Intended as a source of motivation and guidance for those who wish to examine and perhaps change a school's writing program, this handbook addresses both the content and the teaching methodology of a writing program. Sections of the handbook provide (1) background information on the teaching of writing, (2) a discussion of the writing process through its many stages, (3) advice on implementing a school-wide writing program, (4) the important elements to consider when establishing a staff development program for the teaching of writing, and (5) a checklist for assessing a school's writing program. The discussion of each writing component includes a narrative and suggested activities, which are adaptable to various grade levels. A list of selected references appears at the end of the handbook, and suggestions for further reading appear throughout the document. (RL)
Handbook for Planning an Effective Writing Program

Kindergarten Through Grade Twelve
Publishing Information

The Handbook for Planning an Effective Writing Program was prepared by the Handbook Writing Committee under the direction of George F. Nemetz, Consultant in English, California State Department of Education. (See the Acknowledgments for a list of committee members.) The handbook was edited by Theodore R. Smith and prepared for photo-offset production by the staff of the Bureau of Publications, California State Department of Education, with artwork and design by Steve Yee. The document was published by the Department of Education, 721 Capitol Mall, Sacramento, CA 95814; was printed by the Office of State Printing; and was distributed under the provisions of the Library Distribution Act.

Copyright, 1981, 1982
California State Department of Education

Copies of this publication are available for $2 each, plus sales tax for California residents (6 percent in most counties; 6 1/2 percent in four Bay Area counties), from Publications Sales, California State Department of Education, P.O. Box 271, Sacramento, CA 95802.

A list of other publications available from the Department may be found on page 61 of this handbook.

EDITOR'S NOTE: Those who developed this handbook followed all eight stages in the writing process, which are described on pages 9 through 22 of the document. The editing stage, as described on page 17, was composed of these tasks: (1) adhering to the rules of the language and a recognized style; (2) using good diction; (3) following logical syntax; (4) making the text and its references accurate; (5) developing a good format; and (6) proofreading at each step in the process of preparing the manuscript for printing. In addition to the references cited on pages 17 and 19 of this handbook, the editor used Webster's New Collegiate Dictionary and Webster's Third New International Dictionary to resolve any questions regarding preferred spelling and syllabication. The Bureau of Publications has developed its own style for footnotes and bibliographical entries; thus, the editor did not use A Manual of Style as a guide for such entries, but he did use that stylebook as a guide for resolving other matters of style.

To achieve good readability, the editor had the text set on a maximum line length of 15 picas in 11-point Times Roman type, and he had one point of leading added between each line of type. The headings for each section of the handbook were set in 30-point Times boldface type. The material in the appendix was set in 10-point type, and the footnotes and this note were set in 8-point type. The typesetter, Leatrice Shimabukuro, used a computerized phototypesetting machine and magnetic disks for composing the manuscript.

The sidebars, which appear in the margins of the handbook, were selected by George Nemetz and the editor to highlight as many of the central ideas of the text as it was possible to emphasize. In addition, the format was designed to capture the spirit of the writing process and to complement the text. To achieve the desired graphic effect, Artist Steve Yee made high contrast prints of the photographs and screened them to 60 percent of their original intensity.

We hope you find the end product pleasing, readable, and most of all, useful.

Foreword

Voicing concern about the tendency of educators to emphasize reading and listening far more than speaking and writing in the classrooms of this nation, Donald H. Graves said in *Balance the Basics: Let Them Write* that this "imbalance between sending and receiving should be anathema in a democracy." He further maintains that "writing is the basic stuff of education. It has been sorely neglected in our schools."

Dr. Graves is a former public school teacher and principal and is now on the faculty of the University of New Hampshire. He speaks with authority and reminds us all of the centrality that writing should have in education. It is a basic tool for learning in all subject matter areas and at all levels of education. Good writing is an outward manifestation of clarity of thought. What could be more basic to education?

However, probably one of the most difficult tasks students face is learning to write with facility. Indeed, relatively few adults are accomplished in this area. As successful writers and editors point out, writing is hard work, and learning to do it well requires a good deal of time, practice, and knowledge about the writing process. It is a demanding curricular area for both students and educators.

On the one hand, then, writing is of basic importance in education; yet on the other hand, it is very difficult to master. Clearly, the role of the teacher looms large in this area of the curriculum. However, we have come to realize, particularly in recent years, that most teachers have not been well prepared to teach writing.

Although they may possess a depth of knowledge and a mastery of teaching skills in other areas of the curriculum, most teachers do not know how to elicit good student writing. Until recent years, it simply was not an area of emphasis in teacher preparation programs.

Obviously, then, in-service education regarding the planning and establishing of good writing programs is needed. This handbook is intended to facilitate that. Properly used, it can be a valuable tool for those who wish to assess the quality of a school's writing program, to pinpoint in-service education needs of a staff, and to plan and implement a new program.

In providing for effective staff development in the teaching of writing, we in California are fortunate because of the emergence of the University of California, Berkeley/Bay Area Writing Project in 1974. When I became aware of its early successes, I began to follow its development with keen interest and supported efforts to expand it to other sites in the state. At this time we have 17 such sites, and the statewide effort is now known as the California Writing Project. Further information about the project is located in the appendix of this document.

In my opinion, the California Writing Project is one of the most effective staff development efforts we have to improve the teaching and learning of writing. Its emergence has been most timely, and I hope that this handbook will be useful not only for those trained through the project but also for all others who need help...
in planning and carrying out staff
development programs in this
curricular area.

A number of the members of the
committee that prepared this
handbook are associated with the
writing centers that make up the
California Writing Project.
Accordingly, many of the ideas in
the handbook reflect the eminent
practicality and effectiveness of the
work of these centers. I congratulate
them and the other committee
members for producing what I
believe is a most important and
useful handbook, and I commend it
to you.

Superintendent of Public Instruction
Acknowledgments

This handbook was prepared with the help of a group of educators who are highly informed regarding the teaching and learning of writing. Many of them are associated with writing centers that make up the California Writing Project and were nominated to serve on the Writing Handbook Committee by the directors of those centers. Others on the committee were selected on the basis of their expertise in specific areas.

As might be expected, spirited dialogue occurred during committee meetings because of the vantage points of the different committee members. However, they were able to reach consensus, and this handbook represents a distillation of the discussions, writing, and rewriting in which they engaged. It also reflects the suggestions and contributions that were received from a large group of reviewers of early drafts.

The members of the Handbook Writing Committee follow, and the Department of Education is particularly grateful for all of their contributions to the development of the Handbook for Planning an Effective Writing Program:

Sheila Anchondo, District Resource Teacher, San Bernardino City Unified School District
Beverly R. Banks, Writing Project Director, Kern Union High School District, Bakersfield

Roberta A. Beatty, Teacher Writing Coordinator, Beverly Hills High School, Beverly Hills Unified School District
Betty Bivins, Secondary English Adviser, Area 10 Instructional Services Office, Los Angeles Unified School District
Yetive J. Bradley, Reading/Language Consultant, Oakland Unified School District
Gerald Camp, Teacher, Fremont Union High School District, Sunnyvale
Karen A. Carlton, Instructor, Humboldt State University, Arcata
Mary Frances Everhart, Instructor, City College of San Francisco
Myron Fiindt, Teacher, Ponderosa Elementary School, Paradise Unified School District
Martha Johnson, Instructor, Study Skills Center, San Diego State University
George Lober, Jr., Teacher, Clovis High School, Clovis Unified School District
Miriam Ojeda, Associate Professor, Department of Chicano Studies, California State University, Northridge
Glenn F. Patchell, Teacher, Irvine High School, Irvine Unified School District
William J. Rice, English Teacher, Independence High School, East Side Union High School District, San Jose
Suzanne Sekula, Learning Center Assessment Specialist, Santa Monica College
Linda L. Wiezorek, Los Berros
Elementary School, Lompoc Unified
School District

Elizabeth Wood, Fellow, South Coast
Writing Project, University of
California, Santa Barbara

George F. Nemetz, Consultant to the
Committee and Project Coordinator;
Consultant in English, Instructional
Services Section, California State
Department of Education

The principal writer for this
handbook was Professor Eugene
Soules of the English Department
at Sonoma State University in
Rohnert Park, California. The
footnotes and list of selected
references were compiled by
committee members Elizabeth Wood
and Gerald Camp. Significant help
with the handbook section on the
needs of language minority students
was provided by Eleanor Thonis of
the Wheatland School District and
by Fred Dobb, Dennis Parker, and
Rosario Pineyro-Ostby of the
California State Department of
Education. Other members of the
Department who provided assistance
were Elizabeth Breneman, Phil
Daro, Mac Gundlach, Bruce Hagen,
Joe Hoffman, Donovan Merck,
Robert Ryan, Emanuel Scrofani,
James Smith, and Robert Tardif.
The Department's support staff for
this effort included Jill Neeley,
Secretary, Instructional Services
Unit, and the members of the
Department's Word Processing
Center.

Credits for Photographs
Several of the photographs appearing
in this publication, including the one on this
page, were taken by Kim Hicks at one of
the "Writing in the 80's" workshops, which
were held early in 1982 to introduce this
handbook and the latest ideas in the teaching
of writing to the educational community
in California. Ms. Hicks is employed by the
office of the Orange County Superintendent
of Schools. Kenneth S. Lane of the University
of California, Berkeley, also took many
of the photographs used in the handbook.
The Department acknowledges not only the
work of both Ms. Hicks and Mr. Lane but also
the following photographers and organiza-
tions for the other photos used throughout
the document: American National Red Cross;
Jackie Berman, Writer-Photographer, School
Improvement Exchange; Aaron D. Freeman,
Yorba Linda; Los Nigtos School District;
Media Services Unit, Department of Edu-
cation; Sylvia Olds; Ronan Pattridge;
Sacramento City Unified School District;
San Diego City Schools; San Juan Unified
School District; and Kazuhiro Tsuruta,
San Francisco.
Preface

A major responsibility of the California State Department of Education is to provide leadership and assistance to groups whose task is to improve educational programs at local levels. The Instructional Services Section of the Department is providing such leadership and assistance through the preparation of curriculum handbooks. The Handbook for Planning an Effective Writing Program is one in a series of such documents that focus on various areas of the curriculum, the heart of a school’s program.

This handbook and those being prepared in other curricular areas are addressed to those individuals and groups that wish to review and improve educational programs. However, the documents are addressed more specifically to those persons at school site levels who plan and implement curricula: teachers, school administrators, curriculum specialists, parents and other members of the community, and students.

This handbook has been designed to provide school site planning groups with a standard for assessing the quality of a school’s writing program and for developing a new improved program, as appropriate. Our intent is that it augment, not supplant, other curriculum documents, such as the English Language Framework for California Public Schools, the Reading Framework for California Public Schools, the county superintendents’ Course of Study, and locally developed planning and curriculum guides.

We are most grateful for the contributions, advice, and assistance provided by members of the committee that helped to prepare this handbook and the others who are identified in the Acknowledgments. We are also grateful for the suggestions and reactions of those who reviewed early drafts. And we acknowledge the persistence and commitment of George F. Nemetz, Consultant in English, California State Department of Education, who coordinated the entire effort.

We solicit support for our efforts to disseminate this document and to encourage local educators to study and make use of it. Several workshops designed to facilitate this were held in the winter and spring of 1982 under the cosponsorship of the Department, offices of county superintendents of schools, and the California Writing Project. We welcome all efforts to help bring the document to the attention of curriculum planners.

We will not know the value of this document until many of you have had the opportunity to use it. We sincerely urge those of you who do so to inform us of its strengths and weaknesses. Please direct your responses to the Instructional Services Section, California State Department of Education, 721 Capitol Mall, Sacramento, CA 95814.

JAMES R. SMITH
Administrator, Instructional Services Section
I. Introduction to the Handbook

The Purpose of the Handbook

This handbook was designed to provide school site planners and others in the schools of California with a standard for assessing their existing writing programs and a tool for helping them design new programs. Thus, the intended audience for the publication includes all those people at the school level who have responsibilities for planning curricula. The audience also includes school site councils, as established under California's School Improvement Program, and teachers, school administrators, parents, and students responsible for planning writing programs.

