Core Curriculum; *Educational Environment; Elementary Secondary Education; Information Sources; *Learning Modules; *Prevention; Relevance (Education); *School Vandalism; Stress Variables; Student Participation; *Violence; Worksheets

This guide, intended for participants in the third course of the National School Resource Network Core Curriculum, contains an activity/content summary for each module of the course, worksheets, and background materials. The purpose of the course is to introduce a conceptual overview and definition of "school climate" with the goal of effecting positive change. The focus is on ways of improving school climate without administrative or community action. The course first defines school climate, and then discusses ways to assess and improve it. These include formal and informal assessment, improvement of interpersonal relations, stress reduction and management, student involvement in change, and law-related education as a relevant curriculum approach. ABOUT THE CORE CURRICULUM
ON PREVENTING VIOLENCE AND VANDALISM

THE NATIONAL SCHOOL RESOURCE NETWORK APPROACH

The National School Resource Network (NSRN) was established under a grant from the Law Enforcement Assistance Administration, Office of Juvenile Justice and Delinquency Prevention, as a resource to schools troubled by crime, violence, vandalism and disruption. The network provides nationwide training events, technical assistance, and information dissemination to assist schools in preventing and reducing these problems. The focus of all Network activities is on the collection, sharing, and dissemination of resources—most particularly the ideas and strategies that schools and communities have tried.

A National Center, managed by the Center for Human Services and based in Washington, D.C., and Regional Centers in Boston, Massachusetts; Atlanta, Georgia; Chicago, Illinois; and San Rafael, California, will carry out the mandates for the Network. Also participating in the Network are 34 national organizations which form an active consortium to enhance service and delivery efforts.

THE CORE CURRICULUM

The Core Curriculum includes seven courses designed for delivery either in a comprehensive 5-day workshop incorporating all the courses or in separate special presentations. The seven courses are as follows:

Course 1: Putting It All Together and Taking It Home

This course provides an overview of a planning and evaluation process that participants can apply in implementing ideas and strategies in their own schools and communities. The course also allows participants the opportunity to reflect on workshop content and select from among the ideas and strategies presented those which best meet their schools' needs.

Course 2: Discipline

This course covers a range of issues and practices surrounding the development and implementation of an effective school discipline program. The focus will be on clarifying reasons for discipline, building conceptual frameworks for understanding behavior problems, describing policy considerations, and providing specific examples of programs and strategies.
Course 3: School Climate

The purpose of the course is to introduce a conceptual overview and definition of "school climate" with the goal of effecting positive change. The focus is on ways of improving school climate without administrative or community action. The course first defines school climate, and then discusses ways to assess and improve it. These include formal and informal assessment, improvement of interpersonal relations, stress reduction and management, student involvement in change, and law-related education as a relevant curriculum approach.

Course 4: Interpersonal Relations

The goal of the course is to introduce approaches and resources to identify, manage, reduce, resolve and prevent crisis and conflict in schools. There is an underlying assumption that hostile incidents and disruptive behavior are expressions of deep hurt, frustration, confusion, anger and misunderstanding. Specific attention will be given to crisis and conflict intervention and management, gang problems, problems of victims, and intercultural relations.

Course 5: Security

This course is designed to address a full range of preventive measures used to improve the security of the school both during and after school hours. It will provide a variety of alternative approaches to school security which will enhance schools' ability to improve the safety and security of the people and property. Special attention will be given to an overview of security problems, use of non-security staff to prevent problems, physical plant security, and design and upgrading of security programs.

Course 6: Environment

The course on environment provides guidance to school staff on ways to change school environments and make them safer. A full range of physical design strategies that can be implemented in schools is presented. Many of the strategies can be applied by school personnel and students. An assessment checklist will allow school personnel to identify environmental problems.

Course 7: The Community as a Problem Solving Resource

Community involvement in the school can help the schools greatly in solving problems of violence and vandalism. In this course a rationale for community involvement is presented, along with specific approaches for increasing school-community linkage. Use of parents and volunteers, the criminal justice community, and community agencies, businesses, and organizations are stressed. Interagency cooperation is also discussed.
Background and Rationale

A rich body of knowledge based on both formal research and individual experience tells us that individual and group behavior depends in many important ways on the situation and how it is structured and defined. It is possible to make some progress in controlling vandalism and violence through the use of guards and highly restrictive disciplinary procedures. However, the only way to prevent disruption in the schools and to provide a genuine atmosphere of order and caring is to have a school climate that is strongly prosocial and that conveys norms of commitment and personal responsibility.

Improving school climate is a mixture of science and art. It involves a combination of changing the structure of the school situation and changing the feelings that students and staff have about the school.

Purpose

The purpose of the course is to provide a conceptual overview of key elements of school climate with the goal of effecting positive change. The focus is on ways of improving school climate without intervention at the administrative or community level. In the course, climate is defined and methods for assessing climate are presented (Module 3.1). Strategies to improve climate are also presented. These include stress reduction and management (Module 3.2), student involvement (Module 3.3), and introduction of relevant curriculum, such as law-related education (Module 3.4).
Module Summary

This module focuses on defining, assessing, and changing school climate. Activities include: viewing a 5-minute videotape of a high school in New York City and evaluating its environment; introduction of sample programs used in Colorado schools to improve the quality of the school's environment; a school climate checklist completed by participants. Lecture and discussion on factors of school climate as defined by Edward Brainard and Robert S. Fox in "The Climate of the School" are presented. The TDR model of training teams of students, parents, and teachers who work to change the environment in their school is highlighted.

C. Discussion of School Climate Change

Participants discuss how change processes and programs might be applied in their schools.

5. Wrap-Up

Trainer summarizes the module, focusing on the interconnection between people and their environments. “We shape our surroundings and then our surroundings shape us” (Winston Churchill).
Course 3 - School Climate
Module 3.1 - Defining and Assessing School Climate

Objectives

Participants will be able to--

1. Describe a number of elements of "school climate"
2. Identify several aspects or determinants of school climate
3. Review ways of assessing school climate
4. Propose and discuss specific ways to begin improving the climate in their own schools.

Description of Materials

Transparencies

3.1.1 - 3.1.6 Transparencies present information about school climate—what it is, how it is determined, how it can be changed.

Participant Worksheets

3.1.1 "Bad Boys" Climate Assessment
3.1.2 Pre-Crisis Indicators
3.1.3 School Climate Checklist
3.1.4 Improving School Climate

Background Materials

3.1.1 The Climate of the School
3.1.2 Project Examples: Improving School Climate
3.1.3 Suggestions for Projects
3.1.4 Improving School Climate
"Bad Boys" Climate Assessment

You will view a segment from the videodocumentary "Bad Boys," a study of a New York City school. While viewing the tape, jot down any positive or negative aspects of school climate you identify. (These may be mentioned or simply implied.) The four categories of factors/determinants of climate listed below will be discussed in the next activity. Note aspects under one or another category wherever possible.

1. General Climate Factors - The Overall Feeling

2. Program Determinants - Curricular and Extra-curricular Activities

4. Material Determinants - Physical Resources of the School
Pre-Crisis' Indicators

The following list focuses on indicators that may suggest a crisis in school climate. Check those items that are true of your school.

Developed by Bertha Hudson, U.S. Department of Justice, Community Relations Service, 1977-78, as a resource for handling desegregation issues and adapted by NSRN.
There are several school climate checklists. The following questions are based on five of them: CFK Ltd.'s "School Climate Profile"; Rensis Likert Associates: "The Profile of a School"; Dade County Public Schools' "School Morale Attitude Survey"; Racine, Wisconsin, Unified School District's "School Environment, Staff and School/Community"; and Dr. James Garbarino's checklist. This checklist is only a sampling of these questionnaires, all of which are quite long.

Instructions: Answer each question as you see your school. Check the space that indicates your perception of the situation: Almost Never--Rarely--Occasionally--Frequently--Almost Always.

Improving School Climate

Things I could do to improve the climate in my school:

1. Provide activities to promote cooperation and group responsibility.
   Examples:

2. Notice and reward pro-social behavior.
   Examples:

3. Integrate rather than isolate academically and socially marginal students.
   Examples:

4. Other.
CHAPTER I

The Climate of the School

Introduction

A positive school climate is both a means and an end. A good climate makes it possible to work productively toward important goals, such as academic learning, social development, and curricular improvement. It also makes school a good place to be, a satisfying and meaningful situation in which both adults and youth care to spend a substantial portion of their time.

What factors comprise a humane climate? How can people in a school insure that it has a wholesome learning climate? What guidelines can be developed to serve as a measure of the humaneness of a school's climate? These are the essential questions addressed in this book.

Usual writings on the characteristics of a good school's program describe the nature of the curriculum and the instructional program. That is, they describe 1) desirable classroom teaching-learning strategies and conditions, and 2) sets of courses and experiences to be offered students within each area of the curricular and extracurricular programs. This book goes beyond these concerns. It describes, in concrete terms, facets of the school's climate as they relate to school climate goals; how to assess climate; program, process, and material contributions necessary in a healthy climate; desirable relationships among

SCHOOL CLIMATE IMPROVEMENT

Importance of School Climate

During the past decade, great strides have been made in strengthening the American school system. Many new and architecturally inviting school buildings have been built in an effort to keep pace with the rapid increase in the population. New developments and major advances have occurred in program organization—scheduling alternatives, individualized instructional systems, varied approaches to staff utilization, multiple grouping arrangements, and a veritable explosion of multimedia instructional materials. Exciting new curriculum materials have emerged in mathematics, science, English, and the social sciences. Program management techniques such as the Planning-Programming-Budgeting System (PPBS), and behavioral objectives, accountability, and National Assessment programs have become available to help sharpen the focus of educational programs and support the evaluation of their effects.

Despite these strides, we have not totally succeeded in creating the kind of schools we would like to have; we are not achieving the potential we envision. Perennial problems and concerns about schools remain.

In the following list of problems, are any characteristic of your school? Check those which concern you or your faculty, students, or parents. Space is provided at the end of the list to add other problems encountered at your school.

- High student absenteeism
- High frequency of student discipline problems
- Weak student government
- Student cliques
- High faculty absenteeism
- Negative discussion in faculty lounges
- Inadequate conditions
- Feeling of students because the school is too large
- Vandalism
- Student unrest
- Poor school spirit
- Poor community image of the school
- Faculty cliques
- Property theft from lockers
- High student dropout rate
- Underachieving students
- Low staff morale
- Passive students
- Faculty apathy
- Supplies and equipment unavailable when needed
- Students carrying guns, knives, and other weapons
- Poor image of the school by staff
- Dislike of students by faculty members
- Feeling among students that school has little purpose
- High incidence of suspensions and expulsions

Most of these problems demand direct attention, and an alert administrator recognizes the need to correct the dysfunctional programs and processes that seem causal to the negative conditions, attitudes and behavior listed above.

Actually, such problems are symptoms of deeper climate concerns. They are the tips of icebergs, indicators of the inadequacy of a school's programs for dealing with the human needs of students, faculty, and, perhaps, administrators; they are, in fact, often effects rather than causes. Parenthetically, it could be said that if schools continue to perpetuate an anti-human climate in which apathy, failure, punishment, and inadequate success in achieving the curriculum are characteristic, they may guarantee their own demise, and ultimately that of the American social system.
Goals of the Humane School Climate

It is easy to talk about a humane school, and to describe such an environment in glowing terms. But in reality, what is a truly humane school? What does a good climate look like? What are the characteristics of such a school's learning activities? What instructional conditions must exist? How can a school organization maintain efficiency and accountability in its learning program and still be centrally concerned with people? Can a school have trust and effective communication between administrators and teachers, between teachers and students and parents, and still retain respect for individuality and diverse value positions?

PRODUCTIVITY
of Students and Educators
Achieving basic skills
Developing constructive attitudes
Developing and expanding an adequate knowledge base
Clarifying values and purposes
Utilizing inquiry and problem-solving processes

SATISFACTION
on the Part of Students and Educators
Gaining a sense of personal worth
Enjoying school as a pleasant place to live and work
Gaining rewards from participation in worthwhile activities

The authors believe it can. Contained in the answer are the two following goals of the humane school climate:

To provide throughout the school a wholesome, stimulating, and productive learning environment conducive to academic achievement and personal growth of youth at different levels of development.

To provide a pleasant and satisfying school situation within which young people can live and work.

These primary goals focus on the young people for whom schools exist. A corollary is provision of a stimulating and productive environment for the adults of the school community—the faculty, principal, other staff members, and parents.

To summarize, these goals or outgrowths of a school climate can best be characterized as productivity and satisfaction. One without the other is insufficient. Figure 1-1 illustrates the goals.

Emergence of School Climate Awareness

More than fifty years ago, in 1918, the Commission on the Reorganization of Secondary Education articulated the Cardinal Principles of Secondary Education as health, command of fundamental processes, vocational efficiency, good citizenship, worthy home membership, worthy use of leisure time, and ethical character. More recently, in 1938, the Educational Policies Commission of the National Education Association outlined the purposes of education in the American democracy for the everyday pattern of an educated citizen. These were described as the objectives of self-realization, human relationship, economic efficiency, and civic responsibility.

Using public opinion research processes, in 1973, the National Commission on the Reform of Secondary Education, chaired by B. Frank Brown, developed thirteen learner-centered goals for secondary education. They are:

Content goals
Achievement of communication skills
Achievement of computational skills
Attainment of proficiency in critical and objective thinking
CLIMATE OF THE SCHOOL

2. To get along better with people at all levels of society ........................................... 43 percent
3. To make more money—achieve financial success .................................................... 38 percent
4. To attain self-satisfaction .............................................................................................. 21 percent
5. To stimulate their minds .................................................................................................. 15 percent
6. Miscellaneous reasons .................................................................................................... 11 percent

This information has been reported to illustrate that the climate goals at the outset of the climate section are supportive of the aims of American education. They represent routes for achieving the larger purposes of schooling. One climate goal pertains to productivity as it concerns academic, social, and physical development of skills, knowledge, and attitudes. Because of the importance of productivity, in the developmental life of youngsters, and the fact that youth spend a large portion of their life in school, the second climate goal is equally important. This goal pertains to satisfaction—the need for a fulfilling and quality school life.

General Climate Factors

If you were to walk into a school building and try to gain a sense of its prevailing climate, what would you look for? Along what lines would you assess its positiveness or negativeness?

We suggest you look for at least eight factors, which comprise the school's climate and determine its quality. They result from an interaction of the school's programs, processes, and physical conditions.

Ideally, there should be evidence of:

1. Respect. Students should see themselves as persons of worth, believing that they have ideas, and that those ideas are listened to and make a difference. Teachers and administrators should feel the same way. School should be a place where there are self-respecting individuals. Respect is also due to others. In a positive climate there are no put-downs.

2. Trust. Trust is reflected in one's confidence that others can be counted on to behave in a way that is honest. They will do what they say they will do. There is also an element of believing others will not let you down.
3. **High Morale.** People with high morale feel good about what is happening.

4. **Opportunities for Input.** Not all persons can be involved in making the important decisions. Not always can each person be as influential as he might like to be on the many aspects of the school's programs and processes that affect him. But every person cherishes the opportunity to contribute his or her ideas and know they have been considered. A feeling of a lack of voice is counterproductive to self-esteem and deprives the school of that person's resources.

5. **Continuous Academic and Social Growth.** Each student needs to develop additional academic, social, and physical skills, knowledge, and attitudes. (Many educators have described the growth process as achieving "developmental tasks." Educators, too, desire to improve their skills, knowledge, and attitudes in regard to their particular assignments within the school district and as cooperative members of a team.)

6. **Cohesiveness.** This quality is measured by the person's feeling toward the school. Members should feel a part of the school. They want to stay with it and have a chance to exert their influence on it in collaboration with others.

7. **School Renewal.** The school as an institution should develop improvement projects. It should be self-renewing in that it is growing, developing, and changing rather than following routines, repeating previously accepted procedures, and striving for conformity. If there is renewal, difference is seen as interesting, to be cherished. Diversity and pluralism are valued. New conditions are faced with poise. Adjustments are worked out as needed. The "new" is not seen as threatening, but as something to be examined, weighed, and its value or relevance determined. The school should be able to organize improvement projects rapidly and efficiently, with an absence of stress and conflict.

8. **Caring.** Every individual in the school should feel that someone else if he is happy or sad, healthy or ill. (Teachers should feel that the principal cares about them even when they make mistakes or disagree. And the principal should know that the teachers—at least most of them—understand the pressures under which he or she is working and will help if they can.)

---

**Basic Human Needs within the School**

If it is to be successful—productive and satisfying—any institution must provide opportunities for students, faculty, staff, and administrators to fulfill their basic human needs. An effective, wholesome climate cannot exist without meeting such needs. In a sense, the basic needs are an additional means of viewing many of the climate factors just described.

No school organization can possess a wholesome climate without providing for the essential needs of its students and educators:

- **Physiological needs** for involvement in learning. These involve the school's physical plant including heat, light, safety from hazards such as fire, and relatively uncrowded conditions.

- **Safety needs** pertain to security from physical and psychological abuse or assault from others in or around the school.

- **Acceptance and friendship needs** from other students, teachers, staff, and administrators.

- **Achievement and recognition needs** in regard to one's endeavors.

- **Needs to maximize one's potential** or to achieve at the highest possible level.

---

*The authors do not believe the factors listed above, or the other listings used to describe the school's climate, are all-inclusive. Readers may wish to delete or add items, and space is provided for them to do so.*
These needs, which are charted in Figure 1-3, concern the desire of each person for acceptance, identity, and security. Through their interaction, the programs, processes, and physical conditions of the school must provide for each of the basic needs if a wholesome climate is to develop. Should a school deal only with safety needs, for example, it is not likely that trust, respect, high morale, and the like would develop. Safety might be provided by seeing to it that students sit at their desks all day long. But such an approach to safety would do nothing to build trust, encourage innovativeness, or contribute to high morale. Further, a school that has outstanding opportunities for learning, a beautiful physical plant, and involvement processes for making decisions, but has students being physically attacked in the restrooms or teachers fearing for their safety is not likely to develop a wholesome climate.

Focus of School Climate Improvement Projects

It is not likely that a school can directly embark upon precise projects to improve trust, respect, cohesiveness, caring, opportunities for input, high morale, school renewal, and continuous growth. These are not factors that the school is likely to have been working on directly, even if it could. They are universal, and their quality is actually a result of the practices and programs of the more specific school operations within the areas of program, process, and material determinants described in the following section.

School Climate Determinants

Described below are eighteen features of a school's operations that largely determine the quality of the factors and goals (see Figures 1-1 and 1-2) that comprise climate. It is by improving these eighteen school climate determinants that school improvement projects can most easily be developed and evaluated.
The determinants are divided into three major categories: program, process, and material determinants. Figure 1-4, which appears on page 12, indicates the determinants.

Note that the listings of Figure 1-4 and the descriptions of the determinants provide space for addition of items that might be pertinent to a particular school.

In Chapter VI, each determinant is described at greater length, and examples are given to show what might be expected for each program, process, or material determinant. (These illustrations have been contributed by many practicing school principals and staff members involved in CFK Ltd.-sponsored Principal as the School's Climate Leader projects.)

**Program Determinants** of a positive school climate include:

1. **Opportunities for active learning** in which students are totally involved in the process, both physically and mentally, and are able to demonstrate an ability to use their knowledge and skills.

2. **Individualized performance expectations** that are reasonable, flexible, and take into account individual differences. Individuals are frequently encouraged to set their own performance goals. Care is taken to allow for differences while at the same time providing maximum challenges for fully motivating the individual.

3. **Varied learning environments**, which avoid a single, standard mode of instruction, class size, or atmosphere. Schools within schools and alternative programming are considered potential processes for developing optional environments.

4. **Flexible curriculum and extracurricular activities** that provide a wide variety of pace and content options for learners. It is not assumed that all learners in a group have the same content needs or that most will learn at the same rate. Extracurricular activities should serve all students and be subject to constant redevelopment as students' needs change. To the greatest extent possible, such activities should be offered on an open-enrollment basis.

5. **Support and structure appropriate to learner's maturity** in which the school designs its programs, activities, and requirements so they are consistent with the everchanging intellectual, social, and physical developmental character-
ichistics of youth as they grow. Educators practice the principles of child and adolescent growth and development.

6. **Rules cooperatively determined** involving educators and students in the development of rules and regulations that are clearly stated and viewed as reasonable and desirable by those affected.

