest and importance by our on-site users and by helping professionals working in the field. The Searchlights have proved to be highly useful as a synthesis of existing documents on a given topic, and we have been pleased to provide them at low cost for persons desiring packaged, instant information in a particular area. Last year we went one step further.

Choosing the fifteen topics which were in most demand by our ERIC users, we decided to explore in depth the sources revealed in the computer search and identify prime issues and possible trends from the documents, as well as point out the implications of the information for the work of professionals in our field of counseling and personnel services. In so doing we hoped to provide an even more valuable service to those who recognize ERIC as a rich storehouse of information, but who lack the time to examine in detail and analyze the total collection of data.

This year we have added four new titles to what has become an extremely popular service. In addition, one very old title--Career Development: Programs and Practices--has been updated and expanded. The fifteen areas originally chosen for this special treatment and the four new areas are as follows:

Career Development: Programs and Practices
Career: Recruitment and Placement
Career Counseling
The computer search is included in each Searchlight Plus as before, but in addition present:

1. Find an opening narrative which highlights certain documents, identifies issues and trends, and suggests possible implications for the future of guidance and guidance professionals.

2. You should point out that the titles are slightly different from the previous ones. For example, "Mid-Career Change" and "Preretirement Counseling" contain sources from a number of databases, including ERIC. These particular analyses of the literature were prepared for an international guidance conference, and were designed to review sources from as many databases as possible. Interestingly, however, the most useful informational source in preparing these papers was ERIC, and much overlap was found to exist in the documents brought to light from the many databases searched.

This explains the difference between our current series Searchlight Plus and the previous
series Searchlight. If you find the narrative helpful--more helpful than just the basic search--
we would appreciate your telling us so. A major purpose of ERIC is to provide information of
genuine value to you, the user.

MARRIAGE COUNSELING

Penny Schreiber

History of Marriage Counseling

The field of marriage counseling is both very old and very new. Interest and concern about
the intimate relationships of husbands and wives have always been high, but only in the last six
decades has a separate profession developed to provide clinical help for couples who are having
difficulties in their marital relationship. Contemporary marriage therapy did not begin with the
advancement of a new theory or method of practice by a single founder, as did psychoanalysis; nor
did it stem from basic experimental research as did behavior therapy. Rather, it emerged rapidly
in response to the felt needs of clients (EPJ 030 943).

In the last decade in particular, a proliferation of new theories and types of therapies for
treating the problems of married people has come into existence. The purpose of this paper is to
review the literature in ERIC on this topic, attempting to place in perspective the evolution of
marriage counseling into a major branch of the helping professions, and to explicate the myriad
trends and techniques being developed and utilized by marriage counselors today.

The literature of recent years indicates that the term "marriage counseling" is being replaced
by the term "marriage and family therapy." Many professionals writing in the field today have almost
abandoned the term "counselor" in favor of the term "therapist," although they still refer to the
practice of counseling and often use the terms counselor and therapist interchangeably. Before 1970 marriage counseling and family counseling were developing as two separate fields. By the late 1970's they had merged. Everett, for example, writing in 1979 about graduate-clinical education for persons seeking professional academic credentials as marriage counselors, refers to the field of "marriage and family therapy" (EJ 204 312).

This paper also uses the terms counseling and therapy interchangeably, and while it includes a section on family counseling/therapy, the emphasis throughout is on marriage counseling/therapy.

Universities have only recently offered master's and doctoral programs in Marriage and Family Therapy. Previous to the development of these programs, the field of marriage counseling had evolved uniquely through a blending of multiple clinical disciplines. Members of the Association for Marriage Counseling in its first 25 years of existence were primarily social workers, psychologists, psychiatrists, and pastoral counselors. Most of these individuals had sought postdegree training in order to move into the marriage field, but they were identified by their original profession, i.e., they were psychiatrists or ministers, not marriage counselors.

The first clinics in the U.S. to begin serving couples with problems opened in the early 1930's. In 1942 a small group of pioneers organized the American Association of Marriage Counselors. Today the organization has expanded its focus and is called the American Association for Marriage and Family Therapy (AAMFT). Although most of this group--88 percent--received their terminal degrees, as in the past, in related disciplines, 44 percent now call themselves "marital and family therapists," clear evidence that marriage and family therapy is emerging as a separate profession.
The autonomy of the several independent professional disciplines devoted to marital therapy, while offering the potential for useful cross-fertilization, actually resulted over the years in antagonisms that slowed the development of clinical research and theory. In the last ten years the profession has been working hard to expand its empirical and theoretical base. Research in the area has grown rapidly, and on the conceptual front, marital therapy has broken new ground and developed methods of clinical investigation and intervention which have special relevance for the understanding and explanation of marital process and dysfunction (EJ 193 823).

**Techniques**

**Conjoint Therapy**

David Olson believes that a unique and significant contribution of marital therapy to the field of psychotherapy is the value and emphasis it places on the marital relationship per se. In the past, helping professionals sought to understand and treat only the pathology within the individual; marriage therapists, on the other hand, emphasize the significance of the relationship while still valuing the integrity of the individuals involved. As a direct result of their focus on the marital relationship, they have originated and developed another approach that is a major contribution to the field of psychotherapy: conjoint marital therapy. Olson contends that marital therapists can be distinguished as a group by their emphasis on the marital relationship and their predominant use of the technique of conjoint therapy (EJ 030 943).
Conjoint therapy involves seeing both spouses together during all of the therapeutic sessions, although the practice is usually flexible and utilizes both individual and joint sessions.

