An interdisciplinary course on women and identity for college-level women's studies instructors is presented. Materials for the course are taken from myth, psychology, sociology, feminism, art, and other disciplines. It is divided into seven units: sexuality, fertility, work and family, fear and envy, women's networks, individuality, and social change. Students explore the mythical origins of negative sexual stereotypes, lesbianism, bisexuality, heterosexuality, virginity, the cult of the Mother Goddess, new methods and philosophies of birth control, child rearing, and parenting. Work and family topics include the family in the United States, single-headed families, childlessness, and women in the contemporary labor force. Women's networks are discussed from historical, anthropological, and sociological perspectives. The chapter entitled "Women and Social Change" covers participation in social movements throughout history, matriarchy, matrilineality, and new awareness and self. Each unit contains an introduction, lecture outline, discussion topics, reading list, questions, and a bibliography. Appendices include questions on Simone de Beauvoir's theory of reciprocal need oppression, processes in sex role learning, useful statistics, and a course evaluation form. (KC)

The National Endowment for the Humanities
Preface

The Women's Studies Curriculum Series consists of four interdisciplinary courses: Women and Identity, Women's Art and Culture, A Cross Cultural Study of Women, and New Women, New World: The American Experience. Addressed to teachers of Women's Studies in American colleges, community colleges, and universities, the courses provide both a conceptual framework and the resource materials necessary for the study of women in each subject area. Introductory remarks define the goals of each course and the main ideas of individual units; lecture outlines (or lecture topics) describe in skeletal form the specific points to be covered in class; annotated bibliographic materials (including films, slides, records, etc.) suggest resources for students and teachers; questions for discussion pose central issues which may be discussed in class or shaped into paper topics or exam questions. Each course deliberately provides more material than would ordinarily be covered in one semester so that teachers may select and adapt the materials to suit the needs of their students.

We envision many uses for the Series. First, the courses were specifically designed to fill the curricular gap between the now widely taught introductory courses in Women's Studies (commonly, a broadly interdisciplinary treatment of issues affecting the lives of women) and the more narrow specialized...
research seminar. Each course considers its subject from the perspective of at least two disciplines, and ideally should be team taught. The Series may also provide resources for teachers wishing to add material on women to courses in the traditional curriculum. For example, a teacher of Chinese History might adopt materials from the "Women in China" unit of A Cross Cultural Study of Women; teachers of courses ranging from Art History to Home Economics will find Women's Art and Culture a valuable resource; the extensive bibliography in New Woman, New World: The American Experience should be useful to all. Moreover, the four courses in the Series complement and clarify each other, and may be used in combination. For example, several of the courses briefly consider the subject of matriarchy; the teacher wishing to develop a full unit on this topic might compare these treatments, and then consult A Cross Cultural Study of Women for a lengthier analysis. Both Women and Identity and New Woman, New World: The American Experience consider women's role in social change, while Women's Art and Culture includes a section on art as social protest; thus a full unit on women and social change would include materials from several courses. Finally, the Series offers a solid curricular base for a college or university's newly founded Women's Studies program, as well as the means to enrich and update the curricular offerings of well established programs.

The courses in the Series try to teach students to think critically about the complex historical, political, social,
psychological, and aesthetic questions raised by the new scholarship on women. We believe that scholarship, perhaps especially that which derives from humanistic study, illumines and at best can transform the lives of people. Since Women's Studies scholars and teachers know that scholarly evidence need not be divorced from the truth of personal experience, whenever possible we suggest ways for students to connect their study with their lives. Perhaps most important, we recognize that good teachers teach good courses; we rely on your energy and talent to bring these courses to life.

Acknowledgments

The impetus for what became the Women's Studies Curriculum Development Project came from Professor Louise Tilly in her first year as Director of The University of Michigan Women's Studies Program. Funded by grant number EH2-5643-76-772 from the National Endowment for the Humanities, the project brought together a group of Women's Studies scholars and teachers from colleges, community colleges, and universities in Southern Michigan for a weekly Research on Women Seminar. The Seminar examined the new scholarship on women in the various disciplines in order to determine how it could best be integrated into the Women's Studies classroom. Task forces of seminar members, representing Eastern Michigan University, Central Michigan University, Western Michigan University, Schoolcraft College, and The University of Michigan then cooperatively designed the courses.
I would like to thank the members of the Research on Women Seminar, particularly those from distant colleges and universities who made the weekly trek to Ann Arbor through the historic snows of the Winter of 1977. I am especially grateful to the core group of task force members for creating coherent courses out of complex and varied materials. Thanks also go to the Office of the Dean of the College of Literature, Science and the Arts, The University of Michigan, for providing initial funding and office space for the project; to Marti Martell, of the University of Michigan Women's Studies Program, for assisting in preparation of these materials; to Anita Clos, for her faithful assistance throughout the Women's Studies Curriculum Development Project; and to the National Endowment for the Humanities, whose views are not necessarily represented by the findings and conclusions presented here.

WOMEN AND IDENTITY

Introduction

The purpose of this course is to explore what it means to be a woman. Since women have been defined by and often have accepted the definitions of a male-dominated society, this exploration is no simple task. If we study psychology or literature or anthropology as these subjects are usually taught, we find no meaningful definition of women. A world view created by men is reflected in both the content and methods of these disciplines. It is necessary, therefore, to examine the mainstream work creatively and critically, juxtaposing it with feminist thought and the real experience of women (including teacher and student). We must first recognize the prevalent definition of woman as "other" or "object" and then come to a fuller understanding of woman's identity. Is there a uniquely female mode of being which is different from the ways in which we have been defined by others? What is it? What constraints derive from our being female rather than "typically feminine" or "cross sex-typed?"

The course is organized around themes (rather than disciplines) which are relevant to women. Within each theme,

1 We would like to acknowledge the help of Bill McGee, Ethel Klein, Lydia Kleiner, Jacque Parsons, Marie Richmond-Abbott and Susan Weisskopf for providing resources helpful in the preparation of this course.
materials from several disciplines (e.g., myth, psychology, sociology, feminism, art, etc.) will be brought to bear on the question of how the theme is pertinent to women's identity. Since there is more material in each unit than could be covered in a one-semester course, it is up to the instructor and students to choose among the available material, to emphasize or de-emphasize parts of a unit or a unit as a whole. Each unit contains a bibliography (especially important if the teacher lacks expertise in a certain area), a statement about the unit, lecture outlines, and discussion questions. Since there is far more good material than can be assigned in any one unit, readings which are especially recommended for students are indicated. The additional readings might be divided among the students who could report on them to the rest of the class. Additional readings may be suggested by the teacher from the bibliography.

In a one-semester course on Women and Identity we have found that the teacher needs to choose a theme which will bring together the materials from the seven sections. For example, one might focus on the theme of women's individuality versus her participation in networks, on the theme of motherhood as it is examined throughout these materials, or on another pattern that the teacher finds here. We encourage teachers to shape a unified course out of these materials. Students will not easily see the patterns which unify these diverse materials without guidance from the teacher.

Although grading format and class projects are determined by the teacher (hopefully with the help of the students), one
project suggested here is especially consistent with a feminist approach to research, and could well be the central project for the course. We recommend having the students write their own autobiographies and/or self descriptions at the beginning of the term, before they read about how others have defined and described them. Then, each student should interview two women in order to get life histories and self-descriptive data; thus the class as a whole will have a wealth of material to work with. The class should determine the age distribution they want (e.g., each student could interview one woman of her own age and one older woman) and decide upon a set of common questions that everyone should ask. After the interviews, the class should decide how to organize and present the data for everyone's use. Finally, each student should use the data to elaborate on one of the units or themes discussed during the term: to support or refute the literature, to interpret it creatively.

Another assignment that has worked well in this course is to again ask students to write an autobiography. The teacher then meets with each student to discuss the paper, and helps the student to shape a research project out of the issues and themes brought to light in the autobiography.

A final note. The course as a whole does not adequately address the complex situation of black or other minority women, nor does it fully explore the interaction of racism and sexism. We are pleased to learn that The Feminist Press plans to bring out a collection entitled Black Women's Studies.
UNIT I. Sexuality

Introduction

Too often a woman's identity has been defined solely in terms of her sexuality. Our culture has seen woman either as a totally sexual being with no other identity, or as a completely nonsexual person. Both extremes have been scorned—the whore, the easy lady, the hot bitch, versus the old maid, the spinster school marm, the frigid bitch. The only way to escape these categories was to become a "carrier of the species," i.e., someone's mother.

The first purpose of this section is to explore the origin of these stereotypes and categories, focusing on areas which seem to have special impact on how people view women today. The study of mythology is especially rich in providing insight into the images of women in other cultures, images which recur persistently. Jewish and Christian religious attitudes toward the sexuality of women are also major influences.

The second purpose is to examine and analyze the ways in which women today are redefining their own sexuality. The pattern of redefinition involves accepting sexuality as enriching and joyous, but seeing it as only one part of the multitudinous identity of woman.

Within the lecture outline we have included bibliographical information relevant to each section. The readings
form the basis for lecture and discussion topics which immediately follow. A full bibliography is given at the end of the unit.

Lecture Outline

This section discusses how women's sexuality is defined by others, and how we define our own sexuality.

I. Ancient myths.
   A. Mother goddess myths
      3. Ishtar and Tammuz. See the Epic of Gilgamesh.
   B. Specialized Erotic Goddesses
      3. Hathor--Egyptian.
      4. Discussion of Greek goddesses as either being totally sexual or having no sexual activities at all. Pomeroy, pp. 7-10.
   C. Other erotic myths
      1. Cupid and Psyche, Oedipus, Theseus and Ariadne, Aeneas and Dido.
      2. Classical Greek Attitudes to Sexual Behavior (see article by same name by K.J. Dover in Arethusa 6.1, Spring 1973).
7. Sex under Compulsion: Leda, Europa, Daphne, Cassandra, Briseis.

II. Denial, Repression and Oppression of Sexuality
A. Jewish and Christian Attitudes Towards Sex.

The following readings will form the basis for lecture and discussion topics listed below.

Readings:

Discussion Topics:

1. Judaeo-Christian tradition as foundation of laws on sex.
2. Subservient roles of women in family patterns in the Old Testament.
3. Women as more intensely subjected to and involved with religious teaching on sex. Women as target of sexual laws of the Church—the double standard.
4. Limitation of sexual expression to procreation.
5. Women as unclean beings. The Pauline texts as anti-sex and anti-marriage.
6. The Early Church fathers.

B. Virginity and the Cult of Mary

Readings:

Miegge, Giovanni. The Virgin Mary.

