The paper describes Stepping Stones Growth Center, which prepared handicapped students for transition into competitive employment. The origins of the program and its emphasis on functional skill training are reviewed, followed by a description of three levels of services: a "ready" class stressing basic skills, a "set" class emphasizing motivational training, and a "go" class which focuses on job readiness and eventual job placement. Both janitorial/grounds maintenance and food preparation classes are described, as are such ongoing activities as mobility training, money management, time management, and assertiveness training. Additional information addresses a timeline for transition and an individualized education program checklist. Extensive appendices contain several evaluation forms, course outlines, and publicity materials, including a newsletter. (CL)

ACKNOWLEDGEMENTS

Stepping Stones extends special thanks to the Department of Health and Human Services; especially Assistant Secretary Dorcas Hardy and Commissioner on Developmental Disabilities, Jean Elder, for their encouragement throughout the grant period.

We also thank Region IX staff: Richard Silva, Regional Program Director, Administration on Developmental Disabilities, and Project Officers Jim Etem and Susan Rich for their many hours of consultation and technical assistance.

Professionals in the field of Special Education also helped us immeasurably. Notably: Anthony DeSimone, Regional Commissioner, Rehabilitation Services, Region IX, Rina Hill, Vocational Counselor for Special Education, Alameda Unified School District, Bill Rosenberg, Educational Specialist, California SERN program, and Larry Rhodes, Specialized Training Program, University of Oregon, who helped us assemble the materials included in this package.

For funding support we wish to thank Health and Human Services, Administration on Developmental Disabilities; East Bay Community Foundation for partially funding the curriculum specialist, Clorox Corporation, Skaggs and Women's Foundation for general support, and Xerox Corporation for partially funding our computer.

We wish to recognize the research work and general assistance of Max Newton, the writing and editing of Monte Cohen, and all the staff and Board members of Stepping Stones who gave suggestions, constructive criticism, and encouragement.

Most of all we wish to thank the students it is our privilege to serve. They teach us every day.

INTRODUCTION

Both the Administration on Developmental Disabilities, and the Department of Special Education have called attention to the problems faced by handicapped youths upon graduation from their special education classes. After twelve years of access to public education mandated by P.L. 94-142, the first generation of handicapped youths are graduating only to face the future unprepared for the variety of vocational choices in the outside world.

It has been our experience that rather than preparing handicapped youths for competitive employment, most schools serving these students do just the opposite. They are very protective of their students, and for the most part reluctant to move students from the classroom to community-based activities and training. The majority of educational activities and vocational training, if indeed there is any, occur in a segregated and sheltered environment. Accordingly, as Thomas Bellamy has pointed out, over 75% of those completing high school programs for moderately and severely handicapped students are now in adult activity centers where they would have gone anyway without the benefit of special education classes.

Most parents we have worked with are similarly protective of their children. They usually leave their child in school the maximum number of years, regardless of whether the child's course of study is relevant to his future and is preparing him for the world of work. Parents are also often unaware of the variety of vocational training programs available to students, and therefore cannot lobby the school to include such programs in their child's educational plan.

Sheltered workshops then become the only viable alternative for graduating developmentally disabled students without vocational training. And while these workshops may meet the needs of certain lower functioning students, for highly motivated youths this sort of facility is confining and stifling to their potential growth.

We believe the young developmentally disabled student is "Ready, Willing and Able" to learn work skills, interact with non-handicapped peers, and eventually get a job in the community, with the right training. Yet only 2% of students enrolled in vocational education classes are handicapped. And of this 2%, 70% are enrolled in segregated classes apart from non-handicapped peers. In our local school districts of Oakland, Berkeley and Alameda, none of
the developmentally disabled students are enrolled in the vocational education services offered by the Regional Occupational Programs (ROP).

Without this sort of specialized training, transitioning these youths into competitive employment is a nearly impossible struggle. This task is made even more difficult in many urban areas, where the influx of Hispanic and Indochinese emigrants make competition for entry level jobs that much tougher.

With all this in mind, it should be apparent that a problem as complex as transitioning developmentally disabled youths must be addressed thoughtfully, and on a number of levels. Lou Brown, of the University of Wisconsin, has said that the best way to job-train students who score in the bottom 3% in intelligence tests is to get them out on job sites. There you can teach the skills needed for specific jobs in a normalized setting, as well as foster the development of the appropriate social skills expected in the community.

Our experience at Stepping Stones is consistent with Dr. Brown's beliefs. Since 1980, when we received a state CETA grant to job train 10 youths, we have seen our students gain more from community-based activities and integration than from what we teach them in the classroom. We believe the earlier we integrate our students with their non-handicapped peers and train them for concrete social and vocational tasks, the more likely they are to become contributing members of the community after they graduate.

The following pages describe Stepping Stones' approach to preparing its students for the transition into competitive employment. We begin the manual by giving some background information on Stepping Stones and how we came to develop our vocational emphasis. We then expand on the programming at Stepping Stones. Each of our three classes - READY, SET and GO are elaborated on, with an emphasis on vocational activities and aspects unique to each class.

The next section of this manual concerns the parental role in transition, an aspect we believe to be of extreme importance. Here we discuss the need for a parent's active involvement in the child's educational process, and the ways in which we work with parents to achieve this end.

Finally, we end the manual with some concluding thoughts and ideas we have for the future. Though we have been successful thus far in preparing and transitioning our students, we nonetheless feel that the best programs are flexible, and adaptable to new ways to improve the quality of life of its participants.
II. STEPPING STONES- AN OVERVIEW

In September, 1975, a group of concerned parents and professionals began the planning of the Oakland After School Program, later to be renamed Stepping Stones. These working parents of developmentally disabled children designed a program to provide after-school care for their retarded children, a service which was then unavailable. The Association for Retarded Citizens provided infant stimulation (day-care) for infants only, while most regular day care centers were reluctant to mainstream disabled children with their "normal" population. Thus, the working parents of children with special needs were forced to use expensive and untrained baby sitters or relatives for after-school care.

After a series of organizational meetings, the group submitted a written plan and budget to the San Francisco Foundation for consideration. The Foundation, recognizing the need for such a program, awarded a three-year grant.

In September, 1976, the Oakland After School Program opened as a non-profit organization 501(c)3, serving twelve children classified as Trainable Mentally Retarded. Programming during the first two years was mostly recreational in nature, centering around arts and crafts and physical activities. Volunteers along with CETA workers provided the staffing at this time.

By 1978, changes in all aspects of the program were underway. Now known as Stepping Stones Growth Center, the program was licensed for child care by the State of California. The funding base was widened through Revenue Sharing Funds, fees for service from the East Bay Regional Center, along with additional CETA grants. This added revenue enabled expansion of programming and the number of clients served.

The thirty students enrolled at this time, ranging in age from three to twenty-one, had a broad range of disabilities; including cerebral palsy, autism, and deafness. They were divided into 3 classes -- each class learning something about food preparation, housekeeping, public transportation use, grooming and hygiene, in addition to participating in a swimming and recreation program.

As the first of the older students graduated from their segregated high schools, it became apparent to all concerned
that these students were not being prepared for competitive employment. Their schools provided no vocational training classes, no work experience programs, and no career counseling. Thus, graduation usually meant leaving a segregated school and entering a segregated and sheltered workshop, a setting which seldom allows students to realize their full potential in society.

To address this problem, a proposal was submitted for on-the-job training to State CETA. We were awarded a one-year grant to place ten Trainable Mentally Retarded students, aged 16-21, in part-time jobs in the private sector following a three-step training process. Classroom training dealt with the skills needed and behavior expected on the job. Travel training and staff supervised work experience on site at the center followed, until the student was ready for the third step -- job placement and independent work in the private sector. CETA (now JTPA) funding has continued to be an integral part of our program, allowing us to train more than 150 handicapped and non-handicapped youth in pre-vocational and vocational skills in the last four years.

This vocational orientation has become central to all programming at Stepping Stones. We now provide a continuum of services designed to prepare students of any age for the time they enter the job market. As detailed in the following pages, our READY, SET, and GO classes provide training for our youths in independent living and vocational skills seldom taught in their public schools. For adults with special needs we offer training and work experience in our two non-profit business subsidiaries, Boatworks and CleanSweep, along with career counseling and job placement. For information on these two successful mobile work crew businesses, please contact Stepping Stones.

