ABSTRACT

This guide offers a complete nutrition curriculum for grades five through eight. Charts are provided for each grade level stating the instructional objectives and learning activities. Suggestions are made for relating the activities with other subjects in the curriculum, such as health, science, mathematics, social studies, art, and language arts. A guide to additional resources includes listings of books, games, audiovisuals, and computer software. Information is given on where these materials may be obtained and how much they cost. (JD)
Nutrition Education: An Integrated Multidisciplinary Approach

Nutrition Education Curriculum for Georgia Middle Schools, Grades 5-8

Developed by
Frieda F. Brown, Project Director
Division of Home Economics
Georgia Southern College
Statesboro, Georgia 30458

Under Contractual Support Provided Through
Georgia Department of Education
Atlanta, Georgia 30334

Charles McDaniel
State Superintendent of Schools

Ruth Gordon
Nutrition Education Coordinator

With Funds Appropriated from
The United States Department of Agriculture
P.L. 95-166—An Amendment to the Child Nutrition Act of 1966

1984 Reprinted 1986

An Equal Opportunity Program—This program is available to all individuals regardless of race, color, national origin, age, sex or handicap. Persons who believe they have been denied equal opportunity for participation may write to the Secretary of Agriculture, Washington, DC, 20250.

© 1984 Georgia Department of Education, Atlanta, Georgia 30334
The Georgia Department of Education annually receives funding under Public Law 95-466, administered by the United States Department of Agriculture, to develop a state plan for nutrition education in the state of Georgia. The state plan includes many different types of activities for students, teachers, school nutrition personnel, school administrators, parents and the interested public. It focuses primarily on increasing student awareness of the principles of good nutrition and the relationship between proper nutrition and human health.

As part of the state plan, curriculum materials for grades K-12 will be developed to assist school systems in the implementation of a nutrition education program in local schools. Whereas nutrition is a concept most clearly associated with health, much of the material provided in this document will be applicable to health education; however, the primary philosophy regarding nutrition education in Georgia is that nutrition concepts can best be taught if integrated into a wide variety of subject areas and reinforced by activities in the school cafeteria. Therefore, throughout the guides there will be an attempt to make nutrition education a multi-disciplinary field of study.
ACKNOWLEDGMENTS

Support and understanding from Ruth Gordon, Nutrition Education Coordinator, and her staff in the Georgia Department of Education are greatly appreciated in the development of these curriculum materials. Acknowledgment is also given to Betty Lane, Head, Division of Home Economics, Georgia Southern College, for her continued encouragement and confidence throughout this project.

Recognition is also given for the valuable contributions made by consultants: Carol Budack, Early Childhood Education Regional Consultant, Georgia Department of Education; Robert Freeman, Chairman, Department of Elementary Education, School of Education, Georgia Southern College; Doris Pearce, Associate Professor of Child and Family Development, Division of Home Economics, Georgia Southern College; and Jeannine Fortner, School Food and Nutrition Supervisor, Screven County Schools, Sylvania, Georgia.

Gratitude is also expressed to the many teachers and school nutrition personnel who have participated in Summer Nutrition Education Training Program workshops and graduate classes who have offered many helpful suggestions and ideas in the preparation of these materials.

The Project Director wishes also to thank Nancy Into, project secretary, for her dedication to the completion of these materials.

INTRODUCTION

The development of nutrition education curriculum materials for Georgia public schools was guided by four primary goals. These goals have been the motivating force behind many other nutrition education activities conducted for Georgia public schools. Students in grades K-12 will:

1. Learn practical knowledge of foods and their nutritional value.
2. Develop a positive attitude toward the consumption of nutritional food.
3. Develop a suitable pattern of eating whereby the major nutritional problems of school-aged children may be diminished.
4. Develop consumer and decision-making skills regarding food selection that will promote good personal and family health.

To best accomplish these goals, these curriculum materials have integrated nutrition concepts into a variety of subject matter areas throughout the school curriculum. Three State Department of Education publications were instrumental in the identification of the state department's apparent philosophy of nutrition education in public instruction. The 1980 publication *Essential Skills for Georgia Schools* identifies "Nutrition and Health" as a primary topic of instruction in "Health Education." (See Section VIII.) Additional references to nutrition are given in the "Consumer Health" and "Health Careers" topics of the same section. *Building a Better You, A Guide for Health Education in Georgia Schools, Vol. I and Vol. II* was first published in 1972 and then reprinted in 1980. This document clearly states the value of the nutrition/feeding program in each school:

"should provide the right kinds of food in the appropriate amounts needed by the child during the school day; it should also provide the laboratory situation for nutrition education that teaches and motivates the child to know and practice good food habits."

A variety of nutrition concepts, learning activities and desirable outcomes for health education instruction were identified for students in grades K-3, 4-6, 7-9 and 10-12. The third publication, *A Resource Handbook for Teaching Nutrition in the Elementary School*, written in 1970 prior to the other publications, provided a list of "thoughtfully selected concepts appropriate for pupils at each level" (Grades 1-2, 3-4 and 5-6). It, too, encouraged the integration of these concepts into the health, science, social studies, math, art, and language arts programs. Another useful section in this publication made suggestions on the use of the school cafeteria as a laboratory and as a learning reinforcement for classroom activities.

The nutrition concepts identified by the White House Conference on Food, Nutrition and Health and the Interagency Committee on Nutrition Education clearly bring into focus the multi-faceted field of nutrition. These concepts should provide some of the basic philosophy behind all nutrition education curriculum planning.

NUTRITION CONCEPTS

I. Nutrition is the process by which food and other substances become you. The food we eat enables us to live, to grow, to keep healthy and well, and to get energy for work and play.

II. Food is made up of certain chemical substances that work together and interact with body chemicals to serve the needs of the body:
   (a) Each nutrient has specific uses in the body.
   (b) For the healthful individual the nutrients needed by the body are usually available through food.
   (c) Many kinds and combinations of food can lead to a well-balanced diet.
   (d) No natural food, by itself, has all the nutrients needed for full growth and health.

III. The way food is handled influences the amount of nutrients in the food, its safety, appearance, taste, and cost, handling means everything that happens to food while it is being grown, processed, stored and prepared for eating.

IV. All persons, throughout life, have need for about the same nutrients, but in varying amounts.
   (a) The amounts needed are influenced by age, sex, size, activity, specific conditions of growth, and state of health, and are altered somewhat by environmental stress.
   (b) Suggestions for kinds and needed amounts of nutrients are made by scientists who continuously revise the suggestions in the light of the findings of new research.
   (c) A daily food guide is helpful in translating the technical information into terms of everyday foods suitable for individuals and families.
V. Food use relates to the cultural, social, economic, and psychological aspects of living as well as to the physiological.
   (a) Food is culturally defined.
   (b) Food selection is an individual act but it is usually influenced by social and cultural sanctions.
   (c) Food can be chosen so as to fulfill physiological needs and at the same time satisfy social, cultural, and psychological wants.
   (d) Attitudes toward food are a culmination of many experiences, past and present.

VI. The nutrients, singly and in combinations of chemical substances simulating natural foods, are available in the market; these may vary widely in the usefulness, safety of use, and economy.

VII. Foods play an important role in the physical and psychological health of a society or a nation just as they do for the individual and the family.
   (a) The maintenance of good nutrition for the larger units of society involves many matters of public concern.
   (b) Nutrition knowledge and social consciousness enable citizens to participate in the adoption of public policy affecting the nutrition of people around the world.