School-level planners will find the handbook helpful in identifying the strengths and weaknesses of existing or proposed writing programs and in selecting strategies for change. The writers of the handbook have addressed both the content and teaching methodology of a writing program; that is, what ought to be taught and how. The discussion of each writing component includes a narrative and suggested activities, which are adaptable to various grade levels. However, readers are urged to add their own ideas to these lists of suggestions, thereby making the handbook more immediately useful to them. A list of selected references appears at the end of the handbook, and suggestions for further reading appear throughout the document.

Since the handbook's writers focus primarily on the components of a writing program, those desiring more information regarding the broad curriculum of English may wish to consult the English Language Framework for California Public Schools, a publication of the California State Department of Education. Other useful State Department of Education publications include The School Program Development Manual and the Program Review Handbook. Another source which is based on the state curriculum frameworks is the Course of Study: A Program Planning Guide for Grades Kindergarten Through Twelve, 1981—1984, which was developed as a project of California's county superintendents' State Steering Committee for Curriculum and Publications.

(For complete bibliographical data on the publications cited in this paragraph and elsewhere in this handbook, see the Selected References and the Selected Publications of the Department of Education at the end of the handbook.

It should be emphasized that this handbook is intended to complement, not supplant, the English Language Framework. While the handbook is consistent with the framework, its purpose differs.

"Of all those arts in which the wise excel, Nature's chief masterpiece is writing well."

John Sheffield
Basic Principles of an Effective Writing Program

An effective writing program:

- Is a schoolwide effort involving writing as a means of learning in all curriculum areas.
- Provides a wide range of writing experiences for learning in all subject matter areas.
- Builds on students' interests and on their reading and oral language experiences.
- Offers the opportunity for students at any level to develop fluency before they are overly burdened with the fear of error, but with the expectation that they will later attain mastery of form and correctness.
- Provides for adequate "time on task," which is basic to the learning process.
- Provides staff development for the instructional staff.
- Helps students to discover that writing is a way of learning about one's self and about the world, of developing thinking skills, of generating new ideas, and of helping one to survive in an increasingly dynamic and complicated society.

An effective writing program treats writing as a process, a concept which regards the act of writing as an interrelated series of creative activities. Included within this series are pre-writing, writing, responding, revising, editing, developing skills with the conventions of writing, evaluating, and post-writing. The process has several stages in which:

- All parts of the process are given appropriate attention.
- Instruction in specific skills is integrated into the writing process at appropriate points.
- Students write frequently.
- Students write in all subject areas.
- Students write in many modes, such as descriptive, narrative, persuasive, and so forth.
- Students write for a variety of audiences and purposes.
- Teachers serve as models by doing the same exercises they assign their students.

An effective writing program produces students who:

- Believe that what they have to say is important.
- Are motivated to write, because they feel they have something significant to say.
- Write fluently, coherently, and correctly and with economy of expression.
- Do not overly fear putting their ideas on paper for the consideration of others.
- Realize that composing is an
important learning tool in all curricular areas.
- Are able to write in many modes and for a variety of audiences and purposes.
- Readily engage in revising and editing early drafts.
- Pursue the writing task without spending undue time "staring at a blank page."
- Evidence some enjoyment of the act of writing.

(review of Research on the Teaching of Writing)

The basic question the writers of this handbook attempted to answer is "What are the components of an effective writing program?" While the suggestions in the handbook are based on research of teaching practices that have contributed to improvement in writing abilities, they are also based on the professional backgrounds and experiences of the handbook's writers and reviewers. Although many practices merit additional research, much is already known about which practices in teaching the writing process are effective.1 Since several of these findings are in conflict with widespread practices in the schools, both the effective and ineffective practices are identified here:

- Grammar. Perhaps the most widely ignored research finding is that the teaching of formal grammar, if divorced from the process of writing, has little or no effect on the writing ability of students.2 Studies from 1906 through 1976 have repeatedly reached this conclusion.3 It seems to make no difference whether the system taught is traditional, structural, or transformational grammar.4 3 Such instruction, when not directly related with the writing process, does not help students improve their writing.6

Furthermore, some researchers have concluded that in programs in which excessive time is devoted to the study of grammar independently of the writing process, the effects are negative. They have found that the quality of writing

The act of writing, in and of itself, does not necessarily improve the quality of a student's writing.

The act of writing, in and of itself, does not necessarily improve the quality of a student's writing. This is not to say that the study of grammar has no place in a writing program. A knowledge of the conventions of the writing of standard English, including appropriate grammar and usage, is important to students, particularly when they edit and revise their writing. However, it is best taught when a specific need for it emerges in a student's writing, not in isolation from actual writing. It is the latter approach to the teaching of grammar which is not supported by research.

Sentence combining. Sentence combining is a technique for combining short sentences into longer, carefully constructed sentences. Over the past ten years, several studies of classes from the elementary school level through the first year in college have shown that sentence-combining exercises, both oral and written, even when conducted with little or no grammatical terminology, can be effective in increasing the sentence-writing maturity of students.1 8 9 10

Response. On the other hand, some research indicates that writing which includes responses from peers or teachers produces superior results. Response, the reader's reaction to a piece of writing, appears to be what makes quantity effective.15 16 (See page 14 in this handbook for a description of responding as one of the steps in the writing process.)

10Braddock and others, Research in Written Composition, pp. 69-70.
Correcting. Praising what students do well improves their writing more than correction of what they do badly. Intensive correction does no more to improve writing than moderate correction.

Reading. Writing programs that encourage students to read extensively and that devote time to the study of written prose are effective in improving student writing.

Pre-writing. Most recently, researchers have been focusing more on the process of writing itself and less on teacher behavior and writing as a finished product. These researchers have found that an emphasis on pre-writing activities leads to improved student writing. Pre-writing, in this instance, means any exercise, experience, or activity intended to encourage a writer's creative thought prior to the act of drafting his or her manuscript. These structured motivational activities may occur before or during the writing process and involve students in thinking, talking, writing, and working in groups. (See page 9 for a further discussion of pre-writing.)

Modeling. Sharing writing with peers, editing in groups, imitating prose models, encouraging teacher participation in writing assignments are all practices that have resulted in the improvement of student writing. More and more writing programs based on the research findings cited above are beginning to emerge. Preeminent among these programs are the University of California, Berkeley/Bay Area Writing Project.

5Heys, “The Theme-a-Week Assumption,” n. 322.
6Christiansen, “Tripling Writing and Omitting Readings in Freshman English,” p. 124.
The language arts are interrelated and are more difficult to learn when they are taught in isolation from each other. And an outgrowth from it, the California Writing Project, which includes 17 writing centers across the state. These centers provide teachers of writing with in-service education, which reflects the findings of the current research in writing. (See Appendix B for a description of the California Writing Project and a list of the projects.)

(NOTE: For additional information on research in the teaching of writing, see the entries in Selected References.)

Integration of the Language Arts

The language arts—listening, speaking, reading, and writing—are interrelated and are more difficult to learn when they are taught in isolation from each other. People learn language in a sequence that moves from listening and speaking to reading and writing; therefore, an effective writing program necessarily builds on and is reinforced by oral language experiences and is enhanced by extensive reading.

Similarly, the conventions of language—such as spelling, grammar, punctuation, diction, and usage—are not learned well when taught in isolation. They are best learned at appropriate points in the writing process, because students can practice the interrelationships of the skills in their own writing. The immediacy of the effort helps to make the conventions more understandable and meaningful for them.

Students may also perceive the relationships of the writing process to the development of cognitive skills and imagination. As they receive new information through reading and listening, they can begin to integrate that information into their framework of past knowledge by speaking and writing about it. Because the writing process evokes thought and imagination, writing can be an effective tool for learning in all subjects.

(NOTE: For further reading on integration of the language arts, see the entries for Michael Marland, Nancy Martin, and James Moffett in the Selected References.)

Motivation for Students to Write

At the heart of the writing process is motivation, and teachers can do much to help their students become motivated to write. Students want to express themselves and communicate with others, but they often believe that what they have to say is unimportant and, as a result, they tend to be careless in their writing. They will believe that their writing is important if they have experiences that confirm that belief. Such experiences are likely to occur if they are given opportunities to write on topics of deep concern to them.
or with which they are intimately familiar. When writers are in control of their topics, they experience the power of language. Students know that they can anger, delight, and comfort others with oral language, but they seldom experience such reactions to their writing. However, they realize how powerful written language can be when they receive responses to their writing. For example, if, through their writing, students receive a pamphlet in the mail or bring about a change in school rules, they begin to realize that writing can be useful and powerful and that how something is written is important.

Students must also have confidence that they are capable of expressing themselves on paper. "Writer's block," the fear of writing, often occurs because of the students' overriding concern with correctness, not because they have nothing to say about a topic. This paralyzing concern is learned behavior that can be reversed by teachers who reinforce everything their students do right. The confidence students gain through such affirmation will help them achieve correctness and facility with written expression.

Finally, students need to believe that writing is valuable. Most students seldom see adults writing. Indeed, writing is a private act, often done in isolation. As a result, students seldom witness the stages of pondering, revising, and editing that occur in the writing process. The more that students witness teachers and parents writing, the more likely they are to place value on writing. When teachers and parents do writing assignments with students and share their successes and failures, the students are more likely to develop an appreciation of the value of writing.

Unless students perceive the art of writing as important, valuable, and possible, they tend to produce merely isolated samples of writing that are relatively lifeless, perfunctory, awkward, and dull. When their teachers and parents dwell on correctness rather than on content, students are likely to see writing only as an obligation imposed from without rather than as a need to express oneself. (See Appendix A for the National Council of Teachers of English's suggestions for parents on "How to Help Your Child Become a Better Writer.")

(Note: For further reading on motivating students to write, see the entries for Peter Elbow and Ken Macrorie in the Selected References.)

"Achilles exists only through Homer. Take away the art of writing from this world, and you will probably take away its glory."  
François René de Chateaubriand
The Use of This Handbook

This handbook is not intended to be prescriptive; it is intended to be a source of motivation and guidance for those at the school site level who wish to examine and perhaps change a school’s writing program. Neither is it intended to be exhaustive in its recommendations and examples regarding the establishment of writing programs. Rather, it is intended to prompt curriculum planners at the school site level to inform themselves regarding what is known about the teaching and learning of writing and then to plan and implement a new writing program, as appropriate.

Accordingly, the checklist near the end of this document should be thought of as a means for assessing teaching materials, methodologies, approaches, and curriculum guides, not as a means for evaluating teachers. It is the writing program which must be scrutinized. This will require classroom observations; interviews of students, teachers, administrators, and parents; a study of the learning environment in the school; a review of pertinent curriculum guides; an examination of student writing; and a study of the teaching materials and textbooks currently in use.
II. The Writing Process

The writing process might be described as having several stages or phases, including pre-writing, writing, responding, revising, editing, developing skills with the conventions of writing, evaluating, and post-writing. While the writing program should include opportunities for students to become aware of these stages and to have learning experiences in each of them, the stages should not be thought of as necessarily sequential or linear in nature. Rather, the stages are largely recursive; for example, during the writing stage students might edit for the conventions of writing (spelling, punctuation, grammar, usage) as they proceed with composing their ideas. Similarly, many will revise as they go and then revise again later after they receive responses to what they have written.

Some writing assignments may not require attention to each of the stages identified above. Informal writing in journals and brief written exercises to help students attain greater fluency, for example, may not require as much attention to each of the stages as essay writing or other formal expository writing may require. Also, the amount of attention that should be given to each stage will vary from student to student. However, because several of these stages are frequently overlooked in writing programs, conscious efforts should be made to provide students with experiences with all of them.

Pre-writing—the First Stage

Pre-writing is the first stage in the writing process. It includes any experience, activity, or exercise that motivates a person to write, generates material and ideas for writing, or focuses a writer's attention on a particular subject. Pre-writing stimulates and enlarges thought and moves writers from the stage of thinking about a writing task to the act of writing. This stage in the writing process is frequently overlooked, and students are merely expected to write without being motivated to do so.

For younger or less experienced students in particular, pre-writing can be thought of as planned learning experiences that occur between the time they are aware of having to write and the time they begin to write. Later, as they become more experienced with writing, they may have less need for extensively planned pre-writing experiences. They will begin to find their sources of motivation and ideas for writing in their daily environment or in their reading. However, many students have not yet reached this level of
sophistication with the writing process. Carefully planned pre-writing experiences will help them to get started by helping them to discover that they have something to say and that they want to say it.

