Intended for teachers and other personnel working with severely/multiply handicapped students, the catalogue lists books and journal articles (1975-1981) related to special education for severely/multiply handicapped students. Following an introduction discussing definitional issues, entries are alphabetized by title and arranged according to one of seven principal topic areas: (1) curriculum and instruction, (2) assessment and evaluation, (3) content areas, (4) prevocational/vocational programming, (5) integration, (6) parents, and (7) disabilities. Citations include information on title, author, publisher, availability, and publication date as well as a brief abstract and a list of keywords or descriptors. Entries are also organized according to a subject index. (CL)

July 1982

The development of this catalogue was supported by contract #300800719 from the U.S. Department of Education's Office of Special Education (SEP), RFP 80-24. The inclusion of a resource in this catalogue does not imply recommendation by the Upper Midwest Regional Resource Center or SEP, and no official endorsement should be inferred. The intent is to supply pertinent information that allows users to decide whether or not a material is suitable for their purposes.
ACKNOWLEDGEMENTS

The developers wish to express their gratitude to Luanna Voeitz for her editorial comments and suggestions. We are also grateful to Sandy Boone for her secretarial assistance and to Denise Griffith-Sheriff for her technical assistance.
PREFACE

This resource catalogue has been developed through the efforts of the Upper Midwest Regional Resource Center (UMRRC) which is one of twelve centers established by the Office of Special Education to provide program assistance to the states in implementing the Education for All Handicapped Children Act of 1975, Public Law 94-142. Provision of services to severely handicapped is an identified regional need to be addressed by the Center's program assistance activities.

The primary purpose of this catalogue is to serve as a tool for teachers and other personnel working with severely multiple handicapped students in the areas of curriculum development and instructional design. Certainly an important factor affecting the utility of this catalogue is the relative ease with which referenced materials may be accessed. All of the citations in this resource catalogue are readily available in professional journals, books disseminated by major publishers of educational materials or through microfiche distributed throughout the ERIC information system.

While some curriculum references provided are applicable to the needs of hearing and/or visually impaired children who may exhibit accompanying handicaps (e.g., mild mental retardation), the majority of the references cited in this resource catalogue are directed toward the education and developmental needs of youngsters whose cognitive, behavioral and/or neurological deficits are so extensive that these students truly require extraordinary educational services and instructional provisions.

Finally, it is the intent of the developers of this resource catalogue to provide classroom teachers and other practitioners with references to curriculum and instructional materials that are representative of some of the exemplary products available in the field today. However, in light of the recent and ongoing proliferation of curriculum materials in the severely multihandicapped specialization areas, it must be noted that the selected references appearing in this document are only a sample of the growing number of outstanding materials which may have useful and practical applications in special education programs for severely handicapped students.

OVERVIEW OF SEVERE MULTIHANDICAPPING CONDITIONS

During the past several years, federal legislation and specific judicial mandates have literally created a flood of demands upon state and local education agencies to provide appropriate education programs for severely involved multihandicapped youngsters. Without question, these events have spawned a reconceptualization of approaches toward defining and classifying the nature of severe handicapping conditions. In essence, for purposes of providing special education services, the definition-classification-services linkage has been instrumental to the evolution of curriculum concepts and strategies capable of meaningfully addressing the diverse education, behavioral and developmental needs exhibited by severely handicapped students. To appreciate the recent and rapid growth in the sophistication of curriculum and instructional materials designed for use with severely handicapped students, a brief discussion follows concerning perspectives toward the issues of definition and classification.

A perusal of the literature on definition and classification indicates that the terms severely handicapped, severely/profoundly handicapped and severely multihandicapped are often interchanged by professionals (Justen, 1976; Justen & Brown, 1977). While the term multihandicapped by definition implies the presence of more than one type of handicap or disability (that thus promotes the notion of severe or profound handicap), such a definition has proven to be anything but simple and straightforward. In fact, since the mid-1960s, the evolution of definitions of the term severely handicapped, have passed through at least three major trends or cycles. The first of these trends attempted to combine existing categorical disability labels in order to classify a child as multihandicapped. The second and more recent trend attempted to specify marked deficits in children's behavioral characteristics in order to define the term severely handicapped. Still more recently, a so-called "need-centered" model has emerged which attempts to define the concept of severe/profound handicap by virtue of placing primary emphasis on the specific type of special education services needed by
an individual youngster (e.g., basic skill development, remedial academic instruction and so forth). What is noteworthy is that each of these principle trends toward defining and classifying severe handicapping conditions have been linked to the evolution of special services and the development of curriculum problem-solving strategies.

