This paper provides a review and analysis of literature from the Educational Resources Information Center (ERIC) database on the dimensions of career change. Definitions are given for relevant terms and the characteristics of career changers are discussed, including demographic characteristics, developmental stages, and reasons for career change. Assistance programs presently available for career changers are described by type, service provider, and mode of delivery. In addition, the expertise, techniques and tools required by career counselors and facilitators are discussed including: (1) knowledge of adult development theories; (2) ability to plan for and manage change; (3) strategies for getting into and progressing in educational or job choices; (4) an understanding of agencies, businesses and industries; (5) familiarity with the issues faced by special groups; and (6) sensitivity to appropriate teaching and assessment tools for adults and special groups. Several models for program planners are outlined, and relevant areas needing further investigation are highlighted. An annotated bibliography of ERIC references is provided, along with a listing of additional references. (JAC)

AN INFORMATION ANALYSIS PAPER
Based on a computer search of the ERIC database
November 1966 through February 1983

ERIC COUNSELING AND PERSONNEL SERVICES CLEARINGHOUSE
1983
First there was the Searchlight series--computer searches with abstracts of the ERIC database on topics of major interest and importance to ERIC/CAPS users and helping professionals in the field. Then came the Searchlight Plus series, computer searches of the topics in most demand PLUS in-depth analyses of the documents in the search. The opening narrative in each Searchlight Plus highlights certain documents, identifies major issues and trends, describes the historical background and existing programs, and points out the implications of the information for the work of human services professionals. For those who need succinct, timely, and practical information but lack the time to examine the total collection of data, the Searchlight Plus is the "perfect package." For a complete list of current topics, please contact the ERIC/CAPS Publications Department.
INTRODUCTION

Career change, a relatively new issue in the public mind over the last decade, is a pervasive concern of the 1980s. A report of the Carnegie Commission predicted that nontraditional students would seek education and midcareer changes in the 1970s (EJ 249 756). By 1979 the need of adults for career guidance was termed a national priority (EJ 246 808).

Just how extensive career change has become is suggested by recent data. A nationwide poll concluded in 1976 that 40 million Americans, 36% of the population between the ages of 16 and 65, are in a career transition, defined as undergoing or anticipating a job or career change (ED 143 992). The percentage of potential changers may be even higher. A 1975 survey of several studies of this topic revealed that 77% of business executives in their 30s and 63% of those in their 50s intended to investigate second careers (ED 156 826). Of faculty members with Ph.D. degrees, 13½% indicated that they would not choose the same career again. About one-third of blue collar workers said they were thinking seriously about making an effort to change careers.

This paper provides a review and analysis of the ERIC literature on the following dimensions of career change: the career changers themselves; the types and formats of programs presently available; the expertise, techniques and tools required by career counselors and facilitators; models for program planners; and relevant areas needing further investigation.
<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Career</td>
<td>A sequence of occupations, jobs or positions which may be highly salient personally and which may require a high degree of competence and commitment; may include homemaking.</td>
</tr>
<tr>
<td>Career Counseling</td>
<td>Helping processes that identify appropriate career and work options for individuals based on a knowledge of aptitudes, skills, experience and limitations (EJ 160 273).</td>
</tr>
<tr>
<td>Career Education</td>
<td>An inclusive term encompassing all vocational education, general education, career exploration, selection, entry, progression and reentry; includes leisure activities as well as job activities (EJ 146 177).</td>
</tr>
<tr>
<td>Displaced Homemakers</td>
<td>Typically women who have spent adult lives dependent on the income of others, dedicated to caring for husband, children or aged parents, who are suddenly divorced, widowed, separated or abandoned (ED 195 656).</td>
</tr>
<tr>
<td>Dual-Career Family</td>
<td>Both wife and husband in pursuit of nonhomemaking careers; none of the usual family roles are completely delegated or abrogated (EJ 265 593).</td>
</tr>
<tr>
<td>Half-life</td>
<td>Period of time after completion of formal education when approximately half of what the professional has learned is no longer applicable (EJ 112 248).</td>
</tr>
<tr>
<td>In-transition</td>
<td>Process of undergoing or anticipating a job or career change (ED 143 992).</td>

</tbody>
</table>
Midlife

Period between the ages of 35 and 55 years of age.

Occupational Mobility

Any move from one job to another: lateral transfers in the same firm, voluntary and involuntary movement, and major career changes (ED 197 006).

Older Workers

Persons 40-45 to 65 years of age and beyond; the Age Discrimination in Employment Act of 1967/1978 Amendments protect persons 40 to 65 years of age and beyond.

Personal Counseling

Helping processes that attempt to provide support and assistance so individuals can understand the nature of the economic/personal changes they experience (EJ 160 273).

Support System

An enduring pattern of continuous or intermittent ties that play a part in maintaining the psychological and physical integrity of the individual over time (EJ 246 811).

THE CAREER CHANGERS

Characteristics

In a 1978 report of a national study of adults in career transition, about half had completed some post-secondary education (EJ 177 212). Males were better educated and earned more than females, and whites were better educated and earned more than blacks. Most were presently employed and wanted to change fields or levels within their
present field. Those who were unemployed were likely to be homemakers. While financial need was a primary motivator, advancing professionally and finding interesting work were secondary motivators. Those with less than 12th grade educations expressed the most interest in assistance.

A public library in a large Eastern city offered a lifelong learning center and drew hundreds of respondents. Most callers wanted help with basic education or re-entering the job market (EJ 199 828). Teachers and women in clerical positions sought better jobs. Job dissatisfaction was a strong motivator of this center's adult career changers.

Teachers choosing to leave their profession are predominately female and at the beginning of their midcareer period (EJ 239 997). While they vary on their degree of self-esteem and vocational maturity, the majority have had minimal exposure to other career areas. Stereotypic choices appeared to be their only career options when they entered teaching.

When age and sex are controlled and sample characteristics examined, differences emerge between those who elect to stay in an occupational area and those who make changes (ED 156 826). A group of midlife men were likely to make changes when they had adequate financial support, were participating in counseling or therapy, or were undergoing a change in marital status. While differences in personality traits were minimal, those who changed were found to be lower in the congruity of their interests and their work type, and higher in fear of failure and in incidence of emotional problems (ED 246 807).

A follow-up survey of a telephone counseling program directed to home-based adults found the users to be primarily female, between 20-39 years of age, married, raising one to three children, with household incomes above $10,000 (ED 143 992). About half the respondents had completed high school. They were employed in semi- or unskilled jobs and indicated that their motivation for participating in the program was chiefly financial, followed by a desire for interesting work and professional advancement.

Profiles of displaced homemakers from a counseling center's client files and a survey of social service agencies provide similar pictures (ED 195 653). The social service client has had no work experience and few job training opportunities, and she therefore possesses no up-to-date job skills. If she is less than 60 years of age, she is ineligible
for social security, faces both age and sex discrimination in her job search, and is most likely to "need help fast." Of the sample of clients at a college counseling center, 75% of women who were 55 years or older were displaced homemakers; of this group, half were unemployed and 95% had children. As many as 15 million Americans fit the displaced homemaker description.

Air traffic controllers are provided a second career program by a legal mandate (Public Law 92-297). To qualify they either have to have provided 25 years of service or to have reached the age of 50 and provided 20 years of service (ED 172 036). Chiefly male, this group may also represent those in such services as police work and firefighting. They enter their professions at a young age with little formal education beyond high school and learn highly specialized, nontransferable skills during their employment. They are likely to have their children reared and to have somewhat less family responsibility than their younger counterparts when they seek a career change.

Older job seekers, those between 40 and 65 years of age, according to the Age Discrimination in Employment Act of 1967, are likely to face more rejection than younger workers and consequently will require longer periods for job searching (EJ 112 129). Diminishing physical stamina may force older workers to seek occupations which offer them less status than that offered by their original occupation—an intangible reality which many find difficult to accept. Adults seeking career changes indicate they prefer informational services. Out of a list of twenty career services, half the adults indicated high interest in available jobs, facts on occupational fields, career possibilities and paths for advancement, training or educational programs, training for job skills, and the use of various strengths or abilities in specific jobs (EJ 177 212). Financial aid, discussions about particular schools and programs, the relationship of abilities to educational success, occupational ability tests, self-analysis and decision making were areas of high interest for one-third of the sample and of medium interest for the same number. Of lesser interest were discussions of barriers to career progress and problems with employers.

These areas were categorized into four guidance processes: information-giving, guidance, training, and counseling. The fees adults were willing to pay for each process were $1.00-$10.00 for information; $15.00-$50.00 for guidance; $25.00-$75.00 for training; and $40.00-$100.00 for counseling. Because of the heavy emphasis on the informational area, the average amount the sample was willing to pay for career assistance was $25.00.
Other characteristics of adult career changers have evolved from the evaluation of existing programs. Adults are found to require flexible registration and class locations. They prefer courses and workshops which meet less often, and for longer periods of time (ED 189 290). While they are most familiar with traditional instructional methods and indicate a preference for them, they relish the use of discussion formats in contrast to lectures. They resent very young, inexperienced group leaders but draw much content from the input of their peers—a phenomenon noted by adult educators in all areas. This quality enhances the success of peer assistance programs which function as extensions of the professional counselor (EJ 249 756).

Adults seeking career change are likely to present complex or interrelated problems (EJ 112 129). They seek new careers, yet they expect to begin them at higher salaries. Their situations often present few degrees of freedom for making changes. Limited mobility may mean that they must find the jobs leading to their new careers in their home towns.

