Illustrations of familiar birds of the northwest United States and suggestions for attracting them to urban settings are offered in this publication. Foods (plants) that are preferred by these birds are also identified. Explanations are given for each plant's ornamental value; time in bloom and in fruit; height; adaptations; and also the number of bird species that use it. Practical ideas are outlined for attracting birds to homes and gardens. These include suggestions related to water areas, screens and fences, open areas, windbreaks, food plots and feeders, bird boxes and baths. A model for creating a landscape design is offered and illustrated. A list of pamphlets on plants, soils, and conservation methods is also provided. (ML)
Invite birds to your home

CONSERVATION PLANTINGS FOR THE NORTHWEST

Invite birds to your home

By L. Dean Marriage, biologist, SCS

Many of us enjoy having birds and other wildlife around our homes. Their striking colors and pleasing songs appeal to our eyes and ears. Conservation plantings in your yard, whether it is large or small, can help attract more kinds of birds.

More than 100 different kinds of birds are common in the Northwest. A surprising variety and number can be seen in suburban yards and gardens, especially those that have the kinds of trees, shrubs, and flowers that attract birds. If bird feeders and baths are part of the landscaping, your home becomes even more inviting to birds.

This booklet is useful for Washington and Oregon and in California north of San Francisco. Plants described have bird appeal and are good soil and water conserving plants as well. Most of them are better suited for use west of the Cascade Mountains and the Sierra Nevada than in the drier areas east of the mountains.

Plants and birds illustrated are not to scale, but bird sizes are approximately proportional to each other. Birds were painted by Lee LeBlanc of Iron River, Mich.

COVER: Steller's jays on hemlock
Consider the birds' needs

Birds need places to feed, sing, court, nest, rest, and hide. They like a choice of places for these activities—from crowns of tall trees to low-growing flowers and grasses. They also like a choice of foods—seeds, fruits, berries, and flower nectar. You can help meet these needs with conservation plantings. Many songbirds combine plant foods with insects, caterpillars, earthworms, and spiders.

With more plants and a greater diversity of plant species and heights, you can attract more kinds of birds. Plants of varying heights are especially important. If you want to attract certain birds or groups of birds, find out their particular food and cover preferences so you can select appropriate trees, shrubs, vines, grasses, flowers, and other plants. The table on page 7 shows some of the plants preferred as sources of food by many of our Northwest birds.

Choose plants for wildlife value

Unfortunately, many common shade trees and landscape shrubs yield little food for birds. Consider the bird appeal of the plants now in or bordering your yard and make needed additional plantings. Yards that have only deciduous trees and shrubs can be improved by adding pines, junipers, cedars, yews, and other evergreens that provide winter shelter for birds. Fruit-bearing shrubs and trees are helpful additions you can plant.

Not all plants are in flower or in fruit at the same time. By selecting species with staggered flowering and fruiting periods, you can have a succession of floral displays and bird foods throughout much of the year. By intermingling different species, shapes, and sizes, you can create varied and attractive landscaping patterns.
Create a landscape design

Your landscaping should consider the many uses of your property. Plantings for wildlife should be along the margins of the house and lot. This allows open space for human activities, yet provides an attractive setting for birds.

This landscape design, by John Frey, Lexington, Mass., shows one way to vary plantings on a city or suburban lot of about one-third acre. For a lot of this size, 20 to 25 different plant species are optimum. On smaller lots, only single plants of several species may be feasible. With a much larger lot, a greater variety of plants plus hedges, screens, food plots, and other massed plantings is possible. Avoid plants needing repeated applications of pesticides.

In general, trees and shrubs that attract birds grow satisfactorily on welldrained, fairly fertile, loamy soils. The ideal soil has a loose, loamy upper layer 18 inches or more deep. A neutral or slightly acid reaction is preferable. Trees and shrubs should be planted where their roots will not interfere with masonry structures.

Use flowers and other annuals to increase the kinds of bird food, to balance landscape spacing, and to fill in along walls and other structures. A small pool or pond will further enhance your yard's attractiveness for you and your birds. Cutting a small clearing into the margin or in the middle of a wooded area creates an edge effect that birds like.

