Patterns that emerged from reviewing 12 syllabi for courses on public policy in higher education are discussed, and two sample syllabi are presented. The syllabi had wide-ranging differences in concept and content. While some of the courses dealt exclusively with higher education public policy, others merely touched on that topic (e.g., overview courses that include a public policy segment as one of many topics). Several syllabi conceptualized the politics of higher education as encompassing the processes of policy-making (or decision-making) that take place in both internal and external settings. Reading materials on higher education policy are identified and organized into three categories: public policy matters specific to higher education, the policy-making process in more generic terms, and some general references or guides that can be useful to the student. It is suggested that unpublished materials may serve as useful instructional/learning resources (e.g., legislative committee reports, public officials' speeches, and court decisions). Two syllabi are included: Higher Education and the Federal Government, used at the University of Chicago; and State Government-Higher Education Relationships, used at the University of Michigan. A list of members of the course syllabi network is included. (SW)

Higher Education Course Syllabi in Public Policy: A Synthesis

Jack H. Schuster

There are easier tasks than defining what constitutes a higher education seminar on "Public Policy." Indeed, the most striking characteristic of course syllabi relevant to the public policy aspects of higher education is their wide variation in concept and content. This divergence no doubt flows from quite different conceptions of just how important to students of higher education is some familiarity with the process and content of policymaking in the public sector. Accordingly, in some instances self-contained seminars are offered on the public policy aspects of higher education while, more often, the topic is subsumed within a wider-ranging course.

In an effort to create some order out of the melange of a dozen remarkably different syllabi, the following comments touch on (A) diversity and scope, (B) a pedagogical note, and (C) bibliographic sources.

(A) Scope. Courses with some public policy content are arrayed along a continuum beginning with those that deal exclusively with higher education public policy and ending with those that merely touch lightly on that topic. Found at one end of this continuum are such offerings as "Higher Education and the Federal Government" (John Wilson, University of Chicago) and "State Government-Higher Education Relationships" (Jerry Miller, University of Michigan); each is confined to either state- or federal-level policy. Some approaches span federal and state arenas (e.g., "Policy and Politics in Administration," Jerry Bailey, University of Kansas; "Public Policy Dimensions of Higher Education," Jack Schuster, Claremont Graduate School).

Several syllabi conceptualize the "politics" of higher education in a larger sense, thereby encompassing within one course the processes of
policymaking (or "decisionmaking") that take place in both "internal" and "external" settings. The internal (i.e., intra-campus) politics of decisionmaking unquestionably influences virtually every aspect of campus life, but one may question whether such matters of "governance" properly belong in the same domain as that of public policy. Whether one concludes that internal governance and external public policy are Siamese twins or third cousins, it is clear that some courses link the two together (e.g., Joseph Kauffman's "Colleges and Universities: Their Organization and Governance," University of Wisconsin-Madison). Still other offerings -- generally speaking, "overview" courses that include a public policy segment as one among numerous topics -- are clustered at the other end of the continuum (e.g., "Purposes and Policies of Higher Education," Robert Birnbaum, Teachers College).

A comment is in order about courses on the economics or financing of higher education. Those syllabi are reviewed elsewhere for purposes of this syllabus clearinghouse project. It is worth noting, nonetheless, that such courses ordinarily have less to do with economics, as such, than with public policy issues broadly conceived. I suspect that no higher education "economics" course requires any economics as a prerequisite. Rather, these courses typically address broad, value-laden policy questions, such as who should attend college and who should pay. Some specialized courses are more narrowly targeted -- such as a seminar on "Higher Education and the Labor Market" (William Zumenta, University of Washington) -- and, while not precisely a public policy seminar, raise complex, important public policy issues.

The categories of policy areas identified in the syllabi are varied and endless. To name some topics broached in these courses: tax policy, tuition
policy and student financial assistance, federal science policy, anti-discrimination/affirmative action policies, government regulation, "developing institutions," collective bargaining, labor market influences on public policy, international exchange programs, research policy (e.g., protection of human and animal subjects; classified and security-sensitive research), statewide coordination and planning, program review and approval, licensure, and standardized testing.

