The bibliography contains brief descriptions of approximately 160 completed or in-progress studies in special education, most of which have been sponsored or conducted by federal, state, and local education agencies. References, most of which are to studies conducted from 1975 to 1981, are designed to familiarize educators with research on the implementation of state and federal laws for educating handicapped children and to provide users with the names and addresses of individuals and agencies that can be contacted for additional information on the methodologies and results of each of the studies. Studies are divided into the following categories: child count, competency testing/diplomas, declining enrollment, education programs (arts education, preschool/early childhood education, secondary education, vocational education), eligibility criteria, extended school year, finance/cost, future trends, handicapping conditions, identification/referral/evaluation, implementation of state and/or federal laws, incidence of handicapping conditions, individualized education programs, institutions, interagency cooperation/agreements, least restrictive environment/mainstreaming, management/coordination of services, management information services, minorities, monitoring, paperwork systems, parents, personnel, placement, procedural safeguards, program quality, public awareness, related services, reporting, rural education, and student turnover. Information for each study usually includes the title, name of agency conducting the study, brief description of what the study examined, data collection dates, title and date of reports and other materials resulting from the study, and a name and address of the agency and/or individual to contact for additional information. INTRODUCTION

Since the enactment of federal and state laws for the education of handicapped children in the late 1970's which resulted in the rapid expansion of services and special education budgets, administrators' need for information on the implementation of these new programs and on their effectiveness has grown. This need for information has led program administrators at the federal, state, and local levels to engage in a multitude of studies -- needs assessments, analyses, evaluations, and development efforts -- on a variety of topics -- finance, due process, personnel preparation, assessment procedures, to name only a few. While the results of some studies are shared nationally through professional journals and meetings, the majority of studies are designed for use by the agency that sponsored them or only within the state where they were conducted and, therefore, their results are not disseminated widely. However, many of these studies address issues that are common across states and school systems; and some provide answers to questions that an administrator may have somewhere else tomorrow. In short, each has the potential for being of interest to educators in other states or school systems. Until now, there has been no single source of information on the numerous special education studies that have been performed. This bibliography has been developed to do just that.

Purpose

The bibliography contains brief descriptions of approximately 160 studies in special education, most of which have been sponsored or conducted by federal, state, and local education agencies. Its purpose is to:

- Familiarize educators -- especially administrators -- and others interested in the provision of special education with some of the recent studies that have been conducted on the implementation of state and federal laws for the education of handicapped children; and
- Provide users with the names and addresses of the individuals and agencies they can contact for additional information on the methodologies and results of each of the studies.

Although the studies cited in this bibliography address a variety of issues or questions, these studies have a common element: they all examine some aspect of special education that can be tied to the implementation of key provisions of state and federal laws. Although individuals such as teachers and parents may find this bibliography helpful, it is primarily intended for use by administrators. Therefore, studies selected for inclusion do not address such topics as improving student academic performance or managing classroom behavior but, rather, look at issues or problems encountered in implementing the goals and full service requirements of state and federal mandates.
Method of Soliciting Study Descriptions

In order to identify studies in special education that have been or are currently being conducted, two major activities were undertaken. First, letters were sent to all state directors of special education and to special education administrators in the 120 local education agencies and intermediate education units which participate in Project FORUM. These letters explained the purpose of the annotated bibliography, described the nature of the studies being sought, and asked that recipients respond by sending descriptions of studies they had sponsored or conducted or had found to be useful sources of information. Second, two programs in the U.S. Office of Special Education which have sponsored studies related to the implementation of PL 94-142 were asked to provide descriptions of relevant studies.

Over 200 studies and materials were identified by this process and their descriptions reviewed by project staff. Although the studies themselves were not evaluated in any way, some study descriptions that were submitted are not included in the bibliography. Only studies which appeared to address issues in implementing handicapped education laws or topics relevant to the administration of special education and related services at the state and local level are included. Excluded from the bibliography are materials such as regulations, policy guidelines, curriculum materials, teacher training materials and studies related to medical aspects of handicapping conditions and pupil performance. In judging whether to include a study description, FORUM was guided by the premise that each study should be of potential interest to individuals responsible for developing or operating programs to meet federal and state requirements.

Organization of the Bibliography

The study descriptions contained in this bibliography are organized by the subject or topic they address. The subject groupings are located in alphabetical order (see the INDEX for a listing of these subjects). In the upper corner of each page, the subject of the study described on that page is indicated. Each study description is contained on a single page. For each study, the following information is provided:

- Title of the study;
- Name of the agency that conducted the study;
- Brief description of what the study examined;
- When the study's data were collected;
- Title of reports and other materials resulting from the study or the anticipated date by which a report will be available; and
- Name and address of the agency and/or individual to contact for additional information about the study.
Users will note as they read through the bibliography that some study descriptions appear more than once. The reason for this is that a study may have more than one focus; for example, a study of procedures for evaluating learning disabled children has two potential subjects: evaluation and learning disabilities. Therefore, this study description would be found under both subject headings to assist the user who might be looking for all studies that deal with evaluation as well as the user interested in studies related to learning disabled children.

How to Use the Bibliography

Users should refer to the INDEX to locate study descriptions that deal with the subject they are interested in. For each subject heading the INDEX lists the pages on which the study descriptions which address that subject can be found in the bibliography. Once the pages have been identified, the user should proceed to that section of the bibliography and leaf through the study descriptions to find those that may be of particular interest.

If it appears that a study’s report or findings may be of interest, the user can obtain more information from the individual or agency cited as a contact in the study description. Users should note that the reports and other materials cited in the study descriptions may or may not be currently available to the public or may be available only for a fee. The availability of materials and their cost can only be determined by contacting the individual or agency named in the study description.

Special Message to Users

At the end of the bibliography are located a User Evaluation Form and a Study Description Form. Project FORUM asks that you take a few minutes to complete the evaluation form and return it to NASDSE so that the utility of this bibliography can be assessed. Depending upon user feedback, FORUM may undertake revisions to the bibliography in the coming months which could involve expanding the number and types of agencies and individuals from which study descriptions are solicited. Should this occur, user comments on the current bibliography would be most helpful in restructuring future efforts. In addition, if there are studies your agency has conducted or sponsored or studies conducted by others you believe should be included if revisions to the bibliography are made, please complete and return the study description form to Project FORUM.
Development of a Sampling Procedure for Validating State Counts of Handicapped Children

SRI International
Menlo Park, California
(for the U.S. Office of Special Education)

The purpose of this study was to develop a sampling plan and a method that could be used by OSE to validate the state counts. SRI evaluated all previously available data on the incidence of handicapped children and concluded that the data reported by states were at least as accurate as other data sources, if not more so. Regarding a procedure for validating the information, SRI concluded that these procedures should be incorporated into the counting procedures themselves. SRI has developed a handbook for states on how to do this.

A Survey of Pupils' with Handicapping Conditions Success in Passing Regents Competency Tests Required for a Regents High School Diploma

New York State Education Department

The New York State Board of Regents resolved that no pupil can receive a Regents recognized high school diploma without passing a minimum competency test in reading, writing, and mathematics. The Department wished to determine whether the policy reaffirming a commitment to high standards and specified competencies guaranteed by the Regents High School Diploma would bar appreciable numbers of handicapped students from attaining the only recognized New York State diploma. Therefore, this survey and analysis were conducted to determine the impact of this policy on the number of handicapped students likely to receive or be denied a Regents high school diploma.

STUDY TITLE: A Survey for California of Model Programs Serving Handicapped Infants and Preschool Children

CONDUCTED BY: Human Resources Research Organization (for the California State Department of Education)

STUDY DESCRIPTION: During the past decade there has been a significant increase nationwide in the number of programs serving handicapped infants and preschool children. Information concerning these programs is needed by state and local educators in the selection of models consistent with local needs and state requirements. The purpose of this study was to gather information identifying and describing model infant and preschool programs for the handicapped. The information obtained was assembled for use by education decision-makers to assist them in selecting model programs or program components for adoption/adaptation by local education agencies, i.e., programs that comply with regulations and have the potential to meet the needs of local education agencies. Data for this study were obtained from 142 programs nationwide.

A Working Paper on Baseline Information on Early Intervention Programs

Planning Associates (for the California State Department of Education)

The purpose of this study is to examine the existing infant and preschool programs funded by the State of California and to develop baseline data on the cost and effectiveness of these programs by type, program setup, age span, and various handicapping conditions. It is also seeking information on class size, teacher qualifications, service delivery strategies, program components, and other issues as may be necessary to help the state formulate appropriate policy for program quality. In addition, the study is attempting to identify existing evaluation results which would supplement the cost/effectiveness data noted above and identify issues and problems of the existing programs related to funding and program quality, and is seeking solutions to these problems.

