ABSTRACT
This collection of abstracts is part of a continuing series providing information on recent doctoral dissertations. The 16 titles deal with a variety of topics, including the following: (1) the relationship between selected teacher personality traits and teaching behaviors of remedial reading teachers; (2) reading program problems of beginning elementary school teachers and their sources of help; (3) reading educators' and content educators' views on key objectives of content-related reading education; (4) the effects of the reading resource teacher as perceived by the classroom teacher; (5) perceptions of principals' leadership behaviors related to the reading programs in elementary schools with high and low student achievement; (6) the impact of language differences on oral reading analysis; (7) communicative styles and their relationship to evaluations between teacher and students; (8) communicative dimensions of teaching effectiveness; (9) individual teacher differences, predictions, and questioning strategies and student responses during reading lessons; (10) job descriptions for reading specialists in selected school districts in the United States; and (11) intermediate grade teachers' instructional decision making in reading. (FL)
Teacher Characteristics and Teacher Education
in
Reading and English Language Arts Instruction:

Abstracts of Doctoral Dissertations Published in Dissertation Abstracts International, January through June 1983 (Vol. 43 Nos. 7 through 12).

Compiled by the Staff of the ERIC Clearinghouse on Reading and Communication Skills.
This bibliography has been compiled as part of a continuing series designed to make information on relevant dissertations available to users of the ERIC system. Monthly issues of Dissertation Abstracts International are reviewed in order to compile abstracts of dissertations on related topics, which thus become accessible in searches of the ERIC data base. Ordering information for the dissertations themselves is included at the end of the bibliography.

Abstracts of the following dissertations are included in this collection:

Alessi, Linda Gordon
THE RELATIONSHIP BETWEEN SELECTED TEACHER PERSONALITY TRAITS AND THE TEACHING BEHAVIORS OF REMEDIAL READING TEACHERS

Armstrong, Mavie Elizabeth
A TREATMENT FOR THE EXPLORATION AND REFINEMENT OF AN ACTIVITY STRUCTURE TAXONOMY IN LANGUAGE ARTS

Benson, Sheryl Colbert
READING PROGRAM PROBLEMS OF BEGINNING ELEMENTARY CLASSROOM TEACHERS AND THEIR SOURCES OF HELP

Bishop, David Michael
A SURVEY OF READING EDUCATORS' AND CONTENT EDUCATORS' VIEWS ON KEY OBJECTIVES OF CONTENT-RELATED READING EDUCATION

Bulls, Richard Edward, II
A STUDY OF THE EFFECTS OF THE READING RESOURCE TEACHER AS PERCEIVED BY THE CLASSROOM TEACHER

Combs, Martha W.
PERCEPTIONS OF PRINCIPAL LEADERSHIP BEHAVIORS RELATED TO THE READING PROGRAM IN ELEMENTARY SCHOOLS WITH HIGH AND LOW STUDENT ACHIEVEMENT

Davey, Lynn Marie
THE IMPACT OF LANGUAGE DIFFERENCES ON ORAL READING ANALYSIS

Frailey, Donald Raymond
COMMUNICATIONS STYLES AND THEIR RELATIONSHIP TO EVALUATIONS BETWEEN TEACHER AND STUDENTS

Garrison, S. Scott
COMMUNICATIVE DIMENSIONS OF TEACHING EFFECTIVENESS

Lalik, Rosary Macedo
INDIVIDUAL TEACHER DIFFERENCES, TEACHER PREDICTIONS, TEACHER QUESTIONING STRATEGIES AND STUDENT RESPONSES DURING READING LESSONS: A TEACHER EXPECTATION PERSPECTIVE

Mason, Richard Wayne
THE READING HABITS OF RANDOMLY SELECTED K-12 WISCONSIN SCHOOL SUPERINTENDENTS IN PROFESSIONAL AND NON-PROFESSIONAL PERIODICALS

Mosby, Emma Grace
AN ANALYSIS OF JOB DESCRIPTIONS FOR READING SPECIALISTS IN SELECTED SCHOOL DISTRICTS IN THE UNITED STATES

THE RELATIONSHIP BETWEEN SELECTED TEACHER PERSONALITY TRAITS AND THE TEACHING BEHAVIORS OF REMEDIAL READING TEACHERS

The major purpose of the study was to look at the effect of aspects of personality on teaching performance. It was the plan of the study to identify behaviors that differentiated the effectiveness of remedial reading teachers, and then to determine whether the identified differences were related to personality characteristics.