Defining the term and concept of severely multihandicapped by simply combining existing categorical disability labels was based on the premise that placement in a special program designed to serve children with a single disability would be inadequate (Wolf, 1965). Thus, the multiply handicapped child was viewed as qualitatively different from the student with only a single handicap (e.g., mental retardation plus hearing impairment as opposed to mental retardation only). However, this "categorical" approach to defining the concept of severely multihandicapped, in which children's handicaps were identified in dyads (e.g., retarded-physically handicapped, blind-emotionally disturbed), presented two major problems: First, (artificial?) additive effects derived from combining disability labels results in students being "pigeonholed" into a new singular category (e.g., multihandicapped) irrespective of the precise nature of their individual learning and developmental problems (Kishi, 1974). Consequently, with respect to personological characteristics, students identified as severely multihandicapped were often as different from one another as they were from students who exhibited a single handicapping condition. Secondly, teachers were neither formally trained nor equipped to educate children who exhibited specific sensory impairments in addition to mental retardation, physical impairments and/or emotional disturbance (Craft, 1968; Maron, 1975).

Attempts to remedy shortcomings in the use of the categorical dyad-disability orientation toward definition and classification evolved during the early 1970s into a second major trend in defining the term severely handicapped or multihandicapped. Though not ignoring or disregarding the use of traditional categorical labels, this second trend
or cycle toward definition and classification nevertheless placed primary emphasis upon the process of delineating child characteristics relative to an individual's behavioral and developmental deficits. More precisely, Haring (1978) identified the following behavioral domains and characteristics as areas for instructional personnel to note individual children's patterns of performance:

1. compliance problems
2. high rates of self-stimulation
3. poor communication
4. slow response and development rates
5. poor social skills
6. poor health and physical or sensory impairment

Haring further suggested that when taken together, the cumulative effects of the behavioral deficits cited above provide a practical definition since the concept of severe handicaps is described in terms which are critical to the educational, habilitational and/or therapeutic treatment specialist.

Consistent with the emphasis of focusing upon individual child characteristics and behavior to define the term severely handicapped, Abt Associates (1974) developed the following definition:

"Severely" handicapped children and youth (are) functionally defined as those persons age 21 and under who are either mentally retarded, emotionally disturbed, deaf/blind, or multiply handicapped and who exhibit two or more of the following behaviors with a degree of regularity:

- self-mutilation behaviors such as head banging, body scratching, hair pulling, etc., which may result in damage to oneself;
- ritualistic behaviors such as rocking, pacing, autistic-like behavior, etc., which do not involve danger to oneself;
- self-stimulation behaviors such as masturbation, stroking, patting, etc., for a total of more than one hour of a waking day;
- failure to attend to even the most pronounced social stimuli, including failure to respond to invitations from peers or adults, or loss of contact with reality;
lack of self-care skills such as toilet training, self-feeding, self-dressing, and grooming, etc.;

lack of verbal communication skills;

lack of physical mobility including confinement to bed, inability to find one's way around the institution or facility, etc. (p. v.).

While categorical disability labels appear in the definition of the term severely handicapped advanced by the former U.S. Department of Health, Education and Welfare (HEW) (1975), greater emphasis is directed toward the presence of extreme deficiencies in children's behavioral and developmental characteristics. This definition describes severely handicapped children as follows:

"A severely handicapped child is one who because of the intensity of physical, mental, or emotional problems, or a combination of such problems, needs educational, social, psychological, and medical services beyond those which have been offered by traditional regular and special educational programs, in order to maximize full potential or useful and meaningful participation in society and for self-fulfillment. Such children include those classified as seriously emotionally disturbed (schizophrenic and autistic), profoundly and severely mentally retarded, and those with two or more serious handicapping conditions, such as the mentally retarded deaf, and the mentally retarded blind.