Discussion Topics:

1. The Mother Goddess as non-virgin.
2. Virginity among the Greek Olympiad. (Hera and Aphrodite renewing their virginity in the sea. Confusion of Indo-Europeans concerning Mother Goddess figures who were not permanently tied to one man, and who they therefore assumed must be virgins.)
3. Virginity and the concept of private property. Legitimacy and land inheritance.
5. The Cult of Mary as a survival of Mother Goddess worship.
6. Mary and virginity in the Christian Church—see "The Concept of Virginity"

C. The Victorians

Readings:

Tavris and Offir, pp. 62-63.

Degler, Carl N. "What Ought to be and What Was: Women's Sexuality in the 19th Century." American Historical Review. 79:1467-90.

Discussion Topics:

1. Unnatural practices—what were they?
2. Church and scientific pronouncements concerning what was allowable sexually.
3. Women as sexual beings.
   a. the myth of no pleasure.
   b. the consequences of open sexual activity for women.
4. Repercussions of repression.
   a. pornography.
   b. prostitution and venereal disease.
   c. exploitation of working class women (especially domestics) by upper class men.
   d. widespread ignorance.
5. Discussion of how much sexual activity occurred despite these societal strictures (see Degler).
III. Psychological theories: studies and speculation on the nature of women's sexuality.

A. Freud, Jung, Reich

Readings:

Wilson, et al., *Readings in Human Sexuality*, pp. 69-71, pp. 81-83 (see bibliography).

Discussion Topics:

1. the unconscious; sexual sublimation;
2. the psychosexual stages of development;
3. penis envy and its implications; masochism and passivity; "anatomy is destiny";
4. castration urges and the toothed vagina; fear of women;
5. psychoanalysts as the props and policeman of a patriarchal culture;
6. reactions to the Freudians;
7. new theories;
8. feminist therapy.

B. The great clitoral/vaginal orgasm controversy

Readings:

Masters and Johnson.
Discussion Topics:

1. Freud's theory of clitoral orgasm as immature and vaginal orgasm as mature;
2. Kinsey's and Masters and Johnson's findings about the clitoris as the source of sexual pleasure in the female; multiple orgasms;
3. Shainess' theories;
4. Testimony from women.

C. Are men or women more capable of sexual pleasure?

Readings:

Seaman, Barbara. Free and Female. pp. 23-84 (a good summary of arguments)

D. The sex studies. Ellis, Kinsey, Kraft-Ebbing, Masters and Johnson, Hite, Redbook survey.

Readings:

Tavris and Offir, pp. 63-76.

Wilson, et al., pp 83-99, 105-127.

Discussion Topics:

1. Discussion of what the sex researchers listed above discovered about: premarital sex--frequency of; the importance of virginity; extra-marital sex; Kinsey's
homosexual/heterosexual/scale of 1-6; fantasies; masturbation; multiple orgasms; has sexual activity increased?

2. Is there any correlation between socio-economic status, age, education, etc., and sexual activity?

IV. Our Own Definitions:

A. Lesbianism: Identity or Activity.

1. Stereotypes and myths of lesbianism.
   a. women-loving vs. man-hating (for perspectives on man-hating see Bengri, Ingrid. Combat in the Erogenous Zone).
   b. sin or sickness.
   c. child molesting; proslytizing.
   d. butch-femme roles.
   e. lesbians as solely sexual beings.
   f. dominating mother; or dominating father as cause.
   g. bad sexual encounter with a man as cause.

2. Lesbians and the feminist movement.
   a. putting energy into women, and withdrawing it from men.
   b. split between lesbians and heterosexuals in NOW and recent strong support of lesbian issues from NOW.
   c. the charge of lesbianism as a method of resistance to the women's movement.
   d. the glorification of loving women.

3. Lesbianism in literature.
   (see Foster, Jeannette. Sex-Variant Women in Literature, and Rule, Jane, Lesbian Images).

Students should read some of the following fiction:

Grahn, Judy. Edward the Dyke and Other Poems.

Readings:

4. Famous Lesbians.
a. Sappho (Students read Sappho: A New Translation, and Woman/Plus Woman, pp. 129-161.
b. Ruth in the Old Testament (see Chapter 1 in Foster).
c. Natalie Barney, Romaine Brooks, Renee Vivien, etc. (cf. women's networks).
d. Gertrude Stein.
e. Colette, Willa Cather, Amelia Earhart, Radclyffe Hall, George Eliot, Marie Antoinette, Empress Leopoldina of Brazil, Emma Lyon, Carey Thomas, Sarah Churchill, Emily Dickinson, Amy Lowell, Madame de Stael, Dorothy Thompson, Mary Wollstonecraft, etc.

For readings see bibliography. For discussion of the Amazons, see lecture on matriarchy and matrilineality.

B. Bisexuality: Straight or Gay? Or rejected by both?

Readings:

Plato. The Symposium.

Bode, Janet. View from Another Closet. (See bibliography.)

Jem. "A Bi-Sexual Offers Some Thoughts on 'Fences,'" in After You're Out.

Discussion Topics:
1. Possible causes.
   a. simple preference
   b. family background—siblings, parents, socio-economic status
   c. genes or hormones?
2. Are bisexuals really gays holding on to respectability?
3. Simultaneous relationships with men and women—problems and satisfactions.
4. The sexuality of men and women—comparisons and differences.

C. Masturbation. The road to insanity or to self love?

Readings:
3. Barbach. For Yourself, pp. 87-94 (see bibliography).

Discussion Topics:
1. Blindness, hairy palms, warts, etc., as possible consequences.
2. Learning sexual responses and own body.
3. Positive and negative feelings about genitals.
4. Independence, depending only on one's self for sexual pleasure.
D. Celibacy.

Readings:

Our Bodies, Ourselves, pp. 77-78.

Discussion Topics:
1. Social stigma--Old Maid syndrome.
2. By choice or by compulsion.
3. Independence.
4. Nuns and other monastic orders.

E. Heterosexuality.

Readings:

Barbach. For Yourself. pp. 87-94. See bibliography.

Our Bodies, Ourselves, Chapters 2 and 3.

Discussion Topics:
2. The role of the clitoris.
4. Sexual Response Cycle. (Excitement, Plateau, Orgasm, Resolution)
5. Sex inside and outside relationships. Emotional investments in sexuality.
7. "Foreplay"--does the word create a false dichotomy supporting the assumption that only intercourse is the real thing? Importance of it in relations to women's sexuality.
8. Sexual activity for aging women.
9. Problems: (Fear of pregnancy, lack of communication, lack of experience, fear of experimentation, inhibitions stemming from religious or moral strictures, sexual aversion, dispareunia, vaginismus.)
10. The power element between men and women possibly preventing an equal sexual relationship between them.

F. On Virginity.

The concept of virginity has been expressed in a variety of ways. In the Old Testament a virgin was a woman who was unmarried. Much of the discussion that has been carried on about Mary, the mother of Jesus, has been based on the assumption that a virgin is one who has not had sexual intercourse, rather than one who is unmarried.

The interweaving of the concepts of virginity and celibacy occurred in the early years of the Christian church. In part it arose from the fear of sexuality of women by the early Church fathers. They saw virginity as an achievement, an overcoming of the overabundant sexuality of women. In addition, a good deal of the discussion of virginity is based on an idea of a mind-body split, with man being the mind, woman the body. (This split is also seen in Greek thought--the man representing rational, ordering spirit, and the woman emotional, uncontrolled body). The body, i.e., woman, was continually responsible for leading men into sin, according to Augustine and other Church fathers.

By becoming a virgin, woman lost her essential nature and "became" a man. There was a belief expressed in the Second Epistle of Clement that the Kingdom will come "when the two are one, and the outside like the inside, the man like the female, that is neither male nor female." In the Epistle, this means "when a brother seeing a sister does not think of her as a woman, and when a sister seeing a brother does not think of him as a man." (Second letter of Clement, No. 12. Early Christian Fathers, Philadelphia, 1953). This led to some abuses and
there were letters from Bishops condemning the men and women who sleep together as brothers. Ambrose of Milan wrote several letters on this subject. He said that true virginity is of the heart, not just the body, and implies simplicity and poverty. He believed that the virginal life manifests the fundamental Christian freedom by gaining now what others will receive in heaven. For him, to choose virginity was to choose the angelic life.

The disagreement among the Church fathers about marriage is reflected in the writings about virginity. Saint Jerome admonished a widow to mourn the previous loss of her virginity more than the loss of her husband. Ambrose wrote: "Let no one who has chosen marriage despise virginity, or one who has chosen virginity despise marriage."

Much of the writing about virginity was about Mary, who was juxtaposed with Eve. Eve was seen as the person responsible for the sin of humanity. Tertullian says: "You are the Devil's gateway. You are the unsealer of that forbidden tree. You are the first deserter of the Divine Law. You are she who persuaded him whom the Devil was not valiant enough to attack. You destroyed so easily God's image man. On account of your desert, that is death, even the Son of God had to die." Because Eve was responsible for all the problems, Mary came to be seen as the one who had overcome these problems by being the mother of Jesus. The purity of Mary and her virginity became of great concern to the Church fathers. They developed a concept of her perpetual virginity.

The idea of virginity led to the development of all kinds of myths about the healing power of virgins. Some went so far as to say that the bones of a virgin would protect bridges and buildings. The nursery rhyme "London Bridge is Falling Down" reflects this imagery. A virgin who had died a normal death was put in the base of buildings, bridges, etc. The virgin buried in the bridge in the rhyme had supposedly been found not to have died a natural death and therefore the bridge was in jeopardy.

There are many discussions of these ideas. The best are found in:

The development of the virginity of Mary is one that continues to influence us today. See Gertrude Von LeFort, The Eternal Feminine.
Readings: Fiction (suggested readings for student or teachers)

QUESTIONS FOR DISCUSSION

1. How do you think men's view of what is erotic differs from that of women? Does this have any connection with the nature of women's sexuality?

2. Does our culture portray men as being more erotically oriented than women? If so, does physiological data support this image?

3. What influences women's decisions about what is moral or socially acceptable sexually?

4. Are all people potentially bisexual? What evidence supports your view? If yes, what prevents people in our society from developing this potential as the ancient Greeks did, or acting on it?

5. In a society where deities' sexual activity was glorified in cult and art, would there be a greater tendency among women in the society to feel more comfortable expressing their own sexuality? What evidence supports your view?

6. In examining goddesses who are patrons of sexuality and eroticism, what traits emerge?

7. Are women in mythology stigmatized or expected to feel guilty for sexual activity?
8. What images of the nature of women's sexuality emerges from a study of the philosophies of the early Church fathers? How much of these images survive to influence our view of women's sexuality?

