ABSTRACT
This review of the literature, derived from a comprehensive computer search of three databases (ERIC, ABI/INFORM, and Management Contents), discusses career development as an integral part of human development and its place in educational and community settings, with a particular emphasis on the current popularity of career development in business/industry organizations. Career management and pathing are examined in terms of definitions, a model for human resource development, career development systems components, programs and activities, implications for counselors, and future directions. The bibliography section of the review contains the actual computer search with abstracts for each database. (JAC)

INTRODUCTORY NOTE

First there was the *Searchlight* series--computer searches with abstracts of the ERIC database on topics of major interest and importance to ERIC/CAPS users and helping professionals in the field. Then came the *Searchlight Plus* series, computer searches of the topics in most demand **PLUS** in-depth analyses of the documents in the search. The opening narrative in each *Searchlight Plus* highlights certain documents, identifies major issues and trends, describes the historical background and existing programs, and points out the implications of the information for the work of human services professionals. For those who need succinct, timely, and practical information but lack the time to examine the total collection of data, the *Searchlight Plus* is the "perfect package." For a complete list of current topics in both series, please contact the ERIC/CAPS Publications Department.
CAREER MANAGEMENT AND CAREER PATHING IN ORGANIZATIONS

Helen L. Mamarchev

Introduction

The current recognition of career development as an integral aspect of human development represents a move away from earlier views where the focus was on matching an individual to a particular job to be performed for a lifetime. Many early programs emphasized the examination of occupational clusters and career opportunities (jobs) within those clusters. Some practitioners recognized, however, that alternative programs were necessary if they were to accomplish the task of helping individuals develop to their fullest potential. The result was that career development concepts have gradually been infused into educational and community settings in the form of career guidance programs, activities, and interventions. Their designated goal has been to help individuals increase self- and career awareness, develop decision-making skills, and explore the world of work (Mamarchev, 1980). In general, these career development activities have occurred in educational settings at the kindergarten through postsecondary levels.

Within organizations in the past, career development has revolved around management development based on manpower planning requirements (ED 153 069). The current popularity of career development in organizations can be attributed to three factors: (1) the emergence of particular concepts as ways of thinking about careers and visualizing new possibilities in contemporary society; (2) the methods of
implementing career development, i.e., the techniques for both the qualitative and quantitative evaluation of organizational and individual possibilities and needs; and (3) the role of need/support, i.e., motivation, pressure points, or change forces and the subsequent activation of interest in career development (Burack & Mathys, 1980). Other factors include a return to traditional values, the notion of a work career as a key factor affecting the quality of life, an increased acceptance of individuality and the value of personal satisfaction as an end in itself, the use of careers as a vehicle for social equality for women and minorities, the increase in the average education of the work force, and the effect of economic conditions on organizational growth (MC 192591). Because individuals believe that work should provide a sense of growth, achievement, and self-esteem, they have also come to believe that a realistic understanding of career development can help them understand the factors that may guide, inhibit, or enhance their careers (ED 153 069).

This review of the literature is derived from a comprehensive computer search of three databases: ERIC (1966-1981), ABI/INFORM (1971-1981), and Management Contents (1974-1981). The review looks at career management and career pathing in organizations in terms of definitions, a model for human resource development, career development system components, programs and activities, implications for counselors, and future directions. The search section of this review (following the pink cover sheets) contains the complete computer search with abstracts for each database. For the ERIC database (Search I), the EJ (journal) and ED (document) references are listed in descending numerical order. The same is true for the ABI/INFORM database (Search II with ABI reference numbers) and the Management Contents database (Search III with MC reference numbers).
Definitions

Although the literature appears to interchange career development terms, in this paper they are used according to the following definitions:

1) "Career" is the attitudes and behaviors of an individual associated with a life-long sequence of work roles and experiences in pursuit of a commitment to an occupation and/or organization. (Gutteridge, 1976; Hall, 1976)

2) "Career development" is a systematic approach for guiding the entry and movement of human resources through an organization that is concerned with the relationships between individuals, their work environment, and their job assignments. (Gutteridge, 1976)

3) "Career pathing" is the individual's process of planning the routes along which one's career will follow, including such decisions as occupational and organizational choice, job assignment selection, and self-development activities. (Gutteridge, 1976)

4) "Career management" is the employer's process of matching individual interests and abilities with organizational opportunities and needs through a planned program consisting of recruitment and selection, performance appraisal and evaluation, manpower allocation, training and development, compensation and benefits, and management development. (Gutteridge, 1976)

5) "Manpower planning" is the organizational process by which the internal demand and availability of human resources is estimated and subsequent personnel action plans are developed to meet manpower requirements. (Gutteridge, 1976)
6) "Human resource development" is the employer's attitude and approach toward the effective selection, use, and management of people in organizations for the purposes of improving employee productivity and enhancing the qualitative aspects of the workplace. (MC 192574)

It is important to note that the definition of "career" reflects the recent trend of combining psychological and sociological approaches to career development. The "micro" psychological approach analyzes individual attitudes and behaviors and parallels the career pathing component of career development; the "macro" sociological approach examines the organizational focus on work and parallels the career management component of career development (MC 192591). Individuals process occupational information; develop attitudes, values, and experiences; and make career choices. Yet the organization and social environment provide training and occupational opportunities, recruitment, and rewards and benefits; shape attitudes, values, and experiences; and provide occupational information. Thus a career can be viewed as "a mutual influence process of individuals choosing occupations, organizations, and positions and of institutions recruiting and selecting individuals" (MC 192591, p. 204).

This dual-faceted nature of the career provides additional support for the current interest in career development within organizations.

The promise of career studies lies in learning substantially more about why organizations and individuals act as they do. On one hand, the career represents to the person an opportunity and a constraint. The ability to look ahead in terms of a career perspective may be a real source of inspiration and value for some people, to others it may be a curse, a source of discontent and despair. On the other hand, organizational problems are not necessarily the same as those faced by
the individual. Things are accomplished by organizations in part because people are concerned about their careers. Hence, the career must also be seen as a significant feature of the regularity imposed by the rules and culture associated with organizational life.

(VanMaanen & Schein, 1975, p. 8)

A Model for Human Resource Development

Research by Gutteridge (1976) and Wolker (1973) provides a model that visually aids the understanding of the relationships between the various facets of human resource development. According to Gutteridge (1976, p. 5), the following diagram illustrates career development as a complementary function of manpower planning and both career development and manpower planning as part of a system of human resource development. (See next page.)

This model of human resource development, and career development in particular, presents career pathing and career management as an integration of individual and organizational needs (ABI 81026298, ABI 80021691, ABI 75011634, MC 129232). Career development programs based on this model have been a result of organizational responses to increased government involvement and intervention in employer/employee relations, increased employee stress, and technological advances and innovations within organizations (ABI 78005637, ABI 76007033). In addition, organizations have begun to recognize that responding to individual needs and goals can lead to increased productivity (MC 142234), greater organizational effectiveness (MC 137111), and better communications between employees and organizations (MC 136982). This model allows an organization to optimize human resources within the work environment;

optimization is defined here as "the condition in which a set of interdependent goal-related relationships, each peculiar in its component parts to a specific organization, are simultaneously satisfied to the highest possible degree without unacceptably lessening the satisfaction of other significant goals" (MC 123294, p. 20). Optimization thus becomes consistent with a gradual improvement in the quality of social life; i.e., high value is placed on increasing productivity and the subsequent material rewards as well as on the quality of work life.

A systems perspective is also necessary in this model, where a system is seen as "containing highly interdependent parts or sub-systems, all of which interact among themselves and with the environment in determining how the organization functions" (MC 192574, p. 72). Without a systems approach, individual components may develop their own human resource units and duplicate efforts and projects throughout the organization. Although a human resource approach tends to be both psychologically satisfying to employees and organizationally effective, career development programs need to contribute to organizational objectives in a systematic manner because organizational functioning is an interdependent process.

This model also assumes several preconditions for success of any career development program: (1) organizations must modify promotional policies and practices so as to create an open internal labor market in which information on job openings is widely disseminated and employees are free to apply for any position in which they are interested; (2) career development programs should be flexible and personalized, recognizing that career decisions are basically individual decisions; (3) organizations should carefully assess expected benefits and remember that career development is not a panacea for
personnel problems; (4) senior management must be thoroughly committed to the program and actively involve upper and lower levels of line and staff managers in the actual formulation of the career development program; and (5) organizations must be prepared, in order to avoid a credibility gap, to follow through until the success or failure of the program can be realistically evaluated (Gutteridge, 1976). Five requirements for establishing an effective career development program are release time for program development, adequate budget support, a climate of mutual concern and trust, definitions of new roles for employees and managers, and communication of information about the program (ABI 78000143, MC 135884).

Components of an Effective Career Development System

Career Pathing

Career pathing represents the individual's determination process of the routes along which his/her career will follow. According to the model of human resource development, occupational choice, organizational choice, job assignment selection, and self-development are all components of career pathing.

The research on occupational choice suggests that it is an expression of personality (Holland, 1973). The choice of an occupation is an expressive art which reflects the person's motivation, knowledge, personality, and ability. Occupations represent a way of life, an environment rather than a set of isolated work functions or skills. To work as a carpenter means not only to use tools but also to have a certain status, community role, and a special pattern of living. In this sense, the choice of an occupational
Typologies based on individual life histories identify unique-experience subgroups of individuals in an organization and demonstrate that different types of people choose different occupations (ED 091 533, MC 187667).

Occupational choice research also indicates that individuals search for environments that will allow them to "exercise their skills and abilities, express their attitudes and values, and take on agreeable problems and roles" (Holland, 1973, p. 4). Persons involved in a particular occupation also have similar personalities and similar histories of personal development. Thus, the concepts of organizational choice and job assignment selection are closely linked to the career routes an individual will follow, because the individual will continually seek organizations and positions within organizations that provide a desirable "fit" between his/her personality and the work environment.

The notion of self-development in career pathing is represented by research on exchange theory, career life cycles/stages, expectancy theory (Burack & Mathys, 1980), and career anchors (ED 099 581). Exchange theory suggests that individuals seek employment for a variety of reasons, not only to earn money but also to satisfy needs and desires; in turn, the organization seeks to satisfy a number of its needs. Job design, the existence of career paths, and the general organizational climate all have an impact in the exchange process on the individual's continuity of employment, performance, and overall
sense of career progress. Over time, individual decisions about remaining in or leaving an organization are based on the identification of realistic job alternatives and the degree to which anticipated benefits are positive in terms of performance and experience.

Career life cycles/stages research indicates that career development occurs as a patterned process of individual events happening over time and taking place in fairly predictable stages. Individuals grow and change throughout their careers in a continual process of exploration, preparation, entry, establishment, promotion, and stabilization (MC 134675).

Expectancy theory research has investigated the process of individual motivation and the nature of decisions and changes involved with the attainment of desired goals. The research suggests that career pathing means the identification and selection of viable alternatives based on reality checking, which is a self-check of the validity of one's plans. This "path-goal" orientation stresses the importance of identifying long-term goals that reflect a balance of personal lifestyle and work-related considerations, a process that invariably involves short-term career-related choices as a means for securing the long-term goals (Burack & Mathys, 1980).

The "career anchor" concept describes a motivational/attitudinal/value orientation that guides or limits an individual's career. A career is anchored in a set of job descriptions and organizational norms about the responsibilities and rights of a given job title, as well as in a set of needs and motives which the individual attempts to fulfill through the job and the rewards of the job. Career anchors function to pull a person back if he/she strays too far from what he/she really wants; they
are generated by the conservative, stable parts of one's personality. Research has identified several basic career anchors from analyses of statements about fundamental career motivations; these anchors are managerial competence, technical-functional competence, security, creativity, and autonomy. In predicting the career path of an individual, much change would not be expected in career anchors although the person might demonstrate continued movement in the overt manifestations of careers as he/she seeks appropriate organizational settings in which to fulfill needs and desires (ED 099 581, MC 112235).

The complexity of multiple personal and occupational goals and alternatives, along with the variety of subjective and objective criteria for making decisions, affects individual choices in career pathing. Because a career represents attitudes and behaviors associated with a lifelong sequence of work roles and experiences, the individual and the organization both have obligations: the individual must assume responsibility for his/her self-development, and the organization must provide a climate that shapes the human experience to its fullest potential in the organization (ABI 81009446, MC 148452, MC 134655, MC 117220).

Career Management

Career management represents the process followed by the employer/manager of matching individual worker's interests and abilities with organizational opportunities and needs. According to the model of human resource development, recruitment and selection, manpower allocation, training and development,
Performance appraisal and evaluation, compensation and benefits, and management development are all components of career management.

Psychology has contributed to the process of recruitment and selection through the application of scientific criteria and the development of standard ways of observing candidates to permit systematic evaluations and comparisons (Schein, 1965). The design of recruitment programs is often based on information about attrition from the organization and the average time for individual advancement within the system matched against anticipated staffing demands (Burack & Mathys, 1979). The selection process usually involves interviews, standardized testing, application materials, observations of applicants at work for a limited time, or some combination of these. An assessment is made of such variables as biographical information, work history, intellectual level, aptitude, knowledge/skill areas, attitudes, interests, motivation, and personality (Schein, 1965). Many organizations use management skill inventory systems, also known as Human Resources Inventories (HRIs), to collect and store work-related data about employees (ABI 81024321). Whatever the selection procedure(s), the organization must be sensitive to potential problems that can occur with an over-reliance on testing, such as viewing a worker as a static entity to be measured, classified, and stuck in an organizational slot (Schein, 1965). Another problem closely associated with the recruitment and selection process is that of organizational entry; i.e., how potential members or outsiders can move across the organizational boundary that labels them as newcomers. A newcomer's initial expectations tend to be unrealistic, and this may lead to an experience of reality shock. A realistic job preview, in which both positive and negative aspects are clearly presented during the applicant's interview, can reduce the shock (Wanous, 1975; ABI 72002663).
Manpower allocation refers to the actual placement of individuals in a specific position, attempting to match manpower supply and demand, organizational needs and goals, and individual abilities and interests. Of significant importance to this component is the daily contact between those who act to achieve organizational goals and those who look for ways to enhance human resources in support of that achievement (ABI 81019830). This careful monitoring can then lead to action measures, internal and external, that develop human resources to the levels necessary for greater employee productivity and greater employee satisfaction with the work environment (ABI 81019258, ABI 80007928).

Training and development encompass a wide range of programs and activities designed to meet the needs of employees throughout their work life in the organization, including vertical promotions, lateral movements, and departmental shifts. The goals of training are to orient and indoctrinate new employees, teach the specific knowledge and skills for job performance, and provide educational and self-development opportunities for successful advancement within the organization. The steps involved in the development of a training program include the identification of training needs and goals, the selection of a target group, the design of training experiences in terms of appropriate learning theory, and an evaluation of training outcomes (Schein, 1965). Those responsible for the design and implementation of training and development activities must be sensitive to the interactions between training, recruitment and selection, and the individual needs of each employee, particularly newcomers for whom early career experiences are critical to their ultimate performance (MC 192591).

Performance appraisal and evaluation provide feedback to the employee through the analysis of his/her accomplishments. From this individualized plans can be established to aid the professional
growth potential process. The appraisal process generally consists of: (1) a review of overall performance; (2) a comparison of actual performance and established performance standards/minimums; (3) an assessment as to whether the performance was more than adequate so that appropriate credit may be given; (4) a discussion of future tasks and performance standards; (5) a review of the employee's individual development needs; (6) a determination of the support or assistance that the appraiser can give the employee; and (7) the development of a new set of goals to be met before the next scheduled appraisal (Gary, 1982). This procedure requires management to define goals for both the employee and the organization and to provide a supportive work environment.

Compensation and benefits are part of the reward system in the organization that is useful in maintaining employee satisfaction. Although monetary rewards are important, management must remember that nonmonetary recognition often is equally important, as indicated by exchange theory research on careers (ABI 80021149).

Management development is a "strategy evolving out of the integration of individual career planning goals and organizational career management objectives to assist in managerial acquisition of skills, knowledge, attitudes and value systems necessary for successful performance in and movement along established career ladders" (Gutteridge, 1976, p. 12). Most management programs generally combine selective job assignments with training and educational experiences that are intended to strengthen the managerial capabilities of a chosen group of "fast track" employees. Recently, however, organizations have come to the realization that dangling prospects of money and promotion before "star" performers
may not be enough. Achievers want an opportunity to perform and need room to test their talents within the organization. Organizations that want to keep their top performers need to develop a systematic strategy for filling top-level positions through a combination of promotion, coaching, and monetary rewards (ABI 81023250). Considerations critical to the success of a management development strategy include: (1) establishing the chief characteristics of the organization in the future and thereby the central managerial requirements in terms of desirable and critical skills and abilities; (2) assessing individual potential and understanding individual career objectives; (3) analyzing individual needs to determine developmental requirements based on organizationally satisfying future demands; (4) setting up the type, methods, and time requirements for developmental methods and experiences; and (5) determining the individual career paths to be pursued in the acquisition of needed skills and abilities (Burack & Mathys, 1979).

In summary, organizations that are able to integrate and systematize a career management program and a career pathing program will have a more effective career development system. The responsiveness to organizational needs and goals and to individual career needs and aspirations will be more likely to maximize employee productivity and improve the work environment.
Programs and Activities

Implementation

In the implementation of career development systems, the one factor that always seems to be a constant is that of timing—most time estimates are overly optimistic. The introduction of a career development system often calls for changes in policies, procedures, responsibilities, attitudes, and personnel, all of which are capable of responding in a negative way that creates unforeseen barriers and resistance. In addition, limited resources and personnel, the need to deal with the daily organizational activities and problems, and the sequential nature of many career development activities reflect the need for careful thinking. Realistic time estimates can pay off in the implementation of a clearly defined system of career development (Burack & Mathys, 1980). With these cautions in mind, a review of the literature reveals innumerable programs and activities for career pathing and career management and for meeting the career development needs of special populations within the organization (EJ 192 712, ED 153 069, MC 141156, MC 139148).