A Discrepancy Evaluation of Preschool Projects Designed for Pupils with Handicapping Conditions

New York State Education Department

The purpose of this project is to determine whether a sample of preschool projects designed for handicapped children ages birth to five, funded under EHA Part B, were implemented in congruence with the plan put forth in the application. Resources, entry level and exit level behaviors, and instructional strategies are being reviewed. An achievement analysis that correlates selected independent variables with dependent variables (measures of language development, cognitive readiness, adaptive skills and motor skills) is being used in addition to the Probus type of discrepancy analysis.

March, 1981 to June 1981

STUDY TITLE: Interactive Audiovisual Programming for Early Childhood Education

CONDUCTED BY: Arrowhead Area Education Agency #5, Iowa

STUDY DESCRIPTION: The purpose of this project is to study the feasibility of using an interactive learning wall with preschool handicapped students. The learning wall, a hard surface on which learning materials are rear-screen projected, provides students an opportunity to "interact" with life-size images. Interaction includes pointing, drawing, using stick-on pieces, or imitating into the screen as a mirror. Besides setting up the hardware and training teachers in its use, an important aspect of the project is developing the curriculum materials with which students interact.

PERIOD OF DATA COLLECTION: July, 1979 to June, 1980 (project is on-going)

Verification of Procedures to Serve Handicapped Children

Applied Management Sciences
Silver Spring, Maryland
(for the U.S. Office of Special Education)

This study has two components—the Assessment component and the Secondary component. The Assessment component investigated three processes that influence the timeliness within which a school system conducts evaluations for students who have been identified as potentially handicapped—referral screening, case coordination, and quality control. The Secondary component was conducted in two phases. The first phase examined the class schedules of 458 handicapped students in 11 public high schools in two states for information concerning the number and type of handicapped students who received services, the type of coursework the students took, the extent to which they received services in integrated settings, and the extent to which they received services comparable to those of non-handicapped students. The second phase of the study involved the identification and documentation of promising strategies for serving secondary handicapped students. Strategies were grouped into the following topics: personnel utilization, special education, curriculum development, internal special education strategies, regular education teacher preparation/support, special education student preparation/support, and vocational options.

1980 to 1981

1. Verification of Procedures to Serve Handicapped Students: Secondary-Component and Assessment Component; and 2. Onsight Insights

Applied Management Sciences

EDUCATION PROGRAMS: Secondary Education

STUDY TITLE: Study of Secondary Special Education Program Effectiveness

CONDUCTED BY: SRI International (for the California State Department of Education)

STUDY DESCRIPTION: The purpose of this study is to evaluate the effectiveness of secondary programs by initially clarifying their unique educational and social goals. By relating student goals to the program's method of delivering services and to parent, teacher, and student attitudes toward the program, this study is examining student needs as well as administrative organization. This study is focusing on the secondary Resource Specialist program because of the numerous options for adapting this program to different school environments and varied student needs.

PERIOD OF DATA COLLECTION: November, 1980 to May, 1981

REPORT TITLE-AVAILABILITY: Report scheduled for completion - Summer, 1981

EDUCATION PROGRAMS: Secondary Education

STUDY TITLE: Special Teens and Parents: Study of P.L. 94-142's Impact

CONDUCTED BY: Abt Associates Inc.
Washington, D.C.
(for the U.S. Office of Special Education)

STUDY DESCRIPTION: This case study was originally intended to continue for five years but because of a cutback in special studies money was terminated at the end of the second year. The study examined the impact of P.L. 94-142 on secondary learning disabled students and their families. For four requirements of the law—protection in evaluation, individualized education programs, least restrictive environment, and procedural safeguards, the study investigated (a) how the requirements were implemented by the secondary school special education program, (b) the impact of the school program and practices on the students, and (c) the implications of the experiences of the students for those concerned with the education of learning disabled adolescents.

PERIOD OF DATA COLLECTION: 1979 to 1980

EDUCATION PROGRAMS: Vocational Education

STUDY TITLE: Special Education Training Needs of Vocational Teachers

CONDUCTED BY: Santa Barbara Applied Research, Inc. (for the California State Department of Education)

STUDY DESCRIPTION: Although the literature recognizes that vocational education to meet their specific needs is particularly important for handicapped students whose career options are ordinarily more limited than those of other students, there appear to be no previous studies with the specific objective of determining the training needs of vocational teachers in relation to handicapped students. Increasingly, regular vocational teachers find themselves dealing with handicapped students in their classes, yet few of these teachers have had any specific training to prepare them for meeting the needs of such students. This survey is assessing the training, experience, and attitudes of vocational teachers in relation to special education and identifying those areas in which the teachers feel a need for additional training. The information obtained will provide much needed direction for the development of future in-service training programs.

STUDY TITLE: Extended School Year

CONDUCTED BY: Calhoun County Schools, South Carolina

STUDY DESCRIPTION: Under the sponsorship of the South Carolina State Department of Education, this project is examining problems in providing an extended school year program to handicapped children. Student regression is being studied as a portion of the study. Preliminary data suggest that a point system may be an effective method to aid in determining which students may be eligible for participation in an extended school year program.

STUDY TITLE: Special Education Financial and Program Policies

CONDUCTED BY: The Rand Corporation
Santa Monica, California
(for the U.S. Office of Special Education)

STUDY DESCRIPTION: The overall objective of this study is to provide information and analysis that will improve decision-making for special education programming and finance. Three major objectives of this study are (1) to improve decision-making in special education finance by projecting the expenditures required to provide special education to all handicapped children; (2) to improve decision-making on special education finance by analyzing and evaluating current and alternative state formulas for allocating and distributing special education funds; and (3) to analyze local and state variations in a) size and characteristics of handicapped populations served, b) the special education programming provided, and c) the cost of those programs with a new understanding of what policies might be effective in positively influencing these three factors.

STUDY TITLE: Cost of Special Education

CONDUCTED BY: The Rand Corporation
Santa Monica, California
(for the U.S. Office of Special Education)

STUDY DESCRIPTION: The purpose of this project was to study the cost of special education. This cost data collection, modeling, and analysis effort was designed to improve decision-making in special education programming and finance by providing accurate and current information on the cost of providing alternative types of programming arrangements for children with various exceptional physical and mental characteristics. This study will also produce improved cost analysis methods for use by education agency personnel and others concerned with financing and administering special education programs.

Analysis of State and Local Implementation Efforts

Newtek Corporation
Reston, Virginia
(for the U.S. Office of Special Education)

This study was designed to provide information on the budgetary factors at the state and local levels that affect the implementation of P.L. 94-142. The study investigated the special education budgetary process at the state level, and examined in detail budgetary processes in four local education agencies selected on the basis of demography. A guidebook was produced describing the federal funding process for P.L. 94-142 as well as state and local special education funding processes.

Education Finance and the Handicapped Child: Case Studies on the Implementation of PL 94-142

Newtek Corporation
1612 Chimney House Road
Reston, Virginia 22090
703/471-7566
The purpose of this study was to provide clarification of information from existing studies and reports on the cost of special education in California. The study identified and analyzed several major issues related to cost including: sources of revenue, levels of service, effectiveness, and staffing. A major focus of the study was a comparative analysis of Master Plan and non-Master Plan funding models and delivery systems in terms of variation in levels of service, degree of service, revenue and expenditures, number of pupils served, and regulatory provisions.

STUDY TITLE: The Cost of Special Education Due Process Fair Hearings and Appeals in California

CONDUCTED BY: Decision Development Corporation (for the California State Department of Education)

STUDY DESCRIPTION: The purpose of this descriptive study was to document the costs of due process hearings in special education to parents, local education agencies, and the state government. In addition to summarizing total costs, the study analyzed the issues prompting fair hearings, the distribution of cost elements, and the comparative costs of panel hearings, officer-conducted hearings, and state administrative appeals. Policy implications were discussed and recommendations made for reducing fair hearing costs and for improving the recording and dissemination of information on hearing costs.

Report to the Legislature: Committee to Devise an Excess Cost Funding Formula for the Education of Children with Exceptional Educational Needs

Wisconsin Department of Public Instruction in conjunction with the Department of Administration, Legislative Fiscal Bureau, the Committee of School District Representatives, and University of Wisconsin

The State of Wisconsin biennial budget act of 1977 directed the Department of Public Instruction and the other agencies listed above to develop an excess cost formula for distribution of state aid for children with exceptional educational needs. This resulted from concern over the rapidly rising cost of providing services to handicapped children (following the implementation of state handicapped law, Subchapter IV, Chapter 115, Wis. Stats.) based upon the state's 70 percent categorical reimbursement of exceptional education programs, the possible impact of federal funding under P.L. 94-142, and the need to provide equal educational opportunities to both handicapped and nonhandicapped children. The study completed by the committee presented a workable formula for calculating excess cost.