Meaningful Groups

The necessity of grouping adults in need of career services in meaningful ways receives strong emphasis in the literature. Although adults are difficult to typify as a group, program developers have classified those with unique characteristics into key typologies (EJ 206 659), and a consideration of these types is thought to be essential in the design of effective assistance programs (EJ 160 273, ED 189 290). Defining groups by crossing two dimensions of characteristics develops target groups more effectively than by using either dimension alone (ED 189 290). Demographic characteristics such as sex, race and socioeconomic status form one dimension, and life stages or events such as early career, midcareer and retirement provide a second. A third dimension of possible usefulness would look at adults in participant and nonparticipant groups; adults comfortable with adult education formats are usually participants, while nonparticipants are likely to feel uncomfortable with that format and will require a more inventive outreach plan.
Additional demographic characteristics, employment level, educational level and family status are also used to form target groups (ED 189 290). Groups with similar sex, age or socioeconomic backgrounds are likely to share a similar experiential base and thus find relevance in the same content or format. Adults gain from peer input as well as from workshop leaders. Peers with similar backgrounds make constructive suggestions based on their own experiences and feel more comfortable when making suggestions than peers from widely differing backgrounds.

The reasons for making career changes provides another scheme for defining career service groups. Persons can be broadly classified according to extrinsic/external reasons and intrinsic/internal reasons (EJ 220 785, ED 189 290). Forces and events which cause career changes and are external to the person, such as technological developments and family circumstances, are considered extrinsic. The displaced homemaker is an example of an extrinsically motivated career changer. Forces such as dissatisfaction with the rewards of one's job or changes in one's values are considered intrinsic. The teacher choosing to leave her profession is an example of an intrinsically motivated career changer. A major external event may trigger a secondary internal change as well—the changes may not remain mutually exclusive, but may at some point interact.

The voluntary/involuntary dichotomy has also been used to group career changes (EJ 246 807). Factors such as changes in interests or level of competitive zeal may lead to voluntary career changes, while technological and human obsolescence (the physical deterioration of a professional athlete, for example) or getting fired lead to involuntary change.

A further refinement of the external/internal scheme divides motivating forces into the anticipated and the unanticipated and develops four quadrants of changers with similar needs. The displaced homemaker who anticipated she would enter the work force for a year previous to the event and the displaced homemaker who is abruptly widowed will need a different mix of assistance (EJ 160 273). While personal counseling may assume a preponderance in the unanticipated external situation, career counseling is likely to become the more important emphasis in the anticipated external situation. Similar divisions of the counseling mix will be necessary for persons undergoing unanticipated vs. anticipated retirement and unanticipated vs. anticipated job loss.
Adults with differing characteristics gravitate to different types of career services. The conclusion that adults must be placed in meaningful groups predominates in the literature. Demographic characteristics, developmental stages, and reasons precipitating career changes have been recommended as effective bases for determining target groups.

ASSISTANCE FOR CAREER CHANGERS

Service Providers

In the early 1970s existing counseling and career planning services were redirected to meet the needs of adults (EJ 261 114). A survey of adult career counseling programs conducted in 1974 identified five types of agencies as the primary providers of service (EJ 146 013). These types were four-year colleges and universities (34%), community and junior colleges (20%), and private groups and nonprofit groups such as B'nai B'rith and YMCA/YWCA (18%). Government agencies and public adult schools provided 16% and 12% respectively. While comparable statistics do not exist, 1983 would show more professional associations and private employers in this listing (ED 172 035).

Modes of Delivery

The most common mode of delivery to provide adults with career assistance is the classroom setting (EJ 146 013). Classes are held during the day or evening and may last for a week, four weeks, a semester or a year. While they occasionally offer academic credit, noncredit courses are the norm. Small group meetings, seminars or workshops are second in popularity. This mode permits greater control over the selection of group members and locations: meetings take place in schools, workplaces, libraries and other public agencies, and even in such less expected sites as hospitals and prisons. A third mode for providing service is outreach to homes by such techniques as mobile vans, telephones, home study courses and cassette tapes.
Program Types

The diversity of adults who need career assistance and the range of service providers makes few generalizations on programming possible. In addition, career services for adults are seldom based on a single process or model. The largest group of programs includes an eclectic mix with several components, which, when separated out, permit a loose grouping based on existential emphases, client needs and/or guidance processes, and underlying theoretical assumptions.

Existential Focus. When programs are grouped according to existential focus, they include preventive, anticipatory, and crisis approaches. According to program developers using the preventive approach, coping with rapidly occurring change is the life skill essential for members of future generations. This approach would provide youths with an education enabling them to withstand unpredictable and all-encompassing change (EJ 213 776). Such an education would develop their ability to process information rationally and plan for their futures. It would leave them with an inquiring mind and confidence in themselves. Techniques used by teachers and counselors to reach these ends would include: (1) teaching problem solving/decision making skills; (2) breaking down the limitations imposed by stereotypic thought; (3) insuring the development of broad general categories of skills before specialization; (4) promoting ongoing investigation and trial of new skill areas and/or new interest areas; and (5) providing content on the system—how to negotiate it effectively to satisfy economic and emotional needs and how to articulate assets and promote oneself.

The anticipatory approach teaches adults strategies that enable them to make crisis-free transitions but differs in that it is not taught in youth, but at a point close to the transition (EJ 261 123, EJ 239 997, EJ 160 273, ED 215 246, ED 193 573, ED 182 676). Such programs provide information on the life span and teach skills for the effective management of transitions. Future-directed strategies such as imaging, observing models, managing attitudes toward change, and negotiating with or managing others to achieve satisfactory resolution (termed family engineering by one inventive project) are used in these programs (ED 195 652).

23 9
Programs directed toward persons facing unanticipated transitions or crises may involve significantly more personal counseling than those directed toward persons making anticipated transitions (ED 160 273). Components for this group are as follows: developing support networks, managing stress, regaining self-esteem, understanding legal recourse, and learning related self-management techniques. The program may include the components used for groups making anticipated changes as well.

Client Needs/Guidance Processes. In a particularly lucid format for program development, a list is provided of guidance needs thought to constitute a core of career guidance (ED 189 290). These needs, the content of career guidance, are separated out from the guidance processes used to provide the content. The core career guidance needs or content reappear in some form in most programs reviewed: (1) self-awareness, (2) career awareness, (3) social awareness, (4) work effectiveness/skill awareness, and (5) decision making. An additional needs category concludes the list. Before the guidance process and mode of delivery can be considered by the program planner, the needs of the target group of adults are assessed and the content requirements determined.

The guidance processes form a hierarchy or continuum of required input from the guidance professional. The four process categories are: (1) information, e.g., providing lists of jobs and information on career requirements; (2) guidance, e.g., answering clients' questions or referring them to other resources; (3) training, e.g., teaching resume preparation or decision making skills; and (4) counseling, e.g., one-to-one or small group sessions which may include testing along with other counseling processes. According to the above paradigm, the needs of adults and the process or type of service determine the mode of delivery.

Underlying Theoretical Assumptions. Adult career guidance models are categorized according to the underlying assumptions or theoretical bases in several articles. In a powerful educational strategy for counselors, five theoretical approaches are applied to case studies to develop the type of intervention each would offer an adult client (ED 193 573). Super's theory that one's life is the sum of the roles played, that people seek to operationalize their image of self as they live their lives, provides a first approach. Tiedeman's decision making theory, that people progress through stages of anticipation (exploration, crystallization, choice and clarification) and then implementation...
(induction, reformation and integration), is a second approach. Blau's sociological theory sees social structures as affecting an individual's development of attributes and occupational options--these structures also act to determine how suitable the individual views jobs and opportunities for her/himself.

The social learning approach of Krumboltz, Mitchell and Jones looks at the sum of individuals' experiences. Exposure to education and interpersonal and family relationships affect how clients think about their abilities, how they respond to success and failure, and how they cope with change.

A last approach selects the developmental scheme of Levinson and Gould. In this view, clients integrate biological, psychological and sociocultural changes in ways that may lead to integrity and generativity or to stagnation, in ways that may lead to a healthful view of their remaining lifetime or to disillusionment.

Another article summarizes the emerging models of career development for midlife persons (EJ 246 808). They are divided into self-help, informational, developmental and structured group. Self-help or self-administered assistance includes guides for making career decisions, job hunting and other how-to materials in book, pamphlet or tape form. Informational assistance may be the total package offered by public libraries and career information "hot lines." The developmental model assumes that life and work roles are integrated, and that people pass through predictable stages as they age. Exercises used in this model require determining the participants' point of development and the needs in both work and leisure spheres. The last model, the structured group model, follows a predetermined outline, using the exercises which have been mentioned for the anticipatory and crisis models.

There is an advantage to separating the career guidance content, the guidance process, and the mode of delivery. That the self-help and informational models mentioned above are distinct entities is questionable. The structured group may be handled developmentally, informationally or otherwise. Laid on the scheme of content, process and delivery mode, this view of emerging models would seem to compare three (or two if we combine self-help and informational) guidance processes and one theoretical model.
A set of criteria developed to assess adult counseling models asks the following questions (EJ 246 808):

1. Are individual differences addressed?
2. Is the model or approach ethical (using AACC's code of ethics)?
3. Is the model comprehensive; does it look at the integration of roles, not just the work role?
4. Does the model use theory that has been validated by empirically derived data?

The author concludes that developmental models offer the most promise, but goes on to state that a decision making component may also be essential for adult programs.