Career Pathing

Career pathing programs and activities can be divided into the areas of career counseling, career information systems, training and education, and self-management strategies. Organizations have traditionally followed a manager-directed, macro approach to career development. Recently, the individual, micro approach has arisen in which employees, on an individual basis, are provided with counseling and guidance for satisfying and productive positions (ABI 79014220).
Based on the belief that employee development is a lifelong process, the goals of career counseling include the facilitation of employee growth and development to meet personal and organizational goals, the encouragement of personal growth and development to help employees reach their full potential, the development of an internal talent pool, and the integration of the counseling process into the career management activities of performance appraisal and evaluation (ABI 79007508). Because employees express concerns about career change, job advancement, promotions, and adjustment to the work environment (EJ 223 187), a career counseling program can serve as a common ground in which individuals can facilitate organizational plans and organizations can support individual development and growth (Burack & Mathys, 1980). Career counseling can occur informally with friends or colleagues or formally with counselors, psychologists, personnel specialists, or managers (ABI 78005639, ABI 78005635). An effective career counseling program provides information about the individual and the organization so that employees can check the reality of their thinking and design or strengthen a personal action plan whereby they take charge of their own careers. Many career counseling programs follow a model that consists of: (1) a self-assessment of interests, experiences, and education (ABI 78000989); (2) an analysis of future desires and needs; (3) an examination of career ladders within the organization; (4) the available alternatives for short- and long-term goals; (5) reality checking to test the feasibility of various alternatives; and (6) the possible positive and negative outcomes associated with each alternative (ED 102 288, ABI 78000989). The objectives of the career counselor are to provide relevant career-related information, guide the individual to pertinent sources of information,
reduce the conflict between life and career goals, and generally support individual efforts" (Burack & Mathys, 1980, p. 303). To accomplish these objectives, career counselors must understand the career management system as well as aspects of individual career attitudes and behaviors. In the long run, a career counseling program can be a valuable tool for the individual and the organization and lead to improved employee morale, reduced turnover, greater productivity, and an internal supply of personnel so that the right numbers and kinds of people will be prepared when the organization needs them (ABI 79003319).

Career information systems exist in a variety of forms and are designed to provide information about career opportunities within an organization (EJ 238 182). A Corporate Occupational Information System (COIS) is an example of a computerized information retrieval program through which data on occupations and projects within a corporation are indexed by occupational title in a directory of positions. Individuals can use COIS to locate positions that meet their personal career objectives, and/or managers can use COIS to identify present employees who may be suitable for specific jobs (ABI 81018782, ABI 79019068). Job posting systems, which may also be computerized, outline procedures and policies for eligibility requirements, application procedures, selection process and criteria, and notification methods (ABI 81024326, ABI 79000483). Programs such as these decrease turnover for the organization and maximize the return-on-investment for each employee.

Training and education programs allow employees to qualify for jobs they aspire to in their career objectives. These programs are often offered on an in-house basis, although some employees may attend
workshops, institutes, and classes outside the organizational setting (EJ 192 712). Training/education programs focus on such topics as communication skills (ED 125 024, MC 163857) and specific competencies for maintaining a high proficiency level, e.g., engineering (ABI 78014125) or electronics (ABI 79002493). The education takes place in regional schools, internal retraining systems, and fair share programs (ABI 77002619) and in formalized job rotation, intern programs, and seminars (Morgan, 1980). The training of new supervisors demands much attention because the productivity and motivation of a work group reflects the supervisor's ability to get results through others. Motivation at the supervisory level is related to the accuracy of the information received about personal growth opportunities. Training which overlooks the career development needs of the supervisor benefits neither the supervisor nor the work performance of the group (ABI 80016033). Lifelong learning opportunities are also necessary for non-managerial level workers; they need assistance in identifying educational opportunities related to their career plans (ED 191 416). Since 1950, many organizations have begun some type of tuition reimbursement program to support the continuing education efforts of their employees. Limited resources are now prompting some corporations to question the benefits of these programs; they should be examined according to what can be afforded and to what serves primarily organizational needs versus individual needs and preferences. In some instances, satisfying the individual also satisfies the organization (Burack & Mathys, 1980).

Self-management strategies have begun to assume a major role in career pathing. The central focus is the individual's active involvement in and responsibility for defining career goals, interests, and
abilities. The notion of self-assessment provides a format for individuals to join the planning process. Other elements are instruments and materials for use in planning or for support of information from formal organizational assessment systems. Such materials as the Self-Directed Search or Quick Job Hunting Map (ABI 80021692) are generally worked on over a period of weeks or months to allow adequate time for self-analysis, life goals examination, and personal research (EJ 019 660, MC 144390, MC 131170, MC 131153). With appropriate input and assistance from counselors, personnel specialists, supervisors, and peers (ABI 78005636), self-management programs help the employee to gain an awareness of self, acquire problem-solving skills, and develop skills in information-gathering, feedback, and recognition of opportunities for personal growth (ABI 81016801, ABI 80020485, ABI 79006921, ABI 73001549, ABI 73001177). Employees benefit from the process by learning to identify personal strengths, make realistic career plans, follow through on career opportunities, and increase visibility for promotion. The organization benefits by the discovery of persons with career potential, development of a highly motivated workforce through the integration of organizational goals, increased effectiveness through the optimum use of human resources, and enhanced participation and interaction of all personnel (ABI 76004217, ABI 76003185). Additionally, some strategies offer opportunities for self-assessment that are geared specifically to upward mobility and emphasize individual initiative and performance as prerequisites for advancement. Programs of this nature usually consist of a formal registration of interest by the individual, self-assessment, exposure to specific jobs and functions, development programs, goal-setting, and application for advancement (ABI 78009839, ABI 78007975).
In summary, various programs and activities contribute to the career pathing component of the career development system. They in turn permit the individual employee to take advantage of counseling, information, training, and self-management strategies. As a result, the employee can plan future career patterns and determine the appropriate "fit" between personal and organizational goals.

Career Management

Career management programs and activities can be divided into the topics of management development, job enrichment, assessment centers, performance appraisal and evaluation, career ladders, and coaching. Management development programs have traditionally focused on the development of a particular manager for a senior level position or on staff replacement requirements. This limited the "development" opportunities to a relatively small portion of the workforce (ABI 80010211) and, along with manpower forecasting, determined the right number of people at the right place in time and placed those already properly prepared in leadership roles. Today, the role of management development programs is to insure the successful execution of future planning requirements with a special concern for the preparation of managerial, professional, and technical personnel.

Since management development involves the careers of individuals, organizational career management must work out and blend individual needs and dreams with the anticipated needs and demands of the organization. Correspondingly, the fulfillment of business planning is necessarily contingent upon appropriately developed managerial talent. This talent must exhibit the technical and administrative abilities plus personnel leadership to achieve business plans, renewal, and future growth.

(Burack & Mathys, 1979, p. 217)
People born during the post-war baby boom are reaching middle age during the 1980's, and a bottleneck is expected in middle-management positions. The supply of personnel will be larger than the demand due to demographics, economics, increased longevity, and longer working lives. Therefore, management development programs should be more open and adaptable and allow for lateral job movement within the organization (ABI 79019629). Those responsible for management development programs should define the personal attributes and qualities needed in each position (ABI 77012891), plan ahead for the appropriate use of key talent (ABI 77008177), organize managerial jobs into a meaningful structure or career plan matrix (ABI 80021690), and establish a model of training and development that incorporates career pathing with organizational needs (ABI 81004011). The methods employed by management development programs often consist of formal programs conducted by groups independent of the organization and lasting anywhere from a half day to 10-16 weeks (ED 037 624, MC 158096). Some research is critical of university-sponsored executive development programs that seem designed more for the convenience of the educational institution than for the manager (EJ 076 961). "In-basket" exercises, case study, simulation, role play, discussion groups, closed circuit television, on-the-job training experiences, lectures, and programmed instructional materials are examples of the training techniques used by management development programs (Burack & Mathys, 1979).

What individuals do in their work has an important impact on their sense of well being and accomplishment, interest in the organization, job-related satisfaction, and performance. Many of the current job enrichment approaches are based on studies by Abraham Maslow (1971) that identified the
concept of individual needs within a hierarchy and on those by Frederick Herzberg (1959) that divided up personal needs and work-related factors into two distinct types, maintenance and motivating. Maintenance factors are those that surround the job and are associated with Maslow's lower order needs, e.g., supervision, job security, organizational policy, employee relations, and financial rewards. Remedies for problems in these areas tend to be short-term in their effects and need regular appraisal; otherwise, job dissatisfaction occurs. Motivating factors deal with individual performance and higher levels of need, e.g., personal growth, recognition, autonomy, sense of participation, responsibility, achievement, advancement, and financial rewards. (Financial rewards have been shown to possess elements that meet both basic and higher needs.) Although important, maintenance factors have come to be taken for granted by employees who then shift their attention to personal development and growth needs and the ability of a job to satisfy them (Burack & Mathys, 1980). Jobs can be "enriched" in the sense that more behaviorally attractive features can be built in to satisfy needs, but the enrichment must take into account specific situations, personnel, work methods, and economic feasibility (MC 160184). Job enrichment approaches include job analysis to assess behavioral characteristics of a job, job evaluation systems (MC 141158), or job redesign to increase employee involvement with all aspects of a job (ABI 80002488). These programs all require an identification and explanation of the key factors affecting job-related satisfaction, as well as an assessment of the probability that positive performance returns will result from job enrichment efforts.

Group assessment approaches based on the assessment center method date back to World War I. In organizations the assessment center has been used primarily for recruitment and selection and now has
expanded into the areas of managerial/supervisory selection and development (ABI 80012800). The assessment center method is a multiple appraisal technique that involves the use of trained assessors who observe and evaluate the performance of several participants across several skill categories; the setting is situational tests and exercises designed to simulate the essential components of a particular job and to elicit the managerial skills that have been identified as critical to successful performance (Gilbert & Jaffee, 1982). The data generated by this method provide a body of highly accurate information regarding an individual's skill potential that can be used for selection, identification, and diagnosis. The following is a chronological account of the steps taken in establishing an assessment center:

1. Identify organizational problem or area of need.
2. Define objective of assessment center.
4. Conduct job analysis and review data.
5. Identify skills critical to successful job performance.
6. Identify situations and tasks that are characteristic of the job.
7. Develop the simulation exercises.
8. Develop administrative materials and establish operating procedures.
9. Select and train assessors.
10. Determine employees to be assessed.
11. Conduct the assessment center; write exercise reports and have the team meet to derive final ratings and write final reports for each participant.
12. Initiate developmental activities based upon data generated at the center.

(Gilbert & Jaffee, 1982, p. 112)
The versatility and proven effectiveness of the assessment center enable those responsible for career management to project career plans within the organization more accurately and to assess the extent of managerial talent that will be available in the future.

Feedback about the effect of an employee's work performance on others and on the goals of the organization is given through performance appraisals (ABI 80016137, ABI 79004949). The appraisal should focus on the interaction between personality, task, and situation and result in an assessment of performance and individual growth, as well as offer constructive solutions to problems and yield data for making decisions about promotions (ABI 80008466). Those in the appraiser role need training in interpersonal communication skills before conducting performance appraisals (ABI 80013884).

The career ladder represents the ways by which employees move between jobs, departments, divisions, and the like. Three basic models exist to construct career ladders: (1) the "traditional" model based on promotion paths; (2) the "career ladder" model based on job clusters, job-related skills, and job performance, behaviors, or accomplishments; and (3) the "lattice" or "network" model based on an elaborate identification of lateral and diagonal linkages. The career ladder model chosen by an organization depends on size, time, and cost considerations. All three models, however, share a common core of activities that include establishing equal opportunity policy, requiring job analysis, identifying job families, indicating job sequences or movement, establishing communication, and providing a link to manpower planning (MC 158599). The career ladder can help to audit for conformity and change by reflecting how things are supposed to work within an organization (ED 109 341, ABI 81004011, ABI 78005640, MC 162515, MC 155873, MC 135933, MC 132224, MC 132222, MC 132221, MC 119642).
Coaching refers to the interaction between a manager and his/her subordinates to increase their commitment to achieving organizational goals and their own personal objectives (ABI 81016798, MC 141157). Managers may require training in interpersonal communication skills so that they can be sensitive to subordinates' growth needs and help them set meaningful self-development goals that can be followed up on a periodic basis (Burack & Mathys, 1980).

In summary, the various programs and activities that contribute to the career management component of the career development system permit the organization to offer a framework in which individual career needs can be satisfied through institutionally based strategies that concurrently meet the needs of the organization.

Special Populations

As interest in and concern for human resources have grown in organizations, so have the programs and activities that are designed to meet the career development needs of special populations, e.g., women, minorities, the handicapped, midcareer changers, preretirees, and those facing outplacement or obsolescence.

Women. The combination of legislation, the women's movement, and the entry/reentry of large numbers of educated women into the labor force led to the establishment of affirmative action and equal employment opportunity policies by the 1970's that were intended to place women (and minorities) in parts of the organization traditionally closed to them. Hiring and recruitment procedures were revamped (EJ 095 885, MC 150199), and myths and stereotypes about the competence of women in the
workplace were challenged (MC 148368, MC 146437). Management now had to consider women in the areas of job descriptions and responsibilities, nontraditional positions, career pathing and ladders, and performance standards (ED 114 590, ABI 76002030, ABI 73001780). The corporate programs that have recently emerged focus on "the woman as an individual" and provide training for entry into male-dominated areas (MC 165426), career self-management methods (MC 112628), general career pathing strategies (MC 157817, MC 152001), and educational and skill acquisition for the non-degreed (ED 119 022). Career development programs for women consist of assessment, advising, and career pathing workshops that use small group discussions, lectures, feedback, and follow-up methods to help participants identify career goals (ABI 81004051). Management development programs for women are oriented toward the acquisition of supervisory skills that enable them to make tough, fast decisions, give orders and delegate responsibility, take necessary risks, and discipline subordinates (ABI 80009192).

Despite these efforts the proportion of women whose education, career history, and compensation level bear similarity to those of men in the workplace is still very small (ED 176 152). Research on the occupational behavior of women identifies several factors that inhibit achievement behavior in women, e.g., sex role stereotypes, societal attitudes about competency in women, fear of failure, low self-esteem, role conflicts, and perceived consequences of achievement (O'Leary, 1974; ABI 79000641). Many studies comparing male and female executives, however, find no sex differences in satisfaction/dissatisfaction with demanding/undemanding jobs (MC 192591), in performance of duties and perception of career direction (MC 161254), or in the possession of qualities such as competitiveness, assertiveness, and competence (MC 121701).
Kanter (1977) argues that the problem lies within the affirmative action/equal opportunity programs themselves; i.e., that they are based on individual-level models of change and behavior that inevitably lead to the conclusion that "women are different." The effect is to reinforce the present structure of organizations and the low positions of women within them. Programs based on these models lead women to believe that the problem is in their own psychology, reinforce stereotypes about women's need for compensatory training, ignore the range of differences among women and the great overlap between men and women in their work behavior and attitudes, blame men as individuals for discrimination, and absolve the organization of responsibility for molding the psychology of its employees. Kanter (1977) goes on to suggest that structural change within the organizational hierarchy, job redefinition and redesign, and greater flexibility of opportunity through career management strategies (such as those described in this section) are appropriate methods. The anticipated outcome is to provide opportunities that balance numerical inequities and that empower and enhance the work lives of all employees in an organization.

The dual career family, in which both the husband and wife pursue professional careers, is also related to the issue of women's careers. The rewards and conflicts of dual career families, and the factors that make them viable—e.g., mutual commitment, high energy levels, flexibility, and coping mechanisms—are often the subject of case study research (MC 192591). One of the main findings is that much of the coping is done by the couples themselves, rather than by the organizations for which they work (MC 165703). Those who live in different cities to pursue careers can encounter additional
marital and childrearing problems (MC 140361). Organizations need to offer more assistance to dual career couples through revised policies, assistance in career management, supervisory training, intercompany cooperation, and flexible work environments (MC 143221).

Minorities. "This is, perhaps, one of the least studied areas in career literature" (MC 192591, p. 223). Much of what has (or has not) happened for minority groups parallels what has happened for women in terms of affirmative action/equal opportunity programs. The racial biases present in the larger society are also present in the organization (MC 114594). Mobility and career development continue to be areas that demand attention from the top-level management component of the organizational structure (ED 111916, MC 112001).

Handicapped. As with minorities, little research or programs are directed to the handicapped. Affirmative action/equal opportunity programs have not fully mainstreamed handicapped persons into the career ladders of the organization. A project that brought potential employers, college personnel, and disabled persons together over a three-year period for the purpose of increasing employment opportunities for the handicapped concluded that organizations should: (1) maintain current information about the legal aspects of hiring handicapped persons; (2) share strategic or increasing employment of the handicapped; (3) include ways and means to enhance employment opportunities in collective bargaining agreements with labor unions; (4) help those hired to advance on career paths at the same rate as non-handicapped peers; (5) be aware of the unfair burdens that follow from the myth that the handicapped are more highly motivated, perform better, and are more loyal; and (6) work with educational institutions to insure the relevance and "fit" of skills preparation (ED 179704).
Mid-Career Changers. Behavioral science awareness of mid-life crisis began with the work of Carl Jung and has since been looked at in terms of individuals' behavior within the organization (MC 121797). A precise time or chronological age for "mid-career" is difficult to define because mid-career changes may occur after the individual attains his/her maximum level (or becomes aware of what that level will be). Changes occur in the early 30's in some early-peaking occupations, such as R & D (research and development), and later during the 40's and 50's in other occupations, such as priests. Thus the definition of "mid-career" varies with the general progression of positions within an occupation as well as with the chronological age of the individual (MC 192591). Hall (1976) has identified physiological, attitudinal, occupational, and family factors that tend to occur in mid-life; these include an awareness of advancing age and death, actual physical aging, the number of career goals attained, a search for new life goals or reaffirmation of present goals, changes in family and work relationships, a growing sense of obsolescence, and decreased job mobility. Other factors such as stress and satisfaction/frustration level (MC 161954, MC 160173, MC 158608, MC 156345, MC 100776) can also affect the individual. Many persons are reaching a career plateau more frequently and at an earlier age because managerial expectations of rapid advancement are difficult to meet. In addition, the pyramid-look of most organizational structures, with little room at the top, deter the individual from believing that a place "up there" exists for him/her (ABI 80020604).