9. How has the view of some psychoanalysts that women are inherently masochistic affected women's sexual functioning?

10. What demographic factors in early Biblical society influenced sexual prohibitions and mores in that society?

11. Mary is celebrated in Christian religion for being the only pure woman. Does this definitionally make every non-celibate woman impure? Does this apply to men?

12. The Victorians believed that women were not capable of sexual pleasure. How would this affect women's views of themselves?

13. For years orgasm was presumed to originate in the vagina (despite some empirical observation to the contrary). Did women react to this assumption by feeling inadequate because they could not "achieve" the proper type of orgasm? Did this supposition hinder sexual pleasure by convincing a man that if he got pleasure from sex a woman automatically did also?

14. When does a woman identify herself as a lesbian—after: strong emotional attachment to other women; dreams; fantasies; expressions of physical affection short of overt sexual activity; one sexual experience culminating in orgasm (two? three?)? Does identifying oneself as lesbian involve renouncing all sexual activity with men?

15. Why do many heterosexual women and men find lesbianism and lesbians threatening? Why is there a social stigma attached to lesbians?

16. Does sexual activity between women "count for less" or seem less important than sexual activity between men? Why?

17. Can you be aggressive and be a "real woman?" To be a "real" woman, must you relate to men? Is a woman's identity defined solely in terms of a love or sexual relationship with a man?
Readings recommended for specific topics are indicated within the lecture outline.

Delacour, M. *Hermaphrodite. Mythes et rites de la bisexuality dans l'antique classique.*

Euripides. *Bacchae.*

UNIT II. Fertility

Introduction

Fertility has been an inescapable facet of women's identity. In the past, there were few methods of birth control available. Societal pressures to bear children were such that even if there had been, little effective choice existed for women. Child-rearing customs chained women to the home and to the family as securely as the oxen to the yoke.

This section examines the cult of the Mother Goddess, which glorified the fertility of women by worshipping a deity who was depicted as pregnant, and who sympathetically induced the fertility of the women and of the fields. It then goes on to outline discussion of the advantages and disadvantages of the new methods and philosophy of birth control, child-rearing and parenting in an effort to discover how these changes have affected women's identity.

Lecture Outline

I. Paternity confusion.

Discussion of how "primitive" people do not recognize the role of men in conceiving a child. Implications of the belief that a woman produces a child by her own special magic. (See: Margaret Mead, Male and Female; Frazier, Sir James, The Golden Bough; and Cottrell, Leonard, The Bull of Minos.)

II. Women as gatherers. The Agricultural Revolution and its implication for women.
The Mother Goddess--giver of all good things.

A. Characteristics common to most mother goddess figures--attributes and cult practices, evidence of what effect she had on society.

B. Neolithic remains. (For example: Mellaart James. Catal Huyuk: a Neolithic Town in Anatolia, and in the Cambridge Ancient History, Volume I, Part I, pp. 724, 278, 357, 379.)

   2. midwives as criminals.

E. Variant child-rearing structures.
   1. child care centers.
   2. communes.
   3. extended families/networks of friends.
QUESTIONS FOR DISCUSSION

1. Some anthropologists have defined our conception of history as linear—societies moving progressively from one point (usually worse off) to another point (usually better off). Many ancient societies which engaged in fertility rites saw history as cyclical, paralleling the annual death and rejuvenation of the crops. How do you think such conceptions affected the position of women in the society? (If at all.)

2. Some scholars have postulated the theory that the Indo-Europeans, invading what is now Greece, brought with them a patriarchal, sky-oriented religion, and suppressed the female-centered, earth-oriented religion that they found. From your readings, how much evidence is there to support this view?

3. How have widely available methods of effective birth control affected women's view of themselves? Has there been a sexual revolution brought about by widespread dissemination of the pill? Historically, how do you think women's self-image was affected by the probability of bearing a child every year (if she were sexually active)?

4. Is there a connection between demographic factors such as limited arable land for crops, and the desirability for a large family, or the use of birth control devices in the culture? Do people see large families as desirable in our society? If so, do such attitudes derive from a time when reproduction was needed to insure survival of the group? Is there such a thing as a maternal instinct? Or are maternal feelings learned? In Neolithic times, women often tended the crops, while men hunted. Are men and women naturally suited for these tasks? What factors contributed to this division of labor?

5. In some Near Eastern societies in the past, to honor a fertility deity and to induce the crops to grow, people would engage in sexual intercourse as part of religious cult practice. At the advent of Christianity, such practices were discouraged and suppressed. A strong propaganda campaign was instituted against such practices. How much do you think this suppression has to do with many people's ideas that sex is 'dirty, disgusting, etc.'?

UNIT III. Work and Family

Introduction

This unit is divided into five sections: 1) Family in Evolutionary Perspective; 2) The Family in the Contemporary United States; 3) Women in the Labor Force in the Contemporary United States; 4) Family Variants: Working Class Families; the Black Family; Single-Headed Families; Childlessness; and 5) Work: Psychological and Sociological Aspects. We have listed discussion questions and bibliography at the end of each section. Recommended fiction for this unit is listed on page 52.

Lecture Outline

Section 1. Family in Evolutionary Perspective

I. Definitions
   A. Family: coresidential unit of man and woman and any children (or remnant of this unit—as single parent and child) within which collective activities of production, reproduction and consumption may be carried on.
   B. Work: productive labor, can be for own use or for market exchange. In contemporary setting, used commonly as paid productive labor for exchange carried on outside the home.
   C. Evolution: process of growth and development (in reference to social units, usually of complexity and scale).

II. Point of view
   A. Large-scale structural change—changes in technoeconomic base and structures
   B. Focus on behavior, not norms, not legal prescription
   C. Focus not on individuals, but on households and families
III. Evolutionary views in the literature

A. Classic statement. Friedrich Engels, The Origin of the Family, Private Property and the State (1884) discussed the relationship of family to political and economic organization. Based on what is currently seen as an outdated and discredited anthropological interpretation (see critique by Sacks, Zaretsky). He argued that the mode of production determined political organization, family structure, relationships between the sexes. The family was the product of men's desire to know their children, once they owned property. The institution of private property was the origin of female oppression.

B. A more recent statement by Claude Meillassoux argues that mode of production determines the mode of reproduction, but that reproduction and not production is the basis for social relations. A household can be self-supporting in producing food and other needs. It cannot be self-reproducing. It needs outsiders to reproduce not because of any fear of incest but because of the age and sex requirements for reproduction. The regularization of social relations between households in order to guarantee reproduction is the basis of society and the state.

Meillassoux argues that the Marxian emphasis on production for exchange value—institutionalized work, wages, etc.—tends to leave out and overlook the social value of reproduction which is crucial in simple societies. The problem is to reproduce (enough but not too many) in the next generation. Marxian economics tends to understand this from the point of view of the group ("need to reproduce the labor force") but not from the point of view of the family or household.

C. Main evidence for social evolutionary schemes comes from anthropological (ethnographic) evidence. The evidence gathered in contemporary societies with less developed economies is seen as the equivalent of less-developed economies in the past. Thus a cross-cultural, cross-sectional study of societies "stands for" a historical, evolutionary one.

IV. Production and Reproduction

A. Techno-economic base. Type of access to food and other necessities—from hunting and gathering, to pastoral, agricultural, industrial bases and the level of technology (ability to intervene in nature) that goes with it.

B. Demographic regime. In the past, and in less developed societies, demographic factors have been very important socially in affecting how families act. In the present, reproduction is both sure (that is, babies born will survive to adulthood) and the need for population is relatively low (our economy's labor productivity is so high that we need limited, not unlimited
supplies of labor in the future.) Now the prospect of exhausting resources imposes another structural limit—on the number of consumers: again, these are very recent developments (post World War II). Before 1900 mortality was so high even in Europe and the U.S. that high fertility was needed to replace populations. Populations that outgrew techno-economic base suffered excess mortality through hunger and disease.

V. Evolutionary View of Family and Reproduction

A. Hunting and gathering people. King (Bushmen) of Kalihari Desert area—techno-economic base very frail. Land can support relatively small population. Marshall Sahlins points out (Stone Age Economics) that these people have little because they want little. They have a lot of spare time. Women gather nuts and berries, do small animal hunting in groups, have social relationship with same groups. Not a strong demand for labor. Reproductive choices loose. Since mothers have to carry babies as they move, they cannot have more than one at a time; a low rate of reproduction results. Low fertility may be due partly to lack of fat in diet. Also possibility of infanticide. Mortality is not exceptionally high as long as population is in balance with resources. Men hunt.

B. Pastoral society—Family strongly patrilineal. Male workers needed, group work—of brothers as work teams. Women are valued as mothers of sons but not as daughters.

C. Settled agriculture. (From here on, European examples). Plow agriculture as opposed to horticulture (gardening)–labor intensive, irrigated agriculture. Historically, in Europe, linked with growth of state, growth of markets. Removal of work from hearth—division of labor. Women still produce. Labor power of males needed yet land owning means don't want there to be too many heirs. Workers on a holding determined by size of holding. A certain distribution by age and sex needed. Family needs to expand itself by hiring workers when there are not enough family members of the right age and sex; contract by sending family members elsewhere to work when there are too many.

Women divided between productive labor and reproduction. Because of high mortality (especially infant mortality) high fertility does not produce too many children. Further, in Western Europe, historically, there was a late age of marriage and relatively high degree of celibacy. High rate of dissolution of marriage by death.

D. Growth of cities, growth of industry, and growth in scale of agriculture all increased productivity. These processes increase proportion of population which is not in agriculture, which does not own property. Reproductive activity cannot easily
be combined with productive activity as production moves out of household; mortality of infants does not decline rapidly.

Family does not disappear, lose function, etc. It helps people migrate, get jobs, etc. and mothers who don't work perform services for workers, bear and raise the next generation.

Wives are rarely workers outside the home in this kind of situation. The industrial economy needs primarily male workers. But improving mortality conditions due to prosperity means that fewer children are needed. Infant mortality reduced by more maternal attention. Mothers are less needed as producers with increasing productivity of male workers (better wages) mothers and wives specialize in child bearing, child rearing, managing consumption.

Fertility control within marriage begins to show on national fertility rates in the late 19th century. Demographic situation has moved from high fertility, high mortality to low fertility, low mortality.

Families are smaller, life more predictable.

It is only about 1900 that the nuclear family we are familiar with crystallizes.

