The materials in this manual are designed to help workshop leaders prepare for and present a workshop for school board members on the variety of variables that must be considered in the course of developing board policy. In the course of the workshop, board members are encouraged to develop stronger self-confidence as policy makers and increased understanding of their roles and the procedures involved in the policy-making process. The manual consists of six sections: an introduction; three sections on planning, presenting, and evaluating the workshop; a selection of resource materials; and a booklet for workshop participants. The discussion of planning contains information on the focus and scope of the workshop, an overview of workshop presentation, the grouping of participants, and familiarization with resource materials and equipment. The presentation section includes sequential descriptions of workshop activities, leader focuses for each activity, and instructions for conducting the activities. The resource materials provided include a paper on policy formation, a reprint of a published lecture on policy-making in the public sector, and masters from which transparencies for projection at the workshop can be reproduced.

(Author/PGD)
Policy Development

Keys to School Boardsmanship

A Program of Continuing Education for School Board Members

Northwest Regional Educational Laboratory
300 S.W. Sixth Avenue - Portland, Oregon 97204
These materials have been produced as part of "Keys to School Boardsmanship," a project to develop new materials in boardsmanship education for local school board members. It is a joint effort among:

- The Association of Alaska School Boards
- The Idaho School Boards Association
- The Montana School Boards Association
- The Oregon School Boards Association
- The Washington State School Directors' Association
- The National School Boards Association
- The Northwest Regional Educational Laboratory

Copying or duplication by any means (print, electronic, etc.) is prohibited, except by written authorization by the National School Boards Association.

These works were developed under Contract #400-80-0105 with the National Institute of Education, United States Department of Education. However, the content does not necessarily reflect the position or policy of that agency, and no official endorsement of these materials should be inferred.
Prologue:

This manual is one in a series of thirteen developed by the Northwest Regional Educational Laboratory (NWREL) as part of the "Keys to School Boardsmanship" project.

The workshop programs resulting from the project are intended to help strengthen local school boards through continuing education.

The workshops in the series have been thoroughly tested by NWREL staff and by the staff of state school board associations in Alaska, Idaho, Montana, Oregon and Washington. These programs have been found to be extremely useful as tools for strengthening continuing education services to school board members.

The "Keys to School Boardsmanship" materials are now being published and distributed by the National School Boards Association (NSBA). In addition, the NSBA is developing a national center designed to assist state associations to make the best use of the material.

Thirteen manuals in the series now available from NSBA include:

- Board/Administrator Relations
- Building Bridges: School Board Political Roles
- Communicating with the Community
- Conflict: Alternatives to Blowing a Fuse
- Effective School Board Meetings
- The Educational Management Team
- Policy Development
- Policy is Power
- Program Evaluation: School Board Roles
- What Do School Boards Do?
- School Board Self-Assessment
- School Improvement: A Tune the School Board Can Play
- Teamwork: The Board and Superintendent in Action
SECTION 1: INTRODUCTION

Purpose and Rationale

Every so often school board members have an opportunity to chart a new direction or confirm an existing direction in the face of one or more clear alternatives. The board decides to refuse all federal money and/or projects. A transportation company is given the district's transportation business, even though it will cost more. Or the board directs, through policy, that all building principals will spend 60 percent of their time in the classroom supervising instruction.

"These events, in which new courses are set, are the most important class of events in human affairs." They are key decisions that shape destiny. They are the most complex and demanding events with regard to moral, social, psychological or intellectual problems. They are the "key" policy problems.

If there is any one generalization about the state of these policy problems, it is that they are the most complex problems in human affairs. Not only are these policy issues affected by individuals, they are affected by groups of individuals, organizations and groups of organizations.

The purpose of the Policy Development workshop is to introduce the participants to some of the many variables that must be considered in the policy development cycle.

The Policy Development workshop is developed around nine learning activities of instruction. Each activity contains a variety of instructional and experiential activities that are designed to help the participant achieve specific objectives.

Goals

The goal of the Policy Development workshop is to stimulate a discussion and conceptualization of a systematic procedure for management through a cycle of policy development.

General Goals for the Policy Development Workshop

1. To present the individuals on the school board as sincere, responsive people, each with his or her unique interests and values

2. To present the school board chairman as active and in charge

3. To present the members of the board as active participating members, representing a variety of social, political and economic viewpoints

4. To present the superintendent in an appropriate role as an advisor working for the board of education
5. To provide a filmed teaching tool and workshop materials that can be used with a minimum amount of training

6. To provide an instructional program that can be adapted to different time frames ranging from 30 minutes to 6 hours

Objectives

The objectives of the Policy Development workshop are as follows:

1. The participants will increase their knowledge of the procedures that are involved in developing a policy before it is adopted by the board.

2. The participants will demonstrate an increased knowledge of the school board's role after a policy is adopted.

3. The participants will increase their knowledge of the reasons why a school board needs to have policy.

4. The attitudes of school board members in the workshop will be more favorably disposed about the value and worth of school policy.

5. The attitudes of school board members in the workshop will improve in value and worth about their individual contribution to the school board.

6. The attitudes of school board members in the workshop will be more positive about the worth and value of the contribution to the school board of their individual needs and beliefs.

One-Hour Workshop

An interpretation of the pre-posttest data for the one-hour policy workshop indicates that the participants can be expected to have significant gains of knowledge based on objectives 1, 2 and 3. There is also a trend toward a positive shift in attitudes as listed in workshop objectives 4, 5 and 6. However, the attitudinal shift in the one-hour workshop was not as great as the gain in knowledge.

Two-Hour Workshop

An examination of the pre-posttest data from two-hour workshops suggests that the participants can be expected to make statistically significant gains in knowledge levels as described in objectives 1, 2 and 3. In addition, the two-hour workshop can be expected to produce statistically significant positive shifts in attitude as measured with a semantic differential for objectives 4, 5 and 6.
Three Hour Workshop

The three-hour workshop can be expected to produce the same results as the two-hour workshop. In addition, a three-hour workshop will provide an opportunity to expand the program to achieve objectives 7 and 8.

7. The participants will demonstrate an increased ability to analyze societal factors impacting policy development and management.

8. The participants will demonstrate their understanding of the policy process by analyzing and developing a school board philosophy statement to serve as a guide for policy development.

Organization of the Leader's Guide

The Leader's Guide contains the basic directions and materials you will need to plan the workshop. Any additional information or experiences that you can bring to the workshop will serve to strengthen your presentation.

Section 2: Planning the Workshop

Section 2 contains information about preparations you need to make before presenting the workshop. Included are hints and suggestions about:

- Focus and scope
- Objectives and time estimates
- Becoming familiar with the material
- Reviewing Section 3
- Skills needed
- Organizing for learning
- Groupings of participants
- Use of transparencies
- Warnings
- Equipment needed

Section 3: Presenting the Workshop

Section 3 includes a step-by-step description of the workshop procedures, along with the time allocations and the required resources. In addition, you will find:

- A sequence of workshop activities
Section 1: Specific instructions and references to participant materials and audio and visual aids

- A leader focus for each workshop activity
- Helpful hints about workshop activities

Section 4: Evaluating the Workshop

Section 4 contains the procedure used for evaluating the workshop.

- The background of the development and testing of this workshop

Section 5: Resources

This section contains reading material which the leader will need to become familiar with before presenting the workshop. Included in this section are:

- Concept papers
- Background reading and references
- Further explanation of ideas developed in the workshop

Section 6: Participant Materials
Focus and Scope

The Policy Development workshop is composed of nine instructional activities, each with a set of unique objectives. It is possible to redesign the workshop to emphasize specific objectives or to meet given time requirements. However, a word of caution is in order. The workshop will be less successful if in the redesigning the leader eliminates or limits the time allocated for group discussions, interactions and simulations. In other words, do not turn this program into a lecture because of time limitations. It is better to omit certain activities if the time frame is limited, but give a complete presentation of those activities that are presented. The transparencies, activities and film have been designed and organized to be used in a one-hour workshop, a two-hour workshop or a three-hour workshop, depending on the objectives of the leader. Each leader is encouraged to be creative and flexible. The purpose is to get people thinking—not to "give" them the right answer.

Objectives and Time Estimates for Three-Hour Policy Development Workshop

The following outline presents the activities and the approximate time needed for each.

POLICY DEVELOPMENT WORKSHOP

</table>
Two-Hour Workshop

The workshop is the same workshop that is presented in the Leader's Guide with the exception of the Policy Simulation exercise. (Do not use Exercise 1.3.)

One-Hour Workshop

The following organization has been found to be most useful for a one-hour workshop:

1. Inclusion and Anticipatory Set Activities
   - Warmup Activity
   - Four Functions
   - Objectives

2. Start the film; show first seven minutes.

4. Start the film. Show the film to the end.

5. Review with:
   - Transparency PO 4
   - Transparency PO 5
   - Transparency PO 6
   - Transparency PO 7
   - Transparency PO 8

6. Evaluate the workshop.

Becoming Familiar With the Materials

This workshop has been designed around a very specific notion about the school board's role in policy development. The papers presented in Section 5 of this notebook were developed to provide you with the background, research and theory upon which this workshop is built. They do not represent the last word on the subject, and any additional research and reading that you can bring to the subject will strengthen the presentation.
Reviewing Section 3, Presenting the Workshop

Section 3 of the Leader's Guide is a step-by-step outline for presenting the workshop. There are a number of "cues" that have been used to assist you as leader in the presentation:

- **Activity**
  
  Each unit of instruction is identified by an activity number and title, both of which are underlined, e.g., Activity 2: Defining the Learning Program. Each activity stands as a unique unit of learning with its own objectives, participant activities and basis of knowledge. The various activities are related in that they are all part of a larger common concept, in this case, policy development. (See Figure la.)

- **Leader Focus**
  
  Immediately underneath the activity number and name there is a heading, Leader Focus, that is also underlined. The Leader Focus provides you with a "mind set," a "feeling," an "attitude" or an "anticipatory set" that you should attempt to establish in this unit of instruction. The Leader Focus might be defined as the "affective" objective for the unit. (See Figure lb.)

- **Time**
  
  The total time required for each activity will be located at the top left hand column of the first page of the activity. Additional divisions of time within the activity will also be noted in the left hand column. (See Figure lc.)

- **Materials**
  
  The right hand column of each page will list the materials, transparencies, workbook references or other activities for instruction that need to be brought to the attention of the instructor. The references will be noted in the right hand column next to the appropriate point of instruction. (See Figure ld.)

The middle section will use three cues. They are:

- **Leader Instructions**
  - Subpoints

- **Lecturette**
  - Subpoints

- **CAPITALIZED WORDS**
  - Subpoints
Leader Instructions

The cue, Leader Instructions, alerts you to something you must do, say or cause to happen. Each of the following bullets "o" (see Figure le) are additional sequential cues.

Lecturette

The cue, Lecturette, alerts you that at this point in the workshop you are expected to provide a knowledge base or lecture about a given subject. The main points in the lecture will be outlined in the following paragraphs until you reach a new cue. You will also find in the Resources section papers that will provide additional background for the lecture. It is best to make the main points in your own language or words. Do not read the lecturette. (See Fig 1f.)

CAPITALIZED WORDS

The cue of CAPITALIZED WORDS within the general framework of the text alerts you to the advisability of reading the exact words to the participants. The exact words in this case will help direct all the participants through the planned learning activity. (See Figure 1g.)

The cue "---" is used to alert you to subpoints that may be used to add to or clarify a thought or statement. (See Figure 1h.)

Helpful Hints is a cue that will appear at the end of some activities. Its intent is to cue you into something that will help make the workshop more successful. (See Figure 1i.)

A solid line across the entire page will be used to indicate the end of the activity. (See below and Figure 1j.)

Figure 1 on the following page is a visualization of what might occur in one unit of instruction.
<table>

**Activity 2: Defining the Learning Program**

**Leader Focus:**

- Leader Instructions:
  - 5 min.
  - 5 min.
  - (subpoints)
  - (subpoints)

- Lecturette: 20 min.
  - Ask them, IF THE SCHOOL BOARD IS IN CHARGE, WHY DON'T YOU DO IT?
    - (subpoints)

**Helpful Hint:** Move this section very fast...
Skills Needed for the Workshop

Before you make a decision to use these materials, you might take a few minutes and think through four interrelated decisions you should consciously make. All workshop leaders or teachers make the same decisions. The only difference is that a few understand they are making the decision, and the others do it by the "seat of their pants," or as Madeline Hunter says, "like egg on a wall you may or may not hit the spot." The decisions are: first, what are the needs of the participants; second, how much time do you have to work with the participants (one time only for one hour, several times for one hour, one time for four hours, etc); third, what extent of knowledge do the materials represent; and fourth, what are your skills in workshop leadership and competencies in the subject matter?