7. **Varied reward systems**, which minimize punishment and emphasize positive reinforcement of effective behavior. The school should recognize the need for and provide a variety of ways in which students and educators can be productive and successful.

**Process determinants** of a positive school climate include:

1. **Problem solving ability** in which skills are adequately developed to reach effective solutions quickly. Problems should stay solved, and the solving mechanism should be maintained and strengthened. There should be well-developed structures and procedures for sensing the existence of problems, for inventing solutions, for implementing them, and for evaluating their effectiveness.

2. **Improvement of school goals** in which they are clearly stated and understood by students, parents, and educators. Goals should serve as reference points for making decisions, organizing school improvement projects, and guiding day-to-day operations. The school should record all goals and continuously update them. Students, staff members, and administrators are encouraged to develop personal goals directed toward their own growth within the context of the school program.

3. **Identifying and working with conflicts** in a way that recognizes that conflict is natural and that it occurs within individuals, between them, and between groups. Conflict is not a problem unless it mounts up, is not faced, and is allowed to fester. In a favorable climate, conflict is accurately identified and effectively worked on.

4. **Effective communications**, which enhance interpersonal relationships among and between educators and students and parents rather than causing alienation, isolation, misunderstanding, fear, and frustration. Communication involves sending, receiving, and understanding feelings and ideas openly and honestly. It is a multidimensional process, unrestricted by hierarchies or other imposed or imaginary barriers. There should be emphasis on sharing and problem solving, as well as a concern for purposeful listening.

5. **Involvement in decision making** in which opportunity to improve the school exists for students, educators, interested parents, and others. Persons affected by a decision need an opportunity to provide input. Decisions should be based on pertinent information, and decision processes should be clearly specified and understood by all. A variety of decision-making models should be used and the entire process reviewed periodically for effectiveness and efficiency.

6. **Autonomy with accountability**, which balances the freedom of being independent and self-governing with the necessity and desirability of being responsible for actions through reporting and explaining processes in achieving goals and objectives. This equity is vital not only to the school as an organization, but to educators and students as individuals and as working groups.

7. **Effective teaching-learning strategies** in which goals for teaching-learning situations are clearly stated and educators seek evaluative feedback from students and other educators. Teachers should recognize that students have varied learning styles and should attempt to employ methods that consider these styles as well as student maturity. Students should have frequent opportunity to choose from a variety of learning activities. Inquiry should be encouraged, and a system should exist to evaluate teaching strategies.

8. **Ability to plan for the future** is a characteristic whereby the school determines and plans for its immediate and long-range future. In this process, the school's educators and clientele analyze the general course of the education program at their school, and deliberately plan desirable changes and modifications in the school's programs, services, and processes. It involves planning skills and a future orientation—
the attempt to project conditions as the educators and clientele want them to be.

Material determinants of a positive school climate include:

1. **Adequate resources**, which include able educators and support for them and students through provision of instructional material centers and laboratories, desirable classroom or learning-area equipment, furniture, textbooks and references, other materials, and adequate expendable supplies.

2. **Supportive and efficient logistical system**, which is designed to help people be productive in achieving the school, curriculum, and extracurricular activity goals. A responsive system enhances morale. Procedures should enable individuals to efficiently acquire needed material resources. Educators should be able to get commonly used resources rapidly. The system should provide quality in such areas as student scheduling, and in custodial, maintenance, secretarial, purchasing, budgeting, and accounting services. Each individual should know what he can and cannot expect of a school's logistical system.

3. **Suitability of school plant** in which the institution modifies the physical plant as program and human needs change, keeping building decor attractive by use of color, furniture arrangement, and displays of student work.

Chapter VI, "School Climate Determinants," further discusses each of the above eighteen characteristics. Chapter VII shows how a school might initiate a process of developing its own set of definitions and climate determinants, particularly relevant to its own needs and perceptions.

**Summary**

The preceding material, along with Figures 1-1, 1-2, 1-3, and 1-4, provide a conceptual overview and definition of the school's climate. In summary form, Figure 1-5 combines the concepts.
Project Examples: Improving School Climate

(See attached)

MAPLETON High School, Adams County School District #1, Adams County

Telephone: 288-6681
Superintendent: George DiTirro
Principal: James M. Sekich

PROJECT OR ACTIVITY: SCHOOL WIDE ADVISORY SYSTEM

Personalizing the educational experience is the goal of the Advisement Program. It creates an ongoing personal interaction between a teacher (advisor) and a student (advisee). The goals of advisement are a successful goal-oriented educational experience for all students; increased positive home/school communications through active parent involvement in educational planning; improved student decision making and career planning through a process of advisee self-assessment.

Cost-funded through Title IV-C grant. Prior to implementing the program, a full year of staff development was held utilizing personnel from the Bureau of Educational Research at the University of Colorado. Sister Elise Calmus of the University of Colorado is the State High School Facilitator. Mr. George DiTirro, Superintendent of District #1 is the supervisor of the Title IV grant.

Outcomes: State research compiled by the Bureau of Educational Research at the University of Colorado under the direction of Mr. John Ritchie. This included evaluations of the Staff Developmental Program, a survey of parent/teacher and students taken prior to instituting the program; a follow-up survey will be conducted during April 1978.

Superintendent: Dr. J. Roland Ingraham
Principal: Tom Doohan

**PROJECT OR ACTIVITY: TEACHER ADVISORY PROGRAM**

The Teacher Advisory Program has two components:

-- A counselor/teacher team consisting of one counselor and approximately fifteen teachers. The purpose of the team is to provide counseling training to the teachers and to provide a vehicle of sharing ideas and concerns pertaining to the program.

-- A teacher-advisor system in which each teacher is allotted approximately 20 advisees with whom they meet at least four times a year. The students pick the teacher-advisor they want.

The objectives of the program are:

-- To enable the school staff to be more aware of and responsive to the needs of students.
-- To assist students in accepting responsibility for decisions about their own learning.
-- To provide for at least one (1) adult in the school who knows each student and shares responsibility with him for his learning program.
-- To assist students in building confidence by developing a positive self-image.
-- To form new relationships within the school that promotes a caring, supportive, and problem solving relationship between staff and students that would result in an overall improvement of the school climate.

Outcomes: The response from students and staff to the initial portion of the program implemented in October has been positive. The pre-registration for the second semester was improved considerably.

---

Acting on the belief that a positive change in the openness and level of trust in a principal should contribute highly to a corresponding change in the climate of the school she/he manages, Adams County conducted the Administrator Image Audit.

Each administrator was placed into a role group: elementary principals, secondary principals, etc. They were then asked to share in writing (anonymously): (1) personal perceptions of the group; (2) perceptions of each of the other groups; (3) the perception she/he believed each of the others held of his/her own group.

Discussions followed which resulted in clarified perceptions of groups and individuals and specific objectives for the improvement of inter-group relationship for the ensuing year.

**Outcomes:** There has been a decrease in student-teacher conflicts. Curriculum development has gone smoother. Faculty seems more open to change.
The alternative program was designed to offer students various options to obtain a high school diploma. Curriculum courses were given in the English Language Arts, social studies, math science, and reading in the content areas. In addition to academic development, the curriculum has been expanded to place an emphasis on affectual development, and the use of community resources for learning experiences outside the classroom. Students along with staff, share in all of the decisions directly affecting the students' education to include the operational procedures of the program, what the students study, and how they are to learn the content. Letter grades have been dropped in favor of using a point system for credits. All learning objectives are contracted between the individual student and teacher. The rationale behind this approach is basic. We are attempting to watch learning styles and teaching styles. A hopeful outcome is that students will experience success in academics, involve them in decisions that must be made, and involve them in problem-solving concerning not only academic goals, but personal goals as well. Another objective of the program is to improve the individual attitudes of students toward self, school and community. The students identified for this program were chosen primarily because they were potential or actual high school dropouts, although acceptance of a student into this program is not limited to this criteria. Since the program is optional, students sign a contract to participate in this learning situation. This entry contract was developed by students and teachers. At present there are 38 students involved.

Outcomes: The program was implemented at the start of this school year, so specific measurement of the outcomes is pending a year-end analysis. Various methods of measuring the successes and failures of this program have been developed, to include: academic achievement, attitudinal development, attendance, parent response, and school/community receptiveness.

**PROJECT OR ACTIVITY: DEANS**

Four teachers have been employed as deans of students. These individuals have been employed because of their ability as a teacher and their outstanding relationship with students and faculty. Their responsibilities include the discipline and attendance for approximately 700-750 students. They are situated in each of the four buildings on campus. One assistant principal is responsible for these deans. The counselors work very closely, in a team approach, with the dean. The combination of the Dean, Counselor, and Psychologist offers many options when working with adolescent problems.

**Outcomes:** Consistency in interpreting school policies and regulations has been attained. Daily attendance has neared the 95% mark.

**PROJECT OR ACTIVITY: VIDEO TAPE: SHAPING STUDENT BEHAVIOR**

During 3 hrs/week student behavior is video taped in the halls, lunchroom, library, resource centers, smoking area and school parking lot. These tapes are used to evaluate the quality of life at Smoky Hill.

**Outcomes:** When a student can see their behavior on tape, the results are dramatic. This process also helps the administration develop programs to more effectively deal with "instant replay."

Superintendent: Dr. Barnard D. Ryan

Principal: Gary G. Cox

**PROJECT OR ACTIVITY: ORGANIZATIONAL DEVELOPMENT PROJECT**

Faculty members in 1974 began taking inservice courses in which they learned ways of applying Organization Development (OD) procedures to planning optional programs and improving school climate. In these classes they became a cohesive and effective group for school improvement. They surveyed students, parents, and faculty in Spring 1975 to determine optional program needs and areas in which school improvement needed improving. Students, parents, and faculty continued to participate in the program development process through membership on committees and participation in inservice workshops. The school has also used OD specialists from the district office as consultants to groups of the faculty.

**Outcomes:** Through the cooperative curriculum development activity a successful 8th grade English and social studies program has been developed. The OD specialists have helped improve the conduct of meetings; especially in clarifying communication and in setting clear and effective ways of dealing with agenda items. The resulting changes in meeting procedures have promoted more effective use of faculty members' time in meetings and more satisfaction with the conduct and results of meetings.
The Clear Creek County Child Assessment Team is a group of professional representatives of local social service delivery agencies and organizations who deal directly with children of the county and their families.

Outcome: The purpose of the Team is to: 1) Coordinate agency services to youth and their families through the discussion of resources, roles, and actual cases. 2) Develop guidelines for appropriate referrals from agency to agency. 3) Assist each other in the determination of child abuse and neglect cases and the development of a coordinated and adequate treatment strategy for such families. 4) Coordinate the development of needed programs within respective agencies or in the community. 5) Provide professional peer consultation and support around treatment issues and strategies.

Superintendent: Dr. Joseph E. Brzeinski

Principal: John J. Astuno

**Project or Activity: Guardian Angel Breakfast**

Once every two weeks the Principal (Guardian Angel) invites 15-20 students, two to three teachers, and one to two adults from the community to a breakfast which is prepared and served by the East High Home Economics Class. The purpose of the breakfast is for students to get to know the Principal and what he does, and for the Principal to know a broad sampling of students and get a better feeling of the student pulse at East.

**Outcomes:** Very enthusiastically received by all who have attended. This activity is being broadened to include more students and is in its third year of operation.

Superintendent: Wayne Bricker

Principal: Robert P. Breeden

**PROJECT OR ACTIVITY: SCHOOL WITHIN A SCHOOL**

The purpose of this project is to decrease alienation among students, faculty, and community at large. The target population is disaffected youth of all ability levels.

Students who volunteer for this program are removed from the normal classroom routine for three hours a day to special area of the high school where they receive individual instruction in social studies, English, mathematics. They are also exposed to various work experiences and group counseling in this "school within a school." For all other high school activities the students are mainstreamed.

As a result of the program students gain motivation, confidence and self-esteem.

**Outcomes:**

School dropout and truancy rates were decreased. Positive attitudes toward the parents, school, and themselves were developed by students. Many students were able to receive their diploma with their contemporaries. More students were willing to become involved in community activities and projects.
The staff and administration cooperatively designed a three-year staff development program to promote a more humanistic school climate. Major areas of inservice presently being addressed in one half-day inservice session per month are: evaluation of performance, competency based instruction, cultural and ethical awareness, transactional analysis, prescriptive instruction, and involvement of student government representatives.

Outcomes: A planned program is being carried out. The faculty is aware of new techniques and educational developments. Students are involved in all activities and planning, and mutual respect among all members of the "school-family" is developing. Major changes in teacher and administrator evaluation have occurred along with the emergence of a strong student government.

Principal: F. W. Aspedon

PROJECT OR ACTIVITY: SCHOOL CLIMATE IMPROVEMENT PROJECT

As a result of the local school accountability committee placing school climate improvement as a top priority, students, teachers, counselors, administrators, and support personnel were surveyed as to their perceptions of the school climate. Using the survey results, a school climate profile was drawn, and the following activities were initiated in response to the profile:

1) Inservice programs relating to problem solving, open communication, shared decision making and accountability for population representatives.
2) Visitation by population members to other schools.
3) Media (audio visual and printed) distributed.
4) School newspaper articles (informative, and feature).
5) Student projects relating to improved school climate.
6) Increased teacher and student involvement in the decision making process.
7) Student advice groupings (homerooms) under the supervision of teachers were instituted.
8) Regular, structured meetings of support personnel (teacher aides, custodians and so forth) were commenced.

A form of the CFK Ltd., School Climate Profile was administered to the population in the spring of 1976 for post assessment and summative evaluation.

Outcomes: A post-assessment showed positive climate change as perceived by students and teachers and a somewhat negative perceptual change on the part of administrators, counselors, and support personnel.

Principal: Jerry Crabs

PROJECT OR ACTIVITY: SCHOOL SENATE

A school Senate has been formed to replace the traditional student council. The Senate, comprised of students, parents, teachers and one administrator and chaired by the student body president, is a decision making, policy making group. The students meet three days a week in the Student Government class and the Senate session convenes one day a week for two periods with all representatives in attendance. The Senate has the power to change any school policy not affecting School Board Policy, budget, and/or school credit. The principal may veto any Senate bill. The veto may be overridden by a 2/3 senatorial vote.

Outcomes: As a result of the authority invested in the Senate, we have seen a considerable increase in school and community spirit. Because the students have a real voice in school policy making, they are showing a new interest in making suggestions and are actively involved in seeking ways to improve the school climate. The same is true of the parents.

PROJECT OR ACTIVITY: GET A HANDLE ON LANGUAGE - AND FLY!

This is a project-oriented English class emphasizing the practical. It is designed to stimulate students who have had a history of failure (experienced in previous high school and junior high school classes). All writing, speaking and grammar skills are centered around high-interest mini-units (1-3 weeks). Students have the opportunity to suggest unit content and direction. Units are: a) Reading and Drawing Plans for a Dream House, b) Study and Evaluation of Antiques, c) Building a Solar Oven, d) Handtools and their Use, e) Lifestyle Assessment, f) How to Communicate with Parents, g) etc.

Outcomes: Students have expressed verbally and in writing that they are retaining more information and getting into the skill work with less anxiety. Pre and post tests bear this out. The most dramatic proof has been a sealed timed-writing done in September 1977 compared to one in January 1978. The improvements were dramatic. The students are more eager to learn. Discipline problems are virtually non-existent.

PROJECT OR ACTIVITY: CLASS DISCUSSION OF SCHOOL REGULATIONS

At the beginning of the school year and whenever new school policies or regulations emerge, the students, during a designated period of the day, review, discuss, and make recommendations on the regulations to a faculty-student-administration school policy group. This process not only increases understanding of school regulations but also increases the degree to which the regulations are observed. This project is in its second year. Twice a year, in the fall and in the spring, students in designated classes discuss discipline and attendance policies with their teachers. This year proposed changes to the policies were discussed. As a result of these discussions some proposed changes were not implemented; others were modified. The results of the discussions are shared by all faculty members in faculty meetings. In this way, student opinion is considered by faculty members as they make decisions regarding school regulations.

Outcomes: Principal Joe Rocco reports that he believes the procedure "definitely has a positive effect on student attitudes towards rules and regulations because the students have had something to say about them." There is less complaining about rules and more pupils are following them. As a result, the number of referrals to the office for infractions of school rules has declined.

### Project or Activity: Open Campus and Flexible Scheduling

The Open Campus concept provides the University High School with the flexibility needed for a dynamic student climate. The Open Campus provides the opportunity for the following concepts: 1) a flexible schedule, 2) the development of student maturity through the freedom to be involved in developing many of their learning experiences, 3) Independent Study as well as tutorial learning experiences, 4) a means of providing a meaningful discipline solution to student problems, 5) provides for alternative education.

**Outcomes:** The Open Campus concept is truly an organizational means of providing the flexibility needed in today's high school. The concept is not geared to lessen the supervisory aspect of administration or teachers, but rather it provides for an environment that tends to develop mature students who are able to deal with the problems of self-motivation and self-determination.
Eugene Howard, in his article "School Climate Improvement," offers nine interesting suggestions for improving and opening up a school's climate. The suggestions are:

1. Deemphasize hierarchy by organizing nonhierarchical teaching teams instead of the hierarchical ones commonly suggested. Further facilitate communications across hierarchical barriers by developing a "flat" organizational plan designed to encourage decentralized decision-making.

2. Decrease the amount of staff time presently invested in snob appeal type activities which emphasize conformity and competition. Increase the amount of staff time devoted to developing activities for pupils who are generally considered "out of it," open the membership on the student council to anyone who has an idea for improving the school and is willing to work on it.

3. Develop projects to include pupils in the evaluation of their own work.

4. Replace the present achievement recognition system with one which emphasizes more immediate and widespread rewards for tasks well done.

5. Form a group to rewrite the school's philosophy statement and its book of rules and regulations so that what the school stands for is understood more clearly by everyone and so that these beliefs are translated into reasonable rules.

6. Revise the school's grading and reporting systems so that it is possible for everyone to feel that he is succeeding every day.

7. Take students and staff members on retreats or form in-school discussion groups designed to foster open communications, mutual respect, and understanding.

8. Form a group of students to make a study of the inconsistencies which exist in the school between what the school's philosophy statement says and the manner in which the school's programs operate.

9. Interview a group of the school's losers and listen carefully to their description of how school affects their attitudes towards themselves and others. Form a task force to do something about at least one of the concerns expressed by the 'losers' group.

The above list of projects is only suggestive—designed to assist the reader in his understanding of the kinds of innovative practices I am advocating. Such projects are limited in scope. They would, however, modify, at least to a small extent, the climate of the school. Perhaps if a number of smaller projects can be successfully implemented, the students and staff can begin to see the value of climate improvement activities and can feel confident enough to launch a comprehensive program designed to modify all of the climate characteristics which have been identified.
Improving School Climate

A program developed by: TDR Associates, Inc.
385 Elliot Street
Newton, Massachusetts 02164
(617) 969-0651

TDR Associates, Inc., of Newton, Massachusetts, trains internal student-staff-parent teams to measure and improve school climate, racial climate, and school discipline. Using validated instruments, these teams survey student, staff and parent perceptions of these factors, and develop and implement improvement plans based on the findings. These procedures place the locus of change within a school, and have been followed with consistent success.

It is not always apparent why some schools are orderly, friendly, and serious about learning, while other schools are disorderly, hostile, and disinterested in learning. To some extent, school behavior reflects the larger social crisis; changing values, crime and violence, economic retrenchment, a generalized malaise. Yet some schools do manage to transcend their surroundings by maintaining a climate conducive to teaching and learning. Such schools become communities of their own, places where the ills of the culture-at-large are not the governing factors.