Because of the eclectic mix of components found in career services for adults, evaluations do not show the processes, modes or content that are most effective. Agencies offering the services may be limited in the processes they can offer. Public libraries, for example, are unlikely to have personnel trained to offer one-to-one services nor do their budgets permit this type of service. Adults are generally satisfied with the help they receive. If adults are asked previous to service which process they would prefer, they indicate informational over the other types. After service, however, they indicate a preference for one-to-one counseling, and their indicated satisfaction increases as the number of interviews increases (ED 143 993). The services received from counselors, particularly those on self-awareness and self-development, are rated most valuable (ED 189 290).

COMPETENCIES FOR CAREER CHANGE FACILITATORS

The skill of those facilitating or counseling for career change is key to the outcome of the process. Authors agree that working with adults differs from working with youths in that it requires maturity and a diversity of life experiences in addition to counselor training and professional experience (EJ 261 114). An internship or supervised practicum completed with an adult population is also a strongly recommended training component (EJ 261 123). Competencies recommended in addition to those generally thought necessary for career counselors fall into six topical
areas: (1) knowledge of adult development theories; (2) ability to plan for and manage change; (3) strategies for getting into and progressing in educational or job choices; (4) an understanding of agencies, businesses and industries, their organizational patterns, career paths and growth potential; (5) familiarity with the issues faced by special groups such as women, minorities, dual-career couples, single parents and retirees; and (6) sensitivity with regard to the appropriate tools for teaching and assessing adults in general and special groups.

Adult Development

Despite innumerable formulations, there is no comprehensive, empirically validated model of adult development (Heath, 1980; Thomas & Kuh, 1982). The widely published theories are summarized in capsule form in several references (ED 220 785, ED 220 614, ED 220 612, ED 215 246, ED 189 290, ED 156 826).

There are several reappearing themes in the expositions of adult development theory (ED 189 290). The first considers the tasks of adult development as coping with predictable milestones, transitions or crises; e.g., developing an identity, aging, retirement, or death.

An analysis of the changing interplay between the domains of one's life provides a second theme. As work, family, society, and recreation change their respective positions of importance or demands on an individual, the need to make adjustments results.

A third theme identifies age as the element providing adults with common experience. It is the age as opposed to the event which acts as the predating variable; events occur predictably within early, middle and late adulthood. Age categories also mediate the work entry, advancement and retirement events.

Finally, a fourth theme emphasizes that not only does the adult have to adjust to or cope with a transition once, but the need to make most adjustments occurs again and again. The need, for example, to achieve occupational satisfaction may be resolved and then recur at several points during one's life span.

Other summaries of adult development consider the psychological models of Maslow and Herzberg as especially relevant to career change (ED 156 826). As individuals move along Maslow's hierarchy of needs, their expectations of
a career are modified. It is postulated that basic needs will give way to the need for autonomy in midlife. For many retirees, the move may not be toward autonomy, but toward the satisfaction of more basic needs. That adults seek to engage in socially useful work or in human service areas at midlife rather than in their early careers is a common thread woven through the articles reviewed (EJ 146 177, EJ 146 013, ED 171 977, ED 156 826). The change can be interpreted using several of the adult development theories.

Exposure to gerontological research and the dynamics of the aging process must be a part of the training regimen for those providing adults with assistance (EJ 261 123, EJ 149 996, EJ 146 177). The tendency to react with stereotypic bias must be supplanted with interactions based on more accurate information.

Understanding the career changer’s motivation for change is an essential foundation for providing appropriate assistance (ED 149 996). Because the reasons adults change are complex, the hypotheses offered by theories of adult development offer useful starting points for understanding and interpretation.

Managing Change

Adult counselors need both a knowledge of the characteristics of transitions and expertise in the effective management of the transition or change process (ED 215 246, ED 182 676). Anticipatory socialization refers to one way of preparing for transitions which may involve imagining, trial runs, listening to others tell their experiences and related activities. It can, if wisely used, make transitions a growth-producing rather than a traumatic experience (ED 220 785). Procedures or topics appearing under the rubric of managing change include stress analysis, developing support systems, using coping skills, and other self-management activities.

The Workplace

Career counselors have an obligation to interpret educational and occupational structures to clients and then to help them develop strategies for negotiating these systems (EJ 161 788). Their comprehensive knowledge of programs or employment options which bypass nonessential requirements, give credit for life experiences, or otherwise value previous experiences can provide adult clients with a cost- and time-saving shortcut to their goals.
It is in the category of businesses, industries and agencies, their organizational patterns, career paths and potential that facilitators need in-depth expertise when working with career changers. Adults are involved in networks and situations which limit their mobility; they may need to develop their change plans to fit into the job possibilities available locally. Activating their clients' change plans may require the integration of several other services such as child care, financial aid and educational assistance as well. The need for a basic knowledge of how to move up and down, and in and out of job levels and types of organizations may challenge facilitators with little experience in settings other than educational (ED 261 114).

On another level, the facilitator may need to assist clients in assessing their present work settings and their adjustment to them. Adult development and career adjustment have been effectively integrated and well-illustrated in the works of Crites (ED 189 290). Additional efforts in this direction are those of Tiedeman and Holland (ED 126 369). Such skills as force field analysis, conflict resolution, approaching difficult issues, negotiating compromise, and efficient problem solving have enormous promise for application to adults undergoing burnout and dissatisfaction (EJ 149 996; ED 215 246).

**Special Groups**

The issues faced by special groups pose yet another series of challenges for those assisting career changers. The users of existing career change services have been predominantly middle class--reentry women and midcareer changing men. The skills suggested for counseling women for reentry are vastly different from those suggested for counseling minorities for career change.

The needs of reentry women have been widely addressed (EJ 261 114, ED 220 785). The mix of such strategies as understanding self, life planning, goal setting and decision making, risk taking and assertiveness training, and moving into training and/or jobs are typical inclusions in services designed for this group.

Midcareer changing men have had substantial work experience. The service provider who addresses this group primarily with career information may shortchange their future satisfaction. This group needs self-understanding,
especially in terms of interests and personal factors relating to work. Their expectancies, goals, values and abilities are foundations which should be put into place before moving into career information strategies (ED 246 807).

Minorities, generalizing from the literature, are seen as having relatively unstable careers including disrupted work patterns. They face negative stereotypes and, as a result, experience frustration in reaching their career goals. Further, they have few available role models and are likely to have a narrow view of the availability of jobs and how to acquire them.

Of career change programs surveyed, 60% of the minorities presently served are black, 25% Hispanic and 15% from other groups (ED 189 290). Varied income levels and language backgrounds form additional divisions of this target group. The study of minority needs has focused principally on blacks. As a group they express higher interest in services which involve personal, problem-directed counseling than do the better educated whites (ED 193 542). Advice on dealing with barriers which block progress and problems with employers are also high on their list. It should be noted that where minorities are concerned, generalizing is dangerous. As family income increases, they too show less need to deal with the problem areas indicated above (ED 143 992).

A call for the development of new principles for counseling low-income blacks is made by one author (ED 189 290). Empathy and positive regard are necessary but not sufficient—an action-oriented system is thought necessary for this group. The effective counselor will also need to work with inventive outreach programs, find which media are hitting the intended target audience, and depend on collaborative networks of family, friends, former clients and community resources to gain the participation of minority career changers (ED 193 542).

Refugees from Southeast Asia and other non-English speaking countries who need to enter the labor force pose a different set of problems. The barrier of language makes questions on the selection of intervention strategies pale by comparison. Language is considered a more difficult barrier for older minorities than for their younger counterparts (ED 189 290). Language classes, leadership training, and help with functioning in society (e.g., money management and health care/facilities) make the development of workshop content different from that offered to largely middle class midcareer changers (ED 146 013).
Minority groups, older workers and women are victims of stereotyping and discrimination (ED 261 123). Persons wrongfully discharged or subjected to discrimination in the workplace need to be informed of their rights to seek legal redress and how to negotiate the governmental structure to do so. While essential to the career change facilitator, this information has not yet found its way into most career counseling curricula.

Tools

The assessment devices which have received wide usage in career counseling with high school and college age youths may be inappropriate or useless with an older population. There is general agreement that the body of knowledge or assessment of adults is not adequate (ED 189 290). Several new devices or aids are discussed in the literature. Examining life and work histories is seen as more effective than objective paper and pencil approaches (ED 149 996). Interviews more accurately assess the interests and values of a group which have significant life experiences. Identifying and clustering the already developed skills of this population has become one of the key tools for adult career changers.

Standardized tests and interest inventories may appear trite or contrived to an older population. In addition, such issues as face validity, available norms, and sexually and racially biased items may make their use especially inappropriate with several adult target groups. These issues are often ignored by practicing career counselors of all age groups. When reentry women, displaced homemakers, or both men and women who are seeking to escape their earlier stereotypic choices are the targets, the use of biased tools is especially unfortunate. The National Institute of Education's two publications, *Sex-Fair Interest Measurement: Research and Implications* (Tittle & Zytowski, 1978) and *Issues of Sex Bias and Sex Fairness in Career Interest Measurement* (Diamond, 1975), offer lucid expositions on this topic.

Adult career changers lack mobility and have many barriers to freely selecting new career choices. Tools which consider confinement or barriers are included in several workshop models for this group (EJ 261 123, EJ 249 756). An interview worksheet developed for older adults also has broader possibilities for application (ED 193 673). The device...
examines characteristics of the transition, such as cause, timing, degrees of stress, characteristics of the environment (e.g., support network and family relationships) and characteristics of the individual (e.g., health, psychosocial competency, expectations and experience).