SUGGESTED PRE-WRITING ACTIVITIES

Those who plan writing programs should be resourceful in their efforts to develop and implement successful pre-writing activities. Among them might be the following:

1. Provide an environment conducive to pre-writing activities, with adequate materials to stimulate writing activities; e.g., works of literature, magazines, posters, photographs, word games, puppets, and so forth.
2. Provide motivation for writing; e.g., displaying student work, sharing written work with other classes, holding a language arts show, and so forth.
3. Provide time for the class to discuss the writing assignments.
4. Provide a variety of activities for gathering information; e.g., viewing films; interviewing visitors, family, friends, and school personnel; taking opinion surveys—family, friends, and school personnel; hearing stories; reading self-selected materials; and going on field trips to interesting places in the community.
5. Provide opportunities for students to interact and to discuss informally with one another their ideas and plans as they begin to write.
6. Make use of the technique of “clustering” as a means for eliciting student writing. Using this technique, the teacher writes a key word on the chalkboard and then surrounds it with other associated words that are suggested by a group of students. By drawing lines to show relationships between the words in the cluster, the students begin to develop ideas and are ready to begin writing. Further information regarding this technique may be found in Balancing the Hemispheres: Brain Research and the Teaching of Writing by Mary Frances Claggett and Gabriele Lusser Rico.

7. Make use of improvisational drama and other dramatic activities, both within and outside the classrooms, as motivation for writing.
8. Lead the class in a brainstorming session on an announced topic during which all student contributions are listed. Students can then select from among these and arrive at a more specific topic about which they will write.

(NOTE: For further information on pre-writing, see the entries in the Selected References for Mary Frances Claggett and Gabriele Lusser Rico and for James Moffett.)
more, most classroom writing should be seen as simply one stage in the entire process of producing a finished written statement. The process should begin with a series of carefully planned pre-writing activities; after a first draft has been completed, the subsequent stages include receiving responses from the teacher, peers, and others; revising; editing; and learning to observe the conventions of language. Subsequent stages include evaluation and post-writing. The writing stage may require the least amount of time in the process.

For some writers who have spent sufficient time in the pre-writing stage, the actual writing of the first draft will proceed smoothly and rapidly, often being completed in one sitting. At other times the same writer may struggle back and forth between pre-writing, writing, and rewriting. However, the writing of the first draft can be thought of as the fulcrum of the writing process.

Writing, when it is not the mere transcribing or paraphrasing of someone else's work, is the written expression of the writer's ideas synthesized from experience. Writing is the revision of one's thinking that is narrowed to include only the subject at hand. A learning sequence based on this concept of writing might have students begin the process by watching someone else write one word or a simple sentence based on his or her personal experience. Then they would gradually take over the writing process themselves; and, finally, they would share the products with a specific audience. Later, as the students' abilities to engage in abstract thinking increase, the students can use their abilities to communicate through writing as a means of taking in, processing, and communicating new information and ideas.

An effective writing program at any level provides many opportunities for students to develop confidence and fluency, free of the sometimes paralyzing fear of making errors in their writing. Those in charge of the writing program will recognize that only after students have developed this freedom and confidence will they be able to consider adequately the needs of their audience and the purpose of their writing.

**Writing to Develop Fluency**

Fluency is the facility writers have for using appropriate language and putting their thoughts on paper. If writers are fluent, their words flow onto the page with relative ease. Students who write fluently are likely to discover that they have much to say. They express their ideas, feelings, and reactions to events around them relatively easily. They are not preoccupied with matters of correctness in their first draft.

Students lacking fluency are easy to identify. They fidget. They are easily distracted. They do not know what to write about and usually need to have the directions for a writing assignment explained several times. They need constant assurance that their work is acceptable. They often are so preoccupied with correctness that they write very little. Writing for them is a word-by-word struggle.

Teachers can improve their students' abilities to write fluently
by motivating them to write daily and extensively and in more than one subject area. For example, they could be asked to write entries in a journal or diary, letters, vignettes, reports, brief narrations and descriptions, and précis. Having students write as many words as possible within a specific time without worrying about correctness is also an excellent way to help them increase their fluency. As students develop fluency in their writing, they can begin to concern themselves with observing language conventions and with addressing specific purposes and audiences.

3. Listen to stories and then record their thoughts about what they have heard.

4. Keep notes, journals, logs, or diaries of school experiences, such as readings, discussions, experiments, projects, and excursions. These can later be used for “writing for an audience.”

5. Dictate ideas, stories, or descriptions of events to another person who records the material. This can be an easy way of producing a first draft, which the students can revise.

6. Participate in clustering activities at appropriate times. (See page 10 for an explanation of this technique.)

7. Make lists of familiar objects.

8. Read extensively and analytically the works of fluent writers.

Writing for an Audience

Writers may address numerous audiences, but they are their own first audience. Writing for oneself can take various forms, such as journals, diaries, learning logs, and poems. Such egocentric writing may not be fully understandable to others. However, such writing is most important in helping writers discover what they believe, know, and wish to say before they write for a larger audience.

Among the other audiences to whom students may wish to write are parents, other family members, classmates, friends, neighbors, and pen pals. The classroom climate should be such that they feel they can write to their teachers as trusted adults, as partners in learning, and, only later, as evaluators. These known audiences require that writers communicate their feelings and ideas in forms more controlled than those they use when writing only for themselves. As they write, they must constantly envision...

_Suggested Activities to Help Students Develop Fluency_

1. Write as much as they can about a given subject within a specified period of time without the pressure of competing or of being graded.

2. Keep journals or learning logs about their classroom experiences. A learning log is a student-maintained log in which the student, through writing, attempts to explain a presentation, concept, or lesson just learned. This explanation may be directed to the teacher, the writer, a close friend, an imaginary audience, or others.

"True ease in writing comes from art, not chance, As those move easiest who have learned to dance." Alexander Pope
their audience. To their friends, teachers, and parents, they may wish to write letters, brief narrations, poems, vignettes, plays, reports, research papers, and brief autobiographies. To more distant readers, they may wish to write business letters, letters of request, letters to editors, news reports, articles, and instructions.

Ultimately, students should learn to write to broader unknown audiences. Here again, they should try to envision the characteristics of the broader audience they are addressing. As they do so, they will need to adjust the nature of their diction and rhetoric with this larger audience in mind.

**SUGGESTED ACTIVITIES TO HELP STUDENTS IMPROVE THEIR ABILITIES TO WRITE FOR VARIOUS AUDIENCES**

1. Select a real or imagined event (news report, sporting event, accident), and write about the event twice, each time to a different audience.
2. Write to persuade a particular person or group to agree to do something unusual.
3. Write letters to a given audience for a specific purpose (get well, complaint, letter to an editor).
4. Write about what they have learned in various subjects for audiences composed of younger students or students who are unfamiliar with the subject.
5. Interview people in the school or community, and prepare a written report of the interview for publication for a general audience.
6. Write the same message in several different forms to several different audiences.
7. Write parts of stories by creating new endings, different points of view, new characters, or additional incidents.

8. Select an audience for descriptions, vignettes, short narrations, stories, or poems; use story starters, photographs, magazine pictures, art, music, or their own journal entries as sources of motivation.

9. React to books they have read in these ways:
   a. Select a character and write a story that places him or her in a totally different setting.
   b. Write a letter to one of the characters.
   c. Have a character write a letter to the editor or a columnist.
   d. Write a report of an interview or conversation with one of the characters.

**Writing with Purpose**

In addition to learning to write fluently and to address a variety of audiences, students also need to identify a specific purpose for each piece of writing. Indeed, the purpose can be a prime source of motivation for writing. Examples of possible purposes might include writing to inform, to explain, to comfort, to record, to persuade, to complain, or to entertain. Purpose should be determined early in the writing process so that it can serve

"Every piece of writing is shaped not only by its function (or use), but also by a conception of the audience to whom it is addressed."

Arthur N. Applebee
Students need to become aware of semantics or the emotional overtones of many words and to use these advisedly.

as an underlying guide to the diction and rhetoric used. Having a purpose is also important when decisions about grammar and usage must be made, especially during the revision and editing stages of the process. Students need to have experiences in writing for a wide range of purposes so that they may learn what effect different purposes can have on the writing process. They need to become aware of semantics or the emotional overtones of many words and to use these advisedly.

Deciding on the purpose of a piece of writing is related to decisions regarding the nature of the audience, and students need practice in discovering this interrelationship. A useful method is to have them write to different audiences with a single purpose in mind or to have them write to the same audience for varied purposes.

Students may require help in defining various purposes for writing, and teachers should help them discover the writers’ purposes in the various selections they read; e.g., writing that informs, evokes, explores, or persuades. Finally, students should be introduced to these purposes for writing as the need for them arises, rather than according to a fixed outline.

SUGGESTED ACTIVITIES TO HELP STUDENTS IMPROVE THEIR ABILITIES TO WRITE FOR A PURPOSE

1. Compile lists of purposes for writing; e.g., to inform, to explain, to delight, to persuade.
2. Study and discuss models of various purposes for writing.
3. Identify the writers’ purposes in what is read.
4. Write on the same topic with different purposes in mind.
5. Rewrite a completed piece for a new purpose.
6. Parody a piece of writing to show shift in purpose.

(NOTE: For additional information on writing, see the entries for the following authors in the Selected References: Ann Berthoff, James Britton, Roger Garrison, Jack Hailey, Jamey Moffett and Betty Wagner, Donald Murray, and Mina Shaughnessy.)

Responding—Reacting to What Was Written

Through a reader’s response, which can occur at almost any time in the writing process, a writer makes overt contact with an audience. The reaction of a reader to a piece of writing is usually expressed through questions, suggestions, and statements to the writer about the content or form of what was written. The audience can be a teacher, a peer, a group, a holistic scoring team, or anyone who responds to a piece of writing. It should be borne in mind, however, that response is not the same as evaluation, because it is usually a quick first reaction that is general in nature.

One effective way of providing student writers with useful audience responses is by having groups of peers provide the student writers with reactions to early drafts of their writing. These comments serve to help writers clarify their ideas.
and purposes and to eliminate mechanical errors which block reader comprehension. As students make suggestions about the writing of others, they gain a better understanding of the writing process themselves. Since good student writers rely heavily on revision as a means of clarifying and improving their writing, audience response to their writing is particularly valuable in the revision process.

_SUGGESTED ACTIVITIES WHICH ELICIT RESPONSES TO WRITING_

To help students respond constructively to each other's work, teachers:

1. May conduct whole-class response sessions by using reproduced copies of the students' work or by making use of an overhead projector to examine the work. To avoid embarrassing students and possibly discouraging them from writing, the identification of each student writer can be concealed in such sessions. Teachers may role play different types of responses to teach students how to make specific observations which go beyond initial vague and general statements of likes and dislikes.

2. Might provide response sheets, forms, or open-ended sentences that allow students to make written responses to each other's writing. Response sheets may call for responses by individuals, or they may contain space for several people to respond.

3. Might provide demonstrations of the group processes involved in conducting effective sessions on responding to student writing.

4. Might give students two versions of the same piece of writing, and ask them to comment on the differences.

5. Might arrange small response groups of two to five students. Encourage students to share their work by reading aloud or by exchanging papers. In this way, all members of the group will receive immediate audience reaction while they are in the process of composing.

6. Might establish a schedule of individual consultations with students regarding their writing.

(Note: For additional information on responding, as a stage in the writing process, see the entries for Peter Elbow and Mary K. Healy in the Selected References.)

_R evising—Reexamining What Was Written_
The response process is an essential step in helping students see their work through the eyes of others. Revision is the next step.

For many teachers and students, the word _revise_ means "proofread, edit, and copy it over in ink." A true revision, however, involves a process during which a writer "resees" and "rethinks" a piece of
Revision involves a process during which a writer "reses" and "rethinks" a piece of his or her writing many times while writing and rereading it, with special emphasis on how effectively the written material communicates his or her intent to the audience.

During this recursive or recurring process, students need to consider such matters as unity, development, order, clarity, emphasis, and word choice. They also need to examine their work in terms of its organization and the possible need for reasons, examples, or other supporting evidence. They might consider adding further supporting information, qualifying details, concrete examples, sensory details, and transitional words, phrases, and sentences. They might need to change the emphasis or focus of a statement or to insert arguments to meet possible objections to what they have said. They might try reading their work aloud to try to discover possible misstatements, errors, or sources of confusion. They might try rereading their work to see if such matters as the how, where, what, and when of their statements have been adequately addressed. The degree to which they attend to all of these matters will, of course, depend on the skill and maturity of the students. In any event, revision is a recursive process taking place during writing, rewriting, reading, and rereading.