Be sure your landscaping allows you to see the birds, perhaps from a window, patio, or terrace.
Ways of attracting birds

Water areas.—Birds need water for drinking and bathing. Maybe your yard permits the addition of a small pool with rocks in its shallow edges. Birds use the dry tops of rocks for preening sites after bathing. By landscaping the pool area with conifers, hedges, and clumps of shrubs, you also provide resting, nesting, and feeding sites. Conventional bird baths are also helpful.

Screens and fences.—Living fences of honeysuckle or fruit-bearing shrubs, such as cotoneaster, Russian-olive, or holly, can cover or even replace wire fences along property lines. Towhees, wrens, and sparrows find living fences ideal homes. Rows of conifers and large shrubs can screen off an unpleasant view while lowering noise levels. They attract birds yet offer privacy for other backyard activities.

Open areas.—Robins, meadowlarks, and some sparrows favor open stretches of lawns and fields with few, if any, trees or shrubs. In seldom-mowed open areas, try planting a variety of native grasses. Grasses protect the soil against erosion and provide food and cover for wildlife.

Windbreaks.—Junipers, spruces, or pines, with a crabapple tree tucked in on the sheltered side, give birds a warm, safe place to rest when the snow is deep and the wind is blowing. In the spring, windbreaks provide nesting sites. They also provide some weather protection for the house.
Food plots.—A food plot helps keep the birds with you during the winter months. Jays, finches, juncos, and sparrows are attracted by sunflowers, millets, cereal grains, and corn. Plots can be single plants, several short rows, or massed plantings, depending on your space.

Insects around plantings attract vireos, warblers, wrens, flycatchers, kinglets, swallows, and martins. Grasses and weeds ...tract many seedeating birds. Sugar-water feeders in conjunction with flowers of salvia, evergreen huckleberry, red-flowering currant, and the columbines and fuchsias attract hummingbirds. Other plants especially attractive to birds include madrone, cotoneaster, salal, high-bush cranberry, huckleberries, blueberries, currants, gooseberries, maples, oaks, and other "mast" trees.

Groups of birds usually have similar plant food habits, although individual bird preferences and extent of use may vary. Preference ratings for the plants were based on data from food-habit studies, but actual plant use by birds varies by season and situation.

- 〇 Choice
- 〇 Good
- 〇 Fair
- 〇 Used, amount not determined
Feeders, bird boxes, and baths.—In order to provide a year-round food supply plus a variety of nest sites, you may need to set up bird feeders and nest boxes. These are available from pet shops, department stores, and feed and seed stores. Or you can build your own.

Feeders and boxes should blend with the landscape. They need not be expensive or elaborate. The simpler and more natural they look, the better they are. They need to be protected from climbing animals: suspending them from a branch or setting them on a post with a metal shield are two protective measures.

After the birds become accustomed to visiting a feeder in winter, they often will use it during other seasons if it is frequently stocked.

Several types of feeders should increase the bird variety: woodpeckers and nuthatches like suet in wire cages; finches like open trays of seed; mockingbirds, thrushes, and orioles go for dried fruits impaled on nails. Scattering food on the ground will attract ground-feeding birds, such as towhees, sparrows and juncos.

Nesting boxes and shelves attract several kinds of birds, such as wrens and bluebirds. The types of boxes to choose depend on what species nest in your neighborhood.

Bird baths of a somber color atop a pedestal or placed on the ground are excellent means of providing songbirds the fresh water they need. Wide shallow pans of water will also do. Plan to have some shrubby cover near the bath, but avoid ground plantings as they increase
the predation danger from cats. Having water at several heights will increase the kinds of birds attracted to your yard.

The basic resources . . . soil and water

When planting for birds, you need to consider such things as soil, slope, drainage, shade and exposure, and climate, as well as your personal wishes.