School climate can be improved and maintained at a high level of excellence by giving systematic attention to the following factors, over which schools do have control:

<table>
<thead>
<tr>
<th>SCHOOL CLIMATE</th>
<th>RACIAL CLIMATE</th>
<th>SCHOOL DISCIPLINE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Involvement</td>
<td>Groupings</td>
<td>Behaviors Toward</td>
</tr>
<tr>
<td>Accessibility &amp; Expressiveness</td>
<td>Racial Mixing</td>
<td>People</td>
</tr>
<tr>
<td>Receptivity</td>
<td>Goal Direction</td>
<td>Racial Fairness</td>
</tr>
<tr>
<td>Learning</td>
<td>Influence</td>
<td>Staff Support for</td>
</tr>
<tr>
<td>Orientation</td>
<td>Distribution</td>
<td>Integration</td>
</tr>
<tr>
<td>Community</td>
<td>Options</td>
<td>Security</td>
</tr>
<tr>
<td>Dealing With</td>
<td>Order</td>
<td>Staff Modeling</td>
</tr>
<tr>
<td>Problems</td>
<td>Challenge</td>
<td>Multicultural Exposure</td>
</tr>
<tr>
<td>Equal Treatment</td>
<td></td>
<td>Behaviors Toward Self</td>
</tr>
</tbody>
</table>

...
Each of these factors is related to student learning and social development, racial integration, and staff morale and effectiveness. These factors have been validated by research and practice over the past two decades.

The teams are trained to gather data about the current state of these aspects of the school's life, to interpret that data, and to plan and direct improvements where they are most needed on a continuing basis. It is essential that these stakeholder groups work together, to avoid or break out the circular blaming and polarization that is often found. In this endeavor the teams work in concert with the established governing bodies of the school, such as the administration, and the teacher, student and parent associations. The teams supplement and enrich the ongoing operation, not replace it.

Whether the schools are large or small, or city, suburban or rural, the results are encouraging. Some schools have developed new, participative governance and expanded activities programs. Some schools have been increasing student challenge by raising course and graduation requirements, or increasing school member's involvement and the school's sense of community through expanded activities programs. Other schools are working on raising the achievement levels of students through the use of individual learning contracts, cooperative learning teams, and other such approaches. By the time these student-staff-parent teams reach this stage of prescription, they are ready to continue and expand this process on their own.

By participating in the formulation and operation of new school governance procedures, students, staff and parents share responsibility for control of the school, thus diminishing their feelings of powerlessness, however derived. By improving the school climate factors, an atmosphere that enhances school members' investment in learning and teaching can be maintained. By gearing the curricula
and instruction practices to the variety of student interests and abilities in realistic and challenging ways, the "hope of attainment" necessary for self-discipline can be restored for many previously disruptive students.

That schools can make such improvements, even in current times, has been demonstrated. There is no magic involved. It takes time, patience, determination, skill, and engaging proven step-by-step procedures. The ideal state is never reached; only small, incremental changes that can over time add up to collectively impressive improvements. School discipline, and its companion, hope of attainment, are not completely at the mercy of societal forces. With leadership and nerve, schools can become what one historian has recently called, "small communities of competence."
Module Summary

Participants will look at stress as an element of school climate. This module is designed to show that it is normal and reasonable to feel the effects of stress in the school environment and that there are ways of assessing and managing stressors which negatively affect job performance.

Course  3 - School Climate
Module  3.2 - Stress Assessment and Management

Objectives
Participants will be able to--

1. Discuss stress as it applies to school personnel
2. List some sources of school-related stress
3. Identify the stressors that affect job efficiency and functioning
4. Begin developing strategies to prevent or alleviate school stress.

Description of Materials

Transparencies
3.2.1 - 3.2.4 Transparencies support a minilecture on an "Overview of Work Stress Among School Personnel."
3.2.5 - 3.2.9 Transparencies highlight a review of stress reduction and management strategies.

Participant Worksheets
3.2.1 Holmes-Rahe Social Readjustment Rating Scale
3.2.2 Steps to Reduce Stress

Background Materials
3.2.1 Excerpts from "Long-Term Work Stress Among Teachers and Prison Guards"
3.2.2 The Job Related Tension Index
3.2.3 "The Principal's Next Challenge: The Twentieth Century Art of Managing Stress"
3.2.4 "Coping with Stress in 1979"
Resources

R.3.2.1 "Student Stress--Why You're Uptight and What To Do About It"
R.3.2.2 "How to Cope with Stress in the Classroom"

Excerpts from "Long Term Work Stress in Teachers and Prison Guards"

The following are excerpted portions of an article, "Long-Term Work Stress in Teachers and Prison Guards," by Carroll M. Brodsky, M.D. The article, published in the Journal of Occupational Medicine, February 1977, is available in its entirety from the University of California School of Medicine, San Francisco, California 94143.

An increasing number of workers are filing claims alleging that the constant and cumulative stress of their jobs has caused them to become physically or mentally ill and socially disabled. The occupations of teacher and prison guard can serve as models of work environments that have been indicted by these claimants. These occupations are more similar than may appear on first consideration. While teachers are in "education" and prison guards are in "criminology," in a larger perspective both serve as caretakers or custodians of persons who are in their charge not by choice, but by force of law. The resulting relationships between caretakers and their charges are quite similar.

Schools have become, in some sense, prisons. The caretaker in both institutions serves society as a buffer in a setting characterized by conflicting expectations or demands. This position produces tension and illnesses that are in effect occupational hazards. The students or convicts, who may experience the same tensions as the custodians, communicate their distress through passive resistance, passive-aggressive behavior, or threats of violence and physical attack on their caretakers. The need to contain such behavior and the actual danger of physical harm compound the caretaker's discomfort. Frequent changes in organizational structure, in goals and objectives, and in rules make it difficult for teachers and guards to be secure about their own positions.

Contemporary schools and prisons thus represent institutions that are located at a point where public policy and occupational medicine intersect. The mental health of the employees affects the function and welfare of the institutions and their charges, while the culture of the institutions determines the well being of the employees. Until new methods are developed in the fields of education and criminology, society will use those who staff both institutions as buffers between itself and the institutional problems.

The development of new methods is hindered by the fact that society has not really made up its mind how to treat these institutions and the groups they contain. It does not know whether it wants to be kind to children, to educate them to be independent thinkers or merely to train them to fill positions in the economic structure. Because of this indecision, the schools are asked to do all these mutually exclusive things simultaneously. These contradictory expectations place teachers in a very awkward position. They have to keep the children under control but they also have to educate them; they have to teach children
to obey authority unquestioningly but they also have to develop their intellectual independence. Moreover, they often are not given sufficient resource materials and administrative support for any of their roles.

... At the same time both schools and prisons are becoming more volatile places, with students and prisoners more often acting out their anger and other pent-up feelings. Teachers and prison guards are the most convenient and visible manifestations of the system against whom these aggressions are directed and so they become the targets for this acting out of feelings.

... Finally, teachers and prison guards serve not only as buffers but also as scapegoats. Society cannot easily accept the problems related to change or the failure of the remedies it designs to correct obvious ills in its institutions. Because they are in the position of implementing new policies, many of which are social experiments attempting to render schools and prisons more serviceable to society, teachers and guards are the most convenient focal points for society's blame if the policies are unsuccessful.

An operational definition [for long-term stress] emerges. [It] involves awareness—the antithesis of smooth, automatic function. Stress is the awareness of awareness, the recognition that one is not functioning automatically, together with the suspense and anxiety that accompany this state. It is the fear that one will never again experience the peace of automatic function. It is the awareness of threat from the outside or turbulence within that was formerly not present. It is anger at those who have caused this pain. . . . We must ask whether such awareness represents illness or health, mental aberration or good sense. We must ask whether we should reinforce it or try to cure it.

Long-term stress is completely different [from short-term stress]. It is neither temporary nor intermittent but arises from structural conditions that have no prospect of termination. Long-term stress causes changes that develop in several stages. First, there is awareness of conflict on the job. Most workers have had conflicts on the job or have been unhappy with certain aspects of their work. Any single problem is usually seen as transient. At some point, the worker begins to believe the problem is not an isolated or transient one but is inherent in the work situation itself, and he sees no hope for change.

. . . Summary of the Process
Long-term stress is present in the work situation when several or all of the following ingredients are present:

1. The job is one in which the goals or objectives are contradictory, lines of support are ill defined, and there is role ambiguity. There is no hope for improvement.
2. Superiors are in much the same position as subordinates.
3. The consumers of the services are uncooperative and unappreciative or actually threaten violence to the worker.
4. A triggering event occurs that makes the worker aware of his vulnerability and at the same time feel isolated.
5. Internal and external forces are present that make it difficult or impossible for the worker to resign.

Teachers and prison guards are not the only persons suffering from long-term work stress. The above model pertains to other occupations as well, but is different from that of the pressure experienced, for example, by air traffic controllers. The distressing work relationships that are outlined here represent a condition in which the victim is overwhelmed more by his unhappiness, anger, dissatisfaction, and apprehension than he is by the demand for performance.
One of the needed changes is better managerial practices. This would involve finding ways of taking into account the fragility of people under stress and of being supportive of them while helping them adapt to change. It would require the development of cohesiveness among the affected workers and their colleagues, even though they may be competing with each other for promotions or favored shifts or the like. Part of the problem is that the institutions involved have not been able to develop a balance between prisoners' rights and guards' working conditions, students' rights and teachers' working conditions. At present, administrators seem to avoid these issues simply by picking on the weakest individuals in either group, the very ones who can least tolerate being targets.

Better managerial practices would include methods of early identification of problems so that a teacher or guard who has reached the end of his or her rope can seek help. If the sources of help are institutionalized, workers may be more likely to recognize their own problems and be better able to ask for help without feeling themselves stigmatized as inadequate. In fact, the very establishment of resources should indicate that there is no stigma attached to the need for relief from the stresses of these jobs.

Resources should include specially trained persons who can work with the victims of these systems situationally rather than on the basis of their personalities. Of course, everyone has some personality problems, but the symptoms we have been describing result from the situation in which the workers find themselves. There may be some need in an individual case to consider the person's ways of relating to others in order to understand the way in which the situation has affected him, but the important thing is to deal with the problem in a manner that does not say to the worker, "There is something wrong with you." In fact, there is something wrong with the system, and workers caught in it need the reassurance that it is normal and reasonable to feel the effects of the stress under which they have been placed.

Having recognized the existence of this long-term stress, management should provide ways out for the worker. For some, a sabbatical leave at regular intervals would probably be sufficient to allow them to recover from the immediate effects of stress and be ready to get back on the job with restored equilibrium. For others, the need may be for a change of occupation, and this should be made possible. . . .
Finally, sabbaticals and retraining should not be available only to those who can afford to go without pay for extended periods. When a worker can no longer tolerate the stress of being a social buffer, we should recognize the useful service the worker has given and provide time off with pay for some specified period or provide retraining with pay, with some assurance that there will be job opportunities in the new field. Workers should not have to suffer to the point of developing all the symptoms of long-term stress and becoming disabled before any effort is made to help them. The current system is too costly both to the individual and to society as a whole. Even though sabbaticals or career changes also are costly, they are probably less so and are certainly healthier for all concerned.

Common sense would seem to dictate that workers in stressful occupations be warned about the dangers of their jobs. We insist that those working with radioactive materials or with x-ray machines wear badges that will reveal exposure to excessive radiation. We should inform teachers and prison guards and others, who are subject to long-term stress about the early indicators of overexposure. They should be directed to persons who can counsel them and their employers on how to relieve that stress. Symptoms and illnesses that have already developed must be treated. Society, the employer, and the worker all tend to deny long-term stress; we must break through this denial before the stress breaks the worker. Some employers fear that a health education program about the potentially harmful effects of the work will serve to produce disability through suggestion. One cannot discount this possibility, but denial of the risk does not diminish it. Instead it serves to mask working conditions and worker dysfunction that could be remedied.
The Job Related Tension Index

The following items constitute the index:

1. Feeling that you have too little authority to carry out the responsibilities assigned to you.

2. Being unclear on just what the scope and responsibilities of your job are.

3. Not knowing what opportunities for advancement or promotion exist for you.

4. Feeling that you have too heavy a workload, one that you can't possibly finish during an ordinary workday.

5. Thinking that you'll not be able to satisfy the conflicting demands of various people over you.

6. Feeling that you're not fully qualified to handle your job.

7. Not knowing what your supervisor thinks of you, how he evaluates your performance.

8. The fact that you can't get information needed to carry out your job.

9. Having to decide things that affect the lives of individuals, people that you know.

10. Feeling that you may not be liked and accepted by the people you work with.

11. Feeling unable to influence your immediate superior's decisions and actions that affect you.

12. Not knowing just what the people you work with expect of you.

13. Thinking that the amount of work you have to do may interfere with how well it gets done.

14. Feeling that you have to do things on the job that are against your better judgement.

15. Feeling that your job tends to interfere with your family life.
Responses to items were reported on a simple 5-point Likert scale ranging from never (1) to nearly all the time (5).

(Kahn et al., 1964, pp. 424-425.)

Stress is a normal condition of living in today's complex society. It is a condition to which the school administrator is not immune. A formula for measuring stress and some strategies for dealing with it are offered here.

Principals today are faced with more pressure, more aggression, more change, and more conflict than ever before. It is now possible to cram much more into an administrator's day, thanks to computers, telephones, dictaphones, and other "timesaving" devices which have measurably increased the stress of life.

Good or bad, stress is here to stay; brought to new heights by the twentieth century psyche. Every historic era can be traced by its characteristic ailments: the Middle Ages was dominated by the Great Plague and leprosy; the Renaissance was characterized by syphilis; the Baroque Era was marked by deficiency diseases such as scurvy and luxury diseases such as gout; the Romantic Period was linked with tuberculosis and similar ailments; and the nineteenth century—with its rapid industrialization and the development of cities—brought about general nervousness and neuroses.

Walter H. Gmelch is assistant director and research associate, Field Training and Service Bureau, University of Oregon, Eugene.

Reprinted from the NASSP Bulletin, February 1978
And now we have the twentieth century, where tension headaches, high blood pressure, and peptic ulcers keep pace with the Dow-Jones average, and where the oscillation of the economy can be traced by the ebb and flow of tranquilizer prescriptions (Gasner, 1976).

Why has stress become such a problem in this age of comforts and conveniences? Some believe it is in part a result of a loss of the social and spiritual supports which helped people of earlier times during hardship and suffering (McQuade, 1972); specifically, the loss of religious faith, the deterioration of the family unit, and the constant change and challenges to our traditions and customs.

**Change, Stress, and Illness**

One of the major factors contributing to our twentieth century stress-diseases is our future-shocked society where people experience too much change in too short a time; where home is a place to leave or a place to keep up with the Joneses; where technology feeds upon knowledge and knowledge expands at a phenomenal rate; and where even friends don’t last (Toffler, 1970). While change often brings prosperity, any event that changes one’s life pattern or style, according to Holmes and Rahe (1967), also creates stress.

Over a period of 25 years Holmes and Rahe have identified and refined 43 common stress-producing experiences in life, including changes in family, occupation, personal relationships, finance, religion, health, and residence. They associate a weighted number from 100 to 11 with each event, according to its stress-producing potential. Numerous medical studies have indicated that the total number of life change units (LCU’s) is predictive of changes in health.

For instance, if a person accumulated between 150 and 199 LCU’s last year he may fall into what Holmes and Rahe call a mild life crisis in which the odds are 50-50 that changes in health will occur. When the LCU count shoots above 300, 79 percent of the people Holmes and Rahe studied succumbed to illness. Thus, chances are four in five that the pace of life the previous year will soon catch up.

The reader may want to look down the list of events in the table, check the events that occurred during the previous year, and add up the total score. However a few points should be kept in mind: first, both pleasant (marriage) and unpleasant (divorce) life events can cause harmful stress; second, no one can escape, nor does anyone necessarily want to escape all these crises, since to some degree stress is life; and, third, due to differing ties to cope, the same event does not have the same impact on all individuals.

What was your score? The Social Readjustment Scale does not mean the same to everyone. According to many scientists the LCU-illness relationship is suspect due to sources of measurement error (selective memory—either for purposes of denial or illness justification), genetic
influences, personal perceptions as to what is truly stressful, and differences in our abilities to cope (Rabkin and Strauening, 1976).

Your score should be used as an indicator that maybe something should be done to alleviate or postpone any major events contemplated for the future. Adaptive energy is depleted when individuals have to cope with several stress-producing events during the same year. Since the store of energy, from which to respond to these situations is finite, the LCU total generally indicates the amount of energy used up in a year coping with the total life changes.

Some people are more susceptible to changes, stress, and illness than others. For example, what about the principal who, due to outstanding performance (28 LCUs) was offered a superintendent position (36 LCUs) with new job responsibilities (29 LCUs) and a large salary increase (38 LCUs). This promotion may have also precipitated moving into a new area (20 LCUs), buying a new home (30 LCUs) with a large mortgage (31 LCUs), and many changes in living conditions (25 LCUs) and social (18 LCUs), church (19 LCUs) and recreational activities (19 LCUs). At this point the needle has already moved into the danger zone (296 LCUs). To add to this a particularly stressful vacation and our principal superintendent may be in for a serious change in health.

Does this all sound a little far fetched? Not so. In a recent query of administrators new to their positions this year, 70 percent have already reached the moderate to major life crisis state. In fact, one colleague in his second year of administration racked up 547 LCUs last year. Have they all fallen ill? No, not categorically, but those with less ability to cope with stress are cognizant that although they may not be able to control all events, this year may not be the best time to consider other major changes in their lives.

Still not accounted for is the everyday sensory bombardment principals subject themselves to by reading sensationalized newspapers, watching violence on television, and breathing polluted air. In sum, everyone, to some extent, is caught in a great paradox. Life depends on growth, growth creates change, change consumes our adaptive energy, energy is finite, and when energy is exhausted we fall ill. To eliminate change would be to eliminate self-development and life, for change is not necessary to life, it is life.

How To Cope with Stress

The search for coping methods usually begins with consulting the experts in the field. When we have a problem with our child we read Spock, or when we need advice about our marriage we read Fromm, and the stress of our work we read Friedman (1974) and Struening (1975). Isn't it strange that we expect Dr. Spock to be a good father, Dr. Fromm to be a good lover, and Dr. Friedman to behave like a relaxing Type B? Unfortunately, experts tend to write about their hang-ups as consistently as we consult them about ours.

There are no simple solutions to the problems created by undue stress. What we read, experience, and try all provide helpful insights. The real ability to cope is a very personal matter. What works best for many may not be the answer for all. Some research efforts have been made to dichotomize coping into effective and ineffective techniques (Howard, Rech- nitzer, and Cunningham, 1975). Such normative distinctions, however, tend to view a very complex process too superficially or simplistically.

To end the discussion by saying there are no recognized coping techniques applicable to almost all would be misleading and unjust. A few methods which should be helpful to principals are briefly outlined below.

Learn to cope with stress through managing time.

Of the stress faced by administrators none is so pervasive as the stress of time. Setting aside time daily for the organization and planning of tasks helps to substitute the fragmented administrative life with "blocked off" periods for contemplative thought and rational problem solving. Other techniques can also be helpful in controlling the open door paradox, constant telephone interruptions, and drop-in visitors.

Manage by objectives, not by the obvious.

Establishing clear, detailed objectives helps to eradicate many of the ambiguities of the principalship and eliminates confusion by giving a definite sense of direction. The day will not be muddled through haphazardly if the principal prioritizes objectives daily so important issues are addressed first. While objectives can reduce needless tension, the timelines and due dates of goals also create strain. Hopefully, a system of objectives will replace anxiety created by unplanned activities with "constructive" tension.

Build mini-vacations into the day.

While taking time off for physical sickness is considered appropriate, people never seem to find the time or reason to rest from mental fatigue or stress attacks. The need for relief may not always coincide with the 10:00 a.m. coffee break or the TGIF parties. Rest is needed during the day or week, although this may seem absurd to the 65-hour, seven-working-day-a-week person.

Breaking the daily routine with a midday walk to clear the mind, a change in lunch schedules, a chat on the phone with spouse and children, and a stroll through a nearby library or museum are healthy means of breaking the eight-to-five stress cycle. Dr. Stern suggests taking a mini-
Within the Art of Managing Stress,
generally attempt too much for too many people with unrealistic time
estimates (Mackenzie, 1975). Any one of a number of reasons may con-
tribute to this: lack of planning, over sense of responsibility, inability to set
priorities, high need for achievement, and misunderstanding of job
responsibilities. What probably needs to be done is to promise a little bit
less than one believes can be achieved.

The principal, like Caesar, tries to be all things to all people. He should
be re-educated in the discipline of humanology: the art of measuring the
physical and psychological limitations and capabilities of people (Page,
1966). Only through planned self-analysis can he have any hope of reduc-
ing stress. Looking back at past experiences he needs to get in touch with
what was done well, what not so well, what was frustrating, what was fun,
what was challenging, what was boring, what created tension, and what
provided fulfillment. From such retrospection many latent talents may be
rediscovered as well as limitations unveiled. The new awareness will allow
concentration on capabilities and delegation of limitations to those more
qualified. If a principal is weak in curriculum development, he should admit
such shortcomings and hire a vice-principal who is strong in that area.