A well-planned writing program provides instruction in the techniques of revision and opportunities for students to receive responses prior to revising what they have written. It is important to remember, however, that not all writing needs to be taken through the revision stage. Part of learning to revise is learning to decide which pieces of writing deserve or are ready for revision.

Much student writing, as mentioned earlier, should be done for the purpose of developing fluency or for reinforcing the learning of subject matter. The value of such writing is in having the student do it, not in producing a finished piece of writing. Therefore, it does not need to be carefully evaluated and revised, but the teacher may wish to give students credit for doing the writing exercises. However, it is important that students at all levels be taught that revision is an essential step in producing a piece of writing for an audience, and they should be given frequent opportunities to take pieces of writing through the revision stage.

**SUGGESTED ACTIVITIES TO ENCOURAGE STUDENTS TO REVISE THEIR WRITING**

1. Distribute copies of writing by peers or from published sources, and have students analyze the passages, raising as many questions as they can regarding clarity, meaning, and emphasis.
2. Have students in pairs exchange their papers and indicate to each other where clarification or more information is needed.
3. As a daily writing exercise, give students a general declarative sentence and ask them to turn it into a vivid paragraph by making use of concrete and sensory details.
4. Have each student write about a topic for several different audiences. For example, a student might write about personal experiences for parents, a close friend, a sibling, a boss, or for the school newspaper.
5. Have students choose one paragraph or section of a paper, or one paper out of several similar papers, to revise carefully prior to its evaluation.
6. Give students examples of the revisions professional writers have made of their own writing.

(Note: For additional information on revising as a stage in the writing process, see the entries for Richard Lanham and for Iris and Sidney Tiedt in the Selected References.)

**Editing—Refining What Was Written**

Editing, which is the refinement stage of the writing process, is the cleaning up and correcting of a piece of writing. Although a certain amount of editing may be done throughout the writing process, the major work occurs prior to the evaluating and post-writing stages. A variety of people may assist the student writer with the editing process, including peers, teachers, tutors, aides, and parents.

Editing may be divided into the following categories, which identify matters requiring attention during this refinement step of the writing process: (1) the conventions of writing (grammar, usage, capitalization, punctuation, spelling, paragraphing, and syllabication); (2) diction, that is, examining a piece of writing for appropriate, effective, and precise word choices; (3) syntax, which includes adding transitions, changing sentence structure, and correcting awkward constructions; (4) accuracy of text, which includes the checking of quotations, dates, footnotes, and tabular data; (5) proper manuscript form (margins, headings, subheads, paging); and (6) proofreading and reading the work to ensure that what is on the page is what the writer intended to say.

Just as authors edit their writing prior to submitting it to a publisher, so student writers need to edit their work prior to submitting it for evaluation. They need to learn how editing adds to the clarity, correctness, and presentation of a paper. An effective writing program acknowledges the importance of editing, helps students learn to appreciate the value of editing, and provides practice for writers to learn to edit their work.

**Suggested Activities to Teach Editing Skills to Students**

1. Provide students with written standards for editing, such as a format sheet, proofreading symbols, an editing checklist, and a stylebook. (A number of stylebooks are available, but one of the most complete is *A Manual of Style*, published by the University of Chicago Press.)
2. Help students develop, then use, an editing checklist as they edit their own or other students’ papers.
3. Lead an editing session. Teachers may find *A Manual of Style* helpful in carrying out this task.
4. Dictate statements for students to write and punctuate.
5. Have students do sentence-combining exercises. (Teachers may find Frank O’Hare’s book, *Sentence Combining: Improving Student Writing Without Formal Grammar Instruction*, helpful in carrying out this exercise.)
6. Have students work in pairs or small groups to edit each other’s work.
7. Have students edit examples of writing that contain the specific types of problems that are usually corrected during the editing process.

**Developing Skill with the Conventions of Writing**

Students can best develop their skill with the conventions of writing as the need for it arises in their work, rather than according to a fixed program. Writing itself, then, becomes the basis for determining which skills need to be learned by which students and at which time. Some writing skills, such as those needed for writing technical papers or preparing advertising copy, may never be developed by some students, because the need for learning them may never arise. Other skills, however, such as building one’s vocabulary and using correct spelling, punctuation, usage, and grammatical constructions, are needed by all students in order to ensure that they write clearly and correctly.

One key to successful instruction in the conventions of writing is to work as much as possible with the language which students produce themselves. Confronting them with their own written expression in the light of the conventions or rules of the language often produces the most lasting learning. The issue of subject-verb agreement, for example, becomes important when students see how the lack of such agreement can create confusion in their own writing. Students should be encouraged to edit their own writing by listening to the flow of their language. Gross errors often become obvious when written material is read aloud. Although objective tests can reveal much about the students’ knowledge of language conventions, the degree of their mastery of these conventions is best revealed in their own writing.

Various skills are best learned at particular stages of the writing process. For example, vocabulary is often expanded during pre-writing activities, such as brainstorming and clustering. Decisions about usage and grammar often occur during the revision stage when writers may rearrange or combine their sentences. Typically, spelling and punctuation become important when writers proofread their papers in the editing stage of the writing process.

Since students learn at different rates and in different ways, the art of teaching writing conventions is to know when a student is ready to deal with each skill. Learning grammatical analysis, usage, and other conventions makes little sense...
to students until they are writing, grappling with choices, and making decisions. For example, it is futile to teach the uses of the semicolon unless the student has grasped the concept of coordinate elements. Need appears to be the best motivator for developing writing skills, and it is during the writing process itself when students experience the greatest need for knowing how to use the conventions of writing. Teachers should capitalize on this and be prepared to help their students with such matters at that time.

SUGGESTED ACTIVITIES TO HELP STUDENTS DEVELOP SKILL WITH THE CONVENTIONS OF WRITING

1. Diagnose students' writing skills through analytical scoring, noting everything that was done well.
2. Have lists of correct examples of specific writing skills to hand to students who have not demonstrated competency in specific skill areas.
3. Develop pre-writing activities that generate vocabulary.
4. Provide spelling and punctuation checklists for students during the editing stage.
5. Categorize errors in writing so that students notice repeated errors in each category.
6. Provide practice with sentence-combining activities to illustrate sentence construction, variety, and ways of achieving economy of expression.
7. Demonstrate how change in audience and purpose affect decisions about diction, grammar, and usage.
8. Help students make effective use of grammar and usage handbooks. (Although a large number of books on grammar and usage are available, some of the most widely used and respected books are American Usage and Style: The Consensus by Roy H. Copperud; Elements of Style by William Strunk and E. B. White; Modern American Usage by Wilson Follett, edited by Jacques Barzun; and Writer's Guide and Index to English by Wilma and David Ebbitt. Other very useful references are cited in the Selected References.)

(Note: For additional information on the conventions of writing, see the entries in the Selected References for Frank O'Hare and Gail Siegel.)

Evaluating—Judging the Writing Constructively

Evaluation is only one aspect of the post-writing stage of the writing process; thus, it should be kept in perspective. Commonly, teachers have "taught" composition primarily by emphasizing evaluation. Students wrote, teachers corrected. Overemphasis on this one part of the writing process should be avoided, because it could teach students that correctness rather than the communication of meaning is what writing is all about. Evaluation should be simply one stage in the overall process.

It is vital to the development of student writing that evaluation be used to support, not thwart, students...
Evaluation is only one aspect of the post-writing stage of the writing process; thus, it should be kept in perspective. Evaluation to promote growth, writers must know in advance the purpose of the evaluation, the criteria by which the work will be judged, and who the evaluator(s) will be. The purposes for which the evaluation is conducted may range from determining the specific needs of each student to assessing a school's curriculum. Whatever the reason for evaluation, the purpose should determine the methods of evaluation. Awareness of this guideline will help evaluators avoid excessive and inappropriate testing and help them to make more effective use of test data.

Objective tests of the conventions of language can serve a useful function. They can reveal to some extent a student's knowledge of the mechanics of language in such areas as spelling, punctuation, correct usage, grammatical analysis, and vocabulary. Indeed, there is evidence to indicate that the data from objective tests intended to measure the knowledge of language mechanics of a given group of students will correlate well with data produced from writing samples of the same group. Such data are also useful for diagnostic purposes.

Data from objective tests, however, are more valuable as indicators of the editing than the composing skills of students. They tend to reveal more about students' abilities to detect errors in the writing of others than about the students' abilities to compose on their own. For example, such tests may reveal that certain students can differentiate between sentences and sentence fragments, but they may not reveal much about the abilities of the students to compose sentences.

This is not to say, however, that the storehouse of information accumulated during recent years under the California Assessment Program (CAP) should be overlooked by those who examine a school's writing program. Objective test data produced under this program are readily available and can reveal a great deal about the writing programs of the schools in California. (See the latest annual report of Student Achievement in California Schools.) Furthermore, significant efforts have been made under the California Assessment Program to develop and use test items that are based on the content and recommendations regarding written language skills in the English Language Framework for California Public Schools. Indeed, CAP tests currently being developed for use at the sixth grade level include new items that focus on the writing process. The items should make the new tests very useful for diagnostic purposes and should make them much more than merely traditional multiple-choice tests of a student's editing skills. In addition, the program also accumulates data at school site levels regarding the frequency of writing assignments, student attitudes toward writing, and student performance. Such
information should be very useful to curriculum planners at the school site level.

Securing and scoring samples of student writing should be central in efforts to evaluate writing, whether it is done on an individual or a group basis. And it should be remembered that the scoring of writing samples will vary with the purpose of the evaluation; for example:

- **Analytical scoring** is appropriate for helping students discover their specific needs in writing. Under this method of evaluation, a piece of writing is examined and a score value is assigned according to the strength or weakness of each specific area judged. Areas that are commonly judged by this scoring method include punctuation, syntax, grammar, paragraph development, and organization.

- **Holistic scoring** is appropriate for assessing large numbers of papers, for categorizing students by achievement level, or for developing curricula. Under this method of evaluation, a piece of writing is scored as an entity. It is an evaluation procedure which focuses on the overall effectiveness of the piece to communicate, rather than on the strength or weakness of any single area, such as grammar, syntax, or punctuation.

- **Primary trait scoring** is most appropriate for assessing those particular writing characteristics being judged. Under this method of scoring writing, the reader looks for uses of specific characteristics, such as tone or vocabulary appropriate to a given audience.

**SUGGESTED ACTIVITIES TO ENHANCE THE EVALUATION OF STUDENTS’ WRITING, BOTH COLLECTIVELY AND INDIVIDUALLY**

1. Give students time and instructions on how to evaluate their own writing.
2. Have an entire class assess sample papers.
3. Give students training and experience in holistic scoring.
4. Help students develop a scoring guide for a given assignment.
5. Have students keep papers in individual folders for periodic review.
6. Announce the criteria for each assignment and the purposes of evaluation.
7. Provide appropriate staff development opportunities for all teachers of writing.

(Note: For additional information on evaluation, see the entries in the selected references for Charles Cooper, Lee Odell, Paul Diederich, and Miles Myers.)

**Post-writing—Realizing the Importance of Writing**

Post-writing includes all the activities that teachers and students can do with a finished piece of writing. They may chart it, illustrate it, post it, publish it, mail it, or discard it. This stage in the writing process is designed to help students realize the importance of, and establish value for, their own writing.

Too often students see their writing merely as products for teachers to grade. This limited view leads many students to compose stilted or meaningless prose rather than to communicate something that they care about to an audience they care about. By including post-writing activities as part of certain assignments, teachers can...
help their students realize the value of their writing. Often, post-writing will involve the sharing of a written work with an audience. It may range from reading aloud to some form of publishing or display. At other times a piece of writing may be tucked away for personal use, discarded, or evaluated by district office personnel, teachers, students, or peers.

During the pre-writing stage, an awareness of impending post-writing activities can motivate students and give them a sense of audience. Such activities can help them to realize that their work is appreciated and is useful.

