This guide contains a course outline for a tractor mechanic course. The outline is organized by 15 duties: performing general skills and maintaining and servicing storage battery, ignition circuit, the cooling system, the charging circuit, the starting circuit, gasoline fuel system, diesel fuel system, basic engine, lubrication system, clutches, hydraulics, powertrain, differentials, and final drive. Each duty is further divided into job-relevant tasks. These components are provided for each task: standard of performance of task, source of standard, conditions for performance of task, enabling objectives, resources, teaching activities, a criterion-referenced measure (practical application and method of evaluating practical applications), and a performance checklist for evaluation. Appendixes include definitions of terms; a cross-reference of duties, tasks, and performance objectives; a tool and equipment list; and a bibliography. (YLB)
V-TECS GUIDE
FOR
TRACTOR MECHANIC

Prepared by
Robert T. Benson
Technical Coordinator
ACKNOWLEDGMENTS

The Tractor Mechanics V-TECS Guide was developed from the Tractor Mechanics V-TECS Catalog by a committee of Agricultural Mechanics instructors in South Carolina. These instructors are to be commended for their expertise in the field and for their ability to complete the tedious work required in developing this V-TECS Guide. The writers are: Kellon Hall (Marlboro Vocational School), Olin Coskrey (Darlington Career Center), Jakie Lewis (Dillon County Area Vocational Center), and John Weathers (Sumter County Career Center).

The State Office of Vocational Education staff members who assisted the committee were Hugh McClimon (Agricultural Education State Supervisor), and Dr. Annie Winstead (Equity Consultant). Other staff members who were involved with the project were Elizabeth Yergason (Editor), Jim Lewallen, and Barbara Richardson (Word Processing Operators).

Upon completion of the writing of the Tractor Mechanics V-TECS Guide, educators were selected to field review the material for validity and reliability. These educators are to be commended for their thoroughness in providing expertise in modifying and approving this guide for classroom use. The field reviewers were:

T. B. Huffman
Laurens District 55 High School
Laurens, SC

J. Gordon Cartrette
Marion County Vocational Ed. Center
Marion, SC

Kenneth Chapman
Newberry Vocational Center
Newberry, SC

George Ulmer
Edisto High School
Cordova, SC

Paul F. Bell
Finklea Career Center
Loris, SC

William Keels
Hillicrest High School
Dalzell, SC

W. F. Sandifer
Floyd D. Johnson Vocational Center
York, SC

INTRODUCTION

V-TECS guides are an extension or augmentation of the V-TECS catalogs. While the V-TECS catalog is a composition of tasks, performance objectives, and performance guides, it deals only with the psychomotor aspect of an occupation. It is a blueprint of an occupation. It deals only with the identification of the hands-on aspect of the occupation. It does not take into consideration such things as the background information surrounding a task, how to make inferences, generalizations and decisions from a body of knowledge, nor does it deal with attitudes, job seeking skills, safety or energy conservation practices. V-TECS guides take these aspects of teaching and learning into consideration.

Experience has shown that the art of learning can also be taught while teaching subject matter. People need to learn how to learn. V-TECS guides take into consideration how students learn and are an efficient way for instructors to assist them to learn.

V-TECS guides are centered around all three domains of learning: psychomotor, cognitive, and affective. The following is a brief explanation of each.

Psychomotor

Any manipulative skill such as tightening a nut, replacing a hubcap, sharpening a pencil, machining a key slot in a steel shaft, or replacing a SCR in a solid state control panel are examples of manipulative or psychomotor skills. Tasks such as these are identified in V-TECS catalogs. V-TECS catalogs also group tasks by duties and objectives. Each performance objective has a performance standard which must be met to prove student proficiency in the manipulative aspect of the task. The V-TECS catalog, however, does not include any suggestions on how to learn to do these tasks.

V-TECS guides are developed around psychomotor tasks which are worker oriented.

Cognitive

To perform psychomotor tasks, students must think. To tighten a nut they must know which way to turn it and when to stop turning it so that they won't strip the threads or shear the bolt off. If replacing a hubcap, there is a certain technique that may vary from one car to another. For example, start the hubcap by placing the cap in a tilted position and tapping it all the way around until it is properly seated. On a different model, it may be necessary to position the hubcap and snap it all at once. At any rate, students must think about what is being done. This is cognition or a mental activity. Cognition is what goes on in the mind about any job being done. V-TECS guides provide both the collateral knowledge and the impetus to apply cognition to psychomotor tasks.

Students gain cognition through both real and vicarious experiences. They may read, view tapes, memorize or practice a process or procedure until they are certain of it. To test their knowledge, students may be required to decide the proper procedure, method or sequence for performance. This is decision making or cognitive activity at its highest.
Cognition, then, is that process by which information is stored and used. That voice that warns one of potential dangers is cognition. Anything that goes on in the mind is cognition. Students may become the best workers in their job; but, if they fail to think a process through and apply their experience, they may become just one more statistic. It is cognition that tells them to lock and tag out the power supply to an electrical apparatus before starting to repair it. However, cognition does not apply only to safety. Good cognition or thinking can help employees do a job better and quicker. V-TECS guides provide for the cognitive aspects of learning.

Affective

Curriculum writers, supervisors, and instructors often fail to assist students in acquiring a positive attitude toward themselves, their jobs, their school, or their fellow students. V-TECS guides seek to provide assistance to the instructor in achieving this. It is difficult for the instructor to identify bits and pieces of desirable behavior for every unit and often harder yet to teach them. In this area, students might be judged as to how well they clean their work area, or whether they show up to do the job on time, or whether they must be told several times to do something. Potential employers are interested in student attitude because persons angry at themselves or uncertain of themselves are often poor workers.

A student's ability to succeed on the first job and every job thereafter depends largely on attitude. If, for example, students have the attitude of "let someone else do it," they could be in trouble. Students using V-TECS guides will have activities dealing with how to get along with other students, supervisors, or staff member in both large and small groups.
USE OF V-TECS GUIDE

The guide is designed to provide job-relevant tasks, performance objectives, performance guides, resources, learning activities, evaluation standards, and achievement testing in selected occupations.

A V-TECS guide is designed to be used with any teaching methods you may choose. If a lecture/demonstration method is best for you, you will find sufficient help to meet your needs. If you prefer to use discussions or other methods that require student participation, you will find ample help. Regardless of which method is successful for you, a V-TECS guide can save preparation time and offer innovative methods and procedures. For example, students may work either alone or in teams while in class and learn skills in direct relation to what is actually done on the job. This work also takes into consideration student attitudes, thinking skills, and mathematical reading skills.

The use of small groups in teaching can be helpful in two ways: (1) many students may feel inadequate due to their lack of background information in mechanical things; and (2) some students may feel that they are physically incompetent or lack the necessary background experiences. A successful program (course) can provide students with a sense of security by reinforcing positive attitudes while improving skill and knowledge of the subject. By allowing students to interact on a personal level, this task/learner-centered approach can achieve this. As students gain confidence and discover that they are an essential part of a team engaged in the learning-teaching process, their confidence increases. Too, the student in this setting can learn to work without direct supervision. In addition, use of the small-group method permits the instructor to vary instructional routines away from lecture or other full-class methods to activities for single students, pairs of students or any number so desired.

You will find suggestions for specific classroom activities. These activities are not meant to restrict you or your students, but only to suggest a variety of learning activities for each task statement. Please do not feel that you must take your students through all the activities.
PERFORMING GENERAL SKILLS
DUTY: PERFORMING GENERAL SKILLS

PERFORMANCE OBJECTIVE V-TECS 1

TASK: Adjust wheel bearings.

STANDARD OF PERFORMANCE OF TASK:
Manually adjust the wheel bearings on the assigned tractor. The adjusted wheel should roll freely with no loose motion.

SOURCE OF STANDARD:
Kentucky Writing Team - Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a basic mechanic's tool set, jack, and safety stand, manually adjust the wheel bearings on an assigned tractor.

ENABLING OBJECTIVE(S):
1. Use of shop jack.
2. Identify and use safety procedures in the use of a jack.

RESOURCES:
1. Shop manual for equipment.

TEACHING ACTIVITIES:
1. Discuss reasons for proper wheel bearing adjustment.
2. Describe how wheel bearings are adjusted.
3. Demonstrate how wheel bearings are adjusted.
4. Have students describe how wheel bearings are adjusted.
5. Have students perform wheel bearing adjustment.