More specific nutrition education objectives have been suggested and utilized in previous Nutrition Education and Training Program materials. These objectives have been given only as guides to school personnel in order to begin the process of curriculum planning. These suggested objectives have been utilized in three series of summer training workshops in 1980, 1982 and 1983 which were administered by Georgia Southern College. These objectives are grouped into five developmental levels of learning. For this curriculum project, selected objectives from Levels I, II, and III will be used in the K-4 guide, selected objectives in Level IV will be used in the guide for grades 5-8; Level V objectives will be utilized in the grade 9-12 guide.
Suggested Objectives for Nutrition Education
Georgia NET Summer Program

Grades K-4:

LEVEL I: Early Intuitive Pre-operational
The student will:
1. Name the foods he/she has eaten at each meal during the day.
2. Identify the sources of food in his/her diet.
3. Interpret sensory cues that influence his/her food choices.
4. Assess the relationship between food and growth.
5. Analyze factors which make eating an enjoyable experience.
6. Identify a variety of foods through the use of the senses.
7. Demonstrate an understanding of personal hygiene at mealtime.
8. Prepare and taste a variety of unfamiliar foods.

LEVEL II: Late Intuitive Pre-operational
The student will:
1. Name the major food groups.
2. Classify foods into the major food groups.
3. Identify foods that provide nutritious meals for each day.
4. Analyze factors which influence food choices.
5. Plan ways to help with family shopping and the preparation of meals.
6. Categorize foods made from the same product.
7. Cite examples of food processing and distribution systems.
8. Describe food storage facilities in the home and community.

LEVEL III: Early Concrete Operational
The student will:
1. Categorize foods into the major food groups.
2. Describe how nutrients affect physical (growth and appearance) and mental health.
3. Evaluate personal diet in relation to the major food groups.
4. Plan menus for various occasions at home and at school.
5. Identify foods that could be considered good between-meal snacks.
6. Evaluate the importance of snacks in relation to his/her total nutrient needs.
7. Describe types of food service facilities.
8. Analyze selected menus from a food service facility in relation to the major food groups.

Grades 5-8:

LEVEL IV: Late Concrete and Early Formal Operational
The student will:
1. Describe the functions of carbohydrates, fat, protein, vitamins, minerals and water.
2. Analyze the carbohydrate, fat, protein and water content of the most frequently consumed foods in his/her diet.
3. Identify the major nutrients contributed by each of the major food groups.
4. Describe the relationship between a balanced intake of nutrients and proper functioning of the body and good health.
5. Evaluate selected nutritious snacks according to the nutrients they contribute to the diet.
6. Acknowledge how habits and circumstances affect mealtime enjoyment and nutrient utilization.
7. Explain those factors which contribute to the loss of nutrients in foods.
8. Cite changes in nutrient needs during each stage of the life cycle.
9. Examine food habits and roles of foods of various cultures and regions in the U.S.
10. Compare for other people of the world the availability of nutrients from food.
11. Analyze factors which contribute to food waste.
12. Cite ways individuals and society can decrease the waste of food in the U.S.
Grades 9-12:

LEVEL V: Late Formal Operational
The objectives listed under the General category are the most critical and should be integrated into a variety of subject matter areas. Additional objectives are given for several subject matter areas.
The student will:

GENERAL
1. Describe the functions of each vitamin and each essential mineral.
2. Identify food sources of the major nutrients.
3. Identify and apply understandings of the Recommended Daily Dietary Allowances (RDAs).
4. Assess the nutritive value of food eaten away from home.
5. Compare the relationship between diet and susceptibility to disease.
6. Interpret the overall physiological need for energy.
7. Distinguish relationships between food intake, energy output, weight gain.
8. Examine the reasons for variety in food intake.
9. Assess the importance of a balanced diet, reduced calorie intake and fad diets in relation to weight loss.

HEALTH
1. Describe the functions of each vitamin and each essential mineral.
2. Identify food sources of the major nutrients.
3. Identify and apply understandings of the Recommended Daily Dietary Allowances.
4. Evaluate a variety of school lunch meal patterns relating these to the Basic Four and RDAs.
5. Assess the nutritive value of food eaten away from home.
6. Explain the process of digestion.
7. Compare the relationship between diet and susceptibility to disease.
8. Relate physical fitness to nutrition and eating habits.
9. Interpret the overall physiological need for energy.
10. Distinguish relationships between food intake, energy output, weight gain, weight loss.
11. Examine the reasons for variety in food intake.
12. Assess the importance of a balanced diet, reduced calorie intake and fad diets in relation to weight loss.
13. Identify reliable sources of nutrition information.
14. Develop a nutritionally balanced diet for persons in low, middle and high income groups.
15. Interpret the nutritive value of a food item utilizing nutritional labeling.
16. Relate the purchasing of, caring for and preparation of food to its aesthetic acceptability and nutritional quality.
17. Identify new developments in food sources.

SCIENCE
1. Describe the functions of each vitamin and each essential mineral.
2. Identify food sources of the major nutrients.
3. Evaluate a variety of school lunch meal patterns relating these to the Basic Four and RDAs.
4. Explain the process of digestion.
5. Compare the relationship between diet and susceptibility to disease.
6. Interpret the overall physiological need for energy.
7. Distinguish relationships between food intake, energy output, weight gain, weight loss.
8. Examine the reasons for variety in food intake.
9. Assess the importance of a balanced diet, reduced calorie intake and fad diets in relation to weight loss.
10. Identify reliable sources of nutrition information.
11. Interpret the nutritive value of a food item utilizing nutritional labeling.
12. Summarize the role of food additives in today's foods.
13. Identify new developments in food sources.

MATH
1. Evaluate a variety of school lunch meal patterns relating them to basic Four and RDAs.
2. Identify and apply understandings of the Recommended Daily Dietary Allowances.
3. Assess the nutritive value of food eaten away from home.
4. Develop a nutritionally balanced diet for persons in low, middle and high income groups.
5. Interpret the nutritive value of a good item utilizing nutritional labeling.

SOCIAL STUDIES
1. Develop a nutritionally balanced diet for persons in low, middle and high income groups.
2. Analyze influences of food choices and reasons for changes in food choices.
3. Compare changes in American lifestyle to changes in food consumption.
4. Determine how climate and regional differences relate to food consumption.

LANGUAGE ARTS
1. Describe the functions of each vitamin and each essential mineral.
2. Identify reliable sources of nutrition information.
3. Summarize the role of food additives in today’s foods.
4. Analyze influences on food choices and reasons for changes in food choices.
5. Compare changes in American lifestyles to changes in food consumption.
6. Analyze food advertisements.
## Instructional Objectives

1. The student will identify the major food groups, food items which belong to each group and the recommended number and size of servings appropriate for the age group.

## Learning Activities

<table>
<thead>
<tr>
<th>Learning Activities</th>
<th>Resources</th>
<th>Related Subject</th>
<th>Evaluation</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Show the film “What’s Good to Eat?” to introduce the concepts of nutrients and to review the four major food groups.</td>
<td><em>NET Resource Guide</em>, Grades 5-8, Audiovisuals</td>
<td>Health</td>
<td>Given a list of commonly consumed food items, the student will classify 90% of them correctly into the major food groups.</td>
</tr>
<tr>
<td>2. Show the filmstrip “Watch Your Mouth” to review the importance of a balanced diet.</td>
<td>American Dental Association</td>
<td></td>
<td></td>
</tr>
<tr>
<td>4. Use Dairy Council food models to practice classifying foods in the correct food group. Give each student 10-12 models, have them classify them into groups. Allow the students to check each other. This activity can also be designed for use with teams.</td>
<td><em>NET Resource Guide</em>, Grades 5-8, Visuals</td>
<td></td>
<td></td>
</tr>
<tr>
<td>5. Play “Beat the Clock—Food Group Mix-Up.” Assemble two flannel boards divided into the four major food groups. Using food models, place 4 or 5 pictures in each section. Divide the class into teams. Each team will have a turn at rearranging the models in their appropriate groups in a specified time such as 30 seconds. Scores are accumulated by the number of seconds not used to complete the activity. Points can be deducted for foods incorrectly classified. Repeat the game so each student has an opportunity to play. See page 19A in Youth Activities.</td>
<td><em>NET Resource Guide</em>, Grades 5-8, Activity Books/Kits; Leader's Guide <em>Handbook of Youth Activities, Georgia Cooperative Extension Service.</em></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
6. Select some appropriate song jingle or rhyme which emphasizes the importance of the major food groups.