Establish and update life goals.

Whether in business, industry, government, or education, almost all
organizations emphasize the importance of management by objectives
(MBO). But how many “live by objectives” (LBO)? Many states mandate
school boards to establish goals for their districts. Surprisingly, few of the
districts’ leaders and managers have done so themselves.

Delinquency in self-management contributes to the fact that half of all
working people are unhappy with their careers. They discover too late
that a change was needed long ago, when there is neither the time nor
energy to undertake a redirection. Even in their early 30s, for example,
many professionals are starting to question whether they are in the right
place and don’t know if their upward striving was worth it or not. More
tragic are the accounts of principals led to pastures without any retirement
programs to sustain their vitality and interest. A little poem expresses this
point so well:

If you hold your nose to the grindstone rough,
And hold it down there long enough.
You’ll soon forget there are such things
As brooks that babble and birds that sing!

These three things will your world compose,
Just you, and a stone, and you darn old nose!
If I had life to live over, I’d pick more daisies.
Principals should pick daisies before they start pushing them up.

The coping strategies outlined are only an introduction. Others can be cited and should be explored. It is up to each principal to determine which strategy or combination of activities will provide the most effective daily defense against tensions and frustrations. If this article has succeeded in stimulating awareness and thoughts on stress, the mission has been accomplished.

National Student Volunteer Program

Looking for information and assistance regarding high school student volunteer programs? If so, write to the National Student Volunteer Program, one program of ACTION, the federal agency for volunteer service.

NSVP offers publications, training seminars, and consultation for high school teachers and administrators involved in planning or managing student volunteer or service-learning programs.

Eight tuition-free training seminars are being offered this year. Transportation and living expenses are the only costs to participants.

For the dates and locations of the seminars, write: National Student Volunteer Program, 806 Connecticut Ave., N.W., Washington, D.C., 20525, or call toll free (800) 424-8580. If in the Washington area, call (202) 254-8370.
Background material is attached.
Coping With Stress in 1979

Hans Selye, C.C., M.D., Ph.D., D.Sc.

One of the pioneers of modern medicine, Dr. Hans Selye is world-famous for his discoveries about stress. His research has opened new avenues of treatment through the discovery that hormones participate in the development of many maladies that he calls "diseases of adaptation" or "stress diseases." Now President of the International Institute of Stress in Montreal, he was Director of the Institute of Experimental Medicine and Surgery of the University of Montreal from 1945 to 1976. Dr. Selye is the author of 38 books and 1,600 articles, a Fellow of the Royal Society of Canada, and an Honorary Fellow of 43 other scientific societies around the world. The recipient of numerous awards for his contributions to science, he was invested Companion of the Order of Canada, the highest decoration awarded by his country, in 1965.

In his overview on general medicine for the present edition of the Almanac, Dr. Hans Selye said, "Perhaps the most striking recent advance in medicine has been the growing realization that much of the responsibility for health must now be assumed by the people themselves. In a recent national health survey, it was noted that most current illness in the United States is a consequence of the unhealthy habits of the people.

This is particularly true of the methods designed to cope with the stress of daily life. As the president of the Rockefeller Foundation, Dr. John H. Knowles, pointed out in his remarkable book on health in the United States, "Doing Better and Feeling Worse, we are doing better in the conquest of contagious diseases, infant mortality, and the development of the institutions that extend life. Expenditures for health care in the United States have tripled in 10 years from $39 billion in 1965 to $119 billion in 1975, and yet most people are not happier and do not feel better. The point is," he says, "most of the bad things that happen to people are at present beyond the reach of medicine."

But he was careful to emphasize that they are not beyond the reach of individuals who try to supplement what medicine has to offer by taking the time and trouble necessary to learn how they can help themselves.

Of course, we can profit from the enormous progress made in the recognition and treatment of identifiable diseases of the body by medical care and surgery, but it is not enough. Now, the greatest role is played by the help that people can give each other to live in a way that satisfies them without hurting others. I believe we can achieve this most effectively through the development of a code of behavior that assists us in coping with the stress of life in our increasingly "civilized" world.

I admit that I am prejudiced in favor of stress research, for I have worked in this area for 21 years ever since I wrote the first paper on the stress syndrome in 1936. Then, I tried to demonstrate that stress is not a vague concept, somehow related to the decline in the influence of traditional codes of behavior, dissatisfaction with the world, or the rising cost of living. Rather, it is a clearly definable biological and medical phenomenon whose mechanisms can be objectively identified and with which we can cope much better once we know where the trouble lies.

Today, everyone talks about stress, but only a few people know exactly what it is. It is hard to read a newspaper or watch a television program without hearing about stress, and literally hundreds of people now lecture and write about it. They are ever ready to give advice, usually based on the teachings of an Eastern guru or Western "stressologist"—advice that works well just as long as one has absolute faith in the master's divine infallibility.

Far be it from me to suggest that such teaching has nothing to offer, but not all of us can be helped by the same teacher, and there are so many of them around that you could spend your entire life shopping for one that suits you. In any event, if you do succeed in finding such a "healer," you may still lose faith in what you originally thought was the creed that perfectly suited your needs or you may "just not have the time" to follow the recommended prescription—which is another way of saying that you no longer believe it to be the best and shortest way to happiness.

There are alternatives. During recent years, considerable progress has been made in comprehending and controlling stress through classical scientific techniques. The results are of immense practical value for further improving the understanding of stress mechanisms by scientists, and for the prevention of certain stress-induced degenerative or compensatory physical reactions.

Certainly, since 1936 a great deal of progress has been made in identifying the mechanisms of stress-induced bodily responses. At first, we knew only that they are not sudden, momentary changes provoked by nervous tension but rather non-specific, adaptive responses to the need for coping with demands on any kind of stress-producing agents (or stressors) that cause psychic arousal and excitement; nevertheless, the actual, measurable changes characteristic of stress as such are obvious, even in deeply anesthetized patients or experimental animals which are not conscious of the potentially painful or threatening situation.

However, if the troublesome "stressors" (stress-producing agents) last for weeks, months, or years, these adaptive reactions to the first stage of general alarm (so termed because it was visualized as a "call of alarm" to the hormones) of all defense mechanisms to the stage of resistance, during which we learn to deal better with the demands made upon us. The bodily expressions of exposure to stress—the visible organ changes or measurable alterations in the stress hormone content of our blood—tend to disappear. Yet, our adaptability (or adaptation energy) is not infinite. Everyone breaks down sooner or later, depending upon his or her innate resistance and, in the era of stress, itself.

If breakdown occurs, the stage of exhaustion is reached, the final breakdown which ends in death. This entire three-stage response to stressful situations has been called the general adaptation syndrome (G.A.S.).

It was clear from the outset that hormones, especially those of the pituitary (hypophysis) and the adrenals, play an important role in this response. If these glands are removed in experimental animal models, or if excessive stress occurs in a person whose pituitary or adrenals have been incapacitated, the whole reaction is totally deranged and adaptation enormously diminished.

It was also clear that the nervous system plays a role, especially by starting the whole chain of events, because the pituitary receives its impulses almost exclusively from the base of the brain (hypothalamus) to which it is attached. However, both nerves and blood vessels descend to the pituitary through its stalk, and much more work was necessary in subsequent years to prove that the pituitary plays a role. In the rush to the stalk, the adaptive mechanism is deranged almost as much as if you remove the pituitary entirely.

From the practical point of view, perhaps the most important subsequent observations were made during the 1940s. It was found that if the organs involved in resistance to stress are malfunctioning, diseases develop. These maladies are not so much due to what happens to us but to our inability to adapt, and they have therefore been called "diseases of adaptation." The most common among them are peptic ulcers in the stomach and upper intestine, high blood pressure, heart accidents, and nervous disturbances. Of course, any event makes demands upon us and, hence, causes some stress, but it is only people who cannot cope, either because of innate defects or lack of knowledge, who develop stress diseases.

We must also distinguish between the stress-producing agents (or stressors) that cause suffering or distress and the events that we appraise as pleasant because they give us satisfaction and happiness. (You also have to adapt yourself to the unexpected news of winning having become a millionaire or having found the girl you always dreamed of). They produce what we technically call eustress (eu = good, pleasant, as in euphoria, euphoria). Curiously, eustress rarely causes maladies and often actually counteracts the bad effects of distress. There are cases on record where people have died suddenly when faced with the news of a particularly pleasant, unexpected event, as a rule, however, the danger caused by eustress is negligible. After all, unpleasant and satisfaction are what we want in life.

In this short essay, it is impossible to give a meaningful sketch of all that has been learned about the structure of stress hormones, the nerve pathways involved, the...
medicines that have been developed to combat stress, and the diagnostic aids that this approach has offered. Nevertheless, the medical, chemical, or microscopic approach to the problem has been extremely fruitful.

Since the very first description of the G.A.S.—general adaptation syndrome—the most important single discovery was made only recently. It showed that the brain produces certain simple chemicals substances closely related to the adrenal-stimulating or adrenocorticotropic hormone (ACTH). These substances have morphine-like, pain-killing properties, and since they come from the inside (endo), they have been called endorphines. I am especially proud that one of my former students, Dr. Roger Guillemin, was one of the three American scientists who shared the 1977 Nobel Prize for this remarkable discovery, although it was made quite independently of me at the Salk Institute.

The endorphines have opened up an entirely new field in medicine, particularly in stress research. Not only do they have anti-stress effects as pain-killers, but they also probably play an important role in the transmission of the alarm signal from the brain to the pituitary, and their concentration is especially high in the pituitary itself.

Significant breakthroughs have also been made with the discovery of tranquilizers and psychotherapeutic chemicals to combat mental diseases. These have reduced the number of institutionalized mental patients to an unprecedented low. Also worth mentioning are the enormously potent anti-ulcer drugs that block the pathways through which stress ulcers are produced.

However, all these purely medical discoveries are applicable only by physicians, and the general public cannot use them in daily life without constant medical supervision. Furthermore, most of these agents are not actually directed against stress but rather against some of its morbid manifestations (ulcers, high blood pressure, heart accidents). Therefore, increasing attention has been given to the development of psychological techniques and behavioral codes that have been given to us by religion, from the most ancient faiths up to the Eastern sages and contemporary theologues, and include reciting the litany or standard prayers in the quiet and elevating atmosphere of a house of worship, with tranquillizing music. These practices should not be underestimated merely because science cannot explain them; they have worked for so long and in so many forms that we must respect them.

More recently, biofeedback has added a great deal to the psychological approach. A number of highly sophisticated instruments have been developed that inform us constantly about changes characteristic of stress, for example, blood pressure, pulse rate, body temperature, and even electrical brain waves. We do not yet have a scientific explanation for biofeedback, but if you learn to identify, instinctively or through instrumentation, when you are under stress, you can automatically avoid, or at least reduce, it.

Of course, the most important thing we must do is to live happily, and so each of us needs to develop a code of behavior that helps to achieve this. It will never be possible to discover a code or philosophy of conduct equally applicable to everybody. Any code has to be adjusted to the person involved, for we are all different.

After 40 years of research in laboratories and clinics, scientists have found enough evidence to justify trying to develop a code of behavior based only on the laws of Nature. These laws are eternal and applicable to everybody regardless of race, sex, religion, or national and political loyalties. They are equally applicable to everybody because all of us are products of Nature. They are also eternal. Water boils at 100°C at sea level; it always has and always will. These laws apply to body and mind, but we need much more scientific work to learn how to apply them in daily life and to make them easily understandable to everyone.

After four decades of clinical and laboratory research, I would like to summarize the most important principles briefly as follows:

1. 
   Find your own stress level—the speed at which you can run toward your own goal. Make sure that both the stress level and the goal are really your own, and not imposed upon you by society, for only you yourself can know what you want and how fast you can accomplish it. There is no point in forcing a turtle to run like a racehorse or preventing a racehorse from running faster than a turtle because of some "moral obligation." The same is true of people.

2. 
   Be an altruistic egoist. Do not try to suppress the natural instinct of all living beings to look after themselves first. Yet the wish to be of some use, to do some good to others, is also natural. We are social beings, and everybody wants somehow to earn respect and gratitude. You must be useful to others. This gives you the greatest degree of safety, because no one wishes to destroy a person who is useful.

3. 
   Earn your neighbor's love. This is a contemporary modification of the maxim "Love thy neighbor as thyself." It recognizes that all neighbors are not lovable and that it is impossible to love on command.

In my first book for the layman, I tried to condense several thousand scientific articles and two dozen books into 324 pages—which may still have been too long and too technical. Perhaps two short lines can summarize what I have discovered from all my thinking and research:

Fight for your highest attainable aim, but do not put up resistance in vain.
Stress Management Bibliography

Conference on psychological stress, York University, Toronto, Canada, with the participation of numerous specialists who gave papers on the technical aspects of the G.A.S. in relation to psychosomatic medicine.

An easily understandable summary of the price you pay for the stressor effect of various types of noise characteristics of our civilization. Statistics on noise in terms of health and dollars.

Detailed description of the "relaxation response" as a prophylactic measure, especially against the stress of modern executive life. The technique involves relaxing in a comfortable position, and repeating silently, or in a low gentle tone, a single-syllable sound or word. It is suggested that relaxation response be induced once or twice daily for about twenty to thirty minutes.

Various self-induced states of altered consciousness are reviewed as potential anti-stress measures. They involve Transcendental Meditation, Zen, Subui, Hare Krishna, Shintoism, and other religious practices.

A very readable description of the role of stress in various diseases as well as in interpersonal relations, particularly family difficulties and social habits.

This book focuses on the relationship of decisionmaking and stress and includes a chapter on "the arousal theory of stress."

Excellent summary of the author's classic observations on the somatic manifestations of acute emotions, particularly with regard to the effect of fear, rage, hunger and thirst on the sympathetic nervous system and adrenaline secretion.

Kleinsorge, H., and Klumbies, G. Technique of Relaxation. Bristol: John Wright and Sons, Ltd., 1964. This book is a practical tool to train persons to relax. It provides a self-relaxation program. The book also includes a record to help you relax.

The book presents several tension control methods which an individual may use. Illustrations are used.

Detailed and very competent discussion of stress in relation to psychology, with special reference to the problem of coping with threatening situations. Correlations between the adaptive mechanisms of the CNS and the G.A.S. are given good attention.

A readable volume on the sources, management and prevention of distress, emphasizing both the medical and psychological aspects of everyday experiences.

Monograph on stress with a brief chapter on the underlying mechanisms and many examples of stress and the diseases of adaptation as they appear in everyday life.

The book presents a layman's view of stress. It provides examples and hints which people may use to recognize stress factors in their lives. The book also includes a program of exercises specifically to aid relaxation and relieve stress.

This book addresses five major areas: the discovery of stress, the dissection of stress; the diseases of adaptation; and sketch for a unified stress theory; and implications and applications of stress. The book is written in medical, technical terms.

An examination of stress for the everyday person. The discussion is basic and clear. Provides excellent example and illustrations of stress and how it affects people.

Monograph on the psychological implications of the G.A.S., with reference to performance and the development of a healthy personality. Particular chapters are devoted to constructive responses to stress, personality resources which help such responses, how groups cope with stress, and individual resources and strategies in coping with stress.

The book emphasizes protective adaptive reactions, which can play a decisive role in the resistance of man to the common tensions of modern life. Special sections are devoted to "stress interviews" and the part played by stress in headache, migraine, and respiratory cardio-vascular and digestive diseases, in relation to social adjustment and a healthy philosophy of life.

Suitable for adults and students in high school and college. A workbook is also available from the publisher and is particularly useful if the book is used as a course text.

Course 3 - School Climate
Module 3.3 - Student Involvement in School Processes and Programs
Total Time 1 hour and 15 minutes

Module Summary

The module provides participants a rationale for involving students in responsible and challenging direct action as a means of increasing self-esteem and competency and with a resulting decrease in violent antisocial behavior. Various student involvement and youth participation programs involving students in the greater community are introduced.

Activity/Content Summary

<table>
<thead>
<tr>
<th>Activity/Content Summary</th>
<th>Time</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. The Great Thumbless Survival Test (Optional Activity)</td>
<td>15 min.</td>
</tr>
<tr>
<td>Participants are asked to perform a variety of familiar tasks without using their thumbs in order to experience an example of experiential learning. Trainer points out that experiential learning involves students in their school and community and fosters a positive learning climate.</td>
<td></td>
</tr>
<tr>
<td>2. Areas for Student Involvement</td>
<td></td>
</tr>
<tr>
<td>A. Overview of Three Broad Spheres of Student Involvement and Youth Participation</td>
<td>40 min.</td>
</tr>
<tr>
<td>Three areas of activities students may be involved in at school include: (1) working with existing structures for problem solving and decisionmaking; (2) assessing school climate and initiating improvements; and (3) participating in activities beyond school boundaries.</td>
<td></td>
</tr>
<tr>
<td>B. Involvement in Existing Structures for Problem Solving and Decisionmaking</td>
<td></td>
</tr>
<tr>
<td>Studies indicate that students who are active in problem solving and decisionmaking in the school are usually more positive about the school environment and less apt to act in negative ways.</td>
<td></td>
</tr>

</table>
D. Involvement in Assessing School Climate and Initiating Improvements

A project developed by the Center for Human Development in Walnut Creek, California, provides training for students in assessing school climate.

E. Involvement in Activities Beyond School Boundaries

Student participation in activities outside school can help improve attitudes, promote growth, and give students a sense of their role and importance in the community. Youth Action Teams have been formed as one means of encouraging such involvement.

F. Example of an Activity Beyond School Boundaries: An Outdoor Education Program (Optional Activity)

A slide show of an outdoor education program is presented.

3. Survey of Program Models and Projects

Participants and trainer share additional project and programmatic approaches.

4. Conclusion

Trainer reviews the module, emphasizing the potential of student involvement for reducing vandalism and violence in schools and the community.
Course 3 - School Climate
Module 3.3 - Student Involvement in School Processes and Programs

Objectives

Participants will be able to:

1. Cite findings based on theory and research which indicate that student involvement deters violence and vandalism.
2. List the steps developed by the Open Road Student Involvement Program for leadership skills training.
3. Correlate the learnings that occur on an outdoor adventure program with an improved self-concept.
4. Identify other school programs that involve students in decisionmaking and the greater community.

Bibliography

Student Involvement Annotated Reading List
WHAT DOES THE SURVEY MEASURE?

Student Involvement:
The extent to which students participate in and enjoy classes and extracurricular activities at the school.

Student Relationships:
The way students relate to one another, the ease they feel in making friends and dealing with new people.

Teacher Support:
The amount of help, concern and friendship that teachers direct toward students, whether they talk openly, trust students and are interested in their ideas and feelings.

Physical Environment:
The way students feel about the school buildings themselves and the atmosphere they create.

Conflict Resolution:
Whether students are clear about their rights and responsibilities, how conflicts are resolved and whether rules are consistently enforced.

Participation in Decision-Making:
Extent to which students, administrators and teachers share responsibility for decisions about school improvement.

Curriculum:
Extent to which students feel that what is taught in classes meets their needs.

Counseling Services:
Whether or not students feel counselors are accessible and able to help with personal problems, jobs and career information, or concerns about drugs, alcohol or sex.

Recreational Alternatives:
Whether students are satisfied with existing activities and teachers' support of these activities, whether new activities are needed.

Personal Stress:
The extent to which students feel they are under pressure and the resources they have to cope with it.

The student and faculty surveys consist of five questions in each of these categories. Each question in the student interview also corresponds to one of the categories listed above.

Excerpt from book entitled, Something More Than Survival: A Student-Initiated Process for School Climate Improvement, by Sherrin A. Bennett with The Center for Human Development, Walnut Creek, CA. (Publication available from The Center for Human Development)
STUDENT INTERVIEW

The purpose of this interview is to find out how most students are feeling about this school. We hope your answers to these questions will tell us how you see it and what changes might make it better for you.

How long have you been at this school?

What grade are you in?  Female ______  Male ______

Just walking around the school, what do you notice about the environment (buildings, corridors, sound, light, landscape, etc.) that makes it a place you feel

a) comfortable?  b) uncomfortable?

What things do you see happen that make you feel students here

a) Are warm and friendly?  b) Put each other down a lot?