CRITERION REFERENCED MEASURE:

Practical Application:
Given necessary tools and equipment manually adjust the wheel bearings.

Method of Evaluating Practical Application:
Using the checklist for PO #01, all items must be rated satisfactory.
CHECKLIST FOR PERFORMANCE OBJECTIVE V-TECS 1 EVALUATION

PERFORMANCE TEST FOR ADJUSTING WHEEL BEARINGS

Student's Name

Date

DIRECTIONS TO STUDENT:
Manually adjust wheel bearings using the mechanics tool set, jack and safety stand. All items on checklist must be completed and the adjusted wheel bearings must allow wheel to rotate freely with no loose lateral motions.

DIRECTIONS TO EVALUATOR:
Provide needed supplies and equipment. Observe student. All items must be rated satisfactory.

PERFORMANCE OBJECTIVE V-TECS 2

TASK: Adjust wheel bearings.

STANDARD OF PERFORMANCE OF TASK:
Using the torque wrench, adjust the wheel bearings to specifications on the assigned tractor.

SOURCE OF STANDARD:
Kentucky Writing Team - Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a low measuring (inch-pound) torque wrench, other basic tools, jack, and safety stand, adjust wheel bearings on the assigned tractor to the torque specified in the repair manual.

ENABLING OBJECTIVE(S):
1. Use of shop jack.
2. Knowledge of safety procedures in the use of a jack.
3. Ability to read.

RESOURCES:
1. Shop manual for equipment

TEACHING ACTIVITIES:
1. Explain reasons for proper wheel bearings adjustment.
2. Discuss how wheel bearings are adjusted with a torque wrench.
3. Demonstrate how wheel bearings are adjusted with a torque wrench.
4. Have students explain how wheel bearings are adjusted with a torque wrench.
5. Have student perform wheel bearings adjustment using a torque wrench.

CRITERION REFERENCED MEASURE:

Practical Application:
Given necessary tools and equipment, adjust the wheel bearings using a torque wrench.

Method of Evaluating Practical Application:
Using checklist for PO #2, all items must be rated satisfactory.

PERFORMANCE OBJECTIVE V-TECS 3

TASK: Check tires for pressure, wear, and defects.

STANDARD OF PERFORMANCE OF TASK:
Check tires on the designated tractor for proper inflation and identify defects and wear. Tire pressure will be 100% accurate as indicated in the manufacturer's specifications and all defects identified.

SOURCE OF STANDARD:
Kentucky Writing Team - Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a tractor with worn and damaged tires, jack, and tire gauge, check the tires for proper inflation and visually examine tires for wear and defects.

ENABLING OBJECTIVE(S):
1. Use shop jack.
2. Knowledge of safety procedures in the use of a jack
3. Ability to read.

RESOURCES:

TEACHING ACTIVITIES:
1. Explain reasons for proper tire maintenance.
2. Describe cause of defects and wear.
3. Show proper way to check tire pressure.
4. Have student to describe how to check tires for pressure, wear, and defects.
5. Have student perform task of checking tire pressure, wear, and defects.

CRITERION REFERENCED MEASURE:

Practical Application:
Given necessary tools and equipment, check tires for pressure, wear and defects.

Method of Evaluating Practical Application:
Use checklist for PO #3 all items must be rated satisfactory.

PERFORMANCE TEST FOR PAINTING TRACTORS

Student's Name       Date

DIRECTIONS TO STUDENT: Given a tractor set-up in a paint room, gun, respirator, and compressed air source, paint the tractor. The completed paint job should be smooth, glossy, and with only minor runs.

DIRECTIONS TO EVALUATOR: Provide needed supplies and equipment. Observe student. All items must be rated satisfactory.

DUTY: PERFORMING GENERAL SKILLS

PERFORMANCE OBJECTIVE V-TECS 11

TASK: Repair brake assemblies.

STANDARD OF PERFORMANCE OF TASK:
Repair the brake assembly on the designated tractor. All parts will be clean, back in place and the brakes will be adjusted to specifications.

SOURCE OF STANDARD:
Kentucky Writing Team - Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given rebuilt brake shoes, a service manual, jack, wheel blocks, solvents and rags, replacement parts, a mechanic's tool set and a brake tool set, repair a brake assembly.

ENABLING OBJECTIVE(S):
1. Knowledge of safety procedures in the use of a shop jack.
2. Ability to read.
3. Use of hand tools.

RESOURCES:
1. AAVIM, Tractor Maintenance Principles and Procedures, pp. 77-82.
2. Tractor manufacturer service manual.

TEACHING ACTIVITIES:
1. Explain the importance of proper brake repair.
2. Show student different types of brake assemblies.
3. Discuss different cause of defects and wear.
4. Describe the proper way to repair brake assemblies.
5. Demonstrate how to repair brake assembly.

CRITERION REFERENCE MEASURE:

Practical Application:
Given necessary tools and equipment and service manual. Repair the brake assembly on a designated tractor.

Method of Evaluating Practical Application:
Using Checklist for PO #11, all items must be rated satisfactory.

PERFORMANCE OBJECTIVE V-TECS 12

TASK: Service air cleaner (oilbath).

STANDARD OF PERFORMANCE OF TASK:
Service the oil-type air cleaner on the tractor. The service must include acceptable completion of all steps on the instructor checklist.

SOURCE OF STANDARD:
Tractor Operation and Daily Care, American Association for Vocational Instructional Materials, 1970.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a tractor equipped with oil-type air cleaner, operator's manual, necessary tools and supplies, service an oil-type air cleaner.

ENABLING OBJECTIVE(S):
1. Use of hand tools.
2. Ability to read.

RESOURCES:
1. Tractor operator's manual.
3. Modern Farm Power, pp. 53-54.

TEACHING ACTIVITIES:
1. Explain reasons for servicing air cleaners.
2. Discuss how to service an oilbath air cleaner.
3. Demonstrate how to service an oilbath air cleaner.
4. Review steps in servicing an oilbath air cleaner.
5. Have student to perform the task of servicing an oilbath air cleaner.

CRITERION REFERENCED MEASURE:

Practical Application:
Given a tractor equipped with oilbath air cleaner, operator's manual necessary tools and supplies, service an oilbath air cleaner.

Method of Evaluating Practical Application:
Using the Checklist for PO #12, all items must be rated satisfactory.

PERFORMANCE OBJECTIVE V-TECS 13

TASK: Service drive shafts.

STANDARD OF PERFORMANCE OF TASK:
Service the drive shafts on the designated tractor. All parts will be clean and lubricated with the recommended lubricant, and there will be no damage to any parts.

SOURCE OF STANDARD:

CONDITIONS FOR PERFORMANCE OF TASK:
Using the designated tractor, the manufacturer's service manual, shop rags, lubricants, and the necessary tools, service the drive shafts.

ENABLING OBJECTIVE(S):
1. Ability to read.
2. Use of handtools.

RESOURCES:
2. Tractor service manual.

TEACHING ACTIVITIES:
1. Describe the basic types of drive shafts.
2. Discuss reasons for drive shaft service.
3. Show illustrations of how to service a drive shaft.
4. Have student identify different types of drive shafts, and explain how to service them.
5. Have student to perform task of drive shaft service.

CRITERION REFERENCED MEASURE:

Practical Application:
Given the necessary tools and equipment, service drive shafts.

Method of Evaluating Practical Application:
Using the Checklist for PO #13, all items must be rated satisfactory.

PERFORMANCE OBJECTIVE V-TECS 14

TASK: Service an engine governor.

STANDARD OF PERFORMANCE OF TASK:
Service the engine governor on the designated tractor. All worn parts will be replaced and the governor will function properly.

SOURCE OF STANDARD:
Kentucky Writing Team. Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a mechanic's tool set, shop manuals, replacement parts, and gasket compound, service an engine governor.

ENABLING OBJECTIVE(S):
1. Ability to read.
2. Use of hand tools.

RESOURCES:
1. Shop manual for tractor.

TEACHING ACTIVITIES:
1. Explain the reasons for proper servicing of engine governor.
2. Discuss how to service an engine governor.
3. Demonstrate the proper way to service an engine governor.
4. Have student to list the steps in testing an engine governor for functioning.
5. Have student to service an engine governor.