Stepping Stones believes in functional training and education relevant to an individual's day-to-day activities, with a plan for the future. We ask our students and their parents to prepare for and accept the risks involved in gaining any degree of independence. And we modify our program to meet the needs of our students, using any means or adaptive aids necessary to allow them the possibility of achieving this independence. By providing such an educational experience we hope to maximize the potential of each of our clients, and allow him the satisfaction each of us feels as a productive and independent individual.
III. READY CLASS

Stepping Stones' continuum of services begins with the READY class, which serves both our youngest children and older students in need of the basic skills offered. Along with structured play and recreational activities, this class focuses on the development of functional skills which will be built upon as the students matriculate through our SET and GO classes. By providing such programming, we are giving these students a valuable head start that many of our older students did not have.

In the READY class, we try to make activities as serviceable as possible. For example, when students work on number skills, their home phone numbers and addresses provide the basis for the lesson. Language and communication skills are worked on as much as possible in the community where students learn to state their needs verbally or with the use of adaptive aids. Other basic skills emphasized here are money recognition, self-care and grooming, and gross and fine motor skills. These areas are augmented by such pre-transitional activities as food preparation and gardening. Students in the READY class learn basic cooking skills, regularly prepare snacks for the center, and participate in the upkeep of our garden at Stepping Stones. Our READY class evaluation form, prepared and reviewed with parents twice yearly, gives further information on the class curriculum. This form can be found in the Appendix.

A number of other methods are used to further prepare our READY students for increased responsibility. They participate in our bake sales, operating the sales table and selling goods baked by our GO food preparation class. They are given chores around the center to do on a daily basis and are instructed in the skills needed to complete these tasks. When a student has shown a good attitude and a willingness to learn, he or she is periodically included in the vocational activities of the older SET and GO classes.

This last aspect of the READY class is perhaps the most important. By working with older students and by being around the adults in our Boatworks and CleanSweep programs, our READY class is exposed to appropriate role models—individuals with developmental disabilities who are productive and hard working.

Rather than aspiring to be an airplane pilot, a movie star or sports hero, the READY students are made aware of more realistic alternatives and indeed, more than one of the students has voiced his desire to be a part of the Boatworks team when he grows up.
IV. SET CLASS

INTRODUCTION.

More than anything, our SET class acts as a motivational setting, one which is integral to the vocationally oriented curriculum emphasized at Stepping Stones. It is in the SET class that we help our students understand, accept, and act upon the differences between the roles played in childhood, and the roles played as adults.

As such, a number of common goals are established for all of our students in the SET class. They are encouraged to develop more mature self-concepts befitting their emotional and physical growth as well as their abilities and potential. Differences between work and play situations are continually emphasized, as well as the differing attitudes one brings to each of these situations.

The earning, management, and spending of money are also activities which are stressed. Students are placed in situations where money is earned based on the quantity of their work. As students can save or spend this money as they desire, money management and a more adult appropriate form of decision making are skills which are developed here.

To meet these goals and to get students excited about entering the work world, the SET class started and continues to operate a small business. Based on the abilities of its students and on the needs of the surrounding community, we have found this business to be tremendously successful as a motivational and educational tool, as well as a constructive way for our program to earn a bit of extra money.

GETTING DOWN TO BUSINESS: THE OAKLAND RECYCLING EPIDEMIC

Before deciding on recycling as our class business, we took a door-to-door survey of our immediate neighborhood to determine the needs of our community. In this way, we were able to determine what business would be both marketable and consistent with the abilities of our students. A recycling service answered both of these criteria, as well as the goals set forth in the Introduction.
Our recycling program, The Oakland Recycling Epidemic, is based on elements which can be incorporated into any number of small businesses:

-The skills are simple and repetitive. Younger and lower functioning trainees have an excellent chance for success and income.

-Money is paid to the trainees on a piece rate basis. As production rates increase, so does the money earned by students.

-Students get in touch with their community and are exposed continuously to more normalized situations.

-Work related attitudes are emphasized, including staying on task, working as a team, and personal responsibility and accountability.

We believe our recycling business to be quite successful on a number of levels. As the connection between performance and the amount of money earned became more apparent to students, they were indeed motivated and production rates increased accordingly. Consequently, our trainees have become serious about their jobs and most recognize the need for a proper attitude towards work. One of our students became proficient enough to get a part-time job at our local recycling center.

The pride the students take in their work is also readily apparent -- the kind of pride not often seen in contained classroom settings. They proudly refer to their position as a "job" and are quick to point out that they are paid for their efforts.

Our relationship with the community has also been very fruitful. Trainees have become more and more comfortable in their dealings with our neighbors, changing from shy and inarticulate individuals to confident and industrious business people. At the same time, our neighbors have been exposed to disabled people who are motivated and productive, contrary to many of their preconceptions. Thus, their support of our program has been very strong, and they have helped our business in many ways.

Another welcome outcome of our program has been a change in the attitudes of our students' parents and care providers. Having seen their children grow and become productive workers, they have had to alter perceptions of their children's capabilities and future potential as wage earners. Hence, the parents become better prepared for the
time that their children will be working, traveling and perhaps even living independently.

In the Appendix we include a curriculum outline and evaluation form for the recycling business. More detailed information about starting a recycling business is available upon request. It should be emphasized, however, that while recycling has been successful for us, many other alternatives for small businesses exist. We have heard of other gainful enterprises operated by the developmentally disabled, including car washing, collating and yard work services.

While The Oakland Recycling Epidemic keeps us busy, we still have time for ongoing activities which compliment and build on the skills learned through our class business.

ONGOING ACTIVITIES

While money may indeed be the prime motivational factor behind work, we have also used additional methods to further reinforce good performance and proper attitudes. For example, we single out a "Worker of the Week" for special recognition, based upon a trainee's work or improvement.

Individual work contracts are also used on a regular basis with each trainee. In these contracts, specific goals and timetables are indentified by the student, when appropriate, or by the teacher. These goals are discussed with the trainee, stressing the job skills and disposition necessary to reach the goals. If goals are not reached by an agreed upon date, they are re-examined and more appropriate ones chosen. If goals are reached, more challenging ones can be developed. But whether goals are reached or not, these contracts are very beneficial, as the respect and responsibility implied in a formal contract is a powerful way to raise a student's self-esteem.

As mentioned earlier, our students can choose to save or spend the money they earn through recycling. To facilitate this, we have opened our own class bank. Each trainee has his own account and bank book. At the end of each work day, students decide how much to save of that day's pay, deposit that in the bank, and spend the rest at a neighborhood grocery store. At the end of the month, students are able to spend the money they have saved on trips to local department stores.

While their bank accounts give trainees a rudimentary sense of money management, it also gives them a more realistic idea of the value of money, and what is needed to
buy certain items. To supplement these skills, lessons focusing on coin identification, addition, and change-making are also taught.

To illustrate to our students the variety of jobs in the community, we have taken a number of field trips to various job sites. We follow these trips with discussions about the responsibilities of each worker observed, the skills and materials needed for each job, the kind of clothing worn at each site, and other related topics. In this way, many of our trainees have developed a more realistic understanding of future job possibilities, rather than entertaining the unrealistic notions that many of them initially held.

Independent living skills, including various social behaviors, assertiveness training, and personal appearance and hygiene are also addressed in the SET class, usually within the context of our class business. Occasional role playing exercises have also been valuable, especially in the development of sexual awareness and other social skills.

Though teaching these social skills is not the focus of our SET class, we have found that it is good preparation for the transition into our GO class, where both vocational training and independent living skills are emphasized.
V. GO CLASS

INTRODUCTION

When a SET student has consistently shown both a proper attitude and a satisfactory quality of work, he is ready for the transition into our GO class. In this class, the emphasis is on job readiness, with an eye towards placement of our students in outside employment upon completion of their training at Stepping Stones. To accomplish this, the GO curriculum essentially centers around continuing the student's development in two areas: vocational training and independent living skills.

Vocationally, we provide training in janitorial/grounds maintenance and food preparation skills. During their first year in the GO class, students are trained in each of these areas, learning the basic skills, materials, and equipment used in each. In their second year, students are given a choice in which area, including recycling, they would like to specialize. A more rigorous training follows, as outside contracts are obtained and production and quality levels must be reached.