(B) Pedagogy. Most syllabi reveal unremarkable course requirements and instructional strategies. An exception: at least one seminar -- Jerry Miller's "State Government-Higher Education Relationships" -- builds in a substantial site-visit component. This consists of one-to-three-day visits to each of three state capitals (in 1985, Lansing, Columbus and Springfield) where students attend compactly scheduled meetings with key executive, legislative and interest group actors in the higher education policy process.

(C) Bibliographic sources. Two points are worth noting here. The first has to do with the evident absence of any consensus about the most important sources. This should not be surprising; after all, so diverse are the course offerings that it is not feasible to identify staples that appear frequently among the syllabi. Furthermore, those who contemplate organizing a public policy seminar are aware of the frustrations encountered in locating good, timely material. Nevertheless, a sampling of sources, drawn primarily from the syllabi on hand, are listed below.

Second, a good many source materials that are valuable for providing insights into the nuances of the policy process consist of so-called fugitive materials. To illustrate, if one wishes to utilize current developments (say, the authorization process for the Higher Education Act) for instructional purposes in order to dramatize for students the relevance and
importance of the policy process, one obviously cannot rely on published books and articles. Useful sources would include, for instance, legislative committee reports, interest group in-house analyses and newsletters, speeches by public officials, unpublished correspondence, court decisions, and executive department annual reports and memoranda. Even excellent libraries are unlikely to hold many of the most helpful contemporary materials.

The following sources are organized into three categories: those that concern themselves with public policy matters specific to higher education, those that describe the policy-making process in more generic terms, and some general references or guides that can be useful to the student. The inclusion or omission of a particular book or article should be understood simply as a reflection of this author's biases.

Higher Education Policy

Political Process: General

References

To summarize, the boundaries of higher education public policy are indeed fuzzy; accordingly, syllabi that address higher education public policy are notable for their wide-ranging differences in concept and content. Nevertheless, each course is based on the assumption, explicit or implicit, that the student of higher education can ill afford not to acquaint herself better with public policy's profound and growing impact on American higher education.

Note:

EDUCATION 401 - Higher Education and the Federal Government
Spring Quarter 1985
Wednesday 2:00 - 3:50 p.m.
John T. Wilson

I

EDUCATION 401 IS A GRADUATE SEMINAR. I will be responsible for furnishing reading and reference material in various forms, which will serve as a basis for discussion. You will be responsible for the reading, for a share of the discussion, and for a paper on a relevant topic of your choice. You will give an oral presentation of your paper in progress, prior to submitting it in written form. I will be glad to review a draft of the paper as you prepare it.

II

The readings are divided into three segments, the first of which is intended to introduce you to the nature of relationships between the federal government and higher education. Assuming that you can survive some degree of "overload" in the interest of getting a "feel" for these relationships, the readings start out with a survey of the immediate setting, summarizing the developments that have occurred since World War II between the federal government and higher education. Included are statements reflecting a range of attitudes regarding the role of the federal government in the affairs of higher education. Having been introduced to the current set of relationships (to which we will be returning throughout the course), the readings then turn to an examination of what might be thought of as a theoretical basis for a relationship between the federal government and higher education. In this examination we will discuss the concepts that define the "higher education policy arena," review some of the more significant historical events in the evolution of current relationships, and suggest a system of categories that form a matrix which can be helpful in analyzing the essential characteristics of policies, programs, legislation, regulations, and other modes of interactions between the federal government and higher education.

III

The second segment of the readings and references covers an introduction to the organization and functions of the federal government that relate specifically to higher education. Within the Executive Branch we will examine the various roles of the President and the ways in which he can bring his influence to bear upon matters affecting higher
education, both personally and through different parts of the Executive Office, especially the Science Advisor and the Office of Management and Budget. We will examine the functions and organization of the numerous executive branch agencies that have been and continue to be responsible for programs of interest to institutions of higher learning, with special emphasis on the significant role that the academic science programs played in the post-World War II period as precursors of support to higher education per se. We will review in some detail the rise and proposed demise of the Department of Education.