7. Have students write original poems, riddles or rhymes about food groups.

8. Complete the "Count a Meal" wheel worksheet. See page 54 in Youth Activities.

9. Keep a 24-hour dietary record of all foods and drinks consumed. Evaluate the daily intake by classifying all foods into the five groups (USDA).

10. Using the Dairy Council food models or pictures of foods, have small groups of students plan a day’s food intake following the recommended number and size servings of foods from the major food groups appropriate for their age and sex. Evaluate the variety of each day’s intake using a food selection scorecard.

II. The student will identify the importance of breakfast in the mental and physical performance.

1. Have student role-play a car running out of gas. Follow with a pantomime of a person running out of energy due to no breakfast.

2. Utilize Lesson #5 "Breaking the Fast." Identify students’ feeling about breakfast with the value rating activity described in the teacher’s guide materials. View the video program and conduct the decision-making problem given in the teacher’s guide.

The student will list two beneficial reasons for eating a nutritious breakfast.
identify common reasons given for skipping breakfast and will offer possible solutions.

3. Show "Why Doesn't Cathy Eat Breakfast?" The 4-minute trigger film is open-ended.

4. Show the film "Eating on the Run" to help students identify possible ways in solving their poor breakfast eating habits.

5. Brainstorm the number of different reasons why people do not eat breakfast. Divide the class into groups to develop a list of possible solutions to each reason. Equip each group with newsprint and markers to list their suggestions. Share all ideas with the class.

6. Have students write three interesting breakfast menus that fit their own morning schedules and personal tastes.

7. Have students look for interesting recipes for breakfast foods. Share these with the class. Compile a cookbook. In cooperation with the school food service manager, prepare one or two of the most interesting recipes to taste.

III. The student will

- recognize the importance of snacks in contributing to meeting the nutritional needs during periods of growth and adolescence.

1. Show the trigger film "Why Not Snack?" Utilize teacher's guide materials to explore the pros and cons of snacking. Brainstorm for ideas why people snack.

2. Use Lesson #3 "A Little Bit of Everything." The teacher's guide to "Soup to Nuts" provides a wide variety of supplemental activities.

Free loan Georgia School Food Service Division, State Department of Education

Free loan Georgia School Health Food Service Division, State Dept. of Education

NET Resource Guide, Grades 5-8, Audiovisuals

"Soup to Nuts" NET Resource Guide, Grades 5-8, Audiovisuals

The student will list three personal tips to help insure their own breakfast eating habits.

The student will list the situations in which snacking is desirable.

The student will list 3 health problems to which poor snack selection may contribute.

The student will correctly identify the 6 classes of nutrients.

The student will select snacks which supply nutrients as well as energy to the daily intake.
3. Using the food models or food labels, have students identify the number of kilocalories provided by one serving of each of their favorite snack foods. Have the students compare the kilocaloric levels and arrange the foods along a vertical wall chart labeled “Snacks Provide Calories” from the foods with the lowest caloric value to the highest caloric value. Use some removable adhesive to arrange food models along the continuum. Write the caloric value on the continuum line.

4. From the continuum activity, have each student select the snacks they might eat in one day. Have them add the individual calories in a total snack caloric value. Remind them that one lb. of body fat represents 3500 extra calories.

5. Use the computer program “Snackmasters” to reinforce the caloric value of foods in relation to its nutritional contribution in the diet.

6. Have the teacher, school nurse, dental hygienist or dentist briefly explain the process of tooth decay emphasizing the role of sticky sugar-containing foods. Using the snack continuum prepared earlier based on caloric values, have students identify those which are orally hazardous. Draw a red line through these on the continuum.

Food Models: See NET Resource Guide, Grades 5-8, Visuals

The students will identify five nutritional low-caloric snacks.

The student will continue to make snack decisions until the ten selections equal less than 1000-1200 kcal thus earning the rank of Snackmaster of the Highest Order or Snackmaster First Class.

The student will identify five snacks which are orally safe (non-sticky).
IV. The student will identify the major part of the digestive system and briefly explain its significance to nutrition and good health.

1. Show filmstrip “All Systems Go!” in Your Body for Life which presents an overview of the various systems of the body.

2. Use Activity #3 “Follow the Food's Path” of “All Systems Go” package in the Your Body for Life. A worksheet is included which requires the parts of the system to be identified.

3. Use Activity #4 “Food from Top to Toe” of the “All Systems Go” Your Body for Life which discusses the roles of all body systems in the process of nourishing the body. Activity worksheet, puzzle and additional activities are given.

V. The student will list factors which influence their own food preference.

1. Use Food . . . Your Choice, Level 3, Unit One, Activities 1 and 2 to help students identify key factors which influence their eating habits.

2. Have the class summarize the individual lists of influential factors into one fairly comprehensive list. Have the students individually rank the items from most to least influential. Compare the class results. Try to gain class consensus on a ranking of the factors.

VI. The student will recognize the influence which other cultures have had on the eating habits in the U.S.

1. Use Food . . . Your Choice, Level 2, Unit Three: “Food Lifestyles” to identify the major factors which have contributed to the food patterns of the U.S.

The student will name the three most influential factors which contribute to his own food choices.

The student will role play the process of digestion. Have some student volunteer to play the various parts of the digestive system. As the "mouth" is given a picture of food, it describes its chief digestive function and then passes it along to the next part. This process continues until the food has been completely digested.

Worksheets in the Your Body for Life kit are very suitable for post-assessment.
The five student worksheets consist of written texts on five topics followed by questions or class activities to complement the readings. Topics include (1) The American Food Mosaic; (2) Enjoying Cultural Food; (3) More Food from Other Lands; (4) America's Farmland Mosaic and (5) Foods We Have Made Our Own.

2. Study the impact various cultures have on eating habits in the U.S. Food . . . Your Choice, Level 3, Unit II, Activity 2, discusses "Our Cultural Food Heritage."

3. Using food and/or home magazines, have students cut pictures of foods that represent a variety of cultural groups. Make collages of each cultural group.

4. Brainstorm with the students to identify persons or families in the community who may represent various cultural groups. Ask students to interview the family to discover interesting food habits or invite several representatives of other cultural groups to class to share their food habits with the students.

5. If available, arrange a class field trip to a restaurant which serves foods of another culture. Arrange with restaurant manager for students to taste some unfamiliar food item.

6. Have students write letters to restaurants in larger cities which specialize in foreign cuisines requesting sample menus. Make menus available for students to

Social Studies

The students will identify at least two cultural groups in their community which seem to exert the greatest influence upon the community.

Social Studies

The student will write a brief paragraph describing the most interesting observation they made while in the restaurant.

Language Arts

The student will be able to match the names of commonly served foreign dishes to the countries they represent.
VII. The student will identify the major world food commodities and the countries which are the leading producers.

1. Construct on a large bulletin board a world map. Have the students list the leading food commodities. Divide the students into groups to investigate the chief world producers of each commodity. Draw small pictures of each food commodity and place them in the area of the world which produces these foods. Report the findings to the class. Each group should write a short paper on the commodity and its food value in the diet.

2. Plan the unit of study during the month of October on World Food Day.

3. Read the chapter “What’s to Eat?: How Food Gets from the Farm to Your Table.” Identify the states which are the chief producers of the food items given. Post small pictures of each food commodity and place them in the area of the world which produces these foods. Report the findings to the class. Each group should write a short paper on the commodity and its food value in the diet.