The subjects were nine female teachers enrolled in a Master's Degree program in reading education and registered in a clinical practicum in reading. These teachers represented three distinct personality categories as identified by their performance on two subscales of the FIRO-B, which were plotted onto a circumplex personality model. Three trained observers viewed four teaching sessions totalling 120 minutes of videotaped instruction on each subject, and then independently rated 18 dimensions of each teacher's behavior using a modified version of Ryan's Classroom Observation Record and Glossary. Dominant instructional behaviors, identified from the ratings, were described for each subject. Those dominant characteristics were analyzed for within and across group comparisons. The results of the study suggested that consistent teaching behaviors were not found within the three personality categories identified. Subjects were then regrouped according to similarities in dominant instructional traits, and within and across group comparisons were made. Comparable behaviors were noted within the two groups subsequently identified. Across group comparisons yielded differences between these latter two groups.

Conclusions from the study indicated that the instruction provided by effective remedial reading teachers was characterized by numerous dominant traits, whereas the behaviors of the second or stereotyped group, found to be only adequate in effectiveness, lacked dominant teaching traits. Conclusions were also drawn about the effectiveness of the instrument employed in the investigation. Insights into the use of observers to evaluate teacher competence were presented, as were contributing factors which may have affected the personality categorizations. Implications for teacher evaluators and teacher preparation programs were drawn.

A TREATMENT FOR THE EXPLORATION AND REFINEMENT OF AN ACTIVITY STRUCTURE TAXONOMY IN LANGUAGE ARTS

Historically, disciplines other than education have studied the culture of the classroom. Yet, the group phenomena of education has been ignored. The ways teachers manage groups and lesson activities appear to have important implications for the study of teaching and learning. However, there are no rules to follow. A decision-making base does not exist. Yet, the study of teaching and learning is dependent upon the setting within which that behavior occurs. An appropriate approach must be made for an objective method to provide an adequate level of description of the teaching/learning context of the classroom. This is the focus of this study.

The subjects were nine classroom teachers, grades 1 or 2, from two separate school districts within a 50 mile radius of Tucson, Arizona. Six teachers served as the control group and three teachers served as the treatment group. Treatment consisted of orientation in the concept of activity structures, videotaping of language arts instruction, ending of such instruction by the researcher and stimulated recall of such instruction by the teacher in a feedback session with the researcher. Instrumentation consisted of a beliefs questionnaire, a teacher information form, a journal, and an interview all developed by the researcher. Instrumentation followed with both groups, both pre- and posttreatment. Ethnographic techniques were used for both instrumentation and treatment.

A SURVEY OF READING EDUCATORS' AND CONTENT EDUCATORS' VIEWS ON KEY OBJECTIVES OF CONTENT-RELATED READING EDUCATION

Reports a descriptive/comparative study of the opinions and practice of a nationwide sample of education professors regarding content-related reading education. Professors in five fields—Reading, English, Mathematics, Science, and Social Studies—were surveyed by mail questionnaire on their opinions as to the most appropriate sources (a) in which to teach 35 selected objectives of content-related reading education, (b) on their practices as to the amount of time they spend on the same 35 objectives, and (c) on their perceptions of the effectiveness of teachers in these areas. The questionnaire was developed by conducting a search of the field literature and presenting it for selected professionals in the targeted area.

From a total potential sample of 500 (100 each in the five fields) 167 educators, or 33.4 per cent, returned completed and usable questionnaires. Reading Educators returned at the highest rate, 61 per cent. Further data on participants are reported, including rates of return for each group and professional preparation and responsibilities of participants. Data on reasons for nonparticipation of selected nonparticipants are also reported.

