This manual was designed to provide school administrators, counselors, teachers, parent groups, and community members with a comprehensive school-based program for preventing alcohol problems. Detection and intervention before the onset of alcohol and drug problems is stressed. Modeled after employees' assistance programs used to identify and aid employees with negative work performance, the Student Assistance Program described in this manual uses professional counselors who are accountable to the community health agency and school in which they work. The manual describes the counseling program in five chapters, using a question and answer format. The chapters include: 1) The Program in Action: Six Kinds of Groups; 2) Getting Started: Involving Schools, Students, and Parents; 3) Student Assistance Counselors: Qualifications and Duties; 4) Referral to the Program: Getting the Student in the Door; and 5) Community Support: Involving Parent Groups, Faculty, and the Community. A checklist for implementation and a bibliography are provided. The appendices consist of the student assistance program policy for handling student alcohol and drug use, the Code of Federal Regulations regarding the confidentiality of alcohol and drug abuse patient records, a list of state and territorial alcoholism program directors, a counselor evaluation form, an evaluation summary, a sample student questionnaire and a summary reporting form. (ABB)
The Westchester County, New York, Student Assistance Program (SAP) was developed in 1979 under demonstration grants from the New York State Division of Alcoholism and Alcohol Abuse and the New York State Division of Substance Abuse Services, and in 1980 from the National Institute on Alcohol Abuse and Alcoholism.

Student assistance programs have proven to be effective in reducing absenteeism and alcohol and other drug use, and in preventing alcohol problems. However, student assistance programs should be considered as only one avenue for prevention. Research strongly supports comprehensive and integrated approaches for maximum effectiveness. To find out more about additional community resources and strategies, you may wish to obtain a copy of Prevention Plus: Involving Parents, Schools, and the Community in Alcohol and Drug Education. Single copies of this guidebook may be obtained free from the National Clearinghouse for Alcohol Information, P.O. Box 2345, Rockville, Maryland 20852; (301) 468-2600. Refer to Order No. BK113. Multiple copies may be purchased at a cost of $9 each from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. Refer to Stock No. 017-024-01155-0. (Price is subject to change.)

Acknowledgments

This manual is based primarily on discussions with Ellen R. Morehouse, ACSW, Director of the Westchester County Student Assistance Program, as mentioned in the Introduction. The text was written by Gerald Snyder (BPA Order Number 85083-84), and staff of the Prevention Branch, Division of Prevention and Research Dissemination, NIAAA. Sandy Katz served as the NIAAA project officer.

NIAAA expresses its sincere appreciation to the reviewers listed below whose comments and criticisms helped to make this manual as comprehensive as possible:

Beatrice Cameron, Assistant Superintendent
Student Services and Special Education
Fairfax County Public Schools
Fairfax, Virginia

Timmen L. Cermak, M.D.
President, The National Association for Children of Alcoholics
Chief, The Alcohol Inpatient Unit
San Francisco Veterans Administration Medical Center
San Francisco, California

Craig Cummings, Special Educator
Howard County Public School System
Ellicott City, Maryland

Jim Neal, Director
Division of Prevention, Education, and Intervention
South Carolina Commission on Alcohol and Drug Abuse
Columbia, South Carolina

Dennis Nelson, Coordinator
Substance Abuse Prevention
Fairfax County Public Schools
Falls Church, Virginia

Foreword

This manual adds a factual, eloquent dimension to our Nation's drive against the tragedy of teenage alcohol and other drug abuse.

Family problems, poor grades, trouble with the law, feelings of distress and inadequacy—the pangs and pull of adolescence itself—often plague young people. By emphasizing prevention and early intervention, student assistance programs offer a way to head off the severe physiological, psychological, and social problems that lead to and foster adolescent alcohol and other drug use. Such programs are especially important, because alcohol-related traffic fatalities—the leading cause of death among our young people—can be prevented.

Student assistance programs, modeled after the successful employee assistance programs, give needed attention to young people where they spend a great deal of their time—at school. Teachers, parents, and other community leaders look upon this type of program as one that has perhaps the most promise of helping students reduce their use of alcohol and other drugs or avoid the use of these substances entirely. The model program described in this manual was developed by the New York State Division of Alcoholism and Alcohol Abuse in Westchester County, New York, and is often referred to as "The Westchester County Student Assistance Program." It was supported, in part, through a research demonstration project funded by the National Institute on Alcohol Abuse and Alcoholism, Department of Health and Human Services. Several evaluations of the program have shown it to be effective and useful. I am proud to give my support to this achievement of the combined efforts of Federal, State, county, and school, the outgrowth of years of work.

I hope this manual will inform and inspire as we work together to prevent teenage alcohol and drug abuse.

Margaret M. Heckler
Secretary of Health and Human Services
Introduction

In the struggle to combat alcohol and other drug problems, prevention and intervention efforts stand in the forefront. One such effort—in Westchester County, New York—has led to the development of a comprehensive school-based program aimed at those students who are the most vulnerable: pupils new to the school, seniors facing life after graduation, children of alcoholics, and others who may need special guidance in dealing with alcohol and other drug problems.

As they grow to adulthood, many youths face a particularly high risk for developing alcoholism and related problems. Research clearly indicates that children of alcoholics may be predisposed to alcoholism and may be twice as likely as children from nonalcoholic families to develop alcoholism and related problems. The sons and daughters of alcoholics often go undetected and therefore may be ignored or inappropriately treated. Some say that only 5 percent of the 12 to 25 million children of alcoholics are being helped. As they mature, high-risk youth may experience difficulties with personal relationships or develop mental and/or emotional problems. Alcohol and other drug use may be a form of self-medication to allay anxiety and ward off feelings of low self-esteem. The Westchester County Student Assistance Program is located in the schools, where adolescents have easy access to highly trained counselors and where other alcohol- and drug-use-related factors such as drinking at an early age, poor academic performance, deviant school behavior, and poor parent-child relationships are more likely to be detected than at home. Parents, school administrators, teachers, and others in the community find the school an effective place to provide services to children in need.

Based on the highly successful employee assistance program model found in industry, the Westchester County Student Assistance Program uses professional counselors to provide a wide range of primary prevention and early intervention services. The student assistance counselors are trained to detect and reach troubled children. They are able to devote full, quality time to help students participating in the program. Looked upon as a model for school administrators throughout the United States, the program stresses behavior and performance, combines intervention with prevention, uses a referral process in addition to working with self-referred persons, and screens participants for alcohol and other drug involvement when school attendance or performance has decreased.

A valuable characteristic of the program is its ability to identify and help youth, especially those at high risk, before the onset of alcohol and other drug disturbances. This early detection and intervention has proven effective in reducing absenteeism, in decreasing the consumption of alcohol and/or other drugs, and in lessening the problems caused by alcohol and other drug abuse.

Since its inception in 6 diverse schools during the 1979-80 school year, the Westchester County Student Assistance Program has been adopted by 24 other high schools and 4 junior high schools in Westchester County and by many high schools in other parts of New York, Virginia, Massachusetts, New Jersey, New Mexico, New Hampshire, and Oregon, as well as by the Seneca Indian Nation.

This manual is designed for the wide audience of people concerned with
changing the attitudes and habits of young people threatened by the abuse of alcohol and other drugs. These individuals might include school administrators and teachers, alcoholism counselors, community task force members, parent action groups, parent support groups, town or city officials, members of parent and school drug and alcohol education programs, and any other citizens interested in launching a prevention program aimed at teenage alcohol use and abuse. As an aid in this effort, this manual is designed to supplement the National Institute on Alcohol Abuse and Alcoholism's comprehensive guidebook, Prevention Plus: Involving Schools, Parents, and the Community in Alcohol and Drug Education, which describes in detail the operation of five model programs that have proved successful at the local level.

I would like to acknowledge the tremendous contribution of Ellen R. Morehouse, ACSW, director and creator of the Westchester County Student Assistance Program, who had the courage of her convictions to begin such a program and who contributed significantly to the development of this manual.

Robert G. Niven, M.D.
Director
National Institute on Alcohol Abuse and Alcoholism
Overview: The Student Assistance Program

The Student Assistance Program developed in Westchester County, New York, is modeled after the employee assistance programs (EAPs) used successfully by industry to identify and aid employees whose work performance has been negatively affected by alcohol, other drugs, or personal and family problems. The program uses professional counselors to provide alcohol and other drug abuse intervention and prevention services for high school students who have alcoholic or drug-abusing parents, have themselves been abusing alcohol or other drugs, or exhibit behavioral and academic problems or signs of stress that could be related to their own or their parents' abuse of alcohol or other drugs.

The schools and program staff must have a mutually cooperative relationship to ensure success. Counselors are accountable to both the community mental health agency that employs them and the school where they are based, and the project director and principal have equal voices in evaluating, hiring, and firing them.

These same individuals, along with the superintendent of the school district, meet early on to review program objectives and to agree on procedures. Each participating school must agree to provide office equipment; explain the program to students, parents, and faculty; furnish counselors with attendance and grade information, and give students the time they need, to conduct the program; ensure confidentiality; and maintain pupil personnel service at a level corresponding with student enrollment.

Counselors. Explicit criteria require that each student assistance counselor be knowledgeable about adolescent development, counseling methods, and available community resources; be able to work effectively with others in a counseling relationship and to relate well to school staff; and have a master's degree in counseling, psychology, or social work and the equivalent of 2 years of full-time postgraduate experience that has included work with adolescents. Each counselor undergoes a series of interviews that involves answering clinical questions, participating in role-playing situations, and being screened by school staff. Prior to placement, each counselor receives 4 weeks of intensive training.

Training is conducted by the Westchester County project director and outside consultants from community agencies. Student assistance counselors visit community treatment programs as part of their training and develop a working relationship with agency staff to facilitate later referral of students.

Counselors meet frequently with faculty and other school staff to increase referrals. Counselors make presentations about the program at faculty and departmental meetings, provide consultation on specific students or student activities, such as how to make sure there is no drinking at the prom, and meet individually with new staff members. Attending faculty social activities and meeting with staff in faculty lounges or over lunch results in counselor visibility and a positive relationship with school staff.
Counselors try to increase their credibility with students as well. They make brief, 20-minute presentations to classes explaining the program and how confidentiality is protected. These presentations emphasize that the counselors are available to discuss any personal crises or questions. Counselors go out of their way to be seen in the halls with all types of students and staff and frequent teen hangouts and student activities such as sports events, plays, and student council meetings. They also make the program visible within the community by making presentations to the PTA, youth service agencies, local clergy, and other groups.

**Services to students.** Students enter the program through confidential, self-, or mandatory referral. Students and school staff who think a student has a problem are urged to make confidential referrals with the understanding that the source will not be revealed if they do not want it to be.

Students are required to enter the program if they are found under the influence of alcohol or other drugs on the school grounds. The first two times this occurs, in-school counseling is mandated. A third incident results in automatic suspension and a required meeting among student, parents, and counselor.

Counseling groups, typically consisting of six to eight students, are the primary method used to provide assistance to students. All the groups strive to help students reduce their alcohol or other drug use, increase their self-esteem, and improve their ability to function in school and with peers and family members. Generally groups meet for 8 to 10 weeks, and students can recontract for another group series. In addition to groups for students abusing alcohol or other drugs, preventive groups focusing on children of alcoholics, seniors, newcomers, short-term crises, and parental conflict exist in most schools.

All students are seen individually before their first group session so that the counselor can determine their needs and assess their chances for successful group participation. Individual counseling also is available for students who are not ready for group interaction or whose problem is not shared by enough other students to justify forming a group.

Parents are always informed if the student is mandated to the program for being drunk or high on school grounds. Counselors also conduct family sessions for any family when requested and help the family locate community resources for ongoing help when needed. Referrals to community treatment agencies or private practitioners are made for both students and parents when intensive treatment is warranted.
The Student Assistance Program is geared toward short-term school counseling of students to prevent alcohol- and/or other drug-related problems. Through a variety of time-limited groups, the program strives to provide educational and motivational counseling resulting in decreased use of alcohol and other drugs.

Q. What is the main aim of the program?

A. The goals of the program are to prevent students from using alcohol and other drugs to increase school and community awareness about alcohol and drug use, and to eliminate alcohol and other drug use among those students who are abusing by educating them about the negative consequences of their use.

Q. How are the participants divided into groups?

A. There are six kinds of groups—three focusing on primary prevention and three on secondary prevention or early intervention.

1. Groups for students new to the school district
   These groups meet for three or four sessions in October and are organized by grade. The emphasis is on helping students adapt to being in a new school and thus lessening the chance that they will start using alcohol or other drugs to deal with the stress of being new or to gain acceptance. Many students are new to a school because of business or military transfers or because of separations or divorces. These students often have problems
resulting from the stress of change and can too easily join groups that are using alcohol and other drugs. Sessions are aimed at preventing the development of alcohol or other drug problems.

2. **Groups for seniors**
   These groups usually start around January and are for senior students who report fears about leaving the security of school and home or having to decide whether to work, go to college, or enter the Armed Forces. The focus is on preventing students from starting to use or increasing their use of alcohol or other drugs to deal with these stresses.

3. **Supportive education groups for students with alcoholic parents who do not use alcohol or other drugs**
   These groups attempt to help students better understand alcoholism, how it affects the family, and how to cope with their drinking parents and the resulting stresses on their own lives. In order to lessen the chance that the student will turn to alcohol or other drugs, emphasis is put on increased self-esteem and improved academic, behavioral, social, and emotional functioning.

4. **Groups for students who are using alcohol or other drugs and have alcoholic or drug-abusing parents**
   These groups direct attention to parents' and students' use of alcohol and other drugs and the resulting relationship between them. Some of the issues include comparing student and parent drinking patterns, discussing parents' attitudes toward student drinking, dealing with the students' guilt about their behaviors, and becoming alcohol- and drug-free.

5. **Motivational counseling groups for students who are abusing alcohol or other drugs at school**
   These groups are for students who know they have a problem with alcohol or other drugs and want to deal with the problem and improve their functioning. The focus is on being alcohol- and drug-free. Students who have been in treatment, have returned to school, and want support in remaining alcohol- and drug-free also are included in these groups if there are not enough of them to form their own group.

6. **Groups for students who acknowledge having problems with parents or peers but don't see their alcohol or other drug abuse as a problem**
   These students see their main problem as their relationship with their parents or peers, and this is what they want to work on. The focus of the groups is to help students see the connection between their alcohol and other drug use and their problems with parents or peers.

Q. **Can a student who doesn't fit the category join one of the six groups?**

A. No. It is best to have students together who share the same problems and concerns. The students who participate in a group must be willing to acknowledge that they want to work on the focus of that particular group. The cohesiveness is lost when someone in a group is there just to "check out" the
program and doesn't share the concern of other members.

Q. What percentage of participants falls into the various program categories?

A. It varies among schools and depends on the stigma that may keep students out of the program. The Westchester County program strives to have 20 to 25 percent of the participants be students who do not have alcoholic parents and who themselves do not use alcohol or other drugs. The other 75 to 80 percent are target-group students, meaning students who abuse alcohol or other drugs, who are children of alcoholics, or who fit into both categories. The reason for wanting a significant number of non-target-group students is to prevent the program from being stigmatized.

Q. How does the program control this percentage?

A. The counselors are continually monitored and reminded by the program's central office that it is important to reach target-group students and also to attract non-target-group students.

Q. Which of the groups is the most educational?

A. The children of alcoholics group is the most topic-oriented and the group most run like a class. In a typical session, for example, the counselor may explain what a blackout is or why students should not feel guilty or responsible for their parents' drinking.

Q. How does the program go about increasing self-esteem and improving academic, behavioral, social, and emotional functioning of a student with alcoholic parents?

A. The program uses a five-step approach:

  First, the student assistance counselors try to demonstrate to children of alcoholics that the counselors understand what it is like to live with the problem of alcoholism.

  Second, the students are urged to express their feelings and perceptions about what is going on in their home—what hurts and upsets them the most and how their parents' alcoholism interferes with their functioning.

  Third, the program aims to provide specific education around the individuals' greatest concerns and needs. This immediately lessens some of the anxiety and low self-esteem they feel by making them realize that the problem is not with them and not caused by them, but is related to the use of alcohol.

  Fourth, the program strives to give the students concrete solutions for coping with problems. For example, if they cannot do their homework at night, alternatives such as becoming involved in afterschool activities or going to a friend's house are considered. Once they see that they can solve their own problems, they start to feel better about themselves and realize that the situation is not hopeless.
Fifth, the program tries to get the students to look closely at themselves and to understand how their parents' behavior may affect them, so that they can take more responsibility for their own attitudes and actions.

Q. What are some of the other issues that are dealt with in groups of children with alcoholic parents?

A. Session discussions may cover such topics as the following:

- The fear that parents will get hurt or sick, or will die, as a result of being intoxicated
- The willingness to take criticism from friends or teachers rather than expose parents' problems
- The upset and angry feelings caused by the unpredictable and inconsistent behavior of an alcoholic parent or the lack of support and protection from the nonalcoholic parent
- The pain caused by worrying about fights and arguments between parents
- The scared and upset feelings caused by violence or the possibility of violence in the family
- The anxiety caused by parents' behavior that might include criminal or inappropriate sexual behavior
- The feelings of disappointment caused by broken promises

Q. Why are these sessions valuable to the children of alcoholics?

A. They give the children—many of them for the first time—an opportunity to express their feelings and concerns about what is going on at home, to realize that there are other students in the same situation, and to see that there are solutions to some of the problems. If the student assistance counselor can demonstrate an understanding of what is being experienced in the home, the student will realize that what is occurring is not unique and will be able to understand much of the parents' behavior, how the student is affected, and how the student can function better.
Q. What factors are considered in deciding if the children of alcoholics should be referred elsewhere for treatment or evaluation?

A. Certain questions are answered:
   - Are the children unhappy with their own behavior?
   - Do they exhibit poor peer relationships?
   - Are they involved in self-destructive behavior?
   - Do they contribute to poor relationships with their parents?
   - Are serious mental or emotional problems present?
   - Do students have difficulties that cannot be adequately addressed in the group?

Q. How is it determined that a student needs to become involved in an early intervention group?

A. The decision is made if a student is abusing alcohol or other drugs and it is determined that the student is experiencing some negative consequences.

Q. Are problems or stresses unrelated to alcohol and other drugs ever dealt with?

A. Yes. If a student comes in with a problem, the student assistance counselor will try to deal with it. Three counseling sessions are provided to determine whether the problem is alcohol- or other-drug-related. If it is not, the student may be referred to the school's psychologist, social worker, guidance counselor, or school nurse for counseling, or may be referred to an outside counselor in the community. If, however, the school has no one else who can help with the specific problem, or if the student is unable to obtain help elsewhere, and if the student is under a great deal of stress, the student assistance counselor may provide additional individual sessions.

Q. Is there a problem releasing students from class?

A. It is often controversial—for both teachers and parents. But the program diminishes the negative impact by rotating the time of group meetings so that each week the student misses a different class. Individual counseling sessions are scheduled for students' free periods—unless a teacher believes it would be more beneficial for a student to miss a class to see the counselor or if a student is in extreme crisis and cannot wait. If, despite this system, a teacher continues to complain about a student's missing class, the student assistance counselor tries to meet with the teacher to resolve the problem.

Q. When does a family member become involved in the program?

A. The counselors attempt to involve parents whenever possible. In some cases—in mandated referrals when a student has been caught drunk or high on the school grounds, or at school functions, or has been making suicidal gestures—parent involvement is essential. Parents also are encouraged to become involved in
family sessions in which problems are identified and community resources for ongoing help are discussed. Occasionally, counselor-led groups meet in the evenings for parents of alcohol- and other-drug-abusing students. Parents are encouraged to participate in parent–peer support groups or Al-Anon when appropriate.

Q. Is the program ever modified for different ethnic and cultural groups?

A. In some cases, the program must be modified. Working class, blue collar communities, for example, may show more negative feelings about discussing problems outside the family than upper class communities do. Students from working class communities often are reluctant to attend treatment programs, and families generally are not enthusiastic about such participation. In these cases, the program tries to recruit personnel to provide treatment services on the school grounds, where the program is not apt to be stigmatized. Someone from an outside alcoholism, drug treatment, or mental health program might come to the school once a week, for instance.

One Westchester County community with a large low-income, minority makeup—primarily black, Hispanic, and Italian—showed poor acceptance of an excellent psychiatric clinic right in the community, even though there were minorities on the clinic staff. The Student Assistance Program arranged for staff members of the clinic to use an office in the school 2 days a week to provide in-house services.

For other cultural groups with the attitude that drinking is "macho" for men, the program tries to concentrate on the personal harmful effects of alcohol. For students who still show reluctance to participate in community programs but indicate that they would see a private therapist, use is made of an extensive private practitioner list developed and monitored by the program.

Q. When can a student be ordered to attend the program?

A. If the student is identified as being under the influence of alcohol or other drugs, he or she can be mandated to see a student assistance counselor for a required number of sessions. Eight percent of all students seen are referred in this manner.

Q. How are students prepared for outside treatment?

A. Counselors work with all students individually to prepare them for referral. Limited contact is maintained after treatment has begun to increase the chances of successful referral. Periodic followup also ensures that the student is still attending treatment.

