The workshop is the most convenient and frequent means of inservice education. The purposes and types of social studies inservice workshops are examined, guidelines for effective planning and implementation are provided, and helpful hints and areas of caution designed to assist in conducting successful workshops are suggested. Six typical formats of social studies workshops are noted: (1) curriculum development, revision, and improvement; (2) awareness and/or dissemination of social studies materials and strategies; (3) evaluation of curriculum or instructional impact; (4) evaluation of student progress; (5) implementation of specific materials or strategies; and (6) local sharing programs. Those planning successful inservice programs must consider participant needs, workshop content, specific goals, available resources, recruitment and public relations, necessary logistical tasks, evaluation format, and follow-up activities. Hints and cautions to be considered deal with participant involvement, demonstrations and peer teaching, "ice breaker" activities, administrative support, the inclusion of content as well as process, and appropriate evaluation procedures. HOW TO PLAN AND IMPLEMENT SUCCESSFUL
SOCIAL STUDIES INSERVICE PROGRAMS

During the past decade, educational criticism and reform have affected most aspects of public education in the United States. Scholars, blue ribbon commissions, and social critics have scrutinized the educational system, pointed to perceived flaws, and prescribed remedies. Nearly every state has increased course requirements or mandated curriculum changes. The social studies curriculum is affected, directly and indirectly, by these efforts. Currently, a major focus of the reformers is teacher preparation. Nationally, and in many states, dramatic changes in teacher training and certification have been recommended and implemented.

These reform efforts will influence the schools gradually or, given the resistance of the educational system to change, perhaps not at all. The overwhelming majority of people who will be teaching five years from now are already in the classroom. If new ideas about teaching, improved instructional strategies, and more effective materials are to be added to the day-to-day activities of social studies teachers, the primary route must be through inservice education. The most convenient and frequent means of inservice education is the workshop—a relatively short meeting (a few hours to a few weeks) on a specific topic that provides theoretical and practical assistance to social studies teachers and/or supervisors.

This Digest (1) examines the purposes and types of social studies inservice workshops; (2) provides guidelines for effective planning and implementation; and (3) suggests helpful hints and areas of caution—all designed to assist department heads, supervisors, and teachers in conducting successful inservice workshops.

What are typical formats for social studies workshops?

There are at least six types of social studies workshop programs—each distinguished by specific goals and modes of operation. Sometimes, a workshop may combine two or more types. These six types are outlined below.

- **Curriculum Development, Revision, and Improvement.** This is a very common purpose for workshops. As social studies educators struggle with demands brought by an era of educational reform, the social studies curriculum in individual school buildings, school districts, and entire states is being examined and restructured. To be effective, this type of workshop requires extended periods of time. Workshop length may range from a two or three week concentrated period of time during the summer months to a three to five year project requiring periodic sessions in which educational philosophy and goals are discussed and specific content, scope and sequence, and instructional activities are developed.

- **Awareness and/or Dissemination of Social Studies Materials and Strategies.** Ranging in length from an hour to one day, this workshop format explains and demonstrates new or exemplary materials or teaching methods. The format differs from the curriculum development and improvement workshop, because the focus is on awareness rather than academic content or theories of teaching.

- **Evaluation of Curriculum or Instructional Impact.** This type of workshop focuses on effects of the current program on students and/or teachers. It might include findings of researchers and various kinds of evaluation strategies and instruments. It frequently is a difficult workshop to plan and implement, because participants may have preconceived notions about the materials or practices being studied.

- **Evaluation of Student Progress.** Similar to the evaluation of curriculum or instructional impact workshop, this type shifts the focus to measuring student achievement. To be effective, this workshop requires prior development of student goals and the means of attaining them. Both this type, and the curriculum instructional impact workshop, are useful antecedents to a curriculum development program.

- **Implementation of Specific Materials or Strategies.** A natural follow-up to the awareness workshop, this program should include a thorough review of the innovation's rationale and goals and presentations from scholars in the field. Relevant research and demonstrations, preferably by classroom teachers who have used the materials or instructional strategies, should be emphasized.

- **Local Sharing Programs.** This infrequently-used workshop can quicken the diffusion of new ideas, materials, or teaching strategies. Generally, one or a group of local or area teachers describe and demonstrate exemplary practices in their classrooms with a group of students and a teacher audience or with the audience role-playing a class. A variant of this workshop type occurs when teachers meet with business people, organization leaders, community leaders, the clergy, and other citizens to identify and utilize local needs and resources to improve schools.

**What Guidelines Should Be Used In Planning Successful Workshops?**

As in most endeavors, planning is the key to successful inservice programs. The following questions provide useful guidelines for planning.

1. **What are needs of participants?** Successful workshops meet the needs of participants. Survey teachers to determine their concerns. Interview department heads and solicit suggestions and perceived needs.

2. **What will be the content of the workshop?** After determining needs, select the content, format, and topic of the workshop to best meet participants' needs. New materials or teaching methods may represent an unexpected solution to an old need or even a solution to an unidentified problem. Effective workshop planners continually identify and analyze the needs of social studies teachers and continually seek information about new instructional ma-
Don't try to accomplish too much in one program. Trying to cover too much or combine two or more workshop types is a major cause of dissatisfaction.

Do use demonstrations and peer teaching when the workshop goal is to encourage teachers to use a new teaching style or new materials. Experience with the innovation, even if only for an hour, is directly related to the willingness of teachers to try the materials in their own classrooms.

Don't forget content from history and the social sciences in workshop planning. Social studies teachers are eager to attend subject matter updates in their teaching area. Workshops on new materials and teaching techniques should include presentations by content specialists.

Do use some kind of an "ice breaker" activity, even with participants who know each other. Individuals who feel comfortable with the group are much more likely to participate actively in workshop activities.

Don't forget administrative support. Successful implementation of new materials or strategies frequently requires administrative approval and assistance. If possible, administrators should be included in some part of the program.