4. Define the terms “hunger” and “malnutrition.”

5. Identify the parts of the world where malnutrition is a severe problem.

6. Identify the states within the United States which are the chief producers of major food items in our diets.

7. Make available to students a variety of cultural cookbooks. Allow students to select recipes of items they wish to prepare and taste. Coordinate this activity with the school food service manager.

8. Develop a worksheet to record personal taste preference response to each food. Rate each item as delicious, so-so, bad, yuk.

The student will examine. Have practice vocabulary lessons on correct pronunciation of menu items and what the items are. Role play the ordering of lunch or dinner from a variety of menus.

NET Resource Guide, Grades 5-8, Books

Social Studies
Language Arts
Mathematics

The student will identify five new foods from another less familiar cultural group.

What’s to Eat? 1979 USDA Yearbook of Agriculture, “Food Around the World”

Social Studies
Language

The student will name five leading food commodities essential for good health.

1979 Yearbook of Agriculture USDA pp. 22-51

Social Studies

The student will list at least two world producers of each of the 5 commodities.

Social Studies Yearbook of Agriculture “Hungry People” pp. 116-119

The student will be able to match the leading food commodities produced in the U.S. with the state(s) which is the major producer.
VIII. The student will identify the major food products produced in the State of Georgia and the major producing region in the State.

1. Have the class formulate a letter requesting vital agricultural production statistics from the Georgia Department of Agriculture.

   State of Georgia
   Department of Agriculture, Agriculture Bldg.
   Room 204
   Atlanta, GA
   Thomas T. Irvin,
   Commissioner
   404/656-3600

   Science
   Social Studies

   See addresses for state food commodity commission., NET Resource Guide.

2. Ask an agricultural specialist from the Georgia Cooperative Extension Service to visit the class to discuss the role of agriculture in the state’s economy.

3. Using an enlarged Georgia map, have students indicate the areas in the state which produce various food commodities for market.

4. If available and seasons permit, visit a state farmers’ market and discuss how the market operates.

</table>
IV. The student will learn to use label information for judging the nutritional value of foods.

1. Have students bring to class two snack food or cereal labels which provide nutrition information. Choose one label to study in detail. Ask the following questions:
   1. What is the brand name of the product?
   2. What food is it?
   3. How much is in the package?
   4. Who is responsible for the product? Is there an address?
   5. Is there a list of ingredients?
   6. Is nutritional information given?
   7. Are there dates on the package? What do they mean?
   8. Is there a Universal Product symbol?
   9. Are there recipes or preparation/serving suggestions?
   10. Is other information given? List.

2. Categorize information given on the label into 3 types:
   (a) Mandatory by law for all food products
   (b) Mandatory under certain conditions;
   (c) Useful but not required.
   Discuss in which category nutrition comes.

3. Show the slide/cassette program "Label It Nutrition." A student workbook and leader's guide are included in this program.

   NET Resource Guide, Grades 5-8, Audiovisuals
   Food . . . Your Choice, Level 3, Unit I, Activity 7, also provides information on the use of nutrition labeling.
4. Study a label which provides a nutrition information panel. Answer the following questions:
   (1) What is the serving size?
   (2) How many servings are contained in this package?
   (3) How many calories are provided by one serving of this food?
   (4) How many grams of protein?
   (5) What % of the USRDA are provided for
       (a) protein 
       (b) Vitamin A  
       (c) calcium  
       (d) iron  
   (6) How much of this product would you need to eat to provide 100% of your protein meals? 

V. The student will identify the role of advertising on consumer food choices.

1. Show Program Nine “Shopping Sense: Self-Defense” of the Soup to Nuts series. Discuss the variety of advertising techniques used to influence consumer decisions.

2. View three food commercials given on TV. Record the following information about each commercial. Share with the class:
   (1) Time (day & time)
   (2) Product name
   (3) Who is selling it?
   (4) To whom is the advertisement directed (audience)?
   (5) Who are the characters in the commercial?
   (6) Is there music? What kind?
   (7) Is there a repetitive slogan or jingle?
   (8) Are nutritional or health claims made? List them.
   (9) Would you like to try this product? Why?
NET Resource Guide, Grades 5-8, Activity Books/Kits
Newspapers
Magazines

VI. The student will describe the specific digestive processes which occur in the mouth, stomach, and intestines.

1. Show an appropriate film on the mechanical and chemical processes of digestion such as "Food for Cells," Food Becomes You. Worksheets included.

2. Use the Activity 5 worksheets "The Human Fuel System" of the Food . . . Your Choice," Level 3, Unit 1. Practice the correct pronunciation of the terms.

3. Conduct a saliva test for the presence of sugar and starch.

4. Conduct experiment for starch digestion in the mouth by chewing a dry cracker until the sweetness of sugar is detected. Point out both the mechanical and chemical processes of digestion.

5. Conduct an experiment on the chemical digestion of protein and of lipids.

The student will design a one-page, 8 1/2 x 11 magazine ad for the same snack product as the TV commercial Post on the bulletin board.

The student will name all parts of the digestive system and which major digestive function occurs in each.
### Instructional Objectives

I. The student will demonstrate an understanding of the importance of a balanced diet in the physical growth and emotional development of an individual.

### Learning Activities

1. Display the "Guide to Good Eating" poster. Review the nutrients provided in the greatest quantity in each food group. Complete the "Nutrients for Health" Chart (Activity 6) Food . . . Your Choice, Level 3, Unit II.

2. Show the film "How a Hamburger Turns into You." Discuss the need for protein during growth.

3. Graph or diagram the quantity (gm) of protein needed throughout life. Identify the periods of growth. How are these related to protein needs? Similar graphs could also be constructed for calcium, iron, vitamin C and the B-vitamins.

4. Show the film "Vitamins from Food."

5. Divide the class into groups to read and prepare dramas for each of the stories in the booklet "The Great Vitamin Mystery."

6. Select a vitamin or mineral to research the effects of a nutritional deficiency. Write a one page summary.

- **NET Resource Guide, Grades 5-8, Books**
- **NET Resource Guide, Grades 5-8, Audiovisuals**

### Related Subject

- Health
- Science
- Mathematics

### Evaluation

The student will name the major nutrients provided by each of the major food groups.

The student will list the Recommended Dietary Allowances for each of the key nutrients recommended for his/her age/sex.
II. The student will demonstrate an understanding of the concept of energy balance.

1. Use Lesson Four "The Balancing Act" calorie and energy needs of the Soup to Nuts series.

   - **NET Resource Guide, Grades 5-8, Audiovisuals**
   - **Health**
   - **Science**

   The student will identify the recommended calorie intake for his/her age and sex.

2. Identify personal eating habits which reflect your attitude about calories. Use the worksheet "Where Do You Stand?" in the Food for Energy portion of Food Becomes You.

   - **NET Resource Guide, Grades 5-8, Audiovisuals**
   - **Health**

   The student will list three factors which may cause you to overeat in certain situations.

3. Show the "Food for Energy" filmstrip, Food Becomes You or the film Food, Energy and You.

   - **NET Resource Guide, Grades 5-8, Audiovisuals**
   - **Science**
   - **Health**

4. Record a 24-hour list of all foods consumed. Using food composition tables or specially designed computer programs, calculate the total caloric value of a day's intake. Compare to the RDA.

   - **Food Composition Tables, NET Resource Guide, Grades 5-8, Books—Pennington's Bowes and Church's Food Values of Portions Commonly Used**
   - **Health**
   - **Mathematics**

   The student will trace the pathway by which foods can be changed into energy.