Participant Needs

In any workshop the participants will come to the program with a variety of needs, beliefs and styles. Most adults learn best about that which they can immediately use. However, within that statement there is a range of participants; there is a group that just wants to learn about the idea, still another group that wants to develop skills and a third group that wants to immediately apply the information. Of course, it takes less time to expose a person to an idea, more time to teach participants a skill, and even more time for them to learn how to apply and use the skill.

At the same time, many participants come to a conference solely for the opportunity to socialize, discuss current issues and to strengthen and enlarge their interactions and acquaintance with other school board members. The materials in this workshop were designed to meet these "inclusion" and "belongingness" needs through controlled small group discussions and interactions. The word "controlled" is used because these same adults have a need to appear to be in control, and at the same time, they want the workshop to be in control, and be of value and present a worthwhile learning experience.

Small group interactions are an important foundation of the design because they also encourage "feedback." Adults need the opportunity to apply and try out new knowledge. Adults need to know where they stand. They need an opportunity to test new ideas and to make mistakes. The small groups allow the freedom and create the control needed to reinforce described learning outcomes and to help mistakes become valuable learning opportunities.

The use of small groups provides a balance between the "expert" workshop leader and the "experience-based" school board member. The small groups create an opportunity for the school board member to test his/her experiences with the ideas of the presenter.

Any attempt to reduce the small group interactions in this workshop in order to "give more information" will surely "null" the basis of the design and ignore the needs of the participants.
Time

The critical element in learning is time. The biggest mistake you can make is to attempt to build skills or force technical application of knowledge without enough time. Time relates to learning. You must relate the time available to the needs of the participants. The critical decision is whether you have enough time to meet the participants' needs and the objectives. A workshop designed to develop skill will take more time than one designed to expose the participants to an idea.

Level of Materials

The research and development of the concepts and materials in this workshop centered on three levels. The first level is identified as the "introduction level," defined as representing enough of the generalized concepts in the subject area to present a current overview of the subject matter. The second level is identified as skill building, representing the basic skills in the subject matter. The third level is identified as the technical assistance level, to represent an expansion of the basic skills to include application, analysis, synthesis and evaluation skills.

The materials in this workshop were developed to be used at an exposure or skill building level. The skills that are represented in the materials are specific and by no means represent a complete view of the knowledge on the subject. If the workshop leader or association representative is expected to work at a technical assistance level with an individual school district, he/she would surely be expected to bring additional knowledge and skills to the experience.

Leader Knowledge and Skill

A leader with a minimum amount of skill and knowledge should be able to present the workshop at both an introduction and skill building level by following the suggested steps in the Leader's Guide. In this case, the workshop leader should stay very close to the suggested outline. After presenting the workshop several times, the leader may then be ready to create his/her own choices within the materials. If, on the other hand, the workshop leader is an experienced workshop leader with an extensive knowledge in the subject area, the materials in the Leader's Guide may well serve only as a reference or guide. In this case, the leader may choose to alter the material to meet his/her own style or workshop objectives.

The concept papers and other material in the reference section of this Leader's Guide provide a ready reference for the growing leader who wishes to expand beyond the structured material. Just about any material including the most complex mathematical problems can be delivered with a structured, mechanical knowledge level approach. The growing, creative workshop leader will move to a higher level of understanding—application, analysis, analysis of relationships and analysis of organizational principles. At this point, the leader will be in a better position to help individual school boards on a technical assistance level.
The question for the leader is, are you going to throw egg at the wall or are you going to practice what you preach—quality workshop leadership and quality representation for local control?

In any case, all workshop leaders are advised to review all the material, the transparencies and the workshop exercises before making the first presentation in public.

**Workshop Difficulty**

The **Policy Development** workshop presents policy making as a social process. It is an easy workshop to present. A workshop leader might find it helpful to review the **Policy is Power** workshop before presenting this workshop.

A leader with medium skills can present this workshop at a skill building level.

One of the real problems in school boardsmanship is the general misunderstanding of policy and policy as a social process. Too often people who work with school boards present policy at a mechanical level. They often go to great lengths to make sure all the "bases" are covered in the district's policy book. Often this approach does not involve the local administrators, teachers, school board or parents. As a result, the policy does not really belong to anyone except the consultant. Meaningful, well written, long lasting policy is a social process involving all the elements of the community. It is only at the social process level that the school board will start to see policy as a tool for the management and control of the school district.

**Organizing for Learning**

The **Policy Development** workshop is designed to bring together the personal experiences of the participants with the new experiences and information presented in the workshop. Consequently, the most effective way to use the materials and to organize the workshop is to create an environment that facilitates interaction of the participants with the new information. Conversely, the least effective way to use the materials is to lecture to the participants. As a workshop leader, you should have some notion about the learning theory upon which this program is constructed. A concept paper on this subject is included in the resources section of this notebook.

The most appropriate arrangement for the room is one with tables to accommodate seven to ten people organized in such a manner that all the participants can see a central projection area.

If small group arrangements are not possible, attempt to provide for arrangements where the people can move around for worksessions.

Each workshop leader is encouraged to adjust, add or remove parts of this workshop to meet his or her style and the participants' needs. It won't be yours until you change it.
Depending upon the workshop leader's goals, the groups can be either organized around "home groups" or "stranger groups."

Home groups give the participants an opportunity to use live, meaningful examples from their own district. However, it limits the inclusion of new ideas, limits workshop communication, and allows the typical dominating superintendent or board member to continue to dominate.

Stranger groups provide an opportunity to increase communication between school boards, which tends to facilitate sharing new ideas. This, of course, may be good or bad. The stranger groups do allow board members to "rehearse" new roles without being as self-conscious or threatened.

Use of Transparencies

Transparencies in this workshop serve a rather unique function. The transparencies serve the same function for the workshop leader as "cue" cards do for TV broadcasters. The transparencies have been designed to free the workshop leader from the "written page" of the Leader's Guide. The transparencies carry in an abbreviated form the main points of a lecturette or other information that is to be provided by the leader. Consequently, with just a little homework, the leader should be in a position to display the transparency and expand the abbreviated points through a lecturette or directions. The key is to free oneself from the podium or central stage and walk around while delivering the message.

Warning: Do not attempt to deliver this program without first reviewing and coordinating the transparencies with the film and various activities in Section 3 of the workshop.

Do not use the program in a structured lecture hall where participant interaction is restricted. The exercises and program are designed for interaction, not a lecture.

Equipment and Materials Needed

- Newsprint-paper and markers
- Masking tape
- Workbooks
- Overhead projector
- Spare projector bulb
- Blackboard
- Transparency markers
- Film, film projector and screen

<tr>
<td>5 min.</td>
<td>If the time is available, have several people report to the large group.</td>
</tr>
<tr>
<td>2 min.</td>
<td>Summarize the above reports.</td>
</tr>
</tbody>
</table>
Activity 2: Goldhammer

Leader Focus: The purpose of this activity is to confirm the very important role school board members are expected to play as well as recognize the very legitimate fact that they stand for election for some equally important reasons. School board members are a critical link in the democratic process. They are important. They are important. They are important. Get the idea? Help them understand how important they are!

Leader Instructions: In preparation for this workshop, read the paper, "Public's Expectations of the School Board." The paper will give you the background to fill in the points provided on Transparency PO 2a and 2b.
Activity 3: Four Functions

Leader Focus: The purpose of this activity is to outline the four functions of the school board, emphasizing their policy function.

Leader Lecture: Present the concept of Brodinsky's four functions. Use Transparency PO 3. Tell the participants: THE GOAL OF THIS WORKSHOP IS TO STIMULATE A DISCUSSION AND CONCEPTUALIZATION OF THE NEED FOR A SYSTEMATIC PROCEDURE FOR A CYCLE OF POLICY MANAGEMENT.
Activity 4: Objectives

Leader Focus: Good teaching technique dictates that the learners know what they are to learn. Share the objectives.

- Leader Instructions: You should share the objectives you have for the workshop.
- The objectives will be different depending on the length of the workshop:
  - One hour
  - Two hours
  - Three hours
- See the introduction section for the various workshop objectives.
- Write the objectives out and share them with the participants.
Activity 5: Who Are You as an Individual?

**Background and Approach to Work and Life.**

**Total Time:** 32 min.

**Leader Focus:** The purpose of this section (1.1) and the accompanying exercise is to tie in with Goldhammer's investigations into the reasons individuals are elected as school board members. The leader should honor the notion that each school board member brings to the school board a very important and unique set of values, needs and styles. Board members must honor their own values, needs and styles and at the same time honor the values, needs and styles of the other board members as they seek to fulfill their elected positions.

- **7 min.**
  - **Leader Instructions:** Start the Policy film. Show the film through the first section which ends just after the scene with the farmer (Neal).
  - **Stop** the film with the typed review of the questions headed "Who Are You As An Individual?"
  - Have the participants turn in their workbooks to 1.1 "Who Are You As An Individual? Background and Approach to Work and Life."

- **15 min.**
  - Read the instructions aloud to the participants. Be sure to point out numbers 4 and 5. Tell the participants they have 15 minutes to complete this exercise. The instructions are:

  **THERE IS AN EVER INCREASING AMOUNT OF EVIDENCE THAT SCHOOL BOARD MEMBERS ARE IN MANY INSTANCES ELECTED BECAUSE THE PEOPLE SEE THEM AS ROLE MODELS OR PERSONS WHO WILL GUARD AND PROMOTE THE VALUES OF THE COMMUNITY. WHAT DO YOU THINK IS IMPORTANT? ANSWER THESE QUESTIONS ALONE FIRST, THEN FOLLOW NUMBERS 4 AND 5.

- **10 min.**
  - After Exercise 1.1 has been completed, have several of the groups share their efforts. Do not take over 10 minutes for the reports.
— Reinforce the importance of the local school board as probably one of the few elected governmental bodies that have "roots" with the people.

— Note the important contributions of board members.

— Honor board members collectively and as individuals with unique values, needs and styles.

— Note, however, that the individuals must work together toward common goals if the schools are to remain under local guidance.

Encourage questions, sharing and some large group interaction.
Activity 6: Who Are You As An Individual?

Can You Describe Your Community?

Time: 92 min.

Total

Leader Focus: The purpose of this exercise is to sensitize the participants to some of the factors that may influence the policy cycle at a number of different stages.

10 min.

Leader Instructions: Tell the participants to turn to Exercise 1.2, page 3, "Can You Describe Your Community?" Read the instructions with them and ask for questions:

- First, think of your own community and see how many of the questions below you can answer with solid facts.

- Second, share some of the differences between the communities among your small group.

35 min.

- Third, select either sex education, moral education or evolution as a policy issue and, as a team, complete 1.21, 1.22, 1.23 and 1.24, pages 3-7.

--- The team should be prepared to report to the large group.

--- Each team has 30 minutes to complete this exercise.

15 min.

After Exercise 1.2 has been completed, provide the groups with an opportunity to report.

--- To move things along very quickly, have each group report on a different section: 1.2, 1.21, 1.22, 1.23 or 1.24.

--- Be sure each group shares a part of its report.

--- Reinforce the notion that it is important to know your community and its various influential persons and groups.

--- End this section with questions and comments.

--- Summarize the reports of the various groups.
10 min  o Review the points made in the film to this point. Inform the participants that they can stop you at any time for questions.

   All effective policies:

1. Began with a problem or need

2. Were written or designed so people knew what to do

3. Are enforced, evaluated and changed as needed

   Remind them they were elected as "individuals" for their values, needs and beliefs. Note they must understand (1) themselves as individuals, and (2) their community.

12 min.  o Leader Instructions: Continue Film. Start the Policy film again and allow it to play through to the end.

10 min.  o Review the sequence in the film with the transparencies. Tell the participants they can stop you at any time for questions.

   The Four Functions—emphasize that policy making "may be the most important job you have to do."

   Written policy is needed to:

   a. Insure continuity
   b. Clarify expectations
   c. Direct the superintendent
   d. Inform the public
   e. Secure the board's position

   Policy cycle

   Identify a need

   Direct a policy analysis
--- Require policy options
--- Costs in dollars
--- Staff
--- Rules, regulations and guidelines.
--- Review policy draft
--- Take action
--- Rewrite
--- Reject
--- Adopt
--- Implement and monitor
--- Review and evaluate
--- Revise or remove as needed.