CRITERION REFERENCED MEASURE:

Practical Application:
Given necessary tools, equipment, shop manual, replacement parts, and gasket compound, service an engine governor.

Method of Evaluating Practical Application:
Using the Checklist for PO #14, all items must be rated satisfactory.

DUTY: PERFORMING GENERAL SKILLS

PERFORMANCE OBJECTIVE V-TAC 15

TASK: Service hydraulic governor (diesel).

STANDARD OF PERFORMANCE OF TASK:
Service the designated hydraulic governor. When service is completed, the governor will operate according to manufacturer's specifications.

SOURCE OF STANDARD:

CONDITIONS FOR PERFORMANCE OF TASK:
Using a diesel engine having a faulty hydraulic governor, follow the instructions in the manufacturer's service manual to service the governor.

ENABLING OBJECTIVE(S):
1. Ability to read.
2. Use of hand tools.

RESOURCES:
1. Service manual for tractor

TEACHING ACTIVITIES:
1. Discuss the reasons for proper governor service.
2. Explain the steps involved in servicing a hydraulic governor.
3. Demonstrate how to service a hydraulic governor.
4. Answer student questions concerning the servicing of a hydraulic governor.
5. Have student service a hydraulic governor.

CRITERION REFERENCE MEASURE:

Practical Application:
Given a diesel engine having faulty hydraulic governor, a service manual, and the necessary tool, service the hydraulic governor.

Method of Evaluating Practical Application:
When service is completed, the governor will operate according to manufacturer's specification.
PERFORMANCE OBJECTIVE V-TECS 15

PERFORMANCE GUIDE:

1. Follow directions in manufacturer's service manual for complete instructions.

2. Check for erratic engine operation, misfiring or hunting:
   a. Governor idle spring is missing or adjusted incorrectly--replace or adjust.
   b. Governor control spring is worn or broken--remove and replace.
   c. Governor is not operating because of worn parts, binding, sticking, or is incorrectly assembled--check service manual, disassemble, inspect, replace parts if necessary.
   d. Governor spring is incorrect--remove to replace with correct spring.
   e. Governor high idle adjustment is incorrect--adjust governor to diesel pump specifications.
   f. Governor adjusting screw is not adjusted--adjust.

3. If engine does not receive fuel, check for worn, sticking, binding, or incorrect assembly. Take apart and repair or replace.

4. If engine idle speed is faulty, check to see if:
   a. Governor idle spring is missing or adjusted incorrectly; replace or adjust.
   b. Governor not operating because of worn, binding, sticking or incorrect assembly--disassemble and repair or replace parts.
   c. Wrong or extended governor spring--remove and replace.

5. If engine does not develop full power or speed, check to see if:
   a. Governor not operating due to worn, binding or sticking parts, or incorrect assembly--take apart and repair or replace.
   b. Incorrect governor spring--remove and replace.
   c. Improper adjustment of adjusting screw--adjust governor screw.

6. Clean all parts as recommended in the service manual and reassemble and check, following instructions in the service manual.
DUTY: PERFORMING GENERAL SKILLS

PERFORMANCE OBJECTIVE V-TKCS 16

TASK: Service power take-off drive.

STANDARD OF PERFORMANCE OF TASK:
Service the power take-off drive on the designated tractor. The service should include the completion of all the steps on the instructor's checklist.

SOURCE OF STANDARD:
Tractor Operation and Daily Care, American Association for Vocational Instructional Materials, 1970.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a tractor with power take-off drive and necessary tools and supplies, service the power take-off drive.

ENABLING OBJECTIVE(S):
1. Use of hand tools.
2. Ability to read.

RESOURCES:
1. Tractor Operation and Daily Care, pp. 49-1 through 49-5.

TEACHING ACTIVITIES:
1. Discuss reasons for proper service of power take-off drive.
2. Compare the two different power take-off speeds.
3. Explain the steps in servicing a power take-off drive.
4. Have the student to list the steps in servicing a power take-off drive.
5. Have the students service power take-off drive.

CRITERION REFERENCED MEASURE:

Practical Application:
Given necessary tools and equipment, service power take-off drive.

Method of Evaluating Practical Application:
Using the Checklist for PO #16, all items must be rated satisfactory.
# Checklist for Performance Objective V-TECS 16 Evaluation

## Performance Test for Service Power Take-Off Drive

DUTY: PERFORMING GENERAL SKILLS

PERFORMANCE OBJECTIVE V-TECS 17

TASK: Service special drive (belt, chain, gear, and variable speed).

STANDARD OF PERFORMANCE OF TASK:
Service the special drives on the designated tractor. All parts will be clean, lubricated and adjusted to specified tension in service manual.

SOURCE OF STANDARD:

CONDITIONS FOR PERFORMANCE OF TASK:
Given service manuals for specific drives, solvents, lubricants, and the needed tools, service the special drives on the designated tractor.

ENABLING OBJECTIVE(S):
1. Use of hand tools.
2. Ability to read.

RESOURCES:

TEACHING ACTIVITIES:
1. Discuss the different type of special drives.
2. Have students to list the different types of special drives.
3. Show students the proper way to service special drives.
4. Explain the steps in servicing special drives.
5. Have student to perform task of service special drives (belt, chain, gear, and variable speed).

CRITERION REFERENCED MEASURE:

Practical Application:
Given service manuals for specific drives, solvents, lubricants, and the needed tools, serve the special drives on a designated tractor.

Method of Evaluating Practical Application:
All parts will be clean, lubricated and adjusted to specified tension in service manual.
PERFORMANCE OBJECTIVE V-TECS 17

PERFORMANCE GUIDE:

1. Belt drives. (Note: There are three basic types of belt drives—flat belts, V-belts, and round belts. These may be made of leather, rubber, fabric, steel, wire, or in combinations. They may take an opened, turned, crossed, serpentine or mule forms).
   a. Check for signs of improper installation (belt stretches beyond take up, fails for no visible reason, turns over, cut on bottom, creeps or slips). Replace or adjust.
   b. Check condition of pulleys and smooth or adjust as needed.
   c. Check belt alignment and tension. Adjust to specifications.
   d. Clean belt of oil and grease with cloth and solvent. Add belt dressing if recommended by manufacturers.
   e. Clean belt shields and screens.

2. Chain drives. (Note: There are three basic types of chains—plain, roller, and silent).
   a. Remove connector link and clean chain in solvent. Lubricate.
   b. Clean driving sprocket, driver sprocket, and adjustable idler sprocket with brush and solvent. Lubricate.
   c. With connector link removed, wrap chain around sprockets bringing free ends together on one sprocket and install connector link. Tap chain pin links back so that fasteners are snug against the connecting link plate.
   d. Adjust chain tension on adjustable idler sprocket.

   a. Open gears can be lubricated by:
      1. Splash pan which gears run through;
      2. Hand lubrication by brushing or squirting;
      3. Use of a drip oiler.
   b. Check gear for excessive wear, breaks or cracks, and replace if necessary.

4. Variable speed gears are variations on the above gears. Follow instructions given here and in the service manual.
   a. Clean.
   b. Lubricant if indicated.
   c. Adjust tension.
DUTY: PERFORMING GENERAL SKILLS

PERFORMANCE OBJECTIVE V-TECS 18

TASK: Service a torque converter.

STANDARD OF PERFORMANCE OF TASK:
Service a torque converter on the designated tractor. The entire unit will be tested and adjusted to specifications. Worn or damage parts will be repaired or replaced, and the converter will operate to specifications.

SOURCE OF STANDARD:

CONDITIONS FOR PERFORMANCE OF TASK:
Using the manufacturer's service manual, the recommended tools and testing equipment, and replacement parts, service a torque converter. Disassembly and reassembly will be in the order specified in the service manual.

ENABLING OBJECTIVE(S):
1. Use of hand tools.
2. Be able to read manuals.

RESOURCES:
1. Tractor service manual.
2. Fundamentals of Service - Power Trains, pp. 6-12 through 6-13.

TEACHING ACTIVITIES:
1. Explain the purpose and function of the torque converter.
2. Discuss the importance of servicing a torque converter.
3. List the steps in servicing a torque converter.
4. Demonstrate how a torque converter is serviced.
5. Have the student to service a torque converter.

CRITERION REFERENCED MEASURE:

Practical Application:
Using the manufacturer's service manual, the recommended tools and testing equipment, and replacement parts, service a torque converter on a designated tractor.