In a pilot study by Cobkerly in the early 1970's (EJ 089 281) records of 773 former marriage counseling clients of 21 marriage counselors were followed up to determine which forms of treatment achieved the most success. Results clearly suggest that conjoint interviews and conjoint groups are the most effective.

Williams proposes a model format for the initial conjoint marital interview (EJ 108 746). Belsen stresses the importance of the second conjoint interview in marriage counseling (EJ 122 292), using a case study to explore the roles of counselor and clients and the important interactive process that should begin to occur in this second meeting. Little presents an entire transcript of a conjoint counseling session with a couple who are considering a divorce (EJ 122 293). The critique and commentary at the end of this fascinating iteration of what goes on behind closed doors between a counselor and a troubled couple attempts to get at some of the issues, theories, and techniques of conjoint marriage counseling.

Kelly delineates Gestalt approaches to conjoint therapy (EJ 186 459), and Margolin describes how to use conjoint marital therapy to teach couples to manage their anger and avoid physically abusing one another (EJ 204 270). Gurman offers a comparative analysis of the process of conjoint therapy within the three major contemporary models of treatment: (1) psychoanalytic; (2) behavioral, and (3) systems theory. On the basis of his comparative analysis he underlines the need
to develop a taxonomy of marital therapy that specifies different therapies for different couples, with different problems, at different points in the family life-cycle (EJ 193 823).

Cotherapy

The use of two therapists, or cotherapy, is a form of conjoint therapy that is gaining in popularity. Studies to determine the relative merits of cotherapy versus conventional treatment with one therapist are of recent vintage and few in number. Cotherapists are often married, but Russell and Russell believe that the therapeutic effectiveness of cotherapy depends on their style of communication, maturity, and complementarity—and not on whether the cotherapists are married to each other (EJ 193 826).

Briggs and Briggs have developed the interesting theory that some dimensions of marriage can be dealt with only in the presence of another marriage. They believe that the key to "two-marriage" therapy (married cotherapists doing conjoint counseling) is transferential interplay between therapists and patient-couples. In their own experience, this two-marriage arrangement affords the therapists the chance to minimize their authority images, allowing couples to see that no authority is present in marriage and that each partner has something to offer, something to learn. Briggs and Briggs have invented the term "coliberation" to describe the therapeutic process of the letting go of old binds—letting go, together, of former images of each other and of the marriage. While they have performed this type of therapy with increasing success over the past ten years, they point out that the reasons so few married therapists work together are that not very many married therapists are qualified or interested in this type of therapy, and married therapists...
are often reluctant to put their own marriage "on the line" (EJ 199 310).

Cotherapy as a technique has advantages and disadvantages. It is a good teaching method and an expensive use of badly needed time. It is a useful device for role modeling but increases the possibility of counterproductive alliances. Also, the choice of therapist is frequently involuntary creating the possibility of prolonged inter-therapist conflict which can be extremely destructive to the therapy. The therapist can be an obstacle and hold up treatment.

Group Therapy

Group counseling of couples is another recent development (over the last decade) of marital counseling and therapy. Kilgo believes that group counseling has inherent potentialities for therapeutic change that are not possible in individual counseling (EJ 122 231). He agrees with most group facilitators that a major advantage of group counseling is the influence of discussion the standpoint of both teaching-learning and role-modeling, an advantage especially for couples experiencing marital discord.

Leichter emphasizes that treatment problems and process in such groups are quite different from therapy groups in which participants are not related, and that it is impossible to differentiate between couples groups according to social and chronological stages of age (EJ 122 231). Ohlsen presents a rationale for counseling couples in groups and illustrates how group members can be taught to pair up with counselors in order to help their spouses rather than hurt them. He suggests specific steps for forming and facilitating a couples group (EJ 202 803).

Sisson, et al., investigated the effect of combining transactional analysis and Gestalt
therapy: group counseling of married couples. They administered the Tennessee Self-Concept Scale to six couples in treatment and twelve members of a control group both before and after therapeutic intervention had taken place. The results showed significant positive changes in the level of self-esteem of the couples who received treatment.

Nel's utilizes Jung's subjective approach to dream interpretation. The technique is used to bring unconscious material quickly to the surface.

A variation on group therapy is the placement of spouses in separate groups. The method is based on interpersonal relationships within the group. Marital problems are discussed only as they relate to feelings in the group.

Trends

Premarital Counseling

Premarital counseling, while gaining in popularity, is still not widespread. At the present time it is most seriously by religious organizations. Secular and religious-graduate programs offer little training in premarital counseling, and scholarly texts and guides to premarital practicum are few in number.

Schumm and Denton (1979) point out that until recently only three approaches to premarital preparation were utilized: (1) generalized education preparation; (2) therapeutic counseling to
meet the needs of couples presenting specific problems, and (3) instructional counseling, traditionally the province of pastor, rabbi, and physician. A new and fourth approach, referred to by Schumm and Denton as the "enrichment" approach, is based on the premise that equipping couples to deal with their own concerns is more useful to them in the long run than merely giving them information and advice.

Literature on premarital counseling is not abundant in ERIC. Rather, the documents in ERIC focus on young couples in a college setting. One extremely good article of recent vintage by Trainer is a comprehensive description of his system of premarital counseling and examination (EJ 200 863). Trainer is a Professor of Medicine, and the couples he has been seeing over the past 29 years are mainly medical students who (he believes) are much more successful at meeting professional goals than becoming satisfactory husbands and wives. His objectives are to help couples identify any particular problems before the marriage and to introduce verbal communication about the contractual elements of a marriage, with a view to learning their own method of problem-solving.