Q. Who determines the membership of a group?

A. Usually the student assistance counselors make the determination. Many times the students themselves will come in groups to the counselor, and sometimes the students do their own recruiting to form a group.
Q. Do students usually tell their parents of their involvement in a group?
A. Once they feel comfortable in a group, most students inform their parents.

Q. How long does each session last?
A. Each group meeting takes about 40 minutes or one class period.

Q. How large are the groups?
A. Each group includes between 5 and 10 students, with the size of the group determined by the student assistance counselor in each school. After the third session, membership remains closed for the duration of the group.

Q. How many sessions are held for each group?
A. Except for newcomers, groups meet for a minimum of 8 weekly sessions and a maximum of 20, with the average group meeting for about 8 to 10 weeks. Should more time be necessary, the students have the option of meeting again for another group series.

Q. How might it be determined that group interaction is inappropriate for a particular student?
A. Some students might be so disturbed that they cannot function in a group environment. For example, they might be too impulsive, which prevents them from participating in an orderly fashion with others or their problem may be too sensitive to share with others. If it involves incest, for example, the student might best be seen individually, prior to a recommendation for outside treatment.

Q. How is the composition of a group determined?
A. Counselors strive to get the right mix in every group. It would not be right, for instance, to have one girl in a group of boys or one boy in a group of girls. Similarly, it would be inappropriate to have one very quiet student in a group of especially verbal students, or vice versa. Intellectual level is also important—it would not be beneficial to put an intellectually limited student in a group with exceptionally bright students.

Q. Which works better for helping adolescent children of alcoholic parents—individual or group counseling?
A. Although individual counseling is beneficial, research and experience indicate that group sessions are best for most students. A group reduces isolation and offers the students support and confrontation when needed.
Q. Are students ever seen individually?

A. Upon completion of the group sessions, students who need more intensive counseling are seen individually by the student assistance counselor in preparation for referral to appropriate treatment agencies.

Q. How is the focus of a particular group determined?

A. The students are asked at the first group session to verbally agree to make a commitment to work toward a specific goal—e.g., to eliminate alcohol and other drug use or to try to improve relationships with parents or peers, school performance, and/or attendance. If a group strays too far off base, the counselor reminds the student of the group's focus and this helps to get the discussions back on course.

Q. Is any disciplinary action taken against students who refuse to participate in the program?

A. No. However, if a student is mandated to see the counselor and doesn't, the parents are contacted.

Q. Is there any followup after a group has concluded?

A. No formal followup involving a set of procedures takes place. Their continued presence in the school building, however, maintains informal contact between the students and the counselor and encourages feedback from teachers and friends regarding students' progress. At the end of each group, certain students may be encouraged to participate in support groups such as Alateen or Alcoholics Anonymous or to go for outside treatment. In all cases, students are encouraged to remain in touch with the student assistance counselor.

Q. Does followup take place after graduation?

A. There is no formal followup. Some students write letters or visit the counselors during the Christmas or Thanksgiving breaks from college. Graduates with extremely important or urgent matters to discuss are encouraged to call or drop in on the counselors at any time during the year.
Before implementing a student assistance program, both the school and the community must be ready to discuss openly the issues of alcohol and other drug abuse. In other words, the groundwork for acceptance of such a program must be laid. Only when all participants feel that the program is responding to a real need can the program achieve success.

Q. Why would a school want a student assistance program?

A. As the Secretary's Initiative on Teenage Alcohol Abuse points out, prevention is the best "plus" for combatting alcohol and other drug abuse among youth. By concentrating on prevention—and early intervention—a student assistance program helps students understand the negative consequences of alcohol and other drug abuse. Most important, such a program can help students who are new to the school, seniors facing the work world, college, or Armed Forces service, children of alcoholics, and others who may need help during their adolescence.

Q. Who makes the initial contact with the program?

A. Usually the school principal or other school administrator does, often in response to information from a parent or other community member or teacher about the program.
Q. What must a school do to start a student assistance program?

A. In Westchester County, the school must send a letter to the office of the project director to indicate a need and interest in participating. Generally the director will then meet at the school with the principal, other administrators, and staff designated by the principal. Questions about the cost and procedure for setting up the program are answered, and the project director explains details of the services to be offered.

The project director provides literature about the program, answers other relevant questions, and encourages the interested parties to get in touch with principals of other schools that have the program and their counselors to get further, independent perspectives. If the principal and other staff are interested, the superintendent is then involved and may bring the idea to the board of education for approval.

Q. How does a school outside of Westchester County start a program?

A. A school or alcohol or drug abuse agency located outside of Westchester County wanting to start a student assistance program should follow a similar procedure. First, officials should contact the county department that has responsibility for alcohol or drug programming or the person with responsibility for alcohol or drug abuse prevention within their State government to determine if funding is available to contribute to the cost of the student assistance counselor and clinical supervisor. If county or State funding is not a possibility, the school or interested agency might consider paying for the program out of its own budget or trying to raise money locally.

Next, the interested parties should contact the Westchester County program director about how to proceed. If only one school wants to implement the program, replication materials such as forms, bibliographies, and resource materials can be purchased by the school for a nominal fee. The new program's student assistance counselor can be sent to Westchester County for the 1-week orientation given for all new counselors. If several schools in one area want to start the program, it is suggested that a meeting of principals, superintendents, teachers, and representatives of parent groups and alcohol and other drug agencies be arranged, at which the Westchester County project director and one of the Westchester County principals will give a 3- to 4-hour presentation. At this time, material will be distributed for replication, and a principal from Westchester County will explain the effectiveness of the program and some of the issues that typically arise among school administrators.

Q. What is the next step?

A. In Westchester County, once a decision is made by the board of education to enter the program, the school sends a letter to the project director stating an intent to participate and the amount to be spent for the period of July 1 to June 30. The Westchester County Department of Community Mental Health (WCDCMH) recruits and interviews applicants, with the school making the final selection. The counselor is hired by the WCDCMH, participates in a 4-week training program, and then begins in the school.
Q. How much does the program cost?

A. The cost will depend to a large degree on the existing community salary scale for hiring skilled counselors, as well as the number of hours the counselors are involved in the schools. In Westchester County, each of the 24 counselors costs an average of $32,000 a year for salary and fringe benefits (25.2 percent of salary costs). In 1983, for 22 schools, the total program budget was approximately $950,000. For a new program outside of Westchester County, costs would involve salary plus fringe benefits for a counselor, supervisory services, and materials and supplies.

Q. Can an individual implement a student assistance program by just reading this manual?

A. This manual is not intended to provide all of the answers and techniques. Rather, it is meant to familiarize readers with the concept of student assistance programs and to offer basic information on establishing one. Anyone is free to start up a program in his or her own school district. Obtaining materials and training from Westchester County will ease the process, however.

Q. Can school administrators vary the program to suit themselves?

A. Local variations in the program are strongly discouraged. NIAAA demonstrated this program for replication. The manual was developed because the program was successful in decreasing or ceasing alcohol and other drug use and decreasing absenteeism among those participating in the program. Therefore, one can assume that, if replicated as described, the program will reduce absenteeism and alcohol and other drug problems.

Q. How is the program in Westchester County funded?

A. The program is funded by the New York State Division of Alcoholism and Alcohol Abuse, the New York State Division of Substance Abuse Services, the Westchester County Department of Community Mental Health, and each of the participating school districts. The WCDCMH applies every year to the State agencies for the money that comes to the WCDCMH. The WCDCMH combines this State money with some of its own local money and the money from the school districts to pay for the program. The counselors are county employees placed at the school. Technically, the school district is purchasing a service from the WCDCMH. The time it takes to apply for and receive funding will vary from State to State. Procedures also may vary from State to State and county to county.

Q. How much of the cost is borne by the school?

A. Although policies can vary, a participating school generally provides 50 percent of the cost of a student assistance counselor's salary plus fringe benefits. The
school also pays indirect costs for office space, office furniture, and supplies, which usually are minimal.

The other 50 percent is paid by State funding. The 50/50 breakdown is intended to make the program a partnership and provide a degree of independence from the school. In this way, the central purpose of the program is kept in focus, and the student assistance counselors are kept from becoming all-purpose school counselors. In some school districts that employ individuals serving as alcohol and drug abuse prevention counselors, such individuals have been asked to fill in for other school staff in conducting psychological testing, coaching, cheerleading, etc.

Q. Who determines the objectives and procedures of the program?

A. The project director formulates the objectives and then consults with the principal or designated school administrators on the procedures that should be implemented to accomplish those objectives. All principals meet with the project director and other administrative staff every 6 weeks in the beginning to consider changes and discuss any needs that are not being met. For example: Are counselors and students getting along? How can drinking before the prom be reduced? Do teachers object to the program? Is the program accepted by the students? How will questions from reporters be handled? What community groups should counselors address?

Q. How is the program presented to school staff?

A. Student assistance counselors describe the program to school staff, listing the behavioral signs of alcohol and other drug abuse or other problems to be looked for and suggesting ways to determine the appropriateness of a referral to the program.

Staff members are coached in the different ways to make a referral (see section IV: Referral to the Program) and told how to initiate immediate referral of students under the influence of alcohol or other drugs at school.

Q. How are the parents and students notified?

A. At the beginning of the school year, a letter describing the program is sent by the principal to every student and his or her parents. A written policy statement describing the handling of students using alcohol or other drugs is included in the student handbook (see appendix A).

Q. What are the ages of the students involved?

A. In Westchester County, most of the students range in age from 14 to 18—the average age of students attending high school.
Q. What grade levels does the program cover?

A. In some schools, the program covers grades 9 through 12, in others--10 through 12 or whatever the ages are of students attending high school. In some school districts, the program is being modified on an experimental basis for junior high schools to reach students at a younger age and to get their parents involved earlier. The program ends in the 12th grade.

Q. Is the program geared toward a specific cultural or socioeconomic group?

A. The program is intended for all racial, ethnic, and socioeconomic groups of all urban, suburban, and rural backgrounds.

Q. Is parental consent required?

A. The important issue of parental consent must be individually addressed at the State and local levels, since State laws and school policies vary. In some cases, parental consent for a student to participate in the program may be required. Regardless of whether parental consent is mandatory, the school should always notify parents about the existence and policies of the program, and counselors should encourage as much parental involvement as possible in solving students' problems.

Q. If a parent absolutely forbids his or her child to participate, what is the program's policy?

A. If this is made clear to the school administration and the program, the student assistance counselor will not see the child.

Q. What general confidentiality issues apply?

A. Since the counselor's interactions with students are not for the purpose of making educational plans, no official school records are kept. The counselor may, however, write personal notes on students in the program. Because these notes are the counselor's personal property and are not accessible or revealed to anyone, the Federal Family Educational Rights Privacy Act does not apply to these notes.

Federal statutes and regulations protecting the confidentiality of alcohol and
other drug abuse records may apply. These laws protect the confidentiality of those individuals receiving treatment for alcohol or other drug abuse in programs that are federally conducted, regulated, or directly or indirectly assisted. These confidentiality protections normally apply to any information, whether oral or written, in the possession of the counselor about those students who are receiving treatment for alcohol or other drug abuse problems. Whether the program is self-described as prevention-oriented or educational is a question that must be answered individually for each program. If the counselor is providing services to a student who is considered to have an alcohol or other drug abuse problem, the information discussed about the student is covered by the confidentiality protections. It has been the policy and practice of the Student Assistance Program to apply these protections to all students seen in the program. For additional information, see appendix B, Federal Register: Confidentiality of Alcohol and Drug Abuse Patient Records. Questions on the Federal laws may be directed to Chief, Technical Assistance Branch, Division of Extramural Research, NIAAA at (301) 443-1273. State confidentiality laws may protect information about students in the program. Questions about State confidentiality laws may be directed to the pertinent State Alcohol Authority or National Prevention Network representative (see appendix C for listings).

Q. **If a student participating in the program is not covered under the Federal or State confidentiality laws, how is confidentiality treated?**

A. Confidentiality is especially vital to early intervention, and therefore it is protected and given enormous respect in all aspects of the program. In these circumstances, it is a matter of program policy and professional ethics and not Federal or State laws.

Q. **Does anyone outside the program know who is being seen?**

A. The principal of each school is the only person outside the program who knows officially who is being seen. This is for attendance purposes only, so students reported to have missed class will not be penalized if they are seeing a counselor during that time. Each day, the principal is provided with the names of students in the program and the times they are attending the various group sessions. No reason for attendance is given. This policy is made clear to all students.

Q. **What are the responsibilities of the school district in relation to the student assistance program?**

A. The school agrees to:

- Maintain existing pupil personnel services without a corresponding decrease in student enrollment while the school is participating in the program. This measure guarantees that pupil personnel staff will not view the student assistance counselor as someone who can take over their jobs and that adequate support services will be maintained while the program is in existence.
• Provide an office with a telephone, a locked desk, and a file cabinet for the counselor.

• Send a letter to parents and students before or during the first 2 weeks of school.

• Hold a faculty meeting in the first month of school so that the counselor will have the opportunity to explain the program and methods for referral.

• Provide attendance and academic records of students for program evaluation.

• Allow students to participate in rotating group sessions and permit them to miss academic classes except when tests have been scheduled.

• Comply with applicable confidentiality protections, whether State or Federal.

Q. What is the size of the program's central office staff in Westchester County?

A. In Westchester County, besides the project director, the staff consists of three supervisor-administrators, one research assistant, one administrative assistant, and two secretaries. This size staff is not required to set up a program, although in time it may grow to that size. Westchester County started with one project director, one secretary, and one part-time research assistant (to serve 6 schools).

Q. How does the Westchester County program differ from other student assistance programs?

A. Many programs, using a core team approach, train guidance counselors, health teachers, physical education teachers, English teachers, vice-principals, nurses, and others to intervene with students having alcohol and other drug problems. The groups, usually called support groups, may be led by nonprofessional counselors or non-student-assistance counselors.

Q. What percentage of schools in Westchester County participate in the Student Assistance Program?

A. Of the 43 high schools in the county's 40 school districts, 30 are currently participating.

Q. What is the best advice for getting started?

A. If questions remain after reading this manual, interested parties should write to the project director in Westchester County. At the same time, prospective participants should seek out information about the strengths and weaknesses of the program from administrators familiar with the Westchester model.
The program should be viewed not as a panacea, but as an approach that has achieved positive results. Other types of student assistance programs do exist, e.g., the South Carolina Intervention Program (SCIP), and may serve your needs. If you decide to implement the student assistance program, parent support then should be solicited and a local agency contacted that can provide a student assistance counselor. Most important, it is advisable not to try to grow too fast. Programs should start small to preserve the highest quality possible.
The people most responsible for making the student assistance program work in each school are the student assistance counselors. Among their most important qualifications, they must have a master's degree, past experience with adolescents, good assessment skills, and proven aptitude for organizing and leading groups. The key intangible ingredient for all counselors is the ability to communicate—to work effectively with others. Even though they are not a part of the faculty, they must earn faculty members' respect, as well as respect from students, parents, and all others with whom they come in contact.

Q. What are the basic qualifications for all student assistance counselors?

A. In Westchester County, all counselors in a student assistance program must have a master's degree in social work or psychology from a recognized college or university and 2 years of postmaster's full-time clinical experience working with adolescents. The kinds of experience deemed most useful are work as a social worker or psychologist in a school, mental health clinic, family agency, or psychiatric hospital, or work with other alcohol- and drug-related programs with adolescents. However, other qualifications and experience may be appropriate in other locations.

Q. How are the counselors recruited?

A. When a position is open, the Westchester County Department of Community Mental Health posts a notification at convenient locations throughout the
county. After 10 days, advertisements are placed in local newspapers and one or two large metropolitan dailies. Once resumes and application forms have been screened, qualified applicants are called in for a two-part interview. The first interview is performed by one of the program's supervisors, who judges the candidates' clinical skills. For example: How would they assess an adolescent who is depressed? How do they react in role play situations? Do they know the different approaches needed for different groups?

Those who qualify are seen next by the project director, who continues the interview. Five qualified candidates are then sent to be interviewed by the school principal. If the principal does not like any of the five, five more candidates are sent, until the principal feels comfortable with one particular person.

In this process, a candidate who might be wrong for one school might be considered right for another, or vice versa. For example, a candidate who has never worked in an urban area might not understand the needs of students in a large city high school, or a candidate who has never worked with affluent adolescents may not understand the problems of that particular group.

Ideally, the counselors should not live in the school districts where they work—in order to maintain a professional and not too familiar relationship with the students or parents they are trying to help.

Q. Who pays the counselors?

A. In Westchester County, counselors are paid by the Department of Community Mental Health. Each school, however, reimburses the department for 50 percent of the cost of a counselor's salary and fringe benefits.

Q. How much are the counselors paid?

A. The starting salary for counselors in Westchester County for 1984 is $21,000 per year, plus fringe benefits, with the salary scale going up as high as $28,000. The program recommends that counselors be paid a salary equivalent to that earned by a master's level social worker or psychologist in such nonschool settings as university hospitals or outpatient mental health clinics. To obtain high-quality counselors, salary level should be kept as high as possible.

Q. How is it determined that a school needs a full- or a part-time assistance counselor?

A. It depends on the size of the school and the amount of money the school thinks it can afford. In Westchester County, generally schools of 500 students or less have counselors available for at least 2 1/2 days a week; between 500 and 1,000 students, 3 or 4 days a week; and 1,000 or more, the full 5 days. Of course, even a school with fewer than 500 students may wish to have a counselor on hand 5 days a week.
Q. **What schedule do the counselors work?**

A. With the exception of occasional evening hours to see parents or to make presentations to community groups, counselors follow a regular school schedule. After school hours, the counselors receive compensatory time, which can be used on days when the school is closed, such as snow days, school vacations, etc. The counselors work a 12-month year and save most of their vacation time for July. If they have not accumulated enough time, they can take leave without pay or be assigned to a summer school or alcohol, drug, or mental health treatment agency while students are on vacation.

Q. **Why not assign the job of student assistance counselor to a school guidance counselor?**

A. There are several reasons. First, the guidance counselor has numerous responsibilities, including course scheduling, college planning, vocational assessment, and advising students with academic difficulties. These duties often become more intensive at certain times of the year, limiting the counselor’s ability to devote time to the program. If the program is to be optimally effective, it must consistently be a full-time responsibility. The student assistance counselors have full time to devote to counseling and to crisis response. Their caseload becomes high very quickly leaving little time for other responsibilities.

In schools where students are motivated to go to college, the guidance counselor coordinates college planning and makes personal recommendations. Most students would not want to turn for help with alcohol or other drug problems to the person who will have to write their recommendation for college acceptance. Other similar conflicts of interest may occur.

Finally, the guidance counselor does not have the same training as a student assistance counselor. A guidance counselor does not get an intensive 4-week training program on alcohol, other drug, and adolescent issues or the weekly hour-and-a-half of individual clinical supervision that a student assistance counselor receives in the student assistance program.

Q. **Do the student assistance counselors cooperate with the guidance counselors?**

A. Yes, they are viewed as part of the pupil personnel team. Guidance counselors are encouraged to become involved with students in the student assistance program. If, for example, the child of an alcoholic complains that chaos at home is a detriment to study during final exam week, the student assistance counselor may suggest that the guidance counselor also see the student and help deal with this particular problem. In this case and others, both counselors may meet to discuss the best way to help the student.

At the same time, the student assistance counselor may involve the school psychologist, school social worker, vocational counselor, or any other person who can contribute to handling a particular problem. The student assistance counselor routinely asks each student if his or her guidance counselor can be told he or she is being seen. Most students agree. Some may just ask that certain information not be shared, such as a student’s alcohol use or a parent’s
alcoholism. Meeting with the guidance counselor is important, because many times he or she can give the student assistance counselor background information and support that will lead to the student's being helped most effectively.

Q. **How are the student assistance counselors trained?**

A. In an intensive 3- or 4-week summer program, the counselors are trained to work with students experiencing a wide variety of concerns. Topics discussed may include the following:

- Eating disorders
- Depression
- Marital breakup
- Adoption
- Peer violence
- Child abuse
- Suicide
- Children of alcoholic parents
- Working with adolescents
- Confidentiality
- Statistical records keeping
- Generating referrals
- Public speaking skills
- Strategies for implementing the program in the school
- Motivating students to join a group
- Referring to outside resources

Training for new counselors during the first week focuses on how to start the program, how to handle crises, and how to work closely with students experiencing various alcohol- and other drug-related problems. During the remaining 2 to 3 weeks, counselors learn about a variety of other topics, such as how to evaluate a student who cannot function due to anorexia.

While the counselors are expected to know basically how to form and conduct a group, specific training is given to cover a broad range of topics. Inservice training, staff meetings, and weekly supervision are conducted throughout the year.

Q. **Does any of the training take place outside the schools?**

A. Yes, the training is held every August when the schools are empty. As part of their training, the counselors visit community programs and develop a working relationship with hospital and treatment agency staff to facilitate later referral of students needing outside assistance.

Q. **Is the training mandatory for counselors?**

A. Annual training is part of the program's requirements. Returning counselors skip the first 2 weeks of training. All new counselors must attend the entire 4 weeks unless they are hired to fill a vacancy that occurs once school has begun.
Q. Who conducts the training?
A. Instruction is given by the project director, the program supervisors, experienced counselors, and outside consultants from community agencies with expertise in different subject areas.