A contingency analysis was conducted to determine whether relationships existed between membership in Educator group and responses to the opinions and practices items (p < .05). Cramer's V was computed to determine strength of relationships. It was found that for nine of 35 objectives a relationship was found to exist between membership in Educator group and responses to opinions items such that Educator groups disagreed on the most appropriate
course in which to teach the objectives. Furthermore, it was found that for 29 of 35 objectives a relationship was found to exist between membership in Educator group and responses to practices items such that Educator groups differed in the amount of emphasis they placed on the objectives in their courses.

It was concluded that Reading Educators are more involved in the teaching of content-related reading objectives and believe that the objectives are not the sole responsibility of reading educators. Content Educators by group tended to stress different objectives, and as a whole tended to regard the objectives as the major responsibility of reading educators. English Educators did not appear to be significantly more involved in reading objectives than other Content Educators.

A STUDY OF THE EFFECTS OF THE READING RESOURCE TEACHER AS PERCEIVED BY THE CLASSROOM TEACHER

The purpose of this investigation was to study the perceptions of classroom teachers regarding the effectiveness of reading resource teachers. The raw data consisted of a total of 171 critical incidents elicited from 84 elementary school teachers in response to the request to recall positive, negative and neutral incidents involving a reading resource teacher. No more than two incidents of each kind were to be given. Analysis of the contents of these critical incidents led the investigator to classify them into five categories of assistance to the classroom teacher: Class 1, general teaching of reading techniques; Class 2, in diagnosing and prescribing correction of reading problems; Class 3, in demonstrating expertise in instructional materials; Class 4, in general and administrative tasks; Class 5, in teaching reading in direct contact with groups of children. This classification was confirmed by two independent judges.

There are two findings of interest. The first finding comes from the fact that the classes that emerged from the critical incidents differed in the numbers of incidents they contained. Class 5 contains the greatest number of incidents, 60, while Class 4 contains the least number of incidents, eight. Classes 1, 2, & 3 contain 23, 40, & 31 incidents respectively. What the study revealed, then, is that the major areas of assistance by the reading resource teacher as perceived by the classroom teacher are in teaching reading in direct contact with groups of children, in general teaching of reading techniques, in diagnosing and prescribing correction of reading problems, in developing expertise in instructional materials, and in teaching reading in direct contact with groups of children. This classification was confirmed by two independent judges.

The second finding comes from the fact that the five classes differed significantly in the proportions of positive and negative incidents they included. Excluding Class 4, which would seem to represent an area outside of the reading resource teacher's domain, the proportion of positive incidents far outweighed the proportion of negative incidents in all areas of assistance except in the general teaching of reading techniques (Class 1), in which there were twice as many negative as positive incidents. Except for this one area, then, the classroom teacher seemed satisfied with the assistance received from the reading resource teachers.

PERCEPTIONS OF PRINCIPAL LEADERSHIP BEHAVIORS RELATED TO THE READING PROGRAM IN ELEMENTARY SCHOOLS WITH HIGH AND LOW STUDENT ACHIEVEMENT

The present study was conducted to examine the relationship between student achievement of basic skills in reading and the leadership behaviors and background characteristics of principals in the elementary school reading program. The study was designed to identify activities in the reading program which distinguished principals of schools with high student achievement from principals of schools with low student achievement.

For both third and fifth grades in the participating schools, the percentage of students mastering basic reading skills was either above 92% or below 82%. School populations also had between 35% and 70% of the students qualifying for the free and reduced lunch program. Participating in the study were 20 principals and 328 teachers.

A questionnaire that focused upon the principal's involvement with teachers, students, and parents in reading was developed by the writer. Principals and teachers rated the involvement of other persons with the principal in reading program activities.

Questionnaire responses were analyzed by (a) schools, high and low achieving; (b) respondents, principals and teachers; and (c) the interaction between schools and respondents. Background characteristics of principals were also compared in relation to years of experience as an elementary principal, elementary training, years of elementary teaching experience, and preparation in reading for principals of high and low achieving schools.

High achieving schools differed significantly from low achieving schools in activities of the principal related to (a) providing materials for reading instruction, (b) assisting teachers in solving classroom reading problems, (c) helping teachers implement a classroom management system in reading, and (d) encouraging teachers to assist parents with ways to help children with reading at home.