VI. Changes

A. Society Industrializes—growth of scale increases of labor and resources in manufacturing.
B. Cities and proportion of urban population grow.
C. Fertility, mortality fall.
D. Families get smaller. Birth control is used.
E. Extended family becomes less important (warning: people never seem to have lived in extended families over all their lives. Mortality conditions were such that grandparents were likely to be dead when their grandchildren were born.)
F. Age of marriage goes down.
G. Proportion married goes up.
H. Do more women "work"? Almost all women did productive labor in pre-industrial society. In industrial society there is a sharper differentiation between work and non-work. There is more leisure. If we count women's work in the household setting and in the labor force, probably fewer women "work" now than in period of household production, because of the growth of leisure.
I. Personal life. Has there been an increased privatization of family? Does family perform more emotional support function now? The personal life of the past is hard to get at. The
artifacts of the past suggest a less intense attitude toward children and the more public nature of family life in the past. Attitudes are hard to discern. There is more privacy now, children live, parents can spend more money on their children.

Section 2. The Family in the Contemporary United States

This lecture examines the structure of the family in the contemporary United States from two points of view: the couple, and the parents and children. Constraining aspects of family responsibility on women's identity are discussed, as are various suggestions for modifying these constraints.

I. Definitions

A. Nuclear family: a couple and their children. This definition does not specify activities in the couple (such as that husband works, wife doesn't) but simply describes a unit with certain biological and socio-legal connections between and among members.

B. Household is a co-residential unit of persons who share four walls and, most likely, eating arrangements. They may or may not be married or blood relations.

C. Extended family: nuclear family plus other blood or socio-legal relatives, such as grandparent(s), aunt(s), uncle(s), nephew(s), niece(s), grandchildren.

II. Alice Rossi points out that much contemporary "family" literature is focused on couple relationships, rather than "generational continuity and parent-child relationships." She sees this partly as a reaction to the functionalist, sociological (Parsonian) concept of nuclear family as "natural" and "good" because it works. She questions the swing toward cultural determinism and extreme egalitarianism in contemporary social science.

Whether or not we accept all of her analysis, we should note her warning: The result is a tendency in much contemporary thinking to confuse equality with identity and diversity with inequality. But where age and sex are concerned, diversity is a biological fact, while equality is a political, ethical and social precept."

So this lecture focuses not only on marriage but also on parenting.

III. Parents and Children

A. The demography of the contemporary United States (Bane 1-20).

1. Low mortality, low fertility after baby boom ended in early 60's.

2. Aging population
3. Family size (causes of decrease) and childlessness
4. Living arrangements of children (note increased number and proportion of single parent families--discussed in later lecture)
5. Childcare arrangements
6. Vulnerability of children and need for rights

B. Economic perspective--the "new home economics" is a microeconomic theory. It doesn't deal with the economy as a whole but with households. It asks questions about why people have children and how many. "Children are viewed as either 'producer durables' (i.e., producing a stream of future income for their parents--perhaps when the latter are old and retired, if not sooner) or as 'consumer durables' (i.e., producing a stream of future satisfactions for their parents in the same fashion as does an automobile or a house). In a modern, industrialized country with a well-developed system of social insurance and little or no child labor, children are most clearly analogous to consumer goods. In the rural areas of industrialized nations or in the less developed parts of the world, their value as workers is greater, and this is undoubtedly one explanation for the higher fertility in these areas.

Because of children's value (whether as producer or as consumer goods) parents are willing to invest both time and money in child bearing and child rearing." (p. 117)

Not only do meanings of children's value change with economic growth, they vary with class and status within a society. Economic analysis shows that child bearing is negatively related to the price of the mother's time. A woman who can make a good salary because of advanced education has fewer children.

This does not necessarily mean that she will work rather than have children. In fact, she and her family may decide that she should use her time in rearing "high quality" children.

C. Bane concludes that there is little evidence of less care for children in contemporary families. "The most important difference between today's children and children of their great-grandparents' and grandparents' time is that there are proportionately fewer of them." (p. 19)

Further, "parent-child bonds persist despite changes in patterns of disruption..." (p. 19) Many fewer parents and children die, so the rate of disruption of these bonds is lower than it was with higher mortality. Almost all children today are being taken care of by at least one parent."
IV. Couples (Bane 2106–36)

A. Divorce up—correlates of divorce. Possibility that egalitarian marriage is an alternative.

B. Proportions marrying up.

C. Age at marriage up slightly.

D. Marital life cycle

- Concept of life cycle from newly married, to first child, to children living, couple alone, death of first spouse.

- This cycle has changed dramatically over the years due to increased life expectancy and changed fertility patterns (child bearing concentrated in a relatively short period). Husbands and wives have many more years alone together. Couples will spend only 18% of their married lives raising children, compared with 54% a century ago.

E. Tavris and Offir material on housewife, differing views of satisfaction in marriage between husbands and wives. See Oakley for much material on housework.

V. Psychological and Sociological perspectives

A. Perception of marriage (Bernard articles)
   1. Myth: Society's perception
   2. Reality: Woman's perception

B. Division of labor—the psychological and sociological imperative of "traditional" division of labor (it is functional and preserves the status quo.)

C. Role conflict and dual careers
   1. What are the components of role conflict? Spouse, children, work, leisure.
   2. How does one cope? Redefine role (personal)—e.g., set up priorities; Redefine role (structural)—e.g., hire a housekeeper; Role rejection—e.g., quit work or get divorced, etc.; Renaissance woman—try to do everything well.

VI. Suggestions for change

A. Role flexibility—husbands take a larger role in housework, child nurture, wives do outside work.

B. Rossi—farther child spacing, child growth centers, more social sharing of households, families to end isolation of mothers and children.

C. Bane—measures for guaranteeing adequate support and protection for children despite family breakup, "Life time insurance."
D. Individual rights and framework for social conceptualization (C.S. Bell).

QUESTIONS FOR DISCUSSION

1. What are the main factors which have changed family structure in the United States over the last 200 years?

2. How has the family cycle changed in this period?

3. How can society reconcile the need for care of dependent children and parents' claims to autonomy?

BIBLIOGRAPHY

Tavris and Offir, pp. 218-234.

Especially recommended for students.
Section 3. Family Variants: Working Class Families; The Black Family; Single-Headed Families; Childlessness

The other lectures on work and family have focused on middle class marriages which produce children. Here we look at other classes and ethnic groups, group efforts at child rearing, and couples who are voluntarily childless.

I. Working class families

Topics chosen from Rubin. Emphasis on constraints and limitations of working class married life, how lack of understanding between husbands and wives, parents and children, is common. Yet marriage seen as achievement of adulthood. Continued importance of kinship network for women and men.

II. Black families

Carol Stack makes a strong case against any pathological interpretation of Black family. If we ask whether children are being raised in a fairly stable situation, the answer is yes. Welfare and poverty mean that couples are unstable but children are somehow raised, by kin networks that help their mothers. Importance of grandparents and non-married liaisons in these networks.

III. Communes and group efforts at child raising

Rossi has a brief summary of findings presented in various articles in The Family Coordinator (FN 49-55, p. 29). Evidently their own mothers usually have ultimate responsibility for young children, and most mothers choose to have it this way.

Her criticism is biting:

"Just as the sexual script, so the parenting script in the new family sociology seems to be modeled on what has been a male pattern of relating to children, in which men turn their fathering on and off to suit themselves or their appointments for business or sexual pleasure. The authors and dramatists of both the mating and parenting scripts in the new perspectives on the family are just as heavily male as the older schools of thought about the modern family, if not in the generic sense, then in the sense that parenting is viewed from a distance, as an appendage to, or consequence of, mating, rather than the focus of family systems and individual lives. It is not at all clear what the gains will be for either women or children in this version of human liberation."
IV. Childlessness

Establishing the legitimacy of childlessness is an important aspect of making the whole range of choice of parenting and non-parenting possible.

The motherhood mandate and childless couples.

Adult development and childlessness.

QUESTIONS FOR DISCUSSION

1. What structural or situational factors shape the differences between middle and working class families?

2. Compare these factors with the historical view of family in development.

3. How can women in such constrained situations find self pride?

4. What kind of support do Black women and working class women get from each other?

V. Utopias

A. The role of women, women's work and the family in literary Utopias

1. Sir Thomas More. Utopia
3. James Hilton. Lost Horizon. (Shangri-La)
6. Aldous Husley. Brave New World
7. Eugene Zamiatin. We
8. B.F. Skinner. Walden Two

B. Feminist Utopias

1. Joanna Russ. The Female Man

C. The attempts to turn Utopian Ideals into reality
1. Brook Farm--George Ripley (1841-1849)
2. Oneida--John Humphrey Noyes
3. Nashoba--Frances Wright
4. Charles Fourier and the French Utopian Socialists
5. Fruitlands
6. The Shakers--Mother Ann Lee
7. Fruitlands
8. Mormons

QUESTIONS FOR DISCUSSION
1. What kind of work are women doing in the above societies?
2. How does it differ from work done by women in the United States today?
3. What are the underlying assumptions of these societies as to what kind of work men and women are suited for?
4. What is the economic structure of these societies?
5. Is there any correlation between the kind of economic structure and the role of women?
6. What kind of family structure exists (nuclear, extended, none)?
7. How are children born? Who takes care of them?
8. Do children know their biological parents?
9. Are children nurtured by their biological parents?
10. Do men or women or both take care of children?
11. If there is a difference between who takes care of children in these societies, and who takes care of children (and where) in our society, is there any correlation between the type of economic or social structure and who is taking care of the children?
12. How is work divided within the family (if there is one)?
13. What are the general attitudes towards women in these utopias?

BIBLIOGRAPHY

*Especially recommended for students.
Section 4. Work: Psychological and Sociological Aspects

The psychological literature most relevant to the area of work is on women and achievement. A complete lecture on achievement motivation can be gleaned from the following article:

I. Achievement Motivation

A. Traditional theoretical and empirical work

1. Male bias in the field (the use of male subjects)

2. Original conceptualization by McClelland: achievement motivation is a relatively stable disposition to strive for success in any situation where standards of excellence are applicable.

3. Atkinson and Feather add hope of success and fear of failure to the formula. Aroused motivation is a function of expectancy of success and the incentive value of success or failure as well as the strength of hope of success and fear of failure.

4. Crandall included expectancy of success, attainment value, and standards of performance. Motivation should be assessed in particular achievement areas (i.e., sex role appropriate); this accounts for some of the problems in research when dealing with female subjects. Female achievement orientation is manifested in areas which represent culturally defined sex appropriate activities, e.g., social skills.

5. Many say that female achievement behavior is motivated by affiliations rather than achievement. The relevant findings in this area are:

   a. Girls are reinforced for achievement behavior only if they are displayed in a social context.

   b. Veroff differentiated between autonomous achievement motivation and social comparison achievement motivation and an integration of the two (which appear developmentally in that order). He found that girls had trouble with the integration. (On his projective measures, all the figures are male!)
c. Evidence suggests that social skills are an area of achievement for females and that females are not necessarily more sensitive to social approval but may be reinforced for a more social pattern of achievement.

d. All of this says that there is more than one way of achieving—a severe limitation of definition in much of the work in the area.