Q. Can anyone send counselors for training?
A. Counselors or program administrators from any county or State can attend the first week of training. For a nominal fee—approximately $200—they receive the full range of training and special training materials. This sum does not include travel, lodging, or meals, however.

Q. Can out-of-State administrators and counselors receive training in any other way?
A. They can receive assistance in setting up a program by calling the Westchester County project director's office. Also, different parts of the training sessions can be purchased and sent anywhere on cassette tapes. Program staff are available to conduct training in other counties and States if all expenses are paid.

Q. Is the counseling limited only to students?
A. No. Parents may be seen for no more than 3 sessions. In addition to helping students, the student assistance counselors provide consultation on alcohol and other drug issues to school staff, parents, and local community groups.

Q. Specifically, how do the counselors introduce the program?
A. At the beginning of every school year, the counselors make brief presentations to each English class—the only class (in New York State) that every student is required to take every year—thus making sure that all students are familiar with the program. The class presentation includes a description of the range of concerns that students can discuss with the counselor, parent involvement, how to set up a time to talk to the counselor or refer a friend, mandatory referrals, and activities of the counselor. At the same time, as indicated earlier, the principals send letters to each home to explain the purpose and objectives of the program and to provide assurance that parents can talk to the counselors in confidence, if they are worried about their child's behavior. Counselors also meet with students in informal groups to discuss the program.

Q. Do the counselors train school personnel?
A. After orienting school personnel to the program, the counselors teach them how to identify a student who is intoxicated or high in class and how to encourage
the student to enter the program. Faculty members are not taught how to make an assessment, but rather how to notice the signs and symptoms that warrant a referral to the student assistance counselor. Falling grades might be one indicator, for example, or continual tardiness, moodiness, change in behavior or appearance, and, of course, the smell of alcohol on a student's breath. School personnel also are advised on different ways of referring students.

Q. How do the counselors go about gaining the students' confidence?

A. They try to become as visible as possible and go out of their way to mix with all types of students—"freaks," "brains," "jocks," and others—in the halls, lunchrooms, and student hangouts both inside and outside the building. They also attend plays, sports events, and student council meetings. They go anywhere, in other words, where it is possible to meet the students and show an interest in them. As students meet the counselor, positive feedback should start to spread throughout the student grapevine.

Q. Do the counselors also try to mix with faculty?

A. Besides holding frequent meetings with key administrative staff, the counselors hold informal meetings with faculty members. They also eat lunch with the faculty and use faculty lounges, attend faculty and departmental meetings, and meet individually with new teachers to explain the purposes of the program and to solicit their participation.

Q. What are the counselors' main responsibilities?

A. The counselors must provide individual, family, and group counseling sessions as required, be available to the school staff for consultation and training, be knowledgeable about community resources and refer students to them when appropriate, and meet with parent groups. Experienced counselors supervise graduate student interns from psychology, or social work, or counseling programs and attend supervisory training at the graduate school.
Q. How are the counselors supervised?

A. Every week, the project director and supervisors from the county mental health department visit each school for an hour and a half to provide both clinical and administrative supervision to counselors and to ensure that correct policies and procedures are being followed. In addition, school principals meet with counselors regularly throughout the school year. During the first month, counselors are urged to meet with their principal for an hour each week to discuss details about getting the program started. Twice a month, the counselors all come to the project director's office for a 2-hour staff meeting. The first hour of the meeting is for peer supervision, the second hour for general business. During peer supervision, the counselors meet in small groups of six to eight with a supervisor and share administrative, clinical, or personal concerns with their peers.

Q. Who has the main responsibility for supervising the program?

A. Because the school has, in effect, bought a packaged program, the main responsibility comes from within the program. Supervisory cooperation is essential, however. As employees of the Department of Community Mental Health, the counselors are supervised by the department and the school principal throughout the school year.

Q. How is the counselor's work evaluated?

A. Using a counselor evaluation form (see appendix D), each principal assesses the counselor's work in four general areas: work performance, professional orientation, supervision, and personal conduct. On the form, the principal specifies the counselor's strengths and limitations and makes suggestions for improvement. The principal's evaluation, which is shared with the counselor, is combined with the program supervisor's evaluation for a final appraisal.

Q. What is the nature of the meetings held between the counselors and school administrators?

A. In weekly administrative meetings, the subject matter may vary widely. For example, the student assistance counselor may be concerned because many parents are serving alcohol at parties attended by students, or a school may request the student assistance counselor's advice in planning a superintendent's conference on "Alcoholism and the Family."

In other child study or pupil personnel service meetings, general problems may be discussed among a social worker, school psychologist, guidance counselor, nurse, student assistance counselor, and possibly a teacher. These meetings usually proceed according to an agenda. If it is known that one of the students in the program is going to be discussed, the student assistance counselor will ask the student for permission to share information.
Q. During department meetings, do the counselors make official decisions or recommendations?

A. Advice is frequently sought from the student assistance counselors, but information on a student can be given only with the student's permission. If, for instance, a school psychologist wishes to send a student to a neurologist for testing, and the counselor knows that the student is heavily involved with alcohol and other drugs, the counselor may feel it necessary to urge that the student be referred to an alcohol treatment program for detoxification before testing by a neurologist.

Q. What safeguards are built into the program to alleviate the fears of pupil personnel staff as well as community agency members that the counselors will not take over their jobs?

A. The project director, the student assistance counselors, the principals, and the Department of Community Mental Health all are sensitive to this issue. As a result, the student assistance counselors are told to try to refer students with problems that are not alcohol- or other-drug-related to the appropriate pupil personnel staff members and community agencies as soon as possible. Also, students who have alcohol or other drug problems and need treatment are referred to appropriate treatment programs or private practitioners. A student with both an alcohol problem and academic problems will be seen by both the student assistance counselor and the guidance counselor. Individual supervision with the project director and supervisors is used to discuss students and make sure they are being referred appropriately. A second check is provided by a research assistant who tabulates information on referrals made by the counselors.

One of the nonnegotiable conditions of participation for a school district is that it agree not to reduce pupil personnel staff unless a corresponding decrease in enrollment warrants it.
IV. Referral to the Program: Getting the Student in the Door

Referrals can come from parents, administrators, faculty, or any other concerned party. If a program is to operate with real effectiveness, however, the main source of referral must be the students themselves. The number of students referred by even the most vigilant administrators can never approach the real number of students in need of counseling.

Q. Are students required to enter the program?
A. Participation is voluntary, except for students referred for three mandatory sessions because they are caught using alcohol or other drugs in school.

Q. How are students referred to the program?
A. Students come to the program from three sources: (1) self-referral, (2) referral by school personnel, peers, or parents, or (3) compulsory referral.

In self-referral, the main source of referrals, a student learns of the program through a class presentation by the student assistance counselor, or meets a counselor and decides to come in voluntarily, or comes in contact with other students in the group and wants to join.

In the second type of referral, also voluntary, someone refers the student to the program in one of several ways. For instance, the person making the referral may tell the counselor about a suspected alcohol or other drug problem and provide the counselor with the student's name but choose to remain anonymous, thus leaving the counselor to get in touch with the student. Or a slip of
paper may be put under the counselor's door with the simple message: "See Johnny _____. He drinks a lot." On the other hand, the person making the referral, who may be a teacher, a parent, a worried girlfriend or boyfriend, or any other concerned individual, may permit his or her name to be used.

Under mandatory referral, the referring party actually introduces the student to the counselor. This usually occurs when a student is identified as being under the influence of alcohol or other drugs and the principal orders the student to see the counselor. In such cases, the parents are always automatically notified when the referral has been made.

Q. What happens if a student appears under the influence of alcohol or other drugs in class or on school grounds in one of the participating schools?

A. Procedures vary in each school, but usually the student is sent to the nurse's office for examination. The nurse notifies the parent and principal, then sends the student home for the remainder of the day on medical grounds. Upon returning the next day, the student reports to the student assistance counselor for one to three required sessions to determine if problems led to the alcohol or other drug use. If an alcohol or other drug problem is identified, the counselor tries to motivate the adolescent to participate in the program or in an outside program to stop drinking or using drugs.

If a student appears under the influence a second time, essentially the same procedure is followed. This time, however, the student is required to see the student assistance counselor in order to determine the number, frequency, and kinds of contacts to be had with the student, including meetings with parents or referral of the student to other services.

A third incident results in notifying the school principal and suspension of the student. When a student returns to school, he or she is required to be accompanied by a parent. They in turn are required to meet with the student assistance counselor. If the parents fail to comply, the school principal takes further appropriate action, such as contacting Child Protective Services. The parent is told that treatment is needed, and an outside referral is made. Sometimes it is necessary for the parents and principal to do an intervention with a student to get him or her to accept a referral to treatment.

Q. Are referrals to an outside agency for treatment usually mandatory?

A. They generally are not mandatory. The counselor may try to make it easier for the student by offering to go along to the first appointment or by asking the
practitioner to come to the school to meet the student.

Q. Are all students who exhibit school performance problems referred to the student assistance counselor?

A. It depends on the school. In some schools, the student assistance program is the only show in town, and everyone with any kind of problem takes it to the student assistance counselor. In other schools with adequate pupil personnel staff, students with school performance problems might first be sent to a guidance counselor or to the school psychologist or social worker.

Q. Who does the screening for the program?

A. Screening usually is done by the person who identifies the problem. A teacher who identifies a student as routinely absent, for example, may decide not to make a referral to the program but seek help instead from a guidance counselor who, in turn, may expose an alcohol or other drug problem and make the referral. If the problem is clearly identified at the start as possible alcohol- or other-drug-related, the student assistance counselor almost always does the screening.

Q. How many of the referrals to the program come directly from students, by referring either themselves or their friends?

A. 60 percent.

Q. Who else, besides parents, students, counselors, and school administrators, might refer students to the program?

A. Among numerous other referral sources are school bus drivers, school aides, hall monitors, youth officers, police officers, doctors, therapists, and school nurses.

Q. How many of the students are referred to outside agencies or private practitioners?

A. Approximately 20 to 25 percent.

Q. What other groups are the students urged to join?

A. If appropriate, some are encouraged to join groups offering drug- and alcohol-related services, such as Narcotics Anonymous, Alcoholics Anonymous, or Alateen—a nationwide self-help organization for teenagers with alcoholic family members or friends. The Student Assistance Program is responsible for stimulating the formation of two of the five Alateen groups in Westchester County.
Q. How many of the students are seen as a result of mandatory referrals?
A. About 10 percent.

Q. Of the mandatory referrals, how many students return on their own for at least a fourth session?
A. Approximately 60 percent.

Q. Does this figure have any significance?
A. It indicates that students who are initially coerced into joining the program can be engaged and then stay on their own free will.

Q. Is a lack of referrals significant?
A. A lack of referrals from any group, such as faculty or administrators, can indicate a problem in the relationship between the counselor and the referral source, or the referral source's resistance to the program.

Q. How is the student assistance program kept from being perceived as punitive?
A. Care is taken to separate the disciplinary action taken by school administrators when a student is caught using alcohol or other drugs and the referral for counseling based on a health problem. In fact, efforts are made to convince those who are referred to the program that cooperation with the student assistance counselor is the way to avoid a future disciplinary action. Behavior requiring disciplinary action, such as fighting, selling drugs, cutting class, or being under the influence, is handled in the usual way by the school with the appropriate disciplinary consequences.

Q. What happens to students who are already involved in the program and get into trouble even though they are receiving counseling?
A. They are still subject to the school's regular disciplinary action. As a result, the students do not see counseling as being equal to punishment or as a way of getting out of punishment.
If the student assistance program is to work in a school, it must have the support of parents, faculty, and the community at large. The program's aim of preventing and reducing alcohol and drug abuse must become a common goal.

Q. How do staff members work with parent groups?

A. Staff of the program believe in the value of parent peer support groups and parent peer task forces in the county. At one end of the spectrum are parent peer support groups that resemble true self-help therapy groups. The parents meet in small groups of no more than 10, according to the ages of their offspring, and talk about the pains and problems of raising children. At the other end of the spectrum are large task forces with 100 or 200 parents and specific goals—for example, getting the local delicatessen not to sell beer to minors or working to close headshops or to keep drinking from occurring at teenage parties. A variety of groups fall in the middle, and some communities have both a task force and a support group.

With parent peer support groups, the student assistance counselor tries to act as a resource, believing that these groups should not rely on professionals but be self-help entities in the truest sense, offering support to each other and not feeling the need for an expert to tell them what to do.

The counselor is a resource, for example, in that if a group were to complain of having a hard time making decisions on appropriate activities for 12-year-olds, the program might suggest that the group contact a child psychiatrist who knows the developmental needs of 12-year-olds and bring that person in as a resource at one of the meetings. The counselor would not try to analyze such
needs itself. On the other hand, if the task force desires a program for educating parents on, say, legal consequences of using marijuana, it would likely ask a local police officer to provide a perspective on the situation. Another example would be if a group wants to talk about why adolescents use alcohol or other drugs, the counselor is available to lead discussion on that subject.

Q. How do the counselors work with community members?

A. At the request of parent and community groups, and with the permission of the principal, student assistance counselors help not only parents but such community members as clergy, police, and recreation personnel to develop a uniform attitude toward the handling of problems related to adolescent alcohol and other drug abuse. Counselors also provide training when requested.

Q. For what other reasons might parents see the counselor?

A. Parents can be seen alone, in parents' groups, or for up to three family sessions for the purpose of gaining or giving information about a student or for making a referral to an outside agency.

Occasionally, a parent is seen before a child ever participates in the program. This generally happens when a parent gets in touch with a student assistance counselor and requests an interview before the child is seen. Sometimes the parent is seen alone and at other times with other parents of children of the same age. These meetings are short-term group sessions dealing with a specific problem, usually one that is alcohol- or drug-related.

Q. In family sessions, might persons other than parents be involved?

A. Any concerned relative or person close to the family may become involved.

Q. When do these meetings take place?

A. They can take place any time but are usually either early in the morning, before work hours, or in the late afternoon or early evening after work.

Q. Is publicity about the program welcomed or frowned upon?

A. The program welcomes publicity. Generally when a school takes on the program for the first time, local newspapers, radio, and TV seek to do interviews and stories. As a way
of disseminating news about the program and thus reaching more people, the program encourages counselors to cooperate with media representatives. Public awareness also is increased when media do followup stories year after year. Publicity often results in additional referrals to the program.

Q. Are students involved in this public awareness effort?

A. Students may participate in a group session attended by a reporter, but the permission of all students must be granted. No student's name may be used. None of the students are permitted to go on TV full-face. In order to avoid any chance of identification, students must be viewed from the back of the head. Also, students write stories or provide information for student newspapers.

Q. Are special publicity efforts made during certain times of the year?

A. Special opportunities for increased community awareness present themselves during Alcoholism Awareness Month or similar periods focusing on youth and alcohol or other drugs. Program staff may seek to publicize their efforts in numerous ways—for example, by putting displays about alcoholism on bulletin boards, by encouraging English teachers to have their classes read plays that highlight the effects of alcohol, by having French teachers give lessons in French about alcoholism, or by bringing a drinking-and-driving awareness program into the school.

Q. How is confidentiality protected from inquiring reporters?

A. An attempt is made to answer media questions as honestly and forthrightly as possible. It is, however, made clear before any interviews are given that no names are to be used. If a particular case is cited, the identity of the participants must be altered to eliminate any chance of exposing real persons.

Q. What other attempts are made to reach the community?

A. The student assistance counselor is encouraged, if invited, to speak before meetings of the PTA, civic, fraternal organizations, religious groups, neighborhood associations, and any other groups expressing interest in the program.

Q. Can anyone come and see the program in action?

A. The groups themselves are closed to outsiders. Once a year, however, a meeting is held for anyone serious about starting a program. This is a kind of show-and-tell gathering of all counselors, as well as some principals, students, and parents, at which different aspects of the program are discussed.
Q. What reports does the program provide to the schools?

A. Monthly statistical summaries providing information on referral patterns, number of groups, individual sessions, class presentations, speaking engagements, and consultation to faculty are given to each principal. Evaluations of training programs also are provided, as well as supplementary training programs for pupil personnel staff.

Q. What impact has the program had on modifying the handling of problems involving adolescent alcohol and other drug abuse?

A. The evaluation data indicate that the program had a significant positive impact on reducing and preventing use of alcohol and marijuana (see appendix E for evaluation results). The schools now have specific procedures for helping students with alcohol and other drug problems. Principals report more consistency and greater school staff involvement in identifying students who may be using alcohol or other drugs. At the same time, parents are increasingly willing to refer children when alcohol or other drug use is suspected, because they know referrals will be kept confidential.

Q. Can improved academic performance be demonstrated?

A. No. Comparison of the grade point average for students during the 1980-81 and 1981-82 school years suggested very little difference from one school year to the next. Possibly due to the subjective nature of this measure, no significant improvement occurred in academic performance. It therefore appears inappropriate even to try to measure academic performance for the program, since it has as its main objective the impact on alcohol and other drug abuse, not on student grades.

Q. Has the program been evaluated?

A. Yes. Evaluation results show that school attendance has improved, and the use of alcohol and other drugs has declined among students participating in the program. These results, plus the observations of school administrators, faculty, parents, and students, have generated a great deal of enthusiasm for the program and optimism that further positive results can be expected and documented.
Checklist: Initiation to Implementation

This list is in simplified form. Fuller descriptions of each step must be read in the manual for information needed to start a student assistance program.

- Community determines a need for a student assistance program.
- School sends a letter to the Westchester County project director indicating a need for and interest in the program.
- Project director meets with principal (or designated person) to discuss cost, procedure for setting up the program, and other details.
- Principal obtains approval from board of education.
- Principal sends a letter to the project director stating intent to participate in program and proposed budget approval.
- Project director and principal meet to discuss policies and procedures needed for school or school district.
- Qualified student assistance counselor is recruited.
- Counselor attends 4 weeks of mandatory training.
- Counselor introduces program to school staff and provides training to faculty to recognize signs and symptoms warranting student referral to the program.
- Principal sends letter describing program to every student and his or her parents.
- Counselor is introduced to parents and community groups.
- Counselor makes brief presentation about program to each student in the school.
- Referrals are made.
- Groups are formed.
- All systems are go!

Appendix A.

STUDENT ASSISTANCE PROGRAM
POLICY FOR HANDLING
STUDENT ALCOHOL OR DRUG USE

If a student appears "under the influence" of alcohol or a drug in class or on school grounds, s/he is sent to the nurse's office. The nurse examines the student, calls the parent, notifies the principal, and sends the student home for the remainder of the day on medical grounds. When the student returns the next day, s/he reports to the student assistance counselor for one to three required sessions to determine if there are problems which led to the substance use. The counselor offers counseling or other help in remedying the problem.

If a student appears "under the influence" a second time, the same procedure is followed. The student assistance counselor determines the number, frequency, and kinds of contacts with the student including meeting with the parent or referring the student to other services.

The third incident will result in notifying the school principal and automatic suspension results. When the student returns, s/he is required to be accompanied by the parent and the parent(s) are required to meet with the student assistance counselor. If the parent fails to meet with the student assistance counselor, the school principal will take further appropriate action such as calling Child Protective Services.

Students or parents requiring treatment are referred to outside agencies but are followed by the student assistance counselor as well.

Any behavior requiring disciplinary action such as fighting, selling drugs, cutting class, in addition to intoxication, is handled in the usual way by the school.

High School along with 29 other Westchester County High Schools and 4 Junior High Schools is implementing a Student Assistance Program for the 1984-85 school year. This program is funded by the NYS Division of Alcoholism and Alcohol Abuse, the NYS Division of Substance Abuse Services, the Westchester County Department of Community Mental Health, and the school district. The program will provide alcohol and drug education and counseling services to students with school, peer, family, alcohol and/or drug related problems. The program will also provide a new procedure for early identification of students who are experiencing alcohol and drug related problems. It is anticipated that this combination will accomplish the following goals:

1. To prevent the development of alcohol and drug abuse among students.
2. To reduce the incidence of alcohol and drug related problems among students.
3. To improve attendance and to reduce alcohol and drug consumption among students with alcohol and drug related problems.

(Name of Student Assistance Counselor) has been selected to serve as the Student Assistance Counselor at High School. She/he will be working full time and will have evening hours available to see parents and make presentations to community groups. (Name of Student Assistance Counselor) has a Masters Degree in , previous experience in working with adolescents, and specialized training in prevention and early intervention strategies with adolescents with alcohol and drug related problems. She/he is being payed and supervised by the Westchester County Department of Community Mental Health and the school.

(Name of Student Assistance Counselor) will be available to see students who are using alcohol or drugs or have personal, school or family problems that could lead to alcohol or drug abuse or suicide. If you are worried about your child's behavior and would like to speak to the Student Assistance Counselor and/or have the Student Assistance Counselor see your child, please call him/her directly at . All calls will be confidential.

We are hopeful that this program will show some promising results. Data will be collected to assess the overall effectiveness of the program. As a result of the Student Assistance Program, it is hoped that participants will: increase rates of school attendance, and self-report a decrease in quantity and frequency of alcohol and drug use.

Please feel free to call me if you have any questions about the program.