Report to the Legislature: Committee to Devise an Excess Cost Funding Formula for the Education of Children with Exceptional Educational Needs
(May 1978)

Dr. Kenneth Blessing, Director
Bureau for Exceptional Children
Department of Public Instruction
126 South Webster Street
P.O. Box 7841
Madison, Wisconsin 53707
608/266-1781
The State Legislature directed the three agencies named above to prepare a report on the current 70 percent categorical aid formula and to make recommendations for possible changes in this formula. The impetus for this study came from the legislature's concerns over the rising costs of handicapped education programs, the impact of federal funding, and equalized support for handicapped and nonhandicapped children. As a result of this study it was concluded that the Department of Public Instruction should establish an ongoing computerized data system for handicapped education information, conduct an analysis of available data to formulate policy recommendations which could form the basis of an alternative handicapped education funding formula, and develop strategies for immediately lowering the state aid appropriation for handicapped education programs. Specific recommendations included: (a) setting the maximum handicapped aid at a given percentage of total state aids and mandating that state categorical aid not exceed 70 percent of aidable cost; or (b) reducing the percentage reimbursement level from 70% of aidable cost; or (c) freezing the handicapped appropriation level at the 1980-81 appropriation or some specific dollar level and, consequently, prorating or not fully funding the current formula.
Identification of Future Trends in the Provision of Services to Handicapped Students

Newtek Corporation
Reston, Virginia
(for the U.S. Office of Special Education)

This project was designed to provide information on potential future changes in the areas of values, economics, social institutions, technology, and medicine that may affect the provision of services to handicapped children. In 1978, Newtek Corporation held a conference with experts in the five areas who discussed the trends in their areas and the implications of those trends for the handicapped with panel members representing various aspects of services to the handicapped. Although in many cases the projected trends were too speculative to guide policymaking, the conference highlighted some potentially important trends that policymakers should be aware of.

Neuropsychological, Learning and Developmental Characteristics of the Sighted, Visually Impaired Child

The purpose of this study was to examine the efficacy of current models of educating the visually impaired by studying 50 visually impaired children over an eighteen month period to determine learning characteristics. This study is unique in that it is one of the first to examine the neurological variables of the low vision population and the documented learning disabilities of these children.

Inservice Training for Teachers of Visually Handicapped Students

The purpose of this study was to determine the effects of an inservice training program for resource and itinerant teachers on: (1) skills of regular classroom teachers in meeting needs of visually handicapped students enrolled in their classes; and (2) supportive services provided to classroom teachers by resource and itinerant teachers. Hypotheses were tested concerning differences between experimental and control groups related to: (a) classroom teacher skills in meeting needs of visually handicapped students (measured by classroom teacher self-evaluation); (b) supportive services provided by resource and itinerant teachers (evaluated by classroom teachers); (c) supportive services provided by resource and itinerant teachers (measured by resource and itinerant teacher self-evaluation); and (d) factual knowledge of resource and itinerant teachers (measured by objective tests administered to resource and itinerant teachers).

STUDY TITLE: Special Teens and Parents: Study of P.L. 94-142's Impact

CONDUCTED BY: Abt Associates Inc.
Washington, D.C.
(for the U.S. Office of Special Education)

STUDY DESCRIPTION: This case study was originally intended to continue for five years but because of a cutback in special studies money was terminated at the end of the second year. The study examined the impact of P.L. 94-142 on secondary learning disabled students and their families. For four requirements of the law—protection in evaluation, individualized education programs, least restrictive environment, and procedural safeguards, the study investigated (a) how the requirements were implemented by the secondary school special education program, (b) the impact of the school program and practices on the students, and (c) the implications of the experiences of the students for those concerned with the education of learning disabled adolescents.

The purpose of this study is to investigate four procedures for determining the presence of a severe discrepancy between achievement and mental ability, and to assess the effects of the procedures on incidence and population characteristics. The four procedures being studied are: (a) grade/age level cut-off; (b) expectancy formula; (c) standard score comparison and (d) regressed standard score analysis. This study is being conducted as part of the Department's effort to rewrite the operational definition of learning disabilities.

HANDICAPPING CONDITIONS: Learning Disabled

STUDY TITLE: Assessing Learning Disabilities in Terms of Cultural Background

CONDUCTED BY: East Side Union High School District (for the California State Department of Education)

STUDY DESCRIPTION: This project was an intermediate step in the on-going development of a culture-fair model for assessing the learning and behavior problems of adolescents. In this model, diagnosis is re-centered from the traditional focus on variables assumed to lie within the youth to a focus on the youth as a person who is developing within a total "learning space." The learning space is defined as a set of interacting role-relations which include marital and ethnic status of the parents, sex-typing of the student and other family members, the student's ordinal place, and the father's occupation. Information, not only about the student but also about the specific cultural and social patterns being transmitted to the student, is thus systematically sought and evaluated.

HANDICAPPING CONDITIONS: Orthopedically Impaired

STUDY TITLE: Improving Teachers' Understanding of and Competencies for Mainstreaming Orthopedically Handicapped Students

CONDUCTED BY: Foundation for Individualized Evaluation and Research, Inc.

STUDY DESCRIPTION: This is a three-phase project designed to develop and demonstrate effective strategies for improving regular classroom teachers' understanding of orthopedic handicapping conditions and for developing and/or improving their competencies (as well as those of the special education teacher) in order to facilitate more effective integration of the orthopedically handicapped student into the regular classroom. A secondary goal of the project is to develop these strategies in a manner which will allow replication at minimal additional per pupil cost.

PERIOD OF DATA COLLECTION: August, 1981 to August, 1983

STUDY TITLE: Increasing the Capabilities and Vocational Opportunities of the Handicapped

CONDUCTED BY: California State University (for the California State Department of Education)

STUDY DESCRIPTION: The purpose of this study was to determine if severely physically handicapped students could be assessed for assistive device systems which would enhance their academic and vocational potential. It was found that not only were such assessments possible but that timely acquisition of such device systems could yield extremely favorable cost/benefit ratios.

PERIOD OF DATA COLLECTION: 1979 to 1980

STUDY TITLE:
A Multi-Dimensional Comparison of the Social Adjustment of Mainstreamed Physically Handicapped High School Students and Non-Handicapped Classmates

CONDUCTED BY:
Westside Community for Independent Living, Inc. (for the California State Department of Education)

STUDY DESCRIPTION:
"Mainstreaming" has been championed as a highly desirable objective for students who are variously disabled. However, implementation has thus far been based more on faith than on empirical findings. This study is comparing the social adjustment of orthopedically handicapped, mainstreamed high school students with that of their non-orthopedically handicapped classmates. The study is attempting to answer questions such as: (1) do OH students differ from their regular education classmates in social behavior and acceptance; (2) what do participant observers, such as teachers and parents, say about the social functioning of OH youngsters in mainstreamed classes; and (3) how do OH mainstreaming "graduates" recall their experiences.

PERIOD OF DATA COLLECTION:
November, 1980 to May, 1981

STUDY TITLE: Testing and Teaching Communicatively Handicapped Hispanic Children: The State-of-the-Art in 1980

CONDUCTED BY: Bloomsbury West, Inc. (for the the California State Department of Education)

STUDY DESCRIPTION: The project was designed to review the research and current practices related to teaching and testing limited and non-English speaking children from Spanish language backgrounds who are eligible for severe language handicap and language and speech special education services. A handbook developed in this project was designed to help language and speech professionals understand and begin to solve some of the problems school districts face in the education of handicapped children with limited English proficiency. This effort was intended as a first step in developing procedures and materials to meet the specifications of P.L. 94-142 and of California State Law.

STUDY TITLE: Case Selection and Prioritizing Pupils for Participation in Speech/Language Programs/Services

CONDUCTED BY: South Carolina Department of Education

STUDY DESCRIPTION: Because LEAs were reporting speech/language caseloads that prohibited the provision of quality services, a task force study was conducted to examine the issue of reducing the caseload requirements for speech/language clinicians and the implications of such a policy revision. As a result of this study, guidelines were developed to aid in selecting and prioritizing pupils for participation in speech/language programs/services. Although not mandatory, these guidelines should be of assistance to LEAs which choose to implement them.

A Review of the Public Awareness Program and Its Evaluation Procedures

Ira Nelken and Associates, Inc. (for the California State Department of Education)

The study's major goals were to provide a detailed description and an evaluation of current "Public Awareness" programs in the state and to develop model program(s) and evaluation procedures for the State Department of Education. A model for public awareness programs was developed based on a review of the literature and present practices. This model detailed five major approaches to public awareness and included suggestions for reaching four target populations within each approach. The model outlines the (1) use of the media primarily to reach the general public; (2) use of printed materials to reach four target populations; (3) use of inservice/presentations primarily to reach the educational community and school and agency staff; (4) use of personal contact mainly with the educational community; and (5) special education student involvement/special events to reach the general public, educational community, and the students themselves.