Teachers of high and low achieving schools rated principals' involvement in (a) setting goals for reading, (b) planning for inservice needs, (c) reviewing test data for program involvement, (d) encouraging teachers to utilize parents as volunteers, (e) communicating expectations for mastering skills to students, and (f) communicating the importance of reading to students at significantly lower levels than did principals. In addition, principals of high and low achieving schools were not significantly different in background characteristics.

THE IMPACT OF LANGUAGE DIFFERENCES ON ORAL READING ANALYSIS

This study investigated the impact of language differences (dialect) on teachers' perceptions of oral reading on expectations of future academic success, diagnoses of reading strengths and weaknesses, and instructional prescriptions. The effect of teachers' educational background, years of experience, and type of teaching situation was analyzed.

Subjects were one-hundred-fifteen intermediate teachers who listened to one of three tapes read in a different dialect (standard English, Mexican-American English, and black English) and completed a thirty-nine item questionnaire assessing diagnoses, expectations, and instructional prescriptions. Instructional prescription items required teachers to rank skill areas, instructional activities, and reading approaches, and recommend the most beneficial program placement (learning disabilities, remedial reading, classroom development). A 2 x 2 x 3 factorial design was used to analyze teachers' diagnoses and expectations. The dependent variables were the teachers' responses on the questionnaire. The independent variables were the treatment and two levels of teachers' educational background, years of experience, and type of teaching situation. The Friedman Two-Way ANOVA by Ranks was utilized to analyze the teachers' ranks of skill areas, instructional activities, and reading approaches, and recommend the most beneficial program placement.

A chi square statistic was utilized to analyze teachers' recommendations of program placement.

The results indicated that teachers' expectations of academic success and diagnoses were not affected by dialect. Teachers' educational background, years of experience, and type of teaching situation did not affect their expectations or diagnoses.

Teachers' ranks of skill areas, reading approaches, and instructional activities were affected by dialect. Dialect and teachers' educational background did not affect their recommendations of program placement. Within the black English group, less experienced teachers recommended the classroom program, while more experienced teachers recommended programmed placement. Within the Mexican-American treatment, teachers from Mexican-American schools recommended the developmental placement, while teachers from white schools recommended remedial placement.

Teachers' language attitudes seem to be more positive than previous research has indicated. The findings indicate a need for
EVALUATIONS BETWEEN TEACHER AND STUDENTS

Students can be correlated with teachers and student communication styles, grade level, and sex. Mean score ratings of teachers and students with each population's communication style, grade level, and sex were investigated to determine if significant differences exist. Procedure: Seventy-seven classrooms of students and their teachers were the subjects for this study. The students and teachers who served as subjects were listed in either the fifth, eighth, or twelfth year of school. Communication styles were listed as Intuitive, Thinker, Feeler, and Sensor. Both groups of subjects were tested to determine if communication styles were correlated with teacher and student communication styles. The study investigated these differences by comparing the mean score ratings of teachers and students with each population's communication style, grade level, and sex.

Procedures: Seventy-seven classrooms of students and their teachers were the subjects for the study. The students and teachers who served as subjects were listed in either the fifth, eighth, or twelfth year of school. Communication styles were classified as Intuitive, Thinker, Feeler, and Sensor. Both groups of subjects were tested to determine if their communication styles were correlated with teacher and student communication styles. The study investigated these differences by comparing the mean score ratings of teachers and students with each population's communication style, grade level, and sex.

Six hypotheses were developed and analyzed on the .05 level of significance. A one-way analysis of variance (ANOVA) procedure was utilized to determine significant mean scores. Findings: (1) There was a significant difference between students' and teachers' communication style and how they rated their students. No differences existed, however, only for Intuitive and Feeler Teachers and only for the traits of dependability, consideration, punctuality, and creativity. (2) There was a significant difference between communication style and the grade level of teachers. Differences existed, however, only for Feeler and Sensor Teachers and only for certain selected traits. (3) There was a significant difference between communication style and the sex of the teachers rating students. The differences exist, however, only for Thinker Teachers, but do not exist for Intuitive, Feeler, and Sensor Teachers. Again, these differences exist only for Intuitive and Feeler Teachers. (4) There was a significant difference between communication style and the grade level of teachers in terms of how they rate their students. (5) There was no significant difference between the communication style and the grade level of teachers in terms of how they rate their students. (6) There was a significant difference between the communication style and the sex of the student rating teachers. However, significant difference exists only for Sensor Students.