5 min. o Again, use Transparency PO 7, summarizing and reinforcing the policy-making cycle.

5 min. o Using Transparency PO 8, introduce the relationship between:

```
PURPOSE  GOALS  STRATEGY  POLICY
OBJECTIVES
```

--- Encourage questions and interaction
Leader Focus: The main thrust of the workshop is developing a framework for school board members to understand the general context in which they make policy. This context includes the values, beliefs and style for education held by the community the board serves, and the various social, economic, political and institutional factors that affect the means by which and the rate at which goals are pursued. Consideration of how such factors may change in the future—and influence policy development and outcomes—is an integral part of an adequate framework.

10 min.

Leader Instructions: Next, tell the participants: WE ARE NOW GOING TO IDENTIFY A FEW OF THE PRINCIPLES THAT WE HAVE BEEN TALKING ABOUT WITH POLICY SIMULATION EXERCISE 1.3.

Leader Lecturette: At the lowest mechanical level, policies are statements about the goals, objectives and procedures of the school district.

--- Policies are often statements of what the school system is to do and how it is to do it.

--- Policies often set the rules for the use of the buildings, the use of guest speakers, the selection of teachers and administrators, the selection of curriculum and on and on. The list would appear to be almost endless.

--- In most states school boards have been given the legal authority to establish policies.

--- Why, then, do so many people laugh when a board member makes the statement that the board's policies control the district?

--- Why is the failure rate of policies so high? Why are outdated policies so durable and new ones so hard to institute?
Why do board members become frustrated and angry at the policy process and turn their energy to buying pencils and supplies or attempting to manage the district by making all the decisions?

A large part of the answer probably lies in the working habits of recent and distant predecessors of the current board.

When they made their policies three, five or ten years ago, they developed a series of attitudes, procedures and habits that were probably appropriate for the time. The district had fewer students, the community was relatively stable and the board members could work on a personal basis because everyone knew everyone.

In other words, there were fewer outside pressures impinging on the operation of the school. (At this point, the leader might read the Leader Focus.)

20 min.  

Leader Instructions: Tell the participants to turn to page 8 of their workbook. The first step is to pass out 1.3. Each group is to select one of the two Future Briefs (1.3) as their view of society in the future. Again, inform the participants that each group will be expected to give a report to the large group on the values, goals, objectives and policies they identified.

The second step is to identify values.

What aspects of education will the community—and by implication, the nation—value, and how?

Part of this exercise should find board members dealing with more abstract values, e.g., attitudes toward self, families, neighbors and peers, work and leisure, institutions, and the environment.

The point is to clarify values that the community (and the board members) believe should be instilled in students for whatever brief they select.
The group next needs to identify to what extent and how their school system now mirrors—or fails to mirror—these values.

---

Board members would consider future prospects—problems and opportunities—for their school system in the context of these briefs.

---

The group members then need to prepare a partial set of goals for their school system.

---

These goals should, of course, be consistent with the values identified above, should be constructed to fill gaps between the school system as it presently operates and perceives values, and should take into account factors likely to influence the schools' environment in the near future.

---

Next, participants need to identify what things the school board can influence and how, and what things it cannot affect.

---

For example, a board has little control over local migration patterns or court decisions regarding meeting the needs of the handicapped and the right of illegal aliens to educational services.

---

The participants then need to set three objectives and make specific policy for each objective.

---

In summarizing, the leader should suggest that in working through this exercise, board members should be concerned with the broad set of factors that influence policy decisions.

---

However, the training program will be more meaningful if one kind of specific policy action is considered.

---

This is to link what are clearly more abstract or generic issues for policy development with the real, detailed decisions the board must make. Selecting new curricula for a school is suggested as a specific kind of policy area to be used as an example.
TIME | MATERIALS
--- | ---
10 min. | Have the groups report on the brief they selected, the values they set, the goals they selected, the objectives they identified and the policy they set to make the goals happen.
Activity 8: Conclusion and Summary

Leader Focus: The purpose here is to review and bring together the goals and objectives of the workshop and to summarize and connect the activities to the objectives.

- Leader Instructions: Summarize. Point out differences and allow for group interaction. Again, use Transparency PO 8 to show relationship between purpose, goals and policy.

- Close with Transparency PO 9. WITHOUT POLICY, YOU'RE EXPOSED.
Activity 9: Evaluation of Workshop

Leader Focus: Let participants know you are modeling behavior. "I'm having you evaluate this session, just like you should evaluate yourselves as a school board, just like you yourselves should evaluate your people and programs. If you don't evaluate, how else can you grow or improve?"

2 min.  Leader Instructions: Pass out evaluation forms or refer the participants to the appropriate page in the workbook.

10 min.  Ask for individual evaluations. Tell them they have 10 minutes.

Collect; read and tabulate the results.
SECTION 4: EVALUATING THE WORKSHOP*

Evaluation is the hallmark of a good teacher or workshop leader. A systematic planned evaluation is the only method we have to determine the effectiveness of our instruction and the achievement of the learners. This program was developed around four techniques of development and evaluation.

Topic teams and state review committees identified the goals of the workshop, and in some cases, the techniques. In addition, pilot tests, field tests and expert reviews were used at appropriate times during the development and evaluation phases.

*A summary report of evaluative procedures and results is on file in the Rural Education Program of the Northwest Regional Educational Laboratory, 300 S. W. Sixth Avenue, Portland, Oregon 97204.
SUMMARY REVIEW OF DEVELOPMENT AND PILOT TEST ACTIVITIES

Topic Team

The Oregon component of the school board inservice program was responsible for the development of three topics: (1) Policy Making, (2) Communicating with the Community, and (3) Evaluation. The Executive Director of the Oregon School Boards Association (OSBA), Mr. Tom Rigby, appointed one OSBA staff member to work with each topic: Mrs. P. Fitzwater, Policy; Mr. J. Marten, Evaluation; and Mr. D. Dixon, Communicating with the Community. Mr. Rigby also appointed representative school board members and superintendents to serve on each topic committee.

State Review Committee

In addition to the topic teams made up of school board members and superintendents, Mr. Rigby appointed and convened a State Review Committee. The purpose of the State Review Committee was to provide a forum for the involvement of opinion leaders from allied educational agencies. In attendance at the meeting on January 24, 1979 were:

Mr. Tom Rigby, Executive Director, OSBA
Mrs. Pat Fitzwater, Training and Policy Specialist, OSBA
Dr. Milt Baum, Oregon Department of Education
Dr. Wright Cowger, Willamette University, Professor and school board member
Dr. Ron Pytrie, Dean, School of Education, Portland State University
Dr. Jens Robinson, Superintendent, Woodburn, Oregon
Dr. Ray Mullen, Superintendent, Tillamook Educational Service District
Mrs. Carol Williams, board member and President of OSBA
Dr. Betty Tomblin, Northwest Regional Educational Laboratory
Dr. Leslie Wolfe, Northwest Regional Educational Laboratory

The State Review Committee made five recommendations:

1. The inservice programs should help clarify the role of the school board in public education.

2. The inservice programs need to emphasize the proactive role that can be played by an informed school board member.

3. The inservice programs must emphasize the dynamics that take place between board members, between the board and the superintendent, and between the community and the board.

4. The inservice programs must also be targeted to superintendents. The inservice materials should help create a dialogue between superintendents and school board members relative to their working relationship in a democracy.

5. The inservice programs should be developed on several levels which should include materials that a superintendent can use with prospective or existing school board members.
The Policy Development and Policy is Power topic team had four meetings between February 1979 and September 1979. Members of the topic team suggested that they wanted an inservice program in policy that developed three major points, which were:

1. A basis for policy within the context of court rulings, federal laws and state laws, rules and regulations (Policy Development)
2. A systematic procedure for policy development (Policy is Power)
3. A basic understanding of writing policy statements (not completed because of a cut in funding)

Developmental Review

A number of people participated in the initial review of the first product, the self-assessment instrument. The reviewers included: OSBA staff members, topic team members, state review committee members, Washington State School Directors Association members, policy board members and NWREL staff members. The final reviews and evaluations were conducted on three levels: pilot tests, field tests and expert reviews.

Pilot Test Activities

A pilot test was defined as a trial of the workshop conducted by Northwest Regional Educational Laboratory (NWREL) staff.

Summary of Pilot Test Activities

Evaluation Methodology

The package in its original pilot test form was tested in four states with a total of 410 people, of whom 95 percent were school board members. The pilot tests employed a "pretest-treatment-posttest" format. The participants were informed that the materials were in a pilot-test form and that their cooperation and their evaluations would be most helpful. All of the participants agreed to complete pre-workshop and post-workshop questionnaires.

Evaluation

There have been two major reviews of this workshop, one by the project staff (internal) and one by the board of directors (external). In addition, there were five pilot tests of the entire workshop, each test being conducted with school board members and superintendents. At the conclusion of each review or pilot test, information was collected from the participants on a standard workshop critique form.

A major purpose of the pilot test in this instance was to determine if the language, the ideas, the content, and the level of the approach to policy development was appropriate to school board members. Policy development is an area in which few board members or few school boards are heavily involved; therefore, this workshop endeavored to find the entry level to introduce school board members to their role in policy development. It was also intended to be a model on which further information and workshops, materials and products could be developed to give board members more in-depth information about involvement in policy development.

Both reviews and pilot tests determined that the ideas and content presented in the workshop were indeed relevant and useful to school board members. They also indicated that the material is appropriate for all school board members and is not restricted to newly elected board members nor is it restricted to veteran board members or board members in a certain locale.

A summary of the pilot test evaluations from more than 400 school board members and superintendents who have participated in the Policy Development workshop confirms the value of the workshop to the participants. In response to the evaluation question, "Did the content help you as a school board member?" the average response was 4.71 on a 5-point scale. One caution should be noted. The workshop should not be pushed into any time frame less than 90 minutes. Smaller time frames do not allow adequate time for appropriate group discussion, which results in some level of dissatisfaction among the participants.
Expert Review

The third and final review of the material was conducted on two levels, one by the National School Boards Association and a second and independent evaluation by Dr. Keith Goldhammer of Michigan State University. The materials and procedures at this level were reviewed and evaluated for the following:

1. Their representation of the existing basis of knowledge in the literature and the profession

2. The procedures and methods outlined in the workshop and leader's guide

Changes

A number of changes evolved as the workshop was evaluated and reviewed. The most dramatic change was the expansion of the "visuals" to the "lecture" part of the workshop and the addition of the "questionnaires" that can be used by the board members.

Field Tests

Field tests were defined as those occasions when the workshop was delivered by a person other than a member of the NWREL staff. The workshop was delivered in five states by six different association staff people to more than 600 school board members and superintendents.

The recommended changes from the pilot tests, field tests and expert reviews have been incorporated in this package.
In order to improve the workshop, we would appreciate your time in answering the following questions. Feel free to make comments regarding any item.

1. Did this workshop cover what it was advertised to cover?

<table>
<thead>
<tr>
<th></th>

5. Please state one thing you learned or gained from the session:

__________________________
6. What questions remain unanswered for you regarding policy development?

__________________________________________________________________________________

7. Relative to workshops you have attended, how do you rate this workshop?

Very Poor   1  2  3  4  5 Very Good

8. How would you rate the overall performance of the leader--knowledge and presentation?

Very Poor   1  2  3  4  5 Very Good

9. Are you:

_____ A school board member
_____ A superintendent
_____ Other: please state ______________________________

10. What can the leader do to improve the session?

11. Any additional comments for improving this and future workshops will be appreciated.
SECTION 5: RESOURCES

POLICY FORMATION AND THE SCHOOL BOARD∗

Every so often school board members have an opportunity to chart a new direction or confirm an existing direction in the face of one or more clear alternatives. The board decides to refuse all federal money and/or projects. A transportation company is given the district's transportation business, even though it will cost more. Or the board directs, through policy, that all building principals will spend 60 percent of their time in the classroom supervising instruction.

"These events, in which new courses are set, are the most important class of events in human affairs." They are key decisions that shape our destiny. They are the most complex and demanding events with regard to moral, social, psychological or intellectual problems. They are the "key" policy problems.

If there is any one generalization about the state of these policy problems, it is that they are the most complex problems in human affairs. Not only are these policy issues affected by individuals, they are affected by groups of individuals, organizations and groups of organizations. As if this were not enough, individual differences in beliefs, needs and lifestyles compound the problem. Add to this the fact that it is even possible for one person to support several groups with competing policy options. A school board member may support the acquisition of land for a new school in one area and at the same time belong to a civic organization that wants to build the

new school in another area. Another board member may want a new school, but
the increase in taxes will severely attack his financial resources and
threaten his most basic needs. A third school board member may question the
morality of building a new school because increased taxes may cause some old
people to lose their homes. Each person perceives the issue through his/her
own beliefs, needs and lifestyle. In fact, the interests of people and
organizations vary so widely and the policy problems are so complex it is not
inconceivable to imagine a given person ending up on any one side.