Rolfé offers a premarital assessment method to be used in initial interviews with teenage couples (EJ 147 818). His method requires group interviewing with both sets of parents. He discusses selected tests and particular methods of examining the couple's relationship. Araoz uses the Edwards Personality Preference Schedule (EPPS) in his work. Six pairs of related needs from "Trends in Pre-marital Counseling" by W. Schumm and W. Denton. In the Journal of Marital and Family Therapy, 1979, 5(6), 23-32.
are established and two case studies presented to illustrate the usefulness of the EPPS (EJ 115 592). Meadows, et al., describe a premarital counseling model and how it can be applied in a university counseling center. They recommend this premarital counseling triad as an appropriate and needed service in the college setting (EJ 027 905).

Postmarital Counseling

Morris and Prescott describe their experiences in a university counseling center with therapy groups for people who have undergone divorce or recently ended a long-term relationship. They discuss the impact separation and divorce have on the people involved, the resulting adjustment stages, and the corresponding group goals that are set by the therapy groups. They view the people who make up their therapy groups as individuals in transition, and they emphasize the need to make a switch during therapy from crisis-oriented to developmental counseling. Helping people begin to see themselves as single individuals, rather than as ex-spouses, is one of the main goals of developmental counseling (EJ 122 229, ED 092 832).

Sonne addresses the question of compulsory marriage counseling as a part of divorce proceedings. He points out that successful therapy requires a high degree of motivation and a great deal of hardwork, and that compulsion may not be a favorable ingredient of therapy. He adds that New York State had an unsatisfactory experience with compulsory counseling in divorce proceedings (EJ 100 724).

Sex Therapy

Sex therapy as a discrete discipline began only ten years ago with the work of Masters and
A distinction is made in the literature between sex therapy and marital therapy. However, these two types of therapy are closely related. Indeed, based on her own clinical experience, Mildred Hope Withkin believes that sex therapy, performed by trained and sensitive therapists, can be a potent aid to marital and family therapy. An excellent article on what she refers to as "psychosexual therapy" emphasizes that the success of this type of therapy lies in the ability of the couple, aided by the therapist, to substitute pleasure and relaxation for performance. Another factor cited as extremely significant for a successful outcome is a therapist who is at ease and comfortable with all aspects of the subject and nonjudgmental toward the couple in treatment. Withkin concludes that many of the problems that impel a couple to seek marital therapy can be eased as a result of psychosexual therapy—that is, the renewal of the relationship, beginning in and pervading the sexual sphere, spreads through the relationship as a whole, recharging all aspects with affection and caring (EJ 165 551).

A remarkable and well-documented article by Dr. David E. Scharff corroborates Withkin's observations regarding sexual renewal as a metaphor for marital renewal. Scharff contends that the revelation of a "secret" extramarital affair in the course of sex and/or marital therapy is almost invariably a "shot-in-the-arm" for an ailing marriage, resulting in a fresh start and renewed sexual and emotional bonds. He reached this conclusion after working with 30 couples who disclosed infidelity on the part of one or both spouses; in all cases improvement in the marriage—often drastic improvement—occurred. His stand is controversial, but he presents much telling evidence for his views and believes that his findings have many implications for...
the fields of sexual and marital therapy (EJ 177 236).

A third article also speaks eloquently of the physical relationship between a couple as a means of expressing literally the commitment, or lack of it, present in a marriage. Ostrov, writing about his experiences providing sex therapy for Orthodox Jewish couples, notes that because of their religious background, these couples are taught to experience and view sexuality through a markedly distinct value system and code of behavior. Treatment of their sexual dysfunctions, therefore, requires a unique methodology and perspective. Although Orthodox Judaism places strictures on when a couple may have sex, or even be physically close, sex is believed to be a quintessential opportunity for two people to realize growth and life in all areas of their relationship. Ostrov contends that treatment of the sexual dysfunctions of Orthodox Jewish people alters the boundaries between sex and marital therapy because it involves removing psychogenic barriers rather than merely improving or teaching sexual function (EJ 193 676).

Further insights into the treatment of sexual dysfunction are offered by Levay and Kagle. They evolved the theory, based on their extensive clinical experience, that certain specific difficulties called ego deficiencies in the areas of pleasure, intimacy, or cooperation are universally operant in patients seen in sex therapy. Each difficulty forms a distinct clinical syndrome with specific treatment requirements. The authors have found this typology useful in increasing their ability to treat patients effectively and efficiently (EJ 165 550).

Mosher describes a Gestalt experiment in sex therapy involving the exploration of sexual dysfunction as a nightmare (EJ 204 196), and Greene discusses her successful use of a technique
she calls Individual Sex Therapy--an alternative to the stressful surrogate method of sex therapy pioneered by Masters and Johnson (EJ 165 553). Timmers, et al., offer a simple behavioral procedure for counselors to utilize in helping people overcome a problem they define as "goal-directed intimacy." Often anxiety about sexual performance causes people to adhere to rigid patterns in their sex lives, resulting in a lessening of pleasure. They believe that the therapist can do much to help couples unlearn sexual behaviors that act as stumbling blocks to an open, spontaneous sharing of sexuality (EJ 144 428). Scharff refers to sex as a family affair, exploring a couple's sexual dysfunction as it relates to their relationship to their own parents. He concludes that successful resolution of such a problematic sexual relationship may be the first crucial step in rebuilding family harmony and providing a culture of intimacy for children (EJ 137 767). Witkin presents a sensitive analysis of the sexual and emotional issues that couples face following a woman's mastectomy. She offers therapists a wealth of information and techniques for guiding couples through this crisis. Her conclusions, partially based on her own personal experiences, are positive and optimistic, even suggesting that most couples achieve a new level of understanding and intimacy following the trauma of such an operation (EJ 130 679).