Excerpt from book entitled, *Something More Than Survival: A Student-Initiated Process for School Climate Improvement*, by Sherrin A. Bennett with The Center for Human Development; Walnut Creek, CA.
What things do teachers do that make you feel they
a) care about you as a person?

b) don't care about you as a person?

What are you learning in classes that seems really useful or important to your own life, now or later?

What ways do you have to influence decisions about school programs, classroom procedures or student activities?
ACTION PLAN

WHAT IS THE PROBLEM?

√

WHAT ARE THE CAUSES OF THE PROBLEM?

WHAT DO WE WANT TO SEE HAPPEN? (GOAL)

HOW CAN IT BE DONE? (TASKS)

WHO WILL DO IT?

RESOURCES NEEDED? (PEOPLE, MATE- RIALS, MONEY)

HOW WILL WE KNOW IF IT WORKED?

BY WHEN?

Climate Survey Report

Percentage of responses indicating a positive climate in each survey category:

- Student survey responses
- Faculty survey responses

Excerpt from book entitled, Something More Than Survival: A Student-Initiated Process for School Climate Improvement, by Sherrin A. Bennett with The Center for Human Development, Walnut Creek, CA.
The education services available through the Rock County Alcohol and Drug Abuse Program are aimed at providing a comprehensive preventive education approach to alcohol and drugs through identifying and reaching specific population groups such as youth, parents, police, in conjunction with other agencies and organizations. The Rock County Health Care Center has centralized education services and has one full-time health educator. Education deals with the following areas: In-service Training for Teaching Personnel, Drug Education Curriculum Guide, Drug Education Presentation, Alcohol & Drug Abuse Education Workshops, Parent and Community Education.

Title: Youth Employment Planning Team

Description:
This project involved ten youth, ages 14 to 21, from three youth service centers in the Portland, Oregon area working with instructors from the School of Urban Affairs at Portland State University to open up new realms of employment for young people in Portland. The project generated a partial solution to the problem while teaching the young people research and problem-solving skills.

Procedure:
(1) The youth team selected a focus for their project (youth employment in the energy field) and were provided with readings and instruction by the adult facilitators.
(2) Team members attended meetings of the various transportation agencies in their area;
(3) The team drafted a proposal for youth employment in the local transportation system and submitted it to the appropriate agency;
(4) The local transit agency agreed upon the creation of 50 jobs for youth in the agency.

Title: Project Way-Out

Description:

Project "Way Out" deals with adjudicated delinquents. Begun as a fairly simple public service job program, it has evolved over time into a comprehensive educational counseling and vocational project. The overall goal of Project "Way Out" is to provide education, employment, and counseling services to juvenile youth as an alternative to institutionalization. Program objectives are defined in five areas and a fairly comprehensive evaluation is made pertaining to changes in attitude, behavior, recidivism, vocational attainment, and learning. Potential clients are screened before being admitted to the six-month project. Each youth admitted is given the choice of continuing to attend the neighborhood school or attending the project school. The project utilizes individualized instruction, specially developed teaching materials, immediate feedback to students regarding success, and small group or one-to-one teaching. Students receive counseling throughout project participation and, in most cases, after graduation. Employers who hire project participants (at minimum wage) for approximately fifteen hours per week are subsequently reimbursed from project funds.

Partnership in Research

Description

A New Hampshire high school was the setting for a 1972 study that involved high school students as "participant researchers." Students were active in defining, observing, and evaluating issues that they felt had a significant impact on their lives. Through the support of the project staff, the students independently formulated the study questions, selected the research strategies, and disseminated study results. The "Self-study" approach proved to be a viable alternative to traditional methods of inquiry and learning.

Learning Discipline System

Description

The Learning Discipline System is a step system for disciplinary referrals. Each time a student is referred for disciplinary reasons they advance one step. Pre-determined actions to be taken by the school Dean for each step are detailed. Students are informed of school policies, rules, and the step system in small group guidance sessions at the beginning of the school year. They know at all times what step they are on, and the actions that will ensue if they get a referral.

Some of the results observed after one year of operation are: 1) Students view disciplinary action and school deans as more fair; 2) Students are aware of what actions will be taken prior to referrals; 3) More cooperation is given by parents who are also informed of the step system at the beginning of the school year.

Second Wind Program

The Second Wind Program is a one-week canoe trip in Northern Minnesota and Canada for fourteen emotionally disabled youth, educators, and police officials.

The aim of the program is to improve disruptive youths' attitudes towards authority. Youths interact and relate on a one-to-one basis with teachers and police officers in the wilderness setting, and experience leadership (their own and the authority figure's) in a more positive sense. The goal is to develop positive attitudes and decrease disruptive behavior.

School Youth Advocacy

This project is an experimental model program aimed at:

1) assisting youth who have been institutionalized to re-integrate into the school system;

2) providing schools with an alternative program to expelling, suspending, or institutionalizing students with behavior problems;

3) creating educational environments which foster the development of mature, concerned, and responsible citizens.

Alternative programming at the St. Paul Open School includes:

- Advisor-Advisee System: Students select their own advisors, who have 3-23 advisees. Conferences before school begins among students, parents, and advisors establish individual goals for each student. Goals are reviewed biweekly in advisor-advisee meetings and quarterly with parents.

- Use of Volunteers: Parents, senior citizens, college students, and other community members are brought into the building. Volunteers are carefully screened, trained, and followed as they work with students.

- Shared Decision-making: Parents, senior citizens, staff, and community members help make decisions in a number of areas, including budget, curriculum, hiring, and evaluation of students.

- Use of World Beyond Building: School is viewed only as a headquarters. In addition to hundreds of local field trips, students have opportunities to work as interns or apprentices in local businesses. Students also take cross-country trips as part of studies to such places as Gettysburg, Wounded Knee, Puebla, Mexico, and Winnipeg, Canada.

- Evaluation: Extensive evaluation of students, staff, and the total program continues throughout the year. Written evaluation replaces grades. Competencies replace credits for graduation requirements.

Title: Social Restoration Teacher Training

Description

The Social Restoration Teacher Training program is designed to prepare teachers to deal with youth who are on probation, participating in a diversion program, or returning to school after release from a correctional institution. In this training program at Lehigh University teachers are thoroughly trained in diagnostic academic testing techniques and the formulation of remedial programs for individual students. They also are trained in crisis intervention skills, including methods for dealing with spontaneous short-term crises as well as with long-standing problems with family relationships, and so forth. In training for community resource utilization the teachers develop skills in working with agencies with whom these students tend to be in conflict (such as the police) and with other community support agencies (such as social service agencies). The social restoration teacher thus is trained to perform several roles, including teacher, welfare worker, counselor, and youth advocate.

Title: Outdoor Education Program

Description

A selected group of junior high school students spends one week in an outdoor setting with teachers, parents and community members. The program attempts to develop adaptability, interdependence, cooperation, self-reliance, positive attitude, and self-esteem. Personal and group rights, group dynamics and personal responsibility are explored. Opportunities are provided in which students gain in almost every subject area through direct experience and/or observation.

Title: GRASP (Governmental Responsibility and Student Participation)

Description

Student interns are selected by their schools to participate in the work of state and local governmental agencies and community service organizations. Interns report back on a regular basis to share their experiences with other classmates and instructors. Originally funded under ESEA Title III, the program is now supported by the local districts. During their internships, students follow an agency-designed program of activities, including observation, participation in meaningful research and survey activities, special projects, and follow-up through classroom activities. Students are not paid, but receive high school credit for their experience. Students provide their own transportation.

Title: Executive Internships of America

Description

Top executives in business, government, hospitals, museums and various community agencies have become the "teachers" of high school juniors and seniors in more than ten American cities. The Executive Internship Program, which began in New York City and has now become nation-wide, enables high school students to work on a one to one basis with executives for a school semester. Students work four days a week with an executive and meet with other interns in a seminar on the fifth day. In the seminar students discuss their experiences, study local government, and meet with speakers. A final project is prepared.

High School Archaeology Project

The High School Archaeology Project in Cobb County, Georgia began because a Pebblebrook High School student discovered that his school was sitting on a 2,000 year-old Indian site. Just about the time he made his discovery the county announced that it was going to install a large sewer pipeline right through the school site. Having enlisted the help of an archaeologist from the University of Georgia and other experts, students began an emergency dig. They unearthed pottery fragments, stone tools and bones and, in the process, learned geography, ecology and history. The work eventually became part of the school curriculum.

Youth Helper Program

High school students in the small, rural town of Laurens, New York spend one hour four days each week helping care for children of their community through the Youth Helper Program. Ten students go to a day care center in a town church and ten go to Mt. Vision, a school for severely handicapped children. The young people share any special skills they may have, such as carpentry or sewing, with the children. They also have used these skills to carry out related community service projects, such as building a new wing on Mt. Vision and constructing playground equipment at the day care center.” The Youth Helpers receive credit for volunteering and for meeting in a daily seminar to discuss child-rearing practices, mental retardation and mental health services.
The Gloucester Experiment in Gloucester, Massachusetts began when a resident sculptor saw in a colonial cemetery, vandalized and overgrown with weeds, an opportunity to use the talent and energy of young people. With his backyard as headquarters, the sculptor recruited a group of local youth along with a few interested carpenters, architects and teachers, and the restoration began. The young people did everything from manual labor, including landscaping, clearing brush and straightening headstones, to research and historical documentation. Eventually the high school in Gloucester agreed to grant students academic credit for their work. Students who participate in Experiment restorations acquire skills such as surveying and stone cutting and learn history, archaeology, botany and evolution.

The Fourth Street is a community magazine operated entirely by young people on the Lower East Side of New York City. They tap the resources of the neighborhood, an area with a long history as a ghetto for new populations arriving in the United States. The young people have tried to use their magazine as a voice for poor residents of various ethnic groups by interviewing local artists and craftsmen and by printing poetry and artwork by people who live in the community. The young people who publish the magazine interview, edit, translate, take photographs and do production work. Their magazine has been used as a reading text in elementary, junior and senior high schools.
Title: Day Care Youth Helper Program

Description:

Three days a week, 15 students at Bulkeley High School in Hartford, Connecticut travel to four urban day care centers to engage children in learning activities which the young people have designed themselves. Students in this Day Care Youth Helper Program receive credit for combining that fieldwork with a seminar taught twice a week by a home economics teacher at Bulkeley. In the seminar, they develop good parenting skills by learning early child development concepts and relating them to their day care experience.

Title: Computer Car Pooling

Description:

Students at George Washington High School in Denver, Colorado devised a Computer Car Pooling plan which was adopted by their city. Students in the Contemporary Issues class wondered about the possibility of using the school's computer to organize Denver residents into car pools to conserve resources and a student from the Advanced Computer class worked out the details. He designed a computer program which would give residents printout lists of other people who live in their area and keep the same work or school hours. The young people became consultants to large Denver firms which wanted to offer computerized car pooling services to their employees and George Washington became the center of the car pooling effort.

Cityarts Workshop, Inc.

Founded in 1968 by a New York City artist, Cityarts Workshop Inc. is a community arts group which involves young people from various parts of the city in making public works of art for their neighborhoods. A professional artist from Cityarts helps the young people decide on a theme for a mural, design it and transfer it to a large exterior wall; then they put up scaffolding and paint it. Cityarts youth have worked on over 16 projects including a Jewish Heritage mural, a History of Chinese Immigration to the United States mural, a Black Liberation mural and a Wall of Respect for Women mural. Frequently the young people get community residents of all ages to help them complete their projects.

Career Center

Students at Berkeley (California) East Campus High School have established a Career Center in which the students are trained and paid (or receive school credit) to advise their peers on employment matters. The young staff members locate paying jobs for students, learn the requirements for various vocations and then counsel their schoolmates who seek information and job placements. The students also learn such job-seeking skills as being interviewed, collecting references and writing resumes, which they then pass on to other students who come to the center. In a school where nearly three-fourths of the students are from low-income backgrounds, the Career Center provides a vitally-needed service.

**Title**  
Public Service Video Workshop

**Description**

Public high school students at St. Paul, Minnesota's alternative New City School are using video tape as an instrument to inform the public and influence decisions on important municipal issues. In one project, representatives from the Minneapolis and St. Paul Tenants' Unions asked students from New City's Public Service Video Workshop to help make a tape on renters' rights. The unions supplied the legal information and the students furnished the technical know-how and the talent. With the direction of two professional video technicians, students have made over 30 tapes for community agencies. For each tape they do research, scripting, directing, interviewing, narrating and editing. Students earn a trimester's social studies credit while learning first-hand about different issues and viewpoints by working with community adults.

Apprenticeship Program/Open Living School

**Description**

Junior high and elementary school students at the Open Living School, a public-supported alternative school in the mountain town of Evergreen, Colorado spend at least half a day each week interning with community adults through the school's Apprenticeship Program. "Apprentices" from the ages of nine to fifteen have carried out responsible duties at an educational television station, at day care centers and at a nearby zoo; they have served as "apprentices" to electricians, veterinarians, photographers, store managers and potters. The purpose of the program is for young people to experience work with adults who are neither teachers nor parents and to learn about the life of their community through firsthand experience.

Title The West High School Ecology Club

Description

The West High School Ecology Club in Manchester, New Hampshire was formed in 1971 when a group of students began a campaign to clean up the Merrimack River. One student discovered that the discharge from a local meat packing plant was turning the Merrimack into "Blood River." He and classmates documented the pollution and through their investigation helped bring legal action against the culprit. West High ecology students also design ecology lessons and teach them to elementary school-children; petition for environmental protection legislation; and make environmental testing equipment and show teachers and students from all over New England how to use it.

Title Teens Who Care

Description

In rural Adams, Minnesota, high school students spend their study halls and lunch hours giving physical therapy and companionship to handicapped children whose special education class meets right in the high school. Students began this Teens Who Care project and then felt they needed additional training. They traveled with the children to the Mayo Clinic to talk to specialists and to learn how to carry out individual therapy prescriptions. Back at the high school, students continued their training in a social studies course called "Developmental Disabilities" and worked with a physical therapist from a neighboring community.

Title  Ward Aide Program

Description

A bold experiment was started in 1967 at the O.H. Close School, an institution of the California Youth Authority Department, and later expanded to three additional CYA institutions. CYA wards were selected and trained to act as tutors, counselors, and recreational leaders of younger delinquents. Young men between eighteen and twenty-two years old with at least nine years of academic schooling were selected from the CYA population during the first two months of their institutionalization. Trained for their roles during a two-month period, they began work as student aids at the beginning of their fifth month of institutional training. Student aids provided formal assistance through tutoring, counseling, and recreation and informal assistance by serving as role models for younger wards. Another objective of the program was to provide pre-training experience in social service jobs as preparation for academic training for the social service profession.

Title  Mitchell High School Senior Seminar

Description

Senior Seminar is a credit-granting alternative program open to Juniors and Seniors in the Colorado Springs school district, which utilizes the community as the main source of learning experiences. The curriculum is thematic in nature and is composed of intensive modules ranging from two to four weeks in length. The staff has published two excellent resources. The Senior Seminar Curriculum Guide details each module and outlines the philosophy and structure of the entire program. To Learn How To Learn, a student workbook on creative thinking and problem solving, is designed to help students discover their own methods of incorporating direct experience into their learning activities.

Project Adventure

**Description**

Project Adventure works with teachers and schools throughout the country to assist in the design of experiential "adventure" curricula in nearly all areas of study. They have published a wealth of materials, the most notable being Teaching Through Adventure, a description of both the process and specific examples of how to incorporate "adventure" into the regular content areas, and Cowtails & Cobras, a guide to ropes courses, initiative games and other adventure activities. The project was begun in a high school near Boston with a goal of incorporating concepts of the Outward Bound experience.

Chautauqua School

**Description**

The Chautauqua School is housed at Glen Echo Park, Maryland. Students in ungraded classes receive instruction in the four major academic disciplines: English, mathematics, science, and social studies. Students participate in expanded physical education activities, through the Venture Expenditionary Program, which emphasized resourcefulness and self-reliance and G.Y.M., a program of psychocalisthenics. Two-hour arts-and-crafts classes are provided four times weekly. Personal growth and development are facilitated through daily school meetings and informal therapy sessions every Friday.

In-School Suspension/Dropout Reduction Program

This program is designed to provide meaningful educational experiences for students at New Iberia Reshman High School who have been identified as potential dropouts and to reduce the number of at-home suspensions during the school terms. There are two phases to the program: (1) A suspension program which centers around a Behavioral Clinic that is designed to provide isolation from other students, communication with parents, and school work assistance within the school; and (2) a special club designed to provide encouragement for potential dropouts through the use of audiovisual materials, contact with adult members from the community and assistance in school-related problems.

Youth Tutors Youth Program

In the Hightstown, New Jersey Youth Tutors Youth Program, 22 high school students earn credit for traveling four times a week to two elementary schools to tutor children who need extra academic or social attention. Many of the tutors have their own learning problems so taking responsibility for helping educate a younger child has helped them improve their own academic skills, as well as develop responsibility and self-confidence. They use materials they have designed to help individual children with reading or math problems. They plan these lessons and also share tutoring techniques and experiences in a weekly seminar at the high school.

Title Shoulders

Description

About 20 students in each of three Marin County, California high schools are involved in Shoulders, a peer counseling program which was organized by the Marin Family Services Agency. Students go through a 13-week after-school training program in which they learn counseling, communications and utilization of community resources. Then they counsel peers referred to them by guidance counselors and administrators; take part in seminars in which they practice advanced counseling techniques and share problems they are encountering in counseling; and organize outreach activities, such as monthly forums open to parents, teachers and students, and a monthly student opinion poll.

Title Project Input

Description

All junior and senior Hoffman High School students are required to work fifty hours a year during English periods with one of three community institutions: a home for the retarded, a home for the elderly, and an elementary school. Students receive ten hours of training before they enter each program, and write three papers about their experiences. In addition, they develop a case history of an individual they have worked with and a description of a problem existing in each institution. After completing their program, they analyze four case histories of persons similar to those with whom they have worked.

Resource Organizations

ASSOCIATION FOR EXPERIENTIAL EDUCATION
Box 4625
Denver, Colorado 80204

Drawing its members from nearly every sector of education, the AEE is an excellent resource and networking agent. It sponsors an annual conference on experiential education (currently including over 100 workshops and seminars), a quarterly newsletter, and the "Journal of Experiential Education."

FOXFIRE, INC.
Rabun Gap, Georgia 30568

The creators of the popular "Foxfire" magazines and books, Eliot Wigginton and his staff, continue to demonstrate that the cultural base of any community can provide fertile ground for experiential programs in language arts, science, and social studies. They publish "Hands On," a newsletter which provides valuable information for those people interested in creating a cultural journalism project within their own community. Two books related to the "Foxfire" concept are also available from an organization called IDEAS (Star Route Magnolia Road, Nederland, Colorado). "Moments," by Eliot Wigginton, describes "Wig's" philosophy of education and speaks to the how-to of blending experience and academic work. "You and Aunt Arie," by Pamela Wood, is a nuts-and-bolts guide to the production of a cultural journalism magazine and is useful both as a teacher's guide and as a reference for students.

NATIONAL COMMISSION ON RESOURCES FOR YOUTH
36 West 44th Street
New York, New York 10036

NCRY serves as a national clearinghouse of "youth participation" projects in schools and in the community. It maintains a file of over 800 descriptions of programs in which young people are performing unusual and/or significant activities in their communities. The commission's newsletter, "Resources for Youth," is a useful collection of information and data.

EDUCATION AND WORK PROGRAM
Northwest Regional Educational Laboratory
710 SW Second Avenue
Portland, Oregon 97204

This group is currently engaged in research involving three important areas related to experiential education: a study of factors students most associate with excellent learning experiences in the community and those they associate with "nonlearning" experiences in the community; a study of common and unique elements among various experiential approaches; and a study to explore the construct of responsibility and how young people develop and grow in this area. They have published many resources...

NATIONAL ASSOCIATION OF SECONDARY SCHOOL PRINCIPALS
1904 Association Drive
Reston, Virginia 22091

The NASSP has published three items of interest with regard to why "action-learning" ought to be a part of the public high school. These include "This We Believe," a statement of NASSP's guiding principles and a clear advocacy that schools need to be more experiential; "American Youth in the Mid-Seventies," the conference report of the National Committee on Secondary Education; and "25 Action Learning Schools," containing an excellent section on the development and background of experiential education, useful descriptions of exemplary action learning schools, and a list of recommended readings.