Method of Evaluating Practical Application:
Disassembly and reassembly will be in the order specified in the service manual, and the converter must operate to service manual specifications.
PERFORMANCE OBJECTIVE V-TECS 18

PERFORMANCE GUIDE:
1. Following instructions in the manufacturer's service manual, remove all parts necessary to reach the torque converter.
2. Check the fluid level and adjust to correct level if necessary.
3. Start and warm the engine and transmission to operating temperature.
4. Shift into each gear and run engine in each gear for 15-20 seconds. Checking the selector valve, detent positions against the position on the shift indicator, if there is one.
5. Check actual oil levels against service manual recommendations and adjust if needed.
6. When starting, running, and stopping, check the gauges for pressure and temperature. Make adjustments if necessary.
7. Check for leaks, crimped oil lines, and clogged filters, and repair or replace if needed.
8. Examine the oil for water, dirt, or particles.
9. Listen for grinding or grating sounds and squealing sounds from a stuck valve. Locate source if need be, and repair, replace, or adjust the cause.
10. Check for the odor of overheating oil and if present, check for:
   a. Air in the fluid system. Expel.
   b. Plugged cooler core, low coolant level, and defective water pump in the water cooled systems. Correct.
   c. Low fluid level clogged filter, excessive leaking past converter seals, restriction in oil line or defective oil pump. Repair or replace.
   d. Slipping clutches in the planetary gear sets, repair or replace.
   e. Worn edges and pits on vanes of pumps, stator or turbines. Repair or replace.
11. Check out entire unit with checking tools recommended by the manufacturer (unit includes engine, converter, and gear train). Make necessary adjustments, repairs, and/or replacements.
12. Reassemble all parts according to instructions in the service manual.
DUTY: PERFORMING GENERAL SKILLs

PERFORMANCE OBJECTIVE V-TECS 19

TASK: Service universal joints.

STANDARD OF PERFORMANCE OF TASK:
Service a universal joint on the designated tractor. There will be no damage to any parts, new bearings and seals will be installed, and there will be no roughness or binding in the new bearings and seals.

SOURCE OF STANDARD:

CONDITIONS FOR PERFORMANCE OF TASK:
Given new parts as needed, lubricant, a manufacturer's service manual, and the necessary tools, service a universal joint.

ENABLING OBJECTIVE(S):
1. Use of hand tools.
2. Ability to read.

RESOURCES:
1. Manufacturer's service manual.

TEACHING ACTIVITIES:
1. Discuss reasons for servicing a universal joint.
2. Explain the purpose of the universal joint.
3. List the steps in servicing a universal joint.
4. Demonstrate how to service a universal joint.
5. Have student service a universal joint.

CRITERION REFERENCED MEASURE:

Practical Application:
Given necessary tools, equipment, and service manual, service a universal joint on a designated tractor.

Method of Evaluating Practical Application:
The universal joint will be serviced to manufacturer's specifications. There will be no roughness or binding in the new bearings and seals.
PERFORMANCE OBJECTIVE V-TECS 19

PERFORMANCE GUIDE:

Note: The three common types of universal joints are (1) cross and roller, (2) ball and trunnion, and (3) constant velocity. There are several variations on each type. Check manufacturer's service manual for specific details. The following instructions are for a cross and roller type.

1. Note position of grease fittings (if used) and mark the yokes in relation to the propeller shaft for reassembly purposes later.
2. Remove retainer plates (or snap rings) that hold bearings in yoke and drive shaft.
3. Place universal joint in a vise. Select a wrench socket with an outside diameter and slightly smaller than universal joint bearings, and select another wrench socket with an inside diameter slightly larger than the universal joint bearings. Place sockets at opposite bearings in the yoke so that the smaller socket becomes a bearing pusher and the larger becomes a bearing receiver.
4. Close vise jaws until both bearings are free of the yoke, and remove bearings from the cross or spider. (A hydraulic press may also be used).
5. Check service manual for detailed instructions if bearings will not come all the way out.
6. Remove yoke from drive shaft and press bearings out of the drive shaft.
7. Clean and examine all parts, replacing parts with damage or excessive wear. (If old parts are to be reassembled, pack bearings cups with universal joint grease. If new parts are being installed, check new bearings for adequate grease). Use new seals.
8. With pusher socket, press one bearing part way into drive shaft. Position spider into partially installed bearing and place second bearing into drive shaft.
9. Put drive shaft in vise so that bearings are in contact with faces of vise jaws.
10. Press bearings into position and install snap rings or retainer plates.
11. Install bearings in yoke in same manner. Check universal joints for roughness and binding, and correct the condition if necessary prior to installation in tractor.
PERFORMANCE OBJECTIVE V-TECS 20

TASK: Test engine compression.

STANDARD OF PERFORMANCE OF TASK:
Test the engine compression on the designated tractor. Student readings should be within ± 5% of the instructor's readings.

SOURCE OF STANDARD:
Kentucky Writing Team - Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a compression tester and a spark plug wrench, test the compression on an engine.

ENABLING OBJECTIVE(S):
1. Know safety procedures in testing compression.
2. Use of hand tools.

RESOURCES:
1. Manufacturer's service manual.

TEACHING ACTIVITIES:
1. Explain what compression means.
2. Describe different methods of checking compression.
3. List the safety precautions in testing compression.
4. Demonstrate the proper way to test engine compression.
5. Have the student to test engine compression.

CRITERION REFERENCED MEASURE:

Practical Application:
Given the necessary tools and equipment test the compression on a designated tractor.

Method of Evaluating Practical Application:
Using the Checklist for PO #20, all items must be rated satisfactory.
CHECKLIST FOR PERFORMANCE OBJECTIVE V-TECS 20 EVALUATION

PERFORMANCE TEST FOR TESTING ENGINE COMPRESSION

Student's Name: ___________________________ Date: ___________________________

DIRECTIONS TO STUDENT: Given a compression tester and a spark plug wrench, test the compression on a designated tractor. The service must include satisfactory completion of all steps on instructor checklist and student readings should be within ± 5% of the instructor's readings.

DIRECTIONS TO EVALUATOR: Provide needed supplies and equipment. Observe student. All items must be rated satisfactory.

DUTY: PERFORMING GENERAL SKILLS

PERFORMANCE OBJECTIVE V-TECS 21

TASK: Use the dynamometer.

STANDARD OF PERFORMANCE OF TASK:
Test the horsepower, exhaust, fuel consumption, and crankcase blow-by on the designated tractor using the dynamometer. The dynamometer will be connected according to manufacturer's instructions and the student's readings will agree with those of the instructor.

SOURCE OF STANDARD:

CONDITIONS FOR PERFORMANCE OF TASK:
Given a dynamometer complete with operating instructions, the manufacturer's service manual for the tractor to be tested and any needed tools, test the horsepower, exhaust, fuel consumption, and crankcase blow-by on the designated tractor.

ENABLING OBJECTIVE(S):
1. Ability to read.

RESOURCES:
1. Manufacturer's service manual.
2. Preventive Maintenance, pp. 76-77

TEACHING ACTIVITIES:
1. Explain the purpose of a dynamometer.
2. Discuss the reasons for using a dynamometer.
3. Show student proper procedure in using a dynamometer.
4. Have the student use the dynamometer.
5. Compare instructor's reading with the student's reading.

CRITERION REFERENCED MEASURE:

Practical Application:
Given a dynamometer complete with operating instructions, the manufacturer's service manual for the tractor to be tested and any needed tools, test the horsepower, exhaust, fuel consumption, and crankcase blow-by on a designated tractor.

Method of Evaluating Practical Application:
The dynamometer will be connected according to manufacturer's instructions and student reading will agree with those of the instructor.
PERFORMANCE OBJECTIVE V-TECS 21

PERFORMANCE GUIDE:

1. Following manufacturer's instructions, connect the dynamometer to the machine.
2. Operate the engine for 30 minutes at one-half load to get coolant and crankcase oil temperatures up to normal.
3. Increase the load on the engine gradually until the speed is reduced to the rated load speed given in the manufacturer's service manual, and take reading of the horsepower on the dynamometer.
4. Compare reading with that given in the service manual.
5. Following manufacturer's instructions test for: exhaust analysis, smoke analysis, diesel, and carburetor adjustment (spark ignition), and crankcase blow-by.