**Family Therapy**

Although this paper stated earlier that the fields of marriage and family therapy merged in the late 1970's, looking back to the origins of family therapy as a separate professional discipline is still important. The field of family therapy, even more recent in development than marital therapy, has effectively shifted its emphasis from individually-oriented theory and techniques to...
relationship-oriented ideas and procedures that view the family as a system. The pioneers in the field were often psychiatrists who were initially interested in treating families which harbored a severely disturbed individual. The first Family Mental Health Clinic, opened in 1957 in New York City, led three years later to an expanded national center in New York, the Family Institute. Since that time the profession has grown in leaps and bounds. The focus of therapeutic intervention has shifted from attempting to change an individual to working on altering the social environment within the family. Focusing on the family as the source of pathology is an approach that moves in the direction of marital therapy because problem children are so often the harbingers of disturbed husband-wife/relationships (EJ 030 943).

A majority of the articles on family therapy in this search treats marital problems within the larger perspective of family problems. Family problems can be defined as past and/or present problems with a couple's families of origin, or problems within a couple's immediate family, e.g., their relationships with their children. Marital problems may be exacerbated by a troubled child, or conversely, a child may be troubled because of the marital problems of his/her parents.

Spark contends that marriage is a family affair and that "unfinished business" between a parent and grandparents and even siblings can bring about important structural and symptomatic changes in a marriage. She emphasizes that treating marriage within a two- or three-generational context often results in the diminution of conflict and guilt, and provides an opportunity for rebalancing and thus improving all of the relationships (EJ 156 794).

Napier provides further insight into the importance of the "family of origin" in the treatment
of marital problems. He examines what he calls the "rejection-intrusion pattern" between couples. This common pattern occurs when one partner seeks closeness and reassurance while the other strives for separateness and independence. Napier presents a provocative and convincing case for solving, or at least understanding, this problem by examining the childhood family relationship of each spouse. He believes that each partner in this type of relationship marries with the unconscious desire to make up for deficiencies in family experiences. The person who supposedly desires intimacy was suffocated as a child and, being subconsciously fearful of intimacy, seeks someone who will keep an emotional distance. And the partner who claims to require emotional distance was in fact the victim of emotional distance, and instinctively seeks out a mate who appears to smother and enmesh so as to assuage feelings of loss or rejection.

Two people maintaining a fairly constant and intuitively agreed-upon level of interpersonal distance is the end result. Divorce frequently occurs as one person flees what is perceived to be a trap, leaving the other person in severe psychological distress. Napier suggests that therapists who encounter such a couple treat an overtly marital crisis as a family problem, possibly even involving three generations in the treatment process. Therapists are urged to push the partners to confront their internal struggles and family-of-origin conflicts, rather than focus on their immediate marital problems (EJ 175 204).

Hearc's case study of structural family therapy is an excellent example of a couple who, after seeking therapy for a problem child, discover with the help of the therapist that in reality it is their marriage that needs help. During the course of treatment it is the ther-
apist's task to shift the focus skillfully and subtly from the child's relatively minor and easily-resolved problems to the couple's troubled relationship (EJ 193 697).

Three authors discuss the lack of an adequate empirical or theoretical base to test the propositions that have derived from clinical practice in the family field. Floyd contends that many clinical theories are promoted on the basis of merchandising principles (EJ 147 815); Sprenkle sees a need for quality outcome studies in family counseling (EJ 142 714); and Olson argues that the gaps between research, theory, and practice must be bridged (EJ 030 943).

All three authors are optimistic about the future of family therapy and are confident that the problems they discuss are in the process of being solved.

Women's Issues in Sex and Marriage Therapy

Several articles in the literature describe the effect the women's movement has had and will continue to have on how counselors approach the treatment of clients experiencing marital discord. Tsosie-Hoshmand writes about the consciousness-raising influence of the feminist movement on women both married and single. The married woman who commits herself to a new identity that transcends traditional role prescriptions usually finds her marital relationship to be either a major source of support or the principle block to her attempts at self-fulfillment. She concludes by stating that if counselors and therapists consider the contributions of the feminist movement to the definition of a good marriage, their marital interventions will move from the role-oriented to the person-oriented, and from open-ended quid pro quo between partners to value-based negotiation (EJ 134 288).
Rice and Rice, in a paper on nonsexist marital therapy, make the interesting point that unless a male therapist has been in a nontraditional relationship with a woman or has had to restructure his own marriage, his values and biases are likely to be those of the "traditional" marriage. Even a female therapist, according to these authors, must have experienced the need to restructure her own relationships on an egalitarian basis if she is going to be effective in counseling couples attempting to change a traditional marital relationship. Possible ways of alleviating this problem are for therapists to do cotherapy with members of the opposite sex or to examine and possibly change their own marital relationships in order to gain an openness to alternative marital lifestyles. Specific therapeutic techniques are also suggested for therapists to use in helping couples to restructure their marital relationship patterns (EJ 160 218).