COMMUNICATIONAL DIMENSIONS OF TEACHING EFFECTIVENESS

The purpose of this study was to explore three communication variables: perceived communication competence, style and immediacy — an effort to begin clarifying the behavioral (i.e., communicative) dimensions of teaching effectiveness. Each of these three communication variables was measured with respect to its impact upon the following indices of teaching effectiveness: student affect (toward course content, toward the instructor, toward and advocated communication practices); behavioral commitment (adopting suggestions and enrolling in another course of related content); and cognitive achievement (test scores).

Based on a review of the literature, three behavioral independent variables (student perception of their teachers' communicative competence, style and immediacy) were evaluated with respect to their impact on one dependent variable, teaching effectiveness.

Eight hundred sixty-seven undergraduate students enrolled in one basic communication course at Michigan State University participated in the investigation.

Results indicated that communication practices in the classroom have a profound influence on education outcomes. Specifically, Perceived Communication Competence, Teacher Style, and Communicative immediacy consistently predicted teaching effectiveness variables such as student affect, behavioral commitment, and cognitive achievement. Also, results indicated that (1) the most important predictors of student affect toward communication practices suggested in the course were perceived competence and style; (2) student affect toward course content was most powerfully predicted by perceived communication competence; (3) all three teacher communication variables (competence, style and immediacy) were powerful predictors of student affect toward their instructors; (4) the adoption of course suggestions was also powerfully predicted by each of the three independent measures; and (5) cognitive achievement was most influenced, by far, by perceived instructor communication competence. The meaning and importance of these results is discussed with respect to their value to teachers and those who train teachers.

INDIVIDUAL TEACHER DIFFERENCES, TEACHER PREDICTIONS, TEACHER QUESTIONING STRATEGIES, AND STUDENT RESPONSES DURING READING LESSONS: A TEACHER EXPECTATION PERSPECTIVE

The purpose of this investigation was to examine the usefulness of teacher expectation theory for explaining classroom processes involved in reading instruction. In order to accomplish this purpose, two studies were completed. Since student question-answering behaviors may provide insight into the qualitative nature of students' reading comprehension, the first study was designed to examine relationships between teachers' predictions for students' question-answering behavior and student's actual question-answering behavior. Five fifth grade teachers read two passages and 36 related questions. Twelve Type One Memory Task Questions, 12 Type Two Memory Task Questions, and 12 Comprehension Task Questions. Teachers predicted which questions would be correctly answered by each student within their reading classes. During reading group lessons, students read the passages and answered the related questions.

According to a strict version of teacher expectation theory, students' classroom responses and subsequent learning are consistent with teacher expectations. Consequently, teacher predictions were compared to student responses in terms of the consistency between: (a) the number of predicted correct responses for each student and the number of actual correct responses for each student, (b) the number of predicted correct responses for each question type and for each reading group and the number of actual correct responses for each question type and for each reading group; and (c) variables related to teacher predictions and variables related to student responses.

ANOVA and regression procedures indicated several inconsistencies between teacher predictions and student responses. These findings raised questions concerning the usefulness of teacher expectation theory for explaining classroom phenomena. Because alternate versions of expectation theory have incorporated notions of teachers' expectations for students' cooperation as well as notions of individual student differences, the question was raised concerning whether a less parsimonious version of expectation theory might be more useful for explaining teachers' instructional behaviors during reading lessons. This question was examined in the second study.