Complexity

The complexity of the problem increases as we recognize the fact that
there is no such thing as "the problem," whether grading, reading scores,
teacher competencies, curriculum or guest speakers. They do not exist as a
single compact unit. School board policy makers are presented with a rather
difficult issue as they attempt to create a policy that will lead to the
development of a program to improve reading scores. One group of parents and
teachers may want "grouping" by achievement as a partial solution, while
another group of parents and teachers will view grouping as a racist
approach. Some may want to change the testing program, while others may want
to spend more time in reading at the cost of other programs. Reading test
scores may go up because of emphasis, while other test scores go down. A
change in migration patterns or agricultural crops may increase the influx of
non-English speaking minorities into the schools which may result in a drop of
reading test scores. One group of non-English speaking minorities may want an
English-only approach to reading, while another group may want an English as a
second language approach. The problem goes on and on. There is no single
answer that lends itself to a simple problem-solving or decision-making
approach.
A Social Process

Policy making is not a logical, intellectual, problem-solving or decision-making process. Decision making and problem solving imply that there is a single decision-making unit (the school board) with a single set of preferences, a wide range of alternatives and consequences and the capacity to make appropriate calculations. The decision-making model is appropriate for subproblems in policy formation—the allocation of resources once the policy decision has been made. Probably the more appropriate model for the policy process is one of bargaining and negotiation among the parties whose beliefs, needs and lifestyles are not identical. Policy making requires that the policy makers "find a course action that all the parties are willing to live with, without the disappearance of the conflict of interests." Policy making is a social process. Policy making is the communication of policies in such a way as to articulate the interest of a sufficient number of involved parties so as to form a coalition. Policy making is a social process with intellectual elements.

The policy maker must mediate among conflicting sets of beliefs, needs and lifestyles and, at the same time, judge what is possible as well as what is preferable. The policy maker has to weigh off the course of one action designed to implement the values of the people on a given issue without unduly compromising the values of a second group on another issue. In this view, policy formulation does not begin and end with a winning coalition, but extends to the future so that a "wise man" dealing with today's difficulty will take care not to create needless problems for the future.
Information and Policy

In order to avoid creating needless problems for the future, the policy maker will need good information. The raw material of the policy-making process is information. The components of information are defined as anything that can be sensed and/or recorded by human beings. Beliefs, actions, values, ideas, sensations, intuition, experience, desires and the written and spoken word are all forms of information. The policy-making process often includes information that is generated in one context and used in a different context in order to formulate and implement a policy. The "best" form of policy making is an organized process that brings together all of the available components of information. Organized policy making is one of the highest forms of human functioning. First, it requires the policy maker to digest information that is qualitative as well as quantitative. Next, the policy maker is called upon to evaluate vast amounts of material from different contexts of information and then produce a decision based on inter-context information, a process that only human beings can perform.

The policy maker (the school board) must create policy that reflects the characteristics of the times; in this case, the last third of the twentieth century. Policy decisions must concentrate on and assign limited resources to those areas that are most crucial to the long-term welfare of the individual, community, nation and mankind. In this view, policy must be rooted in the philosophical, social, economic and political realities of the time as a policy attempt to define the ideal; that is, the moral society, the just society, and the beautiful society.
Policy statements, therefore, are the policy maker's or school board member's view of what is just, moral and legal for the individual, the community, the nation and mankind. Policy statements are a reflection of the beliefs, the lifestyle and the needs of each policy maker. Every policy statement attempts to alter or control the action of others. Each policy statement or proposed policy has an effect on every school board member and every affected group. Thus, the most consequential educational policy decisions relate to whose beliefs, needs and lifestyles are to be formed and to be altered in what directions.

There is no doubt to the fact that "local control of public schools and local determination of educational policy have been altered during the recent decades by various social, cultural, technological and philosophical developments." The recent rulings of state and federal courts have left little doubt that they are always ready to consider the constitutional implications of school policy. The federal courts have generally been reluctant to enter the complex arena of school finance. However, the clear constitutional issues of due process, desegregation, privacy rights of students, freedom of speech or press and the rights of homosexuals demonstrate the courts' policy-related activities. The United States Supreme Court attempted to clarify the issue when it ruled:

By and large, public education in our nation is committed to the control of state and local authorities. Courts do not and cannot intervene in the resolution of conflicts which arise in the daily operation of school systems and which do not directly and sharply implicate basic constitutional values. On the other hand, "the vigilant protection of constitutional freedoms is nowhere more vital than in the community of American schools."
It is quite clear that school boards, administrators and teachers must be conscious of, and operate within, the trends of our larger society. No board is an island unto itself.

Three Factors of Policy Analysis

Three factors need to be analyzed in attempting to establish the direction of basic educational policy. The first factor of policy analysis needs to consider four levels simultaneously:

1. What are the apparent issues (state, local and national)? For example:
   - How is the school board systematically informed about decisions?
   - How do we improve reading?
   - How do we confront the dropout problem?
   - How do we attempt moral education?

2. What do research findings say about the issues? For example:
   - What is the reading level of our students?
   - What does research say about class size and reading?
   - What does research say about methods of teaching reading?
   - What does research say about the various reading books and materials?

3. What are the policy questions derived from the issues? For example:
   - What level of reading do we want?
   - How much of our resources do we allocate to improve reading?
   - How much will reading scores be improved per dollar spent?
   - Where should we concentrate our dollars?
4. What basic philosophical questions are raised by the apparent issues? For example:
   - What motivates man?
   - What is knowledge?
   - What is education versus training?
   - What do we want our community to be ten, twenty or thirty years from now?
A basic concern a board may have for an "apparent issue," e.g., reading, should, if freely explored, move through all four levels before a policy is considered.

The second factor of policy analysis requires that every policy should be analyzed for the effect it will have on the various "stakeholder" groups. Local community stakeholder groups, such as businessmen, minorities, retired people, teachers, parents, students and others will be affected directly or indirectly by a policy proposal. Other stakeholder groups such as legislators and the courts may be affected by a local policy decision. Policies established in one school district may establish a precedent that will have an effect on the policy of a neighboring school district. Seemingly meaningless policies established today, giving away a small portion of school board authority, may well create a precedent limiting the future action of the school board. Every policy will have a direct or indirect effect on the beliefs, needs and lifestyles of the various stakeholder groups. Therefore, each of these groups will perceive present and future opportunities and threats in each policy proposal. The success or failure of a policy proposal may be determined by the board's process of involving concerned stakeholder groups in the analysis phase of a policy proposal.
A third, and often overlooked, factor in policy analysis is a comparison of alternative policy proposals and types of futures toward which each alternative leads. It is at this point that the policy maker has the most control to establish the future direction of the school. The decision makers (the board of education) will be in the best position to choose if they can see the consequences of alternative choices in terms of their influence on the future. To carry out this sort of analysis, five areas need to be probed:

1. Trend projections
   - What are the economic indicators?
   - What are the demographic and social indicators?
   - What is the unemployment, population, growth index?
   - How are the stakeholder groups changing?

2. Technology projections
   - How will new technology affect society and education?
   - What new hardware, software and behavior techniques are available?

3. Political projections
   - How will pressure groups change?
   - How will law and current court rulings change?
   - What new social-political issues will emerge?

4. Humanistic projections
   - What will be the emerging needs of society and students?
   - How will lifestyles, beliefs and needs change?

5. Visionary projections
   - What do we want for the future?
   - How can we get to the future?
The policy maker must analyze and synthesize all the information available from the past and the future before attempting to formulate a policy that will have an effect on present and future events.

Policy Definition

A policy, in its broadest sense, is an attempt to clarify and control the future of human events. Essentially, a policy statement is an attempt to increase the likelihood of bringing into being desirable future events. A policy statement attempts to clarify and control when it states the reasons and procedures for student dismissal. A policy attempts to bring into being desirable future events when it lists standards for sixth grade, eighth grade and twelfth grade promotion. Curriculum development through school board policy is the school board's way to predict the skills the adults of the future will need to survive.

A policy is an expression of the events the school board wants to happen. A policy may also be an expression of things the board doesn't want to happen, e.g., a no smoking policy. However, most often a policy statement is an expression of the board's view of what it wants to happen. A policy statement is the means through which the board directs the resources of the school district to meet the uniqueness of its community. A policy tells what is wanted and may also include why it is wanted and how much is wanted. Policy gives direction and clears the way for the administrators to take action.

In other words, policy provides the boundaries within which the educational program can operate. Policy fixes responsibilities and direction. Policy provides guidance for the administration and supervision of the school district. Policy is the process through which the board can maintain local control. "Those who make policy are in control." Policy is the school board's power.
Policy Making Skills

If the school board wants to maintain or increase control, it must become the policy maker. However the educational policy maker has a complex, difficult role to play in increasing local control by requiring an organized policy process. Improved policy making will require the policy maker to develop and reinforce a variety of skills. In particular, the policy maker will need to have skills in: (1) decision making, (2) communication, (3) organizational structure, (4) personnel, (5) motivation, (6) control procedures, (7) leadership, and (8) public relations. In all of these dimensions the policy maker will need to increase his/her capacity for rational-analytic abilities as well as extra-rational capacities, such as creativity, tolerance of ambiguity and the propensity to innovate. The policy maker will need to know how to "manage time effectively," conduct "effective board meetings," "communicate with the community," support "evaluation procedures and roles," support appropriate "board/superintendent relations," serve as a "political statesperson" and be sensitive to his/her own personal needs, beliefs and lifestyles and their effect on others and self.

The community elects its best, its most moral people to make tough policy decisions; it does not elect school board members to buy toilet paper, tacks and tractor tires.

The Policy Workshop

The Policy Development workshop and the Policy is Power workshop approach policy making from a social process viewpoint. The film and workshops emphasize and honor the importance of the individual and honor the needs of individuals to work together for a common cause without giving up their individual needs, beliefs or lifestyles. The film and workshops present a policy cycle that suggests a live, dynamic process that continually evaluates and revises policy considerations.
Identifying a Need

Policies come from the community as represented by the board of education. Most often school board members are elected because they are representative of the majority's view of the values, beliefs and style of the community. Communities elect school board members to manage the schools. Even though the Congress, courts and state legislature have influence on certain aspects of educational policy, local school boards make the policies that actually operate the schools. Local school boards set the tone of the schools. Local school boards employ the teachers and the administrators who implement the policies and set the tone in the schools and classrooms. Local school boards are in control to the degree that they employ administrators and teachers who represent their values, beliefs and style.

In small and unchanging communities which tend to have a more common set of values, the school board's task is not as difficult. On the other hand, in larger and growing communities it is much more difficult to determine a common set of values that is representative of the entire community. In both cases, in order for a policy to be effective and lasting it must reflect the values and the economic, social and political realities of the present and the immediate future. This formula is further compounded, as we all know, when the notion of the community is expanded to take into account all those factors that influence the political, economic and social development of our communities. A new economic commitment to the teachers by a school board in one community has an effect on all the neighboring communities. If one school board agrees to negotiate a permissive item in one community it increases the pressure on all its neighboring school boards to negotiate the same item. Of course, some things are beyond the control of the board of education or a community. Migration trends, for example, may cause a school board to re-examine its staffing patterns or its curriculum offerings.
In one community migration patterns may cause the school board to close a school; whereas in another community, migration trends may cause the school board to build a new school.

In the policy-making process school board members are called upon to be the community's wizards of the future by predicting unknown economic, social and political trends. Twenty years ago how many people would have guessed that gasoline would cost more than $1.00 a gallon? Proposing a policy to meet a need or concern is a responsibility of all people in a community.

Policy at its best emerges when the school board plans ahead or anticipates problems that are likely to be a community concern. Unfortunately, and all too often, policy begins with a reaction to an immediate problem, a controversial speaker, the use of a school building, sex education or a student discipline problem. Policy issues may also be identified as the result of employee negotiations. The astute school board will know when to anticipate and suggest new policy direction or when to let the policy need emerge from the community.