**SUGGESTED POST-WRITING ACTIVITIES**

1. Publish student writing in class magazines, school magazines, classroom collections, and in community newspapers.
2. Have students share their writing by reading it aloud to a small group, a class, or a larger school or community audience.
3. Have students read their written scripts on local radio or cable television.
4. Have students adapt their narratives for dramatizing on radio or on the stage or for filming or videotaping.
5. Display in the school and community successful writing of students at all age and ability levels.
6. Have students exchange writing between classes and schools.
7. Have student response groups or editorial boards review student writing and edit it for publication.
8. Have students rewrite a piece by changing the mode, for example, from prose, to poetry or drama, or from narration to exposition.
9. Have advanced bilingual students translate their work from one language to another.
10. Have students share writing about their cultural heritage with students of other cultural backgrounds.
11. Suggest that students use journals or other personal writing activities as a means of clarifying their values.
12. Have students use practical pieces of writing—job applications, resumes, letters, notes, advertising copy—in actual transactions with others.
13. Have students save their writing on topics of interest for later use as reference material for research work, family histories, or local archives.
14. Recognize superior writing through writing contests, awards, and assembly programs.
15. Permit students to set aside or even discard occasional pieces of writing which they do not wish to carry through to a finished product.

(NOTE: For additional information on post-writing, see the entries in the Selected References for Jerry Herman, James Moffett and Betty Wagner; and *Teaching the Universe of Discourse* by James Moffett.)
III. Implementing a Schoolwide Writing Program

General Considerations for a Schoolwide Program

To be effective, a writing program must be schoolwide in scope. Every teacher must be responsible for using writing as a means for learning in every subject area and at all age levels. Students will develop writing skills more effectively when writing is treated by all teachers as an integral part of the learning process rather than by a few teachers as a separate skill. Furthermore, it is not enough for teachers merely to expect students to write; the skills involved must be taught! Although some teachers may be better prepared to do this than others are, all should try to do more than merely ask students to write.

Writing is a valuable tool for helping students learn and retain information in all content areas. Experiences with various kinds of writing in each content area can increase the students' mastery of course content. In the process of ordering thoughts while writing, students arrive at a better understanding of the subject—a process of "coming to know"—than they would have without the writing experience. Expressed another way, through writing students can experience high levels of thinking, such as analysis, synthesis, application, and evaluation. Writing, then, establishes a method through which students may express themselves, organize thoughts and information, communicate ideas and feelings, and demonstrate an understanding of the subject matter.

Serving many useful purposes, student writing provides valuable information for the teacher about the students' abilities, progress, interests, attitudes, insights, and values. When students write, they become involved in their own education and interested in what they are learning. If teachers establish a climate of trust and frequently allow students to write for a variety of purposes and audiences, they will help students develop self-confidence as well as their concepts of themselves as writers.

A written plan for a schoolwide writing program should be prepared and should become part of any other comprehensive schoolwide plan, such as the one used in schools participating in California's School Improvement Program. By means of this written plan, all teachers in a school should understand their role in helping to implement a schoolwide writing program. Furthermore, the written plan should help ensure schoolwide consistency regarding the teaching of writing.

Many children come to school with little experience with the written word. They have not engaged in
some of the activities that many of us take for granted. They have not watched adults read, have not been read to, have not helped make up shopping lists, or have not had their words written for them in a letter to their friends or grandparents. As a result, they are not aware that the printed word is a means of communication—nor, of course, have they absorbed, through experience, any of the skills involved in writing, as young children can so readily do if given the opportunity.

Children who have had few experiences with the written word need specific classroom activities to bridge the gap between their home experiences and (in some cases) home languages and what is expected of them at school. One cannot expect them to attempt to practice and master writing skills before they have had the experience of talking about something from their own life experiences and seeing that “talk” written for them. In other words, they need to have their words and simple sentences recorded for them. Failure to recognize this need and meet it with frequent, regular experiences of the type described leaves children unequipped with simple prerequisite skills. Such children are unable to make sense out of what they are asked to accomplish in school in both language arts and reading. (Teachers may find it helpful to secure from the National Council of Teachers of English copies of “How to Help Your Child Become a Better Writer,” which has been reproduced in Appendix A of this handbook.)

NOTE: For more information on implementing a schoolwide program, see the entries in the Selected References for Virginia Draper, Michael Marland, and Napey-Martin.

SUGGESTED ACTIVITIES FOR A SCHOOL-WIDE WRITING PROGRAM

Some suggested classroom activities for implementing a school-wide writing program are outlined below. The lists are, of course, limited and readers are urged to add to them. The lists have been prepared under two main categories—those for beginners and those for students enrolled in specific subject areas:

- Activities for Beginners

1. To help students make the transition from communicating through speaking to communicating through writing, this sequence of activities might be followed:

   a. Have students talk about their experiences, including school-sponsored field trips.
   b. Elicit further oral responses with the help of pictures, drawings, interesting objects, and other similar stimuli.
   c. Record the students’ responses, especially significant words or sentences.
   d. Have students illustrate what was written through art activities.
   e. Display the illustrations together with the recorded words and sentences.
   f. Help students, particularly those whose dominant language is other than English, learn the written symbol system of the English language, including the:
      (1) Alphabet
      (2) Formation of letters
      (3) Basic patterns of spelling
“In youth men are apt to write more wisely than they really know or feel; and the remainder of life may be not idly spent in realizing and convincing themselves of the wisdom they uttered long ago.”

Nathaniel Hawthorne

(4) Basic conventions of the system in such areas as capitalization and punctuation

2. Dictation is a useful activity to help beginning students become aware of both the similarities and differences of the written and spoken language. Possible dictation exercises might include:
   a. Have students dictate group stories or poems for all to hear and enjoy. They might be based upon actual classroom experiences, including reactions to children’s literature, creative dramatics, classroom visitors, animals in the classroom, and displays.
   b. Have students dictate individually to the teacher, classroom aide, community volunteer, or older students.
   c. Have students dictate short descriptive phrases for photographs, drawings, objects in the classroom, artwork, and science displays; put the phrases on labels for display purposes.
   d. Either in small groups or individually, have students dictate small books of stories, rhymes, or poems.

3. As students gain familiarity with the writing process by seeing their own thoughts written for them, encourage them to take over parts of the process themselves. In order to facilitate this, the teacher might:
   a. Have students trace over the letters of words in a simple sentence that they have dictated to someone who has written the sentence for them.
   They trace first with the index finger of the writing hand and later with a pen or pencil.
   b. Cut up a duplicate copy of the sentence into individual words, scramble them, and then ask the students to reconstruct the sentence, using the original as a model.
   c. Have the students copy the original sentence.

4. After students complete the sequence of activities outlined in the preceding item, they will, through this experience with words from their own vocabularies, be able to spell a few simple words. At this point, teachers can begin to make them aware that most words in English are spelled regularly but that some are spelled irregularly. Then they can be asked to write their own simple sentences, provided there are supportive materials in the room; e.g., word lists generated through brainstorming sessions, poems and songs that they can recite well enough to identify particular words, a phonics system with word lists associated with pictures, individual or class-generated dictionaries, and so forth. Basic writing skills are acquired as students encounter the need for them in their writing.

5. Once students begin to compose their own sentences, they can be encouraged to begin writing for an audience. However, they should be provided the opportunity to incorporate other media, such as the fine arts, in
A written plan for a schoolwide writing program should be prepared and should become part of any other comprehensive schoolwide plan.

This act of communication. Many young children will accomplish higher quality writing if they are allowed to produce in such media first and use this as the inspiration and guide for what they want to say.

Activities in Specific Subject Areas

1. Business Education
   a. To help students see the usefulness of writing, ask them to write and mail a variety of letters that will elicit responses.
   b. To increase student interest in business education, have them make plans for creating a business of their choice. Then have them write promotional material to advertise their new business or products.
   c. To help motivate students, allow them to type assignments for their other classes as partial fulfillment for course objectives in their typing class.
   d. To help students gain practical experience, ask them to write business letters and memos; fill out purchase orders, application forms, and invoices; and prepare budgets.

2. English Language Arts
   a. To help students develop fluency and confidence and to encourage them to have a dialogue with their teacher, allow time for journal writing.
   b. To encourage having fun with language, have students retell an old tale or something read in class in their own words and in whatever mode they choose.
   c. To encourage students to become involved in their reading, have them pretend to be one of the characters in the book and ask them to write a letter to one of the other characters.
   d. To motivate students to write, frequently let them choose the topic so they can explore subjects of importance or interest to them.
   e. To build oral language skills, have students transcribe interviews.
   f. To lead in the development of a comprehensive writing program for students, English language arts teachers should make use of the many suggestions in Chapter II of this handbook.

3. Social Studies
   a. To help students attain an appreciation for a significant historical event, have them write about it from the point of view of two or three different people who experienced it.
   b. To help students learn and retain information, have them record what they are studying, and permit them to refer to the logs during examinations.
   c. To increase the students' understanding of the material being studied, have them answer study questions which require them to discuss cause and effect, to make comparisons, to draw conclusions, and to express their own evaluation of the
material being studied.

d. To help students identify with the time and place they are studying, have them write appropriate songs, poems, letters to the editor, personal letters, and speeches; draw cartoons; or make up a newspaper.
c. Have students explore social studies concepts they do not understand by conducting the necessary research and then writing about their findings.
f. Have students write about an historical event as fiction.

4. Mathematics
a. To help students clarify a mathematics problem, have them write a step-by-step explanation of the solution.
b. To help students see the usefulness of mathematics concepts, have them solve a problem in a real-life situation. Have them state the problem and then write the solution.
c. To encourage students to feel comfortable using mathematical symbols, have them write a story or poem using mathematical symbols in place of some of the words. Encourage them to have fun with the language of mathematics.
d. To help students apply mathematics skills, have them write out word problems that fit given formulae.

5. Science
a. To encourage understanding and retention, frequently allow time for students to record in their own words what they have learned or what still confuses them. Read their learning logs periodically to clear up any inaccuracies and to praise well-written entries. If students can refer to these logs during examinations, they will be motivated to write clearly and concisely.
b. To help increase comprehension, encourage students to explain a new term or process more clearly than it was explained in the text. The best explanation could be posted or kept in a folder to help students who were absent.
c. To encourage students to think more about what they are studying, have them pretend to be a known scientist writing to a colleague or writing a letter to a newspaper in defense of an unpopular theory.
d. To help students learn to read science problems, ask them to write them. They might write questions and answers for possible use on the next examination.

6. Foreign Languages
a. To give students the opportunity to use new vocabulary, plan language experience activities that help them develop oral language skills and use written language.
b. To make students aware of the contributions the language they are studying has made to English, encourage the students to keep a list of English words that come from that language.
c. To help students gain an appreciation of the culture of the people who speak the language they are learning, have them prepare notes describing a trip they would like to make to that country.

Students will develop writing skills more effectively when writing is treated by all teachers as an integral part of the learning process rather than by a few teachers as a separate skill.
Student writing provides valuable information for the teacher about the students' abilities, progress, interests, attitudes, insights, and values.

To give students the opportunity to consider the advantages of being bilingual, have them write about the benefits of being able to write and speak in two languages.

e. To strengthen students' composing skills, have them write short pieces in the language they are studying.

7. Music, Drama, and Art
a. To make students aware that the community provides a range of performances and activities in the arts, have the class prepare and distribute to other students notices regarding such events.

b. In order that students may keep a record of their progress in a current art project, encourage them to keep a log of what they have achieved during each work session.

c. To give students practice in writing, have them listen to songs and lyrics of their choice and write in their own words the "message" of the composer.

d. To help students understand the work of musicians, dramatists, and artists, have these professionals share their art with students; and then give students the opportunity to write about the hard work, the discipline, and the rewards of such performers.

e. Have students in art appreciation classes describe in writing a painting or other works of art.

f. Have students write about the feelings and moods they experience when listening to great music.

8. Health and Physical Education
a. To assess growth, have students keep personal records of their own progress in a particular sport or health project (e.g., a daily diary of jogging), and write comments pertaining to the difficulties they encounter, the methods used to overcome problems that arise, and the goals they set for themselves.

b. To help students appreciate the effort required in becoming a top athlete or in the challenge of overcoming physical handicaps, have them write about one of the school's star athletes or one of the handicapped students involved in the sports program.

c. To help students remember important health and safety rules, ask them to record the rules in a notebook and to ask questions about everything they do not understand.

d. To help students learn more about a particular sport, have them write about it.