CONFIDENTIALITY OF ALCOHOL AND DRUG ABUSE PATIENT RECORDS

General Provisions
Title 42—Public Health
CHAPTER 3—PUBLIC HEALTH SERVICE, DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE
SUBCHAPTER A—GENERAL PROVISIONS
PART 42—CONFIDENTIALITY OF ALCOHOL AND DRUG ABUSE PATIENT RECORDS

The comments and submissions were carefully considered, and additional changes were made in the rulemaking process. The Administrator of Veterans' Affairs and the heads of the other Federal departments and agencies that commented stated that the proposed regulations were designed to protect the confidentiality of alcohol and drug abuse patient records.

Rules and Regulations:

The fixed limitation on the permissible duration of written consent for disclosure was changed from § 2.31 in favor of a limitation to such duration as may be reasonably necessary to effectuate the purpose for which the consent is given.

Finally, a number of clarifying technical, informational, and conforming changes were made in the final proposal, but these are without significant substantive effect.

Accordingly, pursuant to the authority section of Title XX of the Social Security Act (see proposed 45 CFR 220.63, 40 FR 16002, 16006, August 27, 1975), and in accordance with this approach, § 2.37 has been revised to provide that funding sources and third-party payers maintaining drug or alcohol abuse patient records are subject to restrictions upon disclosure to the same extent and in the same manner as any other entity maintaining records within the scope of the authorizing legislation and this Part.

The other major changes are in the area of criminal justice system referrals, and the grounds for the rules finally adopted are set forth in the basis and purpose section (§ 2.30-1) pertaining thereto. In connection with these changes it must be frankly acknowledged that the arguments set forth in the corresponding basis and purpose section (§ 2.30-1) of the May 9 proposal have merit. The final rule in certain instances result in a compromise of the treatment process, if it is, or other authorities in the criminal justice system overreact to information whose communication is allowed under the final rules but would have been prohibited under the proposed rules.

Against such an adverse effect, however, there must be weighed the very real need for which some cooperation between community social service systems and the criminal justice system can yield for some the desired results, and scarred by the consequences of their own criminal conduct. Governmental responses based on a purely medical model have not met with noticeably greater success than those based on a purely punitive approach, and it would be tragic if these rules were so constructed as to become a barrier to the development of better ways to deal with those who are caught up in a pattern of seriously anti-social behavior.

In addition to the foregoing major changes, the following minor, policy changes are incorporated:

A. Definitions and usage rules.
B. Violations and enforcement rules.
C. General purpose.
D. Minor purpose.
E. Rulemaking.
F. Enforcement.
G. Administration.
H. Reports of violations.
RULES AND REGULATIONS

468. Confidentiality of patient records.

(a) Records of the identity, diagnosis, treatment, or prevention function conducted, regulated, or directly or indirectly assisted by any department or agency of the United States, shall, except as provided in subsection (b), be confidential and be disclosed only for the purposes and under the circumstances expressly authorized under subsection (b) of this section. (b) The content or any record referred to in subsection (a) may be disclosed in accordance with the prior written consent of the patient with respect to whom such record is maintained, but only if (1) the record is maintained under such circumstances, and for such purposes, as are authorized under regulations prescribed pursuant to subsection (g), or (2) the patient, or the legal representative of the patient, with respect to whom any given record referred to in subsection (a) of this section is maintained, gives his written consent, the content of such record may be disclosed as follows: (A) Alcohol. (B) Any record shall be authorized under subsection (b), or (C) the disclosure is authorized under regulations prescribed pursuant to subsection (g), or (D) the record is maintained under such circumstances, and for such purposes, as are authorized under regulations prescribed pursuant to subsection (g), or (E) the record is maintained under such circumstances, and for such purposes, as are authorized under regulations prescribed pursuant to subsection (g), or (F) the patient, or the legal representative of the patient, with respect to whom any given record referred to in subsection (a) of this section is maintained, gives such patient's written consent, the content of such record may be disclosed as follows: (A) A record may be disclosed in accordance with such regulations as are prescribed pursuant to subsection (g)), or (B) the record is maintained under such circumstances, and for such purposes, as are authorized under regulations prescribed pursuant to subsection (g), or (C) the record is maintained under such circumstances, and for such purposes, as are authorized under regulations prescribed pursuant to subsection (g), or (D) the record is maintained under such circumstances, and for such purposes, as are authorized under regulations prescribed pursuant to subsection (g), or (E) the record is maintained under such circumstances, and for such purposes, as are authorized under regulations prescribed pursuant to subsection (g), or (F) the record is maintained under such circumstances, and for such purposes, as are authorized under regulations prescribed pursuant to subsection (g). (b) The Administrator of Vocational Affairs, through the Chief Medical Director, shall, to the maximum feasible extent consistent with their responsibilities, provide by regulations prescribed pursuant to subsection (g), or (b) the record is maintained under such circumstances, and for such purposes, as are authorized under regulations prescribed pursuant to subsection (g), or (C) the record is maintained under such circumstances, and for such purposes, as are authorized under regulations prescribed pursuant to subsection (g), or (D) the record is maintained under such circumstances, and for such purposes, as are authorized under regulations prescribed pursuant to subsection (g), or (E) the record is maintained under such circumstances, and for such purposes, as are authorized under regulations prescribed pursuant to subsection (g), or (F) the record is maintained under such circumstances, and for such purposes, as are authorized under regulations prescribed pursuant to subsection (g), or (G) the record is maintained under such circumstances, and for such purposes, as are authorized under regulations prescribed pursuant to subsection (g), or (H) the record is maintained under such circumstances, and for such purposes, as are authorized under regulations prescribed pursuant to subsection (g), or (I) the record is maintained under such circumstances, and for such purposes, as are authorized under regulations prescribed pursuant to subsection (g), or (J) the record is maintained under such circumstances, and for such purposes, as are authorized under regulations prescribed pursuant to subsection (g), or (K) the record is maintained under such circumstances, and for such purposes, as are authorized under regulations prescribed pursuant to subsection (g), or (L) the record is maintained under such circumstances, and for such purposes, as are authorized under regulations prescribed pursuant to subsection (g). (b) The Administrator of Vocational Affairs, through the Chief Medical Director, shall, to the maximum feasible extent consistent with their responsibilities, provide by regulations prescribed pursuant to subsection (g), or (b) the record is maintained under such circumstances, and for such purposes, as are authorized under regulations prescribed pursuant to subsection (g), or (C) the record is maintained under such circumstances, and for such purposes, as are authorized under regulations prescribed pursuant to subsection (g), or (D) the record is maintained under such circumstances, and for such purposes, as are authorized under regulations prescribed pursuant to subsection (g), or (E) the record is maintained under such circumstances, and for such purposes, as are authorized under regulations prescribed pursuant to subsection (g), or (F) the record is maintained under such circumstances, and for such purposes, as are authorized under regulations prescribed pursuant to subsection (g), or (G) the record is maintained under such circumstances, and for such purposes, as are authorized under regulations prescribed pursuant to subsection (g), or (H) the record is maintained under such circumstances, and for such purposes, as are authorized under regulations prescribed pursuant to subsection (g), or (I) the record is maintained under such circumstances, and for such purposes, as are authorized under regulations prescribed pursuant to subsection (g), or (J) the record is maintained under such circumstances, and for such purposes, as are authorized under regulations prescribed pursuant to subsection (g), or (K) the record is maintained under such circumstances, and for such purposes, as are authorized under regulations prescribed pursuant to subsection (g), or (L) the record is maintained under such circumstances, and for such purposes, as are authorized under regulations prescribed pursuant to subsection (g). (b) The Administrator of Vocational Affairs, through the Chief Medical Director, shall, to the maximum feasible extent consistent with their responsibilities, provide by regulations prescribed pursuant to subsection (g), or (b) the record is maintained under such circumstances, and for such purposes, as are authorized under regulations prescribed pursuant to subsection (g), or (C) the record is maintained under such circumstances, and for such purposes, as are authorized under regulations prescribed pursuant to subsection (g), or (D) the record is maintained under such circumstances, and for such purposes, as are authorized under regulations prescribed pursuant to subsection (g), or (E) the record is maintained under such circumstances, and for such purposes, as are authorized under regulations prescribed pursuant to subsection (g), or (F) the record is maintained under such circumstances, and for such purposes, as are authorized under regulations prescribed pursuant to subsection (g), or (G) the record is maintained under such circumstances, and for such purposes, as are authorized under regulations prescribed pursuant to subsection (g), or (H) the record is maintained under such circumstances, and for such purposes, as are authorized under regulations prescribed pursuant to subsection (g), or (I) the record is maintained under such circumstances, and for such purposes, as are authorized under regulations prescribed pursuant to subsection (g), or (J) the record is maintained under such circumstances, and for such purposes, as are authorized under regulations prescribed pursuant to subsection (g), or (K) the record is maintained under such circumstances, and for such purposes, as are authorized under regulations prescribed pursuant to subsection (g), or (L) the record is maintained under such circumstances, and for such purposes, as are authorized under regulations prescribed pursuant to subsection (g).
RULES AND REGULATIONS

2.2.3 Previous regulations as controlling authority. Attention is called to the interpretative regulations, issued by the Special Action Office for Drug Abuse Prevention (29 FR 34565, November 17, 1964, as revised 39 FR 37744, December 6, 1974, referred to hereinafter in this part as the "previous regulations"). These regulations have been given a special status as controlling authority by the provisions of section 303(d) of Pub. L. 93-252, as well as the references in the legislative history of the act to the precedents established under section 408 of Pub. L. 92-256.

2.2.4 Administration and enforcement. It is not contemplated that any particular agency will be set up specifically to enforce compliance with this part. Programs which receive Federal grants may be monitored for compliance with this part and other applicable Federal law as an incident to the planning, development, and administration processes. Similarly, FDA inspections of methadone programs and inspections of health-care facilities furnishing health care to veterans are not intended to include this part, which, when the latter is complied with, is incorporated by reference in the methadone regulations (21 CFR 130.305).

3.2.7 Reports of violations. Any violation may be reported to the United States Attorney for the judicial district in which the violation occurs. The United States Attorney, or a person delegated by him, may issue a written citation for the Record by its floor manager. A list of reports of violations may be found at their purposes of such legislation.

3.2.8 General provisions. (a) Authorizing legislation. The term "authorizing legislation" means section 408 of the Drug Abuse Office and Treatment Act of 1972 (21 U.S.C. 1781) and section 335 of the Comprehensive Alcohol Abuse and Alcoholism Prevention, Treatment, and Rehabilitation Act of 1970 (42 U.S.C. 4263), as such sections may be amended and in effect from time to time. (b) Construction of terms. The definitions and rules of construction set forth in this part are applicable to the purposes of any Program with respect to the authorizing legislation. (c) Alcohol abuse. The term "alcohol abuse" includes alcoholism.

4.2.9 Drug abuse. The term "drug abuse" includes drug addiction.

5.2.10 Diagnosis and treatment. The term "drug abuse" includes drug addiction.

(1) Program. (a) Drug abuse. The term "drug abuse" includes drug addiction.

(b) Diagnose and treat. (1) The term "program", when referring to an individual or organization, means either an individual or an organization furnishing diagnosis, treatment, or referral for alcohol abuse or drug abuse.
(2) The term "program," when not used in the sense defined in paragraph (f)(1), means a plan or procedure, whether functional or organizational, and whether or not governmental, for dealing with alcohol abuse or drug abuse problems from either an individual or a social standpoint.

(g) Program evaluation.

The term "program evaluation" means an evaluation of a program.

(1) The effectiveness, efficiency, compliance with applicable therapeutic, legal, or other standards, or other aspects of the performance, of a program as defined in paragraph (f)(1) of this section.

(2) The validity, effectiveness, practicality, or other aspects of the utility or success of a program as defined in paragraph (f)(2) of this section.

(h) Program director. The term "program director" in this case of a program which is an individual means that individual, and in the case of a program which is an organization, the individual, if any, who is the principal or, in the case of organizations, sponsors or those who control a board of directors, board of trustees or other governing body, the individual who is the program director, managing director, or otherwise vested with executive authority with respect to the program.

(i) Patient. The term "patient" means any individual (whether referred to as a patient, client, or otherwise) who has applied for or been given diagnosis or treatment for alcohol abuse or drug abuse and includes any individual who, after arrest on a criminal charge, is interviewed and examined for diagnosis, treatment, with respect to drug or alcohol abuse preliminary to a determination as to eligibility to participate in a treatment or rehabilitation program.

(j) Patient identifying information. The term "patient identifying information" means the name, address, social security number, or similar information by which the identity of a patient can be determined with reasonable accuracy and speed either directly or by reference to other patient identifying information. The term does not include a patient identifying number assigned by a program.

(k) Alcohol abuse or drug abuse prevention function. The term "alcohol abuse or drug abuse prevention function" means any program or activity relating to alcohol abuse or drug abuse education, training, treatment, relocation, or research, and includes any such function even when performed by an organization whose primary mission is in the field of law enforcement or is unrelated to alcohol or drugs.

(l) The term "person" means an individual, a partnership, a corporation, a trust, a Federal or State governmental agency, or any other legally cognizable entity.

(m) Service organization. The term "service organization" means a person which provides services to a program such as data processing, records, or other functions.
RULES AND REGULATIONS

in senses which are as different, yet related, as those in §§ 2.11(f)(1) and 2.11(f)(2). This part, however, has been read both in conjunction with the Food and Drug Administration's regulations on the Drug Abuse Office and Treatment Act of 1972. The Metha- done Regulation (21 CFR 312.55) clearly uses the term "program" in the § 2.11(f)(1) sense. In section 103(b) of the Act (21 U.S.C. 1133(b)), it is clearly used in the § 2.11(f)(2) sense, and the usage in section 408(b)(2)(B) of the Act has from its original enactment been administratively interpreted to include both senses. As used in this part, the context should indicate the intended meanings with sufficient clarity to make this preferable to creating and defining new terminology which would be different from that used in related regulations and the authorizing legislation.

(4) Which is assisted by the Federal government by way of reimbursement or other unrestrained grants, all of the programs and activities of the State or local government are thereby indirectly assisted, and thus meet that aspect of the statutory criteria for coverage mentioned in (f) of section 2.12(a) of this section, this part applies.

§ 2.12 Applicability—Rules

(a) In general. Except as provided in paragraph (b) of this section, this part applies to records of the identity, diagnosis, prognosis, or treatment of any patient which are maintained in connection with the performance of any alcohol abuse or drug abuse prevention function—

(1) Which is conducted in whole or in part, whether directly or by grant, contract, or otherwise, by any department or agency of the United States.

(b) Sections 2.12(a) (3) and 2.12(a) (4), (e) Section 2.12(b) essentially repeats the interpretation given in § 1401.02(b) of the provisions of law except that it takes account of the special provisions inserted in the new law with reference to the Veterans Administration, and makes clear that the execution for communications within the military-VA system does not generally apply to records pertaining to civilians.

(f) Section 2.12(c), which deals with the question of how the period covered by any given set of records affects the applicability of these regulations to them, restates the principle stated in § 1401.02(a) of the previous regulations, and applies it to records in the field of alcohol abuse and drug abuse. The authorizing legislation contains no effective date provisions. A construction which would apply the statutes to records of completely closed treatment episodes, records necessarily made and maintained by any department or agency of the United States in the Armed Forces, within those components of the Veterans Administration furnishing health care to veterans, or between such components and the Armed Forces, of recognition pertaining to a person relating to a period when such person is or was subject to the Uniform Code of Military Justice.

(2) Except as provided in paragraph (b) (1) of this section, this part applies to any communication between any person outside the Armed Forces and any person within the Armed Forces.

(3) Except as provided in paragraph (b) (1) of this section, this part applies, insofar as it pertains to any drug abuse prevention function, to any communication between any person outside those components of the Veterans Administration furnishing health care to veterans and any person within such components, unless such date as the Secretary of Veterans Affairs, through the Chief Medical Director, by regulation provides the provisions of this part applicable thereto.

(4) Except as provided in paragraph (b) (1) of this section, this part applies, insofar as it pertains to any alcohol abuse prevention function, to any communication between any person outside those components of the Veterans Administration furnishing health care to veterans and any person within such components, to such extent as the Administrator of Veterans Affairs, through the Chief Medical Director, by regulation provides the provisions of this part applicable thereto.

§ 2.12-1 Applicability—Basis and purpose

(a) The broad coverage provided by § 2.12(a) is appropriate in the light of the remedial purposes of the statutes as well as the practical desirability of certainty and uniformity. Sections 2.12(a) (1) and 2.12(a) (2) simply follow the terms of subsection (a) of the statutes, with some explanation material for the sake of clarity and explicitness.

(b) Sections 2.12(a) (3) and 2.12(a) (4) are based upon the use by Congress of the phrase "directly or indirectly assisted by any department or agency of the United States," in the light of the multiplicity and extent of Federal programs and policies which can be of assistance to drug and alcoholism programs, this wording strongly suggests an intention to provide the broadest coverage possible, and if the term is interpreted to include both direct and indirect contributions. It would be manifestly contrary to the general policy objectives of the statutes, with State aid and private, tax-deductible contributions. It would be manifestly contrary to the general policy objectives of the statutes. Many programs commence with direct Federal assistance, financial, technical, or otherwise, and later, as the beneficiaries grow with State aid and private, tax-deductible contributions it would be manifestly contrary to the general policy objectives of the statutes.

(c) With regard to § 1212 (a)(3), it seems clear that whenever a State or local government is assisted by the Federal government by way of reimbursement or other unrestrained grants, all of the programs and activities of the State or local government are thereby indirectly assisted, and thus meet that aspect of the statutory criteria for coverage mentioned in (f) of section 2.12(a) of this section, this part applies.

(d) Section 2.12(a) (4) follows the doctrine established in McGlotten v. Con- nelly, 404 U.S. 468 (1971), in which it was held that the deductible status of contributions to an organization carrying on accepted practices in terms of obtaining specialized services from outside organizations. In conjunction with the definition of qualified services organization, set forth in § 2.11(n), the provisions of § 2.11(p) should pre- vent the development of abuses in this area.
RULES AND REGULATIONS

8.12 General rules regarding confidentiality—Rules.

(a) In general. Records to which this part refers may be partial and may be disclosed only as authorized by this part, and may not otherwise be divulged in any civil, criminal, administrative, or legislative proceeding conducted for, by, or on behalf of the State agency, whether such proceeding is commenced before or after the effective date of this part.

(b) Unconditional compliance required. The prohibition upon unauthorized disclosure applies regardless of whether the person seeking disclosure already has the information sought, has other means of obtaining it, and any official status, has obtained a subpoena, or is otherwise entitled, other than as hereinafter provided for disclosure not expressly authorized under this part.

(c) Information covered by prohibition. The prohibition on unauthorized disclosure covers all information about patients, including their attendance or absence, personal whereabouts, or status as residing, present or not recorded, in the possession of program personnel, except as provided in paragraph (d) of this section.

(d) Crimes on program premises or against program personnel. Where a patient engages in conduct to commit crimes on the premises of the program or against personnel of the program, the patient shall be considered as prohibiting personnel of the program from seeking the assistance of, or reporting such crimes to, a law enforcement agency, but such report shall not identify the suspect as a patient. In any situation, immediate consideration should be given to seeking an order under Subpart E of this part to permit the disclosure of such limited information about the patient as may be necessary under the circumstances.

(e) Implicit and negative disclosures prohibited. The disclosure that a person (whether actual or fictitious) answering to a particular description, name, or other identification is not or has not been attending a program, whether over a period of time or on a particular occasion, is fully as much subject to the prohibitions and conditions of this part as the disclosure that a person is or has been attending such a program. Any improper or unauthorized request for any disclosure of records or information subject to this part must be met by a non-conciliatory response.

(f) In-patients and residents. The presence of any in-patient in a medical facility or resident in a residential facility for the treatment of drug or alcohol abuse may be acknowledged to callers and visitors with a written consent. Without such consent, the presence of any in-patient or resident in such a facility for the treatment of drug or alcohol abuse may be acknowledged if done in such a way as not to indicate that the patient is being treated for drug or alcohol abuse.

§ 8.12-1 General rules regarding confidentiality—Definition and purpose.

(a) Section 8.12(a) continues the general principles of the statutory provisions, and is unchanged from 1001.08 of the previous regulations.

(b) Sections 8.12(b) and 8.12(c) have been added on the basis of comments on the draft regulations published August 23, 1976, in which there was a documented report that counsel for a program had advised the program that it could furnish information to the FBI about patients without their written consent and without completing a full judicial proceeding in accordance with Subpart E of this part. Sections 8.12(b) and 8.12(c) should clarify the original intent of the statute and regulations to the extent of precipitating such errors in the future.

(c) In the situation described in § 8.12(d), the desirability of the general prophylactic rule prohibiting disclosures by program personnel about patients regardless of whether such disclosures are from a written request, is required by the practical necessity to permit protection from, and prompt reporting of, criminal acts. In the context of the first set of regulations issued under 21 U.S.C. 1778, it was emphasized that the operation of the clause ran no way create a sanction for criminals. (37 FR 24636, November 17, 1972). Section 8.12(c) is consistent with that contemporaneous administrative construction.

(d) Section 8.12(e) is adapted from § 1001.11 of the August 23, 1976 draft. The suggestion that this part be cited when declining to give information has been deleted on the basis of comments that correctly pointed out that such a clause, if given by an institution or program maintaining some records covered by this part and parts not, would serve to identify the records inquired about as pertaining to treatment covered by its program.

