ABSTRACT

This bibliography is intended to help readers locate material on anorexia nervosa and bulimia in the collections of the Library of Congress. A scope note briefly defines the terms "anorexia nervosa" and "bulimia" and discusses similarities and differences between the two eating disorders. Four references are included as introductions to the topic and subject headings used by the Library of Congress, under which books on anorexia nervosa and bulimia can be located. The remainder of the guide lists bibliographic references under the headings of: (1) general texts (11 entries); (2) specialized titles (12 entries); (3) bibliographies (2 entries); (4) biography and self-help books (6 entries); and (5) state-of-the-art reviews and conference proceedings (5 entries). Eight abstracting and indexing services that index relevant journal articles and other literature are listed with suggested terms for searching provided under each service. Four journals that often contain articles relevant to anorexia nervosa and bulimia are listed and a list of seven representative journal articles is included. The guide concludes with a list of seven selected materials available in the Science Reading Room pamphlet boxes and names and addresses of six additional sources of information. (NB)

ANOREXIA NERVOSA/BULIMIA
Compiled by Hisako Halasz

TB 85-8

August 1985

SCOPE: Anorexia nervosa and bulimia are closely related eating disorders, found mostly among young, white females from middle to upper-middle class families. The common feature between anorexia nervosa and bulimia is extreme fear of becoming obese. Means for attaining this end, however, differ. In anorexia nervosa, subnormal body weight is achieved by drastic reduction of food intake, often accompanied by vigorous physical activity. In bulimia, body weight is maintained within a normal range by resorting to self-induced vomiting and/or use of laxatives, in spite of periodic eating binges. Bulimia that is the result of purely neuropathological or biomedical causes, is not addressed directly in this guide. In extreme cases of these disorders, physical and physiological abnormalities develop, such as amenorrhea and hypothermia among anorexia nervosa patients and electrolyte imbalance and dental enamel erosion among bulimics. A question has been raised whether anorexia nervosa and bulimia stem from a common psychopathological condition, which is influenced by sociocultural factors and family relationships. This question is unsettled, although observations of bulimic behavior among anorexia nervosa patients, and food restricting behavior and occasional history of anorexia nervosa among bulimics suggest a close relationship between them.

This guide is intended to help the interested reader locate material on anorexia nervosa and bulimia in the collections of the Library of Congress. Not meant to be a comprehensive bibliography, it is designed--as the name of the series implies--to put the reader "on target."

INTRODUCTIONS

Eating disorders. In Diagnostic and statistical manual of mental disorders. 3d ed. Washington, American Psychiatric Association, c1980. p. 67-73. RC455.2.C4A48 1980*