Regarding the Legislative Branch, we will examine the more significant aspects of the legislative process as these relate to both substantive legislation and appropriation actions. Of special interest is the ebb and flow that has taken place during the last decade in the balance of influence regarding education programs between the Executive to the Legislative Branch.

IV

The third segment of the readings pertains to the higher education enterprise itself. Our interest in this segment is to develop an understanding of the "higher education system" as it has evolved in the United States. Special attention will be given to the conflicting aims and motivations within the "system." The special problems of the "research" universities will be covered. Finally, we shall consider some of the options that are available for the future in the relationships between the federal government and higher education and examine some of the reasons that a more rational relationship did not develop, despite the opportunities during the immediate post-war years.

V

The readings are categorized as "essential" and "additional background readings." You will find them a mixture of very easy material and some that is less so. Some will be interesting and some will bore you. Organization manuals, for example, are dull and are not meant to be read, anymore than you would read the telephone directory. They are included so that you will be aware of their existence and know what you may find in them. Presidential messages of one sort and another should be of interest. For example, you will find among those that we have considered relevant to our topic a classic veto message by Mr. Truman and a classic memorandum to executive department heads from Mr. Johnson. Hopefully, the readings which we have categorized as "essential", will give you a reasonable insight into the ways in which policy and program developments are initiated and shaped (and sometimes frustrated) within the boundaries of our political and educational "systems".
SEGMENT I

Federal government policies and programs in support of higher education; the concept of the "higher education policy arena"; some historical reference points; the important "categories of action."

ESSENTIAL READINGS

The Immediate Setting

The first group of readings describes post-world War II relationships between the federal government and higher education in the United States. As you will discover, these relationships are complex and currently stressed. As we go along, we will try to sort out the various relationships in an attempt to see how we got from there to here.

"The Entangling Web" and various other reflections on the relationships between the Federal Government and higher education.

A Basis for a "Theory"

The second set of readings in the first segment is intended to furnish you with a basis for developing your thoughts as to what might constitute a reasonable and rational relationship between government and higher education, especially in our particular form of government and our "system" of higher education.

The Role of the Academic Science Programs

The third and last set of readings in the first segment of the seminar will introduce you to the very important role that the academic science support programs have played in shaping the post-World War II developments in government-higher education relations. Most educationists and most political scientists, for one reason and another, give less attention to this aspect of the relationship in their writings than it deserves. Although the academic science support programs involve a limited number of institutions, the extraordinary influence of these institutions on both the country and on higher education, makes these programs a critical part of current problems. The Kevles article is most important, both for itself and to illustrate how history has come full circle in forty years to repeat itself.

ADDITIONAL BACKGROUND READINGS

The list of additional background readings contains a number of accounts of significant post-World War II developments between the federal government and higher education. The "GI Bill" reference describes a landmark event for higher education, although this was not its intent. There are several accounts of the science programs, including special developments in biomedical and nuclear sciences. For general purposes of information in the area covered by the course, the Ashworth and Wolfle books are probably the most useful and both are very readable.

SEGMENT II

Federal Government Organization and Functions Relative to Higher Education Policies and Programs

General Structure
The Executive Branch
- The executive office
- The roles of the President
- The Office of Management and Budget and the role of the President's Budget
- Executive Branch agencies
The Legislative Branch
- Supporting offices
- The pertinent committees
The Judiciary and the Law and Higher Education

ESSENTIAL READINGS

The readings in the second segment of the course are much less substantive in character than those in the first. They deal largely with a description of the organization of the Executive, Legislative and Judiciary branches of our federal government and the procedures under which they function. In addition to the listed references, we will hand out in class several organization charts to serve as guides regarding relationships between various sub-units of the major agencies. While charts and manuals are, at best, rough approximations as to how things really are, they are helpful first steps on the road to discovering one's way within the maze of government organizations, procedures, etc.