III. The student will demonstrate an understanding of the physical, social, emotional, and cultural factors which influence personal food choices.

   - **NET Resource Guide, Grades 5-8, Audiovisuals**
   - **Health**
   - **Social Studies**
   - **Art**

   The student will construct a poster using magazine pictures or artwork which makes a personal statement about the factors which influence your own eating habits.

2. Clarify your own personal food values. Activities provide in Food ... Your Choice, Level 3, Unit II, Activity 1, gives ample deductions for value identification. Activity One worksheet "What Do You Think?" should stimulate greater interest in the impact culture has upon food patterns.

   - **NET Resource Guide, Grades 5-8, Activity Books/Kits**
   - **Health**
   - **Social Studies**

   The student will construct a poster using magazine pictures or artwork which makes a personal statement about the factors which influence your own eating habits.
IV. The student will recognize the impact which other people and cultures have on food habit development.

1. List the names of significant people. Do these people influence your food habits? How?

2. a. Construct a family tree consisting of grandparents and parents. Identify countries from which ancestors may have emigrated. Choose one culture to study in depth, particularly the characteristic foods and food patterns.
   
   b. Write a term paper discussing this country, its people and their characteristic food habits.
   
   c. Plan a menu characteristic of the cultural group studied. Can you classify all the foods into the food groups recommended by the U.S.D.A.?
   
   d. Share the investigative report with the class. If possible, prepare one food item to taste.

V. The student will identify and explain factors which contribute to food handling safety and protection of nutrients.

1. Conduct experiments described in Part A, Activity 7, “Fathoming Food Handling,” Food . . . Your Choice, Level 3, Unit II to observe the effects various food handling methods have on food. Record observations on worksheets. Complete Activity Worksheet 7B, “Food Handling Detective Story.”

3. Show filmstrip “Why People Eat What They Do?” This filmstrip presents an overview of the factors which contribute to food habit development.

NET Resource Guide, Grades 5-8, Activity Books/Kits

NET Resource Guide, Grades 5-8, Activity Books/Kits

Social Studies

Science

The student will name three cultural groups which have influenced their personal eating habits.

The student will list five desirable food handling practices which help to protect the nutritive value of foods.
2. Conduct the “mock” grocery store visit where damaged food items are found. Identify problems which will occur if these damaged products are used. (Activity is described in more detail in Part B, Activity 7, Food… Your Choice.

3. Locate address of the regional Food and Drug Administration. Write a letter requesting materials regarding proper food handling.

4. Show a film or filmstrip on the proper care of handling of foods. Request list from FDA or use Tupperware’s Keeping Foods Fit series.

5. Invite a sanitation director from local county health department to discuss the responsibilities of the health department to maintaining food safety.
GRADE: 8

Instructional Objectives

I. The student will recognize the relationship of nutrition to the physical, social and emotional development of the teenager.

   Learning Activities

   1. List the physiological changes that occur during adolescence.
   2. Identify the nutrients most responsible for meeting the physiological demands.
   3. Investigate the RDA chart to identify the quantity of nutrients needed during the periods of adolescence. Compare nutritional needs of males and females.
   4. Conduct a 3-day dietary record. Compare the nutritional content of diet to the RDA.
   5. Develop a plan of action to work on any nutritional deficiencies or excesses identified.

   Resources

   “A Healthier You,” Part III Nutrition for Teenagers Only; NET Resource Guide; Grades 5-8, Audiovisuals

   Related Subject

   Health

   Evaluation

   The student will identify personal nutritional concerns and write a reasonable plan of action.

II. The student will identify the nutrition related health problems of teenagers.

   Learning Activities

   1. Identify common dietary problems of teenagers, such as: meal skipping, snacking, fast foods, weight control. Discuss lifestyle habits which are related to diet.
   2. Conduct a body profile study to develop an awareness of personal body build and to identify obvious health problems.

   Resources

   “You Have Special Needs” Part I, Nutrition for Teenagers Only
   Food: Where Nutrition, Politics and Culture Meet

   Related Subject

   Health

   Evaluation

   The student will list five common dietary problems of teenagers.

   The student will identify any personal dietary problems. Select one problem and establish a goal and a plan of action for its accomplishment.
3. Invite a physician, nurse or dietitian to discuss the unique nutritional and health needs of the adolescent. Discuss proper height/weight data and differing rates of growth.

III. The student will recognize the relationship between caloric intake and body weight.

1. Identify the major energy demands of the body. Calculate individual caloric needs for basal metabolism and physical activity.

IV. The student will recognize the significant impact which snacking has on the food habits of the teenager.

1. Display poster “Your Snacks: Chance or Choice?” Brainstorm for the many different kinds of snacks eaten. List the time and situations in which snacks are most likely to be eaten. Using the list of snacks given, classify them into the four categories given on the chart.
   a. Nutrient-plus foods from the four food groups.
   b. Look Your Best Foods.
   c. Low Sugar.
   d. Go-Go for Energy.

Local personnel
Net Resource Guide, Grades 5-8:
Audiovisuals: Filmstrip/cassette: “Energy Balance—Your Key to Weight Control” #2 series in Put Nutrition to Work; Watch Your Weight; or Shapedown.
Games; See Net Resource Guide

The student will list high nutrient density snacks.

Discuss any personal questions about diet and health problems with physician or dietitian.
These classifications are defined with the Teacher Materials. Can all the snacks listed be included in these classifications? If not, suggest other foods to substitute for the poor nutritive snacks.

2. Play the “Snackmaster” computer game to identify high nutritive, low caloric snacks.

3. Using the food models, identify the low-calorie foods present in each of the food groups. Construct a calorie continuum using the food models. What type of foods are high in calories and which are the lowest?

4. Identify the snack items sold in the vending machines. Read the label or find the nutritional content information in food composition book for each item. Evaluate the caloric value and nutritional content. Which items are “junk?”

5. Design a publicity campaign to inform other students of the poor nutritional value of vending machine items.

The student will identify suitable substitutions for the “junk” items sold in the school machines.

ACTIVITY BOOKS/KITS

BE SIZEWISE—DON'T LOSE YOUR BALANCE poster, six-page foldout. Balance and correct size-wise is the theme of both the poster and the foldout. Weight control is discussed.

BODYWORKS: A KIDS' GUIDE TO FOOD AND PHYSICAL FITNESS: Bershad, C and D. Bernick. An activity guide designed to coordinate the learning about food and its importance in maintaining physical fitness. Covers lifestyles, how the body works, physical fitness, sources of food, eating habits and nutrition.

ENERGIZE AT SUNRISE/ENERGY 365, Breakfast unit and game, nutrition education unit, teacher's guide, four overhead transparencies, duplicating masters, poster. These units are designed to introduce children to basic breakfast nutrition content.

FITNESS FOCUS, duplicating activity masters, overhead transparencies, poster and teacher guide. This unit stresses physical fitness through exercise, rest and good eating habits in order to obtain the very best possible you.

FOOD FUNTASTICKS, This material is designed to aid the 9-11 year old disadvantaged youth. Eleven units concerning nutrition related topics are included. A unit on special events and bulletin board ideas are also included.

FOODS AND YOUR HEALTH, Full color transparency-duplicating book including 12 transparencies and 4 duplicating pages showing the relationship between good eating habits and good health.

FOOD: WHERE NUTRITION, POLITICS AND CULTURE MEET, Activity book that gives ideas for students to explore food politics and culture. Includes activities on world hunger and cultural influences on our food habits.

FOOD . . . YOUR CHOICE, Level 3: teacher guide, 38 page spirit master booklet, poster, food models, comparison cards. This unit assists students in nutrition decision making by studying the nutrients in foods and the factors that influence our eating patterns and food choices.
ACTIVITY BOOKS/KITS

FOOD . . . YOUR CHOICE, Level 4, HEALTH program overview, activity cards, posters, 8 transparencies, Nutrition Source Book. This unit focuses on appearance, performance and physical fitness in relation to good eating habits.