STUDY TITLE: A Study to Evaluate Procedures Undertaken to Prevent Erroneous Classification of Handicapped Children

CONDUCTED BY: Applied Management Sciences, Inc. Silver Spring, Maryland (for the U.S. Office of Special Education)

STUDY DESCRIPTION: This study is describing assessment practices used by local school systems to identify and classify handicapped students and to determine their educational placements and is examining the soundness of those practices. The contractor has collected data from 500 school buildings in 100 school districts and reviewed selected documents for 10,000 individual students. Five topics have been identified for reporting: (a) the extent to which local education agencies are using evaluative data such as adaptive behavior and classroom observations in their assessments; (b) a comparison of evaluation procedures for minority and nonminority students; (c) training needs in the area of assessment as identified by the respondents; (d) the extent to which school staff members document their evaluation decisions; and (e) the extent to which school systems have backlogs of students waiting to be evaluated.

PERIOD OF DATA COLLECTION: 1980 to 1981

Verification of Procedures to Serve Handicapped Children

CONDUCTED BY:
Applied Management Sciences
Silver Spring, Maryland
(for the U.S. Office of Special Education)

This study has two components—the Assessment component and the Secondary component. The Assessment component investigated three processes that influence the timeliness within which a school system conducts evaluations for students who have been identified as potentially handicapped—referral screening, case coordination, and quality control. The Secondary component was conducted in two phases. The first phase examined the class schedules of 458 handicapped students in 11 public high schools in two states for information concerning the number and type of handicapped students who received services, the type of coursework the students took, the extent to which they received services in integrated settings, and the extent to which they received services comparable to those of non-handicapped students. The second phase of the study involved the identification and documentation of promising strategies for serving secondary handicapped students. Strategies were grouped into the following topics: personnel utilization, special education, curriculum development, internal special education strategies, regular education teacher preparation/support, special education student preparation/support, and vocational options.

PERIOD OF DATA COLLECTION:
1980 to 1981

The purpose of this study was to determine the extent to which state policies either (a) provided for services to children with disabilities other than those provided for under P.L. 94-142, or (b) used varying definitions or eligibility criteria for the same categories of children. CEC found that neither the types of children served nor the definitions varied widely. However, there were some instances in which eligibility criteria did vary.
This project was undertaken for the purpose of finding legal and professionally acceptable options for assessing the adaptive behavior of mildly retarded children.
STUDY TITLE: Iowa Assessment Project

CONDUCTED BY: Iowa State University and Iowa Department of Public Instruction

STUDY DESCRIPTION: The purpose of this project was to collect information on recently developed procedures for assessing adaptive behavior and sociocultural background, and to examine the appropriateness of these measures for students in Iowa. These data also have implications for the criteria that are established in Iowa to classify students as mentally disabled. In general, the results of the Iowa Assessment Project suggest that the sociocultural measures are appropriate for both the black and white students in the state of Iowa. However, the procedures to adjust conventional intelligence test scores, based upon California data, are not effective for students in Iowa.

This project was conducted to sequentially delineate the competencies necessary in dealing with psychological assessment, intervention, and follow-up and to delineate the standards required to meet the state competencies. The project was initiated out of the conviction that although they were not in written form, standards and competencies for appropriate psychological assessment did indeed exist and that there were certain minimum steps and actions that need attention in most cases referred to a school psychologist. It was further believed that most practicing school psychologists, in an informal manner and when time allowed it, kept to a procedural routine of sorts which insured that the vital aspects of an ethical, efficacious handling of cases would be realized. What was missing was a document or standard that, while allowing for needed flexibility, outlined a best practices approach from the initial referral to the closing of a case.
STUDY TITLE: Learning Disabilities Criteria Project

CONDUCTED BY: Iowa Department of Public Instruction

STUDY DESCRIPTION: The purpose of this study is to investigate four procedures for determining the presence of a severe discrepancy between achievement and mental ability, and to assess the effects of the procedures on incidence and population characteristics. The four procedures being studied are: (a) grade/age level cut-off; (b) expectancy formula; (c) standard score comparison and (d) regressed standard score analysis. This study is being conducted as part of the Department's effort to rewrite the operational definition of learning disabilities.

PERIOD OF DATA COLLECTION: July, 1980 to December, 1981

REPORT TITLE - AVAILABILITY: Completion date not known at this time

STUDY TITLE:
Assessing Learning Disabilities in Terms of Cultural Background

CONDUCTED BY:
East Side Union High School District (for the California State Department of Education)

STUDY DESCRIPTION:
This project was an intermediate step in the on-going development of a culture-fair model for assessing the learning and behavior problems of adolescents. In this model, diagnosis is re-centered from the traditional focus on variables assumed to lie within the youth to a focus on the youth as a person who is developing within a total "learning space." The learning space is defined as a set of interacting role-relations which include marital and ethnic status of the parents, sex-typing of the student and other family members, the student's ordinal place, and the father's occupation. Information, not only about the student but also about the specific cultural and social patterns being transmitted to the student, is thus systematically sought and evaluated.

A Study of the Effectiveness of Various Nondiscriminatory and Linguistically and Culturally Appropriate Assessment Criteria for Placement of Minority Students in Special Education Programs

Planning Associates (for the California State Department of Education)

Recent litigation and legislation have made obvious a number of problems inherent in determining the eligibility of minority group children for special education programs. The study was designed to describe currently applied special education placement criteria and practices related to the use of those criteria in the placement of minority group children. Related practices were reviewed as were elements of the special education process: from search and referral to educational planning and instruction for minority group children.

STUDY TITLE: Case Study of the Implementation of PL 94-142

CONDUCTED BY: Education Turnkey Systems, Inc.
Falls Church, Virginia
(for the U.S. Office of Special Education)

STUDY DESCRIPTION: The purpose of this study was to assess the first year of implementation of P.L. 94-142. Nine local school systems were observed during the 1977-78 school year and the first half of the 1978-79 school year to determine how priorities were established and how implementation decisions were made at each level of the administrative hierarchy. P.L. 94-142's implementation was observed to be well underway at each local education agency despite varying levels of resources and organizational differences between sites. Problem areas were identified but no changes in the Act were recommended at this time.

PERIOD OF DATA COLLECTION: 1978

The purpose of this study was to determine the states' capacities to respond to the new reporting requirements inherent in P.L. 94-142. MAC analyzed the data requirements in the law and the reporting forms being developed by OSE, and visited 27 states to test their capacity to respond. MAC reported on state capacity to provide information on four categories: children, personnel, facilities, and resources. They found capacity was relatively high on the first category and decreased across the remaining categories. They recommended deleting requirements for fiscal data since states could not adequately respond to such requests.
STUDY TITLE: Institutional Responses and Consequences: Study of P.L. 94-142's Impact

STUDY DESCRIPTION: This case study was originally intended to continue for five years but because of a cutback in special studies money was terminated at the end of the second year. The study investigated the relationship of school district responses to P.L. 94-142 to handicapped child and family outcomes, such as self-concept, social skills and competencies, academic achievement, and economic activity.

PERIOD OF DATA COLLECTION: 1979 to 1980

REPORT TITLE-AVAILABILITY:
1. Final Report: Year 2 of Operations

Study of the Quality of Educational Services: P.L. 94-142's Impact

This case study was originally intended to continue for five years but because of a cutback in special studies money was terminated at the end of the second year. The study examined the extent to which school district implementation of P.L. 94-142 results in quality educational services to the handicapped child and the consequences to the child and family. The first year focused on entry into special education during the preschool years, the emotional consequences of the diagnostic process, parental education about P.L. 94-142, and early programming for preschoolers. The second year focused on factors that influence mutual adaptation between families and school staff.

1979 to 1980

Final Report: The Huron Study of the Quality of Educational Services provided to Handicapped Children from the Perspective of the Child, the Family, and School Personnel

Huron Institute
123 Mt. Auburn Street
Cambridge, Massachusetts 02138
617/491-5450
This study was designed to lay the groundwork for future studies of the quality and effectiveness of P.L. 94-142 implementation. The study focused on four principal requirements in the law: provision of due process, least restrictive placements, individualized education programs, and prevention of erroneous classification. The study solicited 15 position papers on evaluation approaches for each requirement for local education agency self-study guides. Four monographs addressing the evaluation of these provisions of the law were produced. Each monograph includes the relevant papers and a review by a panel of education practitioners.
IMPLEMENTATION OF STATE AND/OR FEDERAL LAW

STUDY TITLE:
State/Local Communication Forum for Promoting and Exploring Issues Related to P.L. 94-142

CONDUCTED BY:
National Association of State Directors of Special Education, Washington, D.C.
(for the U.S. Office of Special Education)

STUDY DESCRIPTION:
The Forum project provides avenues of communication between local, state, and federal levels. Eighteen state education agencies and approximately 120 local education agencies are Forum participants. These agencies are sampled to obtain information on emerging issues in special education and on the implementation of P.L. 94-142. The information obtained is disseminated by such means as newsletters and reports to state and local education agencies, to other agencies and organizations interested in the education of handicapped children, and to the general public and is used in reporting to Congress on the implementation of the law. The project also provides technical assistance to state and local education agencies by responding to the issues and needs they have identified.