B. Fear of Success

1. History of the concept: added to the achievement motivation formula in order to eliminate the large "noise" factor when applying the formula to women. Refer to the Horner article in Journal of Social Issues, 1972, Vol. 28 (2) for the original formulation of fear of success. There have been a series of non-replications of Horner's original study.

2. Reinterpretation: fear of success is intimately related to sex role definitions and anticipated consequences of deviating from them. Simply, deviance produces negative consequences.

3. Fear of success is a situational variable, not an inherent trait. Implications:
   a. Traits require "treatment" for change.
   b. To say that women fear success is blaming the victim.
   c. For good critiques of fear of success literature, see article by Condry and Dyer (1976).

II. Other issues related to achievement in women

A. Attribution of success and failure—girls attribute to luck, boys attribute success to ability. See articles by Deaux and Dwek for discussion of this literature and empirical studies.

B. Structural barriers to achievement

1. Overt discrimination

2. Subtle and covert mechanisms (e.g., communication networks, friendships, etc.) See articles by Epstein, Bunker and Seashore, O'Leary.

C. Role innovation: Implications and consequences

1. Determinants of role innovation (Tangri article)

2. The "Queen Bee" syndrome (Staines)
QUESTIONS FOR DISCUSSION

1. What is the "blame the victim" approach and how does some of the literature fit into this conceptualization?

2. What are the implications of alternative conceptualizations for theory and method?

3. What does this literature say about the impact of popular prejudices on science and the influence of science on popular prejudices?

4. What is the value of the fear of success literature and why was it picked up so readily by women in many fields and in the general public even though it is now somewhat discredited?

BIBLIOGRAPHY

Also recommended:

Kimball, M., "Achievement: A Second Look at Some Assumptions." Paper to be presented at the Symposium: "Women as Portrayed by Psychology and Sociology" at Canadian Universities, University of Toronto, Oct. 5-6, 1974. (To be published by CAUT in a book of the same title edited by W. Potter.)
Section 5. Women in the Labor Force in the Contemporary United States

I. Structural factors influencing women's labor force participation

A. Warning: Once the labor force concept in its formal sense was introduced, statistics were gathered to record those who were "in the labor force" (i.e., actively working for pay or seeking such work). These statistics give a sense of concreteness which is probably quite inaccurate. In the U.S., women's work and particularly married women's work has been historically particularly underreported. The definition of labor force participation has been progressively broadened and made more precise. Therefore, the long term historical trend toward increased labor force participation by women should probably not be taken as strictly accurate. Nevertheless, the figures since World War II are worthwhile and certain comparisons can be made between them and earlier periods.

B. Aggregate view: Oppenheimer and others have shown the powerful combined effects of changes in occupational structure, occupational segregation, and demographic factors on women's employment.

1. Occupational segregation. Most single occupations are primarily held by males or by females. That is, most occupations are held by a higher percentage of a single sex than is the overall distribution of the sexes in all jobs. Thus there are female occupations--nurse, school teacher, secretary, clerk, and so on, and there are male occupations, miner, bartender, mechanic, account executive, etc. The sex-type of occupations has changed over time (secretaries and sales clerks were both primarily male) but the trend toward occupational segregation has not lessened.

2. Demand for workers has varied with structure of the economy. Historically, there has been a trend of resources and labor away from small scale agriculture (in which women worked in household units) toward larger scale manufacturing and services. Women worked in certain kinds of manufacturing only--textiles and garment industry. Heavy industry hired mostly men. With the development of a larger area of light industry (especially electronics) and of tertiary sector (services, stores, schools, government) after World War II, there was an increased demand for women workers. Much of this changed economic structure and demand was based on post war population growth.
3. Supply of male workers was inadequate to fill all the new jobs. The supply of single women workers was also too small. Workers coming to maturity in the 1950's were an especially small group (cohort) for they were the persons born in the depression of 1929-30. Because of the prosperity of the early '50s, also, many of them stayed out of the labor force for additional years of education. Consequence: older married women were called in to do many of the new jobs.

A new style of labor force participation by women emerged which involved less paid employment in single years after completion of education, more in married years after children were in school or grown.

This pattern has been modified again in the 1970's with increased labor force participation in single or early married years and continued labor force participation in older years. This has accompanied a steep decline in fertility.

Women, on the average, are often protected in jobs because of segregation. These service jobs are more stable and less liable to depression or regression than construction or heavy industry, in which men work.

II. Micro economic view of labor force participation looks into individuals and households to see why women work.

A. Individuals—need for money and satisfaction. Increased education of women.

B. Households—a married woman's decision on how to allocate her time is 3-way (Kreps and Leaper, Sawhill, "Economic Perspectives")
   1. How much of her time is given to home work without pay.
   2. How much to market work with pay.
   3. How much to leisure.

Factors which enter into this time allocation decision are the education of a woman and perceived needs for children. If a family wants to educate their children, buy them many things, then more income is needed.

III. Working mothers

A. Sawhill on Woman-headed household and financial problems
B. Tavris and Offir on double job of working wives: housework and job; lack of assistance with housework.
C. Child care
D. Power in the family
V. Women in occupations

A. Kanter, in Tavris and Offir, situational interpretation (see Appendix III).

B. Social intervention in occupational segregation—discrimination and affirmative action in hiring.

VI. Changes

A. Flextime—see Tavris and Offir, Ruether

UNIT IV. Fear and Envy

Introduction

The theme of fear and envy pervades much of the literature on myth, anthropology, religion and psychology. One interpretation of the theme is that women have been and are relegated to secondary status as a result of men's fear and envy of their reproductive capacities (and any ability or phenomenon related to reproduction). That is, in order to control the powers of women men have imposed oppressive constraints on the freedom of women. The fear and envy in men has also been projected onto women--women are accused of penis envy, for example.

This unit will begin with an interdisciplinary treatment of the basis for fear and envy, focusing on menstruation and menopause. The next part contains a group of quotations which may be used to organize a discussion about manifestations of fear and envy throughout history. We then consider witches, and finally discuss rape. We recommend the film Rape Culture.

We also list mythological references to be studied as examples of fear and envy.

Lecture Outline

I. Menstruation

The Curse: A Cultural History of Menstruation by Janice Delaney, Mary Jane Lupton, and Emily Toth. New American Library.
1977. This book is the basis for the lecture or lectures. A suggested outline is:

A. Taboos and religious myths--Part I, pp. 5-56.
B. Literature and Myth--Part IV, pp. 123-162.
C. Contemporary Myth--Part III, pp. 87-119.

Because there is so much mythology about menstruation, many women are unaware of the dynamics of the process. Further information in the lecture might include:

Helpful background books:

II. Menopause.

1. Weideger book presents a good account of physiological and psychological aspects of menopause from a feminist perspective.

2. Fear of menopause stems from the menstruation taboo which is nearly invisible in our society today, but still exists.
   a. Manifested in lack of knowledge about what is supposed to happen and the variability which is the norm.
   b. Perpetuated by gynecologists' bias against women and medical model of treating female functioning as a disease. Weideger states, "The gynecologist has assumed leadership as the enforcer of the menstrual taboo and its adjunct, the mythic menopause. From menarche through menopause, it is this physician/shaman who interprets the meaning of her physical problems and points to the women's failure to obey the rules of femininity as the
cause of the problem . . . He shows her the cure (in the form of social readjustment) and tells her she must more rigorously conform to the female role--a role he defines (p. 144)."

c. Tied up with role definitions of femininity and motherhood.

3. Menopause is only one part of the climacteric.
   a. Men also go through a climacteric involving decreased potency and the aging of tissues and bodily systems.
   b. See article by Ramey about men's cycles.

4. Correlates of menopause.
   a. Feelings of shame
   b. Question sexuality (problems may stem from men's decreased potency which is then blamed on female menopause).
   c. Denial of realities (part of the taboo).
   d. Physiological and psychological changes.

III. Manifestations of fear and envy throughout history and across disciplines. Students should read the following passages and discuss their reactions.

The female is, as it were, a mutilated male . . . a sort of natural deficiency. It is not appropriate in a female character to be manly or clever. The male is by nature superior and the female inferior.

Aristotle

A man says what he knows; a woman says what will please.

Jean Jacques Rousseau

A woman, a dog, and a walnut-tree, the more you beat 'em the better they be.

Thomas Fuller

Woman is given to man so that she may produce children. She is therefore his property, as the fruit tree is the property of the gardener.

Napoleon
A woman is nobody. A wife is everything. A pretty girl is equal to ten thousand men, and a mother is, next to God, all powerful. We trust that the ladies of Philadelphia will resolve to maintain their rights as Wives, Belles, Virgins, and Mothers, and not as Women.

Philadelphia Public Ledger, 1848

Women are childish, simple and short-sighted. They are their whole life grown-up children, a kind of middle step between the child and the man who is the true human being. Women are the second sex, in every way.

Schopenhauer

We must start with the realization that, as much as women want to be good scientists or engineers, they want first and foremost to be womanly companions of men and to be mothers.

Bettleheim

The female requires the male, not only for procreation, as in other animals, but also for governance, for the male excels both in intelligence and in strength.

St. Thomas Aquinas

Suffer women once to arrive at an equality with you, and they will from that moment become your superiors.

Cato the Elder

Even school children know that the male is by far the more important sex.

John Calvin

What a mad idea to demand equality for women! Women are nothing but machines for producing children.

Napoleon

When a woman thinks at all, she thinks evil.

Seneca
The fact that women must be regarded as having little sense of justice is no doubt related to the predominance of envy in their mental life.

Freud

It is shameful for a woman to even think of what nature she has, let alone glory in it.

St. Clement of Alexandria

The five worst infirmities that afflict the female are indocility, discontent, slander, jealousy and silliness.

Confucius

Most women have no characteristics at all.

Alexander Pope

...the little girl is a little man until the castration complex. From then till puberty all she has is a castrated penis; she remains unaware of the existence of her vagina.

Freud

The little girl's castration complex is brought into being by the sight of the boy's penis: this makes her feel inferior and she compensates for her deficiency by penis envy. ...the desire to have a child by the father, as a substitute for the penis, is therefore the dynamic factor in the female Oedipus complex.

Freud

...the boy worries about the girl's sexual organ only when he has established a link between the threat of castration and the sight of the female genital (from which he turns away in "horror" or with "triumphant contempt")...

Freud

...at the time of the castration complex the girl despises the castrated mother and femininity in general.