Lassen confronts issues and dilemmas in sexual treatment, including the philosophical approach to therapy of women therapists influenced by the women's movement (EJ 137 768). Golden and Golden address the complex issues that influence the relationship between cotherapists of the opposite sex who are doing sex therapy. Their emphasis is on the woman therapist's role in sex therapy and how the typical issues that arise, such as differences in status, experience, and training, can affect the outcome of treatment (EJ 137 766).

Rogers has written a provocative article on "fascinating womanhood" as a regression in the emotional maturation of women. Many women are attracted to the philosophy espoused in books such as The Total Woman because it allows them to ignore anxiety-provoking demands for

increased role flexibility. Embracing the concept of "fascinating womanhood" enables a woman to retreat from the multiple options of personhood. Specific suggestions for therapeutic intervention are suggested for therapists who encounter female clients willing to be weaned away from the pose of helplessness and powerlessness (EJ 177 258).

Counseling Single People

Edwards promulgates the interesting theory that the divorce rate could be significantly reduced by raising the status of singlehood. She talks about our "pressure-to-pair" society that propels people into coupling in haste, only to end up on a counselor's doorstep in agony over a miserable marriage. Counselors can help break this cycle, she believes, by coming to a better understanding of the psyche of the single person and why he/she feels driven to pairing. According to this author, counselors should become the driving force behind community-based programs with the purpose of inspiring greater self-esteem and self-respect among single people. Once people truly believe they have the option not to marry, the institution of marriage will be strengthened rather than weakened; marriage will be a free choice rather than one demanded by a pairing society (EJ 160 193).

Counselor Education

According to Everett, the master's degree in marital and family therapy is a product of the emergence and gradual maturing of the field (EJ 204 312). During the 1950's doctoral programs were expected to supply the field quickly with professional marriage and family therapists (EJ 204 314).
Instead, in the 1960s and 1970s graduate degree programs at the master's level burgeoned. Doctoral programs have not developed as anticipated for several reasons. Perhaps the most significant factor is that public demand for help with marital and family problems has been so great that potential professionals have discovered that they can enter the field and begin practicing with a master's degree. Universities have followed this trend. The passage of licensing laws at the master's level in several states also has contributed to the recognition of the master's degree as sufficient for certification. A final factor is that postdegree and nondegree training are flourishing. Many professionals in other fields such as psychotherapy and social work are able to develop competencies and professional skills in marital and family therapy by taking advantage of this training. Individuals are simply not interested in the rigors and hurdles of a doctoral program when they can enter the field by other means.

Berman and Dixon-Murphy describe in detail two of the country's oldest and most prestigious free-standing, postdegree programs in marital and family therapy--the Marriage Council of Philadelphia and the Blanton Peale Graduate Institute (EJ 204 315). They point out that because such institutions are not under university control, they are able to be diversified and experimental. Their programs primarily attract working professionals who are seeking to obtain specialized training without completing another degree. The Marriage Council of Philadelphia offers an 11-month, full-time training program for persons at the master's level or above. At Blanton Peale the program is three years in length and requires a 30-40 hour weekly commitment. Free-standing institutes have almost a complete integration of clinical and academic work, resulting in
freedom from worry about such academic concerns as courses and grades. These postdegree programs
draw mainly mature students from a wide variety of backgrounds. Berman and Dixon-Murphy foresee
the free-standing institute continuing in the future to allow for exciting and innovative develop-
ments in the field of marital and family therapy.

The master's degree in marital and family therapy will continue to flourish. Mental health
and community service agencies are increasingly seeking the services of well-trained marriage and
family therapists. The American Association of Marriage and Family Therapists has recognized the
reality of the situation and is encouraging the development of sound educational programs at
master's as well as doctoral levels.

Smith and Nichols emphasize that the AAMFT has long been concerned with the encouragement
of high standards in education and training and in clinical practice (EJ 204 321). Accreditation
of graduate programs and postdegree training centers in marital and family therapy is the sole
jurisdiction of the AAMFT's Committee on Accreditation. The purposes of accreditation are to
(1) stimulate the improvement of professional marriage and family therapy education and training;
(2) establish standards for accreditation that ensure that students will be provided with the
opportunity to acquire the requisite knowledge, skills, and ethical sensitivity to be professionally
competent; and (3) provide the public with an authoritative guide to the best programs in the field
of marital and family therapy.
Implications for Counselors/Therapists

This review of ten years of literature in ERIC on marriage and family therapy portends many things for the future of the profession, and has numerous implications for counselors and therapists. If current trends continue, marriage and family therapy will be a well-established profession in its own right by the middle of this decade. People today are more willing than ever to seek professional treatment for marital and family problems, suggesting that the demand for marriage counseling will remain constant or even rise. Universities and free-standing institutes are willing and able to provide the academic and clinical training that these professionals require.

Marriage and family therapy is best described as a profession that is rapidly changing and still in its adolescence. Counselors must remain aware and wary of new trends, theories, and techniques as they develop and come in and out of vogue, and must avail themselves of opportunities for additional training and further education.

As the profession heads into the 1980's more emphasis must be placed on pre- and postmarital counseling. The best hope for enduring marriages may be effective counseling before, rather than after, the vows are spoken. This ERIC search suggests that premarital counseling is lagging far behind other trends in the profession. Although marriage is as popular as ever, people are no longer willing to remain in unsatisfactory marriages, and the result is a high divorce rate. Divorce is frequently as traumatic as a death in the family, and counselors must be prepared to meet the needs of divorcing people seeking help in recovering from their loss and attempting to establish new lives as single persons. Indeed, counselors might be wise to heed the admonition of
one author (EJ 160 193) who believes that counseling single people to lead fulfilling and productive lives will, in the end, strengthen the institution of marriage; more people will marry because they want to, rather than because they feel pressured to become part of a couple. Again, this ERIC search suggests that postmarital counseling, i.e., counseling individuals after the marriage has ended, although more prevalent than premarital counseling, is also lagging behind other important trends in the profession.

