"I'm No Lady Astronaut": Nonsexist Language for Tomorrow.

Research on the use of language has found that it also discriminates. Among the different manifestations of sexism in language are:
1. The use of "he" as a generic pronoun.
2. The "generic" use of "man" as an exclusively male referent.
3. The use of "you and your wife" as an assumed exclusive readership or listenership.
4. The use of "woman" or "lady" preceding a professional description.
5. Terms describing jobs or roles for either women or men that have no equivalent in the other gender.
6. Descriptions of women on the basis of their physical appearance rather than their individual accomplishments.
7. Word stereotypes such as "pert, blonde cheerleader," and so forth.
8. The use of animal names or attributes to label or describe both women and men.
9. The feminine personification of inanimate objects and elements.
10. The nonparallel use of labels for males and females.
11. Nonparallelism in the use of titles for women and men.
12. The preferential order given to male/female paired terms in which the male term is generally listed first.
13. Terms that were originally nonsexist and historically accurate that have evolved into accepted usage by both women and men, such as "mastery.
15. Terms such as "women's libber" that represent a belief, but have taken on a negative connotation.

Examples and alternatives of language use are given for each category, and a brief quiz--with answers--is attached.

ABSTRACT

Language is a powerful tool for education. It informs, influences, discloses, and communicates. Research on the use of language has found it also discriminates. This paper discusses fifteen different manifestations of sexism in language and suggests more equitable alternatives. The challenge to the educator is to be clear & creative.
"I'm no lady astronanut":
Nonsexist Language for Tomorrow

The way an author uses language reveals her biases. Did that sentence surprise you with the use of "her" as a generic pronoun? If so, it dramatizes the need for an ongoing evaluation of our use of language as teachers, as we examine its potential to inform, communicate, teach, influence and disclose. Language is a powerful tool for instructing as well as for modeling proper and appropriate usage and for influencing developing attitudes toward self and others. Students are sensitive to many aspects of both the intentional as well as the incidental teaching that goes on in the classroom. The teacher's example is a powerful one in every way.

A respectable amount of research has now accumulated on the use of nonsexist language. Yet, in reviewing the actual implementation of inclusive alternatives on a wide scale, it becomes apparent that there is still room for improvement. Although news anchor Dan Rather may now refer to "humankind" when reporting about the space exploration program, many city newspapers still present women in positions of authority with the caption "chairmen." This sexist bias is not only subtly unequal, it is generally inaccurate since many women are now filling roles traditionally held by men. To begin changing this behavior pattern, it is first necessary to be aware of the inequities and to be familiar with alternative usages before one can incorporate nonsexist language as a speaking and writing habit.
What follows is a brief introduction to a surprising variety of commonly used sexist terms and phrases with specific alternatives suggested.

Quiz

First, evaluate your sexist language quotient.

In Standard English usage, which of the following are usually examples of sexist language?

<table>
<thead>
<tr>
<th>YES</th>
<th>NO</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>1. The average student worries about his grades.</td>
</tr>
<tr>
<td></td>
<td>2. chairman</td>
</tr>
<tr>
<td></td>
<td>3. you and your wife</td>
</tr>
<tr>
<td></td>
<td>4. woman doctor</td>
</tr>
<tr>
<td></td>
<td>5. gal Friday</td>
</tr>
<tr>
<td></td>
<td>6. Gold Meir, &quot;a dumpy, doughty lady with drab</td>
</tr>
<tr>
<td></td>
<td>pert, blonde cheerleader</td>
</tr>
<tr>
<td></td>
<td>8. hen-pecked husband</td>
</tr>
<tr>
<td></td>
<td>9. Fill 'er up!</td>
</tr>
<tr>
<td></td>
<td>10. men and ladies</td>
</tr>
<tr>
<td></td>
<td>11. The President and Nancy</td>
</tr>
<tr>
<td></td>
<td>12. boys and girls</td>
</tr>
<tr>
<td></td>
<td>13. bachelor's degree</td>
</tr>
<tr>
<td></td>
<td>14. actress</td>
</tr>
<tr>
<td></td>
<td>15. women's libber</td>
</tr>
</tbody>
</table>
This test has been rigged! Each one of these examples is generally used in a sexist manner. An examination of how these terms and phrases are exclusive quickly reveals just how broad based sexist language is.