Burnout is an affliction that strikes individuals in self-imposed, high-intensity situations. Although once viewed as a result of overwork, it appears to be a necessary transition time for some
employees. During this time life forces are diverted from the normal range of problem-solving and life-sustaining functions while the individual develops a new life support system. Burnout often occurs in mid-career/mid-life when individuals begin to deal with the unrealistic expectations that they and others have placed on them. Organizations can respond to this phenomenon by creating a climate that raises the level of self-worth and morale and by establishing counseling programs that give employees the opportunity to deal with this issue and work through the problems (ABI 80016041).

**Turnover** is costly to an organization in terms of recruitment, training, and the negative influence on morale. Many individuals experiencing mid-career crises, however, opt for positions in other companies because the organization is unresponsive to their needs. Organizations can be responsive through job redesign and enrichment and through provision of positions of real responsibility to new workers early in their careers (ABI 80009393, ABI 80004863).

The threat of **obsolescence** is an important aspect of mid-career change. Obsolescence is the degree to which technical or managerial professionals lack up-to-date knowledge or skills necessary to maintain effective performance in current or future work roles (MC 192591). Those who are flexible and possess high intellectual ability and self-motivation are less likely to become obsolete. Employees can respond to this threat through continued training, lateral career moves involving changes in title and/or function, downward moves to free themselves from time-consuming positions to develop outside interests, exploration of other fields, staying put and developing existing opportunities, or leaving the organization altogether. Organizations can provide challenging initial jobs, periodic job changes,
and work climates that contain participative leadership, matrix structures, communications, and rewards for performance (ED 019 563, ABI 80005286, MC 158623).

Counseling programs that take into consideration the client's work setting, position, talents, skills, interests, and educational/employment experiences are critical for mid-career changers. Through an examination of personal resources, environmental and job-related concerns, life goals, employment opportunities, and previous accomplishments clients can identify their skills and attributes. The mid-career changer can be made aware that he/she is in charge of his/her future through a program oriented to self-exploration, identification of career alternatives, and decision-making (ED 172 032, ABI 78007142, MC 149953).

Outplaced Employees. The current economic recession has led to the relatively recent phenomenon of outplacement; i.e., a group of employees is let go or fired as a result of job cutbacks. With the increasing number of plant closings and the dismissal of many employees, outplacement counseling is gaining a legitimate place within the organization. Many organizations now offer workshops that are designed to bring employees to the point of being able to look constructively for a job with confidence and good job search techniques. The components of a workshop provide a clear explanation of reasons for the cutbacks, appropriate lead time for a job search, counseling for personal and professional concerns, severance packages, an in-house relocation facility, and group sessions for support and information (MC 169364, MC 165959).

Preretirees. A major task of later life is the adjustment to retirement from gainful employment. The degree to which the adjustment is successful plays a major role in determining the extent of life
satisfaction after the individual leaves his/her career path and the organizational structure. Organizations are beginning to recognize their responsibilities for providing formal preretirement planning programs to help employees deal with their concerns about finances, health, housing, social and personal life, and use of time. Through these programs employees become aware not only of pension plans and benefits but also engage in realistic planning for their post-work years. Preretirement planning programs tend to follow three general approaches: (1) small group discussion that focuses on interpersonal, social, and psychological aspects of retirement; (2) self-instructional strategies that use audiovisual and/or print materials; and (3) lectures with guest speakers, films, and group discussions. The intent of such programs is to encourage employees to plan ahead and ease their transition from work to retirement which can be a time of continued personal growth and satisfaction (ABI 80021694, MC 141632).

In summary, the various programs and activities that meet the career needs of special groups are an essential part of a total career development system that contribute to the fulfillment of individual needs and organizational goals.

Implications for Counselors

This literature review indicates that a significant body of material on the subject of career pathing and career management in organizations already exists. Counselors should be aware that a wide range of programs and research addressed to the needs of employees and organizations is already
available to them, and they should review these prior to initiating or designing programs in their own settings. Although no program can or should be adopted as is, many programs can be adapted by the counselor for his/her own use. In short, there is no need to re-invent the wheel!

Counselors should take responsibility for meeting the training and counseling needs of individuals at various points of their career stages by helping them to define clear, practical goals through a process that: (1) offers psychological support (MC 142170); (2) identifies personal and organizational factors associated with job satisfaction (MC 132443); (3) gives opportunities for self-exploration of individual needs and motivation levels vis-a-vis organizational goals; (4) provides occupational information; (5) assists with goal selection and the evaluation of available options (ABI 80010054, MC 141809); and (6) helps the employee formulate a personal action plan (MC 141808, MC 141155).

Counselors should offer career planning workshops or courses that focus on the self-management of careers and include information and activities about career planning, organizational career ladders, individual needs and current job assessments, goal setting, and planning and/or problem-solving (Dyer, 1976; Morgan, 1980; Walker & Gutteridge, 1979; ABI 80012800, ABI 80006379, ABI 78005638, MC 178411, MC 153026). Follow-up and evaluation of such workshops and courses are also necessary to obtain a sense of program effectiveness and to make plans for program revisions (Morgan, 1980). The integration of the career development system into the manpower planning component of the organization is critical to balancing the needs of the individual with the needs of the organization (ABI 81011738, ABI 79016868, ABI 79008886, ABI 79000640, ABI 79000639, MC 141154, MC 141153). To further this integrative effort,
counselors should use counseling as a supportive intervention in the career growth cycles of special populations and help the organization deal with affirmative action/equal opportunity issues (ABI 76007033). Counselors should train supervisors and managers in career planning strategies and performance appraisal methods so that they can offer assistance and guidance to their subordinates (ABI 81008232, MC 190383). In addition, counselors should conduct research on the impact of individual and organizational conditions that affect the total career development system (MC 192591). Finally, counselors should recognize that by taking an active part in the design and implementation of the career development system, they can make a major contribution to the human resources development process.

**Future Directions**

The "state of the art" in career pathing and career management indicates that career programs in organizations are not new and that both large and small organizations can implement effective career programs. The responsibility for career development is shared among the employee, the supervisor, and the organization. Unrealistic expectations on the part of the employees and a tendency to view program objectives solely in terms of the organization are potential problem areas that require careful monitoring. Few efforts to evaluate the effectiveness of career programs have been made. Counselors thus have an opportunity to determine the factors that make positive (and negative) contributions to the career development needs of individuals and the organization (Morgan, 1980).
In future, the task of those responsible for the career development system will be to balance the individual's need for freedom and growth with the organization's needs for productivity and results (ABI 80008711). Career development systems will need to increase their flexibility, train supervisors as career development agents, provide realistic career opportunity information, and provide individualized programs to meet both individual and organizational needs at various career stages (Morgan, 1980; ABI 80008711, ABI 79016872, MC 160212, MC 146051). The successful organization will sustain a well-organized and well-administered career development system that incorporates career pathing and career management activities and that places joint responsibility for initiative in implementation on management and individual employees. The benefits of this effort will result in improved use of human resources, improved performance, decreased turnover, and greater success in achieving affirmative action/equal opportunity goals. With strong endorsement and continued support from top-level management, a comprehensive, integrated career development system can contribute substantially to the long-range success of an organization.

Effects of Conceptual Level and Supervision Structure on Counselor Skill Development.
Berg, Kathleen Stirrett; Stone, Gerald L.
Journal of Counseling Psychology, v27 n5 p500-03 Sep 1980

Effect of conceptual level and degree of supervisory structure on training in reflection of feeling were investigated. Self-report measures supported predictions for low conceptual level participants; behavioral measures yielded minimal support. Supervised trainees improved minimally on quantitative dimensions and significantly on qualitative dimensions of reflection of feeling. (Author)

Descriptors: *Career Planning; *Individual Development; *Industry
After examining societal factors that shape the role of vocational education, this paper presents instructional delivery and faculty development models designed to meet the vocational education needs of contemporary society. The report first identifies, as part of a model for educational viability, three forces affecting vocational programming: society's demands for a trained workforce, the individual's demands for fulfilling employment and upward mobility, and the subject matter taught in response to the demands of both. The interaction of these forces is then examined in an historical review of the development of vocationalism in American higher education. A discussion follows of forces currently affecting vocational education, including increasing fiscal conservatism and the diversity of students and their needs and demands. The paper then presents four models for increasing educational effectiveness: (1) a student achievement model, which depicts student success as a function of his/her ability to define and work toward personal goals; (2) a model for individualized instruction, which gears the instructional and adjunct operations of a college toward meeting the learning objectives of students; (3) a counseling model designed to increase retention by helping the student to set and achieve realistic goals; and (4) a faculty growth model, which provides incentives and support. Diagrams illustrate the models. (JP)

A study sought to determine current practices in word processing installations located in selected organizations throughout the United States. A related problem was to ascertain anticipatcd future developments in word processing to provide information for educational institutions preparing workers for the business office. Six interview instruments were constructed to solicit word processing information from six different practitioner groups: word processing supervisors/managers, word processing operators/correspondence secretaries, administrative support supervisors/managers, administrative support secretaries, principals/originators, and top/middle management decision makers. A questionnaire was also submitted to a group of industry experts (consultants, editors, vendors) for their write-in responses about the future. Information requested of practitioners included educational background, general job responsibilities and duties, time spent on responsibilities, training, training needs, career path, initial and in-service training, and major weaknesses of workers. (Summaries of findings and discussions for each group studied are found in chapter 2.) Industry experts agree that in the next five to ten years (1) employment opportunities will continue to grow, (2) there will be greater interaction between word and data processing, and (3) a stronger emphasis will be placed on effectiveness rather than efficiency. (YLB)

Journal Announcement: RIEMAR81

Perspectives on leadership, the workplace, and changing values are presented in three papers. In "Changing the Shape of Work: Reform in Academe," Rosabeth Moss Kanter discusses the structure of academic career paths and ways to improve the quality of work for individuals employed in academia, applying theories she developed in her study of work in the corporate world. In "Changing Values: Implications for Major Social Institutions," Morton Darrow describes the challenges that changing values pose to all major institutions and would-be leaders. It is suggested that new leaders must be negotiators and integrators of diverse phenomena, understanding patterns of events and able to take charge in situations where their control may be limited. In "Leadership Needs of the 1980s," Michael Maccoby suggests that economic and social transformations demand a new leadership style. Personality and styles of leaders during different historic periods are sketched, covering the craftsman, the builder, the gamesman, and others. According to Maccoby, leaders should be able to analyze and reconstruct their organizations on the basis of social and economic realities and with a real understanding of changing "national character." A project was designed and instituted to furnish a structure that would bring together three groups—potential employers, college personnel, and disabled people—to increase employment opportunities for the handicapped. During the third and final project year, representatives of all three groups met biweekly to discuss issues and concerns. Among the key recommendations drawn from these: (1) companies need current information about legal aspects of hiring disabled people; (2) businesses may profit from sharing effective strategies that increase employment of the disabled; (3) businesses and labor unions need to include in collective bargaining agreements ways and means to enhance employment opportunities by recruitment and job restructuring; (4) once hired, disabled persons need help to advance on career paths at the same rate as their able-bodied peers; (5) the myth that the disabled are more highly motivated, perform better, and are more loyal than the able-bodied places an unfair burden on them; and (6) colleges and businesses should cooperate to ensure the relevance and "fit" of skills prepared for employment needs.

In the third year of the project, five different workshops were conducted in New York, to: (1) develop a case for hiring a handicapped employee; (2) hold an information workshop for other institutions to conduct outreach activities; (3) discuss the legal aspects of hiring disabled workers; (4) present an overview of the employment needs of disabled New Yorkers; and (5) discuss the social needs of disabled New Yorkers. Each workshop was conducted in a three-week period, and each included a study of the region. The workshops included: (a) a study of the region's needs; (b) a study of the region's resources; and (c) a workshop on the needs of disabled workers.
a family of low or lower middle class income, and has a work salary of less than $30,000. While the number of women officers in leading business organizations is small, the total has been growing impressively. The majority of the survey participants remain long-service employees who have been promoted from clerical ranks into officer roles. The proportion of women officers whose education, career history, and compensation level bears similarity to senior level males in the work place; however, still very small. (Author: PJC)

Journal Announcement: RIEJAN80

Based on a survey of seventeen Kentucky industries which revealed common problems of the rural worker, this project attempted (1) to design and field test a vocational development program that will increase the knowledge base concerning the economics of industry in the rural vocational student and (2) to design and field test a curriculum component that will affect the employability skills, the work attitudes, and habits of the rural learner in an industrial setting. A research and control group each contained ten secondary students, ten high school dropouts enrolled in a Comprehensive Employment and Training Act (CETA) Industrial Training Project, and ten postsecondary students employed in industry. Two pretest and posttest instruments dealing with developing a vocational plan, work habits, the economics of industry, and fifteen work values areas were administered. The research group participated in classroom training on vocational planning, work habits, and the economics of industry. Posttest findings indicated that the factory workers increased in the areas of maturity, security, and supervisory relations. Among the CETA students improvements were made in all fifteen areas of creativity and economic return, and intellectual stimulations. (The locally developed survey instrument and pretest-posttest comparison charts are appended.) (LRA)

A study was conducted to see what specific programs have been developed for employee career planning and development in order to help organizations interested in establishing career development programs learn what other organizations are doing, what types of programs are in effect and how they are managed. The study was based upon information derived from interviews, this literature, and questionnaires sent to twenty-seven corporations. Summaries of the information derived from the data collected is presented according to an alphabetical listing of the corporations, among them AT&T, General Electric, IBM, Lawrence Livermore Laboratory, 3M Company, Naval Weapons Center, and Union Carbide Corporation. It was concluded that (1) there are few organized and centralized career development programs in effect; (2) many companies are currently in the process of developing such programs; (3) there is much to be done if the goals of the organization and the individual are to be meshed and obtained, and (4) skills, banks and job postings should be tied in with career development to develop skills needed by certain employees in terms of development for manpower requirements. Extensive recommendations are made on the basis of the study, and implications of coordinated human resources development programs are discussed. (Appendices contain other programs of interest and the questionnaire used in the study.) (TA)

Speech Communication as Career Preparation.

McBath, James H.

EDRS Price - MF01/PC01 Plus Postage.
Language: ENGLISH
Document Type: CONFERENCE PAPER (150)
Journal Announcement: RIENOV76

This paper examines the uses that students can make of knowledge and skills in speech communication and brings other representative evidence concerning communicative abilities and employment and comment on the improvement in public understanding of the field. The unifying aim is to provide a rational for speech communication as career preparation, and this is accomplished by reviewing several studies on the communication needs of business, industry, and health-related agencies. Combining actual interviews with job information, the author explores current job opportunities for women without college degrees who are entering the job market for the first time, returning to work, or changing positions. The book supplies the reader with guidelines on locating job openings, obtaining inexpensive job training, and advancing up the career ladder. New unconventional jobs just opening up to women are explored as well as new fields that are emerging at the boundaries of already existing occupations. The author focuses attention on 49 careers in five major career areas: health care, business, armed forces, engineering and science, and public and personal service. Job descriptions include a narrative of a real-life working woman's experiences on the job as well as training programs, working conditions, beginning salary ranges, and listings of sources of career information. A concluding section discusses training programs (junior/community colleges, private trade/technical/business schools, home study courses, apprenticeships, cooperative work-study programs, and industry training programs) and offers suggestions on seeking vocational counseling. (EA)

Evidence which formal training determines occupational mobility. (4) the impact of employer shifts on occupational advancement, (5) existence by pace of differential returns to mobility between firms. Results indicate a strong relationship between occupational advancement and formal vocational training for both racial groups. Structural factors represented by initial industry and region of residence are found to have little or no effect on advancement. A more important factor is considered to be the white-black difference in endowment of education. No evidence for a racial differential in the effects of industry and geographical shifts on occupational mobility is found. No evidence to support the hypothesis that black turnover fails to result in upgrading because of their confinement to secondary sector jobs is indicated. (Author/AM)

Language: ENGLISH
Document Type: RESEARCH REPORT (143)
Journal Announcement: RIEDEC75

The report explores the obstacles to increased occupational mobility for workers at a multip-plant manufacturing firm. Analysis of the job histories of workers at two plants found advancement opportunities to be limited and inequitable because narrow departmental units were used as the basis for defining eligibility for promotions. Through the use of task analysis a Career Progression System was designed to redefine the eligibility pools for promotional decisions in accord with common skill requirements. Efforts to implement the CPS were only partially successful due to collective bargaining agreements. Constraints coupled with the economic downturn. General conclusions were: (1) Collective bargaining agreements are a major instrument for structuring the internal labor markets of large unionized firms and interventions must be designed to confront this reality. (2) Employees in large industrial firms often lack adequate information about promotional opportunities outside their particular department.
Implementation of Career Progression systems can be hampered by the employer's desire to utilize only those programmatic elements which affect productivity. (4) Government-sponsored intervention should have well-defined objectives besides improved productivity and should avoid partial implementations which do not further these goals.