Note: If indicated, tune-up or overhaul the engine by following instructions in the service manual.

Use the dynamometer after tune-up or overhaul to determine horsepower output and fuel consumption.
MAINTAINING AND SERVICING STORAGE BATTERY
DUTY: MAINTAINING AND SERVICING STORAGE BATTERY

PERFORMANCE OBJECTIVE V-TECS 22

TASK: Activate dry-charged batteries.

STANDARD OF PERFORMANCE OF TASK:
Activate a dry-charged battery in the shop area. The electrolyte should be 3/8 inch above the plates. The reading on the voltmeter will be within one volt of the measurement obtained by the instructor.

SOURCE OF STANDARD:
Kentucky Writing Team - Incumbent Worker.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a dry-charged battery, electrolyte, service manual, protective equipment, battery syringe or manufacturer's dispenser, and a battery charger, activate the battery.

ENABLING OBJECTIVE(S):
1. Read 1/16th ruler.
2. Use fluid measurement.

RESOURCES:
1. Manufacturer's instruction manual.
2. Jacobs/Harrell, Agricultural Power and Machinery, pp. 201-203.
3. AAVIM, Tractor Maintenance, pp. 7-14.

TEACHING ACTIVITIES:
1. Have students to write procedures for activating dry charge battery.
2. The class will discuss and demonstrate safety procedures in using chemicals and electrical equipment.
3. Identify the proper electrolyte for task being performed.
4. Demonstrate use of voltmeter and battery syringe.
5. Have students to charge the dry charge battery.
6. List 5 safety steps in charging a dry battery.

CRITERION REFERENCED MEASURE:

Practical Application:
Given access to the necessary items, activate a dry charge battery.

Method of Evaluating Practical Application:
Using the check list for PO #22, all items must be rated satisfactory.
CHECKLIST FOR PERFORMANCE OBJECTIVE V-TECS 22 EVALUATION

DUTY: MAINTAINING AND SERVICING STORAGE BATTERY

PERFORMANCE OBJECTIVE V-TECS 23

TASK: Charge a wet cell battery.

STANDARD OF PERFORMANCE OF TASK:
In the shop area, charge a wet cell battery. Electrolyte level should be 3/8" above plate. The hydrometer reading by the student should be exactly the same as the instructor's reading on each cell.

SOURCE OF STANDARD:
Kentucky Writing Team – Incumbent Worker.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a wet cell battery, and a hydrometer, charge the battery.

ENABLING OBJECTIVE(S):
1. Ability to follow directions.
2. Use of hand tools.
3. Ability to read.

RESOURCES:
2. AAVIM, Tractor Maintenance, pp. 7-14.

TEACHING ACTIVITIES
1. Demonstrate safety procedures used in charging a battery.
2. List steps in using the hydrometer.
3. Explain the meaning of the different readings found on the hydrometer.
4. Have students prepare a wet cell battery for charging.
5. Have students to distinguish weak or dead cells from properly charged cells.
6. Demonstrate reading the voltmeter and hydrometer.

CRITERION REFERENCED MEASURE:

Practical Application:
The student will charge a wet cell battery. The hydrometer readings will agree with the instructor's reading and electrolyte will be 3/8" above plates.

Method of Evaluating Practical Application:
Use the checklist for PO #23. All items must be rated satisfactory.

DUTY: MAINTAINING AND SERVICING STORAGE BATTERY

PERFORMANCE OBJECTIVE V-TECS 24

TASK: Clean battery terminals, cables, and battery box.

STANDARD OF PERFORMANCE OF TASK:
Clean the battery terminals, cables, and battery box on the designated tractor battery. The cleaned parts should show no visible signs of dirt, moisture, or acid.

SOURCE OF STANDARD:
Kentucky Writing Team - Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a dirty battery, a box end wrench set, clamp puller, terminal cleaning brush, sandpaper, baking soda, carrying strap, and rags, clean the battery terminals, cables, and battery box.

ENABLING OBJECTIVE(S):
1. Know shop safety.
2. Use of hand tools.

RESOURCES:
1. AAVIM, Tractor Maintenance, p. 63.

TEACHING ACTIVITIES:
1. Discuss the importance of cleaning a battery.
2. Explain the effect of baking soda on acid.
3. Demonstrate the procedure for cleaning a battery.
4. Explain the effects of charging and discharging of a battery on the outer surface of the battery.
5. List 5 reasons why cleaning a battery will increase its life.
6. List and identify the parts of the battery that need to be cleaned.

CRITERION REFERENCED MEASURE:

Practical Application:
Student will properly clean the battery terminals, cables and box.

Method of Evaluating Practical Application:
Use the checklist for PO #24. All items must be rated satisfactory.

DUTY: MAINTAINING AND SERVICING STORAGE BATTERY

PERFORMANCE OBJECTIVE V-TECS 25

TASK: Measure the specific gravity of a battery using a hydrometer.

STANDARD OF PERFORMANCE OF TASK:
Using a hydrometer, measure the specific gravity of the designated battery. The measurement should be exactly the same as the instructor's measurement on all cells.

SOURCE OF STANDARD:
Kentucky Writing Team - Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a battery, hydrometer, and a specific gravity explanation chart, measure the specific gravity in each battery cell.

ENABLING OBJECTIVE(S):
1. Be able to add and subtract three digit decimals numbers.
2. Ability to read.

RESOURCES:
1. AAVIM, Tractor Maintenance, pp. 11 to 14.
2. AAVIM, Tractor Maintenance, Transparency

TEACHING ACTIVITIES:
1. Show and discuss transparency on using hydrometer.
2. Discuss the safety practices needed to accomplish the task.
3. Explain what a low reading or a high reading indicates.
4. List steps used to acquire proper specific gravity readings.
5. Demonstrate the proper way to use the hydrometer.
6. Explain how temperature effects the specific gravity reading.

CRITERION REFERENCED MEASURE:

Questions:
1. List 5 steps to insure safety while working with batteries.
2. Explain the following specific gravity. Reading indicates 1.3, 1.23 and 1.220.

Answers:
1. a. Always wear safety glasses.
   b. If needed get help with lifting a battery.
   c. Keep all open flame and sparks away from batteries.
   d. Always disconnect the ground cable first and reconnect last.
   e. Should the battery spill, flush immediately with water.
PERFORMANCE OBJECTIVE V-TECS 25

Criterion Referenced Measure Continued

2.  1.3 battery electrolyte level is low, battery is overcharging.
    1.2S battery is in good condition.
    1.220 battery charge is too low.

Practical Application:
The student will measure the specific gravity of a battery using a hydrometer.

Method of Evaluating Practical Application:
Using the checklist for PO #25. All items must be rated satisfactory.
CHECKLIST FOR PERFORMANCE OBJECTIVE V-TECS 25 EVALUATION

PERFORMANCE TEST FOR MEASURING THE SPECIFIC GRAVITY OF A BATTERY USING HYDROMETER

Student's Name

Date

DIRECTIONS TO STUDENT: Given a battery, hydrometer, and a specific gravity explanation chart, measure the specific gravity in each battery cell. All readings should agree with instructor's reading. All steps on the checklist must be completed.

DUTY: MAINTAINING AND SERVICING STORAGE BATTERY

PERFORMANCE OBJECTIVE V-TECS 26

TASK: Measure the voltage of a battery using the voltmeter.

STANDARD OF PERFORMANCE OF TASK:
Using a voltmeter, measure the voltage on the designated battery. The obtained measurement should be within one volt of the measurement obtained by the instructor.

SOURCE OF STANDARD:
Kentucky Writing Team - Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a battery and a voltmeter with regular or expanded scale divisions, measure the battery voltage.

ENABLING OBJECTIVE(S):
1. Ability to read.

RESOURCES:
1. None

TEACHING ACTIVITIES:
1. List safety steps needed when working with a battery.
2. Discuss the steps used in hooking up the voltmeter.
3. Demonstrate the correct steps in hooking up the voltmeter.
4. Explain why turning the starter on will effect voltmeter reading.
5. Interpret different reading of the voltmeter.

CRITERION REFERENCED MEASURE:

Questions:
1. List 5 safety steps in working with a battery.
2. Define a high reading and a low reading of the voltmeter.