Freud
...the discovery of her castration makes the little girl give up clitoral masturbation and therefore phallic activity ... the normal Oedipus situation is only established if the wish for a penis is replaced by one for a baby which takes the place of a penis ... She is fully satisfied only when she has a son, thus compensating for her penis envy and feeling of inferiority.

Freud

Feminine love is passive and narcissistic. The feminine woman does not love, she lets herself be loved...passive and purely feminine women have no superego.

J. Lampl De Groot

The clitoris plays a purely inhibitory role; it is a superfluous organ.

Deutsch

Don't let a woman, wiggling her behind
And flattering and coaxing, take you in;
She wants your barn: woman is just a cheat.

Hesiod

From her comes all the race of womankind,
The deadly female race and tribe of wives
Who live with mortal men and bring them harm,
No help to them in dreadful poverty
But ready enough to share with them in wealth.
As in the covered hive the honey-bees
Keep feeding drones, conspirators in wrong,
And daily, all day long, until the sun
Goes down, the workers hurry about their work
And build white honeycombs, while those inside
In the sheltered storeroom, fill their bellies up
With products of the toil of others, thus,
Women are bad for men, and the conspire
In wrong, and Zeus the Thunderer made it so.
He made a second evil as a price
Of fire, man's blessing: if a man avoids
Marriage and all the troubles women bring
And never takes a wife, at least he comes
To miserable old age, and does not have
Anyone who will care for the old man.
He has enough to live on, while he lives,
But when he dies, his distant relatives
Divide his property. The married man
Who gets a good wife, suited to his taste,
Gets good and evil mixed, but he who gets
One of the deadly sort, lives all his life
With never-ending pain inside his heart
And on his mind; the wound cannot be healed.

Hesiod

Bring home a wife when you are ripe for it;
When you are thirty, not much more or less,
That is the proper age for marrying.
Your wife should have matured four years before,
And marry in the fifth year. She should be
A virgin; you must teach her sober ways.
Particularly good is one who lives
Nearby, but look around you carefully,
Lest all the neighbours chuckle ar your choice.
No prize is better than a worthy wife;
A bad one makes you shiver with the cold;
The greedy wife will roast her man alive
Without the aid of fire, and though he is
Quite tough, she'll bring him to a raw old age.

Hesiod

IV. Witches

Witchhunting was primarily carried on from the 14th to the 19th centuries. From the 15th century on, women were most often cited as witches. When groups were discussed, women were more frequently named as witches. Alexander of Hales and Thomas Aquinas argued that women were more prone to witchcraft. In the 15th century, both the witch trials and the writing of theorists increased. The trend culminated in the Malleus Maleficarum in which by title the gender of witches is feminine and in which the explanation is given that women were in every way morally and mentally inferior to men.

There are those who believe that witchcraft is based on sorcery. In many cultures, sorcerers are more likely to be women than men. This is true in some areas of India as well as Africa. Though deriving primarily from heresy, European witchcraft did have roots in sorcery. Women have been associated with sorcery more often than men because of their traditional roles as cooks, nurses, midwives, and keepers of the home. In addition, special power was attached to childbearing and menstruation. Women gather herbs, and use them for a variety of things: cooking, curing the sick, or even poisoning. Women are said to know the charms that can cause hatred or love, fertility or impotence.
The basis for witchcraft in European areas is to be found in heresy. There was a change in attitudes toward women occurring in the 11th and 12th centuries. Even though it applied to only a few, the idea of courtly love was influential. In theory, the lady became a being more spiritual and more delicate, more refined than the man, who in turn addressed her with a devotion bordering upon religious adoration. At the same time, there was growth in the veneration of the Virgin Mary, which some believe raised women's position. But most women, being neither noble nor the mother of God, had problems. They were banned from holy orders, could not preach or attend the cathedral schools or universities. They were passed over in succession to fiefs and thrones. The Jewish tradition of the Old Testament, the tradition of Roman literature and Law, the warrior tradition of the Teutons, and the writings of Paul all confirmed that women were to serve men.

In this situation, it is not surprising that women were prominent heretics. Medieval writers say this was because they were gullible, but modern writers see their rebellion against the male establishment. Women of all classes participated in orthodox, monastic and semimonastic reform movements, many of which were seen as heretical by the Church establishment.

The participation of women in witchcraft may have been exaggerated by antifeminist writers eager to attribute to the female sex the utmost weakness. Malleus Maleficarum reflects the mythic fear of women in men. That fear had been heightened by the suspicious attitudes of Church Fathers toward sexual relations. Virginity was the most desired state and woman was a temptress luring men away from perfection. There were many Christian women, but few were canonized who did not die as virgins. Even motherhood received qualified praise, for the Fathers knew what preceded it. St. Augustine argued that intercourse, even in marriage, cannot be wholly free from sin. Because of such fear, and because there was a tendency for the will of God and the will of the Church to be one and the same, witchcraft and heresy provided very convenient ways of getting rid of those who dissented.

The persecution of witches is an example of extreme mass reaction to the fear and envy of women. The pamphlet by Ehrenreich and English is a good treatment of the relation of witchcraft to medicine and the evolution of the male medical establishment after (and in reaction to) the embodiment of wisdom in women.

V. Rape.

See film *Rape Culture.* Discuss the film, feelings.

3. Zeus approached Leda in the form of a swan (see *Oxford Classical Dictionary*).

4. Zeus turned into a bull to carry Europa to Crete.

5. Orion tried to rape the Pleiades, seven daughters of Pleione and Atlast, and he turned into constellations.
BIBLIOGRAPHY

Mythological References Which Can Be Studied as Examples of Fear and Envy:

1. In the play Antigone by Sophocles (recommended translation: Richmond, and Lattimore), Creon expresses constant anxiety about being bested by a woman. (Lines 484, 525, 740, 746, 756.)

6. The custom of Bouvade--see Malinowski.

7. Among the early Costa Ricans, the worst uncleanness is a woman in her first pregnancy. Brinton, Daniel, p. 156.

9. In Russia, when people wanted to preserve their village against an epidemic of plague or cholera--at midnight the old women would walk around the village, secretly summoning the other women so that the men knew nothing about it. They would choose nine virgins and three widows who would be let out of the village, there they would undress down to their shifts. The virgins would let down their hair, the widows would cover their heads. They would hitch one of the widows to a plow. The nine virgins would seize scythes while the other women grasped skulls. They would march around the village, howling and shrieking, while they plowed a furrow to permit the powerful spirits of the Earth to emerge, and so kill germs. Any man who met them was killed.
UNIT V. Women's Networks

Introduction

Some people have interpreted the problems of the Women's Movement (both historical and contemporary) in terms of the lack of cohesiveness among women as a political force. Many women are indeed isolated from each other by virtue of the feminine role. Much has been written on competition among women (for the attention of men) which inhibits the growth of friendship. There are those who propose genetic or evolutionary explanations for why men, not women, engage in close social bonding (e.g., Lionel Tiger).

At the same time, many women speak of the profound closeness, comfort and warmth that is experienced when interacting with other women. Even looking at everyday life in suburbia we see coffee klatches, bridge games, over the fence friendships. Historically, too, it is possible to find evidence of more institutionalized forms of women's networks. It is important to explore women's networks because often women define themselves better in interaction with other women than in interaction with men.

This unit is divided into three sections: (1) Historical, Anthropological, and Sociological Perspectives; (2) Informal, Literary and Religious Networks; and (3) Institutional and Organizational Networks. Bibliographies are given within each section, and specific references are occasionally cited within the lecture outline.
Section 1. Historical, Anthropological and Sociological Perspectives

I. Relationships between women in societies where the political and domestic spheres are integrated.

In some societies there is no sharp distinction between the domestic sphere and an extra-domestic political sphere which links or organizes a series of domestic units. Authority is shared between women and men in these societies, despite the occurrence in some of them of sex-based division of labor. These societies exhibit strong female bonding; women cooperate with each other in daily tasks and their strategies for achieving goals do not differ from men's. They have power to control their own lives and do not have to work through men or try to subvert a male political structure to get what they want.

A. The Navahos.
1. Society is matrilineal, structured around female bonds with a tendency toward a uxorilocal residence pattern.
2. Women have close cooperation ties with other female kin; the mother-daughter bond is especially strong.
3. Marriage ties are weak, especially during the early period, largely because of the wife's ties with her own kin.

B. The Eskimos.
1. Society is organized around the nuclear family with the husband dominant.
2. Women have cooperative networks with other women and close ties with female kin.

C. The Iroquois.
1. Society is matrilocal.
2. Women contribute heavily to the subsistence of the tribe.
3. Women control agricultural production. They also control the economic organization of society and maintain the right to distribute all food, even that obtained by men.
4. Female bonds are strong, and there is little sociability between the sexes.

D. The !Kung Bushmen.
1. The !Kung are a hunting and gathering society, though some are moving toward a sedentary, agricultural way of life.
2. Women contribute heavily to the subsistence of the group and control what they have gathered. This control is related to the simplicity of the economy, technology and social organization. It is less true among the sedentary groups.
3. Men and women are equal and have many overlapping areas of activity.
4. Women have cooperative networks with one another.
5. The sedentary lifestyle undermines sexual equality.

BIBLIOGRAPHY

General:

The articles in this collection can be quite difficult for the beginning student. While we recommend several of them (here, and in other sections of the course) we also urge teachers to study the collection carefully before making assignments.

Navahos:

II. Relationships between women in societies where the political and domestic spheres are related.

In these societies women's situation is much more difficult. Power and authority are vested in a hierarchy of males, and women's methods of achieving goals are political; they must influence the men who hold the power in the society. It is this kind of situation which produces rivalries between women, for example, the conflicts between mothers-in-law and daughters-in-law, stemming from the need to achieve power through competing for a man's loyalty. Nevertheless, female bonding occurs under certain circumstances in these societies as well.

A. Women's rivalries in peasant and tribal societies.

1. In patrilocal extended households political power depends upon the size and cohesiveness of the kin group.

2. The purpose of exogamous marriage in these societies is to unite previously unconnected households and add to their strength.

3. Women live in households where they are strangers.

4. They are in a conflict of interest position vis-a-vis other female members of the household because of their need to achieve power and security by competing with one another to influence men. Wives try to alienate their husbands from their mothers-in-law and to insure the loyalty of their sons.

5. In polygynous societies co-wives compete with one another.

a. The Kanuri in Africa have a very high divorce rate. Divorce is a way for women to assert their independence in this society.
6. The Hebrew matriarchs are a good example of this kind of conflict between women and manipulation of men by women. Rebecca's favoring Jacob over Esau exerts a great influence over the history of Israel. She gets her way by deceiving her husband and manipulating her son (Genesis, Chapter 27). The rivalry between Rachel and Leah, who are sisters and co-wives in a patriarchal extended family is central to the narrative about the origin of the twelve tribes (Genesis, Chapters 29-30).