Such severely handicapped children may possess severe language and/or perceptual-cognitive deprivations, and evidence a number of abnormal behaviors including: failure to attend to even the most pronounced social stimuli, self-mutilation, self-stimulation, manifestation of durable and intense temper tantrums, and the absence of even the most rudimentary forms of verbal control, and may also have an extremely fragile physiological condition."

The significance of the HEW definition should be recognized on two dimensions. First, to be noted are descriptive terms indicative of the severity and extent of the severely handicapped child's behavioral deficiencies. Secondly, it is recognized and understood that such deficiencies and problems require "...services beyond those which have been offered in traditional regular and special educational programs..."
(emphasis added). In short, what in great part facilitates the definition of the term severely handicapped is the innovativeness and comprehensiveness of the multidisciplinary services (e.g., educational, psychological, social and medical) which are necessary to prepare a youngster for as independent a lifestyle as possible in our complex, multifaceted culture.

The third major trend in the evolution of definitions of the term severely handicapped, currently emerging, focuses on individual child characteristics while simultaneously emphasizing the absolute necessity of restructuring traditional modes of delivering educational services to severely handicapped students (Brown, Branston, Hamre-Nietupski, Johnson, Wilcox and Gruenewald, 1979). This developing need-centered orientation toward definition, and particularly the classification of severely handicapped students, represents a systemic approach that attempts to capitalize on the potential of multihandicapped children to acquire adaptive skills through structured learning opportunities in the community and at home, as well as in the special education classroom (Brown, Branston, Hamre-Nietupski, Pumpan, Certo & Gruenewald, 1979).

Consistent with the "child" need-centered orientation, Sailor and Haring (1977) proposed the following definition:

A child should be assigned to a program for the severely/multiply handicapped according to whether the primary educational service needs of the child are basic or academic...if the diagnosis and assessment process determine that a child with multiple handicaps needs academic instruction, that child should not be referred to the severely/multiply handicapped program. If the child's service need is basic skill development, the referral to the severely/multiply handicapped program is appropriate (p. 68).

Severely handicapped children are severely handicapped because they cannot perform skills that other children can perform -- not because they are severely retarded, quadriplegic, brain-damaged, or fixated in some primitive stage of someone's theory of development (p. 73).
Functional retardation, as manifested by the inability to perform basic adaptive skills, is the underlying factor in the definition developed by Sailor and Haring (1977). Moreover, this definition is essentially non-categorical.

A second important feature of the child need-centered orientation is its implications for teacher preparation. Sontag, Smith and Sailor (1977) have argued that nothing less than a fundamental restructuring of teacher preparation competencies is required at both the preservice and inservice levels if current approaches toward the classification of severely handicapped students are to be substantially improved. Ultimately, the merging child need-centered model of classification has the potential to facilitate progressive inclusion of low incidence student populations within the school system and community. Since categorical labels are not used as a common denominator to define and classify those persons who are severely handicapped, the need-centered model promotes maximum flexibility regarding class placement decisions by making it possible for individual youngsters to move directly from the area of basic skill development to remedial academic instruction at the appropriate time.

Finally, it is strikingly apparent that for the forseeable future, a lack of consensus regarding priority definitional issues will continue to characterize attempts toward defining the term severely handicapped. Perhaps this is inevitable since definitions appear to be most functional when they are reflective of a particular set of needs which are oriented, for example, toward special education (Justen, 1976; Sailor & Haring, 1977; Sontag, Smith & Sailor, 1977), vocational potential (U.S. HEW, 1973), or basic life survival (Baker, 1979). Too often in the past, the "exclusion" principle has dominated considerations relative to defining the term severely handicapped. The exclusion principle attempts to imply what a particular disorder is by stating emphatically what it is not. Fortunately, the state-of-the-art concerning the nature and educational prognosis of severely multihandicapping conditions has matured dramatically over the past several years. At this
juncture, it is clear that the evolution of definitions and approaches to the classification of severely handicapped students will continue to account for individual child characteristics (e.g., marked behavioral deficiencies) and simultaneously place an increasing emphasis upon the specification of alternative approaches toward delivering educational services capable of addressing a myriad of students' developmental needs.