Handy References

The President and the Executive Branch

For various reasons ranging from his personal interests, the times, or the press of problems that carry a higher priority for his time and attention, Presidents have differed significantly with reference to the initiation of policies and programs affecting higher education. We shall attempt in class presentations to illustrate this point by reviewing a sample of Presidential messages, including special messages dealing specifically with education and science. In the readings, the Finn book covers in detail how one President and his staff functioned in generating
education policies and legislation. The Sproull et al book is a first-hand account of the struggle to get a new executive agency off the ground. The debate regarding the Department of Education is covered in Miles. Lastly, the U.S. budget reference illustrates how the matrix of federal policies and programs is pulled together by the President and the Executive Office in the form of the President's annual budget message and the budget itself.

The Congress

Subsequent to the Higher Education Act of 1972, events have led to a very greatly increased influence of the Congress in the affairs of higher education. Concomitantly, this has also been a period during which the Congress, for a variety of reasons, has taken steps to reorganize itself and to make arrangements, especially in the form of the Congressional Budget Office, through which it can, on a more equitable basis, deal with the Executive Branch. From the readings you will learn how the "agenda" for a particular session of Congress shapes up, how substantive hearings are conducted and the role they play in affecting policies and programs, and how the appropriation (budget) process works in Congress. The Budget Issue paper illustrates how staff support functions as Congressional Committees wrestle with legislation to support higher education.

A Report to the Senate and House Committees on the Budget

The Law and Higher Education

The readings touch very briefly on the Judicial branch and the growing impact of the law on higher education. The Kaplin reference is the best general book that is available on the subject and the indicated chapters deal specifically with areas of interest to us. We will have a special report on "affirmative action."

ADDITIONAL BACKGROUND READINGS

As in the case of the first segment of the course, the additional background readings cover a limited number of selections over a wide range of material. If you know little or nothing about the federal government (although I find this hard to imagine at your stage of study) the Rienow and the Woll books are very good. For the influence of the Congress in the development of the "land-grant" institutions (a very important American invention in higher education) the Rainsford book is excellent. Several pieces deal with equal opportunity/affirmative action policies. The Hook, Kurtz and Todorovich book will give you the full range of attitudes towards these and other regulatory issues.

Glazer, N. "Regulating Business and the Universities: one problem or two?" The Public Interest, No. 54, Summer 1979, pp. 43-65.

SEGMENT III

The Higher Education Enterprise: variation in purposes; confusion of voices;
The academic budget and sources for its support;
The current scene and the future.

ESSENTIAL READINGS

In the third and final segment of the course the readings cover various parameters of the higher education enterprise in the United States, with a view to examining the "impedence match" between federal government policies and higher education. The essential readings are intended to give you an insight into the way colleges and universities have evolved in the United States, particularly since World War II; the great variety of institutions that compromise the "system"; the nature of "governance" in institutions of higher learning; the resources that sustain colleges and universities; "influencers", especially those who presumably look after the interests of higher education in Washington; and, some special problems that confront the research universities. We have included readings that examine the issue of the university and "social change" as well as some that review problems that confront the colleges and universities in the coming decade.

General

Resources

University of Chicago CHRONICLE, November 1, 1969. "The University and Its Budget."

The Governance Issue

"Report of the Committee on Instruction and Research to the Board of Trustees in Relation to Proposed Administrative Changes." 28 December 1944.

Special Problems

The University as an agency for social change. 61st annual meeting of the American Council on Education. Washington, D.C., October 12, 1978.

Influencers

The Future

ADDITIONAL BACKGROUND READINGS: COMMENT

For individuals who are seriously interested in the history of higher education in the United States, there are many excellent sources. We have not listed additional readings but have indicated above a selection which will give you a range of views to which you may add your own. The Hofstader and Smith two-volume documentary history is perhaps the best single source and is available in paperback in the bookstore. If you were to buy one book on the history of higher education in this country, this is the book to have.