**Directing an Analysis**

Directing an analysis of a policy proposal is the responsibility of the school board. The board directs the superintendent to conduct a study and gather the information for a policy proposal. The policy study may include, where appropriate, all or a few of the following activities:

1. Involvement of all the people who will be affected by the policy proposal.
2. Involvement of resource people, state school board association, private industry, downtown businessmen, school board members, parents, students and others.
3. A review of the appropriate research, laws, existing school board policy, what neighboring school districts are doing, etc.

4. An analysis of long and short term political effects

Requiring Policy Options

The school board should require the administrative staff to present a draft of several options to be reviewed with the board. The drafts should include cost analysis in terms of dollars and human resources as well as suggested rules and regulations to enforce the policy.

Reviewing the Policy Draft

Examining and reviewing the policy proposal is a major responsibility of the school board. There should be no surprises. At this stage, the school board may choose to hold public meetings on the policy alternatives. All those who are interested or who will be affected by the proposed policy should be notified. As a result of this process, the board members will have had a chance to listen to arguments and counter-arguments, and they will have had another chance to contribute their thoughts in the light of the public discussions.

Taking Action

After reviewing the policy alternatives and listening to public reaction, the board has one of three decisions to make. These decisions are:

1. To adopt one of the policy alternatives,

2. Reject all the policy alternatives, or

3. Send the proposals back with new instructions for a rewrite.
Implementing and Monitoring

Once a policy has been adopted, it then becomes the responsibility of the professional staff to implement and monitor the policy. All policies should be in writing.

There are three purposes of written policy. The first is to conserve school board time and effort by freeing it from routine action. If a school board finds itself routinely making the same decision over and over again it is wasting its time. For example, one school board reviewed its minutes for the past year and found that it had made the decision in 28 different cases as to what outside agencies could use the school's facilities. Then it got into trouble because its decisions were inconsistent and not in writing. Another school board spent a large amount of money and time in legal battles which it eventually lost because it didn't have a written policy on the use of guest speakers. Without written policy school boards are condemned to deal with the routine, e.g., the insignificant actions of buying pencils and dealing with the nuts and bolts. Unless the school board has a set of complete written policies it is doomed to spend 90 percent of its time working with 15 percent of its budget. The board may never get around to what school is about—children and learning.

The second purpose of written policy is to provide for consistency. Actions that are inconsistent and based on personalities rather than a stated set of justifiable values will either create a community feud or end up in court. In either case a lot of school board time and energy is used up on perhaps the wrong issues. Sometimes straw men are created just to keep the school board away from the real purpose of the public schools—children and learning.
The third function of written policy is to give the board's representative, the superintendent, guidance and direction during its absence. Written policy gives direction to the administrative team. Written policy frees the administrative team to give direction to the professional staff.

In other words, the objective of written policy is not to restrict or impede board action, but rather to give consistency and to free the board from routine action. Written policy guides maximize the effectiveness of the management and administrative team.

Reviewing and Evaluating

Every school board needs to have a policy that calls for a systematic review and evaluation of every policy. School boards can get into as much trouble over outdated policies as they can nonexistent policies. Policy development is a live and dynamic process.

Revise or Remove

Recognizing that policy development is a dynamic, live process that causes policies to change as needs, beliefs or lifestyles change, policies must be constantly revised to meet a changing world or removed when appropriate.

REFERENCES USED BUT NOT CITED

In this Walter D. Cocking lecture, I hope to achieve three objectives. (1) to provide a rationale for the examination of the governance and management functions at the local school district level, (2) to advance for discussion a set of proposed changes in these functions consistent with the rationale, and (3) to emphasize what I believe to be the importance of policy about policy.

Three questions raised by Yehezkel Dror a dozen years ago provide the general frame for the thoughts and projections which follow:

1. Is public policymaking to follow the traditional pattern of evolving by slowly adjusting to new conditions and knowledge by means of incremental changes and convulsive changes following crisis, or is public policymaking, in part at least, to be consciously subjected to a new and explicit systems redesign that aspires to improve policymaking as much as possible?

2. What optimal design for public policymaking can serve as an instrumental goal toward which real policymaking should be directed?

3. Are there feasible strategies for changing actual policymaking so as to better approximate optimal public policymaking?

My search for answers to these questions reflects a strong bias toward rationality in policy and decision making as well as the incorporation of the best knowledge available in processes attendant to policy and decision making. I do not reject Lindblom's thesis of incrementalism (muddling through) as an explanation of how things "are," but do quarrel with the acceptance of incrementalism as satisfactory policy practice for the future.

Local school officials and their constituencies will be facing several critical policy matters in this decade (some new, some enduring). These issues will test severely the structures and processes of policy making within local districts. Despite the cascade of state and federal mandates and a profusion of court decisions that have the effect of policy, there is considerable policy work remaining to be done at the local level. Local control and local responsibility are very much alive. Policy issues are queuing up for local attention. For example, local and state authorities will soon have to develop fresh policies in regard to the first four years of life: lifelong learning; secondary education; equity; classroom control and discipline; global education; languages; human resource development; incentives, testing, and resource acquisition and allocation. I would hope, therefore, that a good many boards would develop policy about policy.

In considering policy about policy I intend much more than the codification of policies, rules, and regulations, a subject discussed with some enthusiasm at early National Conference of Professors of Educational Administration (NCPEA) meetings, and the annual assemblies of the American Association of School Administrators and the National School Boards Association in the 1940s and 1950s. The object of my concern is the improvement of practice within the local units of government (local school districts) where educational policy is developed. As most of us are aware, governance and management functions are performed within settings and contexts that possess the attributes of the society at large (e.g., uncertainty, turbulence, goallessness, anomic, tensions, and crisis).

The structures and processes of local district governance and management have changed little over the past century. In many places they appear to be creaking and groaning at the seams and at least warrant inspection if not reform. The pursuit of qualitative improvement of educational policy through more rational processes within an open political environment, is a noble pursuit, certainly worthy of the time and energy of educational administrators.

Rationale

Harold D. Lasswell drew a distinction between political science and policy science. Policy science is composed of two essential elements: (1) the study of the process of deciding and choosing among alternative courses, and (2) the evaluation of the relevance of available knowledge for the solution of particular problems. Political science is the study of influence and the influential. It is the science of politics and, as such, states conditions, whereas the philosophy of politics justifies preferences. Policy science is more than political science, but political science is essential to policy science. In his section on "Policy Sciences" in the International Encyclopedia of the Social Sciences, Lasswell places considerable emphasis upon the sources from which policy scientists can be recruited and trained:

The chief obligation of the policy sciences relates to the decision process itself. At present the academic disciplines most immediately involved include political science, law, public administration, business administration, political sociology, and contemporary political history.

Dror has extended and refined Lasswell's thinking in regard to policy, policy science, and policy-making process in ways that I find helpful. Dror maintains that "The major problem at which policy science is directed is how to improve the design and operations of policymaking systems." Further, he argues that "Policy science can therefore be partly described as the discipline that searches for policy knowledge, that seeks general-policyspecific knowledge and policymaking knowledge, and integrates them into a distinct study."

Dror explains that in policy development, knowledge is required of the substance of policy issues, e.g., medical knowledge is relevant to policies about public health, and sociological knowledge is relevant to policies...
about social segregation. It follows that knowledge about pedagogy is relevant to education policy. Policy-making knowledge refers to such things as how organizational structures operate (organizational theory), coordinating and integrating different policy making units (political science) and analyzing, improving, and managing complex systems (systems theory). For me the distinction between policy-making knowledge and policy-making knowledge is important and compelling. It tends to separate the essentially status quo acceptance of things as they are into "perspective of persons like Lindblom from the more optimistic view of circumstances" views of Lasswell and Drør. Yeheskell Dror says more about policy scientists. First, all students of narrow specialties must learn the basic concepts about human and social behavior, especially about those phenomena most likely to be misunderstood by the uninitiated. Also on the graduate level, work on comprehensive policy projects as members of interdisciplinary teams and in survey courses on policy science should be obligatory. Our students whose professional careers may involve work in policy making structures, such as traffic engineers, public health experts, city planners, economists, and statisticians, such academic preparation can be very helpful, but is insufficient by itself. The student's lack of time and experience must keep him from doing much more than broadening his horizons, which would still be a big advantage over the present situation. Additional steps must be taken to permit better integration of experts into policy making after they actually begin participating in units that contribute to policy making. These additional steps might include rotation designed to give single-discipline experts some experience in solving problems comprehensively, planned participation in interdisciplinary teamwork and in the general training programs for senior civil servants, and for the more important experts, special advanced training courses. Special attention must be paid to developing new types of experts who specialize in the applications of various interdisciplinary fields to policy making, especially policy scientists who will serve as professional policy analysts in new staff positions. The new professions of civil strategists and systems analysts demonstrate rather well what I have in mind on a broader scale. Preparing policy scientists for staff positions as policy analysts will be one of the most important functions of policy science, and is a major reason why policy science must be established as a distinct area of research and advanced study.

The several proposals for changing the governance and management of local school districts which follow are intended to achieve practical objectives:

1. Use the time and energy of board members and administrators more efficiently and effectively
2. Maintain a primary focus on education policy, especially learning outcomes
3. Purse policy development processes which are open to, indeed, require the participation of citizens and professionals
4. Clarify the accountability of all participants in policy development processes as well as specify the bases for assessing the performance of persons employed by local districts
5. Extend and intensify the citizen role in educational policy development and policy oversight
6. Incorporate the best knowledge available (both policy issue and policy-making knowledge) in the processes of policy development
7. Keep pace with the growing complexity of individual and organizational life and enhance capacity to anticipate educational needs generated out of change and
8. Lead to the development of policy about policy

Periodically in the history of American education leaders have suggested that boards of education have become anachronisms, have fulfilled their mission, should be reformed, or quietly fade away. There was a period at the turn of the century when the notion of abolishing school boards attracted support from the then-emerging profession of educational administration joined by elites from the business and higher education communities. The theme was revived and realigned in the late 1920s, principally by Charles Judd, then chairman of the Department of Education at the University of Chicago. More recently, Dr. Gene Gruen, former superintendent of schools in New Orleans, made suggestions regarding altered governance for large city school districts which would change but not diminish the role of boards. Several proposals have been advanced for new metropolitan forms of school governance with modest alterations in the policy and managerial expectations for boards and superintendents. None of these proposals has called for the removal of laymen from policy responsibilities for school districts. On occasion, the governance and management of school systems has been wrested from local school authorities and placed in unique forms of receivership or trusteeship (South Boston High School, Trenton, New Jersey, and the Cleveland, Ohio, public schools are recent examples). These receiverships have been generated out of crisis circumstances which called for extraordinary forms of state and court intervention. The proposals that follow are not crisis centered nor are they framed on the belief that laymen are necessarily managing education ineffectively, capriciously, or selfishly in most places. These proposed changes are based essentially on the recognition that the complexity of today's public institutions is such that they are often not governable or manageable within present approaches to their governance and management and are likely to be less so in the future. To put it another way, new and altered ground rules regarding policy development are essential if governors and managers are to conduct their business satisfactorily in the future. My proposals therefore retain the principles of local control and policy determination by citizens but change the conditions under which policy is determined and administration is performed. I am at the same time intending to strengthen institutional appraisal by placing school board members, school administrators, and the leaders of professional organizations in clearer, more fundamentally accountable positions. It is expected that the present pattern of school board behavior and ideology be altered in favor of practices which will allow sounder, more rationally determined school district policy.

Synopsis of the Policy about Policy Proposals

Synopsis of the Policy about Policy Proposals

Should local school boards (and state education authorities where required) play a role in regard to these proposals they would in fact be developing policy about policy.

I propose:

1. That local boards of education develop discrete and definitive policy about policy, some of which are implied by the subsequent proposals for change in the governance and management of local school districts
2. That educational policy become the primary and continuing policy focus of local school officials as distinct from personnel, business, and physical facilities, for example
3. That school boards meet four times per year for extended periods of time (two or three days) in order to gain full command of policy-related data and knowledge, have time to reflect, and consider the views of citizens in regard to policies under consideration
4. That policy-making agenda be prepared two to three years in advance to frame the work of the board, administrative staff, professional organization leaders, student leaders, and citizen groups
5. That superintendents be given long-term contracts (three to five years) with clear-cut guidelines to surround their performance as well as the freedom to administer schools within those boundaries
6. That the form and substance of the superintendent's evaluation be clearly defined and understood at the outset of the contractual period and that data be accumulated and organized to allow the board as the employing agency to pass adequate judgment about the superintendent's performance
7. That the employee salary and wage determination prerogatives now retained by boards of education of local school districts be moved to the state level
8. That representatives of professional groups (teachers and administrators organizations) in local school districts become members of...
The local boards of education and assume policy and accountability responsibilities equivalent to that office. That boards of education utilize a disciplined framework for policy examination and employ that framework within a facility especially designed for that activity, which emphasizes the efficient use of data retrieval and display technology. That school board members and the executive staffs of school districts be trained to handle policy development activity for their enterprises. That one or more states pass special legislation allowing school districts to suspend (for a period of time) current statutes, rules, and regulations for the governance and management of school districts in order to test alternative approaches to governance and management, and that processes of policy development and their enunciation as well as the processes of management be designed to include genuine, sustained student, parent, citizen, and professional educator involvement.