Document Type: RESEARCH REPORT (143)

Journal Announcement: RIEJUL75

The first of a series, this report describes a 10-year followup study of a sample of 44 graduates of the Sloan School of Management, analyzing the interaction of personal values and career events in the lives of managers in organizations. All 44 participants were located, interviewed, and given the same attitude surveys as in the early 1960's. This particular report deals with those results pertaining to the "career anchor" concept, a motivational/attitudinal/value syndrome which guides and constrains an individual's career and reflects both individual and societal influences. Five basic career anchors were defined from the point of view of participants in the study: (1) manager competence, (2) technical functional competence, (3) organizational security, (4) creativity, and (5) autonomy. Although formal titles or career paths may appear overtly similar, important differences may exist in the anchors of career occupants. Classification into career anchor groups was on the basis of reasons for career choice, reasons for job moves, and objectives in life. The concept of career anchor was found to be a viable categorization method. Implications for the concept of career anchors are the early identification of these syndromes and the creating of congruent career opportunities. (EA)

point, success in the business world can depend on being able to anticipate change and move against the tide. Be aware that there are many career mistakes which can be made and business myths that can be destructive. The role of psychological testing in finding the right job is significant, but not necessarily absolute. Certain basic questions relating to a person's job should be asked periodically and the answers evaluated carefully. The desire to achieve can mean the difference between becoming an executive and existing forever in the middle ranks. The author, in discussing these concepts and illustrating them with numerous case examples, attempts to identify the kind of success necessary for personal satisfaction. (AG)

All nine articles in this book were contributed by members of the Association of Teachers of Management and have been published previously. Dr. Wilson presents a framework for viewing problems of company management development, highlighting the continuous search for high quality managers, aspirations of young managers, and the need for consensus between senior managers regarding the nourishment and movement of subordinate managers. Other articles focus on identifying and defining management training needs, gaining the involvement and commitment of managers to change, considering the criteria of successful training, getting full value from external courses, and reconciling individual aspirations with organizational requirements. McClelland emphasises the need for career paths. Mrs. Brown describes how several levels of managers were involved in reassessing company manpower and training needs. Clark and Ramsden analyse management training needs. Coverdale focuses on the criteria for judging training success; Hacon, on management courses; Ticehurst, on functional training; and the role of the training officer in industry; Hamblin, on training in evaluation. Language: ENGLISH
Journal Announcement: RIEOCT70
This document briefly surveys innovative approaches to hiring and job training which are being used by a number of industrial firms. The author's premise is that there are as many jobs as there are unemployed, and therefore that the basic problem is undereducation of available manpower rather than a need for the creation of new jobs. Industry-sponsored training programs are planned for existing job needs; some government-sponsored programs have become dead ends because they were planned on the expectation of development of new types of jobs before the programs were completed, and the expectation was never realized. Reference is made to training programs run by Western Electric, Wellington Printing Industries, Dupont Company, Polaroid Corporation, Chase Manhattan Bank, Xerox Corporation, and others. (MF)

The advent of human resource development (HRD) is a response to a need for change. Besides the traditional responsibilities of personnel administration, HRD includes total career development for both hourly and salaried employees. HRD recognizes human resources as having worth and value, and attempts to obtain, retain, and develop human resources by focusing on the critical career choices made by employees, i.e., beginning employment, improving performance, advancing one's self, and ending employment through career advancement, to termination. Even at the time of termination, HRD perceives a critical point in career pathing. HRD provides a systematic means of organizing and coordinating the workplace and its workers to achieve mutual satisfaction. HRD services will more and more become the organization's chief resource in bringing about a change in focus to reflect management's concern for people as well as products. Chart.

Centel Converges Human Resources into Profitable Energies for Growth
Brindley, J. W.
Telephony, v20n20 34-35,111 Nov 9, 1981 Coden: TLPNAS
ISSN 0040-2656 Jnl Code: TPH
Availability: ABI/INFORM
Doc Type: JOURNAL PAPER

Robert Reuss, chairman and chief executive officer of Central Telephone & Utilities Corp. (Centel) in Chicago, asserts that technology is the force behind dramatic changes in the telecommunications industry. To meet its own rapidly changing business needs, Centel has developed and implemented a human resource plan that places the right people in the right positions. This plan was devised so Centel could cope with changes that will occur during the next few years. One vital and immediate change is the redeployment of human resources to pursue new business ventures. To determine future personnel needs, the corporate human resources function worked with business units as 5-year plans were prepared, so that a thorough human resources component would be built into the projections of each unit. Overall projections showed an increase in employees of 13%, which, broken down by job title and skill, allowed identification of such skills needs as sales and systems engineering. Also included was a careful study of external environmental factors that contribute to the changing business climate. Although the process is incomplete, initial tactics have been put into action. Chart.

Management Selection Systems that Meet the Challenges of the '80s: Computerized Skills Inventories Can Help Put the Right Manager in the Right Job

Walker, Alfred J.
Personnel Jnl v60n10 775-780 Oct 1981 Coden: PEJ0AA
ISSN 0031-5745 Jnl Code: PEJ
Availability: ABI/INFORM

Doc Type: JOURNAL PAPER
A growing number of companies are considering management skills inventory systems, also known as Human Resources Inventories (HRIs) or selection systems. These systems collect and store important work-related data on employees' education, skills, talents, and interests. Challenges which have escalated interest in HRIs are: 1. baby boom demographics, 2. leveling or declining sales and profits, 3. specialized skills, and 4. declining productivity. Deficiencies which can cripple the HRI system include: 1. job requirements that do not use the same language as that entered into the system, 2. data collection that does not use the employee as the primary source, 2. improperly or unevenly applied selection standards, 4. the absence or diffusion of administrative responsibility, and 5. problems associated with the changing nature of work in many companies. There are ways, however, to overcome these problems. Improvements in the HRI area will have benefits that go beyond job matching to prediction of employment movement and better opportunity for career planning.

The Art of Star Treatment

Goneau, Marilyn
Canadian Business (Canada) v54n10 128-132 Oct 1981 Coden: CABUAL ISSN 0008-3100 Jnl Code: CB
Availability: ABI/INFORM

Doc Type: JOURNAL PAPER
An enterprise which does not realize that human talent is its scarcest and most precious resource is going to have a difficult time in a decade when boosting profits means working smarter. However, spotting the talent, bringing it along, and retaining it is a different matter altogether. Many baffled chief executive officers have discovered that dangling prospects of money or even promotions may not be enough. Achievers want an opportunity to perform. They also need room to roam and to test their talents within the organization. Companies that want to keep their star performers will take pains with career planning. This is one reason why the personnel department is giving way to the human resources department. One of the main concerns of human-resources planning is to develop a more systematic strategy for filling open jobs. Manpower or succession planning is being practiced by an increasing number of larger and more sophisticated companies. Some of the methods involved in keeping a star performer are: 1. promotion, 2. coaching him/her, and 3. paying them well. While there are advantages to treating star performers well, some people also maintain that there are distinct disadvantages to having such a system.

Manpower Planning for the 80s

Anonymous
Availability: ABI/INFORM
Doc Type: JOURNAL PAPER

Finding qualified management personnel will become more difficult in the 1980s, so manpower planning is an essential element of survival for the small business. For most firms, a complete reevaluation will be required for recruiting, compensation, and training. Companies must acknowledge that the role of today's human resource manager (HRM) is far removed from the traditional personnel manager. The HRM should have full authority for planning and fulfilling projected manpower needs. The HRM must be able to recruit workers with needed skills and identify the applicants whose goals most closely mesh with company objectives. He must also make sure that the required training for new recruits actually takes place and does the job intended. In addition, the HRM must be the catalyst for the organizational development (OD) program that is designed to improve organizational effectiveness. A primary step in the OD process is for the HRM to inventory human resources to spot weaknesses, and employee resource charting and career counseling reports can be effective tools in fulfilling this responsibility.

Computerized Career Information

Amico, Anthony M.
ISSN 0031-5745 Jnl Code: PEJ
Availability: ABI/INFORM
Doc Type: JOURNAL PAPER

The primary reason for job changes is professional growth, not financial gain. However, employees are often unaware of career opportunities available with current employers. A solution is available in the form of the Corporate Occupational Information System (COIS), which is a computerized information retrieval program through which data on occupations and projects within the firm can be assessed and presented to workers to dissuade them from leaving the firm. In COIS, each occupational title is indexed in a directory of positions. The directory is available to all employees through their personnel representatives. The individual can locate occupations within the firm that meet specific career criteria. COIS can also be used by the employer to search out present employees who may be suitable for a specific job he has in mind. The firm using COIS can be confident that it offers an environment conducive to career development, and the employee recognizes that career goals can be met without necessarily moving to another company.

For a long time, career development was seen as the job of the personnel department, used for new employees or an occasional employee concerned about his or her future with the organization. The philosophy was that if an employee worked hard and showed promise, he or she would move up in the organization and retire with a pension. Now the importance of career development is being realized. Managers need to play an integral role in individualized career coaching, as they are closest to the employee. The managers themselves need to be coached as they may not have the knowledge to guide their employees. Not everyone is cut out to be a manager, and a company should realize that and allow advancement only to those who truly want it. Once managers feel competent in career guidance, they should practice it. A successful program will see greater productivity, reduced turnover, and an increase in employee development.

For a long time, career development was seen as the job of the personnel department, used for new employees or an occasional employee concerned about his or her future with the organization. The philosophy was that if an employee worked hard and showed promise, he or she would move up in the organization and retire with a pension. Now the importance of career development is being realized. Managers need to play an integral role in individualized career coaching, as they are closest to the employee. The managers themselves need to be coached as they may not have the knowledge to guide their employees. Once managers feel competent in career guidance, they should practice it. A successful program will see greater productivity, reduced turnover, and an increase in employee development.

A career path in human resource development (HRD) should be kept in line with one's internal timetable of advancement. Often, one has to decide whether his primary loyalty lies with the HRD field or with the organization. A recent survey found that most trainers value organizational goals but would leave the organization rather than leave the HRD field. HRD professionals must use the career planning and development strategies designed for others in their own career advancement. There are numerous ways to enter the field, but advanced education, such as a master's degree or a doctorate, is usually recommended. Figures. References. Descriptors: Human resources; Development; Careers; Career development planning; Professional development.
The International Civil Service Commission, nonetheless, has potential for ameliorating, if not reversing, some of the negative trends. The Commission is making a serious attempt to deal with the issues of recruitment and career development.

A survey was conducted of Institute of Personnel Management (IPM) graduates to assess the problems they encountered in trying to get their first jobs. Some significant findings include:

1. Most students realized they should seek jobs before the IPM course was completed, and 35% had jobs to go to at the end of the course.
2. A significant number did not take their first job in personnel management, and most who did were offered generalist posts.
3. Of the respondents, 67% stayed in their first job less than 2 years.
4. Students with interest in personnel management as a career seem to come from arts and social science subject study areas and almost never from science and technology backgrounds. Career advisers at IPM were deliberately hard on students expressing interest in personnel management careers because of some false ideas held about that field as a career. They warn that students should get as much work experience as possible and must acknowledge that completion of the course is not a guarantee of an immediate job. Prospective employers are encouraged to attend course sessions to become acquainted with students.

Employment checklist:

1. Personal goals are the foundation for development planning.
2. Other people are either critical to career success, or are co-workers and can be relied upon.
3. Absenteeism and apathy are critical problems in the US workforce. Managers can improve the situation by using wise management techniques and demonstrating to subordinates that they can manage themselves as well as others. To do so, the manager must improve self-confidence and work to have a positive attitude that can be projected to workers. Enthusiasm is important, and the manager should seek to learn employee attitudes, feelings, and goals so that a climate is created that is conducive to a desire and willingness on the part of employees to perform to the best of their abilities. A primary means for a manager to develop and display confidence is to become an effective decision maker. It may be beneficial to make staff members more a part of the decision-making process. Personal goals are the foundation or career building, and goal setting is a powerful tool for personal force. Therefore, effective managers will set specific goals for themselves and for their departments, suggesting also that employees set goals for themselves.

Since 1979, Gulf Oil Co., in cooperation with Chatham College, has offered a career development program to its women employees. The resulting Career Development Program for Women was directed toward 3 areas of career planning support: 1. assessment, 2. individual advising, and 3. a career planning workshop. Implementation of the pilot program included: 1. identification of participants, 2. a 2-day orientation, 3. an R-week course, and 4. evaluation and follow-up. The course itself was designed to include small-group discussions, large group lectures, and ongoing involvement by and feedback from participants. Participants were asked to complete assignments and implement the advisory program. At the conclusion of each session, students completed evaluations of the presentation and activities. At the end of the entire pilot project, extensive questionnaires were filled out by the participants. The program was expanded to include men and has also been used successfully at another Gulf subsidiary.

An Integrated Model for Training and Development: How to Build on What You Already Have
Meallen, Laird W.; Duffy, John F.

Doc Type: JOURNAL PAPER
Training and development (T/D) specialists frequently fall in their purposes because of failure to use on-line programs or behavioral theories which are available. The integrated training development system can best benefit organizations which are characterized by a large, complex internal structure with a high turnover, a young work force, and limited external manpower resources. The T/D specialist must identify meaningful career paths to construct ideal skills profiles (ISPs) and predict vacancies. The ISP represents what is most likely to lead to success on the next highest job in the career path. While the typical performance appraisal process deals with 7-10 traits, this can be expanded to 27-30. The success of any T/D program requires the support of top management. When ISPs are realistically established, they can be compared with an employee's actual skills profile (ASP) to determine whether the individual is within 'striking distance.' Then the participants in the T/D program can be selected intelligently. Benefits of the system include: 1. accurate measurement of training and development needs, 2. effective utilization of existing T/D modules, 3. motivational capacity, 4. availability of reliable feedback for the employee, and 5. availability of effectiveness evaluation mechanisms. Organizational Design: Dealing with the Human Constraint
Briscoe, Dennis R.
California Mgmt Review v23n1 71-80 Fall 1980 Coden: CMRRAK ISSN 0008-1256 Jnl Code: CMR
Availability: ABI/INFORM
Doc Type: JOURNAL PAPER
Organizations must be designed to integrate a variety of people so they can collectively contribute to the accomplishment of organizational objectives: pressures for change can be accommodated either by changing the people in the organization or by designing the organization to meet the pressures. Changing the people can be accomplished by: 1. altered personnel selection, 2. training and development procedures and methods, 3. socialization approaches, 4. providing reward and feedback systems, and 5. providing assessment and development of life and career. Altering the organization might involve modifying organizational结构, and the design of work: while changing the interface between people and the organization entails: 1. management development through job assignment, 2. altering leadership styles, 3. organizational development, 4. employing management by objectives and 5. implementing institutionalized participation. These options give the organization many ways to adapt to the critical differences in employee motivations, commitments, and values. Charts. References.

Redundancy. Recession and Career Crisis Counseling

Owen, Bob
Personnel Mgmt (UK) v12n11 28-41 Nov 1980 Coden: PTMABL ISSN 0031-5761 Jnrl Code: PMA
Doc Type: JOURNAL PAPER

When low economic growth narrows promotional opportunities, there is a temptation to create jobs for young enthusiastic executives. The result may be redundant executives in their forties and fifties. This kind of crisis situation can also arise from mergers or closures. Career situations must be handled sensitively, or the company's image and recruitment prospects may be damaged. The personnel manager should, therefore, develop strategies which will keep crises to a minimum, and the independent counselor is of great assistance in detecting the problem case. Dealing with the hidden fears and worries of redundant executives may involve career development workshops, vocational reassessment, or retraining. The company may assist in resettlement outside the organization and may assist executives in setting up their own businesses. A financial planning service for these people is very important. Retirement planning may also be helpful as part of the development plan for a redundant executive. External resettlement counselors may be used to assist in these areas. The introduction of a career development counselor is also possible.

Doc Type: JOURNAL PAPER

There is a trend toward the shift of organizational power and influence away from central control and orchestration toward permanent vestment in internal special-interest groups. By the dawn of the 1990s, overtrained troops will further disrupt an already overprofessionalized economy. If there is not room at the top for all the qualified people, they will invent games to entertain and aggrandize themselves and steal power from the top. Today's 25-year-olds are impatient and highly assertive. As they rush into the management vacuum, those who do not make it to top positions will form the unmovable, unhappy group. Three outcomes are possible: 1. Overqualified, underused, frustrated middle managers will turn to building mid-level power principalities. 2. Management jobs will be splintered and fragments passed around to keep the troops busy and happy. 3. Middle managers will try to strike some kind of psychological and energy balance between personal, family, and business lives. The forces of economic efficiency and personal human need must be synchronized.

How Ambitious Trainers Can Boost Their Career Bottom Line
Fletcher, Elaine
Training v17n10 55-57 Oct 1980 Coden: TRNGB6 ISSN 0095-5892 Jnrl Code: TBI
Availability: ABI/INFORM
Doc Type: JOURNAL PAPER

Train and human resources development (HRD) managers will be moving into the corporate circle of strategic decision makers in this decade. They will enjoy unprecedented power, including a vice-president's title and a voice in strategic planning, according to one futurist. Other people think that 'personnel' will be broadened to include training and HRD. A report from Heidrick and Struggles indicates that traditional activities like benefits administration are remaining (e.g. the control of personnel) and that other responsibilities, such as management development, training, and company organization, are being added. It appears that there is a growing demand for qualified HRD people and that their salaries and status are increasing. It also seems likely that competition will be more intense for top management, which will lead more people to choose HRD or personnel as a path to the top. However, it seems that 'personnel experience is not a prerequisite for the position of chief executive officer, a job which still demands considerable expertise in finance and marketing.

With minimum effort and cost, a currently existing career development program can be adapted to focus upon older workers. Interestingly, studies are showing that despite the raising of mandatory retirement age, most employees will choose to retire early, and some indicators also suggest they may choose to start other careers. Further, career development programs that are established for older workers would have the advantage of persuading experienced, valuable employees to continue working. This could be particularly useful in high technology fields, such as the aerospace industry, where there is a shortage of qualified personnel.

Some important ingredients in the career development program include: 1. emphasizing the need for individuals to assume responsibility for themselves; 2. analyzing both needs and values; 3. using the same devices in career development programs for younger workers in those for older employees; 4. networking, resume preparation, and interviewing; and 5. following up on the developed career plan. References.

Developing a Career Guidance Program Through the Job Family Concept

John Holland devised a job family classification system based on his analysis of personality traits, abilities, interests and job characteristics. Six "orientations" describe these interactional patterns. The 6 Holland orientations are: realistic, conventional, artistic, investigative, enterprising, and social. Establishing job families and career paths can be a valuable device in career counseling programs. The first part of the career assessment process is an interview, which includes a review of the employee's educational and prior employment history, personal interests, as well as others. The second part of the career assessment process is completion of a survey workbook. The Self-Directed Search. The last part of the core assessment process is the Quick Job Hunting Map, a workbook allowing for a more specific exploration of the employee's skills and abilities. The program has been effective for day-to-day use, classifying employees into an appropriate career path, in providing them with detailed career alternatives, and in initiating developmental programs. References.