§ 8.14 Penalty for violations—Rules.

(a) General. The penalty provided by law. Any person who violates any provision of this part shall be fined not more than $5,000 or imprisoned not more than 5 years, or both, in the case of each subsequent offense.

(b) A fine for a subsequent offense. Where a defendant has committed one offense under either section authorizing this part and another violation of this section or any provision of this part authorized by that section, any offense thereunder, the term "a subsequent offense" means each section or any provision of this part authorized by that section shall be considered as a separate and distinct offense.

§ 8.14-1 Penalty for violations—Broad and purpose.

(a) The term "offense" in this part shall be "minor." (b) The term "minor" means a person who has not attained the age of 18 years or, in a State where a different age is expressly provided by State law as the age at which a person ceases to be a minor, the age prescribed by State law. (c) The term "offense" as used in this part shall be "a minor." (d) The term "offense" as used in this part shall be "a minor." (e) The term "offense" shall be "a minor."
RULES AND REGULATIONS

legal capacity under the applicable State law or by the applicable Federal law to consent to disclosure of such information. In such a situation, the question may arise as to whether the treatment record of the patient may be disclosed, except as provided in paragraph (g) of this section.

(b) If the patient is a minor and consent is required for disclosure of such information, the question may arise as to whether the treatment record of the minor patient may be disclosed, except as provided in paragraph (g) of this section.

(c) Where a State has authorized the furnishing of treatment or other services of a given type to a minor without parental consent, notice to, or consent by, the parent or guardian, it seems clear that a consent to disclosure of such information is required.

(d) A much more difficult problem is presented in the case of a minor who applies for services in a jurisdiction which has determined that such a minor should have the right to obtain treatment without parental consent. The question may arise as to whether the clinician has an ethical or legal duty to notify the parent which conflicts with a duty to act in the best interests of the patient.

(e) It appears that the question may arise as to whether the treatment record of the minor patient may be disclosed, except as provided in paragraph (g) of this section.

(f) Where a State has authorized the furnishing of treatment or other services of a given type to a minor without parental consent, notice to, or consent by, the parent or guardian, it seems clear that a consent to disclosure of such information is required.

(g) Where a State has authorized the furnishing of treatment or other services of a given type to a minor without parental consent, notice to, or consent by, the parent or guardian, it seems clear that a consent to disclosure of such information is required.

(h) Where a State has authorized the furnishing of treatment or other services of a given type to a minor without parental consent, notice to, or consent by, the parent or guardian, it seems clear that a consent to disclosure of such information is required.

(i) Where a State has authorized the furnishing of treatment or other services of a given type to a minor without parental consent, notice to, or consent by, the parent or guardian, it seems clear that a consent to disclosure of such information is required.

(j) Where a State has authorized the furnishing of treatment or other services of a given type to a minor without parental consent, notice to, or consent by, the parent or guardian, it seems clear that a consent to disclosure of such information is required.

(k) Where a State has authorized the furnishing of treatment or other services of a given type to a minor without parental consent, notice to, or consent by, the parent or guardian, it seems clear that a consent to disclosure of such information is required.

(l) Where a State has authorized the furnishing of treatment or other services of a given type to a minor without parental consent, notice to, or consent by, the parent or guardian, it seems clear that a consent to disclosure of such information is required.

(m) Where a State has authorized the furnishing of treatment or other services of a given type to a minor without parental consent, notice to, or consent by, the parent or guardian, it seems clear that a consent to disclosure of such information is required.

(n) Where a State has authorized the furnishing of treatment or other services of a given type to a minor without parental consent, notice to, or consent by, the parent or guardian, it seems clear that a consent to disclosure of such information is required.

(o) Where a State has authorized the furnishing of treatment or other services of a given type to a minor without parental consent, notice to, or consent by, the parent or guardian, it seems clear that a consent to disclosure of such information is required.

(p) Where a State has authorized the furnishing of treatment or other services of a given type to a minor without parental consent, notice to, or consent by, the parent or guardian, it seems clear that a consent to disclosure of such information is required.

(q) Where a State has authorized the furnishing of treatment or other services of a given type to a minor without parental consent, notice to, or consent by, the parent or guardian, it seems clear that a consent to disclosure of such information is required.

(r) Where a State has authorized the furnishing of treatment or other services of a given type to a minor without parental consent, notice to, or consent by, the parent or guardian, it seems clear that a consent to disclosure of such information is required.

(s) Where a State has authorized the furnishing of treatment or other services of a given type to a minor without parental consent, notice to, or consent by, the parent or guardian, it seems clear that a consent to disclosure of such information is required.

(t) Where a State has authorized the furnishing of treatment or other services of a given type to a minor without parental consent, notice to, or consent by, the parent or guardian, it seems clear that a consent to disclosure of such information is required.

(u) Where a State has authorized the furnishing of treatment or other services of a given type to a minor without parental consent, notice to, or consent by, the parent or guardian, it seems clear that a consent to disclosure of such information is required.

(v) Where a State has authorized the furnishing of treatment or other services of a given type to a minor without parental consent, notice to, or consent by, the parent or guardian, it seems clear that a consent to disclosure of such information is required.

(w) Where a State has authorized the furnishing of treatment or other services of a given type to a minor without parental consent, notice to, or consent by, the parent or guardian, it seems clear that a consent to disclosure of such information is required.

(x) Where a State has authorized the furnishing of treatment or other services of a given type to a minor without parental consent, notice to, or consent by, the parent or guardian, it seems clear that a consent to disclosure of such information is required.

(y) Where a State has authorized the furnishing of treatment or other services of a given type to a minor without parental consent, notice to, or consent by, the parent or guardian, it seems clear that a consent to disclosure of such information is required.

(z) Where a State has authorized the furnishing of treatment or other services of a given type to a minor without parental consent, notice to, or consent by, the parent or guardian, it seems clear that a consent to disclosure of such information is required.
perverse in its effects. For example, in a situation where the owner of medical records, all of which are confidential and so marked, a requirement that those pertaining to drug or alcohol treatment be marked in any distinctive way would merely serve to identify such records as pertaining to drug or alcohol treatment—precisely the opposite of the intended result. The purpose of § 2.17, which is based upon § 1401.26 of the previous regulations, is to alert programs to the necessity of exercising due care with respect to the security of patient records.

§ 3.18 Extent of disclosure—Rule.

Any disclosure made under this part, whether with or without the patient's consent, shall be limited to information necessary on the light of the need or purpose for the disclosure.

§ 3.18-1 Extent of disclosure—Basis and purpose.

(a) Section 3.18 expresses the general principle, which has application in many different contexts, that any disclosure from records covered by this part should be limited to information necessary on the light of the need or purpose for the disclosure. It is identical to § 1401.26 of the previous regulations.

(b) This section should not be interpreted as imposing a limitation on the scope of records which may or should be made available to health agencies conducting investigations as required in § 2.19. All of the records maintained by a program relevant to such inspection. The Congress has determined that disclosure under such circumstances is not likely to cause harm, nor to cause the statutes authorizing this part, where such disclosure is required by Federal or State law, and the inspecting agency is a qualified State health agency as defined in § 2.12(e) (1).

(c) The placing of an under cover agent or informant in a program, either as a patient or as an employee, would appear to be contrary to the purpose for which the provisions of law authorizing this part were enacted, and properly subject to prohibition under regulations expressly authorized to carry out those purposes.

(d) From beyond the end of this section, § 3.18 is based on the reasoning that while the use of undercover agents and informants in treatment programs is ordinarily to be avoided, there may occasionally arise situations where their use may be justified. Accordingly, where a showing is made in an application for an order under § 3.18(a)(1) that the criteria set forth in that section are satisfied, the court may grant such an order.

§ 3.19 Undercover agents and informants—Rules.

(a) Definitions. As used in this section, "undercover agents" and "informants" mean a member of any Federal, State, or local law enforcement or investigative agency or other person on observation of one or more persons enrolled in or employed by a program in which he is or was enrolled, for the purpose of reporting to such agency or to another agency concerning such persons which he obtains as a result of such observation subsequent to such enrollment.

(b) General prohibition. Except as otherwise provided in paragraph (c) of this section, or as specifically authorized by a court order granted under § 3.27—

(1) No undercover agent or informant may be employed by or enrolled in any alcohol or drug abuse treatment program;

(2) No supervisor or other person having authority over an undercover agent or informant may knowingly permit such agent to be or remain employed by or enrolled in any such program; and

(3) No law enforcement or investigative officer may recruit or retain an informant with respect to such a program.

(c) Exceptions. The enrollment of a law enforcement officer in a treatment program shall not be deemed a violation of this section if (1) such enrollment is solely for the purpose of enabling the officer to obtain treatment for his own abuse of alcohol or drugs, and (3) his status as a law enforcement officer is known to the program director.

§ 3.19-1 Undercover agents and informants—Special purpose.

(a) In many instances, persons who are patients in treatment programs are making their first tentative efforts toward reintegration into productive society. They may be both vulnerable and suspicious, and the presence in a treatment program of an undercover law enforcement agent or informant may have devastating effects on the program's morale and therapeutic effectiveness. Moreover, it would appear that the purpose of such an agent or informant may be to obtain precisely the type of personal information which might be revealed by improper discipline notes and other patient records maintained by the program. Thus, the placing of an undercover agent or informant in a program, either as a patient or as an employee, would appear to be contrary to the purpose for which the provisions of law authorizing this part were enacted, and properly subject to prohibition under regulations expressly authorized to carry out those purposes.

(b) From beyond the end of this section, § 3.18(a)(1) is crucial to an understanding of the prohibitions which are imposed by § 3.18. Objections to the section were made informally but vigorously on behalf of the Drug Enforcement Administration, on the ground that the testimony of informants or undercover agents gained in treatment programs is essential to the successful prosecution of certain crimes arising under the Controlled Substances Act. It was said that the section as originally proposed, the section would allow only those treatment programs that might agree to cooperate with law enforcement authorities, a result both inhumane and antithetical. As a definition of an informant is intended to make clear, however, it is his function vis-à-vis the persons and fellow patients in the program in which he is employed which is controlling, and not his relationship, per se, with an investigative agency.

(c) Finally, the definition of informant is intended to clarify the distinction between an informant and an ordinary witness. It is the element of prearrangement that distinguishes the latter; in the case of the informed, they are suspected of having placed themselves at the government's disposal and hence at the disposal of the public. To the contrary: we think that the
initial publication of the previous regulations (37 FR 24568). In so saying, we are by no means insensitive to the anxieties repeatedly expressed in both testimony and comments on this section, but we believe that the prohibition contained in § 2.19 and the procedures and criteria set forth in § 2.27 provide a measure of relief which is consistent with the structure and intent of the underlying statutes.

§ 2.26 Identification cards—Rules.

(a) Required use prohibited. No program may require or request any patient to carry in his or her possession, while away from the program premises, an identification card or other form of identification which is issued by the program or which would tend to identify the bearer as a participant in or any similar program.

(b) Conditions of voluntary use. Nothing in this section prohibits a program from issuing an identification card to a patient if the patient’s counselor or other authorized member of the program staff has explained to the patient that acceptance and use of the card is entirely voluntary and that neither an initial rejection nor a subsequent discontinuation of its use will in any way prejudice his or her record or standing in the program. In the case of any patient to whom an identification card or similar device was issued prior to the effective date of this section, or subsequent thereto in violation of this section, a counselor or other authorized member of the program staff shall explain to the patient his right to turn it in without prejudice at any time.

(c) On-premises exemption. Nothing in this section prohibits a program from maintaining and using on its premises cards, photographs, tickets, or other devices, or using passwords or other information, to assure positive identification of patients, correct recordkeeping of attendance or medication, or for other proper purposes, as long as no pressure is brought on any patient to carry any such device when away from the program premises.

§ 2.20-1 Identification cards—Basis and purpose.

Section 2.20 is in furtherance of one of the explicit purposes of the statutes authorizing this part, namely, protection of patients from improper disclosure of their status as such. Regrettably, there appear to be areas where possession of a treatment program identification card can be prejudicial to a person under arrest or subjected to a search. In any part of the country, the accidental display or circulation of such cards can be prejudicial to the maintenance and use on its premises of its premises. In such cases, the program may require or request any patient to carry any such card when away from the program premises.

§ 2.21 Disposition of discontinued program records—Rules.

(a) General rule. If a program discontinues operations or is taken over or acquired by another program, its records to which this part applies with respect to any patient may, with the written consent of that patient, be turned over to the acquiring program or, if none, to any other program specified in the patient’s consent. Except as otherwise provided in this section, any program to which this part applies, but for the transfer of which patient consent is not obtained, shall be either completely purged or destroyed, if any effort to obtain consent for transfer has been made, it shall be recorded which minimizes the likelihood of accidental or incidental disclosure to any third party of personal information about such patient.

(b) Retention period. When records are required by law to be kept for a specified period, and such period does not expire until after the discontinuation or acquisition of the program, and patient consent for the transfer is not obtained, such records shall be sealed in envelopes or other containers marked or labelled as follows: “Records of (insert name of program) required to be maintained pursuant to (insert citation to law or regulation requiring that records be kept) until a date not later than December 31, (insert appropriate year).” The same procedure may be followed when it is determined to retain records for the period of any applicable statute of limitations.

(c) Custodial retention. Records marked and sealed in accordance with paragraph (b) of this section may be held by any lawful custodian, but may be destroyed by such custodian only under such conditions and to such extent as would be permissible for the program in which they originated. As soon as practicable after the date specified on the label or legend required to be affixed pursuant to paragraph (b) of this section, the custodian shall destroy the records. In the case of any program terminated by reason of bankruptcy, the expense of compliance with this paragraph shall be an expense of administration of the bankrupt estate.

§ 2.21-1 Disposition of discontinued program records—Basis and purpose.

While arguments can be made for requiring the destruction of records at the conclusion of their useful clinical life, there is widespread agreement on its span, and there are in addition research considerations which argue for an even longer period. Except in the case of discontinued programs, it therefore seems best to leave this issue for determination by the programs concerned.

§ 2.22 Former employees and others—Rules.

The prohibitions of this part on disclosure of patient records or information contained therein apply to all individuals who are personnel of treatment programs, researchers, auditors, evaluators, service organizations, or others having access to such records or information, and continue to apply to such individuals with respect to such records or information after the termination of their employment or other relationship or activity giving rise to such access.

§ 2.22-1 Former employees and others—Basis and purpose.

The prohibition contained in § 2.22 is arguably an interpretation of the authorizing legislation which would be necessary as a matter of law even in the absence of this part; its validity as an exercise of the rulemaking power conferred by subsection (g) of the authorizing legislation seems beyond dispute.

§ 2.23 Relationship to State laws—Rules.

The enactment of the provisions of law authorizing this part was not intended to preempt the field of law covered thereby to the exclusion of State laws not in conflict therewith. It is therefore clear that permitted under the provisions of this part, or under a court order issued pursuant thereto, is prohibited under State law, nothing in this part or in the provisions of law authorizing this part may be construed to authorize any violation of such State law. No State law, however, may contravene the provisions of this part.

§ 2.23-1 Relationship to State laws—Basis and purpose.

Section 2.23 sets forth publicly an intent or comprehensive relaxation, in some cases, of the confidential nature of the patient’s record, and on the Attorney General, respectively, the power to authorize researchers to withhold from all persons not connected with the research the names and other identifying information concerning individuals who are the subject of such research. The Secretary of Health, Education, and Welfare may grant this privilege with respect to any “research on mental health, including research on the use and effect of alcohol and other psychoactive drugs.” The Attorney General’s power is conferred as part of a section authorizing...
research related to enforcement of laws under his jurisdiction concerning substances which are or may be subject to control under the Controlled Substances Act, but is not expressly limited to such research. Regardless of whether a grant of research privileges is made by the Secretary or by the Attorney General, it is expressly provided that persons who obtain it "may not be compelled in any Federal, State, or local civil, criminal, administrative, legislative, or other proceeding to identify" the subjects of the research for which the privilege was obtained.

(b) With authority for this part. Although they deal, in a sense, with the same subject matter, and may on occasion concurrently cover the same transactions, it is important to note the differences between those sections which this part is authorized to self-executing in the sense that are operatively irrespective of whether the enumerated authority is exercised. The project afforded by the research privilege sections, on the other hand, can only come into existence as a result of affirmative administrative action.

(c) The provisions of law authorizing this part, as well as the provisions of this part, do not contain broad grants of express rulemaking authority, although the provisions of law by which this part is authorized are self-executing in the sense that they are operatively irrespective of whether the enumerated authority is exercised. To the extent that a privilege is thereby created, it grows out of the duties thus imposed. The research privilege sections, by contrast, impose no duties by their own terms, and if any duties are implied from their existence, they would have to be enforced on the basis of an implicit civil (rather than criminal) penalty. To that extent, a privilege is thereby created, it grows out of the duties thus imposed. The research privilege sections, by contrast, impose no duties by their own terms, and if any duties are implied from their existence, they would have to be enforced on the basis of an implicit civil (rather than criminal) penalty. To that extent, a privilege is thereby created, it grows out of the duties thus imposed.

The exercise of the authority conferred by the research privilege sections is subject to administrative discretion, whereas in the case of the duties imposed under this part there is judicial discretion. The exercise of the authority conferred by the research privilege sections is subject to administrative discretion, whereas in the case of the duties imposed under this part there is judicial discretion.

(c) Grant of research privilege not affected by (b) (2) (C) order. The issuance of an order under subsection (b) (2) (C) of either of the sections authorizing this part (21 U.S.C. 1175 and 42 U.S.C. 4562) in no way affects the continuing effectiveness of any exercise of the authority of the Secretary of Health, Education, and Welfare under section (a) of the Controlled Substances Act (21 U.S.C. 872 (a)).

RULES AND REGULATIONS

27811

§ 2.24-1 Relationship to section 305 (a) of Public Health Service Act and section 505 (c) of Controlled Substances Act—Basis and purpose.

(a) In Pub. L. 93-282, the Congress expressly amended (by sections 122 (a) and 205 (a), 88 Stat. 131 and 137) the provision of law which authorizes the part, expressly amended (by section 122 (b), 88 Stat. 132) the research privilege section under the Secretary's jurisdiction, and made explicit reference (in section 305 (d) of the Public Health Service Act) to the regulations previously issued by the Special Action Office for Drug Abuse Prevention recognizing the provisions of section 408 of the Drug Abuse Office and Treatment Act of 1972 with the provisions of the research privilege sections. When the bill which became Pub. L. 93-282 was before the House of Representatives for its last Congressional consideration before transmission to the President, the floor manager, Chairman Staggers of the Committee on Interstate and Foreign Commerce, inserted in the Record a detailed analysis of the bill in its final form (Congressional Record, daily edition, May 5, 1974, page 51565). This analysis contained the following paragraph:

The relationship of section 305 (a) of the Public Health Service Act, authorizing the administrative grant of absolute confidentiality for research, to section 408 of the Drug Abuse Office and Treatment Act of 1972, requiring that Federally-connected drug abuse patient records generally be kept confidential, has been correctly described in an interpretative regulation, 21 C.F.R. 1401.61 and 1401.63, which became effective prior to the statement of the Senate Legislative Board set forth in paragraph (a), of this section. The purpose of the Public Health Service Act and the provisions of section 505 (c) of the Controlled Substances Act are an exercise of the general rule-making authority under (a) of this section. The purpose of the Public Health Service Act and the provisions of section 505 (c) of the Controlled Substances Act are an exercise of the general rule-making authority under (a) of this section.
deficient consent, and § 2.31(d) imposes liability on any person who submits a falsified consent form to a program.

§ 2.32 Prohibition on redisclosure.—

(a) Notices to accompany disclosure. Whenever a written disclosure is made under authority of this subpart, except a disclosure to a program or an individual whose records pertaining to the patient are otherwise subject to this part, the recipient shall accompany such disclosure with a written statement substantially as follows: "This information has been disclosed to you from records which confidentiality is protected by Federal law. An oral disclosure may be accompanied or followed by a written statement as specified in paragraph (b) of this section.

(b) Consent required for redisclosure. A person who receives information from patient records and has been notified substantially in accordance with paragraph (a) of this section is prohibited from making any disclosure of such information except with the specific written consent of the person to whom it pertains, or as otherwise permitted by such regulations. A general authorization for the release of medical or other information is insufficient for this purpose.

(c) Restriction on redisclosure. Whenever a medical or other disclosure is made by any person, such information must be obtained directly from the program maintaining such records and not from another person to whom disclosure thereof has been made. The initial disclosure is an exception to this requirement. The initial disclosure is an exception to this requirement.

(d) Restrictions on redisclosure. Where the initial disclosure was intentional and expressly made for the purposes of this section and 51401.22(a), except for the purpose of preventing multiple enrollments, it may not be otherwise used or disclosed.

§ 2.33 Diagnosis, treatment, and rehabilitation.—

(a) Disclosures authorized. Where consent is given in accordance with § 2.31, disclosure of information subject to this part may be made to medical personnel or to treatment or rehabilitation programs where such disclosure is needed in order to better enable them to furnish services to the patient to whom the information pertains.