In this study, four lessons were observed for each of 10 fifth grade teachers and their middle reading group students. (Author's abstract exceeds stipulated maximum length. Discontinued here with permission of author.)
THE READING HABITS OF RANDOMLY SELECTED K-12 WISCONSIN SCHOOL SUPERINTENDENTS IN PROFESSIONAL AND NON-PROFESSIONAL PERIODICALS

The purpose of this study was to determine the critical tasks to be performed by the reading specialist. A random sample of 50 school districts was selected from a population of 100 of the largest school districts in the United States. Forty-nine districts responded. The critical tasks were taken from job descriptions for the reading specialist from the 31 usable responses for the study. Data analysis of the job descriptions was done manually using a content analysis technique. A total of 416 tasks were listed first. After an item analysis, 42 critical tasks were identified. A questionnaire was developed for this study. The reliability and validity of the instrument were analyzed and found to be acceptable.

Conclusions and Implications: It can be concluded that professional periodicals did not specialize in any one task area but tended to be generalized in nature and addressed all four task areas equally.

Superintendents who read professional periodicals frequently, tended to be older and have more years of education than those superintendents who did not.

Superintendents who read professional periodicals were often those who listed the following four professional periodicals:

1. Phi Delta Kappan
2. American School Board Journal
3. Executive Educator
4. Wisconsin School News

In non-professional periodicals, national and world news were most often read.

AN ANALYSIS OF JOB DESCRIPTIONS FOR READING SPECIALISTS IN SELECTED SCHOOL DISTRICTS IN THE UNITED STATES

MOSEY, EMMA Grace, PH.D. Texas A&M University, 1992. 131pp. Chairman: Dr. Harld L. Hawkins

This study examines the educational and professional backgrounds, opinions, practices, and working conditions of Arizona school superintendents with respect to their districts' reading programs.

The questions investigated for this study were:
1. What are the educational, professional, and reading backgrounds of Arizona school superintendents?
2. What professional organizations and publications appear to be most influential for Arizona school superintendents?
3. What are the expressed important tasks of Arizona superintendents?
4. Who advises Arizona school superintendents about reading matters?
5. What criteria do Arizona school superintendents use to select advisors in the area of reading?
6. What methods do Arizona school superintendents use to evaluate their reading programs?
7. What are the opinions of Arizona school superintendents regarding the effectiveness of their district reading programs?
8. What solutions to the reading problems of their districts do Arizona school superintendents propose?
9. What negative factors do Arizona school superintendents believe influence their districts' reading programs?

A stratified, randomized sample of 39 Arizona school superintendents was selected to participate in the study. Twenty-nine superintendents actually participated.

Superintendents tended to hold advanced degrees, and a majority of them had earned doctorates. Their advanced degrees were usually in education administration, while their undergraduate degrees were more diverse. They tended to have fewer than 10 years in reading courses. They did not attend conferences related to reading, nor did they attend reading conferences. Their reading advisors did not tend to be reading specialists, although superintendents stated that they valued reading knowledge and reading experience in their advisors. The solutions to superintendents' reading problems tended to be external solutions, rather than solutions which could be implemented by themselves. A variety of other findings are reported in the study.

AN INVESTIGATION OF FIRST-TIME UNIVERSITY ENGLISH DEPARTMENT TEACHING ASSISTANTS: CONSIDERATIONS FOR TRAINING PROGRAMS

SAMUELS, JANET E., PH.D. Michigan State University, 1982. 144pp. Director: Dr. W. Valmont

This study investigates teaching assistants in American university English departments, the origins and history of teaching assistants, and the major issues in training programs for them. I also conducted a survey of first-time teaching assistants at five universities in an attempt to learn more about their backgrounds, their understanding of
and attitudes toward writing theory, and their knowledge of writing pedagogy. Finally, I discussed the profile that emerged of the teaching assistants in context with the major recommendations for training programs posited by such theorists as Donald Murray, Janet Emig, Wallace Douglas, Donald Nemanich, and Richard Gebhardt.

The survey revealed that the prospective teaching assistants had extensive external influences motivating, but their educational backgrounds in writing were considerably weaker. While they reported having had little knowledge of specific theorists and theories in writing and pedagogy, they more closely aligned themselves with the recent “process-oriented” approach to writing and its teaching than with the “prescriptive” orientation—perhaps reflecting their experiences as writers which they bring to their newfound role as teachers.