Mr. Pusey has written an interesting, albeit somewhat Harvard-biased, account of events that helped to shape higher education during the post-World War II years, including the years of the "difficulties." If you are interested particularly in the issue of liberal education in higher education, Mr. Wegener's book is highly recommended.

The Cowley book is an historical account of higher education from its beginnings, reflecting the somewhat maverick, though nonetheless scholarly, views of a distinguished teacher. The Ashworth book suggests that higher education has really gone to hell and, after reading the Carnegie Commission reports, one is rather inclined to agree with him. On the other hand, the fact that you are here at the University of Chicago working hard toward a graduate degree is sufficient proof that the world, including the world of higher education, has a future which can't be all bad.
Course Objectives:

Relationships with state government constitute an important consideration for institutional administrators in public institutions and, to a lesser degree, in private ones. Financial relationships are the most obvious and in many ways the most important, but they are not the only types of relations. Among the others of importance are those which concern decisions about programs and activities -- what will be done, how, and by whom. There are numerous other relationships as well. The seminar will attempt to deal with the total interactive network of institutional actors and state government actors which make up the total set of relationships. It also will deal with ways in which these change over time.

State higher education agencies have come to play a major role in many states. Attention will be given to types and roles of state agencies and ways in which they interact with other parts of state government such as the legislature and executive offices. Consideration also will be given to the differences among these agencies from state to state and to factors which are associated with these differences.

Relationships with the Federal government (direct institution-Federal relations and relations with the state as middleman) and relations with communities in which institutions are located also are important and will be given some attention in the seminar.

Examinations

There will not be mid-term or final examinations.

Class Reports

From time to time students will be asked individually or in groups to develop and present reports to the seminar on outside readings.

Grading

Grading will be Satisfactory or Unsatisfactory based upon participation in class sessions and term activities.
Reading

The literature on the topic is extensive. A text and other suggested readings are discussed later in this syllabus and a large number of additional readings will be suggested or discussed during the term. These have not been placed on reserve in order that they be more freely available for people to use flexibly. That system will work only if there is a sensitivity to the needs of the others in the seminar and a sharing of library copies from the University of Michigan libraries and from those of other institutions to which students have access. In some cases books will be on reserve for other courses and that information, when discovered, should be made known to the rest of the seminar group.

Format of the seminar

class sessions will consist of lecture, discussion, visiting guest speakers, and some class projects and reports.

Class trips will be made to three state capitals for the purpose of meeting with individuals involved in these relationships: state agency personnel, representatives of the executive and legislative branches of government, institutional representatives, representatives of public and private higher educational associations and other involved or informed individuals. The goal is to gain first hand information about the activities which occur, the ways in which they are carried on, and the ways in which they are perceived. Trips will be arranged so as to avoid prior conflicts with long standing commitments which students are aware of at the beginning or the term insofar as this is possible. It is important that all students take part in all travel; unusual circumstances which preclude it should be discussed with Professor Miller.

The three state capitols to be visited in Winter, 1985, are planned to be Lansing, Columbus, Ohio and Springfield, Illinois. The Lansing trip will be one day: all day on a Friday. The Columbus trip will be two days: a Thursday and Friday. The Springfield trip will be three days: Wednesday morning departure and Friday night return with the time in Springfield consisting of Wednesday night among ourselves, Thursday day and evening and Friday morning, noon and possibly early afternoon visiting officials, with return Friday afternoon and evening.

Costs of travel are born by students, with the usual arrangements being that car pools are arranged and gas is paid for by those other than the person providing the car. Budget motels are used to keep down expenses; people are scheduled in double rooms unless individuals prefer singles or triples. When the sex ratio leaves someone without a roommate a small Teddy Bear who has travelled with successive groups for a number of years stays with the odd person.