It was noted earlier that career changers were low on the congruence between their actual work and their expressed work needs. The Work Adjustment Theory and the group of questionnaires developed to operationalize the theory are used in a manner which might be replicated with career changers in determining congruence possibilities (EJ 084 229). An occupational expectation inventory gathers another new category of information about career changes; while only beginning to categorize these expectations, it has provocative possibilities (ED 091 550). Force field analysis is a technique which may help to diffuse stress when career change is impossible or change the frame-of-reference of the individual seeking greater job satisfaction (EJ 261 123).

The facilitator of adult career change, particularly if dealing with several target groups, needs a far deeper understanding of adult development and the complexities of the work place than the facilitator of adolescent career choice. If this group is to be served in an all-encompassing way, a wide range of additional skills must be acquired.

MODEL PROGRAMS

A comprehensive source book for the career guidance of women is designed to guide counselors working with women re-entering the work force or underemployed and career changing women (ED 205 717). A basic workshop model with modifications for minorities, nontraditional job seekers, faculties, and families shows the extensive character of this resource. The basic model supplies such standard content as goal setting and decision making, skill identification and transfer, educational information, researching techniques, resume writing and interviewing. It goes well beyond such standard topics, however, as it addresses assessment of current employment status, internal and external barriers, personal qualities and needs vis-a-vis job needs and satisfactions, action plan development and
negotiation skills. Each of the topical areas is bolstered with guidelines for facilitators, actual ready-to-reproduce handouts and evaluation forms. Activities that support the topics, such as force field analysis and negotiation, career alternatives for teachers, and internal and external barrier analysis give this resource potential for use with both male and female career changers. Techniques for recruiting minority groups, utilization of community resources, and determining the need for particular programs make this comprehensive guide an essential resource for career change facilitators.

A 99-page study of displaced homemakers effectively documents the need for services and the priorities providers might follow in planning to offer service to this group (ED 195 653). A progression of service, beginning with information, referral, outreach and publicity, is developed from a survey of the target population. Personal counseling, career counseling, job training and job development form the body of recommended services. Childcare and interagency cooperation are final requisites. According to a related survey, the type of service presently receiving highest usage by displaced homemakers is job/career counseling. Six detailed intervention models are found in the appendix of this resource.

When one member of a dual-career couple is offered an outstanding promotion, it may precipitate a crisis. Resolving that crisis in a win-win fashion is the thrust of a thoughtful and clearly presented model useful for one-to-one counseling settings (EJ 265 593). A three-step intervention plan uses interviews to assess the partners and the situation, their available resources and their coping mechanisms. Tools to aid with this interview—a clinical rating scale and a family grid—are described and referenced so that the reader may obtain copies or design adaptations. The second stage of the intervention plan, implementation, explores options and weighs alternatives, while the third stage, termination, aids the couple with the actual decision making, planning for its operationalization, and reinforcing it with one or more detailed activities. These activities are fully described for the reader.

Getting sufficient numbers of technologically skilled workers will be a major challenge to industries if, as predicted, half of the 1990 labor force needs to work at jobs which do not exist today. Career change assistance will have to be provided by industries. A model for industrial career-development assistance, one of few resources
directed to this most contemporary concern, contains the steps required and a narrative detailing their enactment (ED 208 169). The need to look five or ten years to the future to determine how many employees will be needed, the skills the employees will require, and the physical location where their jobs will be performed is considered by one technical industry as its starting point. Determining the resource pools and acting to insure that the pools meet industry’s needs through such programs as innovative recruitment and internal career planning and development programs is the next step described. A nine-factor internal career development program begun by this industry could be operationalized in other settings with the information provided by this reference.

Teachers who seek voluntary or are forced into involuntary career changes are the target group for a well-described three-hour workshop model for six to ten participants (EJ 239 997). Sessions include such basics as self-assessment, goal setting, decision making and sources of assistance. Developing a support network and expanding one’s understanding of opportunities that build on the skills acquired during teaching are the strengths of this model. The program has potential for those leaving library science, nursing and other traditionally female career options as well. The authors list several areas that need to be researched if this target group is to be effectively assisted with career change. Follow-up studies of changers in this population and annotated lists of relevant resources are among the suggestions they offer.

Two training manuals emphasize skills for use with older job seekers. An excellent overview of this target group prefaces chapters on planning programs and selecting and leading exercises (ED 209 615). Group exercises which prepare professional helpers to work with older people are poignant and worth adopting in basic counseling curricula (ED 193 753). Career development concepts are integrated with research on the needs of older people in a second set of exercises that also merit broader adoption. These two manuals break new ground in assisting older job seekers, and both appear to be based on in-depth experience with the target population. In the first publication, candid comments about participants’ reactions and successes spice the recommendations which accompany an eight-part series of structured group training modules for career management. Similar vignettes are also provided in conjunction with activities in the second manual.
The staff development module designed for those who work with persons facing transitions is a comprehensive reference on developing coping skills (ED 182 676). It includes goals and objectives, outlines, background readings, activities, a guide for presenting the content in workshop format and assessment suggestions. The author's approach is based on self-management theory. He suggests that individuals can control some aspects of their environment in a manner that impacts on aspects over which their control is impossible. The focus throughout the publication is the work environment.

NEEDED RESEARCH

Three general categories of research are suggested by the foregoing review: the job market, the career changers, and the processes used to assist them. With the rapidly changing occupational environment and makeup of the workforce, little up-to-date research on the development of contemporary workers exists (ED 189 290). One researcher noted that of 522 guidance-related studies during a recent five-year period, only 41 related to career information and two to job availability (ED 171 977). New studies need to be conducted on the typical entry, intermediate, and final occupations of workers according to their socioeconomic status. The cataloging of barriers faced during careers, broken down by age, sex, and social class, is another database which would assist those working with career changers. Follow-up studies on the changers are another missing source which could be useful to both career changers and facilitators. Are teachers or similarly displaced workers satisfied when relocated into new fields—how do they view their change process and what assistance could they pass back to their former co-workers (EJ 239 997)?

The effectiveness of services for career changers, of paraprofessional and professional providers of services, and of the modes, processes and content is a second area which needs additional research data. This area is considered a most vital one—despite the proliferation of programs, there is little hard data on the impact of the various types on
the populations served. It should be noted that most reports of effectiveness cited in this paper have been derived by primarily subjective surveys as opposed to objective experimental techniques.

A third area of research should be directed at better understanding the changer. The need for empirical studies of adult development remains. The finer gradations of adult development such as the career development of minorities and women are still insufficiently researched. Whether there are personality characteristics which precipitate voluntary career changes remains an unanswered question (ED 195 652, ED 189 290, ED 143 992).

As a summary to this research section, the dearth of research on and intervention programs for the technologically unemployed worker is noted. Undereducated, used to receiving the higher wages of unionized heavy industries, these workers are reluctant to leave the metropolitan areas in which their families have lived for a generation or more. The industrial giants that once employed them have drastically decreased their need for these employees by the use of robots.

CONCLUSION

In the last decade women re-entering the job market and men seeking midcareer change made up the largest percentage of career changers. Dissatisfaction with present employment, changes in family structure, and physical or job obsolescence precipitated most of their changes.

Users of services for career changers have been predominately middle class, middle-aged, and white. Those services considered most effective have placed changers into meaningful groups using such criteria as demographic characteristics, life stages and reasons for making changes.

While adults appear to seek out program formats they are comfortable with, they indicate a preference for information prior to involvement in a program, but then weigh one-to-one counseling on self-related topics as the most valued part of a program after their involvement. Basic career guidance processes are combined in numerous
ways to form programs for changers. The programs can be loosely typed according to existential focus (whether preventive, anticipatory or crisis-oriented), client needs (whether personal or career-oriented), and underlying theory (whether decision making, self, social learning or developmental).

Professional training and experience working with adults are necessary but insufficient preparation for career change facilitators. Additional background in adult development theory, procedures for managing change, strategies for entering and progressing in organizations, and the needs of special groups—as well as maturity and diverse life experience—typifies successful facilitators.

Career Change Likely to Increase

Technological, social and economic changes suggest that even more career change will be required of or elected by workers in the present decade than in previous decades. In a society more static than the rapidly changing post-industrial present, a single set of skills could carry one through a "work life." Workers entering today's labor market will need to acquire several sets.

Technology is viewed as the underlying the increasing rate of change (ED 197 066). Skills taught by present-day schools, for example, become obsolete and nontransferable by students in later life, and the need to update skills at midlife now affects the semi-skilled as well as the highly skilled worker. The concept of half-life describes the speed with which education for a profession loses its applicability (EJ 112 248). While half of what an engineering graduate learned was no longer applicable after 12 years in 1940, the half-life for engineering had shrunk to five years in 1970. Future change will include even greater use of automation and may increase the size of yet another sub-group, the technologically unemployed (ED 220 614).

"Displaced homemakers," "age discrimination" and "burnout," all terms of the 1970s, serve to illustrate the dramatic rise in divorce rates, the desire of an aging population to remain productive, and the increasing emphasis on job satisfaction and self-fulfillment. A combination of longevity and growing proportions of working women will act to drastically increase the size of the work force (ED 220 614). As a result, young people will find it increasingly
difficult to move into work which meets their expectations immediately after their educational programs. They will be forced to make a longer series of moves as they seek to reach their occupational goals.

Sectors such as government were relatively immune to economic reverses in past decades; because of the intensity of the recent economic cycles, all sectors' workers, whether white or blue collared, now experience the impact of unemployment in midcareer. Economic growth, according to some futurists, will slow as energy costs rise and raw materials become more scarce (El 220 614). Those able to anticipate technological, social and economic changes and effectively modify their careers throughout their work lives may be less likely to find themselves among this country's poor. Given the complex occupational structure, the speed at which changes in that structure occur, and the prospect of a less stable economic future, adults' need for assistance with making career plans will become more critical than it has been and will recur throughout their lives.