From the information reported by the teaching assistants and the major concerns discussed by the theorists, training programs are an essential feature of preparing graduate students to teach college-level writing courses, especially given the concentration of literature in undergraduate English majors' curricula. Furthermore, comprehensive and sustained training programs are needed because they offer prospective college teachers the only training they might receive before entering the field as professionals. While training programs provide soon to be teachers an opportunity to explore a rich and complex field, they are nonetheless flawed because of the short period of time given to them. In addition, they cannot guarantee effective teaching nor dictate attitudes toward writing, theory, and pedagogy. Their importance is, however, not diminished because in training programs, undergraduates' improvement in writing is, ultimately, at stake, and that improvement begins with effective college writing teachers.

A QUALITATIVE ANALYSIS OF INTERMEDIATE GRADE TEACHERS' INSTRUCTIONAL DECISION MAKING IN READING

SIMPSON, ANNIE DAVIS, PH.D. North Texas State University, 1982
393pp.

This study described the rationales used by individual teachers in the selection of activities for reading instruction. The relationship between the teachers' conceptions of reading and factors in their present teaching environment were analyzed as influences in their rationales. Patterns in teachers' thinking about activities representing two theoretical positions in reading were identified.

In-depth interviews were conducted with sixteen fourth and fifth grade teachers randomly selected from seven school districts in the North Texas area. Teachers completed an instrument to identify their conceptions of reading and then described their current reading instruction program. Teachers then responded to twelve activity cards representing two theoretical positions in reading and discussed the current and potential use of each activity in their present situation. Specific reasons for the use of each activity were elicited. Analysis of the data followed qualitative methodology procedures to identify the rationales used and patterns in teacher thinking about specific activities.

Within the limitations of this study, the following conclusions have been formulated:

1. Teachers use multiple rationales in the selection of reading instructional activities which reflect consideration for elements related to the activity, the reading curriculum, the student, classroom management and the larger school environment.

2. Teachers' conceptions of reading are evidenced in their rationales, but reflect general understandings of reading rather than precise theoretical positions.

3. Teachers' considerations of the actual teaching environment are balanced with conceptions of reading in their rationales for selecting reading activities with adherence to the adopted basal program and the class structure utilized as predominant influences.

4. Individual teacher differences were found in the rationales given in reliance on influences from conceptions of reading and the actual teaching environment, thus indicating individual differences in the degree to which teachers make instructional decisions about reading.

5. Collectively, teachers' rationales reflect different patterns in thinking about instructional activities representing the "content centered" and "pupil centered" theories of reading.

ATTITUDES OF LOUISIANA PUBLIC SECONDARY PRINCIPALS AND ENGLISH TEACHERS TOWARD TEACHING THE BIBLE AS LITERATURE

WOODS, JIMMY L. Ph.D. Northwestern State University of Louisiana, 1982. 147pp. Directed by Dr. Don B. Carr

Purpose of the Study. The purpose of the study was to explore the viewpoints of public school secondary principals and English teachers regarding the controversial nature, importance, and problems associated with teaching the Bible as literature in order to explain the apparent lack of Biblical instruction in the secondary English classrooms in Louisiana.

Procedure. Subjects participating in this study were thirty-five randomly selected secondary principals and sixty-six English teachers from throughout Louisiana. Using literature on teaching the Bible, an instrument consisting of twenty-three Likert-scale items was designed to measure attitudes relating to three Biblical instruction problem areas—controversial nature, importance, and hindrances. The total of the responses to these items represented the dependent variable. Independent variables were the two groups—principals and teachers—and a number of demographic groupings.

One-way analysis of variance was used to determine if there were significant differences in attitude scores within the principal and teacher groups in overall attitude scores; and between teacher and principal groups concerning the controversial nature, importance, and hindrances of Biblical instruction as well as differences in overall scores between the principal and teacher groups.

Conclusions. The Bible is not widely used as an instructional tool in Louisiana secondary public school English classrooms, and a probable contributory factor to the Bible's absence is a low estimation of its importance on the part of school administrators.