(b) Use of central registries prohibited except as expressly authorized. The furnishing of patient identifying information by a program to any central registry which fails to meet the definition of a permissible central registry set forth in paragraph (a)(3) of this section is prohibited, and the furnishing of patient identifying information to or by any central registry except as authorized in this section is prohibited. Information pertaining to patients held by a central registry may be furnished or used in accordance with paragraphs (a)(3) and (g).

(c) Safeguards and procedures required. To minimize the likelihood of disclosures of information to impostors or others seeking to bring about unauthorized or improper disclosure, any communications carried on by programs pursuant to this section must be conducted (1) by authorized personnel designated in accordance with § 2.17(b), and (2) in conformity with procedures established in accordance with this section.

§ 2.33.1 Treatment and rehabilitation.—

(a) Section 2.33.1 is a restatement of the policy set forth in § 160.23(a) of the previous regulations, expanded to make explicit reference to nonmedical counseling and other treatment and rehabilitative services.

(b) Section 2.33.1(c) clarifies the corresponding provision in § 160.23(a) of the previous regulations by specifying how and through whom oral consent can be given, and limiting the disclosure to that necessary to determine appropriate medication.

§ 2.34 Prevention of certain multiple enrollments.—

(a) Definitions. For the purposes of this section and 2.35—

(1) The term "administration", "controlled substance", "detoxification treatment", "maintenance treatment", and "maintenance treatment" shall, as hereinafter defined, mean the control, regulation, and prescription of controlled substances for maintenance treatment or maintenance treatment for the purpose of enabling the member programs to prevent any individual from being concurrently enrolled in more than one such program.

(2) The term "program" means a program which offers maintenance treatment or detoxification treatment for the purpose of enabling the member programs to prevent any individual from being concurrently enrolled in more than one such program.

(3) The term "permissible central registry" means a qualified service organization under a contract or accepts, from two or more programs (referred to hereinafter as member programs) all of which are located effective within a given State or not more than 125 miles from the nearest point on the border of such State, patient identifying information about persons applying for maintenance treatment or detoxification treatment for the purpose of enabling the member programs to prevent any individual from being concurrently enrolled in more than one such program.

(4) The term "program" means a program which offers maintenance treatment or detoxification treatment for the purpose of enabling the member programs to prevent any individual from being concurrently enrolled in more than one such program.

(5) The term "permissible central registry" means a qualified service organization under a contract or accepts, from two or more programs (referred to hereinafter as member programs) all of which are located effective within a given State or not more than 125 miles from the nearest point on the border of such State, patient identifying information about persons applying for maintenance treatment or detoxification treatment for the purpose of enabling the member programs to prevent any individual from being concurrently enrolled in more than one such program.

(6) The term "program" means a program which offers maintenance treatment or detoxification treatment for the purpose of enabling the member programs to prevent any individual from being concurrently enrolled in more than one such program.

(7) The term "patient" means a patient in treatment. A member program may supply patient identifying information and nonmedical and medical information concerning the type of drug used or to be used in treatment to a permissible central registry. The furnishing of patient identifying information to or by any central registry except as authorized in this section is prohibited. The furnishing of patient identifying information to or by any central registry except as authorized in this section is prohibited.

(8) The term "program" means a program which offers maintenance treatment or detoxification treatment for the purpose of enabling the member programs to prevent any individual from being concurrently enrolled in more than one such program.

(9) The term "program" means a program which offers maintenance treatment or detoxification treatment for the purpose of enabling the member programs to prevent any individual from being concurrently enrolled in more than one such program.

(10) The term "program" means a program which offers maintenance treatment or detoxification treatment for the purpose of enabling the member programs to prevent any individual from being concurrently enrolled in more than one such program.

(11) The term "program" means a program which offers maintenance treatment or detoxification treatment for the purpose of enabling the member programs to prevent any individual from being concurrently enrolled in more than one such program.

(12) The term "program" means a program which offers maintenance treatment or detoxification treatment for the purpose of enabling the member programs to prevent any individual from being concurrently enrolled in more than one such program.

(13) The term "program" means a program which offers maintenance treatment or detoxification treatment for the purpose of enabling the member programs to prevent any individual from being concurrently enrolled in more than one such program.

(14) The term "program" means a program which offers maintenance treatment or detoxification treatment for the purpose of enabling the member programs to prevent any individual from being concurrently enrolled in more than one such program.

(15) The term "program" means a program which offers maintenance treatment or detoxification treatment for the purpose of enabling the member programs to prevent any individual from being concurrently enrolled in more than one such program.

(16) The term "program" means a program which offers maintenance treatment or detoxification treatment for the purpose of enabling the member programs to prevent any individual from being concurrently enrolled in more than one such program.

(17) The term "program" means a program which offers maintenance treatment or detoxification treatment for the purpose of enabling the member programs to prevent any individual from being concurrently enrolled in more than one such program.

(18) The term "program" means a program which offers maintenance treatment or detoxification treatment for the purpose of enabling the member programs to prevent any individual from being concurrently enrolled in more than one such program.

(19) The term "program" means a program which offers maintenance treatment or detoxification treatment for the purpose of enabling the member programs to prevent any individual from being concurrently enrolled in more than one such program.

(20) The term "program" means a program which offers maintenance treatment or detoxification treatment for the purpose of enabling the member programs to prevent any individual from being concurrently enrolled in more than one such program.

(21) The term "program" means a program which offers maintenance treatment or detoxification treatment for the purpose of enabling the member programs to prevent any individual from being concurrently enrolled in more than one such program.

(22) The term "program" means a program which offers maintenance treatment or detoxification treatment for the purpose of enabling the member programs to prevent any individual from being concurrently enrolled in more than one such program.

(23) The term "program" means a program which offers maintenance treatment or detoxification treatment for the purpose of enabling the member programs to prevent any individual from being concurrently enrolled in more than one such program.

(24) The term "program" means a program which offers maintenance treatment or detoxification treatment for the purpose of enabling the member programs to prevent any individual from being concurrently enrolled in more than one such program.

(25) The term "program" means a program which offers maintenance treatment or detoxification treatment for the purpose of enabling the member programs to prevent any individual from being concurrently enrolled in more than one such program.

(26) The term "program" means a program which offers maintenance treatment or detoxification treatment for the purpose of enabling the member programs to prevent any individual from being concurrently enrolled in more than one such program.

(27) The term "program" means a program which offers maintenance treatment or detoxification treatment for the purpose of enabling the member programs to prevent any individual from being concurrently enrolled in more than one such program.

(28) The term "program" means a program which offers maintenance treatment or detoxification treatment for the purpose of enabling the member programs to prevent any individual from being concurrently enrolled in more than one such program.
 RULES AND REGULATIONS

(3) To any other program which is not more than 200 miles distant and which is not a member of any central registry of which the inquiring program is a member.

(f) Program procedures in case of approved concurrent enrollment. When an inquiry pursuant to paragraph (e)(1) is made of another treatment program and its response is affirmative, the two programs may engage in such further communications as may be necessary to establish whether an error has been made, and if none, the programs should proceed in accordance with such communications and any applicable regulations pertaining to the type of treatment involved.

Section 2.31-1 Program procedures in case of approved concurrent enrollment. When an inquiry pursuant to paragraph (e)(1) is made of a permissible central registry and its response is affirmative, it may advise the inquiring program of the name, address, and telephone number of the other program, or it may advise the other program of the identity of the patient and the name, address, and telephone number of the inquiring program, or it may do both, and in any case the two programs may then communicate as provided in paragraph (f) above.

(b) Advice to patients. When the policies and procedures of any program involving disclosures pursuant to this section, before any patient is accepted for or continued in treatment (other than short-term treatment), a program shall forthwith notify the patient of the names and addresses of any other programs or any registry serving such programs, and any applicable regulations to which such disclosures will be made. Notwithstanding the requirement of § 2.31-1(a), such notice shall be given with respect to any other such program thereafter established within 200 miles, resembling such program, and shall be so stated. Such consent shall be effective for as long as the patient remains enrolled in the program to which it is given.

§ 2.34-1 Prevention of certain multiple enrollments—Basis and purpose.

Section 2.34 is based upon § 1401.48 of the previous regulations. It was omitted from the August 22, 1974 draft, but comments on the omission make it clear that in certain areas of the country, central registries recognized as such by the employing program and the American Medical Association, and such registries are subject to the requirements contained in this section.

§ 2.35 Legal counsel for patient—Rules.

When a bona fide attorney-client relationship exists between an attorney-at-law and a patient, disclosure of any information in the patient's records may be made to the attorney upon the written application of the patient endorsed by the attorney. Information so disclosed may not be further disclosed by the attorney unless authorized in writing by the patient.

§ 2.35-1 Legal counsel for patient—Basis and purpose.

Section 2.35 simplifies and broadens the statement of the policy embodied in § 1401.38 of the previous regulations. Its purpose is to assure the availability to the attorney, with his client's consent, of any information needed as a basis for advice and counsel. The purpose of the prohibition on further disclosures by the attorney is to guard against the possibility that the attorney might be forced to serve as a conduit for otherwise prohibited disclosures to third parties. Ordinarily, the attorney-client privilege would suffice, but that privilege is subject to waiver by the client, whereas this prohibition is not. Where there is a need for disclosure to a third party of any given information about any patient, this prohibition in no way affects the availability of other sections of this Part to authorize such disclosure by the program.

§ 2.36 Patient's family and others—Rule.

Where consent is given in accordance with § 2.31, information evaluating the current or past status in a treatment program may be furnished to any person with whom the patient has a personal relationship unless, in the judgment of the person responsible for the patient's treatment, the disclosure of such information would be harmful to the patient. Information given in accordance with § 2.31 shall be used solely for the purpose of assisting in the rehabilitation of the patient and shall not be used for the purpose of identifying the individual as a patient in order to deny him employment or advancement because of his history of drug or alcohol abuse.

§ 2.36-1 Patient's family and others—Basis and purpose.

Section 2.36 expresses the same policy as was embodied in § 1401.37 of the previous regulations. It is adapted from § 1401.26 of the previous regulations, broadened to reflect the expanded authority for consensual disclosure under the authorizing legislation.

§ 2.37 Third-party payers and funding sources—Rules.

(a) Disclosure of information. Disclosure of information to third-party payers or funding sources may be made only with the written consent of the patient given in accordance with § 2.31 and any such disclosure must be limited to that information which is reasonably necessary for the discharge of the legal or contractual obligations of the third-party payer or funding source.

(b) Prohibition on disclosure. Where a funding source or third-party payer maintains records of the identity of recipients of treatment or rehabilitation services for alcohol or drug abuse such records are, under the authorizing legislation, maintained in connection with the performance of alcohol or drug abuse prevention functions and are subject to the restrictions upon disclosure set forth in § 2.37-1.

§ 2.37-1 Third-party payers and funding sources—Basis and purpose.

Section 2.37 is based upon the general authority to prescribe regulations to carry out the purposes of the authorizing legislation. The great diversity of contractual arrangements and legal requirements under which the operations of third-party payers and funding sources are carried on makes the prescription of detailed records management instructions in those regulations, even if that were otherwise desirable. The general principles set forth in § 2.37, however, should clarify the question of coverage.

and where coverage exists, provide a standard which will minimize the likelihood of violations. See also § 2.3.1-1(g).

§ 2.38 Employers and employment agencies—Rules.

(a) Disclosure permitted. Where consent is given in accordance with § 2.31, a program may make disclosures in accordance with this section.

(b) Eligible recipients. A program may make disclosures under this section to public or private employment agencies, employment services, or employers.

(c) Scope of disclosure. Ordinarily, disclosures pursuant to this section should be limited to a verification of the patient's status in treatment or a general evaluation of progress in treatment. More specific information may be furnished where there is a bona fide need for such information to evaluate hazards which the employment may pose to the patient or others, or where such information is otherwise directly relevant to the employment situation.

(d) Criteria for approval. A disclosure under this section may be made if, in the judgment of the program director or his authorized representative appointed as provided in § 2.17(b), the following criteria are met:

(1) The program has reason to believe, on the basis of past experience or other credible information (which may in appropriate cases consist of a written statement by the employee), that such information will be used for the purpose of assisting in the rehabilitation of the patient and not for the purpose of identifying the individual as a patient in order to deny him employment or advancement because of his history of drug or alcohol abuse.

(2) The information sought appears to be reasonably necessary in view of the type of employment involved.

§ 2.38-1 Employers and employment agencies—Basis and purpose.

Section 2.38 is based on the rulemaking power conferred by subsection (b) (1) of the authorizing legislation, and is adapted from § 1401.38 of the previous regulations. Its purpose is to allow disclosure of information to employers to the extent that such information is necessary and appropriate to facilitate the employment of patients and former patients, while protecting patient privacy and the purpose of identifying the individual as a patient in order to deny him employment or advancement because of his history of drug or alcohol abuse.

It was urged in a comment received on the August 22, 1974 draft that third-party payers or funding sources be flatly prohibited on the ground that the employer's sole legitimate concern is with on-the-job performance. While we are not unsympathetic to this view, a countervailing consideration is that in the case of an employee or applicant who is known by the employer to have a problem with drugs or alcohol, knowledge by the employer of a genuine effort by the employee to deal with the problem may have a positive effect on his behavior in the work place.
RULES AND REGULATIONS

§ 2.39—Criminal justice system reference procedures and purpose.

(a) On the basis of extensive written comment and oral communications received on the subject matter of § 2.39 as proposed in the May 9, 1975 notice (designated as § 2.40 In that notice), we have concluded that the latitude allowed and the conditions imposed in § 2.39 as set forth above are necessary and proper to the fullness of the authorizing legislation.

(b) From a legal standpoint, it seems highly predictable that such proceeding to revoke probation or parole, the due process requirements laid down in Morrisey v.if, 406 U.S. 408 (1972); Gore v. Fite, 418 U.S. 705, 94 S.Ct. 3069, 41 L.Ed.2d 1083 (1974); and Gagnon v. Bisson, 405 U.S. 496, 92 S.Ct. 1174, 31 L.Ed.2d 379 (1972) and Gagnon v. Scarpelli, 411 U.S. 778, 93 S.Ct. 1756, 36 L.Ed.2d 606 (1973) could be met by an unsupported general evaluation by a treatment program to the effect that a patient's status or progress in treatment was unsatisfactory. Thus, if such an evaluation were all that could be communicated upon serious concern and a particular patient's conduct during the period he was in treatment required a deviation requiring satisfactory participation in a treatment program, an issue becomes present.

(c) Revocation of consent. An individual whose release from confinement, probation, parole or parole is conditioned upon such person's status, whichever is later. For the purposes of this section, the discretion vested in the program director or his authorized representative is given in accordance with § 2.31, a program may make a disclosure for the benefit of a patient from the records of that patient if, in the judgment of the program director or his authorized representative appointed as provided in § 2.17, one of the following criteria are met:

1. There is no support in the written consent or guidelines for the disclosure of such person's status, to which the consent was not given freely, voluntarily, and without coercion.

2. Granting the request for disclosure will not cause substantial harm to the relationship between the patient and any other individuals, and the program or to the program's capacity to provide services in general.

3. Granting the request for disclosure will not be harmful to the patient.

(b) Circumstances deemed beneficial. For the purposes of this section, the circumstances under which disclosure may be made to a patient may be made by program or the patient's immediate family. Examples of the foregoing include welfare, medicare, unemployment, worker's compensation, accident or medical insurance, public or private pension or other retirement benefits, and any other information which the program or the patient's status or progress in treatment program to the effect that a or not referred by the criminal justice system, before disclosures for the purposes here involved can be made by programs. We have been urged to make an exception from the requirement of § 2.39 in the case of parolees and probationers, but such an exception would be wholly unsupported by the authorizing legislation. In fashioning these regulations, it is not our privilege to adorn a tabula rasa according to our own predilections: rather, it is our duty to interlineate a stable with fidelity to its spirit, its terms, and its purposes.

§ 2.40—Situations not otherwise provided for—Rules.

(a) Criteria for approval. In any situation not otherwise specifically provided for in this section, where consent is given in accordance with the program director or his authorized representative appointed as provided in § 2.17, one of the following criteria are met:

1. There is no support in the written consent or guidelines for the disclosure of such person's status, to which the consent was not given freely, voluntarily, and without coercion.

2. Granting the request for disclosure will not cause substantial harm to the relationship between the patient and any other individuals, and the program or to the program's capacity to provide services in general.

3. Granting the request for disclosure will not be harmful to the patient.

(b) Circumstances deemed beneficial. For the purposes of this section, the circumstances under which disclosure may be deemed to be beneficial to a patient include, but are not limited to, those in which the disclosure may assist the patient in connection with any legal, medical, or social security benefit or in making any other choice in connection with a particular patient. One situation not otherwise pro-

§ 2.40—Situations not otherwise provided for—Purpose.

(a) Section 2.40 is based upon § 401.23 of this subpart, § 401.23 of the previous regulations, amended to reflect the expansion made by the change in the law in § 2.39, to cover the same scope of consensual disclosures.

(b) A strong case can be made for the proposition that § 2.39, in effect if not expressly, require a program to make any disclosure requested by a patient. The discretion vested in the program, it can be argued, is at best an expression of overprotective paternalism.
mind, however, that persons who have obtained the type of treatment to which this part applies are more vulnerable to pressures of various kinds than are patients in general, it seems preferable to retain some responsibility on the part of the program to protect the best interests of its patients in this very sensitive area. This, like many other choices which these regulations reflect, is a determination which can be reviewed and revised from time to time in the light of experience.

Subpart D—Disclosures Without Patient Consent

§ 2.51 Medical emergencies.—Rules.

(a) In general. Disclosure to medical personnel, either private or governmental, is authorized without the consent of the patient when the situation cannot be dealt with solely by means of communications as described in paragraph (b) of this section without intensifying or prolonging the risk as compared with the consequences of dealing with it, then the initial disclosure under paragraph (a) and any subsequent disclosure or redisclosure of patient identifying information for the purpose of reducing the risk to the patient involved shall be subject to the provisions of § 2.52.

(b) General purpose. Subsection (a) of this section is adapted directly from subsection (b) (2) (B) of the authorizing legislation. The purpose of each is the same; to facilitate the search for truth, whether in the context of scientific investigation, administrative management, or by responsible officials of the Food and Drug Administration to enable them to notify the patients or their physicians of the problem so as to permit treatment thereof or to prevent its recurrence. The general purpose of these sections is to provide for the purposes of this part with which the individual is charged.

(c) The Right of Privacy. So far as relevant to this discussion, we may consider the right of privacy in two aspects. One, a protection against improper governmental activity, is the right to be secure against unreasonable searches and seizures

(d) Other aspect of the right of privacy. One, a protection against improper governmental activity, is the right to be secure against unreasonable searches and seizures. A recent designation by the Supreme Court, in a decision which affected the public health, is the right to be secure against unreasonable searches and seizures. A recent designation by the Supreme Court, in a decision which affected the public health, is the right to be secure against unreasonable searches and seizures.

§ 2.52 Research, audit, and evaluation.—Rules.

(a) Research, audit, and evaluation subject include public and private institutions receiving federal financial assistance or conducting research, evaluation, or audit, or other disclosure of patient identifying information. The term "protected research" includes patient identifying information.

(b) Use of disclosures of patient identifying information. Where a disclosure is made to any person to whom the patient is known to have a responsible personal relationship, except as provided in paragraphs (b) (2) and (b) (3) of this section, the recipient is subject to the provisions of this section.

(c) Record required. Any person making a disclosure of patient identifying information in connection with disclosures made for the purpose of conducting scientific research, management audits, financial audits, or program evaluation, but such personnel may not identify the individual directly or indirectly, may not use such information in connection with any legal, administrative, supervisory, or other action whatsoever with respect to such patient, except as permitted in paragraphs (b) (2) and (b) (3) of this section.

(d) The inclusion of patient identifying information in any written or oral communication, including a report or otherwise in violation of paragraphs (a) (3) and (a) (5) of this section.

(e) In defense of the position that disclosure of patient identifying information for the purpose of reducing the risk to the patient involved shall be subject to the provisions of § 2.52.

§ 2.52-1 Research, audit, and evaluation.—Rules.

(a) General purpose. Subsection (a) of this section is adapted directly from subsection (b) (2) (B) of the authorizing legislation. The purpose of each is the same; to facilitate the search for truth, whether in the context of scientific investigation, administrative management, or by responsible officials of the Food and Drug Administration to enable them to notify the patients or their physicians of the problem so as to permit treatment thereof or to prevent its recurrence. The general purpose of these sections is to provide for the purposes of this part with which the individual is charged.

(b) Other aspect of the right of privacy. One, a protection against improper governmental activity, is the right to be secure against unreasonable searches and seizures. A recent designation by the Supreme Court, in a decision which affected the public health, is the right to be secure against unreasonable searches and seizures. A recent designation by the Supreme Court, in a decision which affected the public health, is the right to be secure against unreasonable searches and seizures.

(c) The Right of Privacy. So far as relevant to this discussion, we may consider the right of privacy in two aspects. One, a protection against improper governmental activity, is the right to be secure against unreasonable searches and seizures. A recent designation by the Supreme Court, in a decision which affected the public health, is the right to be secure against unreasonable searches and seizures. A recent designation by the Supreme Court, in a decision which affected the public health, is the right to be secure against unreasonable searches and seizures.