The independent living skills component complements the vocational training in the GO class. The various skills needed to successfully effect the transition from school to work are addressed. Travel training, money management, assertiveness training, and decision making are just a few of the areas developed here, taught in as normalized and realistic a setting as possible.

Ultimately, the GO class serves one other purpose which we believe is crucial to the future of the students. The element of risk taking is taught to be a necessary part of growth, essential for improving the quality of one's life. The students and their parents or other care providers are encouraged to work through their fears. Parents are informed of their child's program and progress, and are asked to participate in the implementation of our program. Our students are taught to know what precautions to take, what safety resources are available to them, and most of all, to be confident of their worth as individuals and capable wage earners.
VOCATIONAL TRAINING

Janitorial/Grounds Maintenance Skills

In the janitorial/grounds maintenance class, we make work a habit for our students. After issues of safety and the proper use of equipment are reviewed at the outset of the semester, students are assigned tasks to do around the center. Duty schedules are developed by the teacher, and each trainee is assigned certain daily, weekly, and monthly responsibilities ranging from shampooing rugs to weeding flower beds.

Personal accountability is continually stressed -- the content and quality of a student's work is discussed daily. As all of our GO participants are paid under the JTPA program, they are indeed paid workers. Accordingly, the students must call when they don't come to work. Chronic absence or tardiness is not acceptable, and such habits have been the basis for dismissal of a few of our students.

Two-week contracts similar to those used in the SET class are also used here to give additional feedback to the trainees. Student evaluations are done every 6 weeks and discussed with the trainee. At these meetings, the student's strengths, weaknesses and future job potential are discussed in detail to give him an accurate picture of his current abilities. Copies of the two-week contract, the trainee evaluation form, and the Janitorial/Grounds Maintenance Task List can be found in the Appendix.

As the skills of the janitorial crew improves, outside contracts are obtained. During the summer of 1982, five of our students worked on the Potomac, the former yacht of President Franklin Roosevelt, being renovated by the Port of Oakland. Along with general janitorial chores, the trainees did polishing and refinishing, and removed sand used in sand blasting. These students worked 8 hours a day, 5 days a week throughout the entire summer. Another janitorial contract was secured with ConAgra, a local grain company. Two times a year for over 3 years, a crew of five of our trainees has cleaned and maintained their Oakland headquarters.

During the summer of 1983 two of our trainees were stationed at a City of Oakland Park to do litter abatement and assist in their summer recreation program. During the Spring of 1984, a neighborhood grocery store took on one of our students two days a week for cleaning and stocking duties.
The supervisor in each of these sites has been more than satisfied with the work of our students, which is indicative of the skills learned, quality of work, attitudes of our students, and the general success of our training program.

FOOD PREPARATION SKILLS

Within the GO food preparation class, the emphasis is twofold. Initially, we provide training in basic survival cooking and safety skills. Once students learn their way around the kitchen, we then use these skills for profit in a catering business. A copy of our food preparation course outline may be found in the Appendix.

By emphasizing survival cooking skills, we prepare our students for the time they will live in some degree of independence. They are made aware of the different food groups and taught the basics of menu planning. Trips to supermarkets are taken, and students are responsible for making a list and selecting the food to be bought for the center each week. While eating out at local restaurants, trainees determine what combination of foods would constitute a balanced meal, learn to order, use good table manners and pay their bill.

In addition to preparing daily snacks for the entire center, our students have other daily, weekly and monthly duties which include dish washing, laundry, and defrosting the refrigerator.

Once the more formal kitchen training is completed, cooking for profit becomes the focus. Flyers about our business are distributed throughout the neighborhood, asking customers to phone in their orders for cookies, quiche, or banana bread. Pick up is usually a few days later at Stepping Stones. As our menu is limited and repetitious, students are able to handle the demands of customers. The cooking trainees also move out into the community to cater dinners, cocktail parties and wedding receptions as scheduled.

Any profits we realized have been used to upgrade both equipment and potential output, by the purchase of a food processor, a commercial mixer, a dishwasher, and a second refrigerator. Profits also provide bonuses for students, in addition to their JPTA stipends.

Along with the catering business, we were able to provide vocational experience in food preparation for trainees in integrated work sites. During the summer of
1983, we participated in the City of Oakland Parks and Recreation Summer Lunch Program, where three students picked up and stored more than 200 pre-packaged lunches a day, distributing them to children attending the program. During the same summer, three other trainees worked at the Senior Citizens Lunch Program where their duties included setting tables, distributing condiments, and bussing tables at the end of meals. By the end of the summer, they had worked almost 75 meals.

Individually, a number of our trainees have had similar success. One of our students is now working in his high school cafeteria, and another will soon begin work at Eden Express, a restaurant rehabilitation training site in Hayward, California.

In all, we have found our cooking program to be quite successful. By combining survival cooking with our small business, we have fostered training in skills students can use in a variety of settings, including earning a living.

ONGOING ACTIVITIES

To both build on their vocational skills and to develop living skills which foster independence and normalization, additional activities are used in our GO class. Job-related accountability is instilled in our students through the use of two-week contracts and the "Worker of the Week" awards similar to those used in the SET class. Trainees are also expected to use time sheets, signing in and out each day as well as calling when they won't be in.

Various field trips have proved beneficial in building on our trainees' skills. Our cooking class has taken field trips to restaurants ranging from fast food outlets to more expensive and formal eateries. At each, the skills and responsibilities of the various restaurant workers are discussed and compared to those of the students. Similarly, the janitorial crew has taken a number of trips to janitorial supply houses and hardware stores, where the tools and equipment relate to the students' own janitorial experiences.

In preparing our trainees to obtain jobs, job interview techniques are addressed. Using role play, students go through mock interviews and are given feedback on their performances. They are encouraged to highlight their vocational skills and experience, as well as communicate appropriately, with confidence. The need for eye contact and selecting appropriate clothing to wear for an interview
are also areas elaborated on. To generalize these skills, we have brought in local business people unknown to our students to conduct interviews and provide feedback for the trainees.

The rest of the ongoing activities taught in the GO class focus on living skills. While these activities often relate to their vocational skills and future, they center around issues of self-management, emergency situations, and social skills.

1. MOBILITY TRAINING

We consider mobility training essential to the development of an independent lifestyle and devote a good deal of time to this area. As we have had considerable success with our travel training of students, we will elaborate in some detail on our training methods in this area.

Safety and emergency issues are the first elements discussed in the training. Representatives of the Oakland Police Department have helped us here, visiting our center to brief the students on what precautions to take while traveling, and what resources are available to them in case of emergency. Students are further instructed to always carry personal identification which includes the phone numbers and addresses of their homes and Stepping Stones, and how to use that I.D. when needed.

After a student has shown a proper understanding and usage of these safety skills in role play exercises, the actual mobility training begins. The number of the bus the student will be taking between Stepping Stones and his home, and his home address are the first components taught. A student must also know what landmarks to look for outside his bus, and which landmark indicates his stop. Finally, trainees must know the combination of coins needed to ride and learn to present their discount cards upon entering the bus.

Group field trips utilizing public transportation are then taken, and each student is evaluated on his skills using the "Bus Recording Form," which can be found in the Appendix. In this way, we are able to determine where each student's strengths and weaknesses lie, and what areas need to be improved upon before individualized training can begin.

Our individualized training is basically a four-step process. First, a teacher travels with the student, helping
as needed in coin recognition, locating landmarks, and recognizing the appropriate stop. Gradually, the teacher gives fewer and fewer cues, until the student can handle all related tasks without assistance.

At this point, we move to the second step in the process. Here the student travels "solo" while under the watchful eye of a disguised teacher who has gotten on the bus a stop before the student. The student is graded by the teacher using the form mentioned above, and his performance is discussed the next day in class. This step is repeated until the student's performance is considered satisfactory.

The third step entails a teacher in a car following the student's bus, to make sure the student exits at the right stop and makes the right transfer, if needed. If the student misses his stop, the teacher pulls ahead of the bus and waits at a bus stop, where he can get the student off the bus.