7. Women's political interests are at odds with men's in these societies; men gain power by building an extended family group and women gain power by undermining the group's cohesiveness.

8. Quarrels between the male members of these kin networks are blamed on their women.

9. Men discount women's political roles and attribute their disruptive behavior to personal idiosyncracies or the general inferiority of the female sex.

B. Female bonding in extra-domestic neighborhood groups.

1. In patrilocal exogamous societies women are frequently in conflict with other women in the household but share common interests with other women in the same situation.

2. Women exert power by molding opinion, by influencing men's decisions. Gossip is a formidable means.

3. These informal communication networks give women power as a group but restrict them as individuals. The idea that they might one day need the group's support functions as a deterrent upon their individual behavior.

4. This kind of power exerted outside the official channels is not a viable substitute for real political power.

C. Women's Trading Associations.

1. Ijaw Women's Association: factors which allow for the formation of women's associations in West Africa.
   a. Patrilocality and virilocality cause women to be separated from their own kin and oriented toward other women.
   b. The women need a means of economic independence to form viable associations. Some Ijaw groups have this base.

BIBLIOGRAPHY

III. Modern Industrial Societies.

In Black American and English working class families women exercise a kind of de facto authority in the domestic sphere because men are absent. In these situations, though, neither men nor women exert power in the political sphere nor do they have access to economic resources.

A. Black families in America.

1. Black males have high rate of unemployment.
2. Black women with children have access to welfare.
3. Households form around women because of their role in child care. Ties between women form the core of networks.
4. Welfare benefits and kinship ties provide more security for black women than black men.
5. Kin networks are strengthened at the expense of any particular male-female bond. Women act to break up relationships which they perceive as draining their resources and men are expected to contribute to the maintenance of their own kin group.
6. Men are economic exploiters of women because of male unemployment and female access to welfare.
7. Women often seek independence in this situation.
8. Black kin networks are characterized by a lack of stability in particular male-female bonds with successive recombinations within a network.

B. The English Working Class.
1. Men are the nominal heads of households.
2. Men are away from home due to long working hours.
3. Mother-daughter ties are the focus of extra-domestic cooperative networks.

Tanner, Nancy, "Matrifocality in Indonesia and Africa and Among Black Americans," Rosaldo and Lamphere, pp. 129-156.

IV. Mothers and Daughters.

The personality of any woman is strongly influenced by her relationship with her mother, and mother-daughter relationships are deeply affected by cultural conditions. The nature of the relationship has varied enormously throughout the ages. It is molded by a variety of forces and is very much affected by social change. The Amazon myths describe a society where mothers related positively only to their female children, refusing to raise male children and having no more contact with males beyond what was necessary to perpetuate the society. In the myth of Demeter and Kore, the mother-daughter identification is extremely strong, possibly reflecting a matriarchal period in Greek history. In patriarchal societies, on the other hand, the birth of a female child has frequently been regarded to varying degrees as a disaster, even by the mother. Mothers have endured and participated in the exposing of their female infants in some societies. Greek mythology and literature of the patriarchal period provide
examples of intense hatred between mother and daughter in the story of the house of Atreus and Aeschylus' treatment of it. The goddess Athena is totally lacking in female identification, as she asserts in giving her judgement at the end of the Aeschylean trilogy.

But even under patriarchy, the mother-daughter bond has been extremely strong. In India, Havik Brahmins lavish an extraordinary degree of affection upon their female offspring, which they explain as compensation for the hardships their daughters will have to endure as adult women in their society. The mother-daughter bond was also very strong in the eighteenth and nineteenth centuries in this country. Daughters were socialized almost exclusively by their mothers, spending most of their working and leisure hours in the company of mothers, female kin, and other women. The lives of one generation of women were not significantly different from those of the previous generation. In the twentieth century, however, women began to have opportunities which their mothers had not had, and the strength of the mother-daughter bond was undermined. The position of women under patriarchy has always made mother-daughter relationships complicated, although it has created extremely strong identification under some circumstances: The dependence which has resulted from this has not always been healthy and sometimes the relationship has been ridden with a great deal of ambivalence and conflict.

BIBLIOGRAPHY

As a part of this unit, students might want to discuss their relationships with their own mothers and/or daughters.

A. Mother-daughter bonds in matrifocal societies.

1. The mother's role has a very high valuation. She is the center of the household and makes important economic contributions to it.
Section 2. Informal, Literary and Religious Networks

I. Informal Networks

A. Female Friendships

Intimate friendships between women, both women who were related to each other and women who were not, flourished in the United States in the eighteenth and nineteenth centuries. These relationships, which we know about from the diaries and correspondence which some of these women left, appear to be qualitatively different from the kind of friendships most women experience in this society today. At that time Victorian morality imposed severe restrictions upon relationships between the sexes. Courtship was a very formal process and men and women generally were little better acquainted with each other at the end of it than they had been at the beginning. As a result, marriage was often a surprise and a disappointment, particularly for women. In these circumstances women often looked to one another for the deep relationships which they were unable to achieve with men. This intimacy was by and large more socially acceptable than it is today.

1. Women were confined to the home; they had their own sphere which was completely separate from men's and spent much time in each other's company.

2. Mother-daughter relationships provided an apprenticeship period for young women learning adult roles. These relationships were emotionally intimate and gave the women a life long support system.

3. Women also had strong emotional ties with non-resident female kin, such as aunts, cousins and nieces.

4. Women helped one another with domestic chores and in times of crisis.

5. Visiting among women was an institution; women went to one another's homes daily and spent extended periods visiting one another without spouses or other family members being included.

6. The rituals surrounding rites of passage such as marriage, childbirth and death were women's rituals. Men's participation was kept to a minimum.
7. Young women went to boarding schools and made friendships there, frequently with daughters of their mothers' women friends.

BIBLIOGRAPHY

B. Lesbianism

This topic is covered under sexuality but some discussion of it could be included here as it relates to the kind of relationships dealt with in the previous section and pertains to some of the material in the following section. The novel Patience and Sarah would be useful for this discussion since it deals with a lesbian friendship in this cultural context.

C. Literary Networks

Friendships and social connections among writers, artists, and other creative individuals have been a common occurrence throughout history. Sometimes these relationships have led to the formation of more or less organized groups, occasionally centering around a particular individual. Personalities who are attracted to literary people, who seek their society and stimulate interaction among them, have been numerous as well. At various times women have participated in these associations in different ways. This section explores a development in literary networking among women. The section on the salons in France shows women participating as leaders in a movement which primarily involved men. There was more woman to woman interaction in the Blue-stocking movement, where the salons were frequented by males and females. The tone of later salons was very different, and most of the remaining sections deal with literary networking exclusively among women. The instructor will probably want to lecture briefly on this material.

1. The salons in eighteenth century France

a. They were directed by women who were unmarried, widowed, or did not live with their husbands.

b. The women of these salons were recognized as intellectual equals by men and there were many intellectual friendships between men and women at this time.
c. Authorship by women was taboo; what writing they did was not intended for publication or was published anonymously, for example, Mme. De LaFayette's *La Princesse de Cleves*.

d. Women were important primarily as hostesses; they gave male writers and philosophers opportunities to stimulate one another. Their role as catalysts was crucial.

e. The salons were very influential in the development of French literature and they created an intellectual atmosphere which contributed to the revolution.

2. The Bluestockings

a. More women were entertained in the English salons; women were guests as well as hostesses.

b. Intimate friendships existed among some of these women, for example Mrs. Vesey, Mrs. Carter, and Mrs. Montague; Mrs. Chapone, Mrs. Carter, and Mrs. Delaney.

c. Unlike their French counterparts, who were hampered by social restraints, some of the Bluestocking women were writers. Examples of their work include: Mrs. Montague's *Essay on Shakespeare* and her contributions to Lord Lyttleton's *Dialogues of the Dead*; Mrs. Delaney's *Letters on the Improvement of the Mind*, Fanny Burney's novels, Mrs. Chapone's *Letters to Her Niece*, and Mrs. Carter's translation of *Epictetus*.

3. The Transcendentalists

Transcendentalism was a literary movement in New England in the early part of the nineteenth century. The Transcendentalists had close social connections with each other and women participated actively in their gatherings. Margaret Fuller was an important person in this movement. She contributed to networking among the Transcendentalists with her West Street (Boston) conversations. She was interested in educating other women and held gatherings for this purpose. She was involved in the Brook Farm experiment, where the Transcendentalists attempted to apply their theories in practice.

4. The Belle Époque: Natalie Clifford Barney, Renee Vivien, Colette

a. There were numerous salons in Paris in the period just before World War I which were predominantly women's salons.
b. Renee Vivien (Anglo-American poet who lived in France and wrote in French) and Natalie Clifford Barney (American, had a salon in Paris) made several attempts to establish colonies of women, one on Lesbos and one in France.

c. Barney appeared as a character in the works of several authors whom she knew. She was Flossie in Liane de Pougy's *Idylle saphique*, the amazon in Remy de Gourmont's *Lettres a l'amazone*, Laurette in Lucie Delarue-Mardrus' *L'Ange et les pervers*, Evangeline Musset in Djuna Barnes' *Ladies Almanack* and Valerie Seymour in Radclyffe Hall's *The Well of Loneliness*.

D. Early Nineteenth Century Reform Movements and the Women's Movement: Feminist Friendship Networks

In the first half of the nineteenth century, America was the scene of a great religious revival, out of which sprang a variety of movements for social reform. Women participated extensively in these movements. The religious experience, common to women who were affected by the revival, gave them the impetus to break out of traditional roles. Their sensitivity to slaves' oppression stimulated them to think about their own oppression. Moreover, the blindness of the male reformers to women's oppression and the harsh public reaction to female social activism provided a dramatic demonstration of the need for women's rights. Participation in abolitionism and the other reform movements also gave women a great deal of experience in organizing and in public speaking. Women also formed friendships with one another through these activities. These friendships were very important in shaping the early feminist movement. The contemporary women's movement also sprang up in the aftermath of a period of social activism. This phenomenon may suggest that when women work with men to bring about social change, they tend to develop a cohesiveness among themselves.

1. Lucretia Mott and the Grimke sisters were key figures in the abolitionist movement. Mott was a mentor to the Grimkes.
2. Lucy Stone and Antoinette Brown worked together in several reform movements and became feminists together. They married two brothers who shared their interests.