STUDY TITLE:
Evaluation of the Effects of the Implementation of Chapter 766 on Special Education in Massachusetts

CONDUCTED BY:
Massachusetts Department of Education

STUDY DESCRIPTION:
This research will provide a comprehensive analysis of the effects of Chapter 766 (the state law for the education of handicapped children) on the availability of special education and related services to children with special needs. Analysis of policies and practices will provide decision makers with information for improving the quality and effectiveness of special education. This research consists of five major study areas: fiscal/funding issues; effects of Chapter 766 on regular education; secondary special education; least restrictive environment; and IEPs.

Since Massachusetts has data from seven years of implementation, this analysis will assist other states in recognizing both the problems and opportunities they face as they move further along in carrying out the federal law for the education of handicapped children. The evaluation strategy includes data review, field studies, analysis, reporting and dissemination. The sub-studies were contracted out and the study review panel represents major groups outside of the Department of Education.

**Estudio Titular:**

A systems analysis of the response of the Chicago Public Schools to P.L. 94-142

**Realizado por:**

Center for Urban Education
Chicago, Illinois
(for the U.S. Office of Special Education)

**Descripción del estudio:**

El propósito de esta investigación fue examinar la respuesta de las escuelas públicas de Chicago a la P.L. 94-142. Para que la P.L. 94-142 tenga un impacto positivo, sus implicaciones, incluyendo las de identificación, evaluación y colocación de niños con discapacidades, fueron examinadas desde varias perspectivas. Los tres grupos de temas de educación especial (administración, legal, y curriculares y pedagógicos) fueron cada uno investigados utilizando un enfoque de análisis de sistema para determinar qué se ajustan a los nuevos requisitos de la P.L. 94-142, qué revisiones se necesitan y qué variables del sistema podrían afectar la implementación de tales revisiones de manera positiva o negativa.

IMPLEMENTATION OF STATE AND/OR FEDERAL LAW

STUDY TITLE: Children with Different Handicapping Conditions: Study of P.L. 94-142's Impact

CONDUCTED BY: Illinois State University
Normal, Illinois
(for the U.S. Office of Special Education)

STUDY DESCRIPTION: This case study was originally intended to continue for five years but because of a cutback in special studies money was terminated at the end of the second year. It focused on differences in the impact of P.L. 94-142 implementation on children with various handicapping conditions and their families. The study looked at the consequences to families from five theoretical perspectives and related these to the provisions and implementation of the law.

PERIOD OF DATA COLLECTION: 1979 to 1980

CONTACT FOR FURTHER INFORMATION: Department of Sociology, Anthropology and Social Work Illinois State University Normal, Illinois 61761 309/438-2111
STUDY TITLE: Family Involvement and Satisfaction re: Educational Services for their Handicapped Children

CONDUCTED BY: University of Oregon
Eugene, Oregon
(for the U.S. Office of Special Education)

STUDY DESCRIPTION: The purpose of this research was to survey the knowledge, involvement and satisfaction of rural parents with the requirements of P.L. 94-142. Five Oregon counties were involved (Cook, Grant, Harney, Jefferson, Lake). There are 23 school districts in this area with a total school enrollment of 10,000 first through twelfth grade pupils. It is estimated that 25 percent will have been identified for speech problems alone. This project sampled families of children with handicapping conditions other than speech impairment. This study was conducted in conjunction with the ongoing P.L. 94-142 compliance monitoring sponsored by the Oregon Department of Education.

PERIOD OF DATA COLLECTION: 1980-81

This analysis was undertaken to examine several questions. For years, those of us in special education have used the figure of 12% of the total population as a target number of children we should be serving through special services. However, many school districts have had difficulty locating this many children with eligible disabilities. Through an examination of existing data, this report presents some preliminary answers to the following questions: How many handicapped children are there? How many handicapped children should any school district be serving? How does an administrator evaluate child find efforts?
The purpose of this study was to determine the nature and quality of the individualized education programs being designed for handicapped children. These programs are at the heart of the service delivery system and the Congress asked for a survey of them. RTI spent the 1977-78 school year designing a sampling plan and information gathering techniques. Data collected in school year 1978-79 provided descriptive information about what IEP documents are like. The study found that 95 percent of handicapped children have IEPs. Most IEPs meet minimal requirements of P.L. 94-142, except for the evaluation component.
A Study of the IEP: Parent and School Perspectives

Houston Independent School District, Texas

The purpose of this study was to determine the status of the IEPs within the Houston Independent School District with regard to their correctness/accuracy based upon Texas Education Agency and local guidelines.

STUDY TITLE: Individual Education Plans: A Naturalistic Study of the Match Between Intent and Practice

CONDUCTED BY: Indiana University Foundation
Bloomington, Indiana
(for the U.S. Office of Special Education)

STUDY DESCRIPTION: The purpose of this study was to examine what constitutes a child's Individual Education Program. It focused upon the relationships among the written IEP, the program as intended by the teacher, and the program as evidenced by the child's classroom activities. A naturalistic research paradigm was utilized, resting on the framework of a case study model and augmented with other qualitative approaches. It is expected that the results of the study will yield descriptive data from which to generate variables and hypotheses for future research in teacher planning and classroom implementation of the IEP.

The purpose of this study was to survey parents, teachers, and administrators in schools serving "special needs" Indian children in the State of South Dakota. To date no study had researched special education programs on or off the reservation in South Dakota for handicapped Indian students. This study will enable school personnel in these and other schools to improve their special education programs. Areas in need of in-service are being pointed out along with other needs relating to the IEP. A survey questionnaire was developed to elicit baseline data concerning parents', teachers', and administrators' perceptions of compliance procedures of the Individualized Educational Program (IEP). Contracts, Bureau of Indian Affairs, and public schools serving special needs Indian students were compared. Data were collected on-site and analyzed to determine the differences.
Implementing Individualized Educational Programs: An Analysis of the Role of the Regular Classroom Teacher

University of California, Santa Barbara (for the California State Department of Education)

The purpose of this study is to analyze the role of regular classroom teachers in implementing individualized education programs (IEPs) for students participating in special education. This study is descriptive and intended to identify the extent to which regular classroom teachers are currently involved in implementing IEPs. In addition, it is attempting to identify differences between levels (i.e., primary and intermediate) as well as between types of handicap and placement of students with IEPs.

STUDY TITLE: Individualized Educational Program Evaluation Model: Development and Field Study

CONDUCTED BY: Office of the Santa Clara County Superintendent of Schools (for the California State Department of Education)

STUDY DESCRIPTION: This study is designed to develop and study a model to analyze written individualized educational programs (IEPs) of students enrolled in special education programs. Three primary purposes of this model are to establish a process to determine: a) whether discrepancies exist between the programs and services provided to students as described by parents, students, and special education teachers and the programs and services described in the IEP; b) the extent to which student learning needs as identified by the assessment data on the IEP match or relate to the curriculum, designated services, and goals and objectives contained in the IEP; and c) whether IEPs written by multidisciplinary teams differ from those written by annual review teams and, if so, in what ways.

STUDY TITLE: Investigation of the Effects of Student-Assistants on the Implementation of IEP’s in Regular and Special Classroom Settings

CONDUCTED BY: University of Idaho
Moscow, Idaho
(for the U.S. Office of Special Education)

STUDY DESCRIPTION: The purpose of this study was to investigate the effectiveness of student-assistants in implementing IEPs across settings, across severity of handicapping condition, across ages, and across stages of learning. Expected student outcomes were obtained from predictions and projected extrapolations on basic learning (performance) data. Student-instructional assistants were peer-tutors, non-handicapped. The first phase detailed case studies of preschoolers who are mainstreamed and who are in segregated classroom settings. The second phase focused on the degree of severity of the impairment, and the third addressed student vs. teacher drill in the acquisition of self-help skills by severely handicapped children.

Research on Implementation of P.L. 94-142 for Inmates of Juvenile and Adult Correctional Facilities

M.H. Gerry & Co.
Washington, D.C.
(for the U.S. Office of Special Education)

This project addresses the responsibility assigned to SEAs by P.L. 94-142 for assuring "that all educational programs for handicapped children within the State, including all such programs administered by any other State or local agency, will be under the general supervision of the person responsible for educational programs for handicapped children in the State educational agency and shall meet education standards of the State educational agency." (Sec. 612 (6)) CFR 121a.601 details the monitoring of such programs, and this project will take up those procedures for programs in correctional institutions. It will develop an understanding of institutional performance in a sample of states as the basis for writing a guide for all states to evaluate their own institutional performance. While the guide will be specifically designed for correctional institutions, the approach will be applicable for expanded use for special education programs in other state agencies, such as mental health and mental retardation facilities.