(d) Other aspect of the right of privacy. One, a protection against improper governmental activity, is the right to be secure against unreasonable searches and seizures. A recent designation by the Supreme Court, in a decision which affected the public health, is the right to be secure against unreasonable searches and seizures. A recent designation by the Supreme Court, in a decision which affected the public health, is the right to be secure against unreasonable searches and seizures.

(e) In defense of the position that disclosure of patient identifying information for the purpose of reducing the risk to the patient involved shall be subject to the provisions of § 2.52.
studies are of questionable value in any case, and the other is that a sampling technique involving informed consent on the part of the members of the sample can always be used to develop the information sought. Neither one of arguments will withstand careful scrutiny.

(b) In turn, of course, that the efficacy of a given therapeutic agent can often best be evaluated by means of a well-designed prospective study in which special record-keeping procedures, special criteria for patient selection, and an independent control have all been established with a view to the purpose of the study. There are, however, many important investigations which simply do not lend themselves to such a format. Sometimes the desirability or even the possibility of a particular study does not suggest itself except in retrospect. Another important consideration is the fact that an investigation involving human subjects is not given precedence to a hidden agenda. Thus, in conducting an experiment involving the voluntary informed consent from the individual or his legally authorized representative. Thus, in conducting the research or medical procedure violates his duty to the subject or patient if he proceeds without obtaining the voluntary informed consent from the individual or his legally authorized representative. Thus, in conducting an activity which places the subject or patient at risk, the practice of the profession may not give precedence to a hidden agenda, even for so lofty a motive as the advancement of knowledge. In this regard, see the Department of Health, Education and Welfare's Protection of Human Subjects Regulations, 45 CFR Part 46. These regulations are applicable to all Department of Health, Education and Welfare grants and contracts supporting research, development and related activities involving human subjects. Under these circumstances the risk to the subject is that some disclosure or misuse of information from which he could be identified might result in embarrassment, lost opportunities, or other forms of psychological or social injury. While that possibility may be reduced by requiring consent to every review of clinical records for research purposes, a similar result can be achieved by the less restrictive method of limiting further disclosure of identifying information by the researcher. Given the applicability of this alternative, equally effective means for protecting a patient or subject from the possibility of a harmful public disclosure, it is unreasonable to insist upon informed consent to every review of clinical records for the purposes of conducting legitimate research. Particularly since such insistence could lead to the ultimate absurdity of prohibiting efforts to identify the nature and source of an unknown subject simply because the patient or researcher lacked the clairvoyance to have consent forms 'sacrosanct prior to the onset of the affliction.

(c) In sum, there are restraints on certain of the activities involving human subjects. The duty to obtain informed consent is obvious and compelling in situations where an individual is exposed to the possibility of harm, either physical or psychological, as a consequence of medical procedures, research, or similar activities. Where such a situation exists the practitioner conducting the research or medical procedure violates his duty to the subject or patient if he proceeds without obtaining the voluntary informed consent from the individual or his legally authorized representative. Thus, in conducting an activity which places the subject or patient at risk, the practice of the profession may not give precedence to a hidden agenda, even for so lofty a motive as the advancement of knowledge. In this regard, see the Department of Health, Education and Welfare's Protection of Human Subjects Regulations, 45 CFR Part 46. These regulations are applicable to all Department of Health, Education and Welfare grants and contracts supporting research, development and related activities involving human subjects. The practice of the profession may not give precedence to a hidden agenda, even for so lofty a motive as the advancement of knowledge. In this regard, see the Department of Health, Education and Welfare's Protection of Human Subjects Regulations, 45 CFR Part 46. These regulations are applicable to all Department of Health, Education and Welfare grants and contracts supporting research, development and related activities involving human subjects. Under these circumstances the risk to the subject is that some disclosure or misuse of information from which he could be identified might result in embarrassment, lost opportunities, or other forms of psychological or social injury. While that possibility may be reduced by requiring consent to every review of clinical records for research purposes, a similar result can be achieved by the less restrictive method of limiting further disclosure of identifying information by the researcher. Given the applicability of this alternative, equally effective means for protecting a patient or subject from the possibility of a harmful public disclosure, it is unreasonable to insist upon informed consent to every review of clinical records for the purposes of conducting legitimate research. Particularly since such insistence could lead to the ultimate absurdity of prohibiting efforts to identify the nature and source of an unknown subject simply because the patient or researcher lacked the clairvoyance to have consent forms 'sacrosanct prior to the onset of the affliction.

(d) For all of these reasons, the authorizing legislation expressly provides that patient consent is not required with respect to disclosures for research, audit, and evaluation, nor does it prohibit indiscriminate patient identification in connection with such disclosures. While it is entirely appropriate to impose safeguards and procedures in connection with these activities, it would be wholly inappropriate to use the rulemaking process to impose an absolute requirement of patient consent with respect to activities which by statute may be conducted without it.

(e) Classifications of activities. It is clear that Congress intended a balancing of the social and individual interests in the results of inquiry, on the one hand, with the individual interest in anonymity, on the other within the limits set by the legislation and the constitution. With that objective in mind, we may now turn to the various categories of activities which come within the purview of this subpart.

(f) These activities may be classified first, in regard to whether participation is voluntary from the standpoint of the program, and second, as to whether the objective is to ascertain compliance with particular standards (examinations as defined in §211 (g)), or to ascertain the validity of a given standard or hypothesis (scientific research, and program evaluation as defined in §211 (k)). The application of the foregoing classifications logically results in the creation of four categories of activities. Three of them are specifically dealt with in the succeeding sections of this subpart and need not detain us here; the fourth is discussed below.

(g) Scientific research and evaluation. Beyond the bare restatement of the authorizing legislation set forth in §252, these regulations are deliberately silent with respect to purely voluntary scientific research and program evaluation in the sense defined in §211 (g) (2). Testimony and written comments received on the August 22, 1976 draft regulations were noteworthy in two respects. First, no instances of abuse on the part of persons acquiring patient identifying information under these circumstances were cited. Second, while there was some well-founded criticism of an attempt in that draft to provide guidelines for determining what is scientific research and who is qualified to do it, no usable alternatives—indeed, almost no alternatives at all—were forthcoming.

(h) In the written comments, the writer cautioned against any assumption "that our major remaining problems with drug and alcohol abuse and the prevention of illicit diversion and protection of confidentiality," and suggested "that is used to have a problem with the rule making, testing and evaluating improved treatment techniques. To do this," he continued, "place minimal obstacles in the way of bona fide clinical and epidemiologic research."

(i) The result of leaving the rule as it is in the statute, without attempting to sharpen its outlines or define its terms, will be to leave it for interpretation of a case-by-case basis by those who must apply it in practice: the researchers who seek the information, and the programs which supply it. This does not foreclose the possibility of amending the regulations on the basis of experience if it appears either that clinicians are becoming so cautious that research and evaluation studies are being choked off, or that abuses are occurring in the use of information disclosed. But until a need for more detailed regulation in this area is demonstrated, we think its imposition would do more harm than good.

(j) Governmental agencies.—Rules. — (a) In general. Where research, audit, or evaluation functions are performed by or on behalf of a governmental agency, the minimum qualifications and the qualifications of personnel performing such functions may be determined by such agency, subject to the provisions of this part, with particular reference to the organizational requirements and limitations on the categories of records subject to review by different categories of personnel.

(k) Financial and administrative records. When program records are reviewed by personnel who lack either the responsibility for, or appropriate training and supervision for, conducting scientific research, determining adherence to treatment standards, or evaluating treatment management as such, such reviews may be confined as far as practicable to adminis-
tive and financial records. Under no circumstances should such personnel be shown caseworker or counselor notes, or similar clinical records. Provisions should be made so that such financial and administrative matters can be reviewed without disclosing clinical information and without disclosing patient identifying information except where necessary for audit verification.

(c) Scientific research and long-term evaluation studies. No State and no agency or political subdivision of a State may require, as a condition to furnishing, licensing, or otherwise, that any program furnish patient identifying information for the purpose of conducting scientific research or long-term evaluation studies unless the recipient of such information is legally required to hold such information in confidence, is prohibited from taking any administrative, investigative, or other action with respect to any individual patient on the basis of such information, and is prohibited from identifying, directly or indirectly, any individual patient in any report of such research or evaluation, or otherwise disclosing patient identities in any manner.

(d) Opinion and description to be furnished program. Before any patient identifying information is required to be furnished a program, by circumstances described in paragraph (c), the program shall be furnished—

(1) An opinion by the attorney general or other chief legal officer of the State to the effect that the conditions specified in paragraph (c) are fulfilled with respect to the program or with respect to all programs in such State similarly situated, and

(2) A description of the administrative procedures and safeguards required under access or other measures to provide for the security of the data, but such description shall not constitute full safeguards and procedures to furnish guidance for wrongful attempts to breach such security.

(3) Exclusion of procedures. No State or local governmental agency may require any treatment program to furnish patient identifying information to itself or any other recipient except in conformity with this section to § 2.54.

§ 2.54 Patient identifying information in connection with examinations—

Rules.

(a) Definitions. For the purposes of this section—

(1) The term "examination" means any examination in which this section is made applicable by paragraph (b) of this section.

(2) The term "examiner" means any individual or any public or private organization, including any Federal, State, or local governmental agency, which conducts an examination to which this section applies.

(b) Applicability. This section applies to any examination of the records of a named, official title, address, and telephone number of a responsible individual to whom any inquiries by the program about the disposing of such record should be directed.

(d) Disposition of record of patient identifying information in connection with examination. After any record of patient identifying information is being retained by or on behalf of the examiner, the location at which such information will be kept, and the name, official title, address, and telephone number of a responsible individual to whom any inquiries by the program about the disposing of such record should be directed.

(e) Maximum time allowed for disposition. The action required by paragraph (d) shall be completed—

(1) Except as provided in paragraph (e) (2), not more than two years after the record was acquired by or on behalf of the examiner, or

(2) Where the record is in connection with a formal legal proceeding or formal legal proceeding is instituted or to be commenced not more than two years after the record was acquired, and with written notice to this effect is furnished to the program within two years after the record was acquired, not later than the termination of such proceeding.

(f) Notice of final disposition. When an examiner disposes of records as required by paragraph (d) of this section, or, not later than the time prescribed by paragraph (e) of this section, whichever is earlier, the examiner shall furnish to the program concerned a written statement—

(1) That there has been compliance with this section and with the provisions of this part prohibiting any disclosure of patient identifying information from records held by auditors or evaluators, or

(2) Specifying the particulars in which there has been a failure of compliance.

§ 2.54-1 Patient identifying information in connection with examinations—

Basis and purpose.

Confidence on the part of treatment program personnel in the integrity of auditing and regulatory processes is important to the effective functioning of the treatment system. § 2.54 of this part was added to § 2.54 to foster practices which will both justify and engender such confidence.

§ 2.55 Supervision and regulation of narcotic maintenance and detoxification programs—

Rules.

(a) Definition of "registrant." For the purposes of this section, the term "registrant" means a person who, has pending an application for registration under section 303(g) of the Controlled Substances Act (21 U.S.C. 823) (g)); or (2) has been registered under such section and whose registration has not expired or been surrendered or revoked.

(b) Drug Enforcement Administration. Daily authorized agents of the Drug Enforcement Administration shall have access to the premises of registrants for the purpose of ascertaining compliance (or ability to comply) with standards established by the Attorney General under section 331(b)(2) of the Controlled Substances Act (21 U.S.C. 833(g)(2)), and by paragraph (e) of this section and whose registration has not expired or been surrendered or revoked.

(c) Governmental agencies.—

(1) Governmental agencies shall have access to the premises of registrants for the purpose of ascertaining compliance (or ability to comply) with standards established by the Attorney General under section 331(b)(2) of the Controlled Substances Act (21 U.S.C. 833(g)(2)) and by paragraph (e) of this section and whose registration has not expired or been surrendered or revoked.

(2) Governmental agencies shall also have access to the premises of registrants for the purpose of ascertaining compliance (or ability to comply) with standards established by the Attorney General under section 331(b)(2) of the Controlled Substances Act (21 U.S.C. 833(g)(2)) and by paragraph (e) of this section and whose registration has not expired or been surrendered or revoked.

(3) Governmental agencies shall also have access to the premises of registrants for the purpose of ascertaining compliance (or ability to comply) with standards established by the Attorney General under section 331(b)(2) of the Controlled Substances Act (21 U.S.C. 833(g)(2)) and by paragraph (e) of this section and whose registration has not expired or been surrendered or revoked.

(4) Governmental agencies shall also have access to the premises of registrants for the purpose of ascertaining compliance (or ability to comply) with standards established by the Attorney General under section 331(b)(2) of the Controlled Substances Act (21 U.S.C. 833(g)(2)) and by paragraph (e) of this section and whose registration has not expired or been surrendered or revoked.

(5) Governmental agencies shall also have access to the premises of registrants for the purpose of ascertaining compliance (or ability to comply) with standards established by the Attorney General under section 331(b)(2) of the Controlled Substances Act (21 U.S.C. 833(g)(2)) and by paragraph (e) of this section and whose registration has not expired or been surrendered or revoked.

(6) Governmental agencies shall also have access to the premises of registrants for the purpose of ascertaining compliance (or ability to comply) with standards established by the Attorney General under section 331(b)(2) of the Controlled Substances Act (21 U.S.C. 833(g)(2)) and by paragraph (e) of this section and whose registration has not expired or been surrendered or revoked.

(7) Governmental agencies shall also have access to the premises of registrants for the purpose of ascertaining compliance (or ability to comply) with standards established by the Attorney General under section 331(b)(2) of the Controlled Substances Act (21 U.S.C. 833(g)(2)) and by paragraph (e) of this section and whose registration has not expired or been surrendered or revoked.

(8) Governmental agencies shall also have access to the premises of registrants for the purpose of ascertaining compliance (or ability to comply) with standards established by the Attorney General under section 331(b)(2) of the Controlled Substances Act (21 U.S.C. 833(g)(2)) and by paragraph (e) of this section and whose registration has not expired or been surrendered or revoked.

(9) Governmental agencies shall also have access to the premises of registrants for the purpose of ascertaining compliance (or ability to comply) with standards established by the Attorney General under section 331(b)(2) of the Controlled Substances Act (21 U.S.C. 833(g)(2)) and by paragraph (e) of this section and whose registration has not expired or been surrendered or revoked.

(10) Governmental agencies shall also have access to the premises of registrants for the purpose of ascertaining compliance (or ability to comply) with standards established by the Attorney General under section 331(b)(2) of the Controlled Substances Act (21 U.S.C. 833(g)(2)) and by paragraph (e) of this section and whose registration has not expired or been surrendered or revoked.

(11) Governmental agencies shall also have access to the premises of registrants for the purpose of ascertaining compliance (or ability to comply) with standards established by the Attorney General under section 331(b)(2) of the Controlled Substances Act (21 U.S.C. 833(g)(2)) and by paragraph (e) of this section and whose registration has not expired or been surrendered or revoked.

(12) Governmental agencies shall also have access to the premises of registrants for the purpose of ascertaining compliance (or ability to comply) with standards established by the Attorney General under section 331(b)(2) of the Controlled Substances Act (21 U.S.C. 833(g)(2)) and by paragraph (e) of this section and whose registration has not expired or been surrendered or revoked.
visions of §2.54, such agents shall be granted immediate access to any such index. Such agents may use names and addresses so obtained for purposes of auditing or verifying program records, and shall exercise all reasonable precautions to avoid inadvertent disclosure of patient identities to third parties. Names and other identifying information so obtained may not be compiled or used in any registry or personal data bank of any description.

(c) Food and Drug Administration. Duly authorized agents of the Food and Drug Administration shall have access to the premises of registrants and to all records maintained by registrants, for the purpose of ascertaining compliance (or ability to comply) with standards established by the Secretary of Health, Education and Welfare under section 4 of the Comprehensive Drug Abuse Prevention and Control Act of 1970 (21 U.S.C. 958(2)), and 21 U.S.C. §§353 and 371(a). When necessary, they shall have access to the premises of their duties and subject to the provisions of §2.54, agents may use names and addresses of patients strictly for the purpose of auditing or verifying program records, and shall exercise all reasonable precautions to avoid inadvertent disclosure of patient identities to third parties. Names and other identifying information on patients obtained pursuant to this section or by any other compulsory process may not be compiled or used in any registry or personal data bank of any description. Except as authorized under this paragraph or by a court order granted under Subpart E of this part, (1) such agents may not, either orally or in writing, except in conversation with personnel of the registrant, in any registry or personal data bank of any description, or in any conversation with personnel of the registrant while on the premises of the registrant, identify any patient otherwise than by referencing such an identifying number assigned by the registrant, and (2) such agents may not remove from the premises of the registrant any notes, documents, or copies thereof which contain patient or identifying information.

(d) State drug law enforcement agencies. Duly authorized agents of any State drug law enforcement agency having administrative jurisdiction and specific responsibility by statute or otherwise for the enforcement of criminal laws relating to controlled substances (as defined in the Controlled Substances Act) shall have access to the premises of any registrant for the purposes (with respect to core providing provisions, if any, of State law) and subject to the restrictions and limitations set forth in paragraph (b) of this section, and subject to §2.54.

(e) State health authorities.

(1) Definition of "qualified State health agency." The term "qualified State health agency" means an agency of State government responsible for investigation or enforcement of criminal laws generally or criminal laws relating to controlled substances; (ii) whose personnel are qualified by training or experience to conduct inspections of health care facilities to ascertain compliance with treatment standards; (iii) upon whose personnel is executed by effective sanctions, required to maintain the confidentiality of any information concerning the identity of patients which the may acquire in the course of their official duties.

(2) Access. Duly authorized agents of a qualified State health agency shall have access to the premises of registrants, for the purpose of ascertaining compliance (or ability to comply) with treatment standards, and such standards as are in the course of their official duties.

§2.55 Supervision and regulation of narcotic maintaining and detoxification programs—terms and purposes.

(a) Section 2.55 is addressed to the general problem described in the following passage from the legislative history of Pub. L. 92-255:

"A major element of the task of fashioning new regulations pursuant to the express rulemaking authority conferred by this legislation will be to reconcile the sometimes conflicting interests of research, audit, and evaluation with rights of privacy and the confidentiality of the relationship between patient and clinician. Such a reconciliation becomes particularly crucial where the functions of research, audit, or evaluation are conducted by a governmental agency with regulatory powers and responsibility, and the treatment involves the use of a drug such as methadone which is in the research, status or which is readily susceptible of misuse or illicit diversion. Because of the difficulty and complexity of the task, the rulemaking authority is intendend to be broad enough to permit the limitation of the scope, content, or circumstances of any disclosure under subsection (b), subject to the restrictions and limitations set forth in paragraph (b) of this section, and subject to §2.54, providing safe

(b) It has been the consistent interpretation of the Special Action Office for Drug Abuse Prevention that the only provision of the authorizing legislation which permits disclosures to compliance officers, whether of DEA, FDA, or State agencies, is subsection (b) (2) (B). That subsection strictly prohibits any further disclosure of names or other identifying information concerning patients, and the statutory prohibition has been buttressed by provisions of these regulations, notably §2.54, providing safe

(c) In testimony and written comment on the August 22, 1974 draft of these regulations, it has been urged that access to patient identifying information by law enforcement personnel, even for the limited purposes allowed by statute and regulation, should be prohibited except pursuant to a court order obtained under 21 U.S.C. 1175(b) (2) (C). We believe that such a prohibition is beyond our power to impose.

(d) Section 307(b) of the Controlled Substances Act (21 U.S.C. 877) provides, in pertinent part, "Every ** record acquired pursuant to this section ** shall be kept and be maintained, for inspection and copying by officers or employees of the United States authorized by the Attorney General."

It is a well known principle of statutory construction that amendments and repeals by express legislative action are to be given effect. People v. Newman, 33 N.Y.2d 379, 345 N.Y.S.2d 502, 238 N.E.2d 651 (1968), does not merit even the remotest consideration.

We cannot now take the inconsistent position that section 608 of Pub. L. 92-255 did indeed amend by implication section 307 of Pub. L. 91-513 (21 U.S.C. 877(b) and 42 U.S.C. 242(a) (1)) which confer on the Attorney General the General and the Secretary of Health, Education, and Welfare the power to grant the so-called research privilege discussed in §2.54. This position was expressly adopted by the New York court. We cannot now take the inconsistent position that section 608 of Pub. L. 92-255 did indeed amend by implication section 307 of Pub. L. 91-513, particularly in the face of a contrary contemporaneous administrative interpretation by both the Special Action Office for Drug Abuse Prevention and the Department of Justice. In short, if the right of access and copying conferred on Federal agents by 21 U.S.C. 837 is to be amended to provide that it may only be exercised pursuant to a court order in the case of maintenance and detoxification programs, that is a change which must be wrought by Congress.

The case of inspection undertaken by health supervisory agencies, we think that denial of access to any documents or copies thereof which contain patient identifying information may have a serious adverse effect on the inspection process. Even if a program keeps its own records in terms of patient-identifying numbers assigned by the program, the patient file may contain—may, indeed, be required to contain—documents signed by the patient or originating outside the program. Where signatures, names, and addresses are all obliterated, it is impossible that the file not be coerced. We believe that outright forcery is not within the scope of these regulations, even if it were not authorized by the statute.