When all goes well in the third step, the fourth and final step is taken. Here the student travels solo, while a parent and/or staff member of Stepping Stones is available by phone, if needed. For this step, a student may be using the adaptive aids he has used throughout the training which include a photocopy of the coins needed to ride, a picture of the landmark indicating his stop, and possibly even a card to give the bus driver asking for his assistance. We have found that these aids are indeed helpful and reassuring to the trainee, and that through repetition of his travels, these aids can often be dispensed with after a short time.

It is apparent that the travel training detailed above does take time, and a good deal of one-to-one supervision. Yet, as future employment is most likely contingent on a student's mobility, we feel it to be a necessary ingredient of transition training. Should public transportation not be available, other alternatives for mobility training exist, including bicycles and ride-sharing. It is important to utilize all available resources in fostering a student's independence and normalization through mobility training.

2. MONEY MANAGEMENT

Money management training also plays an important role in our GO class. The basic money skills introduced in the SET class are built upon in GO activities. While realizing that each student has a limit to the range of money related tasks he can learn, we have found that certain techniques can be used to realize the potential of each trainee. Some of students already possess sound money
skills. For these students, we provide frequent trips to local shops to allow them to use and strengthen their skills in a normalized setting. Other students need adaptive techniques to function at this level of independence.

One technique which has proved successful is the "One Dollar More Method" whereby students are taught to count out one dollar more than the amount of a given purchase. Students are trained to look at the cash register for the number which is the cue, and to pay for their purchase using dollar bills. For example, a student who buys $3.28 worth of merchandise is taught to use the first number on the register as the cue. In this case, the number is 3, so the student counts out one dollar more than that and gives the cashier four dollars, and waits for the change. Using this method, the most a student can be short-changed is one dollar.

Whatever the level of the student, we believe the use of real money, rather than tokens or chips, is very important. We have seen that the difficulties of learning to use money are most often offset by the motivation students develop for earning and spending real money.

3. TIME MANAGEMENT:

As any job entails some sort of schedule, a rudimentary sense of time management is instilled in our students. To help in the development of this area, digital rather than analog clocks are used throughout our center, as digital screens actually show the time the way people write it or say it.

When a student has shown the ability to reliably read a digital clock, we then move to the development of schedule management. Now a student is given a specific time to leave the classroom and perform a given task. As this process involves keeping an eye on the clock as well as matching the actual time with the agreed upon time, we believe this exercise to be a good introduction to time management. As students become proficient at this, the number of tasks can be increased until they have their own structured schedule which they can follow independently each day.

4. ASSERTIVENESS TRAINING

In our work, we have found many of students initially lacking in the level of confidence needed to effect the
transition from school to work. Accordingly, an ongoing assertiveness training class is an important component in the GO curriculum.

Communication skills, both verbal and non-verbal, are developed in role play exercises to aid in this process. Eye contact, distancing, posture, and voice level are the areas elaborated on. Especially significant is our component on "saying no" with confidence. Certain situations, such as a stranger offering a student a ride in his car, are role played in class. Trainees are taught to recognize these dangerous circumstances and decline decisively. Such assertiveness is generalized by our students' constant exposure to the community, where they, not their teacher, must voice their needs, and make purchases and decisions. Their assertive and social skills are critiqued on a daily basis by teachers, and discussed in group conversations with the entire class.

5. SEXUALITY:

Sexual awareness is another need addressed under ongoing activities. In the Fall of 1983, with the help of Planned Parenthood of San Francisco/Alameda, we started a class designed to deal with these issues. Meeting twice a week for a 3-month period, we used role play and other adaptive techniques to instill in our students body awareness, appropriate sexual behavior, and a general level of sexual awareness consistent with their age. Avoiding sexual exploitation was also an area which was focused on, using role play and follow-up discussions.

It should be noted that during this 3-month period, classes on sexual awareness were also being taught to our READY and SET students to address their specific needs and levels of understanding.

Ongoing classes on sexual awareness have followed the conclusion of the 3-month course to continue to answer the questions and needs of the students. Related situations in the students' own lives are discussed in group settings, with each student having the opportunity to role play the specific incident being discussed.

For more information on our sexual awareness program, a copy of our curriculum is available.
VI. TRANSITION AND THE PARENT

INTRODUCTION:

While schools and other supplemental programs can lay the groundwork for a student's transition from school to work, strong parental involvement is also needed to insure the smoothest transition possible. By being involved and aware of the many resources available to them, a parent can become an effective advocate and integral part of the child's growth. An uninvolved parent, however, can undermine the worth of any program his child may be in, and ultimately stifle any development in the child. It has been our experience that two major factors usually limit parental participation: the fear of the risks involved in the child's growth and the lack of clear information as to their role in the educational and transitional processes.

With regard to this first factor, we have found that the better the communication between our agency and a parent is, the easier it is to work through a parent's fears. To this end, we try to involve our parents as much as possible. They are asked to help develop their child's goals, and are constantly appraised of the progress made towards these goals. Parents are also asked to work on these and other goals at home, whether it is allowing the student to cook meals at home, to travel alone, or to participate in the family decision making process. In this way, parents can see the progress and level of independence of their children rather than having to rely on secondhand information from school.

To help define the respective roles of the parent, of our program, and of the student in the development and implementation of a student's program, we have devised a contract which assigns certain specific responsibilities to each. Timelines are established, and periodic meetings are scheduled to review progress and revise contracts if necessary. A sample copy of this contract can be found in the Appendix.

Another process we have used to help abate fears is use of parental support groups. These groups, organized by the Educational Director, have given parents the opportunity to discuss their trepidations and concerns with other parents who, quite likely, experience the same emotions. In these groups, firsthand success stories have been shared, giving encouragement to hesitant parents by pointing out the successes of their children. Community resources and issues
of advocacy have also been discussed, giving parents the knowledge needed to get help in fostering their children's growth.

We have also initiated the formation of smaller groups of parents with specific, related concerns, allowing parents to focus on issues which affect them all. Yet, whatever the format of these meetings, these support groups have proved beneficial, the success mirrored by revised parental attitudes and greater confidence in their children's abilities.

As stated earlier, the other factor we have seen limit parental involvement is a lack of relevant and understandable information regarding the unique situation as the parent of a developmentally disabled individual. To address this need, we have drawn up a timeline which provides parents with a clear and effective schedule. This timeline points out the appropriate resources to be used and steps to be taken during the various phases of a child's growth. The ultimate goal is the transition of the child from school to work. A copy of this timeline follows, along with a checklist we provide for parents to help them in the development of the Individualized Educational Plan throughout the child's schooling.

A SUGGESTED TIMELINE FOR TRANSITION

From Birth (Ages 0-5)

- Set realistic goals for your child. Include them in the goal-setting process as early as possible.

- Take the time to locate the social services and educational services available to all families of handicapped children. Understand the scope and implications of the Education of Handicapped Children Act, PL 94-142, and the Rehabilitation Act of 1973, Section 504. For this information contact the Protection and Advocacy office in your State capitol. Keep informed of new legislation and how it may affect you or your child. In short, know your rights!

- Consider enrolling your child in an infant stimulation or Head Start program to answer his special needs as early as possible.

- Before school begins, shop around for the best class or school placement for your child. An integrated school setting would usually allow for more normalized educational and social activities.
Early School Years (Ages 6-10)

- Look to see if the school district you have decided upon has an integrated Junior High and Senior High School system for your child. If so, make sure that your child's grade school curriculum and I.E.P.'s cater to the entrance criteria of these programs.

- To help you in the development of I.E.P.'s throughout your child's schooling, review the I.F.P. checklist which follows.

- Look for an after-school program to supplement the work done in school. Determine whether you are eligible for State or Federal funding for this programming.

- Help coordinate the goals worked on in each of your child's programs, to insure consistency and avoid duplication of programming.

- Don't expect the school and after-school programs to do all the training. Take part in reinforcing your child's educational and vocational goals by assigning responsibilities around the house. The sooner your child gets used to the routine of work, the easier the transition from school to work will be.

Middle School Years (Ages 11-15)

- The junior high and high school years should concentrate on preparing your child for the real world. His curriculum needs to emphasize independent living skills, vocational training, and moving from classroom activities to lessons in the community.

- Make sure your child is receiving training at home and in school in the following areas:

  Hygiene and grooming
  Appropriate social behavior
  Emergency information
  Safety and self-protection procedures
  Use of mass transit, or other means of travel
  Money management
  Time management
Telephone skills
Housekeeping and meal preparation skills
Vocational training and evaluation

- I.E.P.'s at this time should reflect this training. They should be worked on at home and in your community to give your child as much normalized and experiential training as possible.