Discussion of the Proposals

The several proposals are a package for the most part. There may be some value achieved by implementing one or two without the rest. But if the objective is effective education policy and managerial performance with accountability clearly defined, then the proposals should be considered as a set. They must meet the criterion of contributing directly and demonstrably to improved education for all who enroll in a district's schools.

Proposal One

Local boards of education develop discrete and definitive policy about policy, some of which are implied by the remaining proposals for strengthening the governance and management of local school districts. Much of what should be achieved early in the consideration of these changes, in my judgment, is the establishment of an ethos or domain within which the policy function is ennobled and understood. Such an ethos presumes commitment to policy development and belief in its significance on the part of policy makers and executives. Policy making as now experienced is simultaneously the most difficult and least systematized activity of legislative and executive persons. It is likewise an activity where there is a significant gap between what is known of how policies can best be formulated and the ways that individuals and institutions do in fact make policy because we do not know how to do it better. Thus there is the genuine prospect that the quality of policy output can be improved.

Dror argues persuasively that changes are needed in structure and process patterns if we are to improve a policy-making system. To begin then, we need to consider the policies which legitimate the need to examine the structures and processes of policy making. School boards, with the concurrence of representative constituencies, should agree that their policy making practices and procedures may benefit from close inspection potentially leading to redefinition and restructuring. With such agreement, then, many policy about policy issues become legitimate. Among those may be the development of explicit policy-making methods and processes. Dror suggests that for purposes of current policy making, the following elements should be standard features of a preferable policy-making method:

1. There should be some clarification of values, objectives, and criteria for decision making.
2. The method should include identifying the alternatives, with an effort to consider new alternatives (by surveying comparative literature and available theories) and to stimulate creation of novel alternatives.
3. The method should include preliminary estimating of expected payoffs from the various alternatives, and deciding whether a strategy of minimal risk or of innovation is preferable.
4. If the first the incremental-change model should be followed. If the latter the next step is establishing a cutoff horizon for considering the possible results of the alternative policies, and identifying the major expected results, relying on available knowledge and intuition.

5. Analysis of the alternatives should deal with both quantitative ("economic") and qualitative ("political") factors, in order to overcome the limitations of current systems analysis and advance toward policy analysis.
6. The method should include an effort to decide whether the issues is important enough to make more comprehensive analysis worthwhile.
7. Theory and experience, rationality and irrationality, will all be relied upon, the composition of the mix must depend upon their various availabilities and on the nature of the problem.
8. Explicit techniques, such as simulation and the Delphi method, should be used as far as they are appropriate.
9. The method should include explicit arrangements to improve the policy making by systematic learning from experience, stimulating initiative and creativity, developing the staff, and encouraging intellectual effort.

Dror's methods lend themselves to incorporation within a policy development process. From my perspective a policy development process is similar to but not the same as the political process. The political process is usually thought to be a set of political activities involving heterogeneous sets of participants interacting one with another where basic values are translated into policy preferences. The policy development process is a much more sophisticated concept. It includes in its execution (1) a deliberate attempt to incorporate the most advanced forms of policy issue knowledge and information available related to the policies to be enunciated, and (2) a monitored political activity designed to ensure the broadest set of perspectives possible. The weight of proposal one is not to locate ways to reduce the interference or meddling on the part of school board members in the everyday administration of the school system. The everyday meddling (or involvement if you prefer) of school board members in administrative matters that occurs across the country is understandable. In fact, board members believe deeply that they are serving their constituents when they interfere and meddle. Administrators often have little understanding of or patience for this sense of responsiveness that board members possess. As a consequence considerable institutional energy goes into disputes over the boundaries of board member and superintendency authority and responsibility.

Thus proposal one is based on the premise that both policy and administrative activity can be more efficient and effective if there is a substantial alternation in the ground rules for those activities. I believe that there should be intensive focusing of energy on each in the expectation that the integration of governance and management functions will produce a sounder institution. F. J. Roethlisberger noted in 1941 that:

"No conceptual framework can do more violence to the territory of the executive or of anyone who is dealing concretely with cooperative phenomena, than the simple notion of cause and effect. For such a person in a position of responsibility a concept of a system involving relations of interdependence is much more useful because it structurally represents the complex events and their interrelations with which he has to deal."

Proposal Two

Educational policy become the primary and continuing policy focus of local school officials as distinct from personnel, business, and physical facilities, for example.

I have been concerned in recent years about the drift of school board and executive service away from policy devoted directly to the educational process and learning outcomes for clients of the system. My concern is similar to but not quite the same as what Callahan described as "the descent into trivia." In the period of 1973-76, I had the opportunity to observe two major school boards close-up. In fact, I attended most of the meetings of one board (including committees) for a full year. My conclusion from those observations is that those boards' energies were addressed overwhelmingly to adult matters, those personnel and finance especially, with little or no time devoted to the children and youth enrolled. Such adult-centeredness could be defended had the preoccupation with adult-centered issues linked viably and fundamentally to learning. But in most cases, as with collective negotiations, for example, that linkage could not be determined.

Thus proposal two, like proposal one regarding a policy ethos, involves a commitment to educational policy first and foremost. It requires
terror and vigilance on the part of school board members and professionals alike. And to ensure against drift and preoccupation with educationally remote matters, school boards should require of themselves and their executive staffs educational impact statements to accompany these proposals. Each major decision or policy should be measured against its educational meaning for those enrolled in the district. Current techniques for impact assessments may not be well enough developed to meet local district needs. But the perfection of these techniques can become an objective and be another of the district’s policies about policy.

Proposal Three

The school board should meet four times per year for extended periods of time (two or three days in succession) in order to gain full command of policy-related data and knowledge. Have time to reflect, and consider the views of citizens in regard to policies under consideration.

In each of the large cities that were a part of a recent study of school boards, board members were spending an inordinate amount of time (much of it wasteful) in meetings of the full board plus committees of the board. Additional time was invested in preparation for board meetings. Board members were also engaging in extensive communication with one another, with school administrators, and with their constituents, between meetings. Seeking the perspective of others as well as listening to those brought to their attention regarding issues before the boards. Despite these investments of time and effort board members and school administrators shared frustrations about their abilities to produce decisions that had some prospect for resolving problems and issues before them.

Regular and special meetings of school boards are often frenzied and unproductive. Policies are developed from a shallow information and data base. Some of the policies that are enunciated issue from what appears to be pure emotion and feeling rather than hard data and fact. The “attention span” of individual board members of the board as a collective is exceptionally brief and stumpy for some policy matters and exceptionally protracted for others. There is little meaningful specialized policy language used regarding policy and policy development. Most decisions are taken without thoughtful and in-depth consideration of how those decisions relate to existing decisions or existing policies. Effective cross-referencing hardly exists at all. Important financial decisions are often taken at the very last minute, under extreme pressure, and with little understanding of or consideration for the long range fiscal and pedagogical consequences of those decisions.

Proposal Three is designed to improve upon those circumstances. The board should meet for extended periods of time (un my judgment for two or three days in publicly announced policy development sessions). These meetings should focus upon a review of the educational policy needs of the system, the development of a policy making agenda, and the consideration of policy proposals produced through an agreed upon policy development process. Such work should take place in an environment designed specially to augment the policy development process. Staff work prior to policy development sessions should likewise reflect the most rational and effective policy development process techniques and practices known.

Proposal Four

Policy-making agenda be prepared two or three years in advance to frame the work of the board, administrative staff, professional organization leaders, student leaders, and citizen groups. Boards at all levels, with the participation of administrators, the leaders of professional organizations, students, where helpful, and citizen group leaders, should develop a policy calendar which incorporates the policy agenda. The calendar should cover at least a two-year time span with the first year (four quarterly meetings) firmly in place and the second year reasonably firm with the opportunity to make adjustments for satisfactory reasons.

As indicated, it would be expected that the policy needs for a school system would be carefully considered and then calendared. The calendar and agenda would be announced and made available for the public. For example, during a year of quarterly meetings schools officials may choose to spend their first policy development period deciding the districts policy stance on preschooiling, or the district’s investment in the educational needs of children during their first four years of life. During the second policy development period the focus may be on the problems of graduates that are unemployable. A third intensive policy development period may be invested in producing policies for personnel evaluation, and a fourth may address discipline and classroom control. Over a period of three years, a dozen policy areas could be thoroughly developed. Currently, many school districts operate with policies that are underdeveloped, obsolete, or nonexistent.

Choices of items for the policy agenda should not be made casually. Considerable time and effort will be required of staff to prepare for two or three days of policy discussion and policy choice with opportunities for citizen involvement. The writing of policy-related documents, identification and briefing of experts, scheduling of hearings, are energy consuming and may compete with the performance of everyday managerial functions. Thus, the selection of policy arenas for development becomes a central governmental and managerial responsibility. It is likely that only a few major policy areas can be developed and approved (prescribed) in a calendar year.

Proposal Five

Superintendents be given long-term contracts (three to five years) with clear-cut guidelines to surround their performance as well as be given the freedom to administer schools within those boundaries.

Board members are to fulfill three functions basically. First, they are to choose a superintendent and develop policies and procedures for evaluating the individual’s performance. Second, they are to be responsible for policy development and policy enforcement. Third, they are to be responsible for appraising the district’s performance and reporting to the public on that performance.

This proposal has to do with each of those three functions but speaks more directly to the first. Three to five years is a brief period in which to expect administrative personnel to achieve institutional goals and objectives. It is a long time, however, for an ineffective superintendent to impact negatively upon an enterprise. Thus, a three- to five-year time frame seems to be reasonable but one hand but somewhat dangerous on the other. Implicit in this proposal is the belief that the chief administrator should have freedom to administer the schools with a minimum of board interference. It is essential that executive responsibility be focused intensively upon the day-to-day operation of the system as well as providing backup services to the policy development process. Many district level administrative staffs in city school systems have observed spend 50 per cent or more of their working hours fulfilling service responsibilities (including running errands) for members of the board of education. Such demands leave only a modest amount of time for the actual management of the district. Thus, this proposal calls for a better balance and a clearer distinction between day-to-day management and servicing the policy development process.

Serving the policy development process could be the responsibility of a policy scientist at least in large districts or at the state level. Learnings from policy science can be inserted into the development of educational policy. It is the occasion for exhibiting skills in the incorporation of policy development process knowledge and policy issue knowledge simultaneously into policy development. In most situations it would be unreasonable to expect that the superintendent of schools would fulfill the policy scientist role and function for school districts. It would not be unreasonable, however, to expect that the superintendent and executive staff would understand the contribution that a policy scientist can make to the policy development process. Thus, it would seem reasonable that school officials would take steps to ensure that the policy scientist role and function be provided for in some way.

Proposal Six

The form and substance of the superintendent’s evaluation be clearly defined and understood at the outset of the contractual period and that data be accumulated and organized to allow the board as the employing agency opportunity to pass adequate judgment upon the superintendent’s performance.

The accountability problem as it relates to executives in large scale public organizations has hardly been touched in terms of effective ministry. The employment of the superintendent is a proper occasion for the examination of the provisos under which the superintendent is to be accountable. It board members are to focus on policy development (their role)
with a minimum of attention to administrative matters (the executive role), then the superintendent's duties and responsibilities flow rather naturally from that decision.

The superintendent should be evaluated in terms of the successful management of the school system as well as the individual's ability to aid and support the policy development process. These are interrelated but distinct zones of executive responsibility. Both need to be spelled out in detail, thoroughly discussed by the board and the executive, and monitored with data collection devices consistent with the dual zones of responsibility.

Proposal Seven

The employee salary and wage determination prerogative now retained by boards of education at local district levels be moved to the state level.

This may be the most controversial proposal of those advanced in this paper. It is one that just about everyone will question for one reason or other but it is not clear who or how many will oppose it. It may be the most important proposal, however, if learning is to be improved.

The impact of collective bargaining on educational policy development processes at the district level is essentially negative. Considerable energy goes into negotiations detracting from both the management of the enterprise and rational policy development processes. In fact, collective bargaining in some school districts has become a major policy-enunciating activity for the system and is a process that fails to meet the criterion of political openness.