Answers:
1. a. Always wear safety glasses.
   b. If needed get help with lifting a battery.
   c. Keep all open flame and sparks away from batteries.
   d. Always disconnect the ground cable first and reconnect last.
   e. If battery spills on you, flush immediately with water.

2. High reading - battery is over charged or charge is normal.
   Low reading - battery is either bad or it is discharged.
PERFORMANCE OBJECTIVE V-TECS 26

Criterion Referenced Continued:

Practical Application:
The student will measure battery voltage using a voltmeter. Measurement must be within one volt of instructor's readings.

Method of Evaluating Practical Application:
Use the checklist for PO #26. All items must be rated satisfactory.

DUTY: MAINTAINING AND SERVICING STORAGE BATTERY

PERFORMANCE OBJECTIVE V-TECS 27

TASK: Run a load test on a battery.

STANDARD OF PERFORMANCE OF TASK:
Run a load test on the designated battery using testing machine. Recorded results should not vary more than .2 volt from the instructor's.

SOURCE OF STANDARD:
Kentucky Writing Team - Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a hydrometer, load-test machine and voltmeter, run a load test on a battery. The voltage should not drop below 4.5 volts on a 6-volt battery nor 9.0 on a 12-volt battery.

ENABLING OBJECTIVE(S):
1. Ability to read.

RESOURCES:
1. Manufacturer's Instructions Sheet for hydrometer and voltmeter.
2. AAVIM, Tractor Maintenance, pp. 11 to 14.

TEACHING ACTIVITIES:
1. Compare the results by a load test versus the hydrometer test.
2. List the steps in setting up the load test.
3. Set-up and demonstrate the load test.
4. Explain the result achieved by running the load test.
5. Identify a good battery by load test out of a group of three batteries.

CRITERION REFERENCED MEASURE:

Questions:
1. Explain steps used to perform a load test.
2. Explain why a load test gives better results than just a voltmeter reading.

Answers:
1. a. Connect the instrument to the battery.
   b. Remove the coil wire from distributor.
   c. Apply load to the battery.
   d. Read voltage.
2. Because a battery may have an internal electrical leak and will accept a charge. The leak will show up in a load test.
PERFORMANCE OBJECTIVE - TECS 27

Criterion Referenced Measure Continued

Practical Application:
The student will run a load test on a battery, recorded results must be within .2 volts of instructor's readings.

Method of Evaluating Practical Application:
Use the checklist for PO #27. All items must be rated satisfactory.

TASK: Treat battery terminals to prevent corrosion.

STANDARD OF PERFORMANCE OF TASK:
Treat the battery terminals on the designated tractor to prevent corrosion. All areas that are subject to corrosion should be coated with light grease.

SOURCE OF STANDARD:
Kentucky Writing Team - Incumbent Worker.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a battery with clean terminals, and a supply of light grease, treat the battery terminals.

ENABLING OBJECTIVE(S):
1. Understand theory of electricity.
2. Use of hand tools.
3. Ability to read.

RESOURCES:
1. AAVIM, Tractor Maintenance, pp. 63-65.

TEACHING ACTIVITIES:
1. Demonstrate removal of battery cable from the battery.
2. List steps to prepare battery for applying the grease to prevent corrosion.
3. Show how to select proper lubricant to apply to the battery.
4. Demonstrate how to treat the battery post to prevent corrosion.
5. Explain what causes battery terminals and cables to form corrosion.

CRITERION REFERENCED MEASURE:

Questions:
1. What causes a battery to slowly discharge if allowed to remain unclean?
2. Explain how a coating of light grease prevents corrosion.

Answers:
1. Acid settles on battery top and may accumulate enough to provide electrical paths to ground.
2. The coating of grease will help to protect the terminal from getting the acid on them and by this way protect against the electrical paths to ground from forming.
PERFORMANCE OBJECTIVE V-TECS 30

Criterion Referenced Measure Continued:

MAINTAINING AND SERVICING THE IGNITION CIRCUIT
DUTY: MAINTAINING AND SERVICING THE IGNITION CIRCUIT

PERFORMANCE OBJECTIVE V-TECS 31

TASK: Measure resistance using ohmmeter.

STANDARD OF PERFORMANCE OF TASK:
Measure the resistance in a piece of ignition wire to within ± 5% of the specifications in the service manual.

SOURCE OF STANDARD:
Kentucky Writing Team - Incumbent Worker.

CONDITIONS FOR PERFORMANCE OF TASK:
Given an ignition wire, service manual, ohmmeter, and necessary tools and equipment, measure the resistance of the wire.

ENABLING OBJECTIVE(S):
1. Know shop safety practices.
2. Ability to read.

RESOURCES:
1. Operators manual for ohmmeter.

TEACHING ACTIVITIES:
1. Discuss shop safety.
2. Demonstrate calibration of ohmmeter.
3. Demonstrate use of ohmmeter to determine wire resistance.
4. Discuss resistance and the causes of resistance.
5. Have students check resistance in wire.

CRITERION REFERENCED MEASURE:

Practical Application:
Measure resistance in a given wire using an ohmmeter.

Method of Evaluation:
Using the checklist for PO #31. All items must be rated satisfactory.
### Checklist for Performance Objective V-TECS 31 Evaluation

DUTY: MAINTAINING AND SERVICING THE IGNITION CIRCUIT

PERFORMANCE OBJECTIVE V-TKCS 33

TASK: Replace ignition distributor.

STANDARD OF PERFORMANCE OF TASK:
Replace the ignition distributor on the designated tractor. Replacement should include the completion of all the steps on an instructor's checklist.

SOURCE OF STANDARD:
Kentucky Writing Team - Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given an ignition distributor, operator's manual, and necessary tools, replace the ignition distributor on the designated tractor.

ENABLING OBJECTIVE(S):
1. Know shop safety practices.
2. Use of hand tools.
3. Ability to read.

RESOURCES:

TEACHING ACTIVITIES:
1. Discuss shop safety.
2. Discuss distributor function.
3. Discuss the function and demonstrate the use of timing light to set ignition timing.
4. Define and explain dwell.
5. Demonstrate the use of the dwell meter.
6. Demonstrate the removal and replacement of the distributor.

CRITERION REFERENCED MEASURE:

Practical Application:
Student will replace ignition distributor. All steps on checklist will be completed.

Method of Evaluating Practical Application:
Use checklist for PO #33. All items must be rated satisfactory.
CHECKLIST FOR PERFORMANCE OBJECTIVE V-TECS 33 EVALUATION

PERFORMANCE TEST FOR REPLACING IGNITION DISTRIBUTOR

PERFORMANCE OBJECTIVE V-TECS 34

TASK: Replace ignition wire.

STANDARD OF PERFORMANCE OF TASK:
Replace the primary ignition wire on the designated tractor. The replaced wire should be properly connected to distributor and coil.

SOURCE OF STANDARD:
Kentucky Writing Team - Incumbent Worker.

CONDITIONS FOR PERFORMANCE OF TASK:
Given necessary tools, equipment, wire material, and operator's manual, replace the primary ignition wire on the designated tractor. Wire size and resistance reading should be 100% accurate as indicated by manufacturer's specifications.

ENABLING OBJECTIVE(S):
1. Know how to use ohmmeter
2. Ability to read specifications.
3. Use of hand tools.

RESOURCES:
1. Service manual for tractor.
2. Operator's instructions for ohmmeter.

TEACHING ACTIVITIES:
1. Explain wiring diagrams and their purpose.
2. Discuss the need for proper wiring.
3. Discuss resistance in wires.
4. Explain the difference in primary and secondary ignition wires.
5. Demonstrate use of ohmmeter to measure resistance.

CRITERION REFERENCED MEASURE:

Practical Application:
Student will replace ignition wire. Wire size and resistance must agree with manufacturer's specifications.

Method of Evaluating Practical Application:
Use checklist for "O #34. All steps must be rated satisfactory.

MAINTAINING AND SERVICING THE COOLING SYSTEM
DUTY: MAINTAINING AND SERVICING THE COOLING SYSTEM

PERFORMANCE OBJECTIVE V-TECS 42

TASK: Flush and clean radiator.

STANDARD OF PERFORMANCE OF TASK:
Flush and clean the radiator on the designated tractor. The cleaned system should show no evidence of containing dirty coolant or foreign materials.

SOURCE OF STANDARD:
Kentucky Writing Team -- Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a water hose, appropriate tools, and a designated tractor, flush and clean the radiator system.