Last years of Public School (Ages 16-21)

- A continued emphasis on the training areas listed above needs to be maintained. Make sure I.E.P.'s address these areas.

- At home, encourage your child to be as independent as possible. Let him prepare meals, socialize with friends, participate in community activities (a bowling league, for example), and do some of the family shopping.

- Investigate resources in your community for possible work experience during your child's last years in school. See that the high school placement counselor guides the student towards jobs or programs like the federally funded J.T.P.A. program.

- Now is the time to start looking for employment opportunities following your child's graduation. Find out what fields your child is interested in, and look into resources in those areas.

- After you have investigated post-school job opportunities on your own, sit down with the high school counselor, your child's teacher, your case worker, and your child to talk about vocational plans. Explain to those present which occupations your child is most interested in, and ask their opinion on the appropriateness of those choices. Discuss possible job placements or other training options.

- Planning for the transition from school to work can indeed become a complex task, with many people involved in the process. To keep things as manageable as possible, clearly define the responsibilities of yourself, of the school and of the youth in the transition process. We have found that the use of a written contract which assigns specific responsibilities to each person involved can be extremely helpful.
- Determine whether your child will be eligible for Rehabilitation or Habilitation sponsorship upon graduation, or whether employment will have to be found in the private sector.

At age 18, your child is legally his own guardian unless you take action. Carefully consider the implications of this situation.

- To help you in this matter, and for other information on issues of guardianship and conservatorship, obtain the free pamphlet "Guardianship, Conservatorship, Trusts and Wills for Families with Mentally Retarded or Other Disabled Family Members." Write to: Protection and Advocacy, Inc.; 1400 K Street, Suite 307; Sacramento, CA 95814, or call toll-free 800-952-5746 for this valuable pamphlet.

- At age 18, your son or daughter is eligible for Social Security Disability Insurance. Prior to their 18th birthday, make an appointment with the Social Security Department to file a claim. Find out how earned income affects S.S.I. and S.S.D.I., the trial work period, and whether payments can be reinstated if a paid job ends.

- Don't look upon S.S.I. payments as a lifelong subsidy. For both greater financial gain and increased self-esteem it benefits your young adult to be employed.

- Be aware of changes in S.S.I. guidelines and how it may affect your child. This system is currently under review.

- During the last semester of school after plans have been made for further job training or job placement, determine who will handle the follow-up. This is crucial, as many jobs are lost in the first months without someone designated to follow along on a scheduled basis to monitor the situation and address any special issues that arise.

On the Job (Ages 21 and on):

- Once your son or daughter does secure employment, be sure to prepare the employer by answering questions and concerns about hiring a disabled individual. The Rehabilitation staff can assist you by informing the employer of rights of the disabled in the workplace and discuss any special needs your son or daughter might have.

- While you will always have the right to ask the employer how the new worker is doing on the job, you also need to let go at this point. Let your son or daughter take responsibility for the work, while you provide guidance and
support if needed. Review any evaluations he gets from his job, and discuss any specific problems with him.

Leaving Home

- If you son or daughter chooses to live independently, investigate the options available. Some issues to consider in this matter include:

1. Whether a group home, a dormitory type arrangement, or regular apartment would be most appropriate.

2. Look at the cleanliness and quality of care given to residents at each setting you visit. See if the residents seem happy, busy and productive.

3. Find out if the home is accessible to his place of work, and public transportation, if needed.

4. Determine whether the residents of the homes you visit participate in community activities, or whether most social interaction is limited to the home setting.

5. Get references on the house parents. Find out how they are evaluated, who does the evaluation, and whether they are a licensed facility.

6. Solicit information from other parents who have gone through this process. They are the experts in this matter, and their experience should be utilized.

- Be proud that your young adult wants to live independently. The confidence and self-esteem reflected in this move mirrors his maturity and your success as a parent.

I.E.P. Checklist

In assessing the adequacy or inadequacy of an I.E.P., one must look at both its content, and the process of its development. An I.E.P. should facilitate parent-school communication and provide accountability. It should help a teacher to focus learning activities and make lesson plans more relevant, while allowing parents input in their child's programming.

This checklist is designed to help the parents in the I.E.P. process throughout their child's schooling. It provides information on both the content and the process of
developing an I.E.P., along with steps the parents can take to make the I.E.P. more effective. As such, this checklist is relevant at any point in a child's schooling, and it can be referred to whenever questions arise.

The first section of the checklist will address the process of developing an I.E.P., with the content of an I.E.P. being the focus of the second section.

The I.E.P. Process

1. Timing

   An I.E.P. should be developed within 30 days of the time your child enters any school or vocational training program.

   I.E.P.'s should be reviewed and revised at least once a year.

2. Participants - I.E.P.'s should include the following persons:

   One or both of the child's parents.

   A case worker or other representative of the agency monitoring special education in your area.

   The child's teacher

   A representative from any other program your child attends

   Your child, when appropriate

   An interpreter, if needed

3. Notification and Scheduling

   You should be notified in sufficient time to arrange attendance.

   The time and place of the I.E.P. should be mutually agreed upon by you and the school.

4. Records

   The school should make available to you any records it has pertaining to your child.
- You should provide any records which may be relevant, including medical or psychological information.

- Ensure that confidentiality is maintained, and that access to personal records is limited to appropriate personnel.

5. Completion

- Make sure you get 2 copies of the complete I.E.P. - one to sign and return to the school, and one for your own records.

6. Review and Accountability

- Review the previous I.E.P., and determine your child's progress towards the goals included in that I.E.P.

- If you doubt the efforts of the school in achieving the I.E.P. goals, you have the right to question the school. You can complain, ask for revisions in the program, or even invoke due process if you feel it is warranted.

The I.E.P.'s Content

1. Characteristics

- A good I.E.P. is specific. Its goals and objectives are stated in terms of observable behaviors and skills;

- Realistic and appropriate. Its goals and objectives fit the child's current abilities and probable growth rate;

- Understandable. It is written in a language comprehensible to both professionals and parents;

- Mutually developed. It represents a consensus among parents and school personnel in terms of goals and objectives;

- Functional. Its goals represent skills the child uses, or will use, on a day-to-day basis;

- Comprehensive. It addresses all appropriate content areas listed below.
2. Content Areas - I.E.P.'s should include goals, where appropriate, in the major content areas of:

- Communication skills
- Behavioral objectives
- Gross and fine motor skills
- Self-help and independence
- Academics, with each subject having its own specific goals
- Pre-vocational or vocational training
- Community awareness, including safety skills
- Recreational and leisure activities

3. Related Services - Specialized services not noted above should be included when used by your child. These areas include:

- Transportation
- Speech or language therapy
- Psychological services, including testing and counseling
- Occupational therapy
- Physical therapy
- Medical services, including testing if necessary

With regard to these specialized services:

Determine who will deliver the service, and include it in the I.E.P.

Specify the length of time services are to be delivered, and the dates services will begin and end. Include this information in the I.E.P.

Include any special media or materials to be used in the I.E.P.

4. Participation in Regular Education - Public Law 94-142 states that (1) To the maximum extent possible, handicapped
children shall be educated with children who are not handicapped, and (2) that special classes, separate schooling, or other removal of handicapped children from the regular educational environment shall occur only when the nature and severity of the handicap is such that education in regular classes with the use of supplementary aids and services cannot be achieved satisfactorily. The law also encourages children's placement in their neighborhood school, or as close as possible to the home, along with the providing of integrated non-academic and extracurricular activities, including lunch and recess.

I.E.P.'s must specify how and when a student will interact with nonhandicapped peers.

In I.E.P.'s:

Opportunities for interaction with non-handicapped peers should be listed.

The staff responsible for the implementation of program during segregated activities should be noted.

Socialization objectives related to integrated activities and the criteria for evaluation should be listed.

The amount of time and the starting and ending dates of these activities should be noted.