The Dairy and Food Nutrition Council
5825 Glenridge Dr., NE
Bldg. 1, Suite 108
Atlanta, GA 30328
$35.00

FOOD . . . YOUR CHOICE, Level 4, HOME ECONOMICS, program overview, activity cards, mini-posters, 8 transparencies, comparison cards, Nutrition Source Book. This unit discusses nutrient and energy values of foods, and the variety of factors affecting our food choices. Also discussed is the relationship between food choices and good health.

The Dairy and Food Nutrition Council
5825 Glenridge Dr., NE
Bldg. 1, Suite 108
Atlanta, GA 30328
$35.00

FOOD . . . YOUR CHOICE, Level 4, SOCIAL STUDIES, program overview, activity cards, posters, transparencies, Nutrition Source Book. This unit presents students with a variety of sociological tools for exploring our political, social and economics consequences of food policies.

The Dairy and Food Nutrition Council
5825 Glenridge Dr., NE
Bldg. 1, Suite 108
Atlanta, GA 30328
$35.00

FOOD . . . YOUR CHOICE, Level 4, SCIENCE, program overview, activity cards, posters, transparencies, Nutrition Source Book. This activity-oriented unit uses scientific methodology to probe biology, chemistry and ecology of food.

The Dairy and Food Nutrition Council
5825 Glenridge Dr., NE
Bldg. 1, Suite 108
Atlanta, GA 30328
$35.00

THE GOOD FOOD BOOK, 40 reproducible worksheets, 2 color posters, answer key, resource guide and projects. This book introduces the four food groups and the nutrition content of different foods.

AMERICAN ETHNIC FOODS SERIES, 1977. Each kit includes two color filmstrips (about 70 frames), two cassettes, teacher guide and scripts (20 pages), seven to eight reproducible masters, wall chart. Six separate kits—on Chinese, German, Italian, Mexican, Native-American, and Soul Foods; cultural food practices, habits, and preparation of ethnic foods.

DAY MILK WAS TURNED OFF, motion picture, 16mm, teacher's guide. A balanced diet is stressed in this fantasy where all the milk in the United States disappears. Individual nutrients are represented by live characters to emphasize the importance of milk in health maintenance.

EATING ON THE RUN, 16mm motion picture. Promotes sensible snacking and alternatives to traditional breakfast.

FOOD AS A FORCE IN HISTORY: This filmstrip/cassette program covers such topics as: Food as a Political, Economic, Social Force; Historical Incidents Related to Food; American History in Light of the Search for Food; World Food Problems and The Current Food Controversy.

FOOD BECOMES YOU, filmstrip and cassette which stresses good nutrition and also introduces energy metabolism and nutrient utilization at the cellular level.

FOOD, ENERGY AND YOU, 1978. 8mm or 16mm color-sound film or videocassette (19 min.), film guide (2 pages). How energy from plant and animal sources of food is converted through the ADP-ATP system to energy for body cells; simplified models of food molecules.

FOOD, FADS AND FALLACIES, filmstrips with cassettes (4). These units provide information on food myths, past and present, and the effect they have on our daily lives. The food faddist is discussed and the differences in eating habits worldwide. A healthy diet is defined and why no one food can be defined as "health food."

AUDIOVISUALS

FOOD FOR LIFE. The Basic Four 4 filmstrips and cassettes. These units discuss the four food groups, and the importance of proper food selection and food handling.

GROWING UP HEALTHY, K-8 nutrition education program designed for use by school food and nutrition personnel. Includes discussion of U.S. Dietary Goals and nutritional needs throughout the life cycle.

HOW A HAMBURGER TURNS INTO YOU. This 16mm motion picture shows how food is changed and processed from its original form into protein and energy.

KEEPINC FOODS FIT. A kit of 11 filmstrips which discusses the proper care, storage and freezing of each major type of food. Teachers' guide included.

LABEL IT NUTRITION. A 62-slide/cassette program designed to introduce the nutrition labeling regulations of the Food and Drug Administration. Teachers' guide and student worksheets included.

NUTRITION AND EXERCISE. 1980. Kit includes two filmstrips, two cassettes or records, teacher guide with scripts. Basic nutrition information; exercise and athletics; energy expenditure and caloric requirements of three teenagers; adjusting caloric levels.

NUTRITION FOR TEENAGERS ONLY. A three-part filmstrip/cassette program which describes the major nutritional concerns of teenagers.

NUTRITION HOW-HOW SETS, Set 1, 2 filmstrips and cassettes; Set 2, 2 filmstrips and cassettes. These units provide facts concerning the relationship between food and bodily functions and the roles nutrients play in maintaining, building and repairing the body.

NUTRITION ON THE RUN: SNACKS AND FAST FOODS. The program draws on a survey of high school students' eating habits. Evaluates teenage foods in light of four major nutritional problems—sodium, fats, sugar and calories. Consists of three full-color filmstrips, three audio-cassettes, 30 copies of an 8-page student activity booklet and a teachers' guide.
**AUDIOVISUALS**

**PUT NUTRITION TO WORK.** A set of 5 filmstrips and cassettes with accompanying scripts. (1) Good Nutrition—True or False; (2) Energy Balance—Your Key to Weight Control; (3) Choosing Food for Good Nutrition; (4) Mealtime—Anytime; (5) Eating Out.

**READ THE LABEL, SET A BETTER TABLE,** Food and Drug Administration, 1974. Available from any regional FDA office. 16mm color-sound film (14 min.). Label information as a guide for making food choices; nutrient groups and their functions.

**THE REAL TALKING SINGING ACTION MOVIE ABOUT NUTRITION,** 1973. 16mm color-sound film (14 min.) Junior high students creating their own film; nutritional needs of adolescents and physical fitness; personal responsibility for food choices.

**SOUP TO NUTS,** ten 15-minute videocassettes, teacher's manual. This is a mass media project designed to help students overcome negative attitudes about nutrition. Professional teens enact a series of playlets and present discussions.

**SHOWDOWN AT SWEET ROCK GULCH,** filmstrip and cassettes. In this unit the "Bad Health Gang" is overcome by weapons that fight dental decay. Useful in support with a dental decay unit.

**TRASH TELLS A TALE: STARTLING DATA ABOUT FOOD WASTE,** 1977. Forty-eight slides, one cassette, and script, "Food Waste as an Individual Concern" study guide. Causes and environmental concerns of food waste; food patterns among consumers; survey methods on conducting a food waste study.

**VITAMINS FROM FOOD:** This 16mm film re-enacts the drama surrounding the discovery of vitamins; explains how the body uses vitamins and suggests the kinds of food sources that will supply all the vitamins we need.

**WATCH YOUR MOUTH,** filmstrip/cassette. This unit introduces Nutribird and specifics on the Four Food Groups.

WATCH YOUR WEIGHT!, 1979. Kit includes color filmstrip (77 frames), cassette, teacher guide and script (16 pages, eight activity sheets and wall chart). Physical and psychological causes of weight problems; underweight and overweight; personal weight control goals.

WHAT'S GOOD TO EAT? This 16mm videocassette film's purpose is (1) to show how the body uses nutrients from food; and (2) to present the Four Food Groups as a reliable pattern for making responsible food choices. Teacher's guide included.

WHAT'S IN A LABEL?, filmstrip, cassette, teacher's guide and study guide. This kit contains a three part series informing students on the history of labels, non-food labels and food labels.

WHOLLY COW, motion picture, 16mm, sound, color, teacher's guide. Animated sequence illustrating how food is processed in a cow's four stomachs, and how the nutrients absorbed from the digestive tract are turned into milk. Actual live scenes of cows in modern milking operation are shown.