ENABLING OBJECTIVE(S):
1. Ability to read.
2. Knowledge of safety rules concerning hand tools and cooling systems.

RESOURCES:
1. Fundamentals of Service — Engines, pp. 8-1 thru 8-16.

TEACHING ACTIVITIES:
1. Discuss with students the importance of a clean cooling system and its effects on engine performance.
2. Have students read Fundamentals of Service — Engines, Chapter 8.
3. Have students draw a simple cooling system, label the parts, and show the direction of coolant flow.
4. Demonstrate how to flush a radiator.
5. Assign students a tractor and have them flush the cooling system.

CRITERION REFERENCED MEASURE:

Practical Application:
Have student clean and flush a radiator using the steps in the performance checklist.

Method of Evaluating Practical Application:
Use instructor checklist for Performance Objective 42, all steps must be rated satisfactorily.

DUTY: MAINTAINING AND SERVICING THE COOLING SYSTEM

PERFORMANCE OBJECTIVE V-TECS 44

TASK: Replace radiator hose.

STANDARD OF PERFORMANCE OF TASK:
Replace radiator hose on the designated tractor. The new hose should show no visible signs of leaks.

SOURCE OF STANDARD:
Kentucky Writing Team -- Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a screwdriver, hose-clamp pliers, and scraper, replace the radiator hose on the designated tractor.

ENABLING OBJECTIVE(S):
1. Knowledge of safety rules concerning hand tools and cooling systems.
2. Ability to read.

RESOURCES:
1. Fundamentals of Service -- Engine, pp. 8-1 thru 8-16.

TEACHING ACTIVITIES:
1. Discuss with students the importance of keeping cooling system hoses in good condition.
2. Have students read FOS -- Engines, Chapter 8, pp. 1-16.
3. Show students examples of radiation hose that appear good on the outside, but are bad inside.
4. Show them several types of hose clamps.
5. Demonstrate use of hose clamp pliers.
6. Have students replace radiator hose on engine assigned to them.

CRITERION REFERENCED MEASURE:

Practical Application:
Have student replace a radiator hose following the steps in the performance checklist.

Method of Evaluating Practical Application:
Use instructor checklist for Performance Objective 44, all steps must be rated satisfactorily.

DUTY: MAINTAINING AND SERVICING THE COOLING SYSTEM

PERFORMANCE OBJECTIVE V-TECS 45

TASK: Replace water pump.

STANDARD OF PERFORMANCE OF TASK:
Replace the water pump on the designated tractor. The replaced water pump should show no signs of leakage and all steps in the installation process should be completed according to an instructor checklist.

SOURCE OF STANDARD:
Kentucky Writing Team -- Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a socket set, open-end and box-end wrench set, screwdrivers, clamp pliers, and gasket sealing compound, replace water pump.

ENABLING OBJECTIVE(S):
1. Knowledge of safety rules concerning hand tools and cooling system.
2. Ability to read.
3. Use of hand tools.

RESOURCES:
1. Fundamentals of Service — Engines, pp. 8-1 thru 8-16.
2. Implement and Service Manual for specific tractor.

TEACHING ACTIVITIES:
1. Discuss with students what a defective water pump can do to an engine.
2. Have students read POS — Engines, Chapter 8, pp. 1-16.
3. Demonstrate how to replace water pump.
4. Have students find the procedure for a specific tractor in I and T Service Manual and write it out.
5. Assign student to an engine and have them replace water pump.

CRITERION REFERENCED MEASURE:

Practical Application:
Have students replace water pump following the steps in the performance guide.

Method of Evaluating Practical Application:
Use instructor checklist for Performance Objective 45, all steps must be rated to be satisfactory.

TASK: Service fanbelts.

STANDARD OF PERFORMANCE OF TASK:
Replace fanbelt on the designated tractor and adjust tension to manufacturer's specifications.

SOURCE OF STANDARD:
Kentucky Writing Team -- Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a new fanbelt, service manual, open-end wrenches, and belt tension gauge, replace the belt on the designated tractor.

ENABLING OBJECTIVE(S):
1. Knowledge of safety practices concerning hand tools and cooling system safety.
2. Ability to read.
3. Use of hand tools.

RESOURCES:
1. Fundamentals of Service — Engines, pp. 8-1 thru 8-16.

TEACHING ACTIVITIES:
1. Discuss with students the reasons for keeping belts in good condition.
2. Have student read POS — Engines, Chapter 8, pp. 1-16.
3. Show student how to replace belts and put correct tension on 'em.
4. Demonstrate the proper method for putting correct tension on the belt.
5. Have them look up correct tension in I and T Service Manual for specific tractor.
6. Assign students an engine and have them service fan belts.

CRITERION REFERENCED MEASURE:

Practical Application:
Have students service fanbelts following the steps in the checklist.

TASK: Test radiator pressure caps.

STANDARD OF PERFORMANCE OF TASK:
Test the radiator cap on the designated tractor for correct pressure tolerance. The gauge reading should be within one gradation of the instructor's reading.

SOURCE OF STANDARD:
Kentucky Writing Team -- Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Using the designated tractor, a pressure tester, and an adapter, test the radiator cap for pressure tolerance.

ENABLING OBJECTIVE(S):
1. Ability to read.
2. Knowledge of safety rules concerning hand tools and cooling systems.

RESOURCES:
1. Fundamentals of Service — Engines, pp. 8-1 thru 8-16.

TEACHING ACTIVITIES:
1. Explain to students how a pressure cap operates.
2. Have students read FOS — Engines, Chapter 8, pp. 1-16.
3. Show and discuss examples of types of radiator caps.
4. Demonstrate how to use radiator cap tester.
5. Demonstrate how to test a radiator cap.
6. Have students test radiator cap.

CRITERION REFERENCED MEASURE:

Practical Application:
Have students test a radiator cap using the steps in the checklist.

Method of Evaluating Practical Application:
Use instructor checklist for Performance Objective 49, all steps must be rated satisfactory.

TASK: Test thermostat.

STANDARD OF PERFORMANCE OF TASK:
Test the thermostat on the designated tractor. The thermometer reading, when the valve opens, should agree with the instructor's reading within plus or minus +30°F.

SOURCE OF STANDARD:
Kentucky Writing Team -- Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Using a thermometer, a container of antifreeze solution, a .003" feeler gauge, and the proper tools, test the thermostat on the designated tractor.

ENABLING OBJECTIVE(S):
1. Ability to read.
2. Knowledge of safety practices concerning heating water.
3. Ability to read a thermometer and feeler gauge.

RESOURCES:
1. Fundamentals of Service — Engines, pp. 8-1 thru 8-16.
2. I and T service manual for specific tractor.

TEACHING ACTIVITIES:
1. Explain to students the importance of an engine operating temperature (approximately 180°F).
2. Have them read POS — Engines, Chapter 8, pp. 1-16.
3. Demonstrate to student how to test a thermostat.
4. Discuss with the students how to troubleshoot thermostat problems.
5. Show students how long it takes an engine to warm up not using a thermostat.

CRITERION REFERENCED MEASURE:

Practical Application:
Have students test a thermostat using the steps in the performance guide.

Method of Evaluating Practical Application:
Use instructor checklist for Performance Objective 50, all steps must be rated satisfactorily.

DUTY: MAINTAINING AND SERVICING THE CHARGING CIRCUIT

PERFORMANCE OBJECTIVE V-TECS 54

TASK: Polarize a tractor generator.

STANDARD OF PERFORMANCE OF TASK:
Using ignition tools, polarize the tractor generator on the designated tractor.

SOURCE OF STANDARD:
Tractor Maintenance, Southern Association for Agricultural Engineering and Vocational Agriculture.

CONDITIONS FOR PERFORMANCE OF TASK:
Given ignition tools and a tractor with a generator in need of polarization, polarize the generator.

ENABLING OBJECTIVE(S):
1. Use of hand tools.
2. Ability to read.

RESOURCES:
1. Shop manual for equipment.

TEACHING ACTIVITIES:
1. Explain what can happen if the generator is not polarized.
2. Discuss the proper way to polarize a generator.
3. Have student to describe how to polarize a generator.
4. Demonstrate the proper way to polarize a generator.
5. Have student polarize a generator.

CRITERION REFERENCED MEASURE:

Practical Application:
Using the manufacturer's service manual, the recommended tools and equipment, polarize the tractor generator on the designated tractor.