Study for Determining the Least Restrictive Environment Placement of Handicapped Children

Applied Management Sciences, Inc.
Silver Spring, Maryland
(for the U.S. Office of Special Education)

The purpose of this 18-month study was to investigate the decision rules or criteria used by the courts and state hearing officers to determine the placements of handicapped children, the guidance given by states to school districts in making placement decisions, and the actual placement procedures used by school districts. Placement decision rules and interpretations of P.L. 94-142's least restrictive environment requirement were compared across arenas. Exemplary practices at the state and local education agency levels were described.

Factors Facilitating Integration of the Handicapped into Less Restrictive Environments

State University College at Buffalo

During 1977 a model was developed to describe the total educational life space of a student who has been placed into a less restrictive educational environment. It was proposed that through the development and use of a multifaceted model, it would be possible not only to document the impact of PL 94-142, but also to establish an extensive data base which could be used predictively to determine the factors which contribute to the successful integration of handicapped children. The task for 1978 was to expand the model and to pilot it with the entire population of a single elementary school.

STUDY TITLE: Advisory Review Panel - A Method for the Administrative Governance of Least Restrictive Alternative and Local Level Conflict Resolution

CONDUCTED BY: La Grange Area Department of Special Education, Illinois

STUDY DESCRIPTION: This is a continuing project designed to provide a method for governing access to more restrictive self-contained special education programs and to resolve conflicts in programmatic recommendations between parents and multidisciplinary teams. The model utilizes a panel of regular and special education personnel who review multidisciplinary team recommendations to determine if more restrictive self-contained special education placements are warranted. In addition, the panel is used as a method of conflict resolution prior to pursuing formal due process. The Advisory Review Panel model has proved to be an effective way of monitoring more restrictive special education placements. Informal data also suggest that the conflict resolution function of the panel has resulted in a significantly lesser rate of formal due process hearings in this joint agreement district.

A Multi-Dimensional Comparison of the Social Adjustment of Mainstreamed Physically Handicapped High School Students and Non-Handicapped Classmates

Westside Community for Independent Living, Inc. (for the California State Department of Education)

"Mainstreaming" has been championed as a highly desirable objective for students who are variously disabled. However, implementation has thus far been based more on faith than on empirical findings. This study is comparing the social adjustment of orthopedically handicapped, mainstreamed high school students with that of their non-handicapped classmates. The study is attempting to answer questions such as: (1) do OH students differ from their regular education classmates in social behavior and acceptance; (2) what do participant observers, such as teachers and parents, about the social functioning of OH youngsters in mainstreamed classes; and (3) how do OH mainstreaming "graduates" recall their experiences.

A Survey of Management Information and Evaluation Systems in New York State

The Boards of Cooperative Educational Services (BOCES) act as a repository of information for constituent districts while providing a statewide network for data access, retrieval, and file maintenance. This project was undertaken in an effort to standardize the information in terms of availability and format, and to improve local and state level monitoring and evaluation activities. This survey is designed to review and automate management information systems encompassing individualized education programs, individualized instructional plans, curriculum resources, student historical, personal and achievement data, and measures or assessment procedures.

STUDY TITLE: Multi-Cultural Pilot Project

CONDUCTED BY: Eastern Regional Education Services Center, Oklahoma State Department of Education

STUDY DESCRIPTION: This study, funded with Part B discretionary dollars, was designed to obtain information concerning discriminatory effects of standardized assessment with culturally diverse students. The study was conducted in seven rural schools in eastern Oklahoma using a sample of 191 school age Native American students. The results of this study indicated performance oriented tests to be the best indicator of potential intelligence for children from this particular population.

PERIOD OF DATA COLLECTION: January, 1980 to July, 1980

REPORT TITLE-AVAILABILITY: EHAB Discretionary Grant #D233

The project was designed to review the research and current practices related to teaching and testing limited and non-English speaking children from Spanish language backgrounds who are eligible for severe language handicap and language and speech special education services. A handbook developed in this project was designed to help language and speech professionals understand and begin to solve some of the problems school districts face in the education of handicapped children with limited English proficiency. This effort was intended as a first step in developing procedures and materials to meet the specifications of P.L. 94-142 and of California State Law.
STUDY TITLE: Nondiscriminatory Assessment: Practitioner's Guide and Test Matrix

CONDUCTED BY: California Association of School Psychologists and Psychometrists (for the California State Department of Education)

STUDY DESCRIPTION: The purpose of this project was to develop procedures that enhance test administrators' abilities to conduct nondiscriminatory assessment. Two products were developed to fulfill this purpose. The first was a Practitioner's Handbook and the second was a Test Matrix. The handbook reviews current assessment practices and suggests new and alternative approaches that could enhance non-biased assessment of minority populations of children. The matrix reviews over 600 test instruments and rates their appropriateness in various areas.

A Study of the Effectiveness of Various Nondiscriminatory and Linguistically and Culturally Appropriate Assessment Criteria for Placement of Minority Students in Special Education Programs

Planning Associates (for the California State Department of Education)

Recent litigation and legislation have made obvious a number of problems inherent in determining the eligibility of minority group children for special education programs. The study was designed to describe currently applied special education placement criteria and practices related to the use of those criteria in the placement of minority group children. Related practices were reviewed as were elements of the special education process: from search and referral to educational planning and instruction for minority group children.

STUDY TITLE: Perception of Parents, Teachers, and Administrators Regarding Compliance Procedures of the IEP in Selected South Dakota Schools

CONDUCTED BY: School of Education
University of South Dakota
(for the U.S. Office of Special Education)

STUDY DESCRIPTION: The purpose of this study was to survey parents, teachers, and administrators in schools serving "special needs" Indian children in the State of South Dakota. To date no study had researched special education programs on or off the reservation in South Dakota for handicapped Indian students. This study will enable school personnel in these and other schools to improve their special education programs. Areas in need of in-service are being pointed out along with other needs relating to the IEP. A survey questionnaire was developed to elicit baseline data concerning parents', teachers', and administrators' perceptions of compliance procedures of the Individualized Educational Program (IEP). Contracts, Bureau of Indian Affairs, and public schools serving special needs Indian students were compared. Data were collected on-site and analyzed to determine the differences.

A Project to Develop BEH Waiver Requirements, Procedures and Criteria

Planning and Human Systems, Inc.
Washington, D.C.
(for the U.S. Office of Special Education)

States that provide clear and convincing evidence that all handicapped children have a free appropriate public education available to them may receive a partial waiver of the law's fiscal nonsupplant requirement. A six-month study was undertaken in 1978 to develop guidelines to be used by the Office of Special Education, then the Bureau of Education for the Handicapped, in reviewing a state's request for a waiver. The guidelines were developed based on an evaluation of the Office's experiences in conducting a review of a request by Massachusetts for a waiver in 1978; on information provided by federal, state, and local agencies as well as state consumer, advocacy, and professional associations; and on a review of monitoring procedures used by other federal agencies.

Study of Activist Parents and Their Disabled Children: Study of P.L. 94-142's Impact

American Institutes for Research Cambridge, Massachusetts and Cambridge Workshop, Inc. Belmont, Massachusetts (for the U.S. Office of Special Education)

This case study was originally intended to continue for five years but because of a cutback in special studies money was terminated at the end of the second year. The study focused on parents who responded energetically to the invitation to activism offered by P.L. 94-142 and examined the benefits of parents' activism for the child. Effective strategies were identified and the history of their development described. The cost of parental involvement was described in emotional and economic terms, and program benefits to the child were shown.

STUDY TITLE: Placement Committees: Parental Participation and Satisfaction

CONDUCTED BY: University of South Dakota
Vermillion, South Dakota
(for the U.S. Office of Special Education)

STUDY DESCRIPTION: This project investigated the degree of participation and satisfaction of parents with the placement committee process in three states - South Dakota, Nebraska, and Iowa. The participation and satisfaction of a group of parents was compared with the participation and satisfaction of two treatment groups of parents, with treatment designed to increase the level of participation and satisfaction. Satisfaction objectives are: (a) Is there a relationship between parents' degree of participation in the process and their satisfaction with the placement process; (b) can parental participation be increased via a simple treatment procedure; and (c) if parental participation can be increased, is this related to increased parental satisfaction?

STUDY TITLE: Involvement of Foster Parents in the Education of Special Children/Current Practices, Problems, and Recommendations

CONDUCTED BY: Office of the Santa Clara County Superintendent of Schools (for the California State Department of Education)

STUDY DESCRIPTION: There is currently an urgent call from teachers and administrators in special schools for assistance in solving problems which evolve from foster placement of their pupils. The number of special children placed in foster homes has risen dramatically in the past decade; it is estimated that fully one third of the children served in south Santa Clara County are in foster care. Although the difficulty of involving foster parents in the development and achievement of IEPs for their foster children is generally acknowledged to be a significant factor in demoralization of special education teachers, little is known about the variety and extent of problems encountered. This study is examining these problems.