Numerous models described in this review provide concrete bases from which to launch career change assistance programs or revise existing ones. While the models address a general public, a trend toward adaptations that focus on specialized groups is noted. Those actively working with adult populations or educating others for this prospect cite the need for research on program effectiveness and the need for tools and approaches that would improve programs for specialized groups. Career counseling, often the less preferred stepchild of the areas of concentration available to counseling students, thus has the potential to affect the lives of most Americans.

Effects of Conceptual Level and Supervision Structure on Counselor Skill Development.

Terry, Kathleen Stirrett; Stone, Gerald L.

Journal of Counseling Psychology, v27 n5 p500-08 Sep 1980

Reprint: UMI

Language: English

Document Type: JOURNAL ARTICLE (080); RESEARCH REPORT (143); GENERAL REPORT (146)

Effects of conceptual level and degree of supervisory structure on training in reflection of feeling were investigated. Self-report measures supported predictions for low conceptual level participants; behavioral measures yielded minimal support. Supervised trainees improved minimally on quantitative dimensions and significantly on qualitative dimensions of reflection of feeling. (Author)

Counseling Middle-Aged and Older Workers

Tomita, Kiku

Journal of Employment Counseling, 12, 3, 100-105 Sep 1975

Language: ENGLISH

Case studies are cited in which applicants were assisted by the counselor in assessing their experience and abilities and relating them to the job market. Types of cases discussed are retirees wanting to return to work, homemakers reentering the business world, and men and women seeking a change of occupations. (Author)

Language: English
Document Type: POSITION PAPER (120); PROJECT DESCRIPTION (141); CONFERENCE PAPER (150)
Geographic Source: U.S.; California
Journal Announcement: RIFOCT81

After examining societal factors that shape the role of vocational education, this paper presents instructional delivery and faculty development models designed to meet the vocational education needs of contemporary society. The report first identifies, as part of a model for educational viability, three forces affecting vocational programming: society's demands for a trained workforce, the individual's demands for fulfilling employment and upward mobility, and the subject matter taught in response to the demands of both. The interaction of these forces is then examined in an historical review of the development of vocationalism in American higher education. A discussion follows of forces currently affecting vocational education, including increasing fiscal conservatism and the diversity of students and their needs and demands. The paper then presents four models for increasing educational effectiveness: (1) a student achievement model, which depicts student success as a function of his/her ability to define and work toward personal goals; (2) a model for individualized instruction, which gears the instructional and adjunct operations of a college toward meeting the learning objectives of students; (3) a counseling model designed to increase retention by helping the student to set and achieve realistic goals; and (4) a faculty growth model, which provides incentives and support. Diagrams illustrate the models.

This review of the literature related to counseling women, based on a computer search of the ERIC database, emphasizes the need for decision-making skills to cope with social change and the women's movement. The influence of locus of control on decision-making is reviewed along with theories about motivational factors for women and students. Role perception, role conflicts, multiple roles, life satisfaction, midlife career changes, and reentry problems are discussed, and programs designed to cope with these changes are described. Implications for counselors are also suggested. The document concludes with the actual annotated computer search used for the literature review. (JAC)

This document is one of three monographs resulting from a three-year study of adult counseling programs and practices in the United States. The first section of this monograph describes issues and potential problems associated with adult counseling and adult life transitions, such as divorce, midlife career change, preretirement planning, and leisure. For each area, three field-tested activities that counselors can adopt or adapt for use in their work settings are included. The second section provides an overview of adult development and adult counseling. Generalizations are presented regarding both the adult experience and appropriate adult counseling behaviors. For each concept, implications for the adult counseling profession are included. A brief summation of adult counseling is followed by extensive lists for the four selected life transitions and for the adult experience in general to offer more in-depth reading and practical counseling materials. (Author/NRB)

Descriptors: Adjustment (to Environment); Adult Counseling; Adult Development; Career Change; Coping; Counseling Techniques; Counselors; Divorce; Helping Relationship; Leisure Time; Midlife Transitions; Retirement

career-related services of 44 learned and professional societies in the humanities and social sciences in the United States. In October 1980, 44 organizations responded to a written questionnaire asking for information on a wide variety of issues and topics connected with career-related services. In addition, when possible, follow-up telephone conversations took place and societies provided additional information and written materials. Among the general findings are (1) small organizations have the most difficulty committing resources to career needs yet have the best record of coordinating their employment efforts; (2) most career services are directed at academic appointments and at entry level positions; (3) many societies provide special services for women and minorities; (4) there is a genuine collaboration between some societies serving the same disciplines and concerted effort to avoid duplication of services; and (5) there is a similar, consistent approach to the topic of career-related services among the more active societies. Although learned societies cannot correct the job market, they can do more to provide collective and balanced assistance to struggling jobseekers, especially nonacademic employment. Appendices contain a list of the organizations surveyed, a chart of the extent of staff and committee service to career-related activities, and a chart of the career-related services. (NE)

Journal Announcement: RIEJ90

The Career Life Assessment Skills Series (CLASS) project was designed to increase the career, self-assessment, and counseling programs available to adults in the Northern Virginia area. Workshops, audiovisual materials, and booklets were developed by Northern Virginia Community College (NVCC) on the following eight topics considered necessary for the fulfillment of the vocational and educational needs of area adults: unique self, job market investigation, job campaign strategies, job keeping and revitalization, the federal employment process, academic survival skills, mid-life and career transitions, and pre-retirement planning. This project report begins by describing the goals and design of CLASS and the adult population to which the project was targeted. Next, a chronological time schedule covering August 1980 through June 1981 outlines the CLASS activities. The results and accomplishments of the project are then delineated in the areas of fall, winter, and spring 1980-81 workshops; the development of booklets and audiovisual materials; acquisition of written materials; publicity; professional development opportunities; travel and outreach; and project evaluation. The final section presents conclusions, implications, and recommendations. Extensive appendices contain publicity fliers, resource lists for the eight workshops and booklet topics, a news release, a guide to resources at NVCC's Career Center, and a workshop evaluation form. This training manual is designed to increase the interviewing, counselling, and placement skills of counselors in public agencies who work with older clients seeking employment. Information concerning the needs and concerns of older people is included, focusing on training to enhance individual and group counseling skills as well as structured training in group methodology for job-search, problem-solving, and job development skills. The materials provide an overview of the training program, its goals, objectives, and needs assessment followed by: (1) plans for developing the training program; (2) activities and exercises for learning about gerontology and older workers; (3) an interpersonal skills package for enhancing intergroup processes; and (4) an eight-part series of structured group training modules for career management. The appendix contains sample needs assessment, activity, and evaluation forms. (JAC)

Reshaping Faculty Careers.
Furniss, W. Todd
Document Not Available from EDRS.
Language: English
Document Type: BOOK (010); POSITION PAPER (120)
Geographic Source: U.S.; District of Columbia
Journal Announcement: RIEAPR82
College teaching is examined in the context of the institution and the society that has changed socially and economically. Patterns typically followed by academics are noted, and the following influences are addressed: inflation, declining enrollments, the age distribution of faculty members, the notion of autonomy of faculty members, faculty members as entrepreneurs, accountability pressures and bureaucratization of an institution or systems of institutions, and government regulation and colleges. Theories of adult and career development are reviewed in terms of their usefulness in guiding decisions affecting today's faculty members. The extent to which a college or university could support career development or assessment activities for its faculty and staff members would relate to questions about effectiveness, reliability, and costs. Characteristic cases of seven faculty members whose careers illustrate difficulties academics may face at several stages of their lives are considered. Institutional approaches to resolving some of the faculty members' difficulties, and approaches taken by faculty members themselves, are examined, along with steps that may benefit younger faculty members, professors in mid-careers, and those approaching retirement. Dilemmas facing those who may wish to alter traditional career patterns and recommendations addressed to faculty members, institutional administrators, trustees, and others are also considered. A bibliography is appended. (SW)

This document is a guidebook for counselors working with Black and Hispanic American women, women reentering the workforce, and unemployed/career-changing women. The monograph contains workshop designs, activities, checklists, readings, techniques for recruiting women, and other community outreach suggestions. Topics covered include evaluation, developing an employment resource and training service, suggestions for conducting a self-directed job search workshop, and the basic model workshop for employment skill training for the underemployed or career-changing women. Modification workshops are suggested for the minority career seeker, the job seeker, the re-entry woman, the nontraditional job seeker, faculty, and families of women employment seekers. Materials provide a step-by-step procedure for conducting the workshops. Many handouts or forms that can be reproduced and given to participants are included, along with a bibliography.

The four papers in this document consider alternative programs and innovative models and techniques concerned with career change and its impact on vocational education. In the first paper, do Shuchat addresses the issue of what vocational education is and is not doing to accommodate the increasing interest in nontraditional job training, and provides practical tips for getting women into nontraditional vocational programs and keeping them. In the second paper, Thomas Scanlan describes a project on entrepreneurship education at the University of Illinois, and includes several examples of strategies that can be employed in entrepreneurship education. Michael Sugarman's paper examines the phenomenon of career change and then describes how technical education preparation programs can possibly identify potential instructors. The final paper, by Charles Ryan and Robert Drummond, presents a description and analysis of an attempt in Maine to institute a statewide computer information system for career guidance. The papers were delivered at an open-invitation conference held at the University of Illinois, and includes several examples of strategies that can be employed in entrepreneurship education.