Examples and Alternatives

1. Probably the most commonly recognized example of sexist usage is "he" as a "generic" pronoun. Psychological studies, however, reveal that students of all ages definitely perceive "he" as referring to the male only. An additional argument is the fact "she" is used as a "generic" pronoun only when referents are stereotypically female (e.g. nurse, teacher, secretary); "The nurse forgot her uniform." What is surprising is the number of alternatives available to "The average students worries about his grades." Some may seem more feasible or natural than others, but at least there are a variety of options to choose from. These include:

   a. using both "his or her" (s/he)  
      The average student worries about his or her grades.
      The average student worries about her/his grades.

   b. pluralizing the subject 
      Average students worry about their grades.

   c. singular subject/plural pronoun  
      The average student worries about their grades.

   d. changing the subject to 1st or 2nd person  
      As an average student, you worry about your grades.
      As average students, we worry about our grades.
e. using the word "one"  
An average student worries about one's grades.

f. using the word "it" (when appropriate)  
Who is it? I believe it was Jim. It's a girl.

An average student worries about its grades. (?)

g. rewording to omit pronoun  
The average student worries about grades.

h. alternating "her" then "his"  
The average student worries about his grades. The average student is anxious, about her future.

i. using plural pronoun to refer to a singular subject  
The average student worries about their grades.

j. inventing a new generic pronoun (na, ton, co, E, hesh, tey, hir)  
The average student worries about na's grades.

2. For the same reasons, the "generic" use of "man" has been found to be perceived as an exclusively male referent. Eleanor Roosevelt and Jane Addams would never be referred to as great "men." There are at least three variations in the exclusive use of "man." These include:

a. "man" as human species  
early man, cave man  
mankind, forefathers  
ALTERNATIVES  
ancestors, humankind  
forebears

b. "man" as verb  
We asked the Girl Scouts to man the exhibit.  
to run, to staff  
to work, to cover

c. "man" as affix  
manmade  
man-hour  
manhole cover  
spokesman  
chairman  
crewman  
handmade, synthetic  
work hour  
utility hole cover  
representative  
chair, chairperson  
crewmember
3. The phrase "you & your wife" is an example of an assumption of an exclusive readership or listenership. Salutations such as "convention-goers and their wives" or "you & your husband" no longer reflect the reality of both husbands and wives being actively involved in the work world as well as the home front. Alternative usages include the inclusive term "spouse" or reference to the appropriate role being addressed, for example, "you, as parents" or "you, as employees."

4. The use of "woman" or "lady" preceding a professional description is considered to be gratuitous and redundant. This is a good example of how our language no longer reflects the current social and economic reality. You would never see such a reference for a man as "male lawyer" or "gentleman banker." Rather than using expressions such as "woman doctor" or "lady attorney," the recommended alternative is simply "doctor" or "attorney" with additional use of the feminine pronoun (she, her), if necessary for clarity.

5. There are many terms describing jobs or roles for either women or men which have no equivalent in the other gender. Feminine examples include: "gal Friday," "chorus girl," and "maid;" for males: "bellboy," "paperboy," and "rifleman." For both genders, such terms are usually demeaning; for women these labels also relegate them to domestic or subservient tasks. The suggested alternative is to describe the task (clerk, dancer, housekeeper) for either gender rather than rely on the derogatory label.

6. One of the most insulting forms of sexist language is
that which describes women (even famous women like Golda Meir in
the example,"Golda Meir, 'a dumpy, doughty lady with drab
dresses.'") on the basis of their physical appearance rather than
their individual accomplishments. When this is transposed to a
male example, the absurdity and irrelevance is immediately
apparent: "John Doe's calm, quiet demeanor and stunning physique
belie the fact that he, too, hopes to finish a Ph.D. in nuclear
physics." The obvious alternative is to describe both women and
men by their achievements or behaviors (e.g. "Golda Meir, famous
world leader").

7. Examples of sexist language which go beyond the words
used, to the stereotypes assumed, include:

"pert, blonde cheerleader;"
"While she was gossiping, the soup boiled over;"
"May I have two strong boys to carry the chairs?"