5. Placement Justification and Signatures - A statement must be included in the I.E.P. which indicates the placement of the child, and why that placement is deemed most appropriate. The finalized I.E.P. must be dated and signed by the parents and other participants. In each I.E.P.:

The child's placement is specified

The justification for placement is included

All involved participants have signed

Note: We wish to thank Ellen Barnes of the Center on Human Policy, whose information provided the basis of this checklist.
VII. FUTURE DIRECTIONS

In looking forward, Stepping Stones sees a number of ways in which to improve the quality of our students' lives. Ventures involving other agencies remain largely unexplored, though we believe such linkages are essential to a student's education. By avoiding replication of service, and by creating a cohesive and complementary educational plan, various agencies can work together to allow each student to reach his full growth potential.

To this end, Stepping Stones and Alameda School District wrote a joint proposal whereby Stepping Stones would provide vocational training and job placement services for special education students in the Alameda School District who are nearing graduation. Alameda classroom teachers would reinforce job readiness skills, functional basic education that relates to their off-site jobs, and assist in developing worksites. The proposal has been submitted to the Department of Health and Human Services, and is now pending.

Another linkage we are developing in the near future involves Regional Occupational Programs (ROP). Because Stepping Stones is not certified as a school, we are now ineligible for such funding. But we have lobbied our local school districts to allow handicapped students the right to participate in ROP's. Currently, local school administrators feel the severely handicapped are too low functioning to benefit from formalized vocational training. We have proved otherwise. We will continue to work towards this goal.

Along with developing inter-agency linkages, we also foresee changes within our own system which will enable us to improve and expand upon our services. We will soon form a Business Advisory Committee, culling members from our local business community. We believe such a committee could provide useful advice in vocational matters and facilitate a greater number of community job placements.

Our plan is to increase the number of off-site community job placements so students would be trained in less restricted environments. Placing several students together for training as an enclave in a work station in industry is also a goal. With more students off-site, additional novice students could be groomed at Stepping Stones for six months to a year, then moved off-site as additional worksites are developed.
We would also like to improve the visibility of both our food preparation and janitorial services through better marketing and community exposure. We will be using the Business Advisory Committee to test marketing strategies. We will work closer with the adult training programs Boatworks and CleanSweep to improve our vocational training techniques. We will use the task analysis they have developed to determine the strengths and weaknesses of our youth.

In the classroom, we will be expanding our employment preparation activities, devoting more time to job search and interview skills. We also hope to make sexuality training an integral part of our program, rather than the secondary component it is now. As there are just so many hours in a day, especially in a part-time program like ours, we will need to set priorities to meet these goals.

We need parents to support our transition efforts throughout the years of public schooling, especially as their children near high school age. Stepping Stones intends to foster greater family assistance by improving our parent outreach program.

In conclusion, we intend to remain flexible to our students' needs while continuing our efforts to transition youth into supported or competitive employment. We are resolved to maximize the resources we have and to continue to develop linkages with Schools, Rehabilitation, and the Business Community. We see no limits in the future for youth with developmental disabilities. We believe the only barrier between our students and employment are man-made, and any man-made obstacle can be scaled with the right training.

* * * * * * * * * * * * *

Stepping Stones is eager for comments about this Learning to Work Transition Project. Please let us know if this Manual is useful to you. Tell us how we can improve our products. We would be pleased to answer questions about any specific operation of our agency. Let us hear from you.

INTAKE ASSESSMENT AND EVALUATION
Parents and Students
Stepping Stones Growth Center

STUDENTS: Ages 3 to 10 years old

Parental Needs
1. Parent fits RCEB P.O.S. priorities for current funding of services or can provide tuition according to the sliding scale fee.
2. The parent has returned a completed application packet by the enrollment date.
   a. All forms returned 30 days after enrollment.
4. Parent fees are paid by the 5th of each month. Two-week notification is given Stepping Stones prior to a vacation.
5. The Center is called if the student is absent any day.

Student Needs
1. The child can participate 80% of the time in all Center activities and trips.
2. The behavior of the child allows him or her to blend 80% of the time with the children in the Center.
3. The child will have mastered self-toileting skills, unless disability creates some problems.
4. The child has basic mastery of the language 50% of the time.
5. The child is medically cleared by a physician.
6. The child appears at the Center, clean, well-groomed, and appropriately dressed for the weather.
7. The child does not consistently act in a threatening manner around others.
8. The child reacts in a positive manner 70% of the time.
9. If the child is physically limited, a wheelchair or pogan buggy must be provided to the Center.
10. Fingerprints of the child are in his/her file.
11. Growth and improvement factor will be a significant part in enabling the child to become a member of the Center.

**On a rating scale of 1--low up to 5--high, with a possible 80 points, 58 points are considered a positive evaluation meaning your son/daughter would be accepted into Stepping Stones, provided your son/daughter and yourself want them to be here.

SIGNATURE OF STAFF

SIGNATURE OF STUDENT

SIGNATURE OF PARENT
GOAL: To train handicapped students in the social and vocational skills needed to operate a recycling business.

OBJECTIVES: Students will identify the recycling products:
   a. Newspapers
   b. Bottles - Green
      Brown
      Clear
   c. Aluminum Cans
   d. Clear plastic bottles

Students will understand and use the safety equipment and measures for the job.

Students will properly sort, bundle, and crush the recyclables.

Students will ready the recyclables for transporting to the recycling centers.

Students will learn money and time management.

Students will interact with the community and communicate their business.

METHODS: The students will learn by doing. Weekly, they will pick up recyclables around the West Oakland neighborhood. They will sort, bundle and crush and prepare for transport to the recycling center bi-monthly. They will go to communicate with the people who give us materials and with the people to whom we sell materials.

Money and time management will go on weekly.

Students will rotate duties so all learn each skill.

EQUIPMENT: Hand crusher for cans, safety goggles and gloves.

FIELD TRIPS: Recycling centers, hardware stores for supplies, and job search sites.
I. Identifying Equipment

A. Aluminum cans

B. Newspapers

C. Plastic bottles

D. Glass bottles
   1. Clear
   2. Green
   3. Brown

E. Trash bags

F. Boxes
   1. Big
   2. Little

G. Computer paper

H. Door hangers (flyers)

I. White ledger paper

J. Colored ledger paper

K. Magazines

Comments:

II. Work Skills

A. Follows directions (from demonstration)
   1. Pays attention to the demonstration
   2. Attempts to do the task
   3. Follows through with the task
   4. Completes task
B. Follows directions (verbal)
   1. Listens
   2. Takes action
   3. Completes task

C. Preparation for delivery
   1. Ties newspapers correctly
   2. Bags or boxes correctly
   3. Crushes cans
   4. Sorts colored bottles
   5. Works in a team

1. Identification and Usage of Equipment (cont'd)

23. Toilet paper holder

II. Janitorial Skills

A. Cleaning bathrooms

1) Chooses the right cleaning powder and solutions
2) Chooses correct tools
3) Cleans mirrors
4) Cleans toilets
5) Cleans sinks
6) Cleans tubs/showers
7) Moves furniture and objects before cleaning
8) Dumps trash
9) Replaces bag in trash
10) Mops or vacuums floor
11) Replaces furniture & objects
12) Replaces tools and equipment
13) Quality checks the room
14) Notifies supervisor when finished

B. Dusting a room

1) Chooses correct tools and equipment
2) Checks with supervisor whether or not to move objects on furniture or desks
3) Dust rag vs. feather duster
4) Correct usage of duster spray
5) Starts at the top and works downward
6) Replaces objects
7) Replaces tools and equipment
8) Quality checks room
9) Notifies supervisor when finished

C. Sweeping a room or dust mopping a room

1) Chooses correct tools and equipment
2) Assesses what furniture needs to be moved out
II. Janitorial Skills (cont'd)

C. Sweeping a room or dust mopping a room (cont'd)

3) Starts at the correct place in the room
4) Sweeps in corners
5) Sweeps under furniture
6) Quality checks room
7) Replaces furniture
8) Notifies supervisor when finished
9) Replaces tools and equipment

D. Mopping a room

1) Chooses correct equipment
2) Measures amount of cleanser correctly
3) Uses correct amount of water
4) Uses correct temperature of water
5) Moves furniture
6) Sweeps before mopping
7) Starts at the correct place in the room
8) Handles the mop correctly
9) Gets in corners and baseboards
10) Gets under furniture
11) Puts out cones or "Keep Out" signs while floor is wet
12) Does a quality check
13) Puts up equipment
14) Replaces furniture when dry
15) Notifies supervisor when done