When your house, sidewalk, and driveway were built, the normal pattern of water flow was changed and likely the runoff rate has increased. Using the plants described plus careful landscape planning can help control soil erosion and water runoff. Planting on the contour adds natural beauty in pleasing patterns and also helps conserve the soil and water resources.

Planis for birds, beauty, and protection

**HAWTHORN**  
*Crataegus spp.*

*Bird use:* 23 species  
*Ornamental values:* Many kinds; deciduous trees, 15–30 ft. tall; pale-green leaves; abundant white flowers in clusters; persistent orange to red fruit  
*Adaptations:* Moderately deep to deep, well-drained, porous soils; sun to partial shade; cold and drought tolerant  
*In bloom:* May-June  
*In fruit:* October-March  
*Sources:* Commercial nurseries

**SNOWBERRY**  
*Symphoricarpos spp.*

*Bird use:* 19 species  
*Ornamental values:* Several kinds; deciduous shrubs, 1–6 ft. high; small white or pink flowers in clusters; white or reddish fruit, sometimes waxy  
*Adaptations:* Wide range of moderately well drained to well drained soils but prefers deep loam; sun to partial shade; cold and drought tolerant  
*In bloom:* June-July  
*In fruit:* September through winter  
*Sources:* Commercial nurseries, stem and root cuttings

**SALVIA**  
*Salvia spp.*  
*Scarlet sage illus.*

*Bird use:* Hummingbirds  
*Ornamental values:* Annual and perennial plants, 1–5 ft. high; deep blue, purple, or bright-red, tubular flowers, often in dense spikes  
*Adaptations:* Wide range of well-drained soils; sun to partial shade  
*In bloom:* July-October  
*Sources:* Commercial seed stores
MOUNTAIN-ASH
Sorbus spp.

*Bird use:* 21 species
*Ornamental values:* Several kinds; trees, 20–40 ft. tall; compound leaves; white flowers in flat clusters; bright-red to orange fruit in clusters
*Adaptations:* Wide range of soil conditions but prefers moist, porous soils; sun to partial shade; cold tolerant
*In bloom:* May-June
*In fruit:* August-March
*Sources:* Commercial nurseries, seedlings

CASCARA
Rhamnus spp.

*Bird use:* of fruit, 19 species; of insects on plants, 40 more species
*Ornamental values:* Many kinds; large deciduous shrubs to small trees, 20–40 ft. tall; prominently veined, dark-green leaves, yellow in fall; shiny black fruit in clusters
*Adaptations:* Well-drained, fertile soils; needs much moisture; sun to dense shade; moderately cold tolerant
*In bloom:* May
*In fruit:* August-September
*Sources:* Wilding transplants

CRABAPPLE
Malus spp.

*Bird use:* 33 species
*Ornamental values:* Many kinds; deciduous trees, 10–30 ft. tall; showy white, pink, or red flowers; red, purple, orange, or yellow fruit
*Adaptations:* Wide range of well-drained soils; sun to partial shade; cold tolerant
*In bloom:* April-May
*In fruit:* August-November
*Sources:* Commercial nurseries, grafting, budding
SUNFLOWER
Helianthus spp.

*Bird use:* 53 species
*Ornamental values:* Several kinds; annual or perennial plants, 4–8 ft. high; large, showy yellow flowers; size of seed-filled disks varies with species; needs careful placement for good landscaping
*Adaptations:* Wide range of soil conditions; sun; moderately cold and drought tolerant
*In bloom:* June-August
*Ripe seed:* August-September
*Sources:* Commercial seed stores, harvested wild seed

WILD CHERRY
Prunus spp. Chokecherry illus.

*Bird use:* 44 species
*Ornamental values:* Many kinds; deciduous shrubs to small trees to 20 ft. tall; yellow leaves in fall; showy white flower clusters or drooping spikes; small dark-purple fruit
*Adaptations:* Wide range of moderately well drained to well drained soils but prefers moderately deep to deep loam; sun to partial shade; cold tolerant; moderately drought tolerant
*In bloom:* April-May
*In fruit:* September-October
*Sources:* Commercial nurseries, wilding transplants

DOGWOOD
Cornus spp. Pacific dogwood illus.