Government:  State
An estimated 64,490 displaced homemakers (primarily middle-aged women who have been full-time homemakers but who have lost their source of support through divorce, death, or abandonment of a spouse) live in Connecticut, and many of them need job services. Counseling, assertiveness training in order to find jobs and lead self-sufficient lives, a survey found. The survey was conducted via a mailed questionnaire to 400 social service agencies or groups, asking them to describe their services to their clients. From the 133 responses received, 60 agencies were selected to receive a more detailed questionnaire, to which 45 responded. In addition, a profile of displaced homemakers was drawn from an analysis of 4,500 files of women clients of The Counseling Center over the past ten years. Responses from the agencies indicated that at least 90 percent of their women clients lack skills, self-confidence, recent paid work experience, training, or education needed to obtain a job. Other problems faced by at least 50 percent of the women include lack of adequate child care, lack of transportation, emotional problems, age discrimination, low motivation, lack of available training, and lack of after-school care for children. The survey also showed that displaced homemakers frequently used job services and support services when they were available, although such services were provided for only a miniscule number of women. The report recommends increased services and increased funding for existing services. (KC)

PROBE, Potential Reentry Opportunities in Business and Education, is a program designed to assist people, primarily women, who are reentering the labor force or school after working in the home for a number of years. Funded by the Higher Education Act, Title I, and administered by the Pennsylvania State University, PROBE is based in Dauphin County Library, Harrisburg, Pennsylvania. The program has two primary components. The counseling/networking component includes information/referral counseling, a job availability service, a resource center, workshops, and support groups. The business/industry component consists of employer contact, information sharing luncheons, and seminars. During the first year (May 1978-April 1979) contact has been made with approximately 850 people. The majority of participants have been women. More women than anticipated have recent job experience, but they want or need job or career changes. PROBE is seen by these participants as being able to help by (1) giving information, (2) one-to-one counseling, and (3) job hunting, self-awareness, job survival, and family engineering workshops. Using Career Development Theory to Help Older Persons.

Geographic Source: U.S.; Florida Journal Announcement: RIEMARR1

This conference presentation describes a program designed to help counselors integrate career-development concepts with research on the needs of older people. The first part deals with the effects of loss, transition, and change on the concept of the older person. The second part reviews assessment studies of older people and presents a sample interview worksheet to help counselors assess how well an individual is adapting to a career transition. The third and final part presents group exercises to prepare counselors and other professional helpers for work with older people; case studies of older people who are undergoing the physical and emotional changes associated with aging, and who are experiencing emotional adjustment problems centered on loss and career transition, are keyed to specific psychosocial theories from which counseling strategies are derived. (CS)

blacks and other minorities have a more difficult time choosing and pursuing a career at mid-life than does minorities. Lack of access to a wide range of career options is one problem. Minorities at mid-life may have a narrow view of the range of available jobs. A limited educational background is another problem. Most minorities interested in changing, or upgrading a career at mid-life did not receive necessary training and experience in their early years. Lack of information about career options, lack of self-confidence in academic ability, lack of funds, and lack of adequate counseling all contribute to limited access to educational opportunities during mid-life. In order to help, counselors must make minorities more aware of counseling services which are available and would be beneficial to them. Counselors must have information about education and jobs, and be able to fit opportunities with client needs. One-to-one counseling is most effective with low-income clients. The use of tests in counseling must be carefully explained since many adults fear tests and lack test-taking skills. (NRB)

This monograph presents articles and materials which examine the relevant theoretical literature pertaining to career counseling services for adults. It reviews alternative ways to deliver career guidance to adults and identifies a set of researchable issues. The two articles in section I, The Context, address the historical development of people and work and look at key policy considerations affecting adult career/occupational services. Section 2, The Theories, consolidates and examines pertinent adult and career development theories. A basic explanation of major ideas of key theorists is made. Another article discusses basic themes, theoretical issues, and interrelationships. An article follows that aims to improve current constructs for understanding adult career development. Section 3, The Clients, explores the known and potential recipients of career guidance. Following an article which discusses ways to think of special populations as a series of descriptions of the unique characteristics of some special adult groups - women, minorities, mid-life career changers, pre-retired and retired, and special workers, criminal offenders, and disabled workers. Section 4, The Programs, describes documented adult career guidance needs and programs being offered to meet them. Several articles focus on key issues of delivering services to adults, such as staffing and evaluation. (YLB)

Aslanian, Carol B.; Schmolter, Ivey B. Ed.

Available from: College Board Publication Orders, Box 2815, Princeton, NJ 08541 ($9.75).

In an effort to help colleges and universities meet the needs of the growing portion of the adult American population seeking postsecondary education, this handbook provides guidelines for the establishment of adult career centers. Although not prescribing a single model or instructing in counseling techniques, the handbook defines overall goals and objectives, provides a framework for planning, generates ideas, identifies choices, indicates strategies and sequences that have worked for others, and suggests practical solutions to common problems. Eight chapters address these areas: (1) objectives; (2) services and methods for offering them; (3) career materials collection planning and accumulation; (4) facilities planning including a floor plan of an existing center; (5) planning and selection of staff; (6) finance, and the integration of budget and program planning; (7) marketing goals and methods; and (8) program evaluation. Sample checklists, reports, outlines, and budgets are included throughout.

This staff development module is part of one of three groups of career guidance modules developed, field-tested, and revised by a six-state consortium coordinated by the American Institutes for Research. This module is designed for adults in helping roles who are experiencing or anticipating life transitions affecting their careers, or who work with others facing such transitions. The goal of this module is to help participants develop skills in coping to order to manage change in their work environments. The module format consists of an overview, goals, objectives, outline, time schedule, glossary, readings, skill development activities, and bibliography. A Coordinator's Guide is also included with detailed instructions for presenting the module in a workshop setting as well as the facilitator's roles and functions, and the criteria used in assessing the participants' achievement of module objectives. This two-part sourcebook presents an overview of career counseling services as revealed by a survey of member institutions of the American Association of Community and Junior Colleges and profiles the career education activities of 90 institutions in 33 states. Part I includes the survey findings in relation to: (1) the availability of nine career education program components (e.g., career resource center, collaboration with community colleges, career change services, work experience opportunities, career information in liberal arts, career educational staff development, and breaking career stereotypes); (2) the availability of 16 specific career services to students; (3) the types of populations served and their needs; (4) the outside groups used by the colleges in their career programs; (5) the career education programs available for college staff; and (6) the types of outside assistance these colleges need to maintain their programs. The program profiles presented in Part II provide general college information, including location, enrollment, and student characteristics; career program information, such as populations served, number of staff, date established, the availability of program-developed materials and information and assistance, and the names of contact persons; and a brief narrative describing the program (160)

The Federal Aviation Administration's (FAA) retraining program is for air traffic controllers who have been removed from their jobs due to either operational or medical disqualifications. The FAA's retraining program is designed mainly for those adults who have completed their child rearing and related family responsibilities so that they may enter the job training program with their child rearing responsibilities solved. In the England program, primary emphasis is placed on such in-job training situations for clients. According to follow-up questionnaire responses, 25% of the program graduates are currently employed. (Interviews with program participants which represent a variety of career choices and training situations are included.)

This case description portrays the educational programs of the National Association of Bank Women designed to meet the special needs of women seeking advancement or career changes in the banking industry. After sketching several shorter programs, the case elaborates upon the collaborative Baccalaureate Degree Program in Management for Women, which is offered at Simmons College in Boston, Mundelein College in Illinois, and Pitzer College in California. This program combines liberal arts, management education, and special training in attitudes and skills less common for women than for men aspiring to executive positions. The program also concentrates college residential requirements in two-week, semi-annual institutes and allows bank women to obtain credits by means of transfer courses, prior work experiences, and independent study. With these credit vehicles and the cooperation of their banks, women can work full-time and still complete the degree in three years. (This case description also includes examples of students who are participating in the management degree program.) (LRA)

This case history describes the Washington State Career Change Program which is designed to respond to the career needs of unemployed residents who have been laid off or unable to continue their jobs as a result of economic, technological, or health factors beyond their control. The career change program assists these individuals in identifying new career objectives, acquiring job-seeking skills and short-term career training, and in finding viable employment in their chosen career areas. In addition to discussing the overall structure and goals of the program, this case also describes the services offered by the nine contracting agencies which implement the program across the state. There is also a delineation of the program's strengths and weaknesses which have been identified during the first two years of operation, as well as a discussion of changes which are anticipated in the future. The program is operated by the Washington Employment Security Department and is funded through the Comprehensive Employment and Training Act and state funds.