E. Vacuuming a room

1) Chooses the right equipment
2) Puts it together correctly
3) Moves furniture
4) Vacuums in corners and under furniture
5) Quality checks the room
6) Checks vacuum cleaner bag and filter
7) Replaces vacuum cleaner bag
8) Replaces vacuum cleaner filter
II. Janitorial Skills (cont'd)

E. Vacuuming a room (cont'd).

9. Replaces furniture
10. Notifies supervisor when finished

II. Landscaping/Grounds Maintenance Skills

A. Mowing Lawns
1. Avoids rocks, etc. while mowing
2. Covers total area
3. Does not leave ridges
4. Handles equipment in safe manner
5. Pours gasoline without spillage
6. Properly disposes of clippings
7. Removes bag from mower
8. Replaces tops, lids and covers
9. Selects proper equipment
10. Shows understanding of and follows sequences for mowing
11. Stores gas cans safely & correctly
12. Trims edges of lawn

B. Weeding
1. Identifies weeds vs. plants
2. Properly disposes of weeds
3. Pulls weeds correctly - with roots
4. Selects proper equipment
5. Turns over soil with hand tools

C. Sweeping/bagging
1. Covers total area
2. Operates power blower
3. Properly disposes of leaves
4. Selects proper equipment
5. Shows system for bagging
6. Shows system for sweeping
7. Uses push broom correctly

This contract has been agreed upon by all of the above signed parties.
SPECIAL PEOPLE SPEAK....

Question: If you could work at any job, what would you do?

K-LEE: Janitorial - so much is involved in it - stripping and buffing floors. I think there is more stuff that should be learned though - more janitorial work. The two places I'd like to work is either a school or a shopping center by my house doing janitorial.

TONY: I don't understand why there is not enough jobs. You see, in Oakland they keep building skyscrapers. So there's gotta be office work and secretarial work, and computer work.

JOHN: Well see, I'm trying my best to move out in the community and I'm having trouble with that. Also, I'd like to make more money. I'd like to work at Alta Bates Hospital in Berkeley, like Tony.

PAUL: Years ago I read that when we got a new President, Reagan, that he has cut back on jobs on special people, that he's prejudiced on special people. We should have a good president who gives to the poor and not the rich.

RICK: How can you say he's prejudiced when he brings two Korean children over and gives them the royal treatment. As far as work I'd like to get back to my radio show at KGO. Three years ago, I had a spot on the show called "Handy Andy Country Western Singers Club." I gave show reviews.

CARL: I want a job giving people tickets at the grocery store - cashier.

BOB: I want a job in Fremont - at McDonald's - bus tables, give the food. Five days a week.

CHESTER: I want to work at a school as a janitor, be with kids.

(Cont. p. 6)

DIRECTOR'S REPORT

Hurray for Stepping Stones! As of December 1984 Boatworks and CleanSweep programs received a 3-year certification from the Commission on Accreditation of Rehabilitation Facilities. The entire staff all deserve a loud round of applause. A big special applause goes to Randice Roberts, Director of Fiscal Administration and Operations, Marge Watson, Director of Program Development & Evaluation, and Maria Distler, Executive Director/Adult Program Director, for taking major responsibilities for the management of compliance with CARF standards.

The promised "How to" manuals are now finished and being distributed nationally and internationally. The manuals are the final product for dissemination, resulting from our 15-month grant from the Department of Health and Human Services: "Transition Project," "Boatworks and CleanSweep," and "Employability Project." Credit mainly goes to Marge Watson and Monte Cohen for their hard work and authorship.

A beautiful video about Stepping Stones is now ready for distribution! This was also made possible through our grant from the Department of Health and Human Services. The video, "Ready, Willing and Able," was done by Sharyl Patton of Patton Productions, and she has received lots of praise for her efforts. The video will be entered in "Superfest '85." We have hosted previews for Stepping Stone's parents and Board members and plan to host a more formal showing for friends of Stepping Stones soon.

Marge Watson and I enjoyed our nationwide visits and presentations that took place in 1984 as a part of our dissemination efforts for our federal grant. We met many new people, shared lots of ideas and information, and had a good time
FUNDRAISING

In terms of percentages, Stepping Stone's 1984 actual revenue and expenses proved to be very close to the budgeted estimates for the year. In 1985 with the federal grant completed, more revenue is expected to come from the Department of Rehabilitation, business income, and fundraising. In addition Stepping Stones has a special grant from United Way and an establishment grant from the Department of Rehabilitation which will not only increase Stepping Stone's level of service, but will assist in meeting the agency's expenses.

Each year the adult programming at Stepping Stones has expanded; more services are available, and therefore the percentage of related revenue and expenses has increased. In 1983 the adult program expenses were 38% and the children and youth program expenses were 28%. In 1984 the adult program expenses increased to 47%, and the children and youth expenses decreased to 20%. We hope to basically maintain this level in 1985, with the adult program expenses estimated at 50% and the children and youth at 20%.

Fundraising and donations are always an important part of Stepping Stone's budget. We expect to raise at least 12% of our income in 1985 through a corporate campaign, a membership drive, a tennis tournament fundraiser, participation in the Clausen House raffle, foundation grants, and individual donations. As our annual budget is now close to a half-million dollars, raising 12% will be a challenge for Stepping Stone's staff and Board. We wish to again thank the following individuals who donated substantially in 1984:

East Bay Community Foundation
George Sandy Foundation
Skaggs Foundation
Cowell Foundation
Marlene DuFour
Clorox Corporation
Soroptimist International of Oakland
Pacific Telephone
Bay Area Black United Fund
The Travelers Companies
Grand Auto

DO YOU KNOW?

A play based on Ron Jones' book, Say Ray will be presented on May 10, 11, 12, 17,18,19 at the John Muir Theatre in Berkeley (Claremont & Ashby). Ron Jones, a physical education teacher at the Recreation Center for the Handicapped in San Francisco, based his book on the true story of Ray Fernandez, a mentally retarded man who was left alone in Mexico and found himself on his own for the first time in his life. The story is told from Ray's point of view and shows the change in his awareness and ability to "make it in the world" as he grows from a dependent Board and Care resident to an independent adult. Ray now lives in the Bay Area again (Cont. p. 5)
FUNDRAISING

The Clausen House 6th Annual Grand Raffle is currently underway. Several Bay Area non-profit agencies have been designated to sell raffle tickets in addition to Clausen House. Stepping Stones is one of these agencies. For every ticket that is sold by a Stepping Stones staff or Board member, client or friend, Stepping Stones will receive $1.00 and Clausen House $1.00. A book of twelve tickets sells for $20. The drawing takes place on June 7th; all ticket stubs and money should be turned into Randi at Stepping Stones by June 4th. Please call Randi at 834-3990 to purchase your tickets, request a brochure, or request tickets to sell for Stepping Stones. Checks should be made out to Clausen House; however, in order for Stepping Stones to get credit for the sale, the ticket stubs and checks must be turned in to Randi at Stepping Stones.

The prizes this year, as always, are great! First prize is a cruise for two on the Royal Viking Line from Hong Kong to Japan! Second prize is a trip to London for two; third prize is a Hawaiian vacation for two. And there are seventeen more prizes - all vacations and exquisite dinners. In addition, Stepping Stones is again sponsoring its own "in-house" contest, open to staff, and Board members, clients, and their families. The Grand Prize for a person who sells the most tickets for Stepping Stones is a weekend at a cabin at Donner Lake; second prize is a sail on the Bay; third prize is a free car wash or one-time laundry service. All prizes are donated.

So...don't hesitate, pickup your tickets today!!

WITHIN STEPPING STONES

During the past few months, Stepping Stones has had several foreign guests visit the center. Some of these visitors came from Japan. Atsuko Kuwana of the Center for Independent Living, accompanied Mrs. Yoshiko Suga and her daughter, Miyuki. Gail Kaneko of Stepping Stones took the guests out to several job sites where they were able to observe the type of work done by Stepping Stones trainees.

Mrs. Suga commented that most programs for people with handicaps in Japan are run by local government rather than private organizations. Therefore, it was very interesting for her to see such places as Center for Independent Living and Stepping Stones where programs are run outside the direct jurisdiction of the government. Miyuki attends a workshop/activity center in Japan which keeps her busy, but there is not much time or energy placed in finding employment outside the workshop. Mrs. Suga observed that Stepping Stone's clients seemed to be self-confident and independent, perhaps as a result of working out in the community.