9. Family Life and Consumer Affairs
a. To help students learn to use language for learning,
encourage them to keep notebooks to record instructions, plans, safety rules, recipes, questions, and concerns related to the subject matter they are studying.

b. To help students understand the difficult task that companies have in providing instructions for the general public (e.g., assembling a bicycle), have students write a description for making or assembling an object.

c. To give students the opportunity to examine their own thoughts and feelings, have them list people who have been important in their lives, and then write about the value of having known these people.

d. To give students an opportunity to share their experiences in the class with others, ask them to write a pamphlet for students who will be taking the course next semester.

(Note: For more information on suggested classroom activities, see the entries in the Selected References for Jack Hailey, James Moffett and Betty Wagner, and Frank O'Hare.)

S

TANDARDS AND EXPECTATIONS FOR
STUDENT WRITING

Typically, the standards and expectations regarding student writing are inconsistent from classroom to classroom at the school site level. What is needed is schoolwide agreement in this area. Teachers, administrators, students, and parents must plan together and establish such standards for the whole curriculum. Furthermore, they should all realize that written expression requires knowledges and skills which must be taught, not merely expected.

Policies should also be developed and agreed upon regarding the assignment and evaluation of homework that involves writing. Typically, during the course of a school day, relatively little time and solitude are available for students to write. Perforce, homework is necessary to extend, supplement, and reinforce student learning in this area. Indeed, since writing is a basic learning tool in all subject matter areas, it should be basic to most homework assignments. However, homework should be assigned on the basis of the needs and abilities of individual students.

Students, particularly those who plan to further their education at a college or university, need to develop good writing skills. Many institutions of higher education require entering students to have greater competency in writing than they did a few years ago. Typical of such policies is that which is evident in the following quotation from a University of California publication:

**WRITING.** Effective critical thinking and proficiency with the written language are closely related, and both are skills which every university student must master. By university standards, a student who is proficient in English composition is able to: (a) understand the assigned topic; (b) select and develop a theme by argument and example; (c) choose words which aptly and precisely convey the intended meaning; (d) construct effective sentences, i.e., sentences that economically and successfully convey the writer's ideas and display a variety of structures; (e) demonstrate an awareness of the conventions of standard written English, avoiding such errors as sentence fragments, run-together sentences, faulty agreements, and improper pronoun...
Clear thinking becomes clear writing: one can't exist without the other.

William Jeynes

If you plan to attend the University, you must take English courses in high school that require the development and practice of these skills. You must take at least four years of English composition and literature that stress expository writing: the development of persuasive critical thinking on the written page.¹

As is evident from the above, one's ability with expository writing is of great concern to the University of California's admissions officials. They are anxious that incoming students be able to express themselves well in writing in any subject matter area they pursue. A quick perusal of the admission standards of other institutions of higher education reveals similar expectations.

Clarity of writing is associated with clarity of thinking. Thus, college-bound students should understand that their skills with expository writing are often considered to be a demonstration of their ability to make judgments, to distinguish between primary and subordinate ideas, and to understand, organize, synthesize, and communicate information, ideas, and opinions. Furthermore, college students are expected to accomplish such writing in prescribed amounts of time.

In summary, those who plan programs for college-bound students should design programs that will enhance the abilities of these students to:

1. Generate ideas about which to write.
2. Formulate a single statement which clearly expresses the central idea of one's essay.
3. Use precise and appropriate words and varied sentence types (simple, complex, compound) and structures (subordinate, coordinate, parallel) to express ideas in the most effective manner possible.
4. Construct a paragraph by developing and supporting the paragraph's main idea with examples or reasons.
5. Organize paragraphs in a sequence so that there is a logical relationship of one paragraph to another and that together the paragraphs support the central idea of the essay.
6. Vary vocabulary and sentences for different audiences and purposes.
7. Present their own ideas as related to, but clearly distinguished from, the ideas of others; or in other words, the ability to distinguish between plagiarism and documentation.
8. Support their opinions or conclusions and to convince others of their soundness.
9. Use a dictionary and other reference works.
10. Use a library.
11. Proofread their writing for errors and omissions of both form and substance; revise and restructure where ideas are poorly organized or where evidence is lacking; and correct their writing for errors in the conventions of written English.

¹University of California Undergraduate Admission Packet 1982-83. Berkeley: Office of the Assistant Vice President—Student Academic Services, Systemwide Administration, University of California, 1981, p. 11.

(NOTE: For additional information on standards and expectations, see the material written by Kellogg Hunt that appears in Evaluating Writing: Describing, Measuring, Judging and the entry for Richard Graves in the Selected References.)
Teaching Writing to Language Minority Students

The primary and often dominant language of a growing number of students in California's schools is a language other than English, and many of these students have limited proficiency in English. However, it should not be assumed that the writing program advocated in this handbook is not suitable to the needs of students with limited proficiency in English or that efforts to help them to learn to write well should be delayed until they become fully proficient in English.

No matter what their dominant language might be, all students, including those who might be referred to as language minority students, are more likely to learn to write well if they are familiar with, and engage in, the writing process described earlier in this handbook. Indeed, the process is as appropriate for non-English-speaking students as it is for students whose dominant language is English. Pre-writing, writing, responding, revising, editing, developing skills with the conventions of language, evaluating, and post-writing are universally appropriate stages in the writing process.

However, a caveat is in order. Language minority students is a broad descriptive phrase that applies to all students who possess varying degrees of proficiency in their primary language and in English. The degree of their proficiency in English and in their primary language determines their readiness to learn to write in English. Thus, it is imperative at the outset for educators to determine the degree of proficiency of language minority students in both English and their primary language.

Proficiency in English, or in any other language for that matter, can be thought of as having two dimensions, which might be referred to as basic and advanced. Basic English is the kind of language which people learn largely in non-school settings. It includes basic abilities to speak, read, and write in English and to understand spoken English. It might be thought of as that level of proficiency in English required for people to function well in their daily encounters with the informal use of the language. Although native speakers of English begin to learn basic English very early in life, those whose primary language is other than English obviously begin the process later.

Advanced English is that kind of language that might be described as academically demanding. It is the predominant dimension of English that students encounter in the classroom or in similar academic settings. Using advanced English requires extensive skills in speaking, reading, and writing English and in understanding spoken English. It is more cognitively demanding than basic English and is the dimension of the language most involved with the writing process.

Students who have not yet attained adequate facility with basic English should not be expected to do well with activities requiring the skills of advanced English. Such students should be provided with a rich array of learning activities designed to improve their proficiency with basic English before they are expected to write extensively in the English language. However, this is not to say that instruction for them in the writing process should be delayed until they attain facility with basic English. The instruction can begin in their dominant language as soon as they have developed a relative mastery.
of the basic features of that language. Many, and perhaps most, language minority students have developed enough mastery of the basic features of their dominant language to begin writing in that language. Later, as they attain greater proficiency with basic English and with writing in their primary language, they will be able to transfer the skills they have learned in their primary language as they begin to write in English.

For students whose primary language consists of a nonstandard dialect of English, a similar but slightly different approach is in order. Educators should be careful not to confuse nonstandard with substandard. As students are given opportunities to master standard English, there should be no belittling of their dialect. They may be given opportunities to write initially in their own dialect during informal writing activities as a means for developing their interest in the writing process. The use of daily journals is one example of informal writing that might be appropriate. However, since they already have facility with a dialect of English, they should be encouraged to begin to write in standard English as soon as possible. The important thing to keep in mind is that, ultimately, the writing process described earlier is as appropriate to the needs of these students as it is to the needs of any others in developing writing skills.

For language minority students, the pre-writing phase is particularly important as they begin to write in English. It is at this point that the interest in writing and the motivation to write in English can be established. They should be given opportunities to try out orally both the form and content of what they wish to say, to ask questions, to solicit words and expressions they need for composing, and to feel free to request assistance.

Through the acceptance of students' oral English discourse, however nonstandard it may have been initially, instructors can motivate these students to put their thoughts in writing. Students should be provided with experiences with which they are likely to have early and cumulative success.

Perhaps most importantly of all, the attitude and behavior of instructors should reflect understanding of and respect for students' cultural backgrounds, high expectations for the success of their students, and confidence in the ability of students to ultimately express themselves well in written English. In such a learning environment, students will discover that learning to write is a developmental process during which they gradually refine the language skills they bring to the classroom until they attain adequate facility in writing standard English.

The main focus of this handbook is on the writing process itself and on ways to help all types of students learn to use the process. The special needs of language minority students should be understood and met to the extent that time and resources permit. Bilingual instructional aides, with proper training, can help a great deal in assisting language minority students to learn to write effectively.

SUGGESTED ACTIVITIES FOR LANGUAGE MINORITY STUDENTS

1. Provide extensive pre-writing
For language minority students, the pre-writing phase is particularly important as they begin to write in English.

activities, such as:

a. Make use of pictures and interesting objects that can be passed among students to elicit their oral and, ultimately, their written responses.

b. Make use of rhymes and poetry, especially those with refrains that groups of students can repeat.

c. Make use of word games, especially those involving elements of humor.

d. Create stories.

e. Establish a classroom library of carefully selected and appropriate books and read aloud from them frequently.

f. Visit sites in the community that are likely to elicit discussion and writing.

Serve various foods as a means for eliciting oral and written responses.

2. Have students compile vocabulary lists of English words that are cognates of words in their primary language.

3. Engage students in group writing to enable each student to make some contribution to the group effort.

4. Urge students to write in their dominant language at the outset and to focus on subjects with which they are familiar.

5. Encourage students to write about their cultural backgrounds.

6. Encourage language minority students initially to write to audiences that are sensitive to their background.

7. Have students write reports on interviews to develop their skills in questioning, transcribing, and editing.

(NOTE: Readers who are particularly concerned about language minority students may wish to seek further information from the entries in the Selected References, especially the entry for Tove Skutnabb-Kangas and from Schooling and Language Minority Students.)

Broad Assessments of Student Writing

Often groups within a school, such as high school teachers in an English Department or a group of fifth grade teachers, may wish to evaluate their students' writing abilities. It should be remembered that the purpose of the evaluation should determine the instrument or methods to be used.

The teachers in a science department, for example, might wish to examine their students' writing of laboratory reports on a pretest and post-test basis to determine growth. They would need to make their students aware of their plans, develop a scoring guide, and then evaluate the laboratory reports for overall organization and clarity. (See holistic scoring on page 21 of this handbook.)

Similarly, the teachers of one grade level at a school, might wish to determine their students' abilities to punctuate dialogue. They would need to agree on a testing instrument, test the students, record their scores, and analyze the results. If the staff decides that a schoolwide assessment of some aspect of the writing abilities of students is needed, the scoring and holistic
The use of writing samples for determining students' basic proficiencies in writing is highly recommended.

Schoolwide assessment of student writing plays a key part in helping a school develop an effective writing program. Not only does the assessment provide a record of student growth in writing, but it can also highlight for students and teachers in the school the centrality of writing in the learning process.

California state law requires the governing board of each school district to establish proficiency standards for all students in basic skill areas, including writing, reading comprehension, and computation. Further, student performance in these areas must be assessed annually at least once in grades four through six, at least once in grades seven through nine, and at least twice in grades ten and eleven.

The proficiency standards required by state law are minimum standards, not ideal standards. In helping as many students as possible attain these minimum standards, educators may lose sight of the larger curricular scene and allow minimum standards to become dominant standards. This handbook can help planners prevent this happening by assisting them in developing a writing program which meets not only the minimum needs of students but also their writing needs at more sophisticated levels. One intent of the legislation was to ensure that all students attain at least a basic ability to communicate in writing. This handbook can help educational planners design writing programs which ensure that students learn to write as well as they possibly can.

As pointed out earlier in this handbook, properly scored writing samples can reveal not only the degree of proficiency in writing attained by students but can also reveal their specific areas of strength and weakness in both editing and composing. Since student outcomes are what the law focuses on, such information should be of great importance to educators who are attempting to meet the spirit of the law by improving their instructional programs. Accordingly, the use of writing samples for determining students' basic proficiencies in writing is highly recommended.

SUGGESTED ACTIVITIES TO ENHANCE THE BROAD ASSESSMENT OF STUDENT WRITING

1. Plan and execute a schoolwide pretest/post-test of student writing, scored holistically, in order to measure the degree of improvement of student writing at all grade levels.
2. Identify specific criteria to be included in the assessment at various grade levels and in each subject area.
3. Provide staff development workshops districtwide to train teachers to do holistic and analytic scoring of student writing.
4. Have teachers develop a scoring guide for each writing assessment.
5. Include a writing sample in all testing programs that are designed to assess the writing abilities of students.