OUTWARD BOUND, INC.
384 Field Point Road
Greenwich, Connecticut 06830

Outward Bound, Inc., is the parent organization of the seven Outward Bound schools in the United States. Though each school is an invaluable resource to anyone interested in adapting outdoor/adventure education techniques to the traditional school setting, two schools in particular have had a long and varied involvement in developing programs for troubled youth: Colorado Outward Bound School, 945 Pennsylvania Street, Denver, Colorado 80203, and Hurricane Island Outward Bound School, Box 429, Rockland, Maine 04841. Outward Bound, Inc., has also coproduced (with National Geographic) an excellent film entitled Journey to The Outer Limits, which details the Outward Bound experience as it relates to a group of young people including a young woman from an upper class East coast family and an inner-city gang leader. A booklet titled "Journey: How to Get Started" is available from the National Geographic and is an excellent teacher's guide.

CENTER FOR YOUTH DEVELOPMENT AND RESEARCH
48 McNeal Hall
University of Minnesota
St. Paul, Minnesota 55108

The center can provide information on action-learning programs in Minnesota including program descriptions, curriculum ideas, classroom activities, and specific ideas for short-term and long-term community experiences. Researchers at the center are currently involved with a major project to determine the methods for evaluating the outcomes of experiential learning. Their booklet, "Action Learning in Minnesota," is an excellent resource guide which details 30 exemplary programs.
The powerful influence of peers on student values, decisionmaking, and behavior cannot be overlooked in examining the causes of the widespread and increasing incidents of crime and violence in schools. The negative and destructive behavior of students can often be changed by rechanneling peer influence to defuse potentially violent situations and by dealing with student problems before they are translated into more serious antisocial behavior. This bulletin describes how a peer counseling program has been utilized for this purpose.

The Problem

As the incidence of crime, violence, and vandalism increases in the schools, the educational climate deteriorates. Students are often influenced by their peers to act in negative and destructive ways and to perform delinquent acts. When this happens, the school environment is no longer conducive to learning or positive behavior.

The Solution

Rock Island

Peer Culture Development, Inc., was originally incorporated in Rock Island, Illinois, in 1974 as the Center for Youth Services, a nonprofit organization aimed at preventing juvenile delinquency and school dropouts as well as improving human relations among teenagers. The organization was initiated in response to a riot-type situation in Rock Island, High School in 1972.

The Peer Culture Development (PCD) counseling program was designed to supplement regular individual counseling by utilizing peer group pressure in a controlled yet voluntary situation to modify and redirect negative behavior. Both positive and negative peer leaders are utilized to identify and deal with problems before they escalate into antisocial or delinquent behavior. By operating in schools, quick and preemptive responses and improvement in the school setting itself are possible. The voluntary nature of the program enhances chances for success and removes any stigma from participation. Students deal with their peers at the school where negative behavior is often exhibited and detected earlier than in other situations.

The original goals of the PCD peer counseling program were to:

- Provide a delinquency prevention program for schools
- Relate the delinquent to his or her victim
- Provide a delinquency prevention treatment resource for the juvenile justice system, including liaison with juvenile service agencies
- Increase peer support for youth returning to school after institutionalization
• Decrease the incidence of school dropouts as well as crime in the community.

As the program evolved, additional goals were established in order to--

• Provide sufficient training for school personnel in leading PCD counseling groups

• Change student attitudes through values clarification

• Develop means for disseminating the methodology to other school systems

• Prepare Rock Island schools for desegregation (which began in 1976)

• Allow the program to evolve into long-range maintenance of lowered delinquency and disruptive behavior in schools

• Divert students from law enforcement agencies and the courts and from negative to positive behavior patterns.

The program is predicated on three concepts:

• The individual has no right to hurt him or herself.

• The individual has no right to hurt others.

• The individual has an obligation to help other people.

By the 1975-76 school year, the PCD group counseling program had expanded to include 13 daily peer group meetings in 11 schools—the high school (3 groups), 4 junior high schools, and 6 elementary schools. Natural peer leaders, both positive and negative as well as more passive students regarded as needing redirection or values clarification, were asked to participate upon referral by school officials. PCD group leaders, parents, teachers, outside agencies, or themselves. Participation is largely voluntary, requiring student and parental permission, although students are occasionally referred by courts or community service agencies. Groups consist of 10 to 12 students of the same sex. The content of meetings is confidential; any participant violating this standard may be excluded.

The purposes of group interaction are to--

• Establish a caring atmosphere

• Defuse potentially troublesome situations

• Provide support and constructive help with participant problems

• Reduce prejudices and barriers to communication.

The procedure for group meetings is as follows:

1. Individuals present their problems.

2. The group decides which problem presented at that meeting is most serious and most warrants the group's attention.

3. A problem-solving discussion is held concerning that problem.

4. The group leader summarizes the most prominent points brought out in the discussion.

During the first 3 weeks of program operation, group leaders are assigned. Orientation is provided for school staff and students. Potential participants are identified and approached, permission for participation is obtained, and the first groups are scheduled.

In the following 2 weeks, participants are introduced to the peer group process. Next, for 4 to 6 weeks, the group attempts to build trust among participants; students begin to discuss themselves and their problems; the benefits of alternatives to negative behavior become apparent; and positive changes are supported by the group.

Then, for 9 more weeks, students with problems are referred to the group and are introduced to group concepts. Concern and support is evident, and the group suggests alternatives to negative solutions. The referred student chooses a solution and the group offers follow-through help. Whenever a problem situation is presented to the group, participants decide whether it can
...solved by students, principals in the situation are invited to the group session to air their views, alternative solutions are sought, and finally, the group becomes committed to a peaceful solution and monitoring progress towards that solution.

In the 1975-76 school year, 12 group leaders organized 57 groups in the Rock Island schools with a total of 723 full-time and 1,399 part-time participants.

Detroit

In Detroit, Michigan, four high schools instituted peer culture groups staffed by school system personnel trained by PCD. The Detroit program involved two types of group counseling--Guided Group Interaction and Personal Mastery--with two 10- to 13-member groups of each type in each of the four schools. Individual and group tutorial/remedial sessions were provided for all students as needed.

Results

Peer counseling programs in Rock Island, Illinois, and Detroit, Michigan, were evaluated after the first and second years of operation. The evaluations were typically based on the incidence of criminal and disruptive behavior reported by students themselves, official school and law enforcement records, and attitudes of students, group leaders, officials, and others familiar with the program.

Rock Island

In Rock Island, the program had a pronounced effect in reducing truancy, delinquency, and substance abuse by full-time participants. According to reporting students, truancy decreased by at least 40 percent, and property and personal offenses were also significantly reduced. Overall, fewer participants reported participating in delinquent behavior, and those who continued such behavior committed fewer offenses. The student assessment was overwhelmingly favorable, more so among high school students than among junior high school students. The second-year evaluation revealed the following reductions in the incidence of negative behavior:

<table>
<thead>
<tr>
<th>Offense/Negative Behavior</th>
<th>Percent Reduction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Truancy</td>
<td>57</td>
</tr>
<tr>
<td>Disciplinary violations</td>
<td>52</td>
</tr>
<tr>
<td>Theft, burglary, shoplifting</td>
<td>73</td>
</tr>
<tr>
<td>Assault, violent behavior</td>
<td>40</td>
</tr>
<tr>
<td>Drunkenness, drug use</td>
<td>33</td>
</tr>
<tr>
<td>Procuring, prostitution</td>
<td></td>
</tr>
</tbody>
</table>

Data were also collected on changes in high school student attitudes after program participation, revealing the following reactions to the program's effectiveness:

<table>
<thead>
<tr>
<th>Program Evaluation Statements</th>
<th>Percent of Students Agreeing</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reduced racial prejudice</td>
<td>46</td>
</tr>
<tr>
<td>Reduced violence in schools</td>
<td>64</td>
</tr>
<tr>
<td>Increased communication</td>
<td>74</td>
</tr>
<tr>
<td>Increased helpfulness and caring</td>
<td>73</td>
</tr>
<tr>
<td>Increased respect for personal property</td>
<td>42</td>
</tr>
<tr>
<td>Made the student more responsible person</td>
<td>43</td>
</tr>
<tr>
<td>Increased respect for faculty</td>
<td>39</td>
</tr>
<tr>
<td>Increased respect for administration</td>
<td>40</td>
</tr>
</tbody>
</table>

The group leaders were well received by the students, who felt the leaders exerted an appropriate amount of control and self-confidence and had a genuine interest in the group.

Elementary school participants, parents, and teachers were also consistent in their positive about the program (students and parents more so than teachers).

Near the end of the second semester of program operation, most participants in the sampled high school and junior high school groups felt their groups had achieved or were close to reaching the level of 'tough caring,' when participants are trusting and genuinely concerned about group members and the school environment and when peer influence is greatest.

The community, however, seemed polarized. Some felt the peer counseling project was just another Federal giveaway program. Evaluators felt these opponents were usually supporters of traditional educational methods, content, and discipline as opposed to more innovative methodologies and...
approaches. Generally, favorable reactions were expressed by the superintendent of schools, principals and assistant principals, teachers, school counselors, security personnel, law enforcement and probation workers, and the director of the local youth guidance council. Some lack of support was noted, however, on the part of some law enforcement agencies and other nonprogram officials which was attributed to the failure of program organizers to establish a foundation in the community, with school personnel, and with law enforcement and related agencies before the program was initiated.

As the program evolved, PCD group leaders identified several problems and needs:

- The program needed a better public relations effort.
- Acceptance by school personnel and the community could be enhanced by academic credentialing of program personnel.
- In-depth training would make possible more sophisticated handling of human relations issues.
- More home visits should be made.
- Training was not sufficient for program implementers in the elementary school setting.
- Liaison between program staff and administrators and between group leaders and their coordinator needed improvement.
- A more formal training program would ensure that group leaders had the benefit of similar qualitative and quantitative preparation.

In summary, the Rock Island peer counseling program is credited with increasing communication between students, decreasing racial problems and violence in schools, increasing helpfulness and caring, and helping students become more responsible people and more respectful towards faculty and administrators.

Detroit

Impact of the Detroit peer culture groups was measured by examining behavior records before and during the program for the 365 high school students participating during the January-June 1979 semester. The results were similar to the findings of the Rock Island evaluation. The following changes in student behavior were noted:

<table>
<thead>
<tr>
<th>Behavior</th>
<th>Percent Change</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fights in school</td>

<tr>
<td>Absences from school</td>
<td>-31</td>
</tr>
<tr>
<td>Failing grades</td>
<td>-31</td>
</tr>
<tr>
<td>Credit hours earned</td>
<td>-31</td>
</tr>
</tbody>
</table>

Replication Issues

A successful peer counseling program can be implemented and become successful in any school system if certain preconditions exist:

1. The school board and school administrators must be willing to tolerate negative behavior of students which would otherwise result in suspension or referral to outside agencies. That is, they must be willing to deal with such behavior within the educational structure.

2. The faculty must be oriented toward the program before implementation to facilitate student referrals by the faculty and faculty input in the form of feedback to and from teachers.

3. Liaison with existing child service agencies (such as the police department, sheriff's office, welfare and youth service agencies) is necessary to provide a means for exchanging information on participant progress.

4. The peer counseling program must be independent of the school administration.

Operational prerequisites are that the program be voluntary, confidential, include positive peer leaders, have available group leaders who will be accessible to students and faculty, and exist in an atmosphere of willingness to move away from the tendency toward institutionalization.
In addition, a firm foundation for the program must be established in the community, the school system, and law enforcement agencies. The Rock Island PCD program has expanded to operation in Detroit and Berrien County, Michigan, and Chicago.

Required Resources

The Rock Island positive peer culture program, funded during its first year by a local foundation, served as the model for the Peer Culture Development program now operating. With the support of the school system, the original organization applied successfully for a Federal grant. The Law Enforcement Assistance Administration provided 90 percent funding to reorganize and expand the program.

PCD maintains a public and private relations program for those interested in peer counseling. Print and media materials are available, and the PCD executive director and group leader coordinator will make local presentations or arrange visits to the program for local decisionmakers.

An excellent process guide for those who have decided to improve their own school climate and reduce the distress that interferes with learning. Describes 26 separate steps and comes in a package with sample flyers, training handouts, and survey instruments for reproduction. The process and materials were developed with the help of five Northern California schools under a grant from the California Department of Alcohol and Drug Abuse.

Contains perspectives on the problem, descriptions of intervention programs, and position statements. Includes a chapter on research on crime in schools. Presents evidence that student access to the school governance and curricular structure is a factor of nonviolent schools.

This paper was developed by NCRY in response to a request from the Office of Youth Development. It provides a widely accepted definition of youth participation, distinguishes youth participation from other types of programs, and presents the benefits of youth participation to different components of society, issues, concerns, and prospects for growth.

The Safe School Study was undertaken in response to Congress' request that HEW determine the number of schools affected by crime or violence, the type and seriousness of those crimes, and how school crime can be prevented. The study is based on a mail survey of over 4,000 schools, an on-site survey of 642 schools, and case studies of 10 schools. Four factors were identified as likely to reduce or control the level of violence in schools. (There is also an executive summary of the report.)

This book rests on the premise that youth are in general devalued in our society and shows how this devaluation leads to unemployment, ineffective schooling, and alienation. As an alternative, numerous programs where youth serve as competent participants in their communities are described, and a call is put forth for a national policy which would value youth.

A description of approaches to and the effects of equal partnership with students in school decisionmaking.

Teacher Corps Youth Advocacy Loop, University of Vermont. Student Initiated Activities: A Strategy in Youth Advocacy.

A description of the history and present status of Activity II of the Teacher Corps Program (Student Initiated Activities). Also included is material from the Youth Participation Conference on Student Initiated Activities which was held at Oakland University on November 8-10, 1977, and project reports from Activities I and II of the Teacher Corp program.

A novel approach to education, learning, and social change, Partnership in Research utilizes the "self-study" method. Young people are involved as "participant researchers," defining, observing, and evaluating issues that they feel have a significant impact on their lives. The book describes an early PIR project in a New Hampshire school as well as more recent applications of the self-study method.

During the 1970's, five national commissions studied both the social context of youth and the situation in the nation's secondary schools. Each commission recommended reforms in schooling process to—

- Reduce isolation of youth from the greater community
- Provide more meaningful learning situations
- Offer more choice as to method of instruction.

The reports:

Two summaries of the reports:

Module 3.4 - Law-Related Education

Total Time 1 hour

Module Summary

This module provides a rationale for including law-related education in the curriculum and introduces programs and resources related to law-related education used by schools. By providing students knowledge of their rights and responsibilities under law and by teaching nonviolent approaches to conflict resolution, law-related education can be a significant factor in reducing violence and vandalism.

Course 3 - School Climate
Module 3.4 - Law-Related Education

Objectives

Participants will be able to:

1. Define the goals and objectives of law-related education programs
2. Discover and use methods and strategies for introducing law-related education into schools/classrooms
3. Identify curriculum materials, programs and resources suitable for teaching law-related education.

"Grin and Bear It"

"Maybe the same ol' American know-how that helped you build a car that gets 90 miles per gallon will help you figure out how to get it out of the basement."

"Momma"

MOMMA / by Mell Lazarus

WELL, WELL, IT'S MY SLOPPY SON!
HELLO, MOTHER.
I'VE DECIDED TO MOVE BACK HOME WITH YOU.
NOT BEFORE AN ENVIRONMENTAL IMPACT STUDY.

"The World of Animals"

Dear Dr. Miller:

Tarzan is the first cat I ever knew that loves a bath. He will actually climb right into the tub, sit there and purr while I'm bathing him. I'm sure this is an unusual question, but are frequent baths bad for a cat's skin? Tarzen doesn't have bad skin. It looks perfect, but I was wondering.

—D.B.

Water won't hurt a cat's skin. Soaps or shampoos could, depending on their ingredients and how thoroughly they're rinsed off afterward. That's really the criterion: If the shampoo isn't irritating to begin with, and if it's rinsed off thoroughly to end with, then a normal cat's skin certainly wouldn't be harmed by the process.

Dear Dr. Miller:

It was Tuesday after our weekend trip before we discovered all those ticks on Mr. Barker.

He spent a lot of that time in the house, and we first saw a tick crawling on the floor, then found them on him. We had him dipped for ticks right away, but don't know how many crawled away in the house before we knew about them. My husband assures me that they could die in just a few days anyway, but then he's not always right.

—E.F.

Not this time, anyway. Ticks tucked away in the woodwork, or elsewhere, might make their move back to Mr. Barker—or to you—as long as a year from now.

Dear Dr. Miller:

I read this incredible story, claimed to be true, that they've been able to transplant a living brain from one rat to another. If this is so, will they be doing this in humans soon?

—S.A.

Grafting a small section of the brain from one rat to another has been successfully done. The transferred brain cells have thrived and the recipient animal benefited. There's a definite possibility the same technique could be applied to help humans with neurological disorders. This does not mean, however, that complete brain transplants are being contemplated now or in the future. There'd undoubtedly be a scarcity of volunteers with new heads or old ones, anyway.

Case

"Leslie was with a group of classmates at a school game. During half-time, a fellow student offered to sell Leslie and the group some drugs. Leslie refused but one of the group accepted the offer.

The next day the school principal called Leslie into the office and said that the friend who bought the drugs was in critical condition caused by impurities in the drug. The principal said the school had received information that Leslie was present during the incident, and asked Leslie to identify the drug pusher. Leslie refused and was suspended by the principal.

Leslie asks that the principal's decision be turned around."

NOTE: Assume that all statements in the case are true.
The Juvenile Justice and Delinquency Prevention Act of 1974 coordinates the various Federal programs dealing with the prevention and treatment of juvenile delinquency and authorizes Federal funds to assist innovative state, local, and private programs.

This legislation created the Office of Juvenile Justice and Delinquency Prevention (OJJDP), which administers the programs designed to furnish humane treatment to juveniles with problems and to prevent, reduce, and control juvenile crimes.

The OJJDP Law-Related Education Program has funded six national organizations to provide specialized training for educators, lawyers, juvenile justice officials, and community leaders as well as to expand law-related studies for students in grades K-12.

1. American Bar Association Special Committee on Youth Education for Citizenship (ABA/YEFC)
   1155 East 60th Street, Chicago, Illinois 60637

   ABA/YEFC provides a coordinating function for all grantees; national and regional leadership conferences, publications and consulting services, and it also serves as a national clearinghouse for the OJJDP program.

2. Children's Legal Rights Information and Training Program (CLRITP)
   2008 Hillyer Place, N.W., Washington, D.C. 20009

   CLRITP will carry out a four-part program, including (1) training of 70 professionals in mental health, social services, law enforcement, and related fields; (2) training of 70 adolescents in the same fields; (3) publication of children's rights columns in student, professional, and city newspapers; and (4) preparation of a manual on children's rights for graduate students.

3. Constitutional Rights Foundation (CRF)
   6310 San Vicente Boulevard, Los Angeles, California 90048

   CRF received in February 1978 a grant award from OJJDP to provide teacher training and technical assistance in five states, using its specially written curriculum materials on criminal justice and civil justice in secondary classrooms. This award has been expanded for a second year so that existing programs now include use of community resources, peer teaching, and other CRF components as well as a national "JUST US" newspaper written entirely by students and the development of Living Law, a book for students with minimum reading skills.
4. **Law in a Free Society (LFS)**
   606 Wilshire Boulevard, Santa Monica, California 90401

LFS has received a grant award to carry out a law-related education program for two years. The major objective of this program is the establishment of ten law-related education centers in selected areas of the nation. The nature and scope of each center's activity will vary depending upon the needs and resources at each site. Through these centers, LFS will provide teacher training and student materials for K-12 instruction.

5. **National Street Law Institute (NSLI)**
   605 "G" Street, N.W., Washington, D.C. 20001

The NSLI program is directed to a Street Law program in high schools, with three components: (1) publication of a textbook on this subject; (2) law school clinical programs in which law students teach Street Law to high school students; and (3) technical assistance and teacher training to school districts using Street Law. The OJJDP-funded program will enable NSLI to (1) provide technical assistance and teacher training in 30 cities, (2) provide technical assistance and funding for the replication of the Georgetown University Law Center law-related education model at six law schools, and (3) develop a court-based pretrial diversion program with a law-related education component.