If the phrase or sentence could not refer to either males or
females, then it may be relying on sex role stereotypes.
Gender-neutral alternatives include:

"trim, active cheerleader;"
"While, she was talking, the soup boiled over;"
"May I have two strong volunteers to carry the chairs?"

8. One of the more unusual instances of sexist language is
the use of animal names or attributes to label or describe both
women and men. Examples for women include: "shrew," "dog,"
"hen-pecked," and "wolf." None are flattering, all are demeaning
and derogatory terms. Unfortunately, most of the terms used to
refer to women also have negative sexual connotations. The alternative is to avoid using such terminology, for either sex, describing instead the behaviors involved, (e.g. "dominated husband").

9. The feminine personification of inanimate objects and elements is another example of sexist language. Cars, ships, hurricanes, Mother Nature, and even nuclear power plants have been referred to as "she" or "her." All have violent and destructive aspects which do not positively represent femaleness. In fact, when weathercasters began alternately naming hurricanes female/male, there were fewer comments such as "the hurricane flirted with the coastline." The logical alternative is to use the pronoun "it" or "its" when referring to all inanimate objects.

10. Sexism also exhibits itself in the nonparallel use of labels for males and females. Terms such as "ladies" or "girls" are often used to describe adult females. The term "men," however, is consistently preferred for adult males. When these labels are paired, the inequity becomes obvious. Examples include:

"men and ladies"
alternatives: "men and women," "gentlemen and ladies"
"Three university students - two girls and a man - were abducted from a research station."
alternatives: "two girls and a boy," "two women and a man"
11. Nonparallelism also manifests itself in the use of titles for women and men. Examples and alternatives include:

- The President & Nancy
- The President & Nancy Reagan
- The President & First Lady
- Governor Carey and Mr. Carey and Mrs. Grasso
- Mrs. Grasso
- Gov. Carey and Gov. Grasso
- Dear Sir
- Dear Sir/Madam
- Dear Reader (Colleague)
- Dear (Job title, company name)

12. Probably the subtlest form of sexist language is the preferential order given to male/female paired terms in which the male term is generally listed first. Other examples besides "male/female" include: "boys and girls," "husband-wife," "his or her," "men and women," and "Mr. & Mrs." A few examples exist of an initial female term: "ladies and gentlemen," "bride and groom," "mother and father," and "aunt and uncle." These pairs, however, are limited to polite, family-related terms. A reasonable alternative is to simply vary the order naturally.

13. Some sexist terms were originally nonsexist and historically accurate: "bachelor's degree," "master's degree," "workman's compensation," and "sportsmanship." Such words and phrases initially referred only to men. Some have evolved into accepted usage which include both women and men, such as "mastery" and "fellowship." Available alternatives, however, include: "baccalaureate degree," "graduate degree," "worker's compensation," and "fairplay."

14. Sexist suffixes offer substandard variations of words
which are not inherently male. Examples include: "authoress," "actress," "aviatrix," and "majorette." Terms such as "poetess," and "Negress" are thankfully archaic. Others such as "majorette" borrow the ending "ette" indicating smallness (e.g. "kitchenette"). Neutral alternatives include: "author," "actor," "aviator," and "major" or "twirler."

15. Finally, the term "women's libber" is a classic example of a phrase which represents a belief, but has taken on a negative connotation in itself. It belittles both women and men, as well as the concept of "women's liberation." The alternative is to adopt terms which are not necessarily emotionally loaded, such as "feminist" or "activist."

Conclusion

Awareness of the value of non sexist language is building. Many guidelines exist for its use and most major scholarly journals require it. A computer software style-checking program is even available (Grammatik, from Aspen Software) for suggesting substitutions for gender marked words. Educators have a special responsibility in this regard as they model language use for students, set standards for expectations of girls and boys, and influence their developing attitudes. The challenge of using non sexist language is to be clearer, more descriptive, and precise. Most people find this practice revitalizes their
thinking, too. The opportunity for creativity is unlimited; language is an evolving human tool which changes as our needs change. As language influences and reflects our reality, and words begin to affect attitudes, the possibilities for change are exciting.