(NOTE: For additional information on making broad assessments of student writing, see the entries in the Selected References for Charles Cooper and Lee Odell (Evaluating Writing), Paul Diederich, Mel Grubb, Miles Myers, Alan Purves, and the Department of Education publications on assessment.)
IV. Staff Development in the Teaching of Writing

No writing program can be complete or very effective without staff development. Research findings and new methods and materials regarding the teaching of writing are being developed in such quantities today that it is difficult for staff members to stay abreast of the findings and the changes. Furthermore, relatively few teachers received training in the teaching of writing during their pre-service education. Accordingly, appropriate staff development programs are necessary if efforts to improve student writing are to be successful.

Important elements to consider when establishing a staff development program for the teaching of writing include the following:

1. The school staff should participate in planning the program in order to ensure their sense of ownership of the ultimate plan and to ensure that the plan is designed to meet their genuine needs, that the scheduling of staff development efforts is agreed upon by potential participants, and that the sources of staff development are respected and supported.

2. Since the teaching of writing is a complex matter, those who plan the staff development programs should design ongoing efforts which provide for the necessary periods of time rather than single session or "quick fix" approaches.

3. To the degree possible, staff development efforts in the teaching of writing should occur during the regular working hours of teachers rather than after school or on weekends.

4. Those who conduct staff development programs in the teaching of writing should be trained for the task. The programs they offer should be grounded on research findings and should provide teachers with practical information as to how to apply the findings in their teaching.

5. The simple passing of information about effective ways to teach writing should merely be an early step in a staff development program in this area. To ensure that teachers learn how to improve their teaching of writing and that such improvement leads to improved student performance in writing, it is imperative that subsequent steps be taken. Participating teachers should:

   a. Watch demonstrations of the teaching of newly acquired concepts and approaches in the teaching of writing.

"It took me fifteen years to discover that I had no talent for writing, but I couldn't give it up because by that time I was too famous."
—Robert Benchley

"I did not know what my own house was like, because I had never been outside it."
—Bernard Shaw
b. Incorporate these concepts and approaches in their own teaching.
c. Have opportunities to share ideas in the teaching of writing with colleagues and to learn from them.
d. Have informed and trusted peers visit their classrooms to ensure that they understand the new concepts and approaches and are employing them effectively in their own teaching.

6. Teachers should have conveniently available to them a professional library regarding the teaching of writing. (Teachers and librarians could use the Selected References in this handbook as a checklist for determining the adequacy of their libraries.) Furthermore, procedures should be established to ensure that the library is kept up to date, especially in terms of ongoing research.

7. The staff development effort should receive the obvious support of district and school site administrators.

8. Efforts should be made to enlist the support of the local school district governing board and the public for the staff development program. It is particularly important to ensure that staff development be considered important enough so that part of the staff's professional time is reserved for the program.

9. Teachers should be encouraged to participate in professional organizations, meetings, workshops, and conferences that are likely to enhance their skills and knowledge regarding the teaching of writing.

10. Administrators and other nonteaching school staff members should support staff development efforts in the teaching of writing and, to the degree possible, participate in the program.

11. Teachers should receive staff development in writing. They should be encouraged to engage frequently in the same writing assignments they give to their students. By doing so, they serve as models, they discover potential roadblocks or unnecessary difficulties in the wording of an assignment, they become more aware of what students go through when writing, and they become more aware of the importance of the content and not the mere mechanics of written expression.

Information may be found in the appendix about statewide staff development programs in California that might be used by those who wish to design in-service education programs at the local level. The programs include the California Federal Teacher Centers, the State School Resource Centers, the Professional Development and Program Improvement Centers, and the California Writing Project. The programs are described in the appendix, which also includes lists of the centers and projects.
V. Checklist for Assessing a School’s Writing Program

The following checklist is based on the foregoing text. However, further reading and the examination of local programs for teaching writing may encourage those who decide to use this checklist to augment it. Perforce, it is not exhaustive. Neither is it intended as a teacher evaluation instrument. Readers should think of this checklist as a tool for examining a school’s overall program for teaching students to write. It is intended to help those who are concerned about the teaching of writing at a school site to become fully aware of the strengths and weaknesses of the existing program and the need for possible changes.

If improperly used, checklists can be intimidating and ultimately counter-productive. To avoid this possible outcome, those who decide to use this checklist are urged to read all of the preceding text. They might also consider readings from the Selected References. Finally, they might also consider establishing a spirit of collegiality at a school site level regarding the assessment of the school’s writing program. If a sense of ownership of solutions to possible areas of need can be established, the use of assessment instruments, such as this checklist, will be far less threatening.

I. Motivation for Students to Write

How effective is your writing program in providing for:

1. Schoolwide encouragement for teachers to engage occasionally in the same writing assignments they ask of their students?

2. Opportunities for students to address topics appropriate to their interests and levels of knowledge?

3. Pre-writing activities?

4. Positive reactions by teachers to anything in the writing process that students do well?

5. The avoidance of excessive attention to correctness early in the process of teaching students to write?

6. Opportunities for students to watch adults engage in the writing process?

"Where there is much desire to learn, there of necessity will be much arguing, much writing, many opinions; for opinion in good men is but knowledge in the making.”

John Milton
II. The Writing Process

A. Pre-writing—the First Stage

II. The Writing Process—Continued

How effective is your writing program in providing for:

7. Writing experiences for which students know they will be the sole audience?

8. Opportunities for students to dictate to another person who records their first draft?

Writing for an Audience

How effective is your writing program in providing for:

1. Opportunities for students to write for various audiences, other than the teacher, including egocentric writing, such as entries in journals and diaries?

2. Learning opportunities to help students realize the importance of identifying their audiences before they begin to write?

3. Opportunities to improve students' sense of audience by writing in various modes, such as letters (of complaint to an editor, to friends and family, and so forth), essays, reports, announcements, brief narratives and descriptions, articles, plays, poems, biographies, autobiographies, instructions, research papers, and news stories?

4. Opportunities to improve their sense of audience by writing about the same subject in different forms, as appropriate, to several different audiences?

Writing with Purpose

How effective is your writing program in providing for:

1. Opportunities for students to write for a variety of purposes?

2. Opportunities for students to study various models of writing which exemplify differing purposes for writing?

3. Encouragement for students to determine the purpose of their writing during the pre-writing stage?

4. Encouragement for students to reconsider during the revision stage the purpose of what they have written?

*Appropriate staff development programs are necessary if efforts to improve student writing are to be successful.*
APPENDIX A

How to Help Your Child Become a Better Writer

Suggestions for Parents from the National Council of Teachers of English

(Reprinted by Permission)

Dear Parent:

We're pleased you want to know how to help the NCTE effort to improve the writing of young people. Parents and teachers working together are the best means for assuring that children and youth will become skillful writers.

Because the situation in every home is different, we can't say when the best time is to pursue each of the following suggestions. In any case, please be aware that writing skill develops slowly. For some, it comes early; for others it comes late. Occasionally, a child's skill may even seem to go backwards. Nonetheless, with your help and encouragement, the child will certainly progress.

The members of the National Council of Teachers of English welcome your involvement in your child's education in writing. We hope you will enjoy following these suggestions for helping your child become a better writer, both at home and at school.

Things to Do at Home

1. Build a climate of words at home. Go places and see things with your child; then talk about what has been seen, heard, smelled, tasted, touched. The basis of good writing is good talk, and younger children especially grow into stronger control of language when loving adults—particularly parents—share experiences and rich talk about those experiences.

2. Let children see you write often. You're both a model and a teacher. If children never see adults write, they gain an impression that writing occurs only at school. What you do is as important as what you say. Have children see you writing notes to friends, letters to business firms, perhaps stories to share with the children. From time to time, read aloud what you have written and ask the children their opinion of what you've said. If it's not perfect, so much the better. Making changes in what you write confirms for the child that revision is a natural part of writing, which it is.

3. Be as helpful as you can in helping children write. Talk through their ideas with them; help them discover what they want to say. When they ask for help with spelling, punctuation, and usage, supply that help. Your most effective role is not as a critic but as a helper. Rejoice in effort, delight in ideas, and resist the temptation to be critical.

4. Provide a suitable place for children to write. A quiet corner is best, the child's own place, if possible. If not, any flat surface

Your most effective role is not as a critic but as a helper.
Praise the child's efforts at writing.

48

with elbow room, a comfortable chair, and a good light will do.

5. Give, and encourage others to give, the child gifts associated with writing:
- pens of several kinds
- pencils of appropriate size and hardness
- a desk lamp
- pads of paper, stationery, and envelopes—even stamps
- a booklet for a diary or daily journal (Make sure that the booklet is the child's private property; when children want to share, they will.)
- a dictionary appropriate to the child's age and needs. Most dictionary use is for checking spelling, but a good dictionary contains fascinating information on word origins, synonyms, pronunciation, and so forth.
- a thesaurus for older children. This will help in the search for the "right" word.
- a typewriter, even a battered portable will do, allowing for occasional public messages, like neighborhood newspapers, play scripts
- erasers or "white-out" liquid for correcting errors that the child wants to repair without rewriting.

6. Encourage (but do not demand) frequent writing. Be patient with a reluctance to write. "I have nothing to say" is a perfect excuse. Recognize that the desire to write is a sometime thing. There will be times when a child "burns" to write, others when the need is cool. But frequency of writing is important to develop the habit of writing.

7. Praise the child's efforts at writing. Forget what happened to you in school, and resist the tendency to focus on errors of spelling, punctuation, and other mechanical parts of writing. Emphasize the child's successes. For every error the child makes, there are dozens of things he or she has done well.

8. Share letters from friends and relatives. Treat such letters as special events. Urge relatives and friends to write notes and letters to the child, no matter how brief. Writing is especially rewarding when the child gets a response. When thank you notes are in order, after a holiday especially, sit with the child and write your own notes at the same time.
Writing ten letters (for ten gifts) is a heavy burden for the child; space the work and be supportive.

9. Encourage the child to write away for information, free samples, travel brochures. For a great many suggestions about where to write and how to write, purchase a copy of the helpful U.S. Postal Service booklet, All About Letters (available from NCTE @ $1.50 per copy).

10. Be alert to occasions when the child can be involved in writing. For example, helping with grocery lists; adding notes at the end of parents' letters; sending holiday and birthday cards; taking down telephone messages; writing notes to friends; helping plan trips by writing for information; drafting notes to school for parental signature; writing notes to letter carriers and other service persons; preparing invitations to family get-togethers.
Writing for real purposes is rewarding, and the daily activities of families present many opportunities for purposeful writing. Involving your child may take some coaxing, but it will be worth your patient effort.

Things to Do for School Writing Programs

1. Ask to see the child's writing, either the writing brought home or the writing kept in folders at school. Encourage the use of writing folders, both at home and at school. Most writing should be kept, not thrown away. Folders are important means for helping
both teachers and children see progress in writing skill.

2. Be affirmative about the child's efforts in school writing. Recognize that for every error a child makes, he or she will do many things right. Applaud the good things you see. The willingness to write is fragile. Your optimistic attitude toward the child's efforts is vital to strengthening the writing habit.

3. Be primarily interested in the content, not the mechanics of expression. It's easy for many adults to spot misspellings, faulty word usage, and shaky punctuation. Perfection in these escapes most adults, so don't demand it of children. Sometimes teachers—for these same reasons—will mark only a few mechanical errors, leaving others for another time. What matters most in writing is words, sentences, and ideas. Perfection in mechanics develops slowly. Be patient.

4. Find out if children are given writing instruction and practice in writing on a regular basis. Daily writing is the ideal; once a week is not often enough. If classes are too large in your school, understand that it may not be possible for teachers to ask for as much writing practice as they or you would like. Insist on smaller classes—no more than 25 in elementary schools and no more than four classes of 25 for secondary school English teachers.

5. Ask if every teacher is involved in helping youngsters write better. Work sheets, blank filling exercises, multiple choice tests, and similar materials are sometimes used to avoid having children write. If children and youth are not being asked to write sentences and paragraphs about science, history, geography, and the other school subjects, they are not being helped to become better writers. All teachers have responsibility to help children improve their writing skills.