WHY DOESN'T CATHY EAT BREAKFAST? WHY NOT SNACK? Each film is a 16-minute color trigger film used to introduce a topic and to stimulate junior high students to discuss how they would react in the situations depicted in the film. Produced and distributed by the National Dairy Council.

WHY PEOPLE EAT WHAT THEY DO? A filmstrip which presents an overview of the factors which contribute to the development of food habits.

YOUR BODY FOR LIFE, a nutrition action program for elementary school. This unit concentrates on the five senses and their relationship to food choice. Also discusses the nutrient groups and their functions in relation to growth and energy.
AMERICAN INDIAN FOOD AND LORE by Carolyn Niethammer. This book contains 150 authentic recipes and explains techniques for making traditional Indian dishes. It gives illustrations and descriptions of the various plants used in the making of the foods.

APPLE PRESS, newsletter, 8 issues per school year. A newsletter including a basic nutrition message with recipes and other nutrition ideas to be used in the school.

DUDLEY THE DRAGON, is a cartoon story of how Dudley, a “dental dropout” dragon learns proper tooth care and good snack habits.

FOOD FOR LITTLE PEOPLE, A booklet that helps prepare parents, teacher and lunchroom staff to serving nutritious snacks to children. Suggestions and recipes for snacks, and information on learning about foods are included.

FOOD FOR TODAY. Helen Kowtaluk and Alice Kapan. A basic food and nutrition reference book.

GOOD FOR ME! ALL ABOUT FOODS IN 32 BITES. Basic nutrition concepts on vitamins and minerals, balancing the diet, snacks and fast foods. Activity ideas are included.

GREAT VITAMIN MYSTERY, A booklet that tells the story of a historical tale of discovery of five important vitamins. The roles of all the vitamins and other nutrients are discussed.
HELP YOURSELF: CHOICES IN FOOD AND NUTRITION: by Nerome, Norge, W., Judith G. McCleery and Isabel D. Wolf. This book, with an educator’s guide, provides information regarding making the very best food choices for the young adult. It is full of news, pictures, recipes, hot topics and helpful tips. It attempts to answer questions about food topics from fitness, to natural foods, to party cooking and beyond.

KIDS ARE NATURAL COOKS. This book contains child tested recipes for both home and school use.

KID’S 50 STATE COOKBOOK. This cookbook contains several selected recipes from each state to reflect the variety of cooking customs and eating habits.

ME AND FAT GLENDA. A story about two girlfriends. One is overweight and the other is new in town. The story covers the adjustment of the two girls.

MILK, BUTTER AND CHEESE. Teacher/children guide that discusses how milk is produced by cows and other milk-giving animals. Also butter, cheese, ice cream and other dairy products are discussed.

MORE SCIENCE EXPERIMENTS YOU CAN EAT by Vicki Cobb. By applying some basic principles of science to some familiar foodstuffs, you can learn about the nature of these foods, about how they change—and about how we sense these changes.

THE NO-NONSENSE GUIDE TO FOOD & NUTRITION The Facts for Everyone . . . by the People Who Know by Marion McGill, M.S. and Orrea Pye, Ph.D. This comprehensive, easy-to-understand guide gives clear explanations of what nutrients are, why we need them, where we get them and what happens if we don’t get enough. Many other subjects covered, plus easy-to-use charts.
BOOKS

NUTRITION FOR ATHLETES, 1975. Booklet (56 pages). Nutritional conditioning; nutrition and athletic performance; food myths common among athletes; eating and athletic events; dietary supplements.

NUTRITION SOURCE BOOK, A reference guide for teachers teaching nutrition education emphasizing the dietary recommendations, and applying nutrients and the food group information to plan daily meals.

ONE FAT SUMMER, A children’s storybook about an overweight boy that discovers by exercising and cutting down on eating, he can lose a lot of weight. The story covers his reactions and those of his friends to his weight loss.

SCIENCE EXPERIMENTS YOU CAN EAT: This book by Vicki Cobb suggests ways to investigate through experiments in your kitchen the properties of solutions, suspensions, colloids and emulsions: the cooking action of microbes and enzymes; phenomena concerning carbohydrates, fats and proteins. What makes popcorn pop? Experiment and find out!

WHAT'S TO EAT? AND OTHER QUESTIONS KIDS ASK ABOUT FOOD, teacher’s manual that includes information on food production, transportation and marketing, examining foods around the world and speculates about food in the future. This was the 1979 Yearbook of Agriculture.

YOU: A YOUNG MAN’S GUIDE TO FOOD, EXERCISE & NUTRITION. A booklet of information to motivate teenage boys to assume greater personal responsibility for developing themselves physically by practicing good eating habits.

YOU: A YOUNG WOMAN’S GUIDE TO FOOD, EXERCISE AND NUTRITION. A booklet of information to help a teenage girl understand the relationship between good eating habits, good physical development and weight control.

YOUR FOOD-CHANCE OR CHOICE?, A booklet that is designed for teenagers in making good food choices in order to promote good health and vitality. Also contains a section on low-calorie snacks.
COMPUTER SOFTWARE

Hardware: Apple II +/Ile; 48K; DOS 3.3; Radio Shack TRS 80 Model III

COMPUTING YOUR WAY TO BETTER NUTRITION: Five absorbing programs use color graphics, tutorials and quiz formats to teach students about food—its content and nutritional value. Includes: “Cereals”, “Chemicals in Foods”, “Fast Food”, “Food Graph”, and “Vitamins”.

Hardware: 32K Apple II with Applesoft and DOS 3.3, Apple II Plus; Apple Ile.

DIETANAL: Analyzes 24-hour food intake in terms of five food groups and tallies five nutrients: calories, protein, iron, calcium, vitamin A and C. Compares intake to Daily Food Guide and RDA’s. If nutrient intake is adequate, program prints list of foods consumed which supplied nutrient. If below 2/3 RDA, program prints list of foods which will furnish more of that nutrient. Audience: Adult

Hardware: Radio Shack Model II Microcomputer; BASIC; Fortran

FAST FOOD MICRO GUIDE: Select typical meal from menu and computer will print out (to the screen or to the printer) a nutritional analysis of the meal showing calories, what percentage of calories come from fat, protein analysis, vitamin A, B, and C content and amounts of other nutrients. Teaching guide also included to aid in interpretation and study of results. Students learn nutritional decision-making and find out how their typical fast food order stacks up nutritionally. Audience: Junior High and above.

Hardware: Apple II

FEELING GREAT!: Four color programs designed to give students a better understanding of health maintenance by examining a variety of topics. Background information, worksheets and research projects help students apply lessons to their own lives. "Energy Needs" looks at the average adult in a nonindustrialized non-European culture. In "Heart Attack" students determine their risk of having a heart attack using six factors: age, diet, exercise, heredity, smoking and weight. Students learn the value of nonnutrients as they examine the digestive system of Fred the Robot in "Nutrients—Nonnutrients." "Toxicity" deals with poisons, their lethality and their relationships with food. A list of chemicals is given and used for a question-and-answer segment about toxicity. Audience: Grade 7-Adult.

Hardware: 32K Apple II with Applesoft and DOS 3.3; Apple II Plus; Apple Ile

GRAB A BYTE: Students work on their own to review nutrition concepts through three game-oriented programs which hold their interest. Can be used in health, home economics, life science or social studies classes, or in instructional centers. Audience: Grades 7-9.