The "mix" of people in cars is intentionally changed on each trip insofar as possible so that everyone winds up exchanging ideas with everyone else. After the first trip it frequently happens that groups have gotten along so well that they want to
stay together; experience has shown that the mixing causes people to find that the travelling partners on later trips are as informative and as much fun as those on early ones.

Text

This text is used because it presents 3 alternative conceptual models of governmental behavior, each of which is shown to have advantages and disadvantages. The development of these conceptual models are described in the book. The specific set of governmental decision upon which they were tested happened to be the decision-making in the U.S. Federal government concerning the Cuban missile crisis. The conceptual models are constantly cited in the literature about public policy making, but there have been remarkably few replications of the application Allison made to an actual series of decisions. Such an application to a series of higher education decisions would add much to the literature of both higher education and public policy.

Note that the organization of the book separates the chapters describing the conceptual models from the applications of each of the models to the Cuban missile crisis. Either set of chapters could be read separately from the other, although one would miss a lot by making that choice.

Highly recommended additional reading:

The literature is extensive and students are urged to read widely. The specific works listed here should be read by everyone fairly early in the term for the reasons indicated.

Aaron Wildavsky, The Politics of the Budgetary Process. This is the classic work on the way in which governmental budgetary decisions are made by multiple actors (individuals, agencies and institutions) interacting with one another within a larger environment which conditions the behaviors and the outcomes. Like the Allison work, it does not deal with higher education and it does deal with the Federal government rather than state government. The parallels are so apparent, however, that it almost is the case that one could take a pencil and systematically substitute the names of state agencies and institutions within the text and have a close approximation of what occurs with the exception that the fifty states are each different in ways which sometimes is idiosyncratic and more often permits states to be grouped into categories (e.g., strong governor states vs strong legislature states; highly bureaucratized states vs those that are less so; highly "polititized" states vs those where government is run more "professionally," states which provide high levels of service to citizens with associated higher tax levels vs those that have traditions of less low cost public service and lower taxes, etc.).
John D. Millett, *The Politics of Higher Education*. It is possible that Dr. Millett will present a higher education Colloquium during the Winter term, 1985. He is a distinguished Political Scientist who describes in this book his experiences as President of Miami University (of Ohio) and then Chancellor of the Ohio Regents for Higher Education (the statewide higher education coordinating agency). In this short book he combines autobiography and a participant-observer report on these two highly political positions. He also is the author of the 1984 book *Conflict in Higher Education: State Government Coordination versus Institutional Independence* which obviously pertains to this seminar. *The Politics of Higher Education* is recommended specifically because of its frank autobiographical treatment of issues in governmental policy making for higher education.

The three classics: Moos and Rourke, Glenny, and Berdahl. The larger literature on state relations and state coordination constantly refers back to three classic works, each of which was in its own way a 'landmark volume that has become a classic. Although they now are dated, each has a freshness about it which makes a reader aware of why it has become a "classic" and what it will take for additional works to join their ranks.

Malcolm Moos and E. Francis Rourke. *The Campus and the State*. Baltimore: Johns Hopkins Press; 1959 (sic). This is the broadest of the three in its treatment of state government. In general it served as an expose of the difficulties which public colleges and universities were having with state government interference in their affairs. The anecdotal horror stories are worth the read; no one since has taken as broad or as critical a look at the operations of state government in relation to higher education (the closest might be the Carnegie Council's *The States and Higher Education: A Proud Past and a Vital Future*). Moos and Rourke based their report on field studies done in selected states, as also was true the work of Glenny and Berdahl.

Lyman A. Glenny, *Autonomy of Public Colleges: The Challenge of Coordination*, New York: McGraw-Hill, 1959 (sic). The original modern study of the organizational structure and functioning of various types of state higher education agencies (somewhat similar studies were done in the 1930's). Glenny made people aware of the need for state level planning and coordination of higher education and supplied the information about how it was done and might be done which fueled the public debates during the 1960's as a growing number of states enacted legislation establishing various forms of state higher education agencies. Glenny himself, a professor of Political Science at Sacramento State College, became Executive Director of the Illinois Board of Higher Education and was responsible for making it one of the most active and visible higher education agencies.
Glenny subsequently became a Professor of Higher Education at the University of California, Berkeley, where he has continued to write extensively about state government-higher education relations and to consult.