An Investigation Into Parent Knowledge of Entitlement as Prescribed in P.L. 94-142

San Francisco State University (for the California State Department of Education)

In California, over 350,000 pupils and their families would ultimately be effected by both the federal laws (PL 94-142 and PL 93-118) and the new omnibus state law (California Master Plan for Special Education). The PTA Project, originally conceived as three year project, systematically explored the knowledge, attitudes and experiences of parents with handicapped children enrolled in California's public special education programs. Parents were interviewed and, subsequently, materials were developed for parents and school districts including a bibliography for parents on their rights, the educational process, resources, organizations and related research, handbooks on educational and psychological testing, and training videotapes on assessment.

The Development of a Statewide Network for Training Special Education Paraprofessionals

Kansas State Department of Education

Kansas has developed the nation's first statewide training programs for special education paraprofessionals. In order to evaluate the program and help determine its future direction, administrators, teachers and paraprofessionals were surveyed. This study was conducted to (a) collect basic information concerning Kansas special education paraprofessionals; (b) determine the attitudes towards, roles of and the duties of paraprofessionals after a statewide program of training and information dissemination had been initiated; and (c) provide a basis for the development of a statewide communication network for paraprofessionals. Major findings of the study include: 1) strong support for the concept that the teacher and paraprofessional form an educational team; 2) teachers and paraprofessionals should jointly define their responsibilities with the teacher working most closely with the more difficult child; 3) the three most common duties performed by paraprofessionals were "educating individual children," "assisting with group educational activities," and "preparing classroom materials;" and 4) the state should continue to expand its training activities through the use of the facilitator model, inservice training conducted by school districts, and college credit at a low-division level.

1978 to 1980

Master Plan Inservice - Is Involvement the Key?

Woodland Joint Unified School District (for the California State Department of Education)

As school districts, county offices, and consortia move towards implementing the master plan for special education in California and toward full compliance with P.L. 94-142, some areas report serious problems in implementing these changes in special education. Others, in contrast, seem to make these difficult changes with a minimum of resistance on the part of staff, parents, and community groups. This experimental study was conducted to determine whether a participatory visitation type of inservice for the joint training of regular and special education teachers would be more effective in increasing regular classroom teachers' willingness to integrate and in developing positive attitudes towards exceptional children than would be the traditional lecture type of inservice that had been conducted in many districts in the state.

The purpose of this study was to assess the array of concerns raised by teachers regarding the effects of P.L. 94-142 on their professional responsibilities. Several concerns were raised by teachers during the course of the FY 1976 study on individualized education programs and several had been raised by national teachers' organizations. The contractor organized the concerns into general types and analyzed the relationships between these categories of concerns and the requirements of the Act and visited six school districts to analyze details of a small number of examples. Recommendations were made for school districts to provide teachers with more information about P.L. 94-142.
Pupil Personnel Services in Illinois: Survey '80

The purpose of this study was to develop basic information relative to PPS staff, their major activities and practices, their interests relative to professional development, their professional concerns, and their opinions about their responsibilities and accountability measures.

Investigation of the Effects of Student-Assistants on the Implementation of IEP's in Regular and Special Classroom Settings

University of Idaho
Moscow, Idaho
(for the U.S. Office of Special Education)

The purpose of this study was to investigate the effectiveness of student-assistants in implementing IEPs across settings, across severity of handicapping condition, across ages, and across stages of learning. Expected student outcomes were obtained from predictions and projected extrapolations on basic learning (performance) data. Student-instructional assistants were peer-tutors, non-handicapped. The first phase detailed case studies of preschoolers who are mainstreamed and who are in segregated classroom settings. The second phase focused on the degree of severity of the impairment, and the third addressed student vs. teacher drill in the acquisition of self-help skills by severely handicapped children.

Competencies and Standards for Psychological Assessment, Intervention and Follow-up

This project was conducted to sequentially delineate the competencies necessary in dealing with psychological assessment, intervention, and follow-up and to delineate the standards required to meet the state competencies. The project was initiated out of the conviction that although they were not in written form, standards and competencies for appropriate psychological assessment did indeed exist and that there were certain minimum steps and actions that need attention in most cases referred to a school psychologist. It was further believed that most practicing school psychologists, in an informal manner and when time allowed it, kept to a procedural routine of sorts which insured that the vital aspects of an ethical, efficacious handling of cases would be realized. What was missing was a document or standard that, while allowing for needed flexibility, outlined a best practices approach from the initial referral to the closing of a case.

STUDY TITLE: Special Education Training Needs of Vocational Teachers

CONDUCTED BY: Santa Barbara Applied Research, Inc. (for the California State Department of Education)

STUDY DESCRIPTION: Although the literature recognizes that vocational education to meet their specific needs is particularly important for handicapped students whose career options are ordinarily more limited than those of other students, there appear to be no previous studies with the specific objective of determining the training needs of vocational teachers in relation to handicapped students. Increasingly, regular vocational teachers find themselves dealing with handicapped students in their classes, yet few of these teachers have had any specific training to prepare them for meeting the needs of such students. This survey is assessing the training, experience, and attitudes of vocational teachers in relation to special education and identifying those areas in which the teachers feel a need for additional training. The information obtained will provide much needed direction for the development of future in-service training programs.

STUDY TITLE: The Impact of Procedural Due Process on How School Staff Spend Their Time

CONDUCTED BY: Minnesota State Department of Education

STUDY DESCRIPTION: Complaints to legislators that special education due process procedures cause an undue time burden on school district staff led to an investigation of the amount of time spent by educators in various activities of regular and special education. Areas examined included direct instruction, curriculum development/modification, referral, assessment, IEP development, staffings, periodic reviews and reassessments, inservice training, and paperwork.

The time study report profiles the percent of education related time spent by elementary and secondary, regular and special education teachers in the areas listed above. The results indicated that the special education due process procedures do not cause an undue burden on regular educators.

Need-based vs. Qualification-Based Programs and Classroom Groupings for Handicapped Students

Reidsville City Schools
Reidsville, North Carolina
(for the U.S. Office of Special Education)

The major objective of this study was to compare two types of regular classroom arrangements for special children (random or clustered) and two types of resource services (remediation of labeled handicapped or remediation of identified skill deficits). Four different curricula were compared. This research addressed the following questions:

1. Is it more advantageous to provide resources based upon identified learning needs or based upon qualifying labels?

2. Is it better to cluster children with specific needs or specific labels within regular classrooms or to randomly distribute special students?

The Impact of Conciliation Conferences and Due Process Hearings During 1979-80

Prior to the initiation of a due process hearing in Minnesota, school district personnel meet with parents to attempt to conciliate their differences. This study was conducted to determine the impact of conciliation conferences on the student's program, parental and district attitudes, cost, the necessity for a hearing and the outcome of subsequent hearings and administrative reviews. Results of the surveys conducted for this report indicated that many districts were able to resolve conflicts during conciliation conferences and avoided the excessive cost and negative attitudes often associated with due process hearings.

PROCEDURAL SAFEGUARDS: Due Process

STUDY TITLE: The Impact of Procedural Due Process on How School Staff Spend Their Time

CONDUCTED BY: Minnesota State Department of Education

STUDY DESCRIPTION: Complaints to legislators that special education due process procedures cause an undue time burden on school district staff led to an investigation of the amount of time spent by educators in various activities of regular and special education. Areas examined included direct instruction, curriculum development/modification, referral, assessment, IEP development, staffings, periodic reviews and reassessments, inservice training, and paperwork.

The time study report profiles the percent of education related time spent by elementary and secondary, regular and special education teachers in the areas listed above. The results indicated that the special education due process procedures do not cause an undue burden on regular educators.

STUDY TITLE: Identification of Strategies for Assisting LEAs and SEAs in Meeting Procedural Safeguards Afforded to Handicapped Children and Their Parents

CONDUCTED BY: Abt Associates Inc.
Washington, D.C.
(for the U.S. Office of Special Education)

STUDY DESCRIPTION: This study considered two cornerstone provisions of procedural safeguards of P.L. 94-142 and Section 504 of the Vocational Rehabilitation Act of 1973: notification and dispute settlement. For notification, the project identified and described in technical assistance materials effective practices used by LEAs to notify parents about special education evaluation, placement, and programming decisions and examined parent response in terms of understanding and involvement in the pupil planning process. For dispute settlement, the project developed and disseminated a catalogue of dispute settlement materials for use by parents, educators, attorneys and advocates.

The Cost of Special Education Due Process Fair Hearings and Appeals in California

Decision Development Corporation (for the California State Department of Education)

The purpose of this descriptive study was to document the costs of due process hearings in special education to parents, local education agencies, and the state government. In addition to summarizing total costs, the study analyzed the issues prompting fair hearings, the distribution of cost elements, and the comparative costs of panel hearings, officer-conducted hearings, and state administrative appeals. Policy implications were discussed and recommendations made for reducing fair hearing costs and for improving the recording and dissemination of information on hearing costs.