3. Elizabeth Cady Stanton and Susan B. Anthony differ from other feminists of this period, who generally had supportive husbands. Anthony never married and Stanton's marriage was unhappy. The two women were mutually supportive in this situation. They worked closely together in the women's rights struggle, so closely that the relationship could be described as mutually interdependent.

4. A split developed between the Stanton-Anthony New York wing of the movement and the New England feminists. Stanton and Anthony were in some ways more radical; they were more interested in sexual emancipation, in making drastic changes in the relations between the sexes, and they also became involved in issues besides women's issues.

5. The Woman's Bible, published in 1895, is a lengthy feminist exegesis of the Old and New Testaments which Stanton edited. The project was essentially Stanton's, though there were a large number of other participants in various parts of it at different times. The varying responses to the religious issue here reveals something about the networking phenomenon in the feminist movement over two generations. The Bible project primarily reflects the interests of the first generation of feminists, and Stanton in particular, who broke with traditional religious doctrines. Stanton retained an interest in these issues longer than many of her colleagues and she experienced great difficulty generating and sustaining interest in the project. Many feminists lost interest in the Bible and felt that it had no relevance to the women's movement. Others, including a new generation who had not experienced the enthusiasm of the earlier revival, were too traditional in their religious orientation to support it.

BIBLIOGRAPHY

The instructor will probably want to lecture on this material and possibly assign a history text, such as Page Smith's Daughters of the Promised Land.

II. Women as Helpers

Women have always provided one another with a variety of supportive services. They have assisted one another with all kinds of everyday tasks and have given much needed help in times of crisis. They have also exhibited a marked tendency to support one another in their efforts toward self improvement.

A. Midwifery: one of the first ways women helped one another at crucial times.

1. While giving birth was an active process, with the parturient woman doing most of the work, birth attendants were midwives.

2. These women were folk healers, who helped women not only in giving birth but also performed abortions sometimes and gave advice on birth control and fertility.

3. The rise of academic medicine undermined the position of the midwife. The discovery of podalic version in the sixteenth century and the invention of the forceps in the eighteenth century brought about male intervention in the birth process. Mothers were no longer in control; they gave birth in more and more passive positions. Midwifery declined and the exclusively male medical profession gradually took over.

4. The church and the medical profession were both against the midwife. The church held that sickness and pain in childbirth were divinely ordained punishment for the sin of Eve. The male academic medical profession protected its developing self interest with a mystique of credentials. Women were not permitted to pursue this professional training.

5. Midwifery survived longer among the lower classes and in backward areas.
6. The modern movement for natural childbirth and home birth:
   a. Hospital births have been shown to have their
      dangers.
   b. Women are striving to regain control over the
      birth process.

BIBLIOGRAPHY

Good material on the history of midwifery is fairly scarce. Chapters six and seven in Adrienne Rich's Of Woman Born: Motherhood as Experience and Institution are recommended.

Witches, Midwives, and Nurses: A History of Women Healers by Barbara Ehrenreich and Deirdre English (The Feminist Press, 1973), could be assigned to students.

For the modern movement, there is Immaculate Deception: A New Look at Women and Childbirth in America by Suzanne Arms (Boston: Houghton Mifflin, 1975) which has a short bibliography on midwifery.

B. Nursing

1. Women were deprived of the primary role they had once had in healing by the development of the modern medical profession.

2. Nursing developed to supplement this profession. While most hospital patients were poor, hospital nurses were not professionally trained and they were often not of reputable character. Doctors made advances in other areas, but did little or nothing to alleviate this problem.

3. The need to revamp the nursing profession provided an outlet for the reforming energies of upper class Victorian women. Here they found a viable role; nursing was a natural and acceptable vocation for "ladies."

4. The Crimean War gave Florence Nightingale and the American Civil War gave Dorothea Dix opportunities to make key contributions in this area.

C. Self Help--See the section on Women and Social Change.

D. Education

1. Educational institutions for women sprang up in large numbers in the United States in the first part of the nineteenth century.

2. Utilitarian concepts governed the education of both sexes.

3. The purpose of educating women was to make them fit wives and mothers. It was generally recognized that business concerns kept men away from home and that children were raised almost exclusively by women as a result.

4. Emma Hart Willard established her Troy Seminary in 1821. She convinced the New York legislature that educating women was important for producing virtuous citizens.

5. Catharine Beecher established the Hartford Female Seminary in 1828. She too believed in educating women to help them perform better in nurturing roles.

6. The idea that women were suited to be teachers followed logically from these premises. Educating children in schools was a logical extension of women's role as educators of their own children at home. Women also were well suited to educate other women, to train succeeding generations to follow in the same path.

7. Academies which educated girls exclusively were run by women.

8. It was inevitable that some women's intellectual curiosity would go beyond the prescribed bounds and that they would wish to study law, medicine, and other fields which were considered men's domain.

9. Women's educational institutions provided a network for women to help each other break out of traditional roles.

10. Women in higher education: Women's colleges in this country were largely founded and run by women. Women have also established large numbers of scholarships and fellowships to help other women further their educational goals.
11. Academic women's caucuses have sprung up as part of the contemporary women's movement. Women who have made inroads as professionals in the predominantly male universities in this country and students who are pursuing advanced degrees in these institutions support one another in these groups. See Renner, Marguerite, et al., "Feminist Historians and the History of Women," University of Michigan Papers in Women's Studies. Vol. 2, No. 2, pp. 125-132.

12. Educated elites: Marie Souvestre

Souvestre was headmistress of the Pensionnat des ruches, which Natalie Clifford Barney attended. Dorothy Strachey Bussy also attended this institution and wrote Olivia. The heroine is modeled loosely upon Souvestre and the theme is the lesbian network which this institution spawned. Souvestre was also headmistress of Allenswood, which Eleanor Roosevelt attended. See Joseph P. Lash, Eleanor and Franklin, NY: Norton, 1971. See also Sklar, Kathryn Kish, Catherine Beecher: A Study in American Domesticity, NY: Norton, 1973.

E. Monasticism

1. Europe underwent broad political changes in the early middle ages. Women were often displaced socially by this process. Some women found a welcome refuge in monastic institutions.

2. Other women were housed there against their wills because they were obstacles to the political ambitions of others. This latter situation sometimes led to disturbances within the monasteries.

3. Most of the women who inhabited religious houses during the early period of the monastic movement in Europe were upper class.

4. Noble women at this time had property of their own, which they often used to endow female religious establishments. They frequently retired to these nunneries as widows.

5. The early stage of the monastic movement was characterized by a lack of centralization. This situation, coupled with the economic resources of many of the women who participated in the movement at this stage, enabled women to control their own religious houses to a great extent.
6. A movement to reform monastic institutions took place during the twelfth century. This movement was dominated by male clergy. Women's independence within monastic establishments was sharply curtailed as a result.

7. The rise and fall of the Beguines
a. The movement consisted primarily of urban women who sought refuge from economic turbulence in community life.

b. The movement was widespread and the communities varied enormously in their modes of organization. Many Beguines were peasants or artisans.

c. The movement declined when the church forced the Beguines to obey male authorities.

8. Convents today are very much subject to the authority of a male hierarchy but a liberation movement is going on. See Janice Raymond, "Nuns and Liberation," Andover Newton Quarterly, Vol. 12, No. 4, 201-212, March 1972.

BIBLIOGRAPHY

Matossian, Mary Kilbourne, "In the Beginning, God was a Woman," Journal of Social History, Vol. 6, No. 3, pp. 325-343. This article discusses Russian peasant women and the cult of the mother goddess in pre-Christian Russia. It offers some hypotheses about women's networking in Russia before the spread of Christianity. Goddess worship in pre-Christian Europe and Russia and its relationship to witchcraft and peasant women's rituals is a fascinating subject. Little is known about it at this time and it would undoubtedly be a fruitful area for further research.
G. Consciousness Raising

1. An individual woman's reassessment of her own personal experience is invariably difficult. This process is much easier if it takes place in a group whose members are undergoing a similar reassessment. The reference group provides support for each individual member.

2. In the process of communicating personal experiences, women discover their common situation.

3. A political perspective is created out of the concrete personal experiences of the group's members.

4. Consciousness raising groups are not formally organized and do not recognize leaders.

5. They spread rapidly through the personal communication of group members with their friends.

H. Feminist Therapy

1. Many women have been extremely disappointed with traditional psychotherapy.

2. The Freudian orientation of traditional psychoanalysis is characterized by a basic inability to understand women and women's sexuality.

3. Traditional psychotherapy has focused attention on intrapsychic conflicts rather than societal oppression as the source of women's problems. Women are made to feel responsible for their problems.

4. Traditional psychotherapists subscribe to conventional notions of "normality" and encourage women to try to adjust to traditional roles.

5. Feminist therapists understand the role of socialization in interfering with women's self-realization. They do not regard women's problems necessarily as an indication of "sickness."

6. Feminist therapists support women who want to be assertive and define their own identity.

BIBLIOGRAPHY

Section 3. Institutional and Organizational Networks

I. Institutional Networks

Women have created networks within certain societal institutions in order to deal with the male bias and oppression of these institutions.

A. Prostitution--the world's oldest profession.
   1. Prostitutes traditionally have never been organized into networks.
   2. There are feminist arguments both for and against prostitution. A good reading might be Shaw's *Mrs. Warren's Profession*, including the introduction by Shaw.
   3. Recently groups of prostitutes have organized and held conventions (e.g., Coyote). *Ms.* Volume 5, Number 3, September, 1976, has an article on this movement.
   4. Readings: refer to the New Woman's Survival Sourcebook for references on prostitution, especially readings by Emma Goldman and Kate Millet. *Ms.* Volume 1, Number 12, June, 1973, has an article on "The Economics of Prostitution," p. 59.

B. Prisons.
   1. Refer to New Woman's Survival Sourcebook pp. 211-213 for references on women in prisons, especially *Women in Prison* by K. Burkhardt.

C. Mental Institutions.

D. Military.

II. Organizational Networks.

A. National multi-purpose groups.
   1. National Organization for Women
      National Office
      5 South Wabash
      Chicago, Illinois 60603
2. Women's Equity Action League  
821 National Press Building  
Washington, D.C. 20004

3. American Civil Liberties Union--Women's Rights Project  
22 E. 40th Street  
New York, New York 10016

4. The Women's Action Alliance  
370 Lexington  
New York, New York 10017

B. Women's Studies Programs
1. Information on various programs may be obtained from ERIC Clearinghouse on Higher Education, Suite 630, 1 Dupont Circle, Washington, D.C. 20036

C. Battered Women's Shelters

III. Feminist Movements in the 20th Century
A. For a discussion of issues within the movement (e.g., reform vs. radical; consciousness raising vs. action; socialist vs. capitalist) see the following:
