An increase in the number of adult women in the paid work force, many of whom are returning to work after a period as homemaker and parent, appears to be one of the major social changes of the past decade. As part of the Project HAVE Skills program, which was designed to develop career counseling materials for reentry women, questionnaires designed around 524 skills (e.g., communications, consumer economics, and emergency and crisis intervention) were developed to aid in identifying job-relevant skills which reentry women might have acquired during their absence from the paid labor force. Adult women homemakers (N=122) responded to the first questionnaire by indicating the extent of their experience with each skill. Personnel specialists (N=56) responded to the second questionnaire by indicating the degree of job-relevance for each skill. Data analyses revealed a low correlation between the extent of women's experience and the personnel specialists' perception of job relevance. The data suggest several possible explanations for this low correlation: (1) the unpaid work on which women spend the most time has little relevance for paid work; (2) stereotypes may have affected the personnel specialists' ratings; and (3) beliefs about the appropriateness of various kinds of work for women may have affected the ratings. The information obtained from the two questionnaires was used to develop a survey instrument for personnel administrators or counselors screening women interested in returning to paid work after a period of time away from the labor force. Tables of the 12 areas of women's unpaid work experiences with moderate or high job-relevance, and a summary of the factor structure of job relevance ratings in 6 unpaid work areas are appended. Also included are the Have Skills Chart, the research edition of the Have Skills Assessment Survey, and the Have Skills Assessment Survey Key. (AG)
MEASURING ADULT WOMEN'S JOB RELEVANT LIFE EXPERIENCE LEARNING

Measuring Adult Women's Job-Relevant Life Experience Learning

Ruth B. Ekstrom
Educational Testing Service

The increasing number of adult women in the paid work force has been one of the major social changes during the past decade. This increase has been especially rapid for women age 25 to 44. Most of these women are returning to the labor force after a period of unpaid work as a homemaker and parent; many of them also have extensive unpaid work experience in community groups and voluntary organizations.

This presentation will describe the development of an instrument which can help counselors, personnel administrators, and adult women themselves identify job-relevant skills acquired through life-experience learning in unpaid work. This work was part of a larger project, called Project HAVE Skills, designed to develop career counseling materials for re-entry women.

The project began by identifying 27 areas in which adult women were expected to have unpaid work experience. These areas were: administrator/manager, advocate/change agent, animal care specialist, artist/craftsperson, child-care specialist, civil/legal rights worker, clothing and textile specialist, community resources specialist, consumer economics specialist, cook/nutritionist, counselor, financial manager, fund raiser, group leader, health care worker, home maintenance technician, home planner and designer, horticulturist/floral designer, human resources specialist, library specialist, consumer economics specialist, cook/nutritionist, counselor, financial manager, fund raiser, group leader, health care worker, home maintenance technician, home planner and designer, horticulturist/floral designer, human resources specialist, library

The research described in this paper was supported by a grant from the Women's Educational Equity Act Program of the U. S. Department of Education. However, the opinions expressed herein do not necessarily reflect the position or policy of the Department, and no official endorsement by the Department of Education should be inferred.
assistant, museum assistant, performing arts specialist, problem analyst/researcher, public relations/communications worker, recreation worker, sales worker/organizer, and teacher/trainer. Several of these areas had been previously identified in a study of the academic relevance of volunteer work and homemaking skills (Ekstrom, Harris, and Lockheed, 1977). New skills lists ("I Can" lists) were prepared for some areas and lists for the other areas were revised to provide a more job-oriented and less academic focus than the original lists used for awarding college credit.

Next we had these 27 separate skill lists reviewed by a panel of judges. The judges were asked to group items that they perceived to be similar. The purpose of this task was to reduce the overlap and redundancy across lists. A final list of 524 distinct skills was prepared. These skills were regrouped, on the basis of the judges' evaluation of content, into 19 areas: administration/management, animal care, communications, community resources and services, consumer economics, counseling and interpersonal skills, design and aesthetics, emergency and crisis intervention, financial management and sales, food preparation and nutrition, fundraising, health care and child care, horticulture, legal and civil rights, mechanical and technical skills, office/clerical skills, problem solving, research, and teaching/training. Two questionnaires were prepared using these 524 skills as items.

The first questionnaire was designed for adult women who were currently homemakers. The respondents were asked to rate the extent of their experience with each of the 524 skills using a scale ranging from 3 = I do this frequently...
to 0 = I have never done this or I cannot do this. The women's questionnaire was sent to a national sample of 125 women who had previously shown interest in this project, as a result of newspaper publicity. One hundred and twenty-two responses were received (a response rate of 98%).

Forty percent of the women who responded were over the age of 35. The typical respondent has two children. About one-third of the respondents live in urban areas, another one-third live in suburban areas, and the remainder live in small towns or rural areas. Eighty-seven percent of these women are white, eight percent are black, and the remainder represent other minorities. Twenty-three percent completed their education in high school; 19 percent have attended college, but had not received a degree; 25 percent are college graduates; and the remainder have attended graduate school.

Mean experience ratings for the women were computed on each item; ratings were also summed across each of the 19 experience areas. The areas of greatest experience were in the areas related to homemaking — consumer economics, food preparation and nutrition, and health care and child care. The lowest areas of experience were animal care (probably because we had relatively few farm women) and legal and civil rights.

The same 524 skills were used in a questionnaire for personnel specialists. These individuals were asked to rate each skill on a job-relevance or generalizability scale ranging from 3 = Relevant for many jobs to 0 = Not job relevant. The personnel specialists were also asked to name a paid job or job area requiring each of these skills.

The second questionnaire was sent to 96 individuals; 56 responses were received (a response rate of 58 percent). Approximately half (52 percent)
of the personnel specialists are employed by service-oriented businesses; about a quarter (23 percent) are employed by manufacturing firms; 14 percent are employed in transportation, communications, and utilities companies.

Mean job-relevance ratings were computed for each of the 524 skills. In addition, the job title or job group relevant for each skill was tabulated using the DOT three-digit code. Job-relevance ratings were also summed across the 19 skill areas. Unpaid work experience in office and clerical work, administration and management, communications, financial management and sales, and problem solving were rated as most job-relevant. Animal care, consumer economics, horticulture, and design and aesthetics were rated as having the least job relevance.

Correlations between women's experience and personnel specialists' ratings of job relevance were computed across areas and within each area. There was a generally low correlation (.15) between the extent of women's experience and the perceived job relevance of that experience when analyzed across areas. There are several possible explanations for this. It is possible that the kinds of unpaid work on which women spend the most time have little relevance for paid work. However, the personnel administrators making these job-relevance ratings were aware that this was a study of women's homemaking and volunteer work skills. Therefore, their ratings could have been affected by any stereotypes which they held about the nature of these unpaid work activities. These data also suggest that beliefs about the "appropriateness" of various kinds of work for women may have affected the relevance ratings. For example, office and clerical skills were rated as more job relevant than administrative and managerial skills.
When the within-area correlations between experience and job relevance were computed, most of the coefficients were positive. This suggests that, within areas, there is a correspondence between the frequency with which women participate in an unpaid work activity and the perceived job relevance of that activity. The correlations ranged from highs of .84 for the areas of communications, emergency and crisis intervention, financial management and sales, and problem solving to lows of -.26 for animal care and -.24 for health care and child care. For twelve of the 19 areas coefficients were significant at or beyond the .01 level. These areas, with the mean ratings and correlations, are shown in Table 1 of the handout.

In order to obtain a better understanding of the personnel specialists' perceptions of job relevance, a factor analysis was performed on each of the 19 scales. Factors with roots greater than or equal to 1.0 were retained and rotated orthogonally by varimax. A factor summary was prepared showing, for each area, the number of factors obtained, a tentative identification of the factor, the number of questionnaire items making up the factor, the mean job relevance rating for the factor, and the occupational area most frequently mentioned as related to the factor. Table 2 shows these results for the six areas which are considered to have the highest potential transferability. There were a total of 43 factors which had high or moderate job-relevance ratings (defined as 1.0 or over). These factors form the basis of the HAVE Skills survey.

We used the information from these two questionnaires to develop a survey instrument that can be used by personnel administrators or counselors to screen women who are interested in returning to paid work after a period of time away from the labor force.
The research version of the survey, contains 132 items. These are skills frequently developed by women in unpaid work which were also rated as being highly job relevant. This survey is available for tryout. Copies of the survey and a more detailed description of this study are available in the Project HAVE Skills Employer's Guide. Note that this research version asks the woman for self-ratings of her skills, instead of the extent of her experience. This approach, which was used in another related study (Project ACCESS) was found to be a good predictor of the actual job performance of re-entry adult women.

The HAVE Skills Employer's Guide also explains how to develop a process to identify the relevance of women's experientially learned skills for any occupation. This process is based on the job element method of personnel selection. To aid personnel administrators who are interested in this process, a chart has been developed showing the hypothesized relationships between D.O.T. Occupational Groups and the 27 lists of women's experientially acquired skills. A copy of this chart is included in the handout.

We anticipate that adult women will have the least difficulty transferring their skills from unpaid to paid work in those areas which received high job-relevance ratings and areas in which there are high correlations between experience and job relevance. The six unpaid work areas that appear to have the greatest potential transferability are office and clerical skills, administration and management, communications and public relations, problem solving, financial management and sales, and counseling and interpersonal skills.
I hope that this first attempt at developing an instrument to identify job-relevant life experience learning will stimulate more work in this area. This approach has a high potential for reducing personnel administrators' dependence on traditional credentials (such as college degrees) which may create artificial barriers for some groups of individuals who have learned their skills through experience instead of by formal instruction.

HAVE SKILLS ASSESSMENT SURVEY
(Research Edition)

Instructions: On the list below, rate your homemaking, community service, and volunteer work skills using the following scale:

3 = I can do this very well; I enjoy doing this; others praise me or compliment me on my ability to do this.

2 = I can do this fairly well; I can do this without any serious problems most of the time.

1 = I can do this but I do not do it well or I dislike doing this.

0 = I cannot do this; I never have done this.

1. Plan and coordinate activities.
2. Develop long-range goals that foster organizational continuity and growth.
3. Develop specific plans to meet long-range goals.
4. Evaluate my own or others effectiveness in meeting goals and objectives.
5. Identify the resources, including personnel, money, materials, and time, needed to accomplish an objective.
6. Establish priorities based on the importance of each objective to long-range goals.
7. Work creatively within the structure and setting of an organization.
8. Coordinate simultaneous projects.
9. Determine the need for and develop alternative plans.
10. Organize a project into its component parts and determine the sequence in which these activities need to be performed.
11. Establish work flow and work loading procedures.
12. Develop and work within an agenda.