The collective bargaining process as practiced presently is sheltered, nearly clandestine, and rules out participation of many interested parties. The interests of students, parents, taxpayers, teachers, administrators, and others are ineffectively reflected at the table. There is little room for considering the items under negotiation in terms of their implications for such basic policy matters as learning outcomes, the effective desegregation and integration of schools, or the extraordinary problems of moving from adolescence into adulthood that young people experience today.

Thus I am proposing that salary, wage, and fringe benefit determinations be moved to the state level. This will allow local district board members and administrators to focus on policy development that is related fundamentally to pedagogy and learning. Such a change will lift an enormous burden from the shoulders of local school officials and liberate them for work directly and fundamentally related to the learning of young people.

Bargaining at the state level has been discussed recently in California where staff for the senate education committee conducted hearings on the concept. Obviously the political implications of this proposed change are profound but they are not without positive consequences at the state level too. Education will be center stage, inescapably attracting statewide interest in the problems of teachers and other educational professionals.

Proposal Eight

Representatives of professional groups (teachers and administrators organizations) for local school districts become members of local boards of education and assume policy and accountability responsibilities equivalent to their offices.

Most if not all states would have to pass legislation that would permit representatives of professional groups to have designated places upon local policy bodies. It is a proposal that has many flaws and is offered after considerable reflection. It is advanced partially from frustration and after witnessing the displacement of the educational welfare of children and youth with other interests that tend to erode educational opportunity.

There have been unfortunate divisions between and among teachers, administrators, and school board members who on a day-to-day basis are responsible for local district teaching, managing, and policy making. The weight of this proposal rests on shared responsibilities for policy development and institutional accountability among professional staff and school boards.

Practitioners at the classroom and building levels are informed people with contributions to make in the educational policy development process. The products of policy development activity ought to reflect directly the best thinking of laymen and professionals. Thus it is of substantial importance that such persons be responsibly involved.

Historically, it was expected that superintendents would and could reflect the educational significance and implications of policy under consideration by boards of education. Such has not the case any longer. At least in many school districts with long histories of negotiated agreements. In some districts, perhaps many, it is literally not possible to develop needed new educational policies either because of existing negotiated contracts or the implications for future contracts are so severe as to cause board members and superintendents to abandon such educational policy development altogether. They have reached an unfortunate stage of educational policy paralysis. Thus this proposal, linked with the movement of collective negotiations to the state level, is intended to produce badly needed new education policy at the local district level.

Proposal Nine

Boards of education utilize a disciplined framework for policy enunciation and employ that framework within a facility especially designed for that activity, one which emphasizes the efficient and rational use of data retrieval and display technology.

As indicated earlier, it is my belief that boards of education and executive staffs adopt a rational approach to policy development I would go even further and recommend adaptations of the decision seminar model of policy development authored by Harold D. Lasswell. The decision seminar is both theoretically complete and practically feasible when persons are trained in its use. It has been tested in many contexts and holds unusual promise as a tool for public problem solving. The model is both simple and complex simultaneously. It is data and information dependent, relies heavily upon rational processes, and permits (even demands) in its usage that the most contemporary and significant information be incorporated.

The decision seminar operates most effectively in a physical environment conducive to the use of computer technology and management information systems. Ideally the policy development processes should occur around a large octagonal table with primary participants seated in a "theater in the round" arrangement allowing secondary and tertiary participants to witness and take part in policy development activity within policies and procedures established for that purpose. Technology should also be available to broadcast and/or telecast the proceedings to the community. Interactive communication with the community should be possible through telephone arrangements or other more advanced cable television capacity. Again through policies and procedures established for this purpose.

Proposal Ten

School board members and executive staffs of school districts be trained to handle policy development activity for their enterprises.

There is an assumption that persons elected to public office as well as those appointed to professional administrative positions are fully competent to engage in policy development activities consistent with their responsibilities. Nothing could be further from the truth in either category. The complexities which surround policy development and administration of education (and other institutions) are so extreme that they escape the ordinary patterns of learning and/or preparation. Governance and management require disciplined approaches that are both efficient and effective. And persons must be especially trained to use those approaches if they are to produce policy and administrative activity consistent with the needs of contemporary institutions.

Haphazard, catch as catch can, incoherent and irrational approaches which have characterized policy and executive life in large institutions over the past two decades will not carry the weight of governance and management needs much further. Radical change is required and that includes the incorporation of an open, ordered approach to policy development and the special training and preparation of persons who are expected to employ a more rational system.

Proposal Eleven

One or more states should pass special legislation allowing school districts to suspend (for a period of time) current statutes, rules and regulations for the governance and management of school districts in order to test alternative approaches to governance and management.

The concepts and ideas incorporated in the proposals above are radical from one perspective, modest from another. They are probably too radical for state mandate and thus warrant special, almost hothouse conditions, for their testing and trial runs. Thus I urge state legislation which...
Proposal Twelve

The processes of policy development and their enactment as well as the processes of management be designed so as to include genuine sustained student, parent, and other citizen involvements

These proposals may appear, despite disclaimers, to be elitist in character and intent. It may be feared that the would produce a closed system rather than an open one, to overestimate the value of knowledge and information, and to place too much confidence in board members ability to develop policy, and managers ability to manage under conditions of freedom and nonintervention. They are not

I believe, with others, that policy development processes and management processes must be open and incorporate many perspectives. Participation is essential to a broad spectrum of citizens and professionals in all phases of policy development and management. Policy development implies a developmental process. Policy should not emerge full blown from the mouth of Zeus. Policy ought to be the product of lengthy study and investigation, citizen and professional review, and refinement before enactment. The policy itself must reflect the finest thinking available, enlightened by the best research available. Similarly, managerial activity must proceed with citizen involvement especially in the appraisal of institutional effectiveness.

This is an area where policy about policy is needed, whether or not the white proposals for change are considered. Over the past dozen years or so, school officials have modified their practices regarding public participation and involvement in local decision making. Few districts have produced comprehensive, well considered, local district policies in respect to participation and involvement.

A system of citizen involvement at the building level with well defined missions and purposes should be linked conceptually and practically to the governance and management system at the district level.

The present forms and structures for citizen involvement often lead to frustration rather than satisfaction, and valuable citizen energies are wasted as a consequence.

Concluding Discussion

There are implications to be drawn from the proposals outlined above. Some are latent. Some are manifest. Some are hidden. Some are in full view.

It is clear that one set of implications relates to policy development itself. From my perspective, it is evident that policy development process is an important concept and should be addressed to broad sectors of educational policy needs. It is also clear that policy development needs to be a disciplined and organized process requiring extensive amounts of time, conducted under conditions conducive to concentration and reflection, and incorporating participation of laymen and professionals. Similarly, there needs to be intensive thought given to the policy needs of school districts, including public and professional involvement in their identification, to the preparation of policy development agendas and calendars, to provisions for the training of school officials in their respective policy-making roles and responsibilities in the policy development process, and to incorporation of policy technologies and support capabilities to enhance the quality of policy products.

It is also clear that the policy requirements of an institution once understood, defined, and calendared are manageable and can be met. In chaotic circumstances often many decisions are made but few well-developed policies are produced. Actually only a few basic policies need to be developed each year. Thus what may appear to be an overwhelming problem is not so intimidating when it is broken out into policy sectors and fitted into a rational agenda of review and development. The segmentation ensures work on policy permits a staff to have reasonable periods of time to perform policy development services to board members. Much of the current frenzy which marks executive activity is at school board need would be reduced. Information, which results from within district research as well as new knowledge acquired from other sources can be incorporated into the policy development process.

It is not the intent of these proposals to depoliticize education. It is the intent to make the policy process more open and accessible to larger numbers of stakeholders, less vulnerable to the machinations of policy elites, and more yielding to the best policy science intelligence that man has been able to devise. Implementation of the proposals would compartmentalize a bit more clearly the work of board members and executive staffs. But it would also lead to the integration of these two functions in order to produce an improved quality of institutional performance. In terms of power, more power would exist in the situation. The power and influence of neither the governors nor the managers would be reduced. Both would be enhanced. Implementation of these proposals would in my judgment create a setting where the idealized creative experience so wisely articulated by Mary Parker Follett in the mid-1920s could be realized. It would in fact be possible for integrative behavior to occur, reducing the occasions for compromise and stalemate.

There are constitutional, statutory, and other legal problems associated with the proposals. If taken seriously they may lead to rather general reexamination of the constitutional and statutory provisions for the governance and management of local districts. For example, many current school board responsibilities may need to be managed in other ways. Determining salaries and wages of school personnel, constructing (even naming) school buildings, authorizing the issuance of bonds, setting school tax elections or referenda of other sorts, the approval of federal applications for funding, and other such decisions may be designated as responsibilities of other governments.

The removal of the collective bargaining function from local districts and placing it at the state level would clear out underbrush and permit boards of education and top school officials to focus more directly upon policy and policy formulation. State level bargaining may lead to a clearer, uniform delineation of the scope of bargaining and to the identification of educational program costs as distinct from those of personnel.

The three basic responsibilities of board members stated earlier would set the tone and establish the parameters of board and executive activity. Consequences would flow from responsible attention to those three board responsibilities. Much of the current trivia which occupies board member time and energy would fall away in favor of responsible educational policy activity and appraisal. The energies of the administrative staff, on the other hand, would be devoted to the effective administration of policies enacted by the board. As a consequence of longer contracts for superintendents the period for judging the effectiveness of administrative leadership and performance would be extended. At the same time school district planning would fall within longer time frames and some sanity could be restored to the administrative work of many school districts where chaos is now the rule.

The final set of implications surrounds the need to prepare both policy makers and executives in ways consistent with these new emphases. It is proper to caution that the precise forms and content of policy development process training is yet to be organized. In fact, there is substantial skepticism about the current capacity of policy scientists to contribute much of what is needed to policy development. Lindblom and Cohen in commenting upon policy analysis and systems analysis say that:

Waste, noise, and the excesses of policy analysis all reflect we suggest, a kind of hyper-rationalism among pPSI (practitioners of Professional Social Inquiry). As a result of inattention to the lunatic fringe of policy science we contribute much of what is wrong with policy development. Lindblom and Cohen in commenting upon policy analysis and systems analysis say that:

The present conduct of governance and managerial activity often appears rational, but that is essentially a veneer. Attendance at board meetings of a large city recently was shocking, even though I have been attending board meetings in school districts (large and small) across the nation for nearly 30 years. The agenda for the session, a regular meeting, was on a single sheet of paper with no documentation. There was no way
Many of the challenges to school boards are described in Yohezkel Dror’s Public Policymaking (1971). These problems are modest when we consider the seriousness of the need for improved performance. In my judgment the time has passed for temporary, uninformative policy making. Some local and state boards of education are moving in some of the directions that I have proposed. The state Board of Education in Illinois reflecting in its practice some of the ideas I have discussed, specifically the utilization of a policy development process, an annual three-day retreat for learning and planning, training in policy development processes and the development of an extended policy agenda. The Toledo public schools are designing a “map and strategy” room to facilitate policy development. The Milwaukee Board of Education is considering policy about policy and the new Chicago Board of Education may consider some of the concepts herein proposed. The California State Senate held hearings recently on moving collective bargaining to the state level. At the Ohio State University, we will be consulting in conjunction with the University Council for Educational Administration (UCEA) partner programs representatives of a half-dozen school districts to consider the above proposals for potential adoption or adaptation. These are modest beginnings. Much more fundamental, far-reaching reforms are required.

Footnotes

1. Discussion of policy usually engenders a lively debate covering perennial questions: What is policy? What is the role of policy? What is the purpose of policy? Setting up a definition of the term policy within the academic community is itself a challenge of some dimension. For these purposes, I use the definition of policy found in Dictionary of the Social Sciences (New York: The Free Press, 1965).

3. See Charles E. Lindblom, “The Inadequacy of Democratic New York: The Free Press 1965; Lindblom argues that decision makers and/or policy makers do not attempt comprehensive surveys and evaluation of decision and policy arenas. Rather they proceed incrementally and take as their starting points not the whole range of decision or policy alternatives but only the here and now in which we live and they move on to consider how alternatives might be made at the margins. Lindblom rejects essentially the theories of Lasswell and Dror which support comprehensive holistic approaches to policy examination and development.

