A study was conducted to investigate issues related to the development of preschool children's self-definitions of attractiveness. Research questions were (1) At what ages can children state a self-definition of attractiveness? (2) Are self-definitions temporally stable? (3) To what degree are children's self-judgments similar to judgments made of them by socializers? and, (4) What is the relationship of children's self-judgments of their attractiveness to their behavior and to verbal reports of their behavior? A sample of 140 subjects included equal numbers of male and female white preschool children, 3 through 6 years of age, and their parents, teachers, and peers. Self-definitions of attractiveness were obtained by asking children to rate themselves on a three-point scale while looking in a mirror; self-definitions were obtained again 2 weeks later. Children were also asked to rate their own behaviors and were observed for positive and negative behaviors during free play. Additionally, parents and teachers rated each child's behaviors, and peers rated each child's attractiveness. Results indicated that children at all ages seem able to report self-judgments of attractiveness and that such reports exhibit short-term stability. Other findings indicated that self-judgments were more related to verbal reports of behavior than to observed playground behavior and that age and sex differences exist in the relationship of children's self-judgments to judgments made of them by socializers and other adult raters. INTRODUCTION

PHYSICAL ATTRACTIVENESS EXERTS A STRONG AND PERVERSIVE INFLUENCE ON PERSON PERCEPTION, SOCIALIZATION AND INTERPERSONAL RELATIONSHIPS (E.G. ADAMS, 1977; BERSCHEID & WALSTER, 1974; LANGLOIS & STEPHAN, 1981). IN GENERAL, ATTRACTIVE PEOPLE TEND TO BE EVALUATED AND TREATED MUCH MORE POSITIVELY THAN UNATTRACTIVE PEOPLE. LANGLOIS AND STEPHAN (1981) AND ADAMS (1977) THEORIZE THAT THIS DIFFERENTIAL SOCIALIZATION PROCESS EMERGES IN EARLY CHILDHOOD. THESE THEORISTS ALSO ASSERT THAT OVER DEVELOPMENT CHILDREN ACQUIRE SELF-DEFINITIONS OF ATTRACTIVENESS THAT APPROXIMATE THE DEFINITIONS OF THEM BY SOCIALIZING AGENTS AND, IN TURN, BEGIN TO EMIT BEHAVIORS CONSISTENT WITH THEIR SELF-DEFINITIONS IN A SELF-PROPHETIC MANNER.

RESEARCH QUESTIONS

1. AT WHAT AGES ARE CHILDREN CAPABLE OF STATING A SELF-DEFINITION OF ATTRACTIVENESS?

2. ARE CHILDREN'S SELF-DEFINITIONS TEMPORALLY STABLE?

3. TO WHAT DEGREE ARE CHILDREN'S SELF-JUDGMENTS SIMILAR TO JUDGMENTS MADE OF THEM BY SALIENT SOCIALIZERS?

4. WHAT IS THE RELATIONSHIP OF CHILDREN'S SELF-JUDGMENTS TO:
   A. OBSERVED BEHAVIOR?
   B. VERBAL REPORTS OF BEHAVIOR?
THE SAMPLE consisted of the sample of preschoolers (ages 3-6; half female), their teachers and peers. Self-definitions of attractiveness were obtained by asking children to rate themselves (who saw a mirror) on a 3-point scale. Self-definitions were assessed again two weeks later (to assess test-retest reliability). In separate testings, children were asked to rate their own behaviors (e.g., sharing, hitting) and were observed during free play for frequencies of positive and negative behaviors. Parents and teachers rated each child's behaviors using a 40-item questionnaire into which attractiveness ratings were embedded. Peers rated each child's attractiveness using Dion's (1973) peer nomination strategy.
RESULTS

ORGANIZED BY RESEARCH QUESTION:

1. CHILDREN AT ALL AGES STUDIED STATED AN ATTRACTIVENESS SELF-JUDGMENT. MOST CHILDREN SELF-CLASSIFIED AS HIGH OR MODERATELY ATTRACTION. A SIZEABLE MINORITY, 17%, INDICATED THAT THEY WERE LOW IN ATTRACTIVENESS.

2. ACROSS THE TWO-WEEK TESTING PERIOD TEST-RETEST RELIABILITIES FOR SELF-DEFINITIONS WERE HIGH, M r = .61. THIS SUGGESTS THAT PRESCHOOLERS' ATTRACTIVENESS SELF-JUDGMENTS ARE RELATIVELY STABLE OVER TIME.

3. SEE TABLE 1. CORRELATIONS OF CHILDREN'S SELF-JUDGMENTS WITH JUDGMENTS MADE OF THEM BY SALIENT SOCIALIZERS AND ADULT RATTERS REVEALED DIFFERENCES BY AGE AND SEX OF CHILDREN:

   3-YEAR-OLD BOYS—STRONG CORRELATIONS WITH ADULT RATTERS ONLY
   3-YEAR-OLD GIRLS—STRONG CORRELATIONS WITH TEACHERS AND FEMALE PEERS
   5-YEAR-OLD BOYS AND GIRLS—NO SIGNIFICANT CORRELATIONS
SEE TABLE 2. ANALYSES OF OBSERVED PLAYGROUND BEHAVIOR AS A FUNCTION OF AGE, SEX AND SELF-JUDGED ATTRACTIVENESS OF CHILDREN YIELDED ALMOST NO EFFECTS DUE TO ATTRACTIVENESS

SEE TABLE 3. ANALYSES OF CHILDREN'S VERBAL REPORTS OF BEHAVIOR AS A FUNCTION OF AGE, SEX AND SELF-JUDGED ATTRACTIVENESS OF CHILDREN YIELDED NUMEROUS RESULTS. HIGHLY ATTRACTIVE CHILDREN REPORTED HIGHER FREQUENCIES OF STAYING NEAR THE TEACHER, RUNNING AND HITTING. CHILDREN WHO BELIEVED THEMSELVES TO BE LOW IN ATTRACTIVENESS REPORTED GREATER LEVELS OF FEAR. ATTRACTIVENESS X SEX INTERACTION EFFECTS REVEALED THAT BOYS WHO WERE HIGH OR MODERATE IN ATTRACTIVENESS REPORTED HIGHER LEVELS OF FIGHTING, HURTING OTHERS AND SCARING OTHERS. AMONG GIRLS, THOSE LOW IN ATTRACTIVENESS REPORTED HIGHER LEVELS OF FIGHTING.
DISCUSSION

1. CHILDREN DO INDEED SEEM CAPABLE OF REPORTING A SELF-JUDGMENT OF ATTRACTIVENESS.

2. CHILDREN'S ATTRACTIVENESS SELF-REPORTS ARE TEMPORALLY STABLE OVER A SHORT TIME SPAN.

3. SELF-DEFINITIONS ARE GENERALLY UNRELATED TO THOSE OF SOCIALIZERS WITH THE EXCEPTION OF THE SELF-DEFINITIONS OF 3-YEAR-OLD GIRLS.

4. IRONICALLY, SELF-JUDGMENTS SEEM UNRELATED TO OBSERVED PLAYGROUND BEHAVIOR. RATHER, THESE SELF-JUDGMENTS ARE MORE RELATED TO VERBAL REPORTS OF BEHAVIOR.

5. RESULTS SUGGEST THAT CHILDREN'S SELF-JUDGMENTS MAY BE IMPORTANT IN UNDERSTANDING THE OVERALL INFLUENCE OF PHYSICAL ATTRACTIVENESS IN THE SOCIALIZATION PROCESS.