*Bird use:* 41 species
*Ornamental values:* Many kinds; perennials, 6–9 in. high, shrubs, 3–15 ft., trees, 15–60 ft.; deciduous leaves red to brown in fall; small to large flowers in showy white to yellow, flat clusters or bunched inside showy, creamy bracts; red, blue, or white fruits bunched or clustered
*Adaptations:* Wide range of moderately well drained soils; sun to partial shade; not drought tolerant; cold tolerant
*In bloom:* April-June
*In fruit:* August-March
*Sources:* Commercial nurseries, wilding transplants
ELDERBERRY
*Sambucus spp.*
Blue elderberry illus.

*Bird use:* 62 species  
*Ornamental values:* Several kinds; small deciduous shrubs to small trees, 1-50 ft. tall; fast-growing and spreading but prunable; white or creamy flowers in flat-topped clusters; blue or red fruits in showy clusters  
*Adaptations:* Wide range of well-drained soils; sun to partial shade; not drought tolerant  
*In bloom:* April-August  
*In fruit:* August-October  
*Sources:* Commercial nurseries, root cuttings

HOLLY
*Ilex spp.*

*Bird use:* 24 species  
*Ornamental values:* Many kinds; evergreen shrubs, 1-15 ft. high, to trees, 30-50 ft.; dark-green or variegated leaves; small whitish flowers; persistent bright-red, orange, yellow, or black fruit  
*Adaptations:* Well-drained, fertile loamy soils; sun to shade; not cold or drought tolerant  
*In bloom:* April-June  
*In fruit:* September-April  
*Sources:* Commercial nurseries, seedlings

RUSSIAN-OLIVE
*Elaeagnus angustifolia*

*Bird use:* 20 species  
*Ornamental values:* Deciduous shrub or small tree, 15-25 ft. tall; introduced species widely established in dry sites; gray-green foliage is silvery below; small fragrant flowers; persistent silvery-yellow to pink fruit  
*Adaptations:* Wide range of soil conditions; tolerates moderate alkalinity and a high water table; sun to partial shade; cold and drought tolerant  
*In bloom:* May-June  
*In fruit:* October-March  
*Sources:* Commercial nurseries, wilding transplants
**FIRETHORN**  
*Pyracantha* spp.

*Bird use:* 16 species  
*Ornamental values:* Several kinds; evergreen shrubs, 6-15 ft. high; glossy green foliage; fragrant white flowers; showy orange to red fruits  
*Adaptations:* Wide range of well-drained soils; sun to partial shade; cold tolerant  
*In bloom:* March-April  
*In fruit:* September-March  
*Sources:* Commercial nurseries, seedlings, budding

---

**DOMESTIC CHERRY**  
*Prunus* spp.  
*Montmorency cherry* illus.

*Bird use:* 37 species  
*Ornamental values:* Many kinds; deciduous shrubs, small to large trees to 75 ft. tall; yellow leaves in fall; showy white flower clusters or drooping spikes; small bright-red to black fruit  
*Adaptations:* Moderately deep to deep, well-drained, porous soils; sun to partial shade; not drought tolerant  
*In bloom:* April-June  
*In fruit:* Usually June-July but varies with species  
*Sources:* Commercial nurseries

You can get further information on plants, soils, and conservation methods at the office of your local soil and water conservation district. The Soil Conservation Service, U.S. Department of Agriculture, as part of its assistance to conservation districts, helps people apply many conservation practices that increase wildlife. County agents, commercial nurserymen, landscape architects, and bird societies can also help.

U.S. Department of Agriculture pamphlets that may be helpful are:
- Making Land Produce Useful Wildlife (FB-2035)
- More Wildlife Through Soil and Water Conservation (AIB-175)
- Ponds and Marshes for Wild Ducks on Farms and Ranches in the Northern Plains (FB-2234)
- Soil Conservation at Home (AIB-244)
- Windbreaks for Conservation (AIB-339)
- Conservation Practices—Signs of Good Hunting and Fishing (PA-1012)