6. Harold D. Lasswell, Policy Sciences: International Encyclopedia of the Social Sciences, David L. Sills ed. (New York: The Macmillan Company and The Free Press, 1968). Vol 121 p 188. In conversations with Professor Lasswell in the six years prior to his death in 1978, we talked about the recruitment and training of policy scientists. He advocated that preparation programs in educational administration would be another source of policy scientists. Persons chosen from educational administration for policy science careers would benefit from internships in programs that would bring them into intimate contact with decision and policy processes. Such experience could occur at one or more levels of government or within any of several areas of substantive interest: e.g., education, energy, environmental relations.

7. Dror, p. 179

8. Ibid

10. Ibid

11. Ibid

14. Several of the proposals for change in the governance and management of local school districts were presented annually at the Idaho State Seminar in Education Salt Lake City (in a paper entitled The Governance of Schools at the Local Level: Rules of Boards Administration, Teachers and the Public). Later, the same proposals were discussed at the annual meetings of the Pacific Regional School Boards Association, Tucson, Arizona December 1979.

15. Dror, op. cit. p 301

16. Ibid pp. 271-272

19. Many large districts have found it very difficult to maintain up-to-date policy procedures rules and regulations documents. The problem is complicated by the growing numbers of rules and regulations accompanying state and federal programs. As a consequence administrators teachers board members, and citizens are poorly informed about what policies exist and are not aware of new policies as they are proposed. The California State Senate has ordered that the central staff make a conflict of interest analysis of the boards of directors of all foundations that provided grants to the San Francisco Unified School District. Many contracts were involved of one or more than one board members on its board. This procedure was made more severe when only two weeks were allowed for the completion of the report.

20. Few criteria for the evaluation of superintendents contain explicit expectations regarding competence in leading a policy development process. Carol studied the evaluation of superintendents in New Jersey in the early 1980s. There were no examples of policy development criteria being applied. Lila N. Carol Evaluating Superintendents in New Jersey (New York: New Jersey School Boards Association, 1972).

23. For a synopsis of concepts involved in the decision seminar see Philip M. Beswick and Larr L. Shinn, Decision Seminar (Columbus: The Ohio State University Press, 1979).

24. There are some things that can be done to improve the performance of public officials. See Glenn D. Paige, The Scientific Study of Leadership.

25. John W. Gardner in his recent book Moral sets the context and requirements for modern leadership insightfully stating that: “The task of leaders in our kind of society is to help transform the problems that all must face to aid in setting of goals and priorities, and to work with others in finding courses of action in the face of goals.” John W. Gardner. Moral: New York W. W. Norton Company, Inc. 1977.

27. The Cleveland Ohio Public School System is a case in point. It remains on the range of usual and educational bankruptcy with little hope of improvement short of complete return in governance and management.

11. Such contexts for policy development permit the achievement of "double loop learning" first noted by E. Ashby. For further discussion of "double loop learning" refer to Chris Argyris and Donald A. Schon, Theory in Practice: Increasing Professional Efficiencies (San Francisco: Jossey Bass, Inc., Publishers, 1974).

Dr. Cunningham is Novice G. Fawcett Professor of Educational Administration at The Ohio State University. In addition to his academic rank, he holds many positions related to the development and improvement of education and practice. Before returning to the faculty at The Ohio State from the deanship at that university, Dr. Cunningham served as a teacher, principal, and superintendent as well as assistant director of the Midwest Administration Center and professor at the University of Chicago. Dr. Cunningham has published extensively in the area of school administration and has research interests in such areas as citizen participation in educational problem solving, policy analysis, educational change, community power structure, and institutional appraisal.

POLICY DEVELOPMENT WORKSHEET 1

Try to answer each of the following questions with five reasons:

Why did the people elect me?
1. 
2. 
3. 
4. 
5. 

Why did I stand for election?
1. 
2. 
3. 
4. 
5.
WHO ARE YOU AS AN INDIVIDUAL?

Background and Approach to Work and Life (1.1)

There is an ever increasing amount of evidence that school board members are in many instances elected because the people see them as role models or persons who will guard and promote the values of the community. What do you think is important? Answer these questions alone first, then follow numbers 4 and 5.

1. List the three most important influences of your background that helped you become who are.
   a. 
   b. 
   c. 

2. List three of the most important values about your work, in the home or on the job.
   a. 
   b. 
   c. 

3. List three of the most important values for your life and/or your family.
   a. 
   b. 
   c. 

4. Introduce yourself to the other members of your group and share with one another your ideas about one, two and three above.

5. For each of the items above create a list of the values your group holds in common. You should have three lists. Also choose a separate person to report on each of the lists.
WHO ARE YOU AS AN INDIVIDUAL?

Can You Describe Your Community? (1.2)

Instructions

- First, think of your own community and see how many of the questions below you can answer with solid facts.

- Second, share some of the differences between the communities among your small group.

- Third, select either sex education, moral education, or evolution as a policy issue and, as a team, complete 1.21, 1.22, 1.23 and 1.24.

- The team should be prepared to report to the large group.

- Each team has 30 minutes to complete this exercise.

1. How fast is your community changing?
   - a. Is it gaining population?
   - b. Is it losing population?
   - c. Are the population groups changing by:
     - (1) Age?
     - (2) Race?
     - (3) Socioeconomic?
     - (4) Religious groups?

2. Is your community's financial base changing?
Describe Your Community

Who are the Influence Groups? (1:21)

Instructions

List the religious groups, service clubs, fraternal organizations, unions, and ethnic groups that are present in your community. Next, name a school policy issue in which they may have an interest. Also name one leader for each group. In the fourth column place the name of the person in your school organization that best communicates with that group.

Who are the Influential Persons? (1.22)

Instructions

List the names of the "ten" most influential (behind the scenes) individuals in your community (external). In the second column next to each name list a current policy issue in which that person may be interested. If you can't think of a policy issue in which that person is interested, place a zero in the column. In the third column place the name(s) of the person(s) in your organization that communicates with that person. What is the role of influential person(s) who do not have apparent policy concerns?

WHO ARE YOU AS AN INDIVIDUAL?

Policy Simulation (1.3)

Instructions

Each group is to select one of the Future Briefs (1.3) as its view of society in the future. Each group will be expected to give a report to the large group on the values, goals, objectives and policies it identified.

The second step is to identify values. What aspects of education will the community—and by implication, the nation—value, and how? Part of this exercise should find participants dealing with more abstract values, e.g., attitudes toward self, families, neighbors and peers, work and leisure, institutions, and the environment. The point is to clarify values that the community (and the board members) believes should be instilled in students for whatever brief they select.

The group next needs to identify how its school system now mirrors—or fails to mirror—these values. Board members would consider future prospects—problems and opportunities—for their school system in the context of these briefs.

The group members then need to prepare a partial set of goals for their school system. These goals should, of course, be consistent with the values identified above, should be constructed to fill gaps between the school system as it presently operates and perceives values, and should take into account factors likely to influence the schools' environment in the near future.

Next, participants need to identify what things the school board can influence and how, and what things it cannot affect. For example, a board has little control over local migration patterns or over federal policies in education.

The participants then need to set three objectives and make specific policy for each objective.
WHO ARE YOU AS AN INDIVIDUAL?

Policy Simulation (1.3)

Transition to a Slow-Growth Pattern: Future Brief I

This line of growth assumes a sweeping change in some of the most fundamental values and beliefs of Americans. The shift will be brought about in part through a state of "growth culture" unrest which leads through a period of stringent social discipline toward an evolving order in which self discipline and reverence toward ecological and cultural order combine with a rejection of the previous consumption-based ethic. Many freedoms currently prized are limited in the interest of stable transition, but the restraints start to be released during the last decade of the century. This is a relatively prosperous future, moving toward a minimum consumption, satisfactory, low-growth pattern by 2000 A.D.

Transition to a Moderate-Growth Society, Liberal Democracy: Future Brief II

This is a line in which the values of liberal democracy are tried and found to be sufficient without the sweeping changes in Future Brief I. Rates of technological innovation slowed gradually under the pressures of resource exhaustion and pollution control. However, technological unemployment threatens to be a serious problem since automation will be developed and the value shift will be away from the work ethic. The trend will be away from conspicuous consumption, but material evidence of success still will be valued. The year 2000 will seem to offer a stabilized American society with a slow-growing, satisfactory, active technological economy.

KEY QUESTIONS ON POLICY

WHY DO WE NEED POLICY?

- "Good boardsmanship holds true to the principle that the board must be in charge and must always get what it wants." Written policy increases the likelihood of the board getting what it wants.

WHAT IS A POLICY?

- A written policy statement is an expression of the board's view of what it wants to happen.
- A policy statement is the means through which the board directs the resources of the school district to meet its predetermined goals.
- A policy tells what is wanted and may also include why it is wanted and how much is wanted.
- Policy gives direction and clears the way for the administrators to take action. "Those who make policy are in control."

WHERE DO POLICIES COME FROM?

- Policies come from the community as represented by the board of education.
- Most often school board members are elected because they are representative of the majority's view of the values, beliefs and style of the community.

WHO CAN SUGGEST POLICIES?

- Policy suggestions may emerge from a number of avenues. The suggestion of a school board member, an administrator, a teacher, a parent or a student may point out a policy issue.
- Policy at its best emerges when the school board plans ahead or anticipates problems that are likely to be a community concern.
WHAT ARE THE FOUR PURPOSES OF WRITTEN POLICY?

○ The first is to conserve school board time and effort by freeing it from routine action.

○ The second purpose of written policy is to provide for consistency.

○ The third function of written policy is to give the board's representative, the superintendent, guidance and direction during its absence.

○ The fourth is to serve as a legal record.

HOW CAN WE MAKE BETTER POLICY?

○ If we define better policy to mean that it lasts longer, that it better uses the district's resources to meet the needs of the future and that it's more representative of a broader base of the community's values, then better policy is the result of a decision-making process.

○ The raw material of the decision-making process is information.

○ The more people included in information gathering the more likely the policy will be more meaningful to a larger group of people which means it will probably last longer and be easier to implement.

WHAT IS THE LEGAL AUTHORITY FOR POLICY?

○ The responsibility for the quality operation of the school district rests largely on the school board.

○ The powers and functions of a school board may vary from state to state or vary within a state, depending on the size of the school district. However, to the school board alone is delegated the responsibility either through implied powers or state law to provide for public education.

○ Board members serve as both state officials and representatives of their local communities.

○ School boards alone are given the responsibility for making the will of the people felt as it is expressed in state laws and local priorities.
HOW IS POLICY RELATED TO RULES AND REGULATIONS?

Generally speaking, a "rule of thumb" suggests that the school board establishes policy and the superintendent develops the rules and regulations that put the policy into effect. The procedure varies from community to community, depending upon the importance of the policy and its supportive rules and regulations. In the case of economic, social or political issues which are sensitive, the school board may want to review and approve the rules and regulations. Under the same circumstances the superintendent may want the school board to approve the rules and regulations. It should be noted that if the board approves the rules and regulations it narrows the operational authority of the superintendent. Sometimes this is desirable and at other times it is undesirable.

WHO IMPLEMENTS POLICY?

The board employs a superintendent to put its policy into effect. Generally speaking, the school board sets policy and the superintendent develops the rules and regulations that will put the policy into effect.

WHO EVALUATES THE EFFECTIVENESS OF OUR POLICY?

The school board should develop a policy that calls for regular and systematic review of all the board's policies. The superintendent should provide the procedures that require a yearly review and evaluation of all the board's policies.

WHAT POWER DO POLICIES HAVE?

Policies in effect have the power of law. Policies are the ultimate authority of the school district. Everything that takes place in a school district should be derived from the authority of a policy. Of course, all the policies of a school district should be congruent with state law.

WHEN IS A POLICY NEEDED?

A policy is needed whenever the school board wants to give direction to the superintendent. Policies are also needed in order to provide directions for routine action, e.g., guest speakers, use of buildings, etc. Establishing policies to deal with routine action will allow the board to spend more of their precious time in other more important areas, such as curriculum.
Who approves policy?

- Only the school board, acting as a legislative body, can approve policy.

Who should write policy?

- Often the school board will assign the task of writing policy to the superintendent or one of his/her administrative team. However, an increasing number of school boards are writing their own policy. No matter who writes the policy, the school board is responsible for it.

Where should the policies be located?

- All of the school district's policies should be located in one central file—often a notebook. The policies should be filed according to a central filing scheme. The most popular filing scheme appears to be one developed by the National School Boards Association.
In order to improve the workshop, we would appreciate your time in answering the following questions. Feel free to make comments regarding any item.

1. Did this workshop cover what it was advertised to cover?

<table>
<thead>
<tr>
<th>No</th>
