Because parents are placing increasing numbers of their children (100,000 more per year) in nontraditional (and sometimes unaccredited) schools for reasons that include religious concerns and dissatisfaction with public schools, state education policymakers are being asked to change laws requiring certified teachers in primary schools and compulsory school attendance. This paper examines issues of interest to such policymakers: testing data for unapproved education, state education requirements, court challenges, and policy alternatives questions, and implications. (PB)
12. Compulsory Schooling and Nontraditional Education

ISSUEGRAMS are summary reports on major education issues written for state leaders. They include background information, analysis of differing views, lists of sources and references—all written for busy readers. Each is updated periodically. For more information, see inside back cover or call ECS Distribution Center at (303) 830-3820.
Compulsory Schooling and Nontraditional Education

The Issue

Some parents today believe that traditional schooling (public or private) is not necessarily equivalent to "education" nor "right" for every child. They are placing their children in nontraditional schools (not necessarily accredited) or educating them at home. Their reasons vary. Some have overriding religious concerns; others are dissatisfied with or mistrust the public school system. Occasionally they seek only to escape the effects of public desegregation policies.

Some private options may violate state compulsory attendance laws. In some states, parents and individuals operating unaccredited private schools have received or are faced with jail sentences. One fundamentalist Christian clergyman in Nebraska has refused to comply with court orders directing him to either obtain state approval for his school or cease operating, and he has been jailed twice. A church has been padlocked to enforce laws requiring private schools to obtain state approval and comply with state rules for operating a school.
The Choice Before
State Education Policy Makers

In states that require compulsory school attendance (rather than compulsory education) and require certified teachers in private schools, policy makers are being asked to change the laws. Private school people seek fewer requirements for private schools, exemption of church schools, provision for home instructions, removal of teacher certification requirements or other policies that would make it easier for individuals to choose nontraditional education options free of state accreditation or approval.

How Many Children are in Unapproved Education Options?

While most children in nonpublic schools are enrolled in Roman Catholic institutions, the U.S. Bureau of Census estimated that (as of 1975) there were close to 1.4 million children in non-Catholic, private schools. Most likely the census bureau counted only traditional and accredited schools. A more careful study for the National Center for Statistics suggests there are about 15,000 non-Catholic private schools serving approximately 2 million students, and that this population is increasing by 100,000 students per year. One might speculate that the difference of some 500,000 to 600,000 children between the official census and this study represents the number of children in unapproved schools.

By contrast, public school enrollments declined from approximately 45.9 million in 1970 to 42.6 million in 1978.

Estimates of the numbers of children being taught at home vary from 10,000 to 50,000.

Education In An Unapproved Setting

When available, testing data shows that children in these schools are performing above national standards. The data do not show whether this is due to socioeconomic status, other individual characteristics, or the education program. With this caveat, the data show children in a Los Angeles home tutorial program (approved by the state) scored higher than children in public schools on nationally standardized tests. Experimental work done about ten years ago showed no significant difference in students' test scores whether they were taught by an experienced teacher or by a lay person knowledgeable in the subject taught. Finally, in three court cases, attorneys introduced evidence of test scores showing
improvement as children moved from a public school to a private, unapproved education option.

State Education Requirements

Traditionally, states enforce minimum standards for private education through compulsory school attendance laws, which provide for punitive action for noncomplying parents and children, but not for those who offer private instruction. Although these laws vary, they contain the following features:

- All states have some kind of compulsory law requiring school attendance or education of children.
- States that require education of the child rather than attendance include Connecticut, Delaware, Idaho, New Jersey, South Dakota, and Vermont. Most states require school attendance, although many of these provide exceptions for home instruction.
- Almost every state provides for jail sentences and fines for parents who fail to comply with the state's compulsory attendance law.
- Without exception, compulsory requirements can be fulfilled by attendance at a nonpublic school that is properly approved or accredited. A number of states require the teachers to be certified, or require approval of the curriculum and similar matters.
- Some states have recently "deregulated" private schools, and have restricted the authority of the state board of education to regulate them. These include Alabama, Arizona, Louisiana, North Carolina, and Tennessee. Washington restricts state board authority but contains a number of important statutory requirements, such as a teacher certification requirement.
- Laws in about half the states permit home instruction by a parent whether the parent has a teaching certificate or not.
- In some states, courts or attorneys general have ruled that if the home meets the standards for private school (generally, where a parent is a certified teacher), home instruction is allowed even if state law does not expressly so provide.
Court Challenges

The United States Supreme Court has indicated that regulation of nonpublic education can go too far. In a landmark case, Yoder v. Wisconsin, the high court narrowly ruled that Wisconsin's compulsory attendance law could not be enforced against the Amish (a religious community). The Court held that the state cannot compel attendance of children in the face of strong religious objections, so long as the children are adequately educated in an alternative setting. Lower courts have extended Yoder only when traditional religious beliefs are involved. Decisions outside of this narrow realm have been mixed, with most cases turning on state constitutional or statutory grounds.