Cotherapy and group therapy as counseling techniques will become increasingly important in the 1980's. Counselors will be making use of these less traditional forms of marriage counseling as they help couples rework their marriages in the context of feminist and humanistic issues.

Cotherapy, in particular, offers potent possibilities for defusing sexist issues that can block the resolution of marital conflicts.

Sex therapy, a field that was virtually invented ten years ago by Masters and Johnson, will continue to make tremendous strides in the 1980's. The articles on sex therapy cited in this paper are among the most exciting in this ERIC search, and have extremely important implications for marriage counselors. Sex therapy has almost nothing to do with teaching couples "how to" techniques for improving their sex lives. Rather, the articles on sex therapy illuminate carefully for the reader the way in which sexual, intimacy functions as a metaphor for an entire relationship. Marriage counselors who stay abreast of developments in the field of sex therapy will deepen their understanding of the intricate and complex process of marital dysfunction.

Finally, marriage counselors in the 1980's will often treat a couple's marital problems
from the larger perspective of family problems, including the consideration of childhood and current relationships with their "families of origin." This emphasis on counseling entire families does much to dispel the prevailing myth that family life in this country is on the decline.

Couples today are simply not settling for a bad or even a mediocre marriage. As increasing numbers of adults contemplate major adjustments or changes in their personal lives, the counselors and therapists they turn to for guidance will work harder than ever, aided by innovative and exciting techniques, to improve the quality of marital and family relationships.
Revitalizing the Career Information Service
Reardon, Robert C.; Minor, Carole W. Personnel and Guidance Journal; 54; 3; 169-171 Nov 75
Descriptors: Vocational Counseling; Information Dissemination; Educational Planning; Job Placement; Career Planning; Program Descriptions; Guidance Services; Higher Education/Information Sources/College Students
The authors describe the Curricular-Career Information Service (CCIS), which is an outreach, self-help, multimedia-based and preprofessional-staffed career guidance service. CCIS consists of five instructional modules which relate to the following student problems: uncertainty about major, relationship of major to jobs, finding a job and information on occupations. Accreditation in Marital and Family Therapy
Smith, Ven G.; Nichols, William C.
Journal of Marital and Family Therapy, v5 n3 p95-100 Jul 1979
Reprint: UMI
Language: ENGLISH
Reviews the significance of accreditation in marital and family therapy and the role of the Committee on Accreditation of the American Association for Marriage and Family Therapy. Accreditation of educational and training facilities through a sound process can facilitate development and maintenance of quality preparation. Accredited programs are listed. (Author/BEF)
Descriptors: Academic Standards/ *Accreditation (Institutions)/ Credentials/ Educational Programs/ *Family Counseling/ *Graduate Study/ Higher Education/ *Marriage Counseling/ *Psychotherapy/ Therapists

Training in Marital and Family Therapy at Free-Standing Institutes
Berman, Ellen; Dixon-Murphy, Thelma F.
Journal of Marital and Family Therapy, v5 n3 p29-41 Jul 1979
Reprint: UMI
Language: ENGLISH
Describes free-standing post-degree training programs in marital and family therapy and focuses on the Marriage Council of Philadelphia and the Blanton Peale Graduate Institute. Such programs have continuing possibilities for flexibility and innovation in the training field. The free-standing institute is the almost complete integration of clinical and academic work possible. (Author)

Doctoral Programs in Marital and Family Therapy
Nichols, William C.
Journal of Marital and Family Therapy, v5 n3 p23-28 Jul 1979
Reprint: UMI
Language: ENGLISH
Examines doctoral education in marital and family therapy, giving attention to major trends and developments in this area. They have not fulfilled expectations formerly held for their potential development. An examination of the potential in significant amounts of continuing education to stay abreast of developments in a rapidly changing field. (Author/BEF)

Conjoint Marital Therapy to Enhance Anger Management and Reduce Spouse Abuse
Margolin, Gayla
American Journal of Family Therapy, v7 n2 p13-23 Sum 1979
Language: ENGLISH
Describes a treatment program for couples who mishandle anger or are physically abusive. The treatment endorses the elimination of demonstrations of anger and elaborates upon ways to identify preliminary anger cues. Abusiveness is unacceptable. Methods to improve problem-solving skills and to enhance overall enjoyment of the relationship are also proposed. (Author)

The Gestalt Experiment in Sex Therapy.

Musher, Donald L.

Journal of Sex and Marital Therapy, v5 n2 p117-33 Sum 1979

Reprint: UMI

Language: ENGLISH

The Gestalt experiment is applicable to sex therapy. Familiarity with modes and methods of experimenting permits the therapist's creativity to emerge. Applications of sexual metaphors and sex dysfunction as a nightmare are presented, using methods drawn from Gestalt dream work. The case of Gestalt experiments are illustrated in a client-therapist dialogue. (Author)

Disrespect, Tension, and Togetherness—Apartness in Marriage.