This case history describes the Tektronix, Inc. program of career fulfillment for its 11,000 employees. The study is divided into seven major sections. The first four sections deal with the purpose and philosophy of the program, history and company culture, organizational structure and staff, funding and resources. The fifth section presents mechanisms facilitating employee career mobility. Included in these are the following formal and informal components: (1) traditional informal career discussions with the employee's manager or equivalent; (2) pilot programs to make career counseling more formal and accessible to employees; (3) formal education and training offerings, as well as educational counseling; and (4) an expanded job posting system. The sixth section contains examples of nine career changers at Tektronix. The final section discusses future possibilities for increased employee career change options. (LRA)

As a product of the Career Change Project by the Technical Education Research Centers, this book describes specific career change programs currently operated by a variety of organizations and includes other information relevant to career change. The book is divided into six major sections. The first section is an introduction which includes chapters on career change in perspective, a career change model and support services, and identification of career change programs. The second section of the book describes four career change programs in business and industry. Section 3 discusses three programs in educational institutions. Three programs for career change in government agencies are presented in section 4. The fifth section discusses two programs which are organized by professional associations. The final section of the book presents a short discussion of other career change programs throughout the United States and briefly describes two current career change research projects. (A more detailed description of the career change programs discussed in this book may be found in the project's case histories—see note.) (LRA)

The Lifelong Learning Center at the Reading Public Library
conducted a study to determine how the clients perceived
various aspects of the center's activities in terms of their
needs and expectations. A survey was mailed to 329 clients;
the response rate was 51%. Survey questions asked about (1)
clients' satisfaction with access conditions, staff
interaction, and information exchange; (2) clients'
recollection of importance of needs and information at the
time of contact; and (3) clients' perception of the outcomes
and importance of the outcomes. Other questions concerned
the clients' view of "how it all turned out," feelings about life
generally, reactions to antonyms, and readiness to recommend
to others. Interviews were conducted to determine how the
experience fitted into the person's life. Analysis of
responses revealed that persons who received either counseling
or information reported high satisfaction levels with services
accessibility, information quality, and staff relationships. The
most valuable center asset was perceived as the
interpersonal staff exchange. Outcomes included 69 enrollments
in colleges, schools and courses and 32 reportedly favorable
job adjustments. No serious program omissions were uncovered.
There was a high level of satisfaction with the program's
development and readiness to recommend it to others. (The
survey instruments are included) (CSS)

A study was conducted to assess client reaction to key activities of the Lifelong Learning Center (LLC) of the Free Library of Philadelphia and to identify particular patterns of client interest. A survey was developed to determine (1) clients' satisfaction with accessibility of services, quality of interaction with staff, and information provided; (2) clients' perception of their needs at first contact with the LLC; and (3) clients' reported outcomes developed from their LLC consultation experience. Other questions were asked about the clients' outlook on life, the LLC contact "all turned out," and if the client had encouraged others to participate. From a random sample surveyed by mail, 51% (162 clients) responded. Most respondents were in their mid-twenties: 74% were female; 45% were married; and the average of schooling was two years collegiate experience. It was found that there was considerable satisfaction with the existential dimensions of contact with the LLC particularly with counseling. Employment-related concerns were ranked highest; this suggests the possibility that client expectations were focused on the immediate employment situation. Of the 162 respondents, 128 reported an action outcome; 60 persons reported starting or changing jobs; and 68 reported enrollment in some educational activity. (CSS)

Journal Announcement: RIENOV79

In order to learn how people may alter or reconcile their aspirations and jobs during their career development, this study examined the match between vocational aspirations and actual jobs of white young men and older men. Age trends in the match between vocational aspirations and actual jobs were studied in a nationally representative sample of 3,730 white men aged sixteen to twenty-eight who were interviewed yearly over a five-year period. Findings indicate that as the youth aged, higher agreement between jobs and aspirations (classified according to Holland's typology) occurred. In addition, the distributions of both aspirations and actual jobs differed with age. Larger proportions of the older men were engaged in enterprising work, and the distribution of aspirations, which at age sixteen diverged markedly from the distribution of jobs, resembled that distribution more closely by age twenty-eight. (Implications for changing strategies of vocational counseling and research are included.) (Author/LRA)

This study examines school-to-work transition services, encompassing educational and occupational information and guidance, as well as job placement, induction, and follow-up. Section 1 provides an introduction to the study and the study’s historical background. Section 2 concerns the organizational goals and forms of transition services. It uses a cross-country framework which draws on the experiences of Western Europe, Canada, the U.S., and other countries. Greatest emphasis is placed on the age group which enters work after lower or upper secondary education, but much of the discussion is equally applicable to young people’s transition to work from other settings, including the armed forces, corrective institutions, residential health-care facilities, or other special environments. Similarly, transitions from one level or type of education to another are covered. In section 3, orientation and information, the components of national information programs are discussed. Guidance and counseling development are observed in section 4, especially in several European countries. Section 5 examines initial placement: job-search and job-finding methods. It contains a discussion of how job-finding methods differ depending on such variables as sex, age and educational level, type of handicap, and minority status. Section 6 contains placement outcomes, and section 7 explains induction programs, both theoretical and practical. References conclude the study. (CT)

This literature review focuses on the role of the community college in meeting the needs of adults seeking assistance in mid-life career changes. Factors such as longer life spans, better health, increased leisure time, and greater emphasis upon the quality of life increase the need for mid-life vocational counseling, leisure counseling programs, widow/widowers counseling, and pre-retirement workshops, as well as the need for availability of lifelong educational opportunities. Family, job, and societal pressures can be seen to interact and produce four career patterns: routine (absence of career change), self-determined (career change because of desire rather than necessity), situationally determined (change brought about by outside pressures), and self-directed accommodation (change influenced by environmental pressures but shaped by individual choice). An assessment of the career pattern involved is one of the first steps in finding a second career, and one in which community college counseling programs should play a part. The effective accomplishment of the educational and counseling goals of a college requires the provision of services that meet the special needs and abilities of adult students, the organization of services into a pattern that is compatible with the character of the college, and the administration of services in ways that are mutually supportive. (A bibliography is included.) (MB)

This report deals primarily with the literature involving mid-career changes within the paid labor force. Changes from to paid employment and the career shift of the re who joins or returns to the labor force are considered, but shifts to unpaid work, volunteer jobs, and early retirement without a second career are not included. The focus of this examination of career change emphasizes a shift in the occupational field to a new career pattern. The information based on a literature review is organized in the following manner: definitions of mid-career change and other related terms; potential interest in mid-career change; historical, sociological, and psychological perspectives on work; theories of adult development and mid-life crisis; policy and reform; and programs to facilitate career change. Research recommendations conclude the report. Annotated bibliographies from several sources are included in the appendices. (BM)

This is a report of a survey of the career guidance and counseling needs of 401 representative in-transition adults in the United States. None were full-time students, and all were either undergoing or anticipating job or career changes. The survey determined that 38% of the American population between the ages of 16 and 65 is in a career transition status, and these adults are predominantly female, white, between 20 and 39 years of age, and married with one to three children living at home. Adults in transition want career services of all types, but are most interested in specific information on jobs, careers, or educational opportunities. Of all adults, the least educated express the greatest interest in services and are willing to pay for them. The adults were asked to indicate their degree of interest in various types of services: information, counseling, guidance and training. Generally speaking, when given the choice as to what kind of help they wanted with a particular topic, adults preferred information to the other three services. (PFS)

with incomes of $5000–15,000, of varied educational attainment. The few males using the service were single, under 30, with incomes of less than $10,000 a year. CEP clients were overwhelmingly satisfied with the service they received, with their counselors, and with the telephone as a medium of communication. They felt the Project had helped them accomplish their goals, improve their situations, and develop more self-confidence. The type of counseling considered most valuable was in the area of self-evaluation, goal setting, and career decision making. About half the clients indicated they would be willing to pay for the services they had received, but only a few would agree to pay more than $25. (PFS)

Materials contained in the 16 volumes that make up the Rural America Series suggest practices through which rural schools can meet local community needs and realize their potential for career program delivery. This handbook, one of five in subset C, describes a variety of school based activities designed to assist students in accomplishing that aspect of their career transition related to locating, securing, developing, maintaining, and evaluating their selected career objectives. The placement process is approached from both programmatic and individual student points of view. The programmatic component stresses providing activities, services, and resources that have the potential for benefiting all students. The individual component stresses ways of meeting each student's unique placement needs. Each element of the placement program includes both student activities and school/community activities. Suggestions are also included for staffing a placement program, selecting program objectives, and evaluating the school's effort in placement. (TA)

Following a brief introduction by the editor, four symposium papers are presented on continuing the development of career: "Career Development in Adults. Why do People 35 and Over Change Jobs?" Nancy K. Schlossberg; "Applying Vocational Theory to Adult Problems," John L. Holland; "Career Development of Adults: Why, When, Where, How," Elinor Waters; and "A Philogenous Proposal: Up With Women," Mary Lou Randour. Dr. Schlossberg discusses the causes of mid-life career changes emphasizing that they do not necessarily relate to job loss or the downgrading of opportunity. A framework is presented for understanding adult career development and planning career development programs. John L. Holland's paper summarizes his developmental and structural theories on vocations. Several suggestions are presented for the practice of vocational guidance in mid-life career development. Professor Waters describes a six session career development program for adults. The clientele, format, and course content are described. The final paper by Dr. Randour discusses sex discrimination problems and the needs of women in the world of work. A solution suggested in Dr. Randour's paper is the creation of a child service educational reward system based on the concept of the Veterans Administration educational benefits. (Author/BP)

The book is intended as a manual for the reader who has some career or job questions. Exercises (such as questions to answer and charts to complete) are provided for independent use by the learner who may then be able to use the data generated to make decisions, to get opinions from significant persons, and to act upon what has been learned. Topics considered in the book's nine chapters are: how to use the book, getting information on jobs and self, developing life plans, getting more information on personal skills, beginning to make a decision, writing a resume, participating in interviews, finding a job (with suggestions especially for college students, managers and executives, and women), and finding a government job. Appended material includes 13 articles related to career guidance, career change, and job searching; sample resumes; and feedback pages (for sending information to the author). A 53-item bibliography concludes the book. (Author/MS)