STUDY TITLE: Advisory Review Panel - A Method for the Administrative Governance of Least Restrictive Alternative and Local Level Conflict Resolution

CONDUCTED BY: La Grange Area Department of Special Education, Illinois

STUDY DESCRIPTION: This is a continuing project designed to provide a method for governing access to more restrictive self-contained special education programs and to resolve conflicts in programmatic recommendations between parents and multidisciplinary teams. The model utilizes a panel of regular and special education personnel who review multidisciplinary team recommendations to determine if more restrictive self-contained special education placements are warranted. In addition, the panel is used as a method of conflict resolution prior to pursuing formal due process. The Advisory Review Panel model has proved to be an effective way of monitoring more restrictive special education placements. Informal data also suggest that the conflict resolution function of the panel has resulted in a significantly lesser rate of formal due process hearings in this joint agreement district.

STUDY TITLE: Level of Informed Consent Being Reinforced Under PL 94-142 on Behalf of Handicapped Children in Foster Care

CONDUCTED BY: School of Education, University of Kansas (for the U.S. Office of Special Education)

STUDY DESCRIPTION: The purpose of this project was to determine the quality of representation presently being exercised on behalf of handicapped children in foster care for special education purposes under P.L. 94-142. Survey interviews were conducted in two states, Kansas and Massachusetts, utilizing as subjects the two most frequently-involved representatives of handicapped children in foster care: (1) foster parents; and (2) social workers. The objectives of this project included the following: a) to provide descriptive documentation of the frequency with which the social worker and foster parents are serving as representatives for handicapped children in foster placement for special education decision making purposes; b) to provide descriptive documentation of the frequency with which the multiple agents identify any of the permissible agents as being legally responsible for representing handicapped foster children; and c) to determine whether there is a significant difference between social workers and foster parents of handicapped children in terms of accuracy of information, and the level of agreement of their information in regard to LEA team decisions.

**STUDY TITLE:** Study of the Quality of Educational Services: P.L. 94-142's Impact

**CONDUCTED BY:** Huron Institute
Cambridge, Massachusetts
(for the U.S. Office of Special Education)

**STUDY DESCRIPTION:** This case study was originally intended to continue for five years but because of a cutback in special studies money was terminated at the end of the second year. The study examined the extent to which school district implementation of P.L. 94-142 results in quality educational services to the handicapped child and the consequences to the child and family. The first year focused on entry into special education during the preschool years, the emotional consequences of the diagnostic process, parental education about P.L. 94-142, and early programming for preschoolers. The second year focused on factors that influence mutual adaptation between families and school staff.

**PERIOD OF DATA COLLECTION:** 1979 to 1980

STUDY TITLE: Criteria for Quality

CONDUCTED BY: Thomas Buffington Associates
Washington, D.C.
(for the U.S. Office of Special Education)

STUDY DESCRIPTION: This study was designed to lay the groundwork for future studies of the quality and effectiveness of P.L. 94-142 implementation. The study focused on four principal requirements in the law: provision of due process, least restrictive placements, individualized education programs, and prevention of erroneous classification. The study solicited 15 position papers on evaluation approaches for each requirement for local education agency self-study guides. Four monographs addressing the evaluation of these provisions of the law were produced. Each monograph includes the relevant papers and a review by a panel of education practitioners.

PERIOD OF DATA COLLECTION: 1977-78

REPORT TITLE-AVAILABILITY: Four Monographs entitled Developing Criteria for:
1) Evaluating the Protection in Evaluation Procedures Provision of PL 94-142;
2) the Evaluation of the Least Restrictive Environment Provision;
3) Evaluating the Due Process Provisions of P.L. 94-142; and

STUDY TITLE: A Review of the Public Awareness Program and Its Evaluation Procedures

CONDUCTED BY: Ira Nelken and Associates, Inc. (for the California State Department of Education)

STUDY DESCRIPTION: The study's major goals were to provide a detailed description and an evaluation of current "Public Awareness" programs in the state and to develop model program(s) and evaluation procedures for the State Department of Education. A model for public awareness programs was developed based on a review of the literature and present practices. This model detailed five major approaches to public awareness and included suggestions for reaching four target populations within each approach. The model outlines the (1) use of the media primarily to reach the general public; (2) use of printed materials to reach four target populations; (3) use of inservice/presentations primarily to reach the educational community and school and agency staff; (4) use of personal contact mainly with the educational community; and (5) special education student involvement/special events to reach the general public, educational community, and the students themselves.

STUDY TITLE: Initiatives in School Psychology

CONDUCTED BY: South Carolina Department of Education

STUDY DESCRIPTION: Given the absence of federal standards and the inconsistency in state definitions for the training and practice of school psychologists, psychological services must be thoroughly researched to aid school districts in maintaining more efficient service delivery mechanisms and to improve the availability, quality and cost effectiveness of school psychological services. Three task force subcommittees addressed the following topics related to this issue: administration, finance and essential services, role and function, and training and continuing education related to psychological services.

PERIOD OF DATA COLLECTION: September, 1977 to May, 1978

REPORT TITLE - AVAILABILITY: Briefing Paper - Initiatives in School Psychology

CONTACT FOR FURTHER INFORMATION: Beth Lowman, Consultant Psychological Services State Department of Education Office of Programs for the Handicapped 310 Rutledge Building Columbia, South Carolina 29201 803/758-7432
The purposes of this study were 1) to conduct a needs assessment of those children considered mentally ill or severely emotionally disturbed hearing impaired who are identifiable within the service systems of the code departments and who may be in need of appropriate mental health services; 2) to share information on available resources to meet the needs of this population; and 3) to develop a report for the Associate Director of the Department of Mental Health and Developmental Disabilities addressing the kind of program planning necessary to respond to the needs of the identified population.
The purpose of this study was to determine the states' capacities to respond to the new reporting requirements inherent in P.L. 94-142. MAC analyzed the data requirements in the law and the reporting forms being developed by OSE, and visited 27 states to test their capacity to respond. MAC reported on state capacity to provide information on four categories: children, personnel, facilities, and resources. They found capacity was relatively high on the first category and decreased across the remaining categories. They recommended deleting requirements for fiscal data since states could not adequately respond to such requests.
This report describes the 1978-79 special project funded by the Office of Special Education to determine the factors which facilitate and hinder rural LEAs in delivering special education services. The report discusses predominant problems as defined by rural state education agencies and limitations found in rural LEAs or cooperatives visited. Major problem areas included severe difficulties in recruiting and retaining rural staff, traditional attitudes/resistance to change, inadequacies of staff development programs, and other factors such as cultural differences and geographic and climatic difficulties.
National Comparative Study Regarding Rural Special Education Delivery Systems Before and After Passage of P.L. 94-142

National Rural Research and Personnel Preparation Project
Murray State University
(for the U.S. Office of Special Education)

This study compared service delivery systems before and after implementation of P.L. 94-142 in rural school districts. Although this study identified considerable progress in implementing comprehensive special education programs as a result of P.L. 94-142 (e.g., 92 percent increase in number of students identified and served), considerable problems were evident. Predominant problem areas included staff retention and recruitment, resistance to change, and funding and staff development needs.

Family Involvement and Satisfaction re: Educational Services for their Handicapped Children

University of Oregon
Eugene, Oregon
(for the U.S. Office of Special Education)

The purpose of this research was to survey the knowledge, involvement and satisfaction of rural parents with the requirements of P.L. 94-142. Five Oregon counties were involved (Cook, Grant, Harney, Jesserson, Lake). There are 23 school districts in this area with a total school enrollment of 10,000 first through twelfth grade pupils. It is estimated that 25 percent will have been identified for speech problems alone. This project sampled families of children with handicapping conditions other than speech impairment. This study was conducted in conjunction with the ongoing P.L. 94-142 compliance monitoring sponsored by the Oregon Department of Education.

A Study to Identify Solutions to the Problems of Effectively and Efficiently Coordinating and Funding Educational Programs in Rural Areas for Elementary/Secondary Children with Special Learning Problems

South Carolina Joint Finance Review Committee, National Conference of State Legislators, and Governor's Office (South Carolina)

The goal of this study is to examine the state's educational delivery system for handicapped children to assure that all handicapped youth are being provided an appropriate education. Owing to the heavy rural complexion of South Carolina, special emphasis is being placed on studying the most efficient methods of providing related services through interagency cooperation to school districts whose small numbers of handicapped children make the provision of educational and related services prohibitively costly.

Study of Student Turnover Between Special and Regular Education

SRI International
Menlo Park, California
(for the U.S. Office of Special Education)

Little is known about student flow between special and regular education. The purposes of this study are to (1) describe the characteristics of children leaving special education and the reasons for their departure, (2) identify the extent to which handicapped children transfer successfully into regular education programs, and (3) identify children who may receive a treatment of short duration, and therefore may not be receiving services when federal counts are taken.