Rosenblatt, Paul C.; And Others

Journal of Marital and Family Therapy, v5 n1 p47-54 Jan 1979

Reprint: UMI

Language: ENGLISH

For a study of marital togetherness and apartness, the partners in 126 couples completed questionnaires. The role of disrespect, a factor serving as an abrasive in marriage, was investigated. Findings suggest that therapy for couples with a presenting problem of insufficient contact may first have to deal with abrasive factors. (Author)

Resisting the Pressure to Become a Surrogate: A Case Study

Greene, Susan
Journal of Sex and Marital Therapy, 3, 1, 40-49; Spr 77
Reprint Available (See p. vii): UMI

The surrogate role is stressful. The surrogate hopes to bypass explosive relationship issues in order to lower the patient's level of tension. Such bypassing is difficult. An alternative tactic has been developed for individual sex therapy and is exemplified by a case study. (Author)

Sex Therapy as an Aid to Marital and Family Therapy

Witkin, Mildred H.
Journal of Sex and Marital Therapy, 3, 1, 19-30; Spr 77
Reprint Available (See p. vii): UMI

The treatment by a qualified sex therapist of a sexually dysfunctional couple referred by a family or marital therapist often significantly facilitates the overall therapeutic progress. Resistance by partners or other family members is considered, as is the use of "unsuccessful" sex therapy as a diagnostic tool. (Author)

Descriptors: *Self Concept/ *Sexuality/ *Interpersonal Problems/ *Marriage Counseling/ *Family Problems/ Males/ Females/ Therapy/ Case Studies/ Human Development/ Program Descriptions
Certain factors limit marital therapists in dealing with individuals conflicted over and disenchanted about "traditional" marriage: 1) the therapist's gender; 2) the presence of sex-role stereotyped behaviors and expectations; and 3) the therapist's own marital experience. Specific helpful experiences and therapeutic techniques are discussed.

Marital Therapy and Changing Values
Tsip-Hoshmand, Lisa
Family Coordinator, 25, 1, 51-55 Jan 76
Implications of Feminist and Humanistic value structures for marriage are conceptualized. Their effects on therapist orientation and definitions of the viable marriage are discussed, together with proposed alternatives in marital intervention. It is concluded that value orientations and standards of positive mental health could provide therapists and clients with definite direction. (Author)

Sex is a Family Affair: Sources of Discord and Harmony
Scharff, David E.
Journal of Sex and Marital Therapy, 2, 1, 17-31 Spr 76
This paper explores family aspects of sexual issues...
Because the emotional trauma associated with a mastectomy exceeds the physical trauma, the recovery of the woman is greatly affected by the response of her husband or lover. Sex therapy, therefore, involves the couple. The approach described is aimed at assisting the couple to confront and integrate the mastectomy experience. (Author)

Exemplary Career Resource Center for Grades 6 Through 9 in Pennsylvania.

Publ. Date: 30 Jun 74; Ed: 27p.

EDRS Price MF-$0.00 HC-$2.00 Plus Postage.

Descriptors: *Career Education/ Educational Programs/ Elementary/ Secondary Education/ Information Dissemination/ Paraprofessional/ Personnel/ Program Descriptions/ Program Planning/ Program Proposals/ Resource Centers

Following a discussion of the need for the service the report presents a proposal for the establishment of a career resource center in order to properly utilize and disseminate career information to students in Grades 6-9 in selected Pennsylvania schools. The career resource center will be involved with the following activities: (1) collection, synthesis, and placement of career information resources available from commercial and other sources; and (2) institution of an organized system for the dissemination of career information to students. The individual responsible for the organization, administration, and implementation of these services will be the career resource specialist who is a paraprofessional employed and assigned by the local district. The career resource specialist will work cooperatively with the professional guidance staff in the school. Other staff members include the counselor and supporting staff (community volunteers and students). The paraprofessional will also be responsible for collecting data for the evaluation of project objectives. Necessary information for the planning of the career resource center includes suggestions for the budget and costs and amount of particular equipment and materials. A bibliography is included. (Author/EC)
Communication Competence for Ongoing Relationships.

*Jerry L. Syer*

16p.; Paper presented at the Annual Meeting of the Western Speech Communication Association (Los Angeles, California, February 18-21, 1979)

EDRS Price MF01/PC01 Plus Postage.

Language: English

Geographic Source: U.S./Arizona

Designed to facilitate increased communication competencies of partners in two-person, relatively long-term relationships, the Communicating as a Couple workshop was developed and tested to provide knowledge of specific and useful competencies, along with a rationale, a supportive environment, feedback, and motivation. The four-minute exercise units dealt with basic communication principles and competencies for strengthening a relationship, for productive conflict, and for changing and maintaining a relationship. Exercises were designed for skills practice and awareness raising, and included meaning clarifications, relationship messages, eye contact and physical distance, open ended questions, nonverbal communication practice, objective nonverbal description, voice practice, and structured self-disclosure, among others. Twenty couples participated and were tested; results indicated that neither the reported frequency of verbal aggression nor the amount of communication changed significantly. Although the nature of the communication became much more positive and relationship cooperation and conflict-handling ability were enhanced. (Included are recommendations for developing the field of communication counseling, references, and two sample exercises.) (DF)

After describing a social learning formulation of the male alcoholic's marriage, this paper reviews the few studies of behavioral marital therapy (BMT) for alcoholics and their wives. Although none of these studies are as rigorous as one might wish and many of them are merely case studies, a review of the literature shows that behavioral marital therapy in conjunction with social and vocational behavioral alcoholism treatment produces better results with State Hospital alcoholics than does a less intensive traditional alcoholism treatment. When intensity of treatment is held constant, behavioral marital therapy for outpatient alcoholics is not only superior to three alternative behavioral treatments but clearly exceeds the outcome statistics in the nonbehavorial literature. With the exception of a study treating only the wife, behavioral marital therapy has had positive results in 29 of 31 cases treated. A series of issues and questions future studies should address are listed. In addition, a study to compare behavioral and non-behavioral couples groups is proposed. (Author)

A fundamental behavior in order to make relevant comments in therapy.