Robert D. Berdahl. *Statewide Coordination of Higher Education.* Washington: American Council on Education, 1971 (sic). Berdahl, a professor of Political Science at San Francisco State College, developed in his study the classification of statewide coordinating agencies which has been used (with minor modifications) since, categorizing them into (1) voluntary, (2) coordinating only (sub-divided between those with advisory powers only and those with regulatory powers), and (3) statewide governing boards. This framework has served as the framework for elaborately detailed reporting on the legal authority of statewide agencies (which change from time to time in various states); modifications of it have been used in most descriptive studies of statewide higher education agencies. In recent years the literature of higher education has been criticized for focusing so completely upon this organizational model that it was giving too little attention to "political" and "inter-organizational" perspectives (Berdahl himself always pointed out the importance of political reality). Berdahl subsequently became a Professor of Higher Education at SUNY Buffalo and more recently at the University of Maryland.

"The Cookbook." In 1971, Glenny and Berdahl together with Ernest G. Palola and James G. Paltridge authored a brief, descriptive and prescriptive "how-to-do-it" explanation of statewide coordination titled *Coordinating Higher Education for the '70's: Multi-campus and Statewide Guidelines for Practice* which was apologetically referred to as "the cookbook." It provides possibly the most straightforward, easy to read, description available of the "party line" which is accepted by most advocates of statewide higher education coordination. It was published by the Center for Research and Development in Higher Education, University of California, Berkeley.

Ira Sharkansky. *The Routines of Politics.* New York: Van Nostrand Reinhold Company, 1970. A simple but not simplistic presentation of the ways in which much of the work of governmental policy decision-making has been routinized in ways which facilitate getting decisions made but often bewilder the uninitiated. Reading this is an easy way to get initiated. For almost any reader, some of its contents falls in the category of "I knew that" and some in the category of "what do you know?"

Multi-campus institutions. A growing number of institutions followed the pattern established by the University of California (9 campuses) and the California State Universities and Colleges System (19 campuses) in establishing arrangements under which a group of campuses which might be
separate institutions in another state were campuses of a single system with a single central administration that exercised varying degrees of control over individual campuses depending upon the particular system. The two standard works on this type of arrangement are by E. C. Lee and F. M. Bower: *The Multicampus University: A Study in Academic Governance.* New York: McGraw-Hill, 1971; and *Managing Multicampus Systems: Effective Administration in an Unsteady State.* San Francisco: Jossey-Bass, 1975. These studies were sponsored by the Carnegie Commission and the Carnegie Council, respectively. There also are several edited volumes which describe the operation of particular multicampus systems as of the time the book was written — one on Wisconsin, one on California State Universities and College, etc.

Politics of higher education. An awareness of the importance of politics in public policy decision-making as it affects higher education has emerged in recent years. The best, easily available treatment of the topic is Edward R. Hines and Lief S. Harlmark, *Politics of Higher Education.* AAHE-ERIC series 1980, No. 7.
Clearinghouse for Course Syllabi in Higher Education

A group of Association for the Study of Higher Education (ASHE) members are forming a national higher education network for course syllabi. (See box.) The activity, sponsored by ASHE's Committee on Curriculum, Instruction and Learning, promises to be of great benefit to new and experienced teachers in higher education.

If you wish to participate, please send your latest course syllabi to the appropriate members of the network today. These individuals have committed their time and effort toward the following:

- syntheses reviewing course syllabi received with an evaluation of what is happening in each area (e.g., course titles, emphases, major works and resources in use, syllabi, modes, trends, observations), along with a few exemplary syllabi to be made available via the ERIC Clearinghouse on Higher Education by the end of 1985
- updates of the essay/abstract in four years.