6. See if youngsters are being asked to write in a variety of forms (letters, essays, stories, etc.) for a variety of purposes (to inform, persuade, describe, etc.) and for a variety of audiences (other students, teachers, friends, strangers, relatives, business firms). Each form, purpose, and audience demands differences of style, tone, approach, and choice of words. A wide variety of writing experiences is critical to developing effective writing.

7. Check to see if there is continuing contact with the imaginative writing of skilled authors. While it's true we learn to write by writing, we also learn to write by reading. The works of talented authors should be studied not only for ideas but also for the writing skills involved. Good literature is an essential part of any effective writing program.

8. Watch out for "the grammar trap." Some people may try to persuade you that a full understanding of English grammar is needed before students can express themselves well. Some knowledge of grammar is useful, but too much time spent on the study of grammar steals time from the

Be primarily interested in the content, not the mechanics of expression.
By becoming an active participant in your child’s education as a writer, you will serve not only your child but other children and youth as well.

9. Encourage administrators to see that teachers of writing have plenty of supplies—writing paper, teaching materials, duplicating and copying machines, dictionaries, books about writing, and classroom libraries of good books.

10. Work through your PTA and your school board to make writing a high priority. Learn about writing and the ways youngsters learn to write. Encourage publication of good student writing in school newspapers, literary journals, local newspapers, and magazines. See that the high school’s best writers are entered into the NCTE Achievement Awards in Writing Program or the Scholastic Writing Awards or other writing contests. Let everyone know that writing matters to you.

By becoming an active participant in your child’s education as a writer, you will serve not only your child but other children and youth as well. You have an important role to play, and we encourage your involvement.

For additional copies of this brochure, send requests prepaid to the NCTE Order Department, 1111 Kenyon Road, Urbana, IL 61801. Up to 14, free; 15—99, $.05 each; 100 or more, $4.50 per hundred. Parents and teachers are encouraged to make copies for use with local groups. The brochure is also available in Spanish from NCTE.

“A sentence should contain no unnecessary words, a paragraph no unnecessary sentences, for the same reason that a drawing should have no unnecessary lines and a machine no unnecessary parts.”

William Strunk, Jr.
APPENDIX B

The California Writing Project

With the help of the California State Department of Education, the Bay Area Writing Project, which was begun in 1974 by the University of California, Berkeley, has been expanded during the last few years and has become known as the California Writing Project. A distinctive feature of this project is the collaboration it has fostered among disparate participating agencies.

The projects that make up the California Writing Project have enjoyed the support, joint planning, and involvement of educators from school districts, offices of county superintendents of schools, the State Department of Education, community colleges, and public and private colleges and universities. Instead of haggling over where to place blame for the problem of poor writing by students, representatives of these various educational organizations have engaged in wholesome dialogue, have established working relationships, and have cooperatively established these new writing projects. Funding for this effort has come from various sources, including the National Endowment for the Humanities, ESEA Title IV-C, and the universities, school districts, and offices of county superintendents of schools that have been involved.

Central to these projects is the selection and training of cadres of teachers of writing. Those teachers then serve as in-service education leaders and change agents in their own and other schools and institutions of higher education. Annually at each project center, approximately 25 carefully selected instructors, from the elementary through the university levels, spend six weeks during the summer as University Fellows. They are intensively trained to teach effectively the composing process to students and also to their peers.

During the subsequent year they continue with their regular teaching but then become known as teacher consultants. Project personnel negotiate with the employers of the teacher consultants to obtain the occasional release of the consultants to conduct in-service education programs.

Since the inception of the project, several hundred educators have received summer training. They, in turn, have provided in-service education for hundreds of others whose new knowledge has enabled them to improve their teaching of the composing process.

General information about the California Writing Project may be secured from:

Instructional Services Section
California State Department of Education
721 Capitol Mall
Sacramento, CA 95814
Telephone: (916) 322-3284

At the time this handbook went to press, the following projects composed the California Writing Project:

Area III Writing Project
English Department, Sproul Hall
University of California, Davis
Davis, CA 95616
(916) 752-8394 or 2257 (Msg.)
Instead of haggling over where to place blame for the problem of poor writing by students, representatives of these various educational organizations have engaged in wholesome dialogue, have established working relationships, and have cooperatively established these new writing projects.
APPENDIX C

California Federal Teacher Centers

Through a competitive grant process, the Federal Teacher Center Program makes grants to local educational agencies or institutions of higher education to assist them in planning, establishing, and operating teacher centers. A teacher center is a site which serves teachers from the public and nonpublic schools of a state or from an area or community within a state. Teachers, with the assistance of such consultants and experts as may be necessary, develop and produce curricula, utilize research findings, and provide training to improve the skills of other teachers to enable them to better meet the educational needs of their students.

The people to be served by a teacher center are determined by the governing body, the teacher center policy board, and may include all school personnel, elementary and secondary school students, parents, teachers who are unemployed, former teachers employed in other capacities who intend to return to teaching, and intern teachers assigned to teach in a school where the teachers are being served by a teacher center. In 1980-81 federal teacher centers were in operation in the following locations in California:

Berkeley Federal Teacher Center
1720 Oregon
Berkeley, CA 94703
(415) 644-6274

Laguna Salada/Jefferson Federal Teacher Center
375 Reina del Mar
Pacifica, CA 94044
(415) 359-7854

Marin Teacher Learning Cooperative
111 Las Gallinas
San Rafael, CA 94903
(415) 472-4110

San Fernando Valley Federal Teacher Center
CSU Northridge, Department of Education
Lanai Road School
4241 Lanai Road
Encino, CA 91436
(213) 990-4867

San Francisco Federal Teacher Center
135 Van Ness Avenue
San Francisco, CA 94102
(415) 665-9490

Santa Clara Federal Teacher Center
100 Skyport Drive
San Jose, CA 95110
(408) 299-4885

West Orange County Federal Teacher Center
5201 Bolsa
Huntington Beach, CA 92647
(714) 665-9490
Personnel at these centers help local school staff to determine their in-service education needs and then assist them to plan, implement and evaluate their local staff development programs.

Deciding that preservice education does not fully prepare teachers and other school staff to meet the diverse and changing needs of students, the California Legislature in 1977 enacted Assembly Bill 551, which established the State School Resource Center Program. The centers established under this program facilitate the development of in-service education programs that are designed by the local school staffs to meet their particular needs. Upon request, personnel at these centers help local school staffs to determine their in-service education needs and then assist them to plan, implement, and evaluate their local staff development programs.

Eligible participants for local staff development activities include all persons who work directly on a regular basis with students, including teachers, administrators, pupil services employees, paraprofessionals, and volunteers. In 1980-81 state school resource centers were in operation in the following locations in California:

APPENDIX D

School Resource Centers
Established Under Assembly Bill 551, Article 2
APPENDIX E

Professional Development and Program Improvement Centers (PDPICs)

The Professional Development and Program Improvement Centers provide a comprehensive program of in-service training to strengthen the instructional and supervisory skills of teachers, administrators, and aides, kindergarten through grade twelve. This in-service training is primarily in the areas of reading and mathematics, and it is focused on skills in diagnosing learning disabilities and developing corrective methods of instruction.

The PDPICs also include a program for the principal and other school administrative personnel designed to improve their supervision of the teaching-learning process. Additionally, the PDPICs serve as incentives to local educational associations to integrate all other local, federal, and state money resources related to teacher and administrator in-service training. The state money allocated is matched by an actual dollar commitment from LEAs and county offices. This requirement facilitates integration of existing staff development programs and further supports the improvement of the educational achievement of students enrolled in both categorical aid and regular programs.

Further information about these centers, which are listed below, may be obtained by contacting the Office of Staff Development, California State Department of Education, 721 Capitol Mall, Sacramento, CA 95814, telephone (916) 322-5537:

Butte County Schools Office
P.O. Box 397
Durham, CA 95938
(916) 895-1501

Humboldt County Schools Office
901 Myrtle Avenue
Eureka, CA 95501
(707) 445-5411

Lake County Schools Office
1152 South Main
Lakeport, CA 95453
(707) 263-3080

Long Beach Unified School District
2355 Webster Avenue
Long Beach, CA 90813
(213) 426-3986

Napa County Schools Office
4032 Maher Street
Napa, CA 94558
(707) 224-3151

Orange County Schools Office
1300 South Grand Avenue
Santa Ana, CA 92711
(714) 552-5011

Placentia Unified School District
1301 East Orangetherope Avenue
Placentia, CA 92670
(714) 524-4376

Placer County Schools Office
1230 High Street
Auburn, CA 95603
(916) 823-6222

Rowland Unified School District
1830 Nogales Street
Rowland Heights, CA 91748
(213) 965-2541

San Diego Unified School District
4100 Normal Street
San Diego, CA 92103
(714) 293-8264

San Juan Unified School District
3738 Walnut Avenue
Carmichael, CA 95608
(916) 944-3614

PDPICs provide a comprehensive program of in-service training to strengthen the instructional and supervisory skills of teachers, administrators, and aides.

</table>
A great deal has been published regarding the teaching of writing, especially during recent years. However, or in the text and that that are particularly pertinent to the content of this handbook appear here. Many noteworthy publications on the subject are not listed, but only because they did not seem immediately appropriate for the handbook’s purposes. Selected publications of the California State Department of Education, including those cited in the text, are listed on page 61.

Books

Most recently, researchers have been focusing more on the process of writing itself and less on teacher behavior and writing as a finished product.
An effective writing program builds on students' interests and on their reading and oral language experiences.
Evaluation, Dissemination, and Assessment Center, California State University, Los Angeles, 1981.

University of California Undergraduate Admission Packet 1982-83. Berkeley: Office of the Assistant Vice President - Student Academic Services, Systemwide Administration, University of California, 1981.

"If you would not be forgotten, as soon as you are dead and rotten, either write things worthy reading, or do things worth the writing."
—Benjamin Franklin

**Periodicals**

"The limits of my language are the limits of my world."
—Ludwig Wittgenstein
Selected Publications of the Department of Education

The *Handbook for Planning an Effective Writing Program* is one of approximately 450 publications that are available from the California State Department of Education. The Department's publications cited in this handbook and others that the readers may find helpful in their work follow:

- *Arts for the Gifted and Talented, Grades 1–6* (1981) $2.75
- *Assessment of Writing Performance of California High School Seniors* (1977) 2.75*
- *Bilingual Program, Policy, and Assessment Issues* (1980) 3.25
- *California Private School Directory* 5.00
- *California Public School Directory* 12.50
- *California Public Schools Selected Statistics* 1.50
- *California's Demonstration Programs in Reading and Mathematics* (1980) 2.00
- *Discussion Guide for the California School Improvement Program* (1978) 1.50*
- *District Master Plan for School Improvement* (1979) 1.50*
- *Education of Gifted and Talented Pupils* (1979) 2.50
- *Elementary Program Review Handbook* (1981) 1.50*
- *English Language Framework for California Public Schools* (1976) 1.50*
- *Establishing School Site Councils: The California School Improvement Program* (1977) 1.50*
- *Foreign Language Framework for California Public Schools* (1980) 2.50
- *Handbook for Planning an Effective Reading Program* (1979) 1.50*
- *History-Social Science Framework for California Public Schools* (1981) 2.25
- *Improving the Human Environment of Schools* (1979) 2.50
- *Improving Writing in California Schools* (1982) 2.00
- *Monograph on Staff Development* (1980) 1.50
- *New Era in Special Education: California's Master Plan in Action* (1980) 2.00
- *Planning for Multicultural Education as a Part of School Improvement* (1979) 1.25*
- *Proficiency Assessment in California: A Status Report* (1980) 2.00
- *Proficiency Skill Development* (1980) 7.50
- *Putting It Together with Parents* (1979) .85*
- *Reading Framework for California Public Schools* (1980) 1.75
- *Relationship Between Nutrition and Student Achievement, Behavior, and Health* (1980) 4.00
- *Sample Assessment Exercises, Manual for Proficiency Assessment, Elementary* (2 vol.) (1978) 54.00
- *Sample Assessment Exercises, Manual for Proficiency Assessment, Secondary* (2 vol.) (1978) 54.00

Since the handbook's writers focus primarily on the components of a writing program, those desiring more information regarding the broad curriculum of English may wish to consult the *English Language Framework for California Public Schools.*