The literature cautions that predicting outcome in therapy research depends not only on the technique used, but also on therapist and couple characteristics, choice of conjoint, individual, or group therapy, as well as other variables of the therapeutic setting. Results of empirical investigations of these factors are inconclusive. Therapists can, however, examine results of empirical outcome research to distinguish which techniques are most helpful for certain problems areas. The 26 problems, presented alphabetically, include: Alcoholism, Behavior Deficits and Excesses, Communication Breakdown, Hostility, Money and Sex. Sources used are representative of current outcome research and case presentations attesting to the effectiveness of the techniques described under each problem heading. For each problem area, one or more techniques are suggested as useful to therapists during treatment of couples. (Author)

Adlerians believe that change of any lasting value has a fundamental dependency on the client's awareness of how he incorrectly processes data in his life; he must develop the insight necessary to correct the errors in his life style. Also, the therapist must know the goals of the client's behavior in order to make relevant comments in therapy. While Adlerians emphasize the relationship with the therapist as the vehicle for bringing the client to important insight they are cognizant of the fact that the client often attempts to gain control of the treatment, sometimes by dwelling on his pain or threatening impending disaster. An Adlerian technique, written and spoken about, is called "imagery." The process of this technique is to help the client understand the reasons for his maladaptive behavior to gain greater insight into the manner in which he is processing data. Generally, the process is one in which the therapist associates the life style behavior which the client either appears to be unaware of or is aware of yet unwilling to change with some concrete image or example of this behavior. This procedure is particularly useful in helping couples or one member of an intimate relationship to make life decisions. Case examples are presented. (Author/KS)

GENERAL INFORMATION

1. PRICE LIST
The prices set forth herein may be changed without notice: however, any price change will be subject to the approval of the National Institute of Education Contracting Officer.

2. PAYMENT
The prices set forth herein do not include any sales, use, excise, or similar taxes which may apply to the sale of microfiche or hard copy to the Customer. The cost of such taxes, if any, shall be borne by the Customer.

3. REPRODUCTION
Express permission to reproduce a copyrighted document provided hereunder must be obtained in writing from the copyright holder noted on the title page of such copyrighted document.

4. CONTINGENCIES
CMIC shall not be liable to Customer or any other person for any failure or delay in the performance of any obligation if such failure or delay (a) is due to events beyond the control of CMIC including, but not limited to, fire, storm, flood, earthquake, explosion, accident, acts of the public enemy, strikes, lockouts, labor disputes, labor shortage, work stoppages, transportation embargoes or delays, failure, or shortage of materials, supplies or machinery, acts of God, or acts or regulations or priorities of the federal, state, or local governments; (b) is due to failure of performance of subcontractors beyond CMIC’s control and without negligence on the part of CMIC; or (c) is due to erroneous or incomplete information furnished by Customer.

5. LIABILITY
CMIC’s liability, if any, arising hereunder shall not exceed restitution of charges. In no event shall CMIC be liable for special, consequential, or liquidated damages arising from the provision of services hereunder.

6. WARRANTY
CMIC MAKES NO WARRANTY, EXPRESS OR IMPLIED, AS TO ANY MATTER WHATSOEVER, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE.

7. QUALITY
CMIC will replace products returned because of reproduction defects or incompleteness. The quality of the input document is not the responsibility of CMIC. Best available copy will be supplied.

8. CHANGES
No waiver, alteration, or modification of any of the provisions hereof shall be binding unless in writing and signed by an officer of CMIC.

9. DEFAULT AND WAIVER
a. If Customer fails with respect to this or any other agreement with CMIC to pay any invoice when due or to accept any shipment as ordered, CMIC may without prejudice to other remedies defer any further shipments until the default is corrected, or cancel this Purchase Order.

b. No course of conduct nor any delay of CMIC in exercising any right hereunder shall waive any rights of CMIC or modify this Agreement.

10. GOVERNING LAW
This Agreement shall be construed to be between merchants. Any question concerning its validity, construction, or performance shall be governed by the laws of the State of New York.

11. DEPOSIT ACCOUNTS
Customers who have a continuing need for ERIC documents may open a Deposit account by depositing a minimum of $200.00. Once a deposit account is opened, ERIC documents will be sent upon request, and the account charged for the actual cost and postage. A monthly statement of the account will be furnished.

12. STANDING ORDER ACCOUNTS
Customers who desire to receive microfiche copies of all ERIC reports announced in each issue of Resources in Education may do so by depositing $200.00 or submitting an executed purchase order. The cost of each issue and postage will be charged against the account. A monthly statement of the account will be furnished.

13. PAPER COPY (PC)
A paper copy (PC) is xerographic reproduction, on paper, of the original document. Each paper copy has a Velum Bristol cover to identify and protect the document.

14. FOREIGN POSTAGE
Postage for all countries other than the United States is based on the international Postal rates in effect at the time the order is shipped. To determine postage allow 75 microfiche or 75 (PC) pages per pound. Customers must specify the exact classification of mail desired, and include the postage for that classification with their order. Payment must be in United States funds.

OTHER ERIC COLLECTIONS AVAILABLE FROM EDRS

STANDING ORDERS
Subscription orders of microfiche copies of all ERIC reports announced in each issue of Resources in Education average $150.00 per month.