The Development of An Integrated Career Planning Program at Gulf Power Company

Lopez, Felix E.; Rockmore, B. Wayne; Kesselman, Gerald A.
Availability: ABI/INFORM
Doc Type: JOURNAL PAPER

In January of 1980, Gulf Power Company of Pensacola, Florida, began a comprehensive human resource planning program. It was designed to identify, train, and develop future upper- and middle-level managers for the effective operation of the enterprise. In addition, the firm was looking for a way in which those managers and professionals could direct the course of their careers with the advice and counsel of human resource professionals. Two important foundations of an integrated career planning program are extensive job analysis research, and a solid performance evaluation program. Further, the first major task in the development of the career planning program at Gulf was the organization of the 200 management jobs into a meaningful structure called a career plan matrix. In addition, Gulf used 2 methods of job analysis known as Threshold Traits Analysis, and Demand and Task Analysis. In starting the career planning program at Gulf Power Company, these steps were taken: 1. publication of the job library, 2. development of an employee interest input document, and 3. communication of job opportunities. Work to Retain Top Performers, Consultant Warns Anonymous
Savings & Loan News v10n10  118-119  Oct 1980  ISSN 0036-5114  Jnrl Code: SLN
Availability: ABI/INFORM
Doc Type: JOURNAL PAPER

According to Roger Fritz, president of Organizational Development Consultants, Naperville, Illinois, some savings associations may unknowingly be encouraging top performers to leave because they are not creating a challenging and supportive work environment. When an association is forced to cut back on personnel as a way to cut operating expenses, it is important to build a feeling of job security for the top performing employees. Cutbacks must be related to merit or productivity so that good employees are assured of their importance to the organization. Adequate performance evaluation is essential even though developing a good system is very difficult. Management must be able to define goals for both the employees and the association. An environment that encourages individual input is important since top performers typically look for new challenges. It is equally important that supervisors be candid with employees if there are no prospects for advancement open to them. A reward system is a useful tool in maintaining employee satisfaction. Nonmonetary recognition is often as important as monetary rewards. Top-performing individuals are an important asset to the association, and it is important to take an aggressive personnel management approach to keeping them.

In a systems approach to career planning, an employee analyzes his work history, decides if he is ready to proceed through the review steps, and if so, he notifies his supervisor to request a career-planning discussion. This initiates the level-by-level review which provides feedback necessary to develop realistic and attainable career plans. The employee's career plan is presented at an annual review of human resources meeting. The annual review is a time to share information, make quality decisions, and give top management support to career plans, and is the linking pin between individual career planning and organizational human resources planning. The annual review members should analyze the company's human resources needs prior to focusing on specific employees and should then review career plans previously approved to determine their progress, possible revisions, and problems. An evaluation of newly submitted career plans is also included in the annual review meeting. The systems approach benefits the entire organization and improves communication. Charts. References.

Managers at Work: Companies and Careers
Wolff, Michael F.
Research Management v23n4 8-9 Jul 1980 Coden: RESMA3
ISSN 0034-5334 Jnl Code: RMG
Doc Type: JOURNAL PAPER

C. Dennis Hall, president of Bell-Northern Research, has much advice to offer about career management. Career management is a delicate balancing exercise, and to accomplish this balance 8 critical questions must be answered: 1. How much of the truth should an employee be told about his performance and why? 2. How much effort should be put into developing the high flyers as opposed to developing the average performer? 3. Should individuals move out of research and development with their projects? 4. What are the fundamental requirements for a dual ladder approach to career planning? 5. When do formal courses aid in planning careers? 6. How can the average employee be kept satisfied, and for how long? 7. How important is a staff role in a career? 8. How is outplacement handled? Employees should be told as much as possible in an undistorted way. Most employees are not triple-A performers, and their careers cannot be ignored. However, the high-flyers require carefully orchestrated communications because these are the ones around whom ccessful projects are constructed. A move made out of research and development should be on a career path basis, individually determined. The need for a parallel path for research and development professionals depends on the nature of the group. If outplacement occurs it must be handled legally and generously.

Burn Out-Business's Most Costly Expense
Nelson, John G.
Personnel Administrator v25n8 81-87 Aug 1980 Coden: PEADAY
ISSN 0031-5729 Jnl Code: PAD
Doc Type: JOURNAL PAPER

Burn out is an affliction which strikes people in self-imposed, high-intensity situations. Once burned out executives were seen as being simply overworked; however, simplistic explanations are no longer accepted. Burn out, in fact, appears to be a necessary transition for some employees. What occurs in a normal and healthy grief reaction is that the life forces are diverted from the normal range of problem-solving and life-sustaining functions, and during this period, the person is developing a new life support system. Further, a mid-career is often the classical time in life when people start to deal with some of the unrealistic expectations that they and others may have placed on their lifestyle. Personnel managers can perform an important role in the burn out situation. Management needs to create a climate of working conditions which raises the level of self-worth and morale. There is also a need to get the employee to deal with himself in the employment situations by such techniques as talking about issues bothering him, learning to be reflective, and not accepting his condition. The result may be an employee who is comfortable with himself and his business, and the company may not lose a highly-skilled and loyal employee.

Descriptors: Employee problems; Career advancement; Personnel management; Employee morale; Job attitudes; Employee attitude (PER)
Personnel giving rise to programs has a devastating effect. The training of new supervisory employees demands much attention. The importance of the supervisor is reflected in the fact that productivity and motivation of any work group derives from a supervisor's ability to get results through others. Motivation at the supervisory level is related to the supervisor receiving accurate information on growth opportunities in the organization as it relates to personal development. Training conducted without attention to individual career development frequently misses the point if the goal of training is to improve the efficiency of the manager and, in turn, the performance of the work group. The career development system must meet certain goals, and the role of the human resources department in meeting these objectives is: 1. to facilitate individual career development within the organization, 2. to establish a functional nexus between existing personnel programs and the career development system, and 3. to insure the continued viability of the career development system by demonstrating to top management how it accomplishes the organization's business objectives. Important elements of the career development program include: 1. managing the employee's career, 2. managing one's own career, 3. a skills assessment and career goals booklet, and 4. career development meetings. Tables. References.

Descriptors: Career advancement; Career development planning; Training; Communications; Organization development; Careers; Development; Systems; Human resources; Employee development (PER)

The number of programs in force at a given time; the needs of individual employees in terms of training and employee satisfaction are often overlooked. Personnel departments should be prepared to justify the development costs of their programs and should be required to sell these programs to line management to ensure support. A very obvious deficiency of personnel departments in insurance companies is the meager understanding of underwriting and insurance marking practices.

Using Assessment Centers for Individual and Organization Development
Olivas, Louis
Doc Type: JOURNAL PAPER
Organizations are finding the prospect of using assessment centers increasingly attractive due to extensive research indicating the validity of the technique in predicting managerial success. Traditionally, assessment center technology has been used for organizations' recruitment and selection processes. Now, assessment center results for specific departments within or across an organization can serve as a guide for designing and budgeting organization development programs. Still, few organizations utilize assessment center results for scientifically designing a specific developmental program for the individual. The indirect benefits of visible commitment by an organization to develop current managers effectively, combined with an interest in self-development on the part of the individuals involved, can enhance the total human resources effort. With such benefits, human resources managers can more accurately project career plans within an organization and can more accurately assess the extent of managerial talent that will be available during future periods. Graphs.

Results-Oriented Training Designs
This, Leslie E.
Training & Development  Jnrl  v34n6  14-22 Jun 1980  Coden: TDEJAT  ISSN 0041-0861  Jrnl Code: STD
Doc Type: JOURNAL PAPER
Human resources development designers need to examine their philosophy of training and education. When he has formulated a clear philosophy of training, the trainer knows what he is doing and why. In addition, the trainer might examine the assumptions regarding training in order to explicitly identify their positions and the likely impact of the assumptions on training. To plan a design to improve performance on a job, a thorough understanding of the nature of the job is required. Eventually, it is important to develop limited objectives for a particular time frame and for a particular set of training program activities. Designing a curriculum for specific results will be aided by certain considerations: 1. the diversity of program participants, 2. concepts and patterns of career development, 3. curriculum content, and 4. curriculum method. Further, a number of variables must be considered in course design and course sequence. The arrangement of courses, course sequence, methods, and other curriculum components can vary along the following scales: 1. number and length, 2. subject matter mix, 3. placement of equivalency tests and other evaluation, 4. relationship between the curriculum and other possible concepts and patterns of career development.

Career Development: What Organizations Are Doing About It
Griffith, Albert R.
Personnel v27n2  63-69  Mar/Apr 1980  Coden: PSNLAH ISSN 0031-5702  Jrnl Code: PER
Doc Type: JOURNAL PAPER
Insecurity and uncertainty in the workplace can result in economic loss to the organization and severe stress to the employees. The occurrence of illness resulting from the adverse effects of stress is increasing as business becomes more complex and demanding. To determine what steps are being taken by management to help employees deal with business-related and personal stress, a survey was conducted which involved 118 of the Fortune 500 companies. There were 3 purposes for the survey: 1. identification of people in the organization responsible for administering and providing services for career development, 2. analyzing the scope of career development services, and 3. ascertaining top management's commitment to career development and the extent to which this concept is integrated with corporate personnel practices. The results of the survey showed that career development in the corporation is more a management function than an auxiliary one, and that career development programs are offered in a majority of organizations, but only to a small portion of the workforce. The organization's long-range interests will be served if career development services are recognized as a way of increasing productivity. Turnover rates could be reduced significantly if management made it possible for employees to grow through career development programs.

An important role of the human resource professional is helping employees define clear, practical career goals.
Research suggests, both with individuals and organizations, that the career management process involves 6 distinct stages and that an individual needs to move successively through each stage in order to manage a career effectively. The 6 stages are: 1. profiling, 2. reality testing, 3. targeting, 4. strategizing, 5. execution, and 6. integration. Goal selection is the process followed by individuals to identify the variety or available options, evaluate the desirability and practicality of the options, and select from them the ones which represent attainable goals. It is important that today's worker keeps these options open. Six of these options are: 1. vertical, 2. lateral, 3. realignment, 4. exploratory research, 5. job enrichment, and 6. relocation out of the system. Vertical mobility is the most traditional of these options. When goal setting is completed, employees will have selectively chosen the goals which are most appropriate and meaningful, both to the employer and the individual.

Solving the Turnover Problem
LaBelle, Charles D.; Shaw, Kimball; Hellenack, Leslie J.
Datamation v26n3 144-148,150,152 Apr 1980 Coden: DTMNAT ISSN 0011-6963 Jrn1 Code: DAT Doc Type: JOURNAL PAPER
The data processing (DP) industry needs a solution to the problems of attracting, motivating, and retaining superior
computer talent. The DP professional's utopia is a place
where politics are at a minimum, where good opportunities and
challenges go to deserving employees, and where there is a
conscious and systematic development of each person's
skills. In such a place, performance is evaluated on an objective
basis, equitable rewards are distributed, and educational
opportunities are available. Manufacturer's Hanover Trust
developed a structured resource management system to help
solve their people problem. The development of the structured
human resource management system began with the creation of
a foundation that portrays details and descriptions of each job
and the interrelationships of all jobs so that the DP person
has a career road map. Skills that can be attained by working
in the installation must also be defined and should be
correlated to the job descriptions. By developing successful
human resource systems, companies will be better able to cope
with DP challenges in the years ahead. Tables, charts.

I'll Never Work for a Woman Supervisor Again!
Tureciano, Dorrline Anderson
Supervision v42n5 6-8 May 1980 Coden: SUPRAO ISSN 0039-5854 Jrn1 Code: SUP Doc Type: JOURNAL PAPER
To be professional, women supervisors must think, feel, and perform like an executive. Margaret Higginson, research
director and management consultant, and author of "The
Ambitious Woman's Guide to a Successful Career," cites 6
guidelines for female executives: 1. They must be able to make
tough, fast decisions, without fear or uncertainty. 2. They
must give orders and delegate, without agonizing over
popularity. 3. They must be ready to take necessary risks,
without self-recrimination or second-guessing. 4. They must
be able to discipline subordinates and reject poor work
without feeling guilty or being a nit-picky. 5. They must
continue to grow and to learn business terminology and the
financial language of business. 6. They must believe in and
project themselves as strong and true. A woman supervisor must
take all responsibility for her decisions in order to gain
respect from her superiors and her subordinates. Positive
reinforcement and mutual trust with subordinates will improve
the department's productivity, and enhance the woman
supervisor's reputation.

Career Development Trends for the 80s: Better Managers, Higher Productivity

Pinto, Patrick R.
Training v17n4 31,33 Apr 1980 Coden: TRNBG6 ISSN 0095-5892 Jnl Code: TBI
Doc Type: JOURNAL PAPER

During the 1980s, the career development task of human resource development professionals will be to balance the individual's need for freedom and growth with the organization's needs for productivity and results. While most existing career development systems will continue to maintain the basic components, trainers will increasingly focus on counseling and on controlling unrealistic expectations. In turn, line managers will increasingly control career development programs through their input regarding the programs' design and use. Managers will be better rewarded for career development. With more information and more collaboration, there will be a change from organizational dominance and influence to a situation where the individual has a share of information and resources. As employees initiate their own career planning, trainers will provide context for individuals to do more of their own career planning and development.

Assess Your Strengths—Before You Start Your Own Career Plan

Zemke, Ron
Training v17n4 29 Apr 1980 Coden: TRNBG6 ISSN 0095-5892 Jnl Code: TBI
Doc Type: JOURNAL PAPER

Many trainers, adept at assessing performance problems and weaknesses of others, are unable to look objectively at their own personal and professional assets. A 6-step Strength Analysis assists trainers in viewing themselves in an objective framework. While the analysis can be done alone, working with a small group may be more fun and more informative. Step 1 entails developing a skills checklist and selecting 5 top strengths. Then, skills, attitudes, talents, abilities, or characteristics, which may or may not be professional strengths, should be determined. Step 3 is reading both lists of strengths before the group for feedback. In Step 4, a new list of strengths is written, with 2 descriptions each of professional success and failure experiences. Strengths liked and disliked should be indicated. Review how strengths and preferred "likes" played in successes and failures. Step 5 entails writing a final description of strengths. Step 6 is to brainstorm possibilities (assessing options) with the group.

Take the Time to Chart Your Career in HRD

Zemke, Ron
Training v17n4 27-28,30 Apr 1980 Coden: TRNBG6 ISSN 0095-5892 Jnl Code: TBI
Doc Type: JOURNAL PAPER

Many human resource development (HRD) officers, expert at helping others develop their careers, are becoming interested in their own personal career development. Building such a career development plan can begin with a personal strength analysis, followed by a realistic assessment of career options. Dr. Beverly L. Kaye, career development consultant, suggests that setting multiple career goals and working toward more than one at a time is better than a single goal. According to Kaye, there are 6 career options for HRD professionals to consider: 1. vertical mobility, 2. lateral mobility, 3. realignment (downward) in the system, 4. exploratory research or development projects, 5. do-it-yourself job enrichment efforts, and 6. relocation to another position outside the organization. Flexibility is the key to keeping HRD professionals from being boxed into a stagnant job or screened out of viable options and alternate career paths.

The Air Force's Comptroller Civilian Career Enhancement Program (CCCEP) aims at ensuring that well-qualified personnel with professional as well as managerial skills are available at all levels for comptroller positions. The Comptroller of the Air Force Civilian Policy Council helps assess the needs of career groups, sets policies to meet these needs, and recommends individuals for high-potential appointments. 1. Promotion opportunities and, secondly, cadre reserved positions, career groups, financial management, and computer resources. From the GS-12 through GS-15 level, individuals may enter either the career executive force, which is categorized by a broad range of jobs crossing functional and organizational lines, or the career general force, which is limited to one locale. Career executive positions are further classified as: 1. essential, providing basic development experience, 2. career broadening, calling for reassessment to increase development opportunities, and 3. cadre reserved positions, jobs reserved for high potential individuals that are given priority consideration.

Most firms are confronted with 2 major contrasting personnel policy questions that relate to staffing versus career management as the major function of personnel departments. These questions are: 1. Why is the company not able to have the right number and right types of persons in the right place at the right time? 2. Why is the company not able provide its employees with continuing career satisfaction? It appears in answer to question 1 that people are oriented toward a top-down view of business problems and identify with top management and organizational goals and initiatives. As for the second question, people take a bottom-up view of problems and identify with employees, especially with their goals and initiatives. These 2 viewpoints have their own behavioral focus, and they use different personnel strategies. However, these two approaches are not mutually exclusive. A combined approach to human resources planning is essential for effective organizational operations. The first step to implementing such a plan is to obtain the full support of the chief executive officer. Chart.
Every time a good employee leaves, the company pays, in terms of recruiting and training a replacement, and in the negative influence on morale. Many of these employees were valued workers who would have remained with the company if conditions and opportunities had met their needs. Jobs should be designed with people in mind. Promontory people respond to the challenge of job enrichment. Companies should recruit in such a way that the applicants will include people in the labor market who are the best qualified, not merely those who walk in. The specifications of the job should determine the selection criteria. To accurately select the best qualified employees, the company must base its decisions on a balanced weighing of the evidence in relation to the criteria. Real responsibility must be given to the new worker early in his career.

Career-life planning provides some focus on what people want from work. Career-life planning is a systematic effort by the organization to design jobs according to the aptitudes, abilities, and objectives of employees. Career-life planning is based on organizational adaptability in the face of several assumptions about organizational and human behavior. Career-life planning methods typically begin with problem recognition and end with changes in structure and processes. Job redesign, as a planning technique, means an increase in employee involvement with the entire job, and this results in the employee exercising more variability and taking more responsibility.