HOW TO USE THIS CATALOGUE

Resources in this catalogue are indexed by seven (7) principal descriptors. These are: Curriculum and Instruction, Assessment and Evaluation, Content Areas, Prevocational/Vocational Programming, Integration, Parents, and Disabilities. The Disabilities descriptors are cross indexed to resources that pertain to a particular disability.

Each resource description has been alphabetized by title, assigned a number from S1 through S116, and can be found in the section entitled: Resource Descriptions. To locate resources that pertain to a specific topic, follow these steps:

Step 1: Turn to Subject Index, TAB 3, and look at subject descriptors listed under the seven main headings.

Step 2: After locating the descriptor you are interested in, turn to the appropriate tab (3A - 3G) in the catalogue that lists titles and resource description numbers.

Step 3: After selecting titles of interest, turn to Resource Descriptions, TAB 4, and locate the descriptions by their number.

*There is also a Title Index, TAB 5, at the back of this catalogue.

Illustration

A person interested in assessment instruments would do the following:

1) Turn to Subject Index, TAB 3, and find Assessment Instruments listed under Assessment and Evaluation.

2) Turn to Assessment and Evaluation, TAB 3B, and find the Assessment Instrument subsection.

3) Review the titles listed under Assessment Instruments and, after selecting those of interest, turn to Resource Descriptions, TAB 4, and locate the description by its assigned number (e.g. S1, S6, S14).

* This catalogue includes resources that offer a compilation of current instruments. There has been no attempt to list all assessment instruments.

** These descriptors are used for catalogue organization purposes only, and do not necessarily have programmatic implications. Please note that Severe/Profound Disabilities is not listed as a descriptor for the primary reason that all sources selected were written for the severely handicapped population.

*** Only those materials with direct reference to mental handicap in the title or abstract were placed under this heading. However, most materials selected have been written with mentally disabled persons in mind.

TITLE: The Adaptive Behavior Curriculum: Prescriptive Behavior Analyses for Moderately, Severely and Profoundly Handicapped Students Volumes I and II

AUTHOR: Popovich, D.; Laham, S.

PUBLISHER/PRODUCER: Paul H. Brookes Publishing Company
P. O. Box 10624
Baltimore, Maryland 21204

AVAILABILITY: Publisher/Producer

PUBLICATION DATE: 1981

ABSTRACT: This curriculum guide contains more than 3500 behavioral objectives which have been written in prescriptive terms so that a student's present level of functioning can be determined and an individualized education program can be designed. Both professional staff and parents can use this tool for planning and observing the educational progress of the individual student. Topical areas covered include: self-help, communication, socialization, perceptual motor skills, and aquatics.

P. O. Box 190
Arlington, Virginia 22210

PUBLICATION DATE: April 1976

ABSTRACT: This paper, presented at the 5th Annual International Convention of the Council for Exceptional Children, Chicago, Illinois, examines the impact of specific motor deficits upon multiply handicapped children's overall development. Suggested guidelines for assessment of motor behavior in multi-handicapped children, including youngsters with visual impairments, are discussed.

PUBLICATION DATE: Fall 1981

ABSTRACT: Described is the assessment methodology and results of an experimental study designed to elevate the precision of strategies currently employed for evaluating severely motor-involved children's performance on sensorimotor level cognitive tasks. Among 20 students differentiated by treatment group (physical plus verbal, prompt versus verbal, prompt only) and motor ability group, a treatment X trait (motor ability) interaction was found. Moreover, for students receiving the physical guidance plus verbal prompt assessment methodology, motor ability scores were found to be significantly predictive of cognitive performance scores. Specific implications for educational practice, continued interdisciplinary collaboration and future research are discussed.