6. **Phi Alpha Delta Law Fraternity International (PAD)**
   1140 Connecticut Avenue, N.W., Washington, D.C. 20036

PAD is a nonprofit professional service organization in the field of law. PAD has received an OJJDP grant for a two-year program beginning February 1979. The PAD program has five components:

- It will rally its entire membership to give support to this program.
- PAD members will be urged to generally support existing local, state, and national goals to reduce crime, vandalism, and violence in the United States.
- PAD will cooperate closely with the other five grantees to assist them in their respective law-related education programs.
- PAD will select ten metropolitan areas in which to promote and support specific law-related education programs serving at least 1,620 students in the local elementary, intermediate, and secondary schools.
- All PAD law school and alumni chapters, as well as individual members of the fraternity, will be encouraged to join in this fraternity-wide program by active participation in the ten metropolitan areas and to initiate their own juvenile justice and delinquency prevention projects in other areas.

Additional information about several of these projects, as well as others, is included in the following pages reprinted from the Directory of Law-Related Education Projects, 1978, ABA/YEFC.
National Projects of Special Interest

The following projects provide a variety of consulting services, including on-site assistance, to individuals and groups throughout the country.

American Bar Association Special Committee on Youth Education for Citizenship (YEFC)

Norman Gross, Staff Director
1155 East 60th Street
Chicago, Illinois 60637
312-947-3960

The ABA Special Committee on Youth Education for Citizenship was established in 1971 to provide national clearinghouse and coordination services for individuals and groups interested or involved in law-related education. Because YEFC has no proprietary interest in any particular projects, materials or models in the field, it promotes all worthwhile efforts and helps develop programs best suited to each community's particular needs and interests.

YEFC has produced a wide variety of materials which provide practical information on how to begin and sustain law-related programs. It has prepared a film, "To Reason Why," which documents the need for law-related education and indicates ways in which lawyers and educators can cooperate in developing law-related programs. In addition to this Directory, YEFC has published a series of three curriculum catalogues -- the Bibliography of Law-Related Curriculum Materials: Annotated, Media: An Annotated Catalogue of Law-Related Audio-Visual Materials, and Gaming: An Annotated Catalogue of Law-Related Games and Simulations -- and three books on program development -- Teaching Teachers About Law: A Guide to Law-Related Teacher Education Programs, The $$$ Game: A Guidebook on the Funding of Law-Related Educational Programs, and Law-Related Education in America: Guidelines for the Future.

YEFC also offers a new magazine, Update on Law-Related Education, which contains information on recent United States Supreme Court decisions, new law-related curriculum materials, classroom strategies, funding opportunities, and other matters of topical interest.

YEFC has conducted regional conferences on law-related education throughout the country and conducts research concerning major areas of program development and implementation. It also provides on-site consulting services on all aspects of law-related education to school systems, bar associations, and other interested groups.

Institute for Political/Legal Education (IPLE)

Barry E. Lefkowitz, Director
207 Delsea Drive
R.D. #4; Box 209
Sewell, New Jersey 08080
609-228-6000

The Institute for Political/Legal Education began in 1969 as a program combining classroom instruction with field work in law and politics for Burlington, New Jersey high school students. Now nationally validated by the U.S. Office of Education as an innovative project under ESEA Title IV-C, IPLE consists of a year-long social studies curriculum which provides high school students with an understanding of and practical experiences in political, governmental, and legal processes. The curriculum includes three units: voter education; state, county, and local government; and individual rights. The program uses the community as a classroom, and requires at least twenty days for student field-work and internship in local and state agencies. IPLE conducts one-week teacher education workshops to provide training in the use of its curriculum materials and strategies for structuring, organizing, and implementing IPLE in a school system. In addition, IPLE sponsors seminars and workshops on these topics as well as its annual New Jersey Model Congress where students discuss and enact legislation researched and written by themselves.
Law in Action National Office

Trudy Faust, Coordinator
393 North Euclid Avenue
Room 25
St. Louis, Missouri 63108
314-361-8626

The Law in Action national office provides workshops and informational assistance on the Law in Action series to educators and school systems. Designed for students in the middle grades (5-8), Law in Action originated as part of a pilot law-related project for eighth graders in the St. Louis Public Schools. Now published by West Publishing Company, the series includes a student book, a teacher's manual, and a silent filmstrip on each of the following topics: Lawmaking, Juvenile Problems and the Law, Youth Attitudes and Police, Courts and Trials, and Problems for Young Consumers. The series is activity-oriented and includes such teaching strategies as mock trials, simulations, and community involvement projects.

Law in American Society Foundation

Peter Senn, Executive Director
Lyceum Building
2235 North Sheffield Avenue
Chicago, Illinois 60614
312-321-8332

Since 1971, the Foundation established a nationwide network of school, college, university, and correctional projects in law-focused education, and provided administrative and limited financial support to such projects, in addition to resource and evaluation services during their pilot phase. The Foundation has also offered intensive summer teacher training institutes at both introductory and advanced levels which included instruction in law-focused substance and methodology, and offers the services of the Clearinghouse for Resource Materials, which features films, books, reports, and other law-focused materials.

The Foundation has produced a number of curriculum materials for use in elementary and secondary schools. The Trailmarks of Liberty series focuses on constitutional concepts appropriate for the elementary, junior high school, and senior high school grades. The Justice In America series, designed for use in grades 7-12, consists of six volumes on such issues as urban problems, welfare, housing, criminal law, consumer law, and the juvenile court system. The project has also produced the law-focused multi-media materials Foundations of Justice (for elementary school students) and In Search of Justice (for secondary school students).

Law, Education and Participation (LEAP)

Vivian Monroe, Executive Director
Todd Clark, Education Director
6310 San Vicente Blvd.
Suite 402
Los Angeles, California 90048
213-930-1510

Law, Education and Participation is a national project of the Constitutional Rights Foundation, a Los Angeles-based project in law-related education that has operated since 1963. The LEAP project provides consulting assistance across the United States in the following areas: developing community support for law-related programs; organizing school resource programs using the voluntary services of lawyers, law students, and justice agency personnel; designing student and teacher internships with justice agencies; planning and staffing teacher preservice and inservice training on the administration of justice; organizing school, community, and citywide conferences and seminars; and organizing peer teaching programs in law-related education. Direct assistance is available through a regional office in Philadelphia (see p.84) and a local office in Chicago (see p.31). Information about their programs is also provided in Education for Participation, a guidebook for teachers, administrators, lawyers, and other leaders in the field.

LEAP also disseminates student materials developed and published by the Constitutional Rights Foundation, including the quarterly Bill of Rights in Action, numerous simulation games (such as Police Patrol, the Jury Game, and Kids in Crisis), a new Living Law series, and other law-related materials.
Law in a Free Society (LIFS)

Initiated by the State Bar of California in 1970, Law in a Free Society is a K-12 civic education project conducted with the cooperation of the faculty of the University of California, and other institutions of higher learning, as well as school districts, bar associations, and other groups and agencies in California and several other states. LIFS is developing a comprehensive K-12 curriculum based on eight concepts: authority, diversity, freedom, justice, participation, privacy, property, and responsibility. Preservice and inservice teacher training materials have already been prepared consisting of casebooks, lesson plans, curriculum objectives, and course outlines.

With the support of the National Endowment for the Humanities and the Danforth Foundation, the project is now developing classroom instructional materials on the eight concepts. Six sequential modules are being prepared for each concept with each module containing four sound filmstrips and tape cassettes, student resource books designed to reinforce the filmstrips, and a teacher's edition with an evaluation component.

The LIFS project staff is available to provide consulting services in the following areas: program development, inservice teacher training, and developing support for law-related programs from legal, educational, and other community organizations.

National Street Law Institute

The National Street Law Institute is an outgrowth of a six-year-old Georgetown University program in which law students teach about the law in District of Columbia public high schools. The project now works with law schools nationwide to help them design clinical programs in which law students receive credit for teaching a Street Law course in area high schools and correctional institutions, and conducts widespread teacher education programs. The programs emphasize areas of law as they apply to individuals in their daily lives.

Its national text, Street Law: A Course in Practical Law, consists of units on criminal law, consumer law, family law, housing law, environmental law, and individual rights law; a teacher's manual provides background and legal case materials as well as sample mock trials. The project has also published Street Law: A Course in the Law of Corrections, consisting of both student and teacher materials.

In addition, the project provides the following services: teacher training and other assistance with curriculum development, instructional methodology, mock trials, and areas of substantive law; technical assistance to school systems, law schools, departments of corrections, bar associations, and other interested groups; and development of legal education materials.
Curriculum Materials and Resources for Law-Related Education

Susan E. Davison

Over the past decade a wide variety of approaches to law-related curriculum has evolved. Some of these approaches have been very practical, aimed at teaching students the skills which may help them cope with the legal system when they encounter it. What to do if you are arrested, what it means to sign a contract, how to initiate civil proceedings, and so on. The best of these programs also give an overview of the legal system and an understanding of how law is used to mediate conflicts between individuals and between individuals and society. The National Street Law Institute in Washington, D.C., is one group which has developed such materials. Street Law: A Course in Practical Law includes basic information about criminal law, consumer law, family law, housing law, individual rights, and environmental law. These substantive areas are explored through problem-centered discussion questions and activities which encourage students to wrestle with issues in the same way the courts must. They thereby promote student knowledge about the law, increase understanding and appreciation of our legal system, and encourage the development of critical thinking skills.

On the opposite end of a continuum reflecting types of approaches is that taken by such projects as Law in a Free Society, a project in Santa Monica, California, supported by the National Endowment for the Humanities and the State Bar of California. Instead of organizing a curriculum around legal information students should know, the materials are built around eight fundamental and pervasive concepts of our legal and political systems: justice, responsibility, diversity, authority, freedom, participation, privacy, and property. There is much emphasis on clarifying values and developing critical reasoning abilities. Law is viewed from a broad, humanistic, and interdisciplinary perspective: How is it that disputes in our society can be settled? How can we direct our social interactions to maximize individual rights while insuring societal safety and well being? What are the merits and liabilities of any particular course of action? More concretely, from a student’s viewpoint: How can we decide on rules for a game at recess? Who should make school policy decisions? Should we support gun control legislation?

Somewhere in between these two approaches—-the practical and the conceptual—is a number of others which incorporate in varying degrees the ideas of both. The materials chosen by any particular system will depend on the objectives desired, the needs of the student audience, and the abilities and training of teachers who will be using the program.

There are increasingly more materials to choose from, especially for secondary students. Among these, some are of superior quality. Many others will be helpful to creative teachers who can use them in imaginative ways. A few materials, however, are clearly off the track which thoughtful educators would want to travel. These materials tend to emphasize unquestioned compliance with and respect for the law. Their message is usually clearly stated, but may be included more subtly: “Don’t disobey this rule or law or some terrible consequence (punishment) will befall you.”

Quality law-related education programs encourage students to identify and analyze issues, not to learn uncritically legal facts and principles. Such programs thereby promote the development of thoughtful and active citizens who are better prepared to understand and deal with the many facets of their lives which are touched by the law.

Getting Started

This article concentrates on law-related curriculum materials for the social studies classroom (addresses for distributors appear at the conclusion of the article). It may be useful, however, to begin by listing resource materials which provide a broader focus. The American Bar Association Special Committee on Youth Education for Citizenship has produced a number of resource materials. These and others are listed below. Additional resource materials may be secured from many of the organizations described in the latter part of this article.

The Adolescents, Other Citizens and Their High Schools. National Task Force For High School Reform. McGraw-Hill Book Company (1974), 119 pp., paperback. A report of the task force commissioned by the Kettering Foundation to study education for responsible citizenship. Presents many recommendations on such topics as the need for students to understand their rights and the need for citizens and parents to become more involved in the activities of high schools.

Teaching About the Law. Gerlach, Ronald A. and Lynn W. Lamprecht. W. H. Anderson Company (1975) 354 pp., hardcover. A complete overview of K-12 law-related education. Chapters provide a rationale for teaching law in elementary and secondary classrooms; the history and future of law-related education; descriptions of curriculum materials; analyses of ways to use community resources; techniques of using legal reference materials; suggestions for using case study, clarification, strategies, and simulation; information on evaluation strategies; and suggestions as to how the school system can organize programs and train teachers. Selected bibliography provides a comprehensive list of the vast literature on law-related education.

A Critical Review of Curriculum Materials in Civic and Legal Education. Law in a Free Society. Law in a Free Society (1973). 16 pp., paperback. A booklet outlining criteria which may be used in choosing or developing a good law-related curriculum. "Critical" indicates that the project publishers are being questioned, and the use of the term "Critical" discloses the authors' intentions to discuss, with examples of how current materials are or are not meeting each objective.

Education for Citizen Action: Challenge for Secondary Curriculum. Newman, Fred M. McCutchan Publishing Corporation (1975), 198 pp., hardcover. Describes the more than 200 law-related curriculum materials available for teaching law in elementary and secondary education. "Challenges" and "opportunities" for using materials are described. The book also includes a bibliography which lists more than 100 law-related publications useful for teaching law in secondary schools.

The Making of a Free Society. Clark, Todd. Greenhaven Press, Inc. (1976). 209 pp., paperback. A booklet outlining criteria which may be used in choosing or developing a good law-related curriculum. "Critical" indicates that the project publishers are being questioned, and the use of the term "Critical" discloses the authors' intentions to question each of the many law-related curriculum materials available for the teaching of law in secondary schools.

Building Foundations: Law-Related Education for Elementary Students

There are unfortunately many fewer law-related curriculum materials for elementary children than for students in secondary schools. In the past, K-6 teachers have been left largely on their own to develop and adapt materials. The materials described below were designed specifically to teach law-related concepts and content.

Citizenship Adventures of the Lollipop Dragon. J. A. White. Charles E. Merrill Publishing Company (1976). Grades K-3. Six stories from the Kingdom of Tum Tum which emphasize law-related concepts. In Freedom of Choice: Make Mine Purple, Prince Hubert discovers that individuals have their own preferences and are not agreeable to having him determine the color of their homes. In Choosing a Leader: Charley the Great, the children of Tum Tum decide to have a president of their club and learn some things about authority, fairness, and prudent methods of choosing leaders. In Rules Are Important: A Mixed-Up Mess, Prince Hubert thinks he'd like to do without rules for a while until he participates in a mixed-up mess. The Majority Rules: A Secret That Grew, the people of Tum Tum find a way to solve disagreements about how to surprise the Queen on her birthday. In Changing Rules: It's Different Now, Princess Gwendoly helps the roadbuilder and learns many things about rules, including how they originate and how to change them when necessary. In Civic Responsibility; Living Dreams, the Lollipop Dragon and the people of Tum Tum help the King and Queen make the Kingdom a better place. Many segments include "activity booklets" and "free-choice activities." The "Lollipop Dragon" universe includes with-open-ended questions for young viewers. Teacher's guide provided.

Citizenship Decision-Making Instructional Materials. Citizenship Development Project: Experience-Based Education for a Complex Society. Citizenship Development Program (1976). 300 pp., paperback. Grades 4-6. These materials are designed to involve students in exercises which develop awareness and understanding of political decision-making. Conflict resolution, the need for rules and laws, methods of issue analysis, the function of authority and other basic legal and political concepts and processes are examined in concrete contexts.

buy the air above Sun Valley and build huge mushroom-shaped houses which block out the sun. In *The Battle of Ogden and Utah: The Adversary Process*, two cavenm try to settle a dispute over the ownership of a sabertoothed tiger. In *Twice the Price: A Value Judgement*, two boys pass out leaflets protesting a rise in school curriculums. The student activity book involves a number of strategies including mock trials, value clarification exercises, case studies, and vocabulary exercises. Kit includes 4 color sound filmstrips, student activity booklet, and teacher's guide.

**Law and Responsibilities for the Intermediate Grades: Making Value Decisions**. Pathoscope Educational Films, Inc. (1974), color sound filmstrips, 13 minutes each. Grades 4-6. Each filmstrip poses open-ended questions about situations in which difficult decisions must be made. In *The Case of the Blue and White Whistle*, Calvin is accused of stealing his basketball team's team of stealing a whistle. Evidence for and against him is presented to his teammates, who must decide if he can remain on the team. In *The Case of the Stolen Hubcaps*, a young boy watches his brother steal a hubcap. He extracts a promise not to tell from his friend, who also saw the theft. When his friend finally informs the police, the audience must decide what the proper limits to loyalty should be. *The Case of the Boss* is the story of a young man who must decide whether to hire him in the store where he works.

**Law in Action Series**. Linda and Sally Mahe, West Publishing Company (1975), 93-136 pages each, paperback. Grades 5-9. Each unit booklet of this excellent series contains effective activities and inquiry-oriented lessons that can be used easily at several grade levels. Silent filmstrips which reinforce activities are also available. Booklets include *Courts and Trials, Just Ice, Values and Law*, *Lawmaking, Young Consumers*, and *Youth Attitudes and Police*.

**Exploiting Social Relationships**. Some excellent materials are not found under "law" or "citizenship" categories but are classified under "values," "guidance," or "moral development." Similarly, materials which help children explore social relationships can also be used. I have listed some from these areas that I believe can be especially helpful in teaching law-related concepts to elementary students.

**The Boy Who Liked Deer (Learning to Be Human Series)**. Learning Corporation of America (1976), 16mm color film, 18 minutes. Grades 5-9. Jason, a boy who loves to help care for the deer in a local park, joins with his friends in acts of unfelicing vandalism. One "prank" includes breaking into the feeding bin in the deer park. Unknowningly, the boys spill poison into the deer's feed. The deer become very sick, and Jason begins to painfully understand how deeply his actions can affect others.

**First Things: Social Reasoning Series**. Guidance Associates (1974), color sound filmstrips, 6-10 minutes each. Grades K-4. Each of the four student kits contains 2 open-ended filmstrip stories which encourage children to use social reasoning abilities. In *How Do You Know What Others Will Do?*, two situations are presented in which children need to analyze why might have been the actions of others. The stories in *How Would You Feel?*, *Case of the Stolen Hubcaps*, and *Micro-Community II for Elementary Grades 4-5-6* encourage children to put themselves in the places of others and understand other points of view. In *How Can You Work Things Out?*, children are challenged with situations in which actions that affect other people's feelings must be dealt with. The stories in *How Do You Know What's Fair?*, encourages students to analyze what fairness means in everyday life situations.

**The Lemonade Stand: What's Fair? Encyclopaedia Britannica Educational Corporation (1970), 16mm color film, 14 minutes. Grades K-6. Two boys go into business together selling lemonade. One boy, somewhat discouraged by lack of sales and ignored by other boys to join their ball game, fails to return to the lemonade stand after a lunch break. A road work crew discovers the lemonade enterprise and buys all the lemonade. The boy who continued to work at the stand does not want to split the money equally with his partner, and some interesting questions are raised as to what is fair. Teacher's guide provided.
components of most elementary curricula. Includes teacher manual, student work-sheets and forms, posters, and play money.

Powderhorn. Shirts, R. Garry. Simile II. (1971). kit. Grades 5-6. A simulation in which students play pioneers who need to trade resources. Another group of traders eventually is given more power than the others and is in a position to make the rules which govern trading. Other groups may follow a number of alternatives to counteract the tyranny of the ruling group. Includes instructor’s guide, charts, badges, and trading cards. For 18-33 players, 1-2 hours playing time.

Role-Playing for Social Values: Decision-Making in the Social Studies. Shaftel, Fannie R. and George Shaftel. Prentice-Hall, Inc. (1967). 431 pp., hardback. Teacher. Discusses the functions and value of role-playing and simulating experiences. Focuses on role-playing as a key to promoting practice in the decision-making process. Primary emphasis is placed on role-playing in the elementary grades. Includes numerous examples of how role-playing can be used and provides many stories which can serve as bases for role-playing activities and increased understanding of honesty, responsibility, fairness, and other basic moral concepts.

The Super thaw Rumors: Lessons in Values. Churchill Films (1967). 16mm color films, 15-19 minutes each. Grades 4-6. Open-ended stories through which basic social values can be explored. The Clubhouse Boat tells the story of a child pressured by friends to “borrow” money. In Trick or Treat older boys encourage younger children to play a dangerous trick. In Paper Drive (also in- termediate grade) a group of children in one class cheat in a contest to collect newspapers, and both the children and the teacher have some difficult decisions to make.