Mrs. Suga's major interest in programs in the United States was to see board and care facilities to help her establish one in Japan. Although Stepping Stones does not provide residential services, the tour and explanation provided her a chance to see an example of a day program that could work in conjunction with a residential facility toward developing people with independence. It seems that there are very few, if any, board and care facilities for developmentally disabled people in Japan, so the special attention required to help develop the potential of this population falls almost solely on the family. By setting up a board and care facility, she hopes to alleviate some of this additional work that falls upon the family.

Keiko Higuchi of Japan, presently an intern at the Center for Independent Living, also visited Stepping Stones recently. Monte Cohen, Stepping Stone's Case Manager, took Ms. Higuchi out to CleanSweep and Boatworks work sites. She especially liked Boatworks and was impressed by how much the clients liked their work.

We hope that our Japanese guests visit to Stepping Stones proved fruitful for them and that they were able to see and learn enough while in the United States to begin new programs and trends in Japan.

***

In February we had a visitor from London, England. Clare Hebbert is an
WHO'S WHO

Orlando Williams has been a student at Stepping Stones since 1979. We have seen him change from a very shy boy who hardly talked to a delightful 13-year old "tease" who considers himself "the best worker in town." Orlando is a very hard worker and a very responsible one. He likes to work outside in the garden planting and pulling weeds; he's a great kitchen assistant and loves to cook and wash dishes; he works hard at the janitorial, laundry and grounds maintenance skills he is now learning. Orlando is now responsible for taking orders from staff members or clients who want to buy something from the "store" that the students run on Fridays, selling hot dogs, popcorn, soda, and ice cream. He is learning to use a cash register and make change as part of this "store" project and says he would like to work at a store someday.

Orlando attends a special class which is mainstreamed in a regular school setting. Presently he is at Franklin and hopes to attend McChesney Jr. High School next year. We have learned that he is learning to use an IBM computer and spell with a special language computer program.

Orlando says that his hobbies are bowling and going to the movies. He also really likes the money he is earning as incentive rewards at Stepping Stones. He wants to save it all, and says he "doesn't want to spend it, just stack it up."

March Gregory Lewis, a director of Project Employment, a non-profit organization in Perth, Western Australia, interrupted his honeymoon for 1½ days to visit the adult programs at Stepping Stones. Greg operates work stations in industry and job placement services for mentally retarded persons. We found him to be refreshingly upbeat with a positive outlook on persons with disabilities. He took away copies of our 3 Federal Grant products - Learning To Work, Boatworks & CleanSweep, and the Employability Project; and shared with us information about his programs. The good news is that he plans a Boatworks in Perth within 2 years, and Marge secured a place to visit while watching the Americas Cup races 2 years hence.

Later in March, Marge gave a briefing and site visit tour to Eli Tsur, Coordinator for social welfare programs, of Israel, and Carol from the Region IX program staff. Mr. Tsur was impressed with Lois and her crew of Phil, Carol, Randy, and Rick. He was curious about the concept of treating the clients as employees, at marketing our services, and direct placement to the private sector. Most people with disabilities in his country are placed in workshops or remain at home with their families. He also marveled at the wealth of this country. A modest yacht here like a Santena 22, selling for around $5,000 would cost $25,000 there. There are only 2 marinas in the whole nation, Haifa and Elat so he didn't see a lot of future for Boatworks, but CleanSweep - yes!
WHAT'S NEW?

Three new Boatworks and CleanSweep staff have been hired recently. Andrew Farnsworth replaced Gail Kaneko as Production Manager. (Gail decided on a career change.) Andrew has a great deal of supervisory experience and a business background at Weyerhaeuser Company and C & H Sugar. Charles Cave replaced Richard Wallace as a CleanSweep supervisor. Charles has over 5 years experience working with adults that have developmental disabilities, in sheltered workshops. John Gomes replaced Raymond Salazar as the CleanSweep consumer aide. (Raymond, who has a physical disability, found that the job was too strenuous. He was placed in another job training program to learn vehicle repair skills.) John was a vocational rehabilitation client with past work experience.

Stepping Stones Board of Directors elected new officers at their annual meeting in January. President of the Board is Maryann Dresner, an attorney in San Francisco. Vice-President is Ursula Egli, a management consultant. Secretary/Treasurer, Sylvia Smith, is the Director of Children's Protective Services of Alameda County. Other Board members at this time are: Michael Cobb, law student and community activist; Ann O'Rourke, acquisition staff at Cetus Corporation; Denise Rule, assistant Vice-President at Bank of California, Oakland branch; Arthur Gulley, instructional counselor at Intercity Services; Kevin Anderson, of Xerox (presently on leave of absence); Ted Michaud, director of the School for the Deaf (presently on leave of absence); and Roscoe Dellums, honorary member.

Stepping Stones administrative teams have remained very stable. The Executive team consists of Maria Distler, Executive Director; Marge Watson, Director of Program Development and Evaluation; and Randice Roberts, Director of Fiscal Administration and Operations. On the management level, Maria Distler currently also acts as the Adult Program Manager. Janet Scovell is the Children and Youth Program Manager; Dennis Womack is the Job Placement/Contract Procurement Manager; Andrew Farnsworth is the Production Manager and Monte Cohen is the Case Manager. Grant Garcia, is the Work Adjustment Instructor.

Other Boatworks/CleanSweep staff include Billy McIntyre, Charles Cave, Lois Kathan, and Liv Berg-jo, vocational supervisors. The Children and Youth Program teachers are Monte Cohen, Fran Hebron, and Ellen Greenberg. Several of the positions are part-time.

Stepping Stone's secretary/receptionist is Lucile Bent. In addition, we often have highschool students who are being trained as secretary/receptionists and teachers' aides. Currently, Cheryl Collins is assisting at the front desks in the afternoons, and Roxanne Robinson, Regina Wadley, and James Buffin are teachers' aides.

THANKS TO....

Stepping Stones depends on donations, from foundations, corporations, and individuals. Every year a significant portion of our budget must be raised from these sources. In the past few months Stepping Stones has received the following donations:

The Travelers Companies $750.
Consolidated Capital $1000.
Janet Scovell $350.
Carol McKillop $25.
Toni Coplan $25.
Elizabeth Sklut $25.
Pat Dutter $25.
Richard Berger & Judy Derman $25.

We are very grateful to the above companies and individuals, and also to the people who donated over $200 last quarter through the United Way donor option plan and the combined federal campaign.

Remember! Anyone who donates "at the office" to United Way, can specify that they want the money to go to Stepping Stones.

(continued from Page 2, "Did You Know?") and has a wife, a child, a job, and an apartment! Advance tickets are $1.00 for consumers or $5.00 for nonhandicapped adults. They will be $6.00 at the door. Call Area Board V. for more information.
KELVIN: I want to be a custodian too, maybe at a junior high school. I like to buff floors.
SANDY: I would like to work at a Burger King and do floors, bathrooms. I could clean off tables, throw away garbage.
DIANE: I would like to work at a hospital, doing janitorial work.
RANDY: I'd like to go and get a job working fast foods - Burger King or something - as a bus boy.
STACEY: I want to work at McDonald's sometimes - wait tables, wash windows. And sometimes I want to work at Burger King - two jobs.
PETAR: I want to be a construction worker - make way for new houses and new buildings. I want to tear things down with a big 'ole crane and bull doze's.
KAREN: I want to work at Capwell's selling clothes and hats and shoes and belts and jackets.
RON: I like to work in a bar. I'd stay sober at night. Clean up the bar.
CRAIG: I already got a job - I earn $4.75 an hour at Mobile in Hayward - 5 nights a week. I've been there six years. Plus, I work here in the daytime.
GLEN: I want to mop floors. Sometimes I want to work in a big office with big floors. That's my dream.

The Videotape "Ready, Willing and Able" tells the story of Stepping Stones' innovative programming for children and adults with developmental disabilities. Most of the vocational training takes place in work crews out in the community. Featured is a neighborhood recycling business, and the internationally famous "Boatworks" program. Produced by Sheryl Paton under a grant from Health and Human Services, Administration on Developmental Disabilities. Superfest 1985 entry.