Litigation over the status of private education has culminated in court rulings in a number of states, among them Florida, Hawaii, Iowa, Kentucky, Michigan, Nebraska, North Dakota, Ohio, Washington, and West Virginia. Generally states undergoing litigation require school attendance and certification of private school teachers. In a few states the central issue is approval of curriculum or facilities, or zoning rules. Additional cases have been or will soon be filed in many states, including Iowa, Maine, Michigan, New Hampshire, North Dakota, and Virginia. Given the growth of fundamentalist Christian schools, other nontraditional private schools and home instruction, states that require compulsory school attendance and set standards for the school will probably be challenged in the near future.

The litigation receiving the most attention from the media appears to be State v. Faith Baptist Church, dealing with the refusal of Reverend Everett Silvean to obtain approval from Nebraska for any aspect of his church-run school. The school uses a series of booklets called the Packet of Accelerated Christian Education (PACE), including instructional information and self-administered tests. The school does not use state-certified teachers, a requirement under Nebraska's compulsory school attendance law. The Nebraska high court found the materials adequate, but upheld the state's requirement for certified teachers. On appeal to the United States Supreme Court, the case was summarily dismissed because, based on the papers filed before it, the high court could not identify an important constitutional issue.

Somewhat similar opinions (not going to the U.S. Supreme Court) have been handed down by state courts in Florida, North Dakota, and Wisconsin. In some of these cases, parents refused to provide any evidence about the child's schooling.
In other cases, state courts have ruled in favor of parents. In Ohio, in State v. Whisner, the state supreme court struck down a system of state regulation that, by its literal terms, left no time for religious instruction in a private school. A Michigan court was reluctant to find a mother teaching a child at home guilty under the state's compulsory attendance law, as she met the requirements for teacher certification but refused to obtain a certificate for religious reasons. (Michigan allows home instruction only by certified teachers.) In a Kentucky case, the state court applied a state constitutional provision (found only in a handful of state constitutions) that prohibits requiring a child to attend a school which parents find objectionable for conscientious reasons.

Policy Alternatives

Where statutory requirements are flexible, imaginative administrative solutions to the issue become possible. In New Hampshire, for example, state officials reached a somewhat fragile agreement with fundamentalists that required information to be submitted on church stationery rather than on official state forms. This fulfills the state's need for certain information, but recognizes the fundamentalists' tenet that they should not submit to state regulatory systems. In Iowa, the state accepts reports from parents instead of the fundamentalist school. The fundamentalists involved felt individual reporting was no different than filing an income tax form, while a church report was tantamount to church submission to state regulation.

A state considering a change in its policy can look to sister states for models. In the past five years several states have deregulated private education:

- Tennessee, for example, prohibits the state board and local boards from regulating faculties, textbooks, or curricula in church affiliated schools.
- North Carolina requires only that private schools keep records on pupil attendance and disease immunization and that they select and administer a nationally standardized test to students each year. The schools keep the tests on file and make them available to state inspectors. They must also meet fire, health, and safety standards established by other laws.
- Washington prevents state agencies from expanding on statutory provisions, but these provisions set minimum
standards as to length of school year, length of day, subjects to be taught, and teacher qualifications. Teacher certification is required, except for courses in religion and other subjects not taught in the public schools. State law in Washington allows persons of "unusual competence" to teach, if they are supervised by certified teachers.

o The Vermont legislature, following efforts by its state board to require teachers certification, made it clear it could not do so, and also strengthened its child abuse laws in order to narrowly focus on actual problems, rather than to sweepingly subject all private educators to regulation.

o In mid-1982 the Arizona legislature determined to permit home instruction, so long as the child shows academic progress, as indicated by test scores or an impartial professional evaluation.

o Louisiana exempted schools which receive no local, state or federal funds from most reporting requirements.

o Arizona, Oregon, and North Carolina require testing of the children, to help provide assurance that they are being educated.

o Teacher certification is the mechanism used in Washington, although it reduces flexibility for private education alternatives and precludes instruction by a parent in most cases.

Policy Questions

Policy makers contemplating a change in state compulsory education laws need to ask the following questions before deciding on a course of action.

o Should compulsory attendance laws carry criminal sanctions against parents honestly acting in the best interests of their children?

o Are the children educated in unapproved settings acquiring what they need for good citizenship and self-sufficiency?

o What are the long-range implications of large segments of the population insulating themselves from the mainstream of society — in this case, by avoiding state-approved education for their children?
Are private schools havens for those wishing to avoid integration?

Do existing consumer protection laws assure that parents are evaluating small nontraditional schools on the basis of adequate and correct information?

What are the political implications of the growing exodus from public schools, when local school districts depend on state aid based on enrollment or attendance?

Policy Implications

Organizations and individuals urging more flexible compulsory education laws argue that this is required to preserve the free exercise of religion. These groups argue that parents know what is best for the child. They include those participating in nontraditional options, fundamentalist Christians, more traditional private schools and, to some extent, organizations and individuals concerned with civil liberties. The national ACLU, for example, in its Policy #71A, states: "We believe that, in the interest of parental fight to choose an alternative to public education, [home instruction with safeguards, such as approval of curriculum or testing of the child] . . . should be extended to all jurisdictions because the state's interest in assuring minimum levels of education does not extend to control of the means by which that interest is realized."

Organizations and individuals urging retention or adoption of stricter requirements for private education generally argue that these regulations are needed to assure the best interests of the child, and to prevent balkanization of society. These groups include teachers' organizations and public school administrators.