Document Type: RESEARCH REPORT (143)
Journal Announcement: RIESEP76
The report describes a University of Illinois project which designed and field-tested computer-assisted adult counseling centers. These centers offered counseling for persons seeking to make career changes, to continue their education, or to leave the home and enter the labor market. Computers provided comprehensive data bank of information on occupational and educational opportunities, while counselors performed the essential roles of identifying obstacles to educational or career goals and of planning ways to overcome these obstacles. The theoretical basis for the design of the centers is adapted from Tiedeman and O'Hara, wherein services are built around the developmental tasks relevant to the educational and career needs of adults. A six-step method to guide the counselor and client in self-study planning is outlined. The four major components of the information system—educational information, occupational information, self-information, and guidance information—are described in the report. (NJ)

Journal Announcement: RIEOCT74

This paper describes a guidance program for students who are
multipotential people, i.e., they are able to adopt themselves and
develop the necessary specific skills to perform well in a
variety of occupations. The author disputes the traditional
method of counseling wherein the counselor attempts to
identify single talents of the counselee. Instead, he contends
that today there is a premium on adaptability in today's world
of work. Shifting manpower needs, the geographic mobility of
industry, and automation all contribute to the importance of an
ability for vocational adaptability among today's work force.
Research in the area of vocations has more often focused on permanence of choice rather than mobility and transition between occupational choices. Although, according to Super, "each person has the potential for success and satisfaction in a stated number of occupations," research in this area has been sadly lacking. A career counseling process which supports the concept of multipotentiality will be better able to help the client anticipate change in his career coupled with the need to develop other abilities. The author concludes by describing the multipotential approach as having five phases: (1) readiness, (2) awareness, (3) exploration, (4) reality testing, and (5) confirmation. (Author/HMN)

A man's work shapes him far more profoundly than any other
single influence in his life. There are many ways in which a
person can find himself in the wrong job, but time, thought, and action invested before accepting a position can help the
job seeker avoid many of the common errors. The introductory
letter and resume can make or break a career. Beyond that
point, success in the business world can depend on being able to anticipate change and move against the tide. Be aware that there are many career mistakes which can be made and business myths that can be destructive. The role of psychological testing in finding the right job is significant, but not necessarily absolute. Certain basic questions relating to a
person's job should be asked periodically and the answers evaluated carefully. The desire to achieve can mean the
difference between becoming an executive and existing forever in the middle ranks. The author, in discussing these concepts and illustrating them with numerous case examples, attempts to identify the kind of success necessary for personal satisfaction. (AG)

The author suggests alternatives to chip away at occupational traditionalism and vestigal hang-ups shared by men and women about women in the world of work, and which encourage the development of programs to ensure that equal opportunity will be a reality. Background statistics are presented which indicate that women are increasingly entering the world of work, but are increasingly concentrated in the relatively less skilled, less rewarded, and less rewarding fields of work. Restrictive hiring practices and subtle forms of discrimination which still persist based on old myths about women's capacities, performances, their work life expectancy, and their absence rates are cited. Several ideas are recommended for counselors. Among these are: special careers' nights for girls and their parents to broaden the perspectives of both on their work horizons; more and better occupational information designed to erode the stereotype; and encourage a wide range of occupational choice; stimulate early interest in developing individuality of girls; use of parent conferences to help parents understand changing roles and changing choices in the career decisions of girls; and use of co-educational group counseling sessions to explore attitudes and expectancies. Journal Announcement: RIEFND71

A roster of all persons who perform rehabilitation counseling in the United States was compiled, and random samples of 40 each were selected from 25 sampling cells representing the total population of 4,559. Case records, job histories, early career aspirations, and education were mined in order to place the rehabilitation counselor in the second or first career group. Second careerists were considerably older on their entry into the profession than the first careerists. Their modal entry age was 35 to 39 while the modal age of the first careerists was 25 to 29 years of age. Significant differences in undergraduate grade averages were found. Over 60 percent of the second careerists had grades of B or better, while over half of the first careerists were admitted with grades of B or below. Over half of the second careerists had majored in education or the humanities, and nearly 50 percent of the first careerists had college majors in sociology, psychology, or social work. No difference was found in the rehabilitation counselors' place of work. Equal percentages of the two groups worked for the three most frequent employers of rehabilitation counselors--the Veterans Administration, private agencies, and Federal and state offices of the Rehabilitation Services Administration. (BC)

Overview of Needs, Programs, and Implementations of Vocational Counseling and Guidance.

Kunze, Karl R.

EDRS Price - MF01/PC01 Plus Postage.

Language: ENGLISH

Journal Announcement: RIEJUL69

The author begins by overviewing some recent criticisms of the vocational guidance field: (1) too little collaboration with industrial personnel; (2) an emphasis on processing masses of people rather than on the individual; and (3) the need for a systems approach to counseling. His impressions, from the vantage point of industry (i.e. the placement end of the vocational counseling segment), suggest flaws in the educational-counseling system, resulting in inappropriate, inexperienced, and unqualified job applicants. The differences between a counseling approach and the industrial personnel approach to job seekers/holders are enumerated. Trends and circumstances which may affect the infusion of counseling into industrial relations systems are discussed. The paper concludes with a consideration of "lifelong counseling" wherein adults would have vocational counseling throughout their work histories and even into retirement. (TL)

Theories of Career Development. A Comparison of the Theories.

Osipow, Samuel H.

1968 16p.; This abstract encompasses only Chapter B, A Comparison of the Theories, pages 220-233.

EDRS Price - MF01/PC01 Plus Postage.

Language: ENGLISH

Journal Announcement: RIEJUL69

These seven theories of career development are examined in previous chapters: (1) Roe's personality theory, (2) Holland's career typology theory, (3) the Ginzberg, Ginsburg, Axelrod, and Herma Theory, (4) psychoanalytic conceptions, (5) Super's developmental self-concept theory, (6) other personality theories, and (7) social systems theories. Osipow contrasts them with regard to their strengths and weaknesses by two general criteria: Formal adequacy subsumes: (1) explanatory adequacy, (2) empirical support, (3) generally, (4) logical consistency, (5) operational adequacy, and (6) logical consistency. The understanding of career development includes:

(1) normal development, (2) problems in career development, (3) facilitation or modification of career behavior, (4) critical periods and agents, (5) the role of interests, (6) the role of aptitudes, and (7) the role of the family. Osipow evaluates not to find the superior theory, but to show in which context each is most likely to be useful. He finds them generally lacking in formal adequacy, and finds differences between theories in choice of emphasis, suitable research methods, and the degree that relationships between events are specified. (BP)

NOTE: - Orders for 33 or more microfiche and all orders for paper copies PC will be shipped via United Parcel Service unless otherwise instructed.

Revised October 1982
GENERAL INFORMATION

1. PRICE LIST
The prices set forth herein may be changed without notice; however, any price change will be subject to the approval of the National Institute of Education Contracting Officer.

2. PAYMENT
The prices we have shown do not include any sales or other state or local taxes which may apply to the sale of microfiche or hard copy to the Customer. The cost of such taxes, if any, shall be borne by the Customer. Payment shall be made within thirty (30) days from date of invoice. Payment shall be without expense to CMIC.

3. REPRODUCTION
Express permission to reproduce a copyrighted document provided herein must be obtained in writing from the copyright holder noted on the title page of such copyrighted document.

4. CONTINGENCIES
CMIC shall not be liable to Customer or any other person for any failure or delay in the performance of any obligation or for damage sustained or delay in the delivery of any microfiche or hard copy to the Customer if such delay or damage results from acts of God, war, labor trouble, strike, lockout, fire, flood, or any cause beyond CMIC's control and without negligence on the part of CMIC or his servants.

5. LIABILITY
CMIC's liability, if any, arising hereunder shall not exceed the acquisition costs.

6. WARRANTY
CMIC MAKES NO WARRANTY EXPRESS OR IMPLIED AS TO ANY MATTER WHATSOEVER INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE

7. QUALITY
CMIC will replace products returned because of reproduction defects or non-compliance. The quality of the output document is not the responsibility of CMIC. Best available copy will be supplied.

8. CHANGES
No waiver or modification of any of the provisions hereof shall be binding unless in writing and signed by an officer of CMIC.

9. DEFAULT AND WAIVER
CMIC shall not be in default of any right, express or implied, if CMIC delays in the delivery of microfiche or hard copy, or if CMIC does not accept any shipment as ordered. CMIC may, at its discretion, deliver other shipments or defer or cancel any shipment without any liability for the same.

10. GOVERNING LAW
This Agreement shall be construed to be between merchants. All questions concerning its validity, construction or performance shall be governed by the laws of the State of New York.

11. DEPOSIT ACCOUNTS
Customers who have a continuing need for ERIC documents may open a Deposit account by depositing a minimum of $200.00. One deposit account covers all ERIC documents to be delivered, and any interest earned on the account up to a maximum of $200.00. Any unspent portions of deposit accounts will be returned to the customer.

12. STANDING ORDER ACCOUNTS
Customers desiring to maintain standing orders of all ERIC reports are encouraged to open a Deposit account. Orders may be placed by depositing $200.00 or submitting an executed purchase order. The cost of each issue and postage will be charged to the account. A monthly statement of the account will be furnished.

13. PAPER COPY (PC)
A paper copy is a xerographic reproduction of the original document. Each paper copy has a Vellum Braille cover to identify and protect the document.

14. FOREIGN POSTAGE
Postage for all countries other than the United States is based on the International Postal Rates in effect at the time. The order is shipped. To determine postage allow 75 microfiche or 75 pages per pound. Customers must specify the number of microfiche or pages desired and the postage for that classification with their order. Payment must be in United States funds.

OTHER ERIC COLLECTIONS AVAILABLE FROM EDRS

STANDING ORDERS
Subscription orders of microfiche copies of all ERIC reports announced in each issue of Resources in Education average $160.00 per month.