There are some significant problems with career-life planning programs, such as: 1. widespread employee dissatisfaction with work and life, and 2. inability of organizations to always change the amount of control that employees have over career choices through devices such as job redesign, model career patterns, broadened authority patterns, and variable rewards. Charts. References.

Accountability for Career Development - A Must for Improved Program Management

Staats, Elmer B.
Bureaucrat v.8n3 2-6 Fall 1979 ISSN 0045-3544 Jnl Code: BUR
Doc Type: JOURNAL PAPER

Over the years, the need for greater emphasis on personnel management, particularly on the development of career personnel, has become increasingly evident. The Civil Service Reform Act is one response to this need for more accountability in the management of personnel who comprise the federal workforce. The act recognizes the importance of managing personnel at the working level, requires that managers set performance standards and critical job elements for their employees, and increases the likelihood that managers will view personnel activities as an integral facet of program management. While federal managers have neither recognized the importance of career development for their employees nor been held accountable for it in the past, Civil Service reform should provide the foundation for improved accountability for federal employee career development. Accountability for effectively developing career personnel must be included in the successful management of federal programs over the long term. A capable career staff is imperative for well-managed programs. By recognizing the importance of pushing personnel functions into federal agencies' operating units, the Civil Service Reform Act should lead to a growing awareness in the federal government of the link between personnel activities and program functions and to increased accountability for career development.

Bank Systems & Equipment v.16n10 50-54 Oct. 1979 ISSN 0005-5080 Jnl Code: BSE
Doc Type: JOURNAL PAPER

Several large banks with 1500 or more employees are using computerized human resource information systems to help match employees' skills with various jobs and promotions as they come open. Some use a skills inventory system for exempt employees which stores personnel data like pay and performance information. Others, like Bank of America, are going even further and are automating their job posting systems. Employee attitude surveys are being computerized by Citibank so the bank will know how employees feel about various job related topics. Computerization of employee information also has helped in producing annual Employment Information Reports required by the Equal Employment Opportunity Commission. Career pathing, dividing skills and jobs into families as a prelude to job posting, is also being computerized. Finally, these computerized systems have helped reduce turnover and have promoted upward mobility and job satisfaction.

The Coming Management Population Explosion

Rosow, Jerome M.
Advanced Mgmt Jnl v.44n4 4-16 Autumn 1979 Coden: ADVMAS ISSN 0036-0805 Jnl Code: AMJ
Doc Type: JOURNAL PAPER

In the 1980s those people born during the post-war baby boom will be reaching middle age, and a bottleneck is anticipated in middle-management type jobs. The supply of personnel will be larger than the demand because of the demographics involved and because of some changes in the labor market such as increased longevity and a longer working life. Management can deal with this bulge in a variety of ways. Management development programs should be more open and adaptable rather than elite and secretive. Employees should be given the option of making lateral job changes within a company. Long term professional performance could be maintained by giving employees educational sabbaticals to improve or change their skills. Inservice training can be used as well as career counseling. Jobs can be redesigned and staff can be better utilized so that companies can adapt without massive layoffs.

A successful organization must sustain well-organized and well-administered human resource and career planning programs. In an overall program, job analysis information and human resource planning offer vital background data for career planning. Such a program helps in systematizing human resource and career planning activities for the organization and places joint responsibility for initiative in implementing most career planning and development activities on both management and individual employees. Generally, the value of career planning should result from the improved use of key human resources as such planning provides for better matching of individual strengths with organizational needs. Other benefits include: 1. more efficient use of human resources. 2. improved performance of incumbents in key jobs. 3. increased turnover, and 4. more efficient achievement of affirmative action goals. With a strong endorsement and continued support from top management, a comprehensive and integrated human resource and career planning program can contribute substantially to the long range success of any organization.

7. a continual upgrading of the organization’s human assets.

Career programs can be grouped into the following main categories: 1. career counseling, 2. individual career planning, 3. organization human resources planning, 4. career information systems, 5. management or supervisory development, 6. training, and 7. programs for special groups. Career development programs can be seen as a positive means of increasing individual and organizational efficiency. A survey showed the activities involved in career programs include: 1. advanced management program, 2. career pathing, 3. midcareer update, and 4. preretirement counseling. Most of these activities develop through a directive from top management. Career program evaluation is an important part of these programs. Both large and small organizations can implement career programs, with many of the career programs being informal. One major problem is unrealistic expectations on the part of participants. Charts.

Career Counseling: Too Little, Too Late?
Gambill, Ted R.
Supervisory Management v24n4 24-30 April 1979 Coden: SPMAUHISSN 0039-5919 Jnl Code: 5PM Doc Type: JOURNAL PAPER

A common problem facing many organizations is the neglect of career counseling. Many managers tend to avoid this area.

One of the reasons for this is that most managers are untrained in career counseling. Managers often feel that the time spent in career counseling is wasted time. Some of the objectives for career counseling should include the facilitation of employee growth and development so that organizational and personal goals are met, the encouragement of personal growth and development so that the employee reaches his full potential, the development of a reservoir of internal talent from which to draw, and the integration of the career counseling process into the performance appraisal system, training program, and other personnel-related efforts.

One of the basics underlying a career counseling program should be the belief that employee development is a lifelong process. The manager should encourage growth and create an environment that will stimulate growth. An employee must realize the importance of using each job assignment to further develop his abilities. Career counseling is the organization's most valuable employee-development tool.

Self-Assessment: A Strategy of Growing Importance
Burack, Elmer H.
Training & Development Jnl v33n4 48-52 April 1979 Coden: TDEJATISSN 0041-0861 Jnl Code: STD Doc Type: JOURNAL PAPER

Personnel managers, training directors, and human resource development specialists have become increasingly interested in self-assessment methods which allow organization members to gain better personal understanding of their skills and goals. Currently, the materials used for self-assessment include a wide-range of scales, inventories, and informative writings. Self-assessment requires commitment and a joint effort from both employees and the organization. In order for an individual to gain fully from self-assessment procedures, it is important to understand key aspects of the approach: 1. awareness or organizational and life occurrences which affect one's life, 2. planning, 3. adequate personal skills, 4. learning environment, 5. timing, and contemplation, 6. feedback, 7. changing solutions as situations change, and 8. active personal participation. Developing Managers in a Low-Growth Organization
Guerrier, Yvonne.; MacMillan, Keith
Doc Type: JOURNAL PAPER
In a recent study of over 1,300 British managers from the public and private sectors, only 1/3 of the sample thought that their organizations had effective management development programs. The results of the study also indicated that managers from large organizations were much more likely to doubt the organization's capacity to develop managers. In successful management development programs, the individual is challenged intellectually and in practical management situations, a condition which is more likely to happen in small companies. Some companies which are involved in generating and expanding small firms are considering seconding inexperienced managers to work part-time, serving as consultants, while senior managers could work in the smaller firms as a transition to retirement.

Personnel business is by coming up through the ranks—the basis.

The best way to become expert in security is good employee communication and counseling. Some of the vital workshops at the meeting were:

- Recruiting and Promoting but No Pirating, Please

Some researchers have concluded that many shortages of qualified personnel for specific jobs are due, at least in part, to a breakdown in the career-counseling process in organizations. A reason for this growing problem may be that managers are venturing into unfamiliar territory with career counseling, even though employee development has become a fundamental personnel management responsibility. Only professional managers have realized that time spent in career counseling can have a greater payoff in performance than time spent on day-to-day responsibilities. Career counseling can become a very valuable employee-development tool for the organization. While a time investment is involved, the return can be manifold if the job is done properly. Employee development, increased productivity, reduced turnover, higher employee morale, and the presence of an internal supply of personnel so that the right numbers and kinds of people will be prepared when a company needs them are all factors which will contribute to ensuring a firm’s prosperity and survival.

While past studies conclude that 2 out of 3 R&D engineers are rated as "low performers" after reaching age 35, other studies indicate that management’s inability to deal effectively with this trend actually accelerates technical obsolescence. For many engineers technical obsolescence is a threatening reality. Instructions follow on how to lead engineers to a "technical shutdown": 1. Minimize engineering salaries, 2. Offer dull projects with few rewards, 4. Curb management interest and influence on technical decisions, and 5. Refuse organizational recognition. However, engineers can remain vital and interested if the presence of: 1. Valuable job-related courses, 2. Opportunities in career development, 3. Incentives for individual creativity, 4. Experienced engineers being allowed to share with younger workers, and 5. Engineers being supported with open communication lines, feedback, and clear expectations. The trend to obsolescence can be easily changed just by recognizing habitual mistakes, too often made and too long in existence. References.

Four Steps to Get Ahead

Kruse, John H.

Management World v7n12 10-12 Dec. 1978 ISSN 0090-3825

Jnrl Code: ML

Doc Type: JOURNAL PAPER

The future of an employee is dependent to a great extent on

the interaction he experiences with his manager. Today's business world expects that his firm will give

consideration to his professional development, the manager is

obliged to monitor the progress of his subordinates with an

eye to enhancing their careers. Four steps are suggested hereby the young administrator can encourage his manager to

assume this supportive role: 1. Understand what motivates the

manager. 2. Decide what type of manager he is (autocrat,
bureaucrat, etc.). 3. Change your approach to fit his

management style. 4. Enhance your importance. Young

employees are admonished not to be afraid to be ambitious

about career development. Ambition is harmful only when it

injures others. Guidelines toward enhancing the employee's
delegate authority, avoiding being a "yes" man, etc.

Right Person in Right Job Is Key to Success

Greenburg, Herbert M.; Greenberg, Jeanne

Advertising Age v50n2 56 Jan. 8, 1979 Coden: ADVAAQ

ISSN 0001-8899 Jnrl Code: ADA

Doc Type: JOURNAL PAPER

A recent study of over 350,000 individuals proved beyond

statistical question that four out of five people are in the

wrong job. The result is that potentially good agency account

executives are working as media planners, while potentially

outstanding radio or television station managers are

attempting to sell time. They are performing marginally and

are frustrated, and their companies inevitably reap reduced

profits. Three basic causes can be cited for this:

1. Lack of guidance in schools, 2. Limited education about

real job requirements, and 3. Inappropriate hiring criteria.

There are two major sources of talent for every company:

1. It is possible that the talent can be found within the

company itself, and 2. the talent can be found within the community.

There are three important personality qualities that are

essential regardless of the product or service a person is

selling, and regardless of the level of the position: 1.

empathy, 2. ego-drive, and 3. ego-strength. The key is in

scrapping invalid hiring criteria and replacing them with the

individual's real ability to do the job.

In order to aid individuals who fear added responsibility, the problem in training is to change their social orientation to accept new skills, not to teach technical skills per se. This problem is especially prevalent among women holding traditional female jobs. In order to find out why some women resist promotions, whether training could help in such circumstances, etc., a survey was conducted of 160 women in various occupations. Findings include: 1. Many women appear not to have integrated work fully into their lives. 2. Refusal to accept a promotion was not found to be significantly related to marital status, education, children, race, etc. 3. Most women cite added responsibility as their main reason for not desiring a promotion. 4. Women appear to have some common training needs such as interpersonal behavior skills, time management skills, and development of technical skills. Self-directed educational material is needed to help women rise to the opportunities offered by promotions. Tables References.

Career planning approaches suffer from 3 problems: 1. the question of who should participate, 2. lack of participation by employees, and 3. the fact that career planning is often done independently of organizational requirements. An additional shortcoming of many programs is that they are not viewed from a systems approach. The 3 key components of a career planning system are: 1. personnel assessment-selection of those most likely to participate successfully, 2. personnel assessment-determination by employees of career goals through clear self-concepts, and 3. organization assessment-analysis of the path within the organization by which a particular career goal may be reached. Administration of a career planning system involves the simultaneous activities of plan development and joint goal setting. Human resources practitioners must take a systems perspective, and the individual manager must be willing to take the time and energy to develop his subordinates. Figure. References.

Due to increasing employee interest in career development and affirmative action requirements, many companies are turning to job opening systems. A job opening system outlines procedures and policies for the internal mobility and promotion of personnel. System characteristics include: 1. system development and orientation, 2. a specific and inclusive job opening notice posted or published, which includes applications and a deadline for filing, 3. a limit to the number of jobs an employee can apply for in one year and other specific employee requirement provisions, 4. thorough application review, interview, decision, and rejection notices or calls. A growing number of firms are developing job opening systems as they have recognized that a well-administered program not only decreases turnover, but also increases morale and motivation and consequently, productivity and profits. In all, by maximizing human resources, companies are also maximizing their return-on-investment on each employee. References.

Descriptors: Job openings; Affirmative action; Career advancement; Internal migration; Human resources; Personnel management; Systems

While being a maverick and not adhering to formal channels and procedures can cause problems, if there is a real need to cut through red tape and a manager is sure he can deliver, then the rules should be broken. Care and common sense must be used in breaking the rules, however. Managers may go beyond the requirements of their jobs by: 1. taking the initiative in understanding goals, 2. defining their authority, whether delegated or assigned, and 3. beating the deadlines for performing their jobs. Managers should carefully plan their work and delegate assignments if they find work is piling up too fast, if they have to work nights to catch up, if there is too little time for thinking, if they are pressed in meeting deadlines, etc. Also discussed are suggestions on how to keep good workers, how to get new ideas, and how to increase personal productivity.

Descriptors: Improvements; Guidelines; Managers; Personnel management; Time management; Career advancement

Without a formal program to keep job descriptions and evaluations current, assure incumbent qualifications, and control staffing profiles, it may be difficult to challenge a company's professionals to maintain a high level of competence. A project was begun at NCR Corp., which involved multiplant quality assurance organizations. The purpose of the project was to: 1. raise the expertise level of engineers, 2. provide up-dated job descriptions and evaluations, and 3. develop staffing profiles to guide human resource development. The implementation plan was developed utilizing a participative management strategy, a common implementation date and a 6-month follow-up analysis. Employee reaction was mixed with most seeing the project as a path for "self-improvement." The quality engineering division evidenced noticeable productivity improvements, and employees began to take advantage of educational opportunities. Management endorsed the project. Charts.

Are P.A. Graduates Any Different? A Preliminary Look at Public Personnel Officials

Thompson, Frank J.

Public Personnel Mgmt. v7n3 198-204 May-June 1978

Coden: PPMN CX ISSN 0091-0260 Jnl Code: PPM
Doc Type: JOURNAL PAPER

In a comparison of government personnel officials with public administration, business administration, and other graduate backgrounds in terms of their attitudes toward hiring practices and their accommodation to work in the public sector, graduates of public administration programs are more likely to express a preference for remaining with government, when confronted with an equally well-paying job in private industry. Otherwise, differences among the 3 groups of graduates are minimal. Sociopolitical, organizational, and educational factors help account for the findings. Graduate students, exposed to the socializing forces of public agencies and being indoctrinated to certain values, norms, and behavior patterns, may quickly come to hold common views. Thus, the graduate is reluctant to take employment outside the realm in which he is familiar, accepted, and conditioned. Graduate programs in public administration play an important role in reinforcing student interest in government careers. Tables.

At Cleveland Trust, a major midwest bank, the primary personnel policy seeks the best return for salary and benefits expenditure, while the employee is provided a career path leading to financial reward and growth opportunity. The personnel department has developed a comprehensive system, the Carter Assessment Program, whereby an individual can initiate and pursue a good career match. The company offers a Career Assessment Workshop, complete with booklets, to assess, review, and determine career goals. The program is voluntary, and the employee may continue in the Career Development Program and may even use the Outplacement Service, another service provided at no cost to the employee. To implement these programs successfully, the bank management had to accept critical factors: 1. not to fear loss of good employees whose best interests could be served elsewhere, and 2. belief that there will be no detrimental effects to productivity.

Planning Job Progression for Effective Career Development and Human Resources Management
Wellbank, Harry L.; Hall, Douglas T.; Morgan, Marilyn A.; et al.
Personnel v55n2 54-64 March-Apr. 1978 Coden: PSNLAH
ISSN 0031-5702 Jnl Code: PER
Doc Type: JOURNAL PAPER
Three important problems concerning many career development and human resources management systems are: 1. little connection between career planning and development and management, 2. career development activity in classroom settings being unrelated to actual job needs and experiences, and 3. many systems being unnecessarily complex. Sears, Roebuck is developing a new method of job-based career development and human resources management which may resolve these critical problems. Several principles of career development are proposed using job assignment sequences. 1. The most important influences on career development occur on the job. 2. Different jobs demand the development of different skills. 3. Development occurs only when the employee has not yet developed the skills demanded by a particular job. 4. By identifying a rational sequence of job assignments for employees, the time required for skill development can be reduced. It is important to have an objective method of measuring the skills for various jobs and of putting them together in a way that will stimulate growth in desired directions. If used carefully, this system can be a useful way of increasing the employee's self-direction and career fulfillment. It will also provide a more efficient utilization of the organization's human resources. Chart.

Managers Called Crucial to DPers' Career Plans
Beeler, Jeffry
Computerworld v12n14 9 April 3, 1978 Coden: CMPWAB
ISSN 0010-4841 Jnl Code: CW
Doc Type: JOURNAL PAPER
DP managers must be very careful to supply their subordinates with full knowledge of the career paths available to them. Any attempts at hiding dead-end paths will only frustrate the worker and leave him discontented. The management structure of the company and the structure of the computer profession as a whole should be outlined for the employee. Workers should be encouraged to establish realistic career goals. Once these goals are identified, managers should evaluate a worker's skills and abilities to determine if the goals can be met and, establish a timetable for advancement. Disaffected workers may require reevaluation of their goals and a new charting of career paths. DP managers must work carefully with their workers to guide them through each step toward their goals. Training should be provided to certain personnel to expand their horizons. Lockheed California offers a wide range of compensation for DP specialists who wish to remain in their current positions.

Descriptors: Data processing; PERSONNEL; Career development planning; Careers; PERSONNEL MANAGEMENT
Career development remains a neglected area of concern, stemming from 3 key sources: 1. evaluation of managers on the basis of productivity, not on their development of subordinates, 2. regarding the individual employee's personality as sacrosanct, and 3. giving higher priority to the organization's needs than to employees' goals. The experience of the internal audit division of a large wholesale bank suggests that: 1. careers can be managed more effectively as budgets, forecasts, and market strategies. 2. A different approach to career development is needed. 3. Successful career development can be achieved by unique leadership skills (management) viewing career development as a daily managerial responsibility. Traditionally, 3 major theories which have influenced most corporate development practices are: 1. WASP approach, 2. decision-making approach, and 3. black-box approach. However, an interactive approach focuses on the ongoing environment as the key determinant of career growth. Six "growth inducers" guided the actions of the internal audit division. 1. spread of control, 2. task openness, 3. stream of feedback, 4. buddy system, 5. evaluation by jury, and 6. strategy of the chief. With their continuous stress on developing competence and skill, they are sufficiently general to be applicable to many organizational settings.

Descriptors: Career development planning: INTERACTIVE: PROGRAMS: Innovations; Employees: SUPERVISORS: PERFORMANCE APPRAISAL: TEAMS; PERSONNEL MANAGEMENT

A successful program consists of 3 phases: preworkshop, workshop, and follow-up. It should encourage employees to consider their own concepts of career planning and assess the degree to which they believe the program is appropriate for them. Such a program is designed to ensure a continual flow of personnel to meet the organization's needs. Organizing a successful program must be a joint responsibility of both employee and employer. Charts.

Descriptors: Career development planning: Models; Goals; PERSONNEL MANAGEMENT: Innovations: Workshops

Reasons for implementing a career development program are grouped into 3 categories: 1. increased government involvement and intervention in employer/employee relations, 2. increased employee stress, and 3. technological advances and innovations within organizations. The purpose of a career development program is to match an employee's career aspirations with the opportunities and challenges available within the company. An effective process is comprised of 3 interrelated phases: 1. assessment, 2. transition or individual development, and 3. integration. The design and implementation of a career development program requires a considerable investment of time and money. Failure to meet critical conditions will diminish the program's success probability: 1. Top management must support career development by providing necessary resources and commitment to career development goals. 2. Career development counselors must have authority to ensure employee confidentiality. 3. Introduction of the program and counseling must be gradual. 4. Career development must have an appropriate position within the organizational hierarchy. Employees and businesses need career development programs. Career development activities: 1. increase employees' chances for career success, 2. reduce cost of career frustration, and 3. help management identify and develop employees' potentials. Chart.

Descriptors: Career development planning: PERSONNEL MANAGEMENT: PROCEDURES: Needs analysis: Employees: Goals

More and more employees are rejecting traditional concepts of career development, many of which include: 1. inventory of management manpower resources, 2. skills index, 3. assessment programs, and 4. skills inventory system. Emphasizing the company's needs and neglecting the employees' aspirations is becoming an outdated, failing system of operation. A new direction in career planning, characterized by concern for the employee and enabling employees to control their futures, has: 1. systems to identify motivated skills, 2. life/career development systems, and 3. career action planning. A model career planning program attains 2 goals: 1. It gives employees knowledge about themselves. 2. It leads to increased knowledge to the world of work. It must be tied to organizational realities to provide reasonable alternatives.

- **Career Planning Sparks? Yes. Fire? No.**

A recent phenomenon in management literature has been the formal attention to careers, career guidance, and career development. This trend has been especially appropriate in labor-intensive service industries such as life insurance. What has kindled this interest is the large movement of agents from one company to another. To stop this loss, agencies must start considering people as resources of equal importance to tangibles. Any program of human resources management must involve the individual agency heads, and the quality of the manpower source as well as the quantity must be considered. Supplying the agent with the knowledge of company and agency objectives and strategies helps the agent to see future potential and opportunities. The implementation of a Home Office Career Program should include career conference activities for personal need and goal identification and provide assistance, assessment, and continuous career counseling.

- **Results of a questionnaire mailed to 70 top human resources people were that, with 32 responses, 25 had no formal career planning program in their organizations and did. Although some indicated that they planned such program implementation, others had no present plans at all. However, most companies contacted had either counseling programs that include career aspects or provided career information. Others provide training, tuition refund programs, skills bank, and job posting programs and generally supported and encouraged their employees. Thus, despite the lack of formal efforts, something is being done to promote career planning. There are indications that more will be happening in the future. As this survey was general and limited, results were difficult to analyze. It is possible that the career planning movement may be enforced by the government if present forces and trends continue. Companies instituting formal programs, while affecting them initially expensive and time-consuming, may benefit in the long run by carefully molding confident, efficient, dedicated employees. It seems that few companies totally ignore employee efforts and ambitions, and all showed, in varying degrees of interest, that some effort toward career planning had been made.**

Descriptive terms: Career development, planning, Counseling, Management, Personnel, Counseling, Performance, Planning.
The Social Security Administration tries to provide its 80,000 employees with services aimed at helping them with self-development and career advancement. The human resources team of administration psychologists constructed a work-preference schedule to be used in career planning. Development of the interest inventory was in 3 phases: 1. a content validation phase in which a pool of tentative items were developed through both on-site observations and employee discussions, 2. a scale construction phase in which an experimental form of the inventory was given to 700 employees to scale and assign each item to one of 12 job areas, and 3. a final norming phase in which the participant's likes, dislikes, and unsure responses were quantified. The interest inventory, called the "SSA Career Interest Profile," is used as an aid in career counseling. Charts.

There are 5 fulcrum requirements of an effective career management system. 1. Time-The organization must be prepared to free people's time from operating matters so that they may work in task forces, study groups, and data analysis projects. 2. Budget-A budget for the study builds commitment to develop a strong career management system. 3. Climate-If the climate is one of mutual concern and trust, any career management effort should work. 4. New roles-All parties must be prepared for the new roles that they will play. 5. Communications-Users of the system must understand the various elements. The system's programs and services are designed to increase communications between employees and the organization and may include career intentions surveys, career information systems, career monitoring systems, flexible career pathing, performance appraisal, potentials assessment, career planning, or career development. References. Chart.
PEOPLE ARE, OR SHOULD BE, THE MOST VALUED ASSET OF ANY ORGANIZATION, AND IF THEIR CAREERS ARE MANAGED PROPERLY, THEIR VALUE SHOULD INCREASE. EFFECTIVE CAREER MANAGEMENT REQUIRE THAT THE MANY PERSONNEL PROGRAMS THAT CAN AND SHOULD PLAY A PART IN THIS IMPORTANT PROCESS BE FOCUSED TO DO SO. NORMALLY THE ONLY ASPECT OF CAREER MANAGEMENT THAT IS CONSIDERED IS TRAINING, A NEW METHODOLOGY OF DIFFERENTIAL PERSONAL ATTRIBUTES THAT CAN BE USED TO MAKE CAREER MANAGEMENT WORK IS SUGGESTED. A LALT OF PERSONAL ATTRIBUTES OF EACH JOB SERIES IS ESTABLISHED. THIS LIST BECOMES THE INTEGRATING FACTOR OF THE VARIOUS ASPECTS OF CAREER MANAGEMENT. MANY OF THE FUNCTIONS OF PERSONNEL-MANAGEMENT SUCH AS WRITING POSITION DESCRIPTIONS, SELECTING, PROMOTING, OR TRANSFERRING EMPLOYEES, DETERMINING TRAINING NEEDS, CONDUCTING PERFORMANCE REVIEWS, COUNSELING ON CAREER-DEVELOPMENT, AND DEVISING COMPETENCE TESTING, SHOULD AND COULD USE THE SAME LIST OF ATTRIBUTES. SELF-MOTIVATED PERSONAL CAREER-PLANNING - A BREAKTHROUGH IN HUMAN-RESOURCE MANAGEMENT

WALTER, VERNE
PERSONNEL JRNAL V55 N4 P162-167,185 APRIL 1976 Coden: PEUOAA ISSN 0031-5745 Jrnal Code: PEJ
Doc Type: JOURNAL PAPER

SELF-MOTIVATED PERSONAL CAREER-PLANNING IS BASED ON THE BELIEF THAT PEOPLE MUST WORK THROUGH THE COMPLEXITY OF CHARTING THEIR OWN CAREERS, RATHER THAN DEPENDING ON SUPERIORS OR EXPERTS FOR ASSESSMENT AND DIRECTION. IT IS A PROCESS OF SELF-ASSESSMENT AND GOAL-SETTING, CONSISTING OF CAREER-ASSESSMENT AND PERSONAL PLANNING EXPERIENCES FOR MANAGEMENT FACILITATORS AND EMPLOYEE PLANNERS, WITH BENEFITS FOR BOTH. THE ORGANIZATION BENEFITS BY DISCOVERY OF PERSONS WITH CAREER POTENTIAL, DEVELOPMENT OF A HIGHLY MOTIVATED WORK-FORCE BY INTEGRATION OF ORGANIZATIONAL GOALS, INCREASED EFFECTIVENESS THROUGH THE OPTIMUM USE OF PEOPLE, AND ENHANCED PARTICIPATION AND INTERACTION OF PEOPLE. THE EMPLOYEE PLANNERS BENEFIT BY LEARNING TO IDENTIFY PERSONAL STRENGTHS AND TO MAKE REALISTIC CAREER PLANS, LEARNING HOW TO FOLLOW THROUGH ON CAREER OPPORTUNITIES, AND INCREASING VISIBILITY FOR PROMOTION EXHIBITS.

SELF-MOTIVATED PERSONAL CAREER-PLANNING - A BREAKTHROUGH IN HUMAN-RESOURCE MANAGEMENT - PART I

WALTER, V.
Doc Type: JOURNAL PAPER

MILLIONS OF PEOPLE IN THE WORK-FORCE EXPERIENCE SOME DEGREE OF ALIENATION, ANXIETY, AND CONFUSION ABOUT DIRECTING THEIR CAREERS IN CONSTRUCTIVE AND PERSONALLY GRATIFYING WAYS. EMPLOYEES WANT TO FEEL THAT THROUGH THEIR WORK THEY CAN DEVELOP THE BEST IN THEM AND REALIZE THEIR POTENTIAL. YET THERE ARE MANY BARRIERS BLOCKING THE DISCOVERY AND DEVELOPMENT OF PRODUCTIVE TALENT. MANAGERS HAVE A GREAT DEGREE OF INFLUENCE OVER THE QUALITY OF TALENT THAT EMERGES IN THEIR EMPLOYEES, AND YET MANY STILL FUNCTION AS THOUGH RULES AND REGULATIONS TAKE PRECEDENCE OVER EMPLOYEE NEEDS EXPETATIONS. EMPLOYEES CAN ERECT BARRIERS TO THEIR OWN DEVELOPMENT, ALSO, BY SUCH MEANS AS AVOIDING SELF KNOWLEDGE TO AVOID RESPONSIBILITY, BY COMPLACENCY, AND BY SUBMITTING TO THE ILLUSION OF SUCCESS. SELF-MOTIVATED PERSONAL CAREER-PLANNING CAN OFFER AN IMPETUS TO THE CREATION OF ON GOING SELF-REALIZATION AND GROWTH FOR THE EMPLOYEE NOT REALIZING HIS POTENTIAL.

A SYSTEM IS DESCRIBED FOR THE PERIODIC MEASUREMENT AND REPORTING OF THE VALUE OF PEOPLE IN A PROFESSIONAL ORGANIZATION. THE FOLLOWING ARE FOUR BASIC MANAGEMENT USES OF THE INFORMATION PROVIDED BY THE HRA SYSTEM - EVALUATION OF MANAGEMENT'S DEVELOPMENT OF THE FIRM'S HUMAN RESOURCES, INDIVIDUAL CAREER PLANNING, HUMAN-RESOURCES PLANNING AND EVALUATING THE EXPECTED CONTRIBUTION OF DIFFERENT SERVICE STATES TO THE FIRM, AND DIFFERENT OFFICES TO THE FIRM IN DEVELOPING HUMAN RESOURCES. THE FIRM'S HRA SYSTEM DESCRIBED SHOULD BE OF INTEREST TO CPA FIRMS, ESPECIALLY LARGER ORGANIZATIONS. IN ADDITION, THE EXPERIENCE GAINED IN DEVELOPING HRA FOR A CPA FIRM'S NEEDS MAY SUGGEST APPLICATIONS TO OTHER TYPES OF ORGANIZATIONS, ESPECIALLY SERVICE FIRMS. THUS, CPA FIRMS SHOULD VIEW HRA FOR ITS POSSIBILITIES IN IMPROVING THEIR OWN MANAGEMENT AND AS A POTENTIAL PRODUCT FOR CLIENTS USE. CHARTS

THE EXPANDING ROLE OF THE PERSONNEL FUNCTION

FOULKES, FRED

HARVARD BUSINESS REVIEW V53 N2 P71-84 MAR.-APRIL 1975

Descriptors: ACTIVITY; ATTENTION; ATTITUDE SURVEYS; BENEFITS; BEHAVIOR; CAREER DEVELOPMENT PLANNING; CAREERS; DESIGNS; DEVELOPMENT; DIRECTORS; EMPLOYEE; EMPLOYEES; FUNCTIONS; HIGH; HUMAN RESOURCES; MANAGERS; MOTIVATION; NEW; PERSONNEL; PERSONNEL MANAGEMENT; POWER; PROBLEMS; RESOURCES; ROLES; SURVEYS; WAGES & SALARIES; WORK; WORKWEEKS; YEARS
PERSONNEL MANAGERS SUFFER FROM ACUTE FRUSTRATION IN CARRYING OUT THEIR ROLES DURING PERIODS OF PLANNED CHANGE. FRUSTRATIONS ARISE FROM LACK OF INFLUENCE WITH TOP-MANAGEMENT AND LINE-MANAGERS, FROM THE CONFLICT-OF-INTERESTS INHERENT IN THE PERSONNEL-FUNCTION AND FROM LACK OF ADEQUATE TECHNIQUES TO COPE WITH UNSTABLE SITUATIONS AND WITH INDIVIDUAL EMPLOYEES NEEDING SPECIAL HELP. WELL-TRIED PERSONNEL-PROCEDURES LOSE THEIR 'CUTTING EDGE' IN CONDITIONS OF CHANGE BECAUSE OF THE METHODS THEMSELVES, TECHNOLOGIES AND ORGANIZATIONAL-STRUCTURE. PERSONNEL MANAGERS WILL NEED TO LEARN ABOUT OVERHAULING EXISTING TECHNOLOGIES AND DEVISING NEW ONES. THEY WILL NEED TO LEARN ABOUT RECENT ADVANCES IN GROUP-METHODS, COUNSELING AND CAREER DEVELOPMENT, AND DEVELOP BETTER PRACTICAL TOOLS OF ANALYSIS AND DIAGNOSIS. THEY WILL LEARN TO IMPROVISE, TO SURVIVE AND OPERATE SUCCESSFULLY IN CONDITIONS OF UNCERTAINTY.

THE PERSONNEL MANAGER'S FRONT-LINE ROLE IN THE MARKETING FIELD

THE FRONT-LINE PERSONNEL MANAGER SHOULD DEVELOP HIS SKILLS IN CONSULTING. HE SHOULD BECOME A BUFFER, AN INTERPRETER, AN EDUCATOR, AN INNOVATOR OF POLICY, AND LAST OF ALL A MANAGER. MARKETING ORGANIZATIONS ALREADY HAVE A SIGNIFICANT NUMBER OF THEM AMONG THE BENEFITS TO AN ORGANIZATION THAT TRIPS THE FRONT-LINE PERSONNEL APPROACH ARE THESE CAREER DEVELOPMENT FOR FIELD PEOPLE AND FOR PERSONNEL ITSELF, POLICY RENEWAL FOR THE HOME OFFICE THROUGH AN UNDERSTANDING OF WHAT REALLY GOES ON OUT THERE, AND AN APPRECIATION IN THE BRANCH OFFICES OF A 'PERSONAL' PERSONNEL APPROACH FROM HEADQUARTERS. THE COMPANY THAT SHOWS AWAY ITS PERSONNEL BINOCULARS IN FAVOR OF A FRONT-LINE PERSONNEL APPROACH WILL DISCOVER MORE.

FULL UTILIZATION OF WOMEN IN EMPLOYMENT. THE PROBLEM AND AN ACTION PROGRAM

RECENT FEDERAL LAWS AND ENFORCEMENT AGENCIES HAVE PLACED PRESSURE ON PERSONNEL MANAGERS TO COME UP WITH INNOVATIVE PROGRAMS FOR HIRING AND PROMOTING WOMEN. ORGANIZATIONS ARE FEELING THEIR WAY AND NEED SOME GUIDELINES TO PLAN THE SPECIFIC DETAILS IN IMPLEMENTING A PROGRAM. THE FOCUS HAS BEEN TWO-FOLD - TO ELIMINATE EARLY SOCIAL-ROLE STEREOTYPING THAT RESULTS IN NONAGGRESSIVE NONACHIEVING ROLES FOR WOMEN. AND TO ELIMINATE JOB DISCRIMINATION. CAREER PLANNING IS A LONG-TERM SOLUTION. THE SHORTER TERM PROGRESS WILL COME THROUGH FIRMS, GOVERNMENT AGENCIES AND OTHER ORGANIZATIONS. AN ACTION PROGRAM THAT LOOKS AT THE TOTAL PERSONNEL SYSTEM IS DESCRIBED AND A CHECKLIST WHICH HIGHLIGHTS THE NECESSARY STEPS AND PRIORITIES IN ANY PLAN IS INCLUDED. D. D.

EMPHASIZING THE CAREER PLANNING PROCESS

AN IMPLICIT OBJECTIVE OF HUMAN-RESOURCE MANAGEMENT IS TO INTEGRATE INDIVIDUAL GOALS WITH ORGANIZATIONAL GOALS. CENTRAL TO THIS INTEGRATION IS CAREER PLANNING. PROVIDING BANK EMPLOYEES AN OPPORTUNITY TO PLAN SIGNIFICANT SEGMENTS OF THEIR CAREERS WITH ORGANIZATION SUPPORT AND GUIDANCE CAN LEAD TO GREAT SELF-ACTUALIZATION FOR INDIVIDUALS AND MORE EFFECTIVE USE OF TALENTS FOR THE ORGANIZATION. RELATIVELY FEW ORGANIZATIONS ARE PROVIDING THESE OPPORTUNITIES. PROGRAMS SUCH AS JOB, PROGRAM PLANNING AND BUDGETING, LONG-RANGE PLANNING, ETC., HAVE STRESSED THE NEED TO GIVE DIRECTLY AND PREDICTABILITY. A PLANNED CAREER PLANNING PROGRAM IS BASED ON THE PREMISE THAT THE EMPLOYEE KNOWS WHERE HE IS GOING. HIS POTENTIAL TRIAL FOR GETTING THERE AND HOW TO GO ABOUT ACHIEVING PER-SONAL LONG-RANGE OBJECTIVES. S. S.

AN INTEGRATED APPROACH TO HUMAN RESOURCE MANAGEMENT.

PERNICK, R.

GAO REVIEW, VOL. 16, NO. 2, SPRING 1981, P. 71-78.BIBLIOG. 20, JOURNAL.

CHANGES IN LAWS AND SOCIETY GREATLY AFFECT THE WORKFORCE AND PERSONNEL MANAGEMENT POLICIES. HUMAN RESOURCE MANAGEMENT (HRM) IS A MANAGERIAL ATTITUDE SEEKING TO IMPROVE EMPLOYEE PRODUCTIVITY AND ENHANCE THE QUALITATIVE ASPECTS OF THE WORKPLACE. THE HRM SYSTEM OF THE GOVERNMENT ACCOUNTING OFFICE (GAO) IS DESCRIBED. IT SEeks TO APPRAISE JOB SATISFACTION, CAREER PATHS, HIRING PRACTICES, AND PROPER STAFFING. THE VALUE OF A SYSTEMATIC, COMPREHENSIVE HRM POLICY IS RECOGNIZED. AN OPERATIONAL MODEL GENERALLY ADDRESSES THE NEEDS OF AN ORGANIZATION IS PRESENTED. A CONSOLIDATED DATA BASE AIDS IN FULLER EVALUATION AND FEEDBACK. AN HRM PROGRAM IS EVALUATED ON ITS LONG RUN CONTRIBUTION TO ORGANIZATIONAL EFFECTIVENESS IN MEETING PRESENT AND FUTURE GOALS.

PREPARING FOR EXECUTIVE POSITION INTERVIEWS: QUESTIONS THE INTERVIEWER MIGHT ASK - OR BE ASKED.
GINSBURG, S. O.
PERSONNEL, VOL. 57, NO. 4, JULY/AUG. 1980, P. 31-36., JOURNAL.
Adequate preparation is the key to a successful interview. Both the interviewer and the candidate being interviewed must know the appropriate questions and answers. The preparation of these questions takes a substantial amount of time but this investment of time is well worth the effort. The interviewer will get an employee who fits in with company policy and ioicals; the candidate may decide to accept a position that could alter the course of his career. A list of possible questions for both the interviewer and candidate is included.

THE ANNUAL HUMAN RESOURCE REVIEW.
VOSBURGH, R. M.
PERSONNEL, VOL. 59, NO. 10, OCT. 1980, P. 830-837., JOURNAL.
A systems approach to career planning is outlined. An annual review of human resources is given in a formal procedure. This approach integrates career planning with human resource planning, training, and development, and the selection and placement system. A flowchart is presented which shows the career-planning steps involving self-analysis of work history, likes, dislikes, successes and failures. This approach is designed to be continuous, but should involve one annual meeting for review. Specific questions for review are given.
Descriptors: HUMAN RESOURCE DEVELOPMENT; PERSONNEL MANAGEMENT; CAREER DEVELOPMENT; PLANNING; CAREER PATH; TRAINING AND DEVELOPMENT; 0007; 0458; 0110; 0251; 0115; 0279; 0007; 0543

HELP FOR THE FIRED STAFF.
BUTLER, F.
EXECUTIVE, VOL. 22, NO. 4, APRIL 1980, P. 57,58+. JOURNAL.
The advantages of outplacement or relocation counseling for individuals and firms are discussed. Today, dismissal of many staff people or even plant closings are increasing, and certain steps are necessary for a firm to escape censure by its various critics. The steps to be followed include presenting clear reasons for the cutback, a minimum of two months' lead time, outplacement consultants, severance package, an in-house relocation facility and group workshop.

THE DYNAMICS OF THE GROUP OUTPLACEMENT WORKSHOP.
BROUSSARD, W. J.; OELARGEY, R. J.
PERSONNEL, VOL. 58, NO. 12, DEC. 1979, P. 855-857+. JOURNAL.
Outplacement counseling is gaining a legitimate place in procedures when an employee or a group of employees is let go as a result of job cut backs. The ingredients for a successful outplacement workshop are discussed with emphasis on the abilities of the leader. The purpose of the workshop is to bring the employee to the point of being able to constructively look for a job armed with confidence and good techniques.

FUTURE MANAGERS TAKE A LARGE BYTE.

THE FUTURE PROFESSIONAL MANAGER IS INCREASINGLY SEEKING TRAINING IN USE OF SOME COMPUTERS. MANY BUSINESS SCHOOLS INCLUDE THIS TRAINING IN THEIR MASTER OF BUSINESS ADMINISTRATION DEGREE PROGRAM. THE USE OF COMPUTER TECHNOLOGY CAN AID THE AMBITIOUS YOUNG EXECUTIVE.

Descriptors: BUSINESS SCHOOLS; CAREER PATH; COMPUTER SERVICES; EXECUTIVE; HUMAN RESOURCE DEVELOPMENT; MANAGEMENT TOOLS; SURVEY; TEACHING; 0751; 0110; 0122; 0157; 0007; 0797; 0368

IN THE LAST DECADE THE NUMBER OF DUAL CAREER FAMILIES (BOTH HUSBAND AND WIFE WORKING) HAS INCREASED SIGNIFICANTLY. THE CONSEQUENCES THAT DUAL CAREER MARRIAGES HAVE ON CHILDREN AND IN GENERAL ON FAMILY RELATIONSHIPS ARE EXAMINED. THE IMPACT OF THE HUSBAND'S ATTITUDE ON THE WIFE'S SUCCESS IS ANALYZED. DAUGHTERS OF WORKING WOMEN ARE FOUND TO BE INDEPENDENT AND SELF-SUFFICIENT WHEREAS SONS TEND TO BE MORE OBEDIENT.

Descriptors: BUSINESS SCHOOLS; CAREER DEVELOPMENT; CAREER PATH; DECISION MAKING; EMPLOYMENT; HUMAN RESOURCE DEVELOPMENT; LABOR MARKET; MANAGEMENT; ORGANIZATIONAL BEHAVIOR; WOMEN IN BUSINESS; 0110; 0110; 0007; 0609; 0605; 0348; 0324

TOWARDS EQUALITY IN WORKING RELATIONSHIPS.

UNFAVORABLE ATTITUDES CONCERNING FEMALE EQUALITY BY THE MALE

SUB-CULTURE HAVE HAD A NEGATIVE IMPACT ON WOMEN IN MANAGERIAL SITUATIONS. LEGISLATION IS NOT ABLE TO EFFECTIVELY REMOVE DISCRIMINATION AT ALL LEVELS OF EMPLOYMENT. THERE IS A NEED FOR IMPROVED TRAINING FOR THE WOMAN ENTERING A FORMERLY MALE-DOMINATED WORK AREA.

THE MANAGERIAL CAREER.
THJAGGER, T.
MANAGEMENT TODAY, DEC. 1978, P. 55-57.
Most managers have carefully planned their career paths with change in job being either lateral, hierarchical, or radial. A crucial or most significant career move could be identified in most employment histories of managers interviewed.

Descriptors: AGE; CAREER DEVELOPMENT; CAREER PATH; HUMAN RESOURCE DEVELOPMENT; JOB ADVANCEMENT; JOB ANALYSIS; JOB PERFORMANCE; JOB TRAINING; MANAGEMENT; MANAGEMENT TRAINING; MANAGER BEHAVIOR; 0831; 0110; 0110; 0007; 0454; 0055; 0527; 0273; 0605; 0233; 0856
TAKING OFF FOR THE TOP...HOW MUCH ACCELERATION FOR CAREER SUCCESS?

BAILYN, L.

THE CHANGES IN THE SOCIETY IN WORK/FAMILY PATTERNS, WITH WOMEN ENTERING BUSINESS AT ALL LEVELS, NECESSITATE CHANGES IN THE CAREER PATH. TWO CAREER PATH MODELS, CHALLENGE/SUCCESS AND APPRENTICESHIP, ARE DISCUSSED IN DETAIL.

Descriptors: CAREER PATH; HUMAN RESOURCE DEVELOPMENT; MATERNITY LEAVE; NEPOTISM; SOCIAL ISSUES; WOMEN IN BUSINESS

IS THE GRASS REALLY GREENER IN CORPORATELAND?

MEISLER, L.

INSTITUTIONAL INVESTOR, JAN. 1979, P. 127-128.

THE DIFFERENCES, IN TERMS OF CAREER FULFILLMENT, OF BEING EMPLOYED AS AN ANALYST BY A BROKERAGE FIRM OR BY AN INDUSTRY FIRM ARE EXPLORED. THE ADJUSTMENTS REQUIRED AND THE SATISFACTION EXPERIENCED WHEN TRANSFERRING FROM WALL STREET TO CORPORATE LIFE IS DETAILED.

Descriptors: CAREER DEVELOPMENT; CAREER PATH; HUMAN BEHAVIOR; HUMAN RESOURCE DEVELOPMENT; JOB SATISFACTION

MUCH ADD ABOUT MENTORS.

ROCHE, G.R.

HARVARD BUSINESS REVIEW, VOL. 57, NO. 1, JAN.-FEB. 1979, P. 14-28, BIBLIO. 8

THOSE TOP EXECUTIVES WHO HAVE HAD A MENTOR TEND TO HAVE GREATER SATISFACTION IN THEIR WORK, AND STARTED TO EARN HIGHER SALARIES AT AN EARLIER POINT IN THEIR CAREERS. YOUNGER EXECUTIVES TEND TO HAVE MENTORS. MAYBE THEY SEARCH FOR A MENTOR FROM WHOM THEY CAN GAIN BENEFIT FROM THEIR EXPERIENCE. MANY CHARTS ARE INCLUDED FROM THE RESEARCH CONDUCTED BY THE AUTHOR.

Descriptors: CAREER DEVELOPMENT; CAREER PATH; EXECUTIVE; HUMAN RESOURCE DEVELOPMENT; MANAGEMENT; MANAGEMENT DEVELOPMENT; MANAGEMENT STYLE; MANAGEMENT TOOLS; 0011; 0010; 0157; 0007; 0605; 0588; 0856; 0797

A CAREER PREPARATION CLASS FOR BUSINESS SCHOOL UNDERGRADUATES.

HILGERT, R.L.

COLLEGIATE NEWS AND VIEWS, VOL. 32, NO. 2, WINTER 1978-79, P. 203-204

COURSE IN CAREER PREPARATION HAS BEEN SUCCESSFUL IN PRESENTING INFORMATION TO STUDENTS IN AN ORGANIZED, SYSTEMATIC WAY. RESUME PREPARATION, INTERVIEW SKILL, EMPLOYMENT OPPORTUNITY EVALUATION, CAREER OBJECTIVES AND JOB SEARCH TECHNIQUES ARE INCLUDED.

Descriptors: BUSINESS SCHOOLS; CAREER DEVELOPMENT; CAREER PATH; EVALUATION; HUMAN RESOURCE DEVELOPMENT; INTERVIEW TECHNIQUE; JOB HUNTING; STUDENT; TEACHING; TRAINING AND DEVELOPMENT; 0751; 0110; 0110; 0249; 0007; 0513; 0891; 0954; 0906; 0273

THE NEXT TEN YEARS.

DIBBEN, M.

THE ACCOUNTANT, VOL. 180, NO. 5426, JAN. 25, 1979, P. 103-104.

MALE ATTITUDES TOWARD PROFESSIONAL WOMEN WILL HAVE TO CHANGE BEFORE TRUE EQUALITY FOR WOMEN IS ACHIEVED. IF WOMEN TAKE TIME OFF FROM WORK TO RAISE FAMILIES, IT WILL CONTINUE TO BE HARDER FOR THEM TO RECEIVE THE TRAINING GIVEN TO MEN.

Descriptors: CAREER DEVELOPMENT; CAREER PATH; COMPETITION; DISCRIMINATION; EQUAL RIGHTS; HUMAN BEHAVIOR; HUMAN RESOURCE DEVELOPMENT; PROMOTION; PSYCHOLOGY; SOCIAL CHANGE; WOMEN IN BUSINESS; 0011; 0010; 0498; 0485; 0476; 0198; 0007; 0930; 0454; 0080; 0950; 0324
HEALTH ASPECTS OF THE WOMAN EXECUTIVE.
Barnes, J.
Women executives have health records as good as or better than their male counterparts. Those who have achieved the professional status through education and motivation are likely to be healthy individuals at the outset.
Descriptors: career path; discrimination; education; executive; health; health insurance; human resource development; medical; social change; stress; women in business.

WHY SO FEW?
Paddison, L.
Women still are in the lower echelon of occupations while few reach executive levels for subtle and poorly understood reasons. Merely removing discrimination will not provide equal opportunity without effectively utilizing women's education and potential.
Descriptors: career development; career path; discrimination; human resource development; job advancement; job qualifications; labor force; management; personnel management; women in business.

WOMEN’S EDUCATION - A SOCIAL REVOLUTION.
McLauchlan, M.
The founder of North London Collegiate School, Frances Buss pioneered equal educational and professional opportunities for women. Our rapidly changing society requires that women today learn skills with discipline and training in math, science, modern language and English.
Descriptors: career development; career path; civil service; colleges and universities; education; equal rights; human resource development; social change; social responsibility; women.

RECRUITING THE MANAGERIAL WOMAN.
Von Seldeneck, J.M.
A problem for women is one of upward mobility and holding career momentum in that direction. A profile is given of today's woman manager. Some recruitment problems are identified.
Descriptors: career path; human resource development; job advancement; management; recruitment; women in business.
SELECTION OF A TOP EXECUTIVE: STEADY PROGRESS AND ORGANIZATIONAL STABILITY MAY BE BETTER ACHIEVED BY A SLOWER MOVING, QUIET BUT EFFICIENT LEADER."

Descriptors: CAREER DEVELOPMENT; CAREER PATH; HUMAN RESOURCE DEVELOPMENT; MANAGEMENT DEVELOPMENT; MANAGER BEHAVIOR; ORGANIZATIONAL DEVELOPMENT; PERSONNEL MANAGEMENT; PROMOTION; 0110; 0110; 0007; 0608; 0605; 0588; 0856; 0686; 0458; 0454

PLANNING JOB PROGRESSION FOR EFFECTIVE CAREER DEVELOPMENT AND HUMAN RESOURCES MANAGEMENT.

Wellbank, H.L.; Hall, D.T.; Morgan, M.A.; Hamner, W.C.

Job evaluation system to guide employees through their career decisions is described. Implementation methods are also discussed.

Descriptors: Career Development; Career Path; Employee Behavior; Human Resource Development; Job Classification; Job Evaluation; Management; Organizational Behavior; Organizational Development; Planning; 0110; 0110; 0958; 0007; 0055; 0929; 0605; 0938; 0686; 0251

TAKING THE MYSTERY OUT OF CAREER DEVELOPMENT.

Fazel. M.

Traditional career development programs are compared to that of a bank where career development is implemented via superior-subordinate interactions.

Descriptors: Bank; Career Development; Career Path; Human Resource Development; Internal Audit; Management; Management Development; Management Strategy; Manager Behavior; Organizational Development; Organizational Behavior; Superior Subordinate Relationship; 0001; 0110; 0110; 0007; 0468; 0605; 0588; 0933; 0856; 0686; 0938; 0558

A MODEL CAREER PLANNING PROGRAM.

Benson, P.G.; Thornton, G.C. III

A framework for a successful career planning program is developed. The need for employee and organization cooperation noted.

Descriptors: Career Development; Career Path; Employee Behavior; Human Resource Development; Management; Management Development; Management Policy; Organizational Development; Organizational Behavior; 0110; 0110; 0958; 0007; 0605; 0588; 0933; 0686; 0938

CAREER PLANNING: SPARKS? YES. FIRE? NO.

Miller, E.C.

A survey concerning attitudes of corporations towards career planning reveal a consensus on the uses of career planning but the general absence of such programs.

Descriptors: Career Development; Career Path; Corporate Behavior; Employee Behavior; Human Resource Development; Management; Management Policy; Organizational Development; Organizational Behavior; 0110; 0110; 0127; 0958; 0007; 0605; 0933; 0686; 0938
SYSTEMS CAREER PATH DEVELOPMENT.

IOEMA, T.H.

INFORMATION SYSTEMS CAREER PATH DEVELOPMENT IS DISCUSSED IN TERMS OF CAREER PATH MEASUREMENTS AND GENERAL REQUIREMENTS FOR SYSTEMS POSITIONS.

Descriptors: CAREER DEVELOPMENT; CAREER PATH; DATA PROCESSING; HUMAN RESOURCE DEVELOPMENT; SYSTEMS; 0110; 0110; 0495; 0007; 0031

COMMUTING: A SOLUTION FOR TWO-CAREER COUPLES.

ANON

A BUSINESS WEEK SURVEY FOUND THAT THE INCIDENCE OF COUPLES WHO LIVE IN DIFFERENT CITIES TO PURSUE SEPARATE CAREERS IS RISING. THE ARRANGEMENT OFTEN ALLOWS THE COUPLES TO DEDICATE MORE TIME TO THEIR JOBS. HOWEVER, SUCH AN ARRANGEMENT MAKES A MARRIAGE DIFFICULT TO MAINTAIN, AND CAN OFTEN PRESENT CHILD-REARING PROBLEMS.