PUBLICATION DATE:  1979

ABSTRACT:  Special testing provisions necessary to evaluate the abilities of deaf-blind children are described. Specific recommendations are made relative to the need for developing a quantifiable behavior checklist system with separate norms for deaf-blind and nonhandicapped individuals. Utilization of such a checklist, according to the authors, could complement use of standardized tests and developmental scales.

7010 Roosevelt Way, N.E.
Seattle, Washington 98115

1975

Eight basic instruction-related components of curricular programs for severely handicapped students (e.g., content rationale, method, performance) are presented and discussed in detail. Also described are other basic principles of curriculum design for severely handicapped students, including multiple uses of the concept of task analysis and strategies for promoting skill generalizations across persons, places, instructional materials and language cues.

              7010 Roosevelt Way, N.E.
              Seattle, Washington 98115

PUBLICATION DATE: September 1978

ABSTRACT: Four case studies demonstrate the management of inappropriate behavior of severely handicapped clients, ages 14-21, in a prevocational training program. Interventions combined skill training with behavior management strategies such as shaping, differential reinforcement of other behaviors, ignoring, timeout, and negative reinforcement.

AVAILABILITY: Publisher/Producer

PUBLICATION DATE: 1980

ABSTRACT: Based upon a Piagetian developmental framework, instructional materials are presented for assessing and teaching cognitive/communicative skills to persons functioning within the Sensory-Motor period (i.e., equivalent to birth through 24 months of age). Specific directions are provided for administering the assessment and for sorting student's performance on clusters of tasks in the following cognitive sub-domains: object permanence, means-ends, vocal and gestural imitations, operational causality, spatial relationships and schemes for relating to objects. For curriculum decision-making purposes, directions are also provided for charting and profiling student's performance data.

PUBLICATION DATE: January 1982

ABSTRACT: This article reviews and analyzes major curricula and instructional procedures that have evolved from various theoretical positions over the past 15 years. Curriculum development for educational instruction of severely handicapped students has followed several paths in attempting to identify content and methodology. Those approaches discussed include the developmental and environmental adaptation and holistic. The authors make some suggestions for redirections in the field.

ABSTRACT: Based on a curricular program for severely handicapped deaf adolescents who do not function successfully in a traditional school environment, this curriculum guide stresses the teaching of independent living skills, work related skills and functional communication. Individual sections focus upon health education, money management, food shopping and sex education. Assessment forms, instructional objectives and teaching activities are included in each section of the curriculum.

PUBLICATION DATE: March 1978

ABSTRACT: This paper, presented at the 63rd Annual Meeting of the American Education Research Association, Toronto, Ontario, Canada, provides an extensive review and explanation of the concept of curriculum-referenced evaluation. Traditional methods for evaluating instruction with severely and profoundly handicapped persons are contrasted with curriculum-referenced evaluation methods. Also described are examples with regard to how time series evaluations may be conducted while utilizing a number of commercially-available assessment instruments.

PUBLICATION DATE: 1979

ABSTRACT: This article describes the effects of four treatment procedures intended to reduce self-injurious behavior in 22 severely handicapped students. The procedures investigated were contingent restraint, reinforcement withdrawal, differential reinforcement of incompatible behavior and omission training (rewarding the subject for not emitting the self-injurious behavior). The contingent restraint procedure was found to be superior to the other three treatments and a theoretical analysis of the treatment effects is provided.

ABSTRACT: This bibliography lists 176 special education exemplary curriculum guides. These were reported effective in the education of handicapped and gifted children as a result of a survey of state education agencies, universities and special projects from over 40 states. Abstracts for each guide include title, publisher, copyright or development date, price, number of pages, type and level of class.

TITLE: Non-Vocal Communication Techniques and Aids for the Severely Physically Handicapped

AUTHOR: Vanderheiden, G. C.; Grilley, K.

PUBLISHER/PRODUCER: University Park Press
300 N. Charles Street
Baltimore, Maryland 21201

AVAILABILITY: Publisher/Producer

PUBLICATION DATE: 1976

ABSTRACT: Presented is a comprehensive treatment of communication problems and alternative intervention strategies for use with severely physically involved individuals. Special attention is directed toward factors impacting upon the selection of an appropriate symbol system for the individual child -- be it based on objects, pictures, words or Bliss symbols.