Why We Need Each Other: The Animals’ Pic- nic Day. (Basic Concepts Series) Learning Corporation of America (1976). 16mm color film, 10 minutes. Grades K-3. After some animals make fun of others, they find out that they all can be important to the group as they work together against an impending flood disaster. Teacher’s guide provided.

Why Take Care of Property: The Planet of the Ticklebottoms (Basic Concepts Series). Learning Corporation of America (1976). 16mm color film, 12 minutes. Grades K-3. The people of the planet Nice always took good care of their property. One day two children decided to start breaking things. This eventually results in a severe deterioration of the planet. The film ends optimistically as everyone works together to rebuild their society. Also available in Spanish.

Children’s Literature

Children’s literature is yet another avenue through which to explore law. A look through your school’s library shelves might be quite useful. Many stories have good places to stop the narrative and analyze the issues involved. I have listed just a few of the possibilities below.

Alice in Wonderland. Carroll, Lewis. Grades K-12. This famous tale can be used to raise law-related issues, especially relating to due process. It is published in numerous editions for all grade levels, with or without illustrations and notes.

The Cat in the Hat. Seuss, Dr. Beginner Books (1957). 48 pp., hardback. Grades K-2. While Mother is out, Sally and her brother have a strange visitor who makes himself more than at home in their house. Raises questions about responsibility and property. Also available in Spanish.

Horton Matches the Egg. Seuss, Dr. Random House, Inc. (1960). 64 pp., hardback. Grades K-3. Mayzie the Bird persuades Horton the Elephant to sit on her egg while she goes on a brief errand. When Mayzie does not return, Horton must decide how far he is responsible for the egg. Also raises doubts about fairness, when, after much hardship for Horton, Mayzie comes to claim her soon-to-hatch egg.

Horton Hears a Who. Seuss, Dr. Random House, Inc. (1954). 64 pp., hardback. Grades K-3. A sensitive story about Horton the Elephant’s perseverance in protecting a minute society hidden deep in a fuzz ball. His continual persistence in asserting that “A person’s a person no matter how small” can be used as the basis for young children to discuss responsibility, different points of view, discrimination, justice, and many other subjects basic to an understanding of justice.

Expanding Horizons: Law-Related Education

- In Junior and Senior High School

A wide variety of law-related educational materials, with varying approaches and levels of sophistication, is now being introduced into the secondary school curriculum. Although many schools prefer, to integrate law into already existing courses, there have been more and more courses and units developed specifically on law. There follow descriptions of fairly comprehensive materials which could be the bases of such courses or units.

tracts from laws and court opinions, and illustrative materials. Inquiry-oriented with factual and open-ended questions. Includes photos, cartoons, charts, and facsimiles of legal documents. Teacher’s guide available. Especially appropriate for advanced students.

Juris: An Interaction Unit Introducing Contracts, Torts, Juvenile and Criminal Law. Zarecky, Gary and William M. McCarty, Interact (1975), 23 pp., paperback. Grades 7-12. Explains the background of our "legal system" and the basic elements of law relating to contracts, torts, juvenile law, and criminal law. The teacher’s guide suggests various activities through which students can investigate hypothetical cases relating to the areas of law discussed in the student book.

Law in Action Series. Riekes, Linda and Sally Mahe. West Publishing Company (1973), 93-136 pp., paperback. Grades 5-9. Each unit booklet of this excellent series contains effective activities and inquiry-oriented lessons that can be used easily at school or home. Filmstrips are also available. Booklets include Courts and Trials, Juvenile Problems and Law, Lawmaking, Young Consumers, and Youth Attitudes and Police.

Street Law: A Course in Practical Law. Newman, Jason and Edward O'Brien. West Publishing Company (1973), 281 pp., paperback. Grades 8-12. Provides information on the practical aspects of law. Aimed at teaching students how to make the law work for them. Includes material on criminal law, consumer law, family law, housing law, law affecting individual rights, and environmental law. Suggests ways to open discussions for discussion. Appendices include the amendments to the Constitution (including the proposed Equal Rights Amendment) and a glossary. Photos. Teacher’s guide available.

Studying About the Constitution and the Bill of Rights

Study of the Constitution and Bill of Rights is emphasized in all secondary schools. In the past, many of these studies have been lifeless and dull. There are now more materials, however, which I believe can be especially useful and interesting teaching tools. Studying the Constitution and Bill of Rights can be an exciting and dynamic experience. It is also essential to the education of responsible citizens. The materials below were designed especially to emphasize the Constitution and Bill of Rights. Of course, many other law-related materials listed elsewhere also relate to this important area.

The American Judicial System (Oxford Spectrum Series). Starr, Isodore. Oxford Book Company (1972), 116 pp., paperback. Grades 9-12. Comprehensive and easily understandable discussion of federal courts, with emphasis placed on the historical development of the Supreme Court. Includes many landmark cases, including the conspiracy trial of the Chicago Eight, Marbury v. Madison (the power of judicial review), Gibbons v. Odegen (the power of Congress to legislate interstate commerce), Dartmouth College v. Woodward (contract), and Ex parte Milligan (protection of military and civil jurisdictions) and many others. Discussion questions and activities suggested, including follow-up reading.

The Bill of Rights in Action Series. BFA Educational Media (1966-1976), 16mm color films, 14-23 minutes, Grades 7-12. Twelve films which present cases involving legal issues. The decisions are left open-ended to promote discussion. In Capital Punishment, a convicted felon argues that his mandatory death sentence is unconstitutional under the 8th Amendment. In De Facto Segregation, a student is promoted ahead of a white employee. The 3rd Amendment, a student is held in an unconstitutional internment camp. In Freedom of Religion, a Jehovah’s Witness refuses a blood transfusion which would save his life. In Freedom of Speech, a neo-Nazi who is arrested for disturbing the peace after making a speech on the virtues of Hitler.
In front of a synagogue in Freedom of the Press, a reporter refuses to answer a grand jury's questions about the sources of his information. Juvenile Law contrasts the due process rights of adults with the special provisions made for juveniles and uses a hypothetical case in which the constitutionality of denying equal treatment is raised. The Privilege Against Self-Incarnation is a fictional account in a future society in which a defendant's right against self-incrimination is raised when he is confronted with the state's "truth machine." The Right to Legal Counsel explores indigents' rights to counsel using Bevett v. Brady and Gideon v. Wainwright. In the Right to Privacy the limits and scope of the right to privacy are examined in a hypothetical case in which electronic eavesdropping devices are used to obtain evidence to get a search warrant. The Story of a Trial follows a petty theft case showing the rights of the accused which are protected during arrest, arraignment and trial. Women's Rights involves a case in which a high school girl is prohibited from swimming on the boys' team in her school.

Great Cases of the Supreme Court (Markers of Liberty Series). Rutcliffe, Robert H., editor. Houghton Mifflin Company (1975). 131 pp., paperback. Grades 7-12. Case book which makes journalistic presentations of famous cases on freedom of religion, and expression, search and seizure, slavers and citizenship, the right to vote, equal opportunities, and criminal procedure. Each case has discussion questions, and activities. Glossary, list of cases, mock trial and trial script. Decisions for the cases are provided in a supplement to the book. Teacher's guide provided.

Ninth Justice: A Board Game of the Supreme Court and Judicial Process (American Political Behavior Series). Gillespie, Judith A. Ginn and Company (1972), kit. Grades 9-12. A card and board game designed to teach students about the judicial process of the Supreme Court, especially in relation to the recruitment of the ninth justice, the influence of a ninth justice on decision making in major cases, and the societal impact of a ninth justice on court decisions which set precedents. Uses two hypothetical court cases—legalizing marijuana and abolishing school dress codes, in which civil rights issues are involved. Includes teacher's guide, six participant guides, six game boards, 32 deck of cards, two duplicating masters of score sheets, and a transparency diagram. Four to 48 players, 2-3 class periods.

of the six films re-enacts the situations leading up to a significant Supreme Court case, as well as dramatizing the court arguments and presenting majority and dissenting opinions. Series includes Equality Under Law: The California Fair Housing Cases, Equality Under Law: The Last Generation of Prince Edward County, Freedom to Speak: People of New York v. Irving Feiner, Justice Under Law—The Schenck Case: Bible Reading in Public Schools, and Free Press v. Fair Trial by Jury: The Sheepard Case. Some corresponding student booklets in the series are described above.

The System of Justice

The justice system is one area in which student interest never flags. Perhaps the media have helped spark this interest, although television and movies often give students incorrect impressions about courts, police, and prison. In addition, many students who have had first-hand contact with crime and the law realize that the ideal of justice is often not being met, and appreciate an opportunity to explore the discrepancy between the ideal and the reality. It is important for teachers to help students examine how justice is pursued through the legal system. The following are some materials which may help in this task.

Confrontation in UrbA: Lundstedt, Ronald and David Dal Porto. Classroom Dynamics Publishing Company (1972). 55 pp., paperback. Grades 9-12. A case involving two high school students and two college students charged with inciting a riot at a local snack shop. Emphasizes the feelings of the shop owner, the students, and the arresting police officer. All necessary information and materials are provided in a book with tear-out pages. Involves 7-45 players during 3-11 class periods.

Crime and Justice. Teaching Resources Films (1974), color sound filmstrip, 14 minutes. Grades 7-9. This filmstrip demonstrates the need for improvement of police, courts and prisons. Includes the gun control controversy and presents important questions as to the availability of firearms, police bargaining and sentencing. Some open-ended questions are posed. Teacher's guide provided.

Law in a Democracy Series. Guidance Associates (1973-1975), color sound filmstrips. 11-16 minutes. Grades 7-12. Four filmstrip kits each containing two segments which encourage thoughtful exploration of various aspects of law and the justice system. Exploring Limits of the Law is a beginning exploration of how far the law should go in controlling behavior, including case analyses related to parental discipline, religious freedom, and employer-employee relationships, as well as victimless crimes. Enforcing the Law provides a documentary look at one day in the lives of two police officers and viewpoints from numerous segments of society about the role of police. In The Criminal Court each step of the justice system is followed from the arrest through the trial of an 18-year-old accused of heroin possession. Consequences for the Convicted is designed to stimulate frank discussion of the need for correctional reform, by looking at the evolution of "punishment" and the rationale behind incarceration. Teacher's guides provided.

and hypothetical cases presenting the need for law, the role of the police, arrest and trial, rights of the accused, and citizenship rights and duties. Includes student books and logbooks, posters, and a record. Teacher's guide provides background information, lesson plans, and activities. "Moot: A Simulation of Procedures Derived from Juvenile and Adult Law Cases" by Zarecky, Gary. Interact (1973), Kit. Grades 9-12. A role-playing simulation that allows students to experience the legal system and practice their advocacy skills. It includes a "drug bust" scenario, and several optional cases, such as murder, assault, and battery. The simulation is designed for 20-35 students during a 4-class period or in 4-hour sessions.

"Plea Bargaining: A Game of Criminal Justice" by Katsh, Ethan. Ronald M. Pipkin and Beverly Schwartz Katsh. Simile II (1974), Kit. Grades 9-12. A role-playing simulation that allows students to experience the legal system and practice their advocacy skills. It includes a "drug bust" scenario, and several optional cases, such as murder, assault, and battery. The simulation is designed for 20-35 students during a 4-class period or in 4-hour sessions.

young people’s rights in relation to labor, the school, the home and family, and the juvenile justice system. Provides both historical and contemporary perspectives. Selected bibliography.

**Law and United States History**

One subject which is required of almost all secondary students is United States history. Of course, this is a subject in which it is easy to integrate much law-related material. Some of the following may be incorporated into existing classroom units.

**Constitution: A Simulation of a Convention Called To Revise the United States Constitution.** Kennedy, Charles L. Interact (1974), kit. Grades 10-12. Students study the U.S. Constitution as they participate in a simulated constitutional convention which is considering revisions of the original document. Includes teacher's guide and students' guides for 35 players over 15 class periods.

**Espionage: A Simulation of the Rosenbergs’ Trial of 1951.** Lacey, William. Interact (1974), kit. Grades 8-12. Students examine the anti-communist mood of the 1950s, the justice of the use of capital punishment for conspiracy to commit espionage, and the validity of evidence in the trial of Julius and Ethel Rosenberg. The trial is reconstructed, and the jury reaches its own conclusion. Includes teacher's guide and students' guides. For 35 players during 3-5 class periods.

**The Haymarket Case.** Dal Porto, David. History Simulations (1972), kit. Grades 9-12. Simulates the 1886 Haymarket trial from jury selection through decision. May be helpful in stimulating discussion of free speech, dissent and protest, labor rights, and other issues, as well as due process and other legal issues. Includes procedures, teacher information sheet, master role sheet, fact sheet, role sheets, subpoena, decision sheet, reporter sheets, and trial exhibits. For 28-38 players during 3-5 class periods.

**1787: A Simulation Game.** Rothschild, Eric and Werner Feig. Oilcott Forward (1970), kit. Grades 7-12. Players are fictitious delegates to the Constitutional Convention of 1787, as well as George Washington, James Madison, and Benjamin Franklin. Background of the times is provided but convention outcomes may vary from actual history. Includes record, duplicating masters, agenda poster, role cards, a delegate handbook, and teacher’s guide. For 20-40 players during 3-4 class periods.

**Six Involvement Exercises for United States History Classes (Vols. 1-4).** Krause, William and Da C. Sischo. Involvement (1974), 50 pp. each. Grades 8-12. Each of the four volumes contains six activities, including inquiry exercises, role-playing, and simulations on historical, political, and legal subjects. Includes material on the electoral college, presidency, the Korematsu trial (legality of relocation and internment of Japanese Americans during World War II), Dred Scott trial (rights of slaves), the Pullman trial (legality of railroad strike), and many other subjects. Values of the American Heritage: Challenges, Case Studies, and Teaching Strategies (NCSS Yearbook). Ubbelohde, Carl and Jack R. Fraenkel, editors. National Council for the Social Studies (1976), 213 pp., hardback. Teacher. Case studies help readers to focus on the development of American democracy. Life, Liberty and the Pursuit of Happiness are examined through case studies of past and current controversies over those rights mean in specific circumstances. Includes impressment of citizens during wartime, the trial of Susan B. Anthony, religious freedom issues raised by Mormons in the 19th century, and the rise of corporate power and monopolies. Extensive section on strategies for teaching about values. Recommendations for further reading provided.

**The War Crimes Trials: Dal Porto, David and John Koppel. History Simulations (1974), kit. Grades 9-12.** Simulates war crime trials in Germany after World War II. Students take the roles of judges, witnesses, lawyers, and four of the accused in two separate mock trials. Includes all necessary information and forms. For 25-40 students during 10 class periods.

**Organizations**

I have not listed nearly all the materials that could be used in elementary and secondary classrooms, nor have I covered all the subject areas which could be included. Many more quality materials exist or are in development stages. The following are brief descriptions of a number of organizations which may be able to assist you in identifying materials and developing approaches for law-related education curriculum.

**American Bar Association Special Committee on Youth Education for Citizenship (YEFC), 1155 East 60th Street, Chicago, Illinois 60637, (312)-947-3960.** Staff Director: Norman Gross. YEFC has, since 1971, served as a national clearinghouse and coordinator on all aspects of law-related education. Staff provides consulting services to groups interested in establishing and developing programs, and assists in insuring coordinated efforts among community and educational systems, both public and private. YEFC has produced a series of publications, listed-earlier in this article, and can inform you of law-related projects already underway in your vicinity. It also works with colleges and universities in incorporating law-related education into pre-service teacher education programs.

**Correctional Service of Minnesota, Education Division, 1427 Washington Avenue South, Minneapolis, Minnesota 55404, (612)-339-7227.** Education Director: David Whitney. The Correctional Service of Minnesota is a private, non-profit organization which offers an extensive collection of law-related resource and curriculum materials for sale and rental. Other activities of the Correctional Service include research into various correctional problems and law-related training for teachers and criminal justice personnel.

**Institute for Political/Legal Education (IPLE), 426, Glassboro-Woodbury Road, Pitman, New Jersey 08071, (609-589-3410).** Executive Director: Barry E. Lefkowitz. This nationally validated Title IV-C Project provides consulting in all states for establishing political and legal education programs based on the IPLE model. The IPLE program includes both classroom and field experiences for New Jersey high school students, and has developed a number of curriculum materials.

**Law, Education and Participation (LEAP), A National Project of the Constitutional Rights Foundation, 6310 Sán Vicente Boulevard, Los Angeles, California 90048, (213)-930-1510.** Executive Director: Vivian Monroe. Provides consulting services to legal and citizenship projects throughout the United States. LEAP, originally funded by the Ford and Danforth Foundations, grew out of the Constitutional Rights Foundation (CRF), which was established in 1963 to encourage improved law-related education in the schools of California. The Constitutional Rights Foundation has produced a variety of materials, including its Bill of Rights in Action quarterly, simulation games, Constitutional Rights Series (Benzerig, Inc.), and other materials. Affiliated offices are located in Philadelphia and Chicago.

**Law in a Free Society (LIFS), 606 Wilshire Boulevard, Suite 600, Santa Monica, California 90401, (213)-393-0523.** Executive Director: Charles N. Quigley. LIFS was created in 1969 as a project of the State Bar of California. It has developed in-service teacher education materials on each of eight concepts: authority, diversity, freedom, justice-participation, privacy, property, and responsibility. Multi-media kits for K-12 student instruction are now being developed. Consulting services are available.

**Law in American Society Foundation, 33 North LaSalle Street, Chicago, Illinois 60602, (312)-346-0963.** Executive-
Director: Robert H. Ratcliffe. The Foundation has conducted intensive summer teacher education institutes in the substantive and pedagogical aspects of law-focused education since 1966. Curriculum materials include the Justice in Urban America series, Trailmarks of Liberty series, Foundations of Justice, and the Law in American Society Journal. The Foundation also offers consulting services to interested groups throughout the country.

National Organization on Legal Problems in Education (NOLPE), 5401 Southwest Seventh Avenue, Topeka, Kansas 66606. (913-273-3600). Executive Secretary: M. A. McGhehey. NOLPE was established to “improve education by promoting interest in and understanding of school law throughout the United States.” While it should be understood that “school law” is not the same as “law-related education,” the publications of NOLPE can provide information on the status of current legal issues affecting school administrators, teachers, and students.

National Street Law Institute, 412 Fifth Street, N.W., Washington, D.C. 20001. (202-634-8235). Director: Jason Newman. In 1972, “Street Law” was an experimental course in two D.C. high schools, designed to give students practical information about the law. The program has now expanded to include many D.C. junior and senior high schools and is being established in other cities in the nation. It has developed useful curriculum materials, including Street Law: A Course in Practical Law and Street Law: A Course in the Law of Corrections (West Publishing Company). Consulting services are available.

THE REALITY OF SUCCESS
(Second film in a three-film package: REALITY THERAPY)

Dr. William Glasser presents his seven-step formula for teachers to deal with students who have scholastic or disciplinary problems. Describer critic: "The Reality of Success" presents a clear, concise system for a teacher's practical needs in dealing with difficult students. Dr. Glasser's process is well designed and simple so that it can be flexible under varying circumstances. Intended for preservice and inservice teachers and counselors concerned with reaching problem students. Grade levels of junior high and up.

"...MORE THAN JUST A PLACE TO COME TO"

A documentary investigation of school violence and vandalism -- causes, effects, and programs for change in elementary, junior high, and high schools. The film records scenes surrounding a tragic murder on a school playground and two quarter-of-a-million dollar school arson fires. Students (elementary through high school), teachers, parents, administrators, judges, and police talk about the atmosphere of fear and hostility in schools and then demonstrate what can be done to bring peace and tranquility back into the classroom.

Not previewed by NSRN staff.
Most Americans do not understand the laws that affect their lives every day, nor are they familiar with the processes of law and how to deal with them. Law-related education addresses these needs through meaningful programs on the law and legal system in our nation's elementary and secondary schools.

TO REASON WHY is designed to introduce law-related education to educators, lawyers, parents, justice officials and other members of your community. The film:

- Discusses the need for improved education about the law and the legal process.
- Shows classrooms from kindergarten through twelfth grade where law studies are being successfully introduced.
- Identifies the essential elements of worthwhile programs.
- Demonstrates effective teaching techniques such as mock trials, role play and classroom participation by representatives of the justice system.
- Discusses resources available to those interested in instituting law-related education in their schools.

Color Film, 30 minutes
Purchase: $200
Rental Fee: $15 (3 days)