Hardware: Apple II Plus (48K); Apple Ile (64K)

NAGING LIFESTYLES: SURVIVAL MATH SKILLS: Three new simulations strengthen basic math skills by involving students in the mathematics of daily life situations. "The Calorie Counter"—Students plan a day's meals appropriate to their individual calorie requirements. The computer then rates the students' menu plans. "Comparison Shopping"—Small groups of students cooperate to buy a week's supply of groceries within the tastes and budget of a family of four. "Budget for Success"—"What's it like after I graduate from high school?" Students make decisions about college, jobs, marriage, children, houses and cars, and then manage their living expenses. Audience: Grade 6-Adult.

Hardware 48K
NUTRI-BYTES: Three-program quiz game designed to teach nutritional information. Explains diets and disease, food additives and shopping/eating advice.

Hardware: Apple II micros 48K, all CP/M computers with 64K and IBM PC.

NUTRI-QUIZ: To test one’s understanding of basic nutrition concepts. Audience: Junior/Senior High Adult.

Hardware: Apple II; 3.2; 48K; Memory; Applesoft

NUTRITION: A tutorial program on basic nutrition facts that will provide your students with accurate information about: basic food groups, daily nutritional requirements, balanced and unbalanced diets and how to modify an unbalanced diet, important nutrition terms, the relationship between activity levels and caloric intake, nutrition labels, seasonal availability of foods. The student will practice modifying menus to improve nutritional intake. Employs branching at three reading and concept levels from below average ability junior high students to adults.

Hardware: TRS-80 III

NUTRITION: Five programs. “Cereals” uses color graphics to show the sugar content of 64 popular breakfast cereals. “Chemicals in Foods” provides a lesson and quiz on the chemical content of today’s foods. “Fast Food” analyzes the nutrient content of items served in fast food restaurants. “Food Graph” shows the nutrient value of common foods, using a bar graph to indicate the percent of recommended daily intake. “Vitamins” is a tutorial and quiz on food and water soluble vitamins.

Hardware: Apple II (32K) with Applesoft and DOS 3.3; Apple II Plus; Apple IIe

NUTRITION—A BALANCED DIET: Program analyzes various daily diets and compares them to recommended daily allowances. Nutritional data is provided so students may select right foods to make up any deficiencies.

Hardware: TRS-80 Model I or III

RECIPE FILE: Allows user to store any number of recipes in user selected files, recall recipe when needed and alter amounts of ingredients to feed any number desired. Audience: Adult.

Hardware: Apple II or II Plus (Requires 48K and Disk drive) BASIC

SNACKMASTER: A NIBBLER’S DILEMMA: Each player takes role of “Snackmaster” whose task it is to select between-meal treats for “Snackman”. Ten temptations are presented. Selections must lead to lowest possible calorie count, but snacks are presented in random order so luck enters the picture—much as in life. Ten selections totalling less than 1200 calories wins. Computer reveals calorie counts after selections and keeps track of names of students with five lowest scores. Encourages calorie consciousness and staying on balanced diet. Large selection allows for repeated plays. Audience: Junior high and above.

Hardware: TRS-80; Disk

SNACKS: To examine the nutrient profiles of several common snacks. Audience: Elementary to Adult.

Hardware: Apple II; 3.2; 48K; Applesoft

WATCH YOUR CALORIES!: Counting calories becomes a snap when the computer takes on the job! Two different programs analyze the caloric value of foods. Each program contains the caloric content of over 250 of the most common foods and ingredients for use in its analysis.

Hardware: 16K TRS-80 Model I, III, or 4

WHAT DID YOU EAT YESTERDAY?: Diet analysis printed on screen or printer showing excesses and deficiencies. Program's data bank stores hundred of foods and is based on 1980 RDA's and the newly revised food composition values released by USDA from 1980 through 1983. Program is useful as a diet check and teaching aid to help learn what is needed for a balanced diet. Audience: Junior high and above.

Hardware: TRS-80; Disk

WHAT I USUALLY EAT: With the aid of colorful graphics, students record daily food choices and receive feedback on the quality of their choices. Individual and class profiles are developed which can be used to measure changes in eating patterns. Audience: Grades 3-6.

CHANGING AMERICAN DIET, teacher's reference guide including information on food habits, nutrition and food consumption. The guide encourages everyone to improve their health by changing their diets.

CREATIVE FOOD EXPERIENCES FOR CHILDREN, Mary T. Goodwin and Gerry Pollen, a curriculum guide including activities for involving children in food-related experiences. The Basic Food Groups and other foods are studied and cooking experiences with different foods are included.

FOOD FOR THOUGHT, A curriculum guide that includes ideas and instructions for nutrition education.

LADY BUGS AND LETTUCE LEAVES, A curriculum that includes gardening and environmental education components. This guide provides information in the areas of health, nutrition and gardening.

NUTRITION EDUCATION FOR THE RETARDED CHILD, a curriculum guide that includes activities and nutrition content on the level of a retarded child.

NUTRITION IN A CHANGING WORLD, A curriculum guide that will inform young people of the value of foods, sources, and the importance of foods in relation to growth and good health.

NUTRITION SUPER STARS, A 3 ring teacher's manual that contains activities in lesson plans that integrates nutrition into other subject areas.
BASIC 4, game designed for 2 to 4 players and requires each player to answer questions correctly on the four food groups.

GOOD LOSER, Game that teaches weight control.

SOUP'S ON, Game similar to bingo whereby players attempt to balance a diet.

SUPER SANDWICH, Game whereby the player concocts a sandwich using food providing the daily RDA but within the allowable calories.

WHEELS, Game that teaches information on vitamins and minerals.

NUTRITION EDUCATION PAPER-PENCIL GAMES, Games used as ice breakers at school food service training workshops, nutrition education classes or any health education meeting.
FOOD MODELS, 146 full-color photographic, life size models, die cut. A variety of daily meals, snacks and standard sizes are included in this unit. Cultural foods are included. The food values and their contribution to the U.S. RDAs are printed on the back.

FOOD REPLICAS, 30 food replicas, display cards, carrying case. The tough, vinyl composition can be used in the application of sauces. American Foods of the South. Portion sizes are based on the ADA exchanges. These replicas can be used in teaching dieting and weight control.

COMPARISON CARDS, 6C cards, teacher's guide, spirit duplicating masters. This set of cards consists of a series of colorful bar graphs illustrating the nutrient content of popular foods. The graphs are based on the contribution of nutrients according to the U.S. RDA used in labeling.

WHAT DID YOU HAVE FOR BREAKFAST THIS MORNING?, poster, depicting youngsters from different ethnic groups. A teacher's guide tells about food habits from the countries of the children pictured.

YOUR SNACKS: CHANCE OR CHOICE? Poster, teacher guide, and a mini-poster with teacher guide. These posters show a variety of nutritionally sound snack choices.
RECOMMENDED BASIC NUTRITION RESOURCE BOOKS

RECOMMENDED NUTRITION JOURNALS AND PERIODICALS

Consumer Reports, Consumers Union of the United States, Inc., 256 Washington Street, Mount Vernon, NY 10550, monthly, $11.00 per year.

Dairy Council Digest, published six times per year by the National Dairy Council, 6300 N. River Rd., Rosemont, IL 60018-4233.

Family Health, Family Health Magazine, 149 5th Avenue, New York, NY 10010, monthly, $5.97 per year.

Journal of Nutrition Education, published quarterly by the Society for Nutrition Education, 2140 Shattuck Avenue, Suite 1110, Berkeley, CA 94704, $12.00 per year.

Nutrition Today, published bi-monthly by Nutrition Today Society, Director of Circulation, Box 1829, Annapolis, MD 21404, $3.00 per copy.

Nutrition News, published four times annually by the National Dairy Council, 6300 N. River Rd., Rosemont, IL 60018-4233, $2.50 per year. Provides research and nutrition education ideas.

School Foodservice Journal, published ten times per year by American School Food Service Association, 4101 East Iliff Avenue, Denver, CO 80222, $20.00 per year.