TITLE: Observing Behavior, Volumes I and II

AUTHOR: Sackett, G.

PUBLISHER/PRODUCER: University Park Press
300 North Charles Street
Baltimore, Maryland 21201

AVAILABILITY: Publisher/Producer

PUBLICATION DATE: 1978

ABSTRACT: This two volume guide explores ways that direct behavior observation methods can be used to expand descriptive knowledge concerning mental retardation and related conditions, and to test specific research hypotheses in these areas of investigation. Volume I is entitled: Theory and Applications in Mental Retardation; Volume II: Data Collection and Analysis Methods.

PUBLICATION DATE: 1981

ABSTRACT: This directory describes two groups of model demonstration projects and five Learning Disabilities Research Institutes. One group of model demonstration programs is supported by the Program for Severely Profoundly Handicapped Children and Youth. Presented is an analysis of data provided by 29 programs for severely/profoundly handicapped which includes abstracts of each project. A product guide lists titles of brochures, newsletters, directories, catalogs, evaluation instruments, curricula, training guides, literature reviews and research reports developed by the project.

AUTHOR: Iannicelli, M. M.; McConnaughey, F. B.

AVAILABILITY: ERIC Document Reproduction Service
P. O. Box 190
Arlington, Virginia 22210

PUBLICATION DATE: April 1977

ABSTRACT: This paper, presented at the 55th Annual International Convention of the Council for Exceptional Children, in Atlanta, Georgia, describes a developmental, team teaching program for multiply handicapped children between the ages of three and seven years. The structured program integrates task analytic and applied behavior analysis strategies with the teaching of developmental skills, especially in the areas of motor and perceptual functioning. Sample instructional formats, including skill assessment procedures, are presented.

St. Louis, Missouri 63141

AVAILABILITY: Publisher/Producer

PUBLICATION DATE: 1980

ABSTRACT: This book was designed primarily as a college/university text to prepare teachers for working with severely/profoundly handicapped students. The initial chapters focus upon behavioral characteristics, diagnosis and assessment of severe handicapping conditions. Curriculum design, selection and use of principles of instructional materials and methods for evaluating student performance are extensively covered over a total of eight chapters. Use of community resources and working with parents and families of severely handicapped students are dealt with in the remaining chapters of the text.

TITLE: Teaching Auxiliary Communication Skills to Severely Handicapped Students

AUTHOR: Nietupski, J.; Hamre-Nietupski, S.

PUBLISHER/PRODUCER: AAESPH Review
Volume 4, Number 2, Summer 1979
pp. 107-124.

AVAILABILITY: The Association for the Severely Handicapped (TASH)
7010 Roosevelt Way, N.E.
Seattle, Washington 98115

PUBLICATION DATE: Summer 1979.

ABSTRACT: This article discusses strategies for the selection design and implementation of appropriate auxiliary communication skills programs. Those systems described include manual systems, communication aids and communication codes. The authors advocate consideration of auxiliary systems for any child who has not produced intelligible utterances by ages 5 to 8 years, and who has not made adequate progress in a verbal communication training program.

PUBLICATION DATE: 1979

ABSTRACT: This article discusses integrated educational and curriculum
models for severely handicapped children. It provides strategies
and steps to achieve the following objectives:

(1) severely handicapped people should not be compared with
chronologically younger, non-handicapped persons

(2) programs should be adapted so that partial participation
in age-appropriate, functional activities is possible

(3) curriculum should be integrated with non-handicapped curricula

(4) services for severely handicapped should be varied, individu-
alized, heterogeneous, flexible and changeable.

PUBLICATION DATE: 1979

ABSTRACT: This accumulation of papers focus on vocational rehabilitation efforts to provide services to severely handicapped adults. Many articles are applicable to the student population, however, and address such issues as prevocational training programs, community living skills curriculum, experimental behavior analysis in vocational training, diagnostic assessment, etc.