66
(f) From a legal standpoint, the term "audit" has long comprehended the notion of external verification. In a commercial setting, this means that at least some inventory will actually be counted, at least some receivables will be verified by contacting the customers, and so on. To rule that this crucial aspect of the audit process cannot be carried out with respect to a treatment program until after the auditor goes through the procedure of obtaining a specific court order under subsection (b) (2) (C) would seem to contravene the intent of subsection (b) (2) (B).

(g) In all of this, our decision must be illuminated by a balanced consideration of the best interests of the patient no less than a desire to foster the implementation of cherished values in society at large. If protection of the patient's right to privacy is achieved by means which seriously impair our ability to protect him from exploitation and malpractice, not to mention the diversion of funds intended for his benefit, it would be a hollow victory indeed. We believe that the procedures and safeguards which these regulations impose on the conduct of audits and evaluations will avoid this result, while affording substantial and meaningful new protection to the confidentiality of patient records.

§ 2.56 Prohibition on disclosure of patient identities from research, audit, or evaluation records—Rules

Where the content of patient records has been disclosed pursuant to this subpart, the provisions of subsection (b) (2) (C) of the sections which authorize this part are merely requested or compelled disclosures prohibited or privileged by other provisions of law, whether Federal or State. An order or provision of an order based on some other authority, or a subpoena, or other compulsory process, is required to compel disclosure. To illustrate, if a person who maintains records subject to this part is merely requested, or is even served with a subpoena, to disclose information contained therein in a manner prohibited in the absence of a court order, he must refuse such a request unless, and until, an order is issued under subsection (b) (2) (C). Such an order would remove the prohibition, but would not, of course, provide a mechanism for the relief of the subsection (a) provisions which would otherwise apply. If there were no subpoenas or other compulsory process, or a subpoena had been quashed, the custodian of the records would have discretion as to whether to disclose the information sought unless and until disclosure were ordered by means of appropriate legal or administrative process, the authority for which would have to be found in some source other than subsection (a) (2) (C) of the sections authorizing this part.

§ 2.61 Legal effect of order—Rules

(a) This section is a restatement of the interpretive rules embodied in §§ 1401.61 and 1401.62 of the previous regulations. Each the positioning of the authority to issue court orders in § 2.240 as initially passed by the Senate Finance Committee, December 2, 1971, and the explicit cross-reference in section 408 (a) (3) of the Act (42 U.S.C. 4582) makes clear the congressional intent that section 408 (b) (3) (C) operate as a mechanical means and not as an affirmative grant of jurisdiction to authorize disclosures prohibited by other provisions of law, whether Federal or State.

(b) The amendment made by Pub. L. 93-282 to section 405 (b) (2) (C) of the Alcoholics Act (42 U.S.C. 4582) was enacted with the same language and structure as section 408 (b) (3) (C) of the Act. While the term "audit" was defined in section 408 (a) (3) to include means of appropriate legal or administrative process, the authority for which would have to be found in some source other than subsection (a) (2) (C) of the sections authorizing this part is merely requested or compelled disclosure. To illustrate, if the party seeking the information leaves the party seeking the information leaves in no worse position than if the records were not needed for the purpose of the order, rather than subsection (a) (2) (C) order would lie if preliminary examination suggests that the records are needed for some purpose, and where there would seem to be some advantage in securing a disclosure of information from subsection (a) (2) (C) orders.

Section 2.56 restates the prohibition on further disclosure which is contained in subsection (a) (2) (C) of the Act. Whether the records are needed for the purpose of the order, rather than subsection (a) (2) (C) order would lie if preliminary examination suggests that the records are needed for some purpose, and where there would seem to be some advantage in securing a disclosure of information from subsection (a) (2) (C) orders.

--Rules

The authority which subsection (a) (2) (C) of the Act authorizes this part (21 U.S.C. 1775 and 42 U.S.C. 4582) confers on courts to issue orders authorizing the disclosure of records applicable only to records referred to in subsection (a) (2) (C) orders. The authority of subsection (a) (2) (C) orders to researchers, auditors, or evaluators pursuant to subsection (b) (3) (B) is part of the original regulations under section 408 of Pub. L. 93-282 published November 17, 1972 (37 FR 24,338), and was carried forward unchanged in the amended regulations published December 6, 1973 (38 FR 33,745).

(b) Although this rule is well supported by the history and technical structure of the legislation, the potential considerations in its favor are even more compelling. In § 2.52-1, we have discussed the urgent necessity for access, even without patient consent, to patient records on the part of qualified personnel engaged in scientific research and evaluation. Where this access includes that occasion as more limited for compliance sometimes may not be done, it may not be any question of access to the party seeking the information leaves in no worse position than if the records were not needed for the purpose of the order, rather than subsection (a) (2) (C) order would lie if preliminary examination suggests that the records are needed for some purpose, and where there would seem to be some advantage in securing a disclosure of information from subsection (a) (2) (C) orders.
the submission of testimony or other evidence by the program or its personnel.

§ 2.63-1 Limitation on objective data.

In the three-year period subsequent to the original enactment of 21 U.S.C. 1175, not a single occasion was reported to the Special Action Office for Drug Abuse Prevention on which an attempt was made to secure a (b) (2) (C) order authorizing the disclosure of a confidential communication by a patient to a counselor or other member of the staff of a treatment program. In all of the comments and testimony received on the draft regulations published August 22, 1974, there was nothing to suggest any circumstances under which a court order authorizing such a disclosure would be either desirable or appropriate. Yet the mere possibility that such an order might be issued is to some a source of anxiety which impair the effectiveness of treatment. Such an ongoing irregulative effect clearly counsels the refusal to authorize for such a disclosure to the existence of possibility that some peculiar circumstance might arise in which judicial authority might be sought. Accordingly, the limitation imposed by 1 2.63 on the scope of (b) (2) (C) orders to preclude that possibility, and hence to eliminate its adverse influence on treatment services, appears to be a proper exercise of rulemaking power.

§ 2.64 Procedures and criteria in general.

(a) Identity of patient. Applications for court orders to authorize disclosure of records pertaining to a known patient shall not use the real name of the patient unless the patient consents to its use or the facts make it impracticable and illegal. In the case of an ex parte application initiated by the patient, the application should be instituted in the name of a fictitious person, such as Jon Doe, unless the patient requests otherwise. The same procedure should be followed in the case of a separate proceeding held in conjunction with a pending criminal or civil action. Any court order should identify the patient's real name if the patient voluntarily requested, and the disclosure of the patient's real name should be communicated to the referenced program as a way to protect the confidentiality of the patient's identity.

(b) Notice. In any proceeding not otherwise provided for in this subpart, in which the patient or the program has been notified of the application and the basis thereof, the patient should be notified of the application and the basis thereof, the court makes an explicit finding to the effect that the program affected and in other programs similarly situated, and the ability of such programs to attract and retain patients, is outweighed by the public interest in authorizing the disclosure sought.

(c) Scope. Both disclosure and dissemination of any information from the records in question shall be limited under the terms of the order to assure that no information will be unnecessarily disclosed and that dissemination will be no wider than necessary. Under no circumstances may an order authorize a program to turn over patient records in general, pursuant to a subpoena to a program to attract and retain patients, is outweighed by the public interest in authorizing the disclosure sought.

(d) Form. Any application to which this section applies shall be denied unless the court makes an explicit finding to the effect that the program affected and in other programs similarly situated, and the ability of such programs to attract and retain patients, is outweighed by the public interest in authorizing the disclosure sought.

§ 2.64-1 Procedures and criteria in general.—Basis and purpose.

Section 2.64, in accordance with subsection (c) of the authorizing legislation, sets out procedures and criteria for the issuance of (b) (2) (C) orders in general, subject to the specific provisions with respect to particular types of proceedings covered in the preceding sections of the subpart.

§ 2.65 Investigation and prosecution of patients.—Rules.

(a) Applicability. This section applies to any application by an investigative, law enforcement, or prosecutorial agency for an order to permit disclosure of patient records for the purpose of conducting an investigation or prosecution of an individual who is, or who is believed to be, a present or former patient in a program.

(b) Notice. Except where an order under § 2.65 is sought in conjunction with an order under this section, any program with respect to which the records under this section shall be notified of the application and afforded an opportunity to appear and be heard thereon.

(c) Criteria. A court may authorize disclosure of records pertaining to a patient for the purpose of conducting an investigation or a prosecution for a crime of which the patient is suspected only if the court finds that all of the following criteria are met:

(1) The crime was extremely serious, such as one involving kidnapping, homicide, assault with a deadly weapon, armed robbery, rape, or other acts causing or directly threatening loss of life or serious bodily injury, or was believed to have been committed on the premises of the program or against personnel of the program.

(2) There is a reasonable likelihood that the records in question will disclose material information or evidence of the commission of a crime of which the patient is suspected, and that dissemination of any information from the records in question will disclose material information or evidence of the commission of such crime.

(3) The disclosure is an indispensable way of obtaining the information or evidence.

(4) The actual or potential injury to the program operated by any department or agency of Federal, State, or local Government, is in fact so represented.
The principal purpose of § 2.66 is to enable a regulatory agency to obtain the necessary information to perform its duties. To that end, the broad definition of "records" in § 2.11(c) creates for program personnel as complaining witnesses.

(d) In regard to § 2.56(e), experience has demonstrated that independent counsel may be of crucial importance. The leading case construing 21 U.S.C. 1175, People v. Neuman, 52 N.Y.2d 378, 435 N.Y.S.2d 502, 388 N.E.2d 651 (1978), certiorari denied, 441 U.S. 1183, 94 S.Ct. 2577, 40 L.Ed.2d 118 (1974), would never have been presented to the court but for the facts that legal counsel for the United States District Court appears to have issued a wholly inappropriate order under 21 U.S.C. 1176 in a case in which the authority program involved was operated by an agency of the United States Government, and another order issued to the program was represented by the same attorney who represented the agency seeking the order. It is possible that the order of would have been issued in any event, but it seems clear that there was no adequate presentation to the court of arguments or testimony in opposition. It is difficult to see how the purposes of subsection (b) (3) of the authorizing legislation can be carried out if there is inadequate presentation of the issues to the courts which must decide them.

§ 2.66 Investigation and prosecution of program—Rules.

(a) Applicability. This section applies to any application by an administrative, regulatory, supervisory, investigative, law enforcement, or other governmental or authorized source of information has disclosed a need for follow-up, or which may be carried out if there is inadequate protection of records in question. No information obtained pursuant to an order under this section may be used to conduct any investigation or prosecution of a patient, or be used as the basis for an application for an order under § 2.65.

§ 2.66-1 Investigation and prosecution of programs—Basis and purpose.

The legal rationale underlying this section has been set forth in § 2.18. It is expected that this section will find its principal and perhaps its exclusive application in the area of drug law enforcement. Experience has demonstrated that medical personnel, no matter how denominated, can engage in the illicit sale of drugs on a large scale, and that the use of undercover agents and informants is normally the only effective means of securing evidence sufficient to support a successful prosecution.

[FR Doc. 78-11719 Filed 6-27-78; 9:38 am]

Title 21—Food and Drugs

PART 1414—SPECIAL ACTION OFFICE FOR DRUG ABUSE PREVENTION

CHAPTER III—SPECIAL ACTION OFFICE FOR DRUG ABUSE PREVENTION

Revocation of Part

On May 9, 1975, there was published in the Federal Register (40 FR 20542) a notice of proposed incorporation proposing the revocation of Part 1411 of Title 21 of the Code of Federal Regulations by reason of the proposed incorporation of its subject matter in a new § 321 of Title 42 of the Code of Federal Regulations. Interested persons were invited to submit written comments, views, or arguments with respect to the proposed incorporation, within 30 days of the date of publication of that notice. None were received, except to the extent that those which were implicit in those submitted on the proposed new Part 3 of Title 42 of the Code of Federal Regulations, which were duly considered.

Dated: June 25, 1975.

Larry Larans, Jr.
General Counsel, Special Action Office for Drug Abuse Prevention.

COUNSELOR EVALUATION FORM

Please rate your counselor's skills during the 1984-85 school year in the following areas. Also, please describe the strengths and weaknesses in each area. Please use the back of this form if you need more space.

1. Ability to involve a cross section of the students. ____________
   Excellent | Good | Fair | Poor

2. Attendance at student activities. ____________

3. Ability to identify student crises and intervene appropriately. ____________

4. Responsiveness to parent and community groups. ____________

5. Initiation of alcohol and drug related prevention activities for students. ____________

6. Willingness to put in extra time when needed. ____________

7. Sensitivity and responsiveness to faculty. ____________

8. Sensitivity and responsiveness to pupil personnel staff. ____________

9. Sensitivity and responsiveness to non professional staff. ____________

10. Ability to follow through on suggestions made in supervision. ____________

Evaluation Summary

Of the 1,972 students participating in Student Assistance Program activities during the 1982-1983 school year, a sample of 232 students who took the pre/post test was selected for study. The purpose of this evaluation study was to measure the effectiveness of the alcohol and other drug abuse prevention and intervention procedures employed by the Student Assistance Program to decrease the quantity and frequency of alcohol and other drug use. This was one of the objectives of the program. The other objective was to improve school attendance of participating students.

A nonexperimental Two Group Pretest-Posttest Design was selected to test the effectiveness of intervention for alcohol and other drug taking behavior. School records were used to measure changes in school attendance. A significant drop in absenteeism occurred for students participating in the Student Assistance Program. A summary of findings for alcohol and drug taking behaviors of participating students follows as do a sample questionnaire and a summary reporting form.
STUDENT ASSISTANT PROGRAM
1984/85 SCHOOL YEAR
QUESTIONNAIRE INSTRUCTIONS
TO PROGRAM PARTICIPANTS

TAKING PART IN THIS STUDY IS COMPLETELY VOLUNTARY. STUDENTS ARE BEING ASKED TO COMPLETE THESE QUESTIONNAIRES SO THAT WE CAN EVALUATE THE STUDENT ASSISTANT PROGRAM.

ALL INFORMATION IN THIS QUESTIONNAIRE IS STRICTLY CONFIDENTIAL. TO INSURE CONFIDENTIALITY, THE QUESTIONNAIRES ARE PUT IN SEALED ENVELOPES AND MAILED DIRECTLY TO OUR EVALUATOR. NO ONE, EXCEPT THE EVALUATOR, WILL HAVE ACCESS TO THESE QUESTIONNAIRES.

COMPLETING THIS QUESTIONNAIRE IS VOLUNTARY.

IF THERE ARE ANY QUESTIONS YOU DO NOT WANT TO ANSWER, YOU MAY LEAVE THE QUESTION BLANK. IF YOU DO NOT WANT TO COMPLETE THE QUESTIONNAIRE, YOU MAY LEAVE THE WHOLE QUESTIONNAIRE BLANK. PLEASE DO NOT SIGN YOUR NAME ANYWHERE ON THE QUESTIONNAIRE.

THANK YOU FOR YOUR COOPERATION.

WESTCHESTER COUNTY DEPARTMENT OF COMMUNITY MENTAL HEALTH
STUDENT ASSISTANCE PROGRAM
OUTCOME EVALUATION FACT SHEET
1982-83 SCHOOL YEAR

Use of Alcohol, Within 30 Days of Pre/Post Test

22.7% (49 of 214) did not report use of alcohol on either the pre or post-test
77.3% (167 of 214) reported use of alcohol on the pre-test and/or the post-test
  55.1% (92 of 167) reported use of it on the pre-test, but not on the post-test
  12.6% (21 of 167) did not report use of it on the pre-test, but did on the post-test
  32.3% (54 of 167) reported use of it on both the pre and post-test
70% (49 of 70) of those who did not report use of alcohol on the pre-test continued
this pattern of behavior
63% (92 of 146) of those who reported use of alcohol on the pre-test, did not on the
post-test

Use of Marijuana, Within 30 Days of Pre/Post Test

67.4% (155 of 230) did not report use of marijuana on either the pre or post-test
32.6% (75 of 230) reported use of marijuana on the pre-test and/or the post-test
  82.7% (62 of 75) reported use of it on the pre-test, but not on the post-test
  12% (9 of 75) did not report use of it on the pre-test, but did on the post-test
  5.3% (4 of 75) reported use of it on both the pre and post-test (but reported a
decrease in the number of days on which it was used)
94.5% (155 of 164) of those who did not report use of marijuana on the pre-test
continued this pattern of behavior
93.9% (62 of 66) of those who reported use of marijuana on the pre-test did not on the
post-test

"High" at School on Alcohol, Within 30 Days of Pre/Post Test

59.5% (135 of 227) did not report being "high" at school on alcohol on either the pre
or post-test
40.5% (92 of 227) reported being "high" at school on alcohol on the pre-test and/or
the post-test
  29.3% (27 of 92) reported being "high" at school on alcohol on the pre-test, but
not on the post-test
  41.3% (38 of 92) did not report being "high" at school on alcohol on the pre-test
  but did on the post-test
  29.3% (27 of 92) reported being "high" at school on alcohol on both the pre and
post-test
78% (135 of 173) of those who did not report being "high" at school on alcohol on
the pre-test continued this pattern of behavior
50% (27 of 54) of those who reported being "high" at school on alcohol on the pre-test
did not on the post-test

"High" at School on Marijuana, Within 30 Days of Pre/Post Test

78.4% (182 of 232) did not report being "high" at school on marijuana on either the
pre or post-test
21.6% (50 of 232) reported being "high" at school on marijuana on the pre and/or the
post-test
  94% (47 of 50) reported being "high" at school on marijuana on the pre-test, but
not on the post-test
  6% (3 of 50) did not report being "high" at school on marijuana on the pre-test,
but did on the post-test
98.4% (182 of 185) of those who did not report being "high" at school on marijuana on
the pre-test continued this pattern of behavior
100% (47 of 47) of those who reported being "high" at school on marijuana on the pre-test,
did not on the post-test

Usual Quantity of Alcohol Consumed in One Day on Average Weekend/Holiday

16.9% (30 of 178) did not report consumption of alcohol on the pre or post-test
83.1% (148 of 178) reported consumption of alcohol on the pre-test and/or the post-test
  22.3% (33 of 148) reported consumption of it on the pre-test (average of 3.4 drinks in one day) but not on the post-test
  8.1% (12 of 148) did not report consumption of it on the pre-test, but did (average of 3.2 drinks in one day) on the post-test
69.6% (103 of 148) reported consumption of it on both the pre and post-test (but stayed at virtually the same level of consumption)

71.4% (30 of 42) of those who did not report consumption of alcohol on the pre-test continued this pattern of behavior
24.3% (33 of 136) of those who reported consumption of alcohol on the pre-test (average of 3.4 drinks in one day) did not on the post-test

Quantity of Alcohol Consumed in One Day on Average Weekend/Holiday, Within 30 Days of Pre/Post Test

22.4% (49 of 219) did not report consumption of alcohol on either the pre or post-test
77.6% (170 of 219) reported consumption of alcohol on the pre-test and/or the post-test
  54.7% (93 of 170) reported consumption of it on the pre-test (average of 3.2 drinks in one day) but not on the post-test
  8.8% (15 of 170) did not report consumption of it on the pre-test, but did (average of 4.5 drinks in one day) on the post-test
36.5% (62 of 170) reported consumption of it on both the pre and post-test (but the level of consumption decreased by almost two drinks per day)
76.6% (49 of 64) of those who did not report consumption of alcohol on the pre-test continued this pattern of behavior
60% (93 of 155) of those who reported consumption of alcohol on the pre-test (average of 3.2 drinks in one day) did not on the post-test

First Month of School Activities List

We would appreciate your cooperation in sharing with us some of your feelings and reactions to the counselor and/or program. Please do NOT sign your name. For each statement, circle the number which best corresponds to your feelings or beliefs:

- If you STRONGLY AGREE with the statement, circle 5.
- If you AGREE with the statement, circle 4.
- If you NEITHER AGREE OR DISAGREE with the statement, circle 3.
- If you DISAGREE with the statement, circle 2.
- If you STRONGLY DISAGREE with the statement, circle 1.
- If you DON'T KNOW how to respond to the statement, circle DK.

For statements 10, 11, and 16 if the statement does not apply to your situation (for example, if you have NEVER had a drink, taken drugs or participated in a group session), circle NR, meaning NOT RELEVANT.

1. The counselor helped me with my problems. 5 4 3 2 1 DK
2. The counselor was often too busy to see me when I needed help. 5 4 3 2 1 DK
3. In the beginning, I felt uncomfortable when I saw the counselor. 5 4 3 2 1 DK
4. I did not want to tell my family/friends when I started seeing the counselor. 5 4 3 2 1 DK
5. I feel better about myself since I started seeing the counselor. 5 4 3 2 1 DK
6. In general, I am doing better in school since I started seeing the counselor. 5 4 3 2 1 DK
7. My grades improved since I started seeing the counselor. 5 4 3 2 1 DK
8. I am absent from school less often since I started seeing the counselor. 5 4 3 2 1 DK
9. I cut classes less often since I started seeing the counselor. 5 4 3 2 1 DK
10. I have cut down drinking since I started seeing the counselor. 5 4 3 2 1 DK NR
11. I have cut down taking drugs since I started seeing the counselor. 5 4 3 2 1 DK NR
12. I have been getting along better with my parents since I started seeing the counselor. 5 4 3 2 1 DK
13. I have been getting along better with my friends since I started seeing the counselor. 5 4 3 2 1 DK