Method of Evaluating Practical Application:
Polarizing of the generator will be in the order specified in the service manual and the generator must work correctly.

PERFORMANCE GUIDE:
1. Polarize the generator on externally grounded generators by touching a short insulated jumper wire momentarily between the two posts on the regulator marked "Bat" and "Gen" (sometimes marked "Arm").
2. Polarize the generator on internally grounded generator by momentarily touching the ends of the "Bat" wire and the "FLD" wire together.
DUTY: MAINTAINING AND SERVICING THE CHARGING CIRCUIT

PERFORMANCE OBJECTIVE V-TECS 55

TASK: Test a tractor generator on a bench using the test for the common A circuit generator.

STANDARD OF PERFORMANCE OF TASK:
On the designated tractor, test the generator on a bench using the test for common A-circuit generators. The voltmeter and ammeter readings should be 100 percent accurate when compared to those of the instructor.

SOURCE OF STANDARD:

CONDITIONS FOR PERFORMANCE OF TASK:
Given an ammeter, carbon-pile resistor, voltmeter, switch and necessary tools, test the generator on the bench to determine output.

ENABLING OBJECTIVE(S):
1. Use of hand tools.
2. Ability to read.

RESOURCES:
1. Manufacturer's service manual for equipment.
2. Fundamentals of Service — Electrical Systems, pp. 4-12 thru 4-19.

TEACHING ACTIVITIES:
1. Discuss reasons for bench testing a tractor generator.
2. Explain how to use the voltmeter and ammeter.
3. Demonstrate the proper way to test a tractor generator on a bench using the test for the common A circuit generator.
4. Have the student to list the steps in testing the A circuit generator.
5. Have the student perform the task of testing the common A circuit generator.

CRITERION REFERENCED MEASURE:

Practical Application:
Given an ammeter, carbon pile resistor, voltmeter switch, and necessary tools, test the generator on the bench to determine output.

Method of Evaluating Practical Application:
The voltmeter and ammeter reading must be 100 percent accurate when compared to those of the instructor.
PERFORMANCE OBJECTIVE V-TECS 55 (Continued)

PERFORMANCE GUIDE:
1. Consult the manufacturer's technical service manual for service and repair specifications.
2. Connect an ammeter and switch in series with a battery to the generator output terminal.
3. Connect a voltmeter from the generator output to ground.
4. Connect a carbon pile resistor across the battery.
5. Connect a jumper lead to the generator field terminal.
6. Operate the generator to obtain battery voltage and close the switch.
7. Speed up the generator to its rated value, adjust the carbon pile to obtain the specified voltage and compare the current output with the generator specifications.
8. If the generator output is below par, check for additional malfunctions.
DUTY: MAINTAINING AND SERVICING THE CHARGING CIRCUIT

PERFORMANCE OBJECTIVE V-TECS 56

TASK: Replace amperage gauge.

STANDARD OF PERFORMANCE OF TASK:
Replace the amperage gauge on the designated tractor. The replaced gauge should function properly and all the steps on an instructor's checklist should be completed during the replacement process.

SOURCE OF STANDARD:
Kentucky Writing Team -- Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given replacement amperage gauge, necessary tools and equipment, replace an amperage gauge on the designated tractor.

ENABLING OBJECTIVE(S):
1. Ability to read.
2. Use of hand tools.

RESOURCES:
1. Shop manual for equipment.

TEACHING ACTIVITIES:
1. Explain the function of an amperage gauge.
2. Discuss the steps in replacing an amperage gauge.
3. Show the student how an amperage gauge is connected.
4. Have the student list the steps in replacing an amperage gauge.
5. Have student replace an amperage gauge.

CRITERION REFERENCED MEASURE:

Practical Application:
Given replacement amperage gauge, necessary tools and equipment, replace an amperage gauge on a designated tractor.

Method of Evaluating Practical Application:
Using the checklist for Performance Objective 56, all items must be rated satisfactory.

DUTY: MAINTAINING AND SERVICING THE CHARGING CIRCUIT

PERFORMANCE OBJECTIVE V-TECS 57

TASK: Replace bearings (alternator or generator).

STANDARD OF PERFORMANCE OF TASK:
Replace the bearings in the designated alternator or generator. When service is complete the armature will run free with no side play.

SOURCE OF STANDARD:
Kentucky Writing Team -- Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a new set of bearings, a service manual, a mechanic's tool set, and an arbor press, replace the bearings in an alternator or generator.

ENABLING OBJECTIVE(S):
1. Ability to read.
2. Use of hand tools.

RESOURCES:
1. Shop manual for equipment.

TEACHING ACTIVITIES:
1. Explain how to identify defective bearings.
2. Discuss reasons for replacing bearing on a alternator or generator.
3. Demonstrate the proper steps in replacing bearing on a alternator or generator.
4. Review the steps in replacing bearings.
5. Have student replace the bearing on an alternator or a generator.

CRITERION REFERENCED MEASURE:

Practical Application:
Given the necessary tools, equipment, and service manual, replace the bearings in the designated alternator or generator.

Method of Evaluating Practical Application:
Disassembly and reassembly will be in the order specified in the service manual. When service is completed the armature will run free with no side play.

PERFORMANCE GUIDE:
1. Identify defective bearing based on the side play in the armature.
2. Disassemble alternator or generator following instructions in the manufacturer's service manual.
3. Press defective bearing from housing.
4. Press new bearing into housing.
5. Reassemble alternator or generator.
DUTY: MAINTAINING AND SERVICING THE CHARGING CIRCUIT

PERFORMANCE OBJECTIVE V-TECS 58

TASK: Replace diodes.

STANDARD OF PERFORMANCE OF TASK:
Replace a diode on the designated alternator. The replacement process should include the completion of all the steps on an instructor checklist.

SOURCE OF STANDARD:
Kentucky Writing Team -- Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given an appropriate press, an alternator, soldering iron, pliers, and necessary tools, replace a diode.

ENABLING OBJECTIVE(S):
1. Ability to read.
2. Use of hand tools.

RESOURCES:
1. Manufacturer's service manual.

TEACHING ACTIVITIES:
1. Explain the purpose of the diode.
2. Discuss the steps in testing the diode.
3. Demonstrate the proper method of testing the diode.
4. Demonstrate the proper way of replacing a diode.
5. Have student list steps in replacing a diode.
6. Have student replace a diode.

CRITERION REFERENCED MEASURE:

Practical Application:
Given an appropriate press, an alternator, soldering iron, pliers, and necessary tools, replace a diode.

Method of Evaluating Practical Application:
Using the checklist for Performing Objective 58, all items must be rated satisfactory.
CHECKLIST FOR PERFORMANCE OBJECTIVE V-TECS 58 EVALUATION

PERFORMANCE OBJECTIVE V-TECS 59

TASK: Replace generator brushes.

STANDARD OF PERFORMANCE OF TASK:
Change the generator brushes on the designated tractor. The replacement process should include the successful completion of all the steps on an instructor checklist.

SOURCE OF STANDARD:
Kentucky Writing Team -- Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Using new brushes, necessary tools and equipment, replace the brushes on the designated generator.

ENABLING OBJECTIVE(S):
1. Ability to read.
2. Use of hand tools.

RESOURCES:
1. Manufacturer's service manual for equipment.

TEACHING ACTIVITIES:
1. Explain the function of the generator brushes.
2. Discuss how to identify brushes that need replacing.
3. List the steps in replacing generator brushes.
4. Demonstrate the proper way to replace generator brushes.
5. Have student replace generator brushes.

CRITERION REFERENCED MEASURE:

Practical Application:
Given the necessary tools and equipment, replace the brushes on a designated generator.

Method of Evaluating Practical Application:
Using the checklist for Performance Objective 59, all items must be rated satisfactory.

PERFORMANCE OBJECTIVE V-TECS 60

TASK: Replace heat sink.

STANDARD OF PERFORMANCE OF TASK:
Replace the heat sink on the designated alternator. The diodes should function correctly based on an alternator diode test. The heat sink will be in position as designated by the specific alternator.

SOURCE OF STANDARD:
Kentucky Writing Team -- Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a charging system with a faulty heat sink, a new heat sink, service manual, the needed wrenches, alternator and soldering iron, replace the heat sink.

ENABLING OBJECTIVE(S):
1. Ability to read.
2. Use of hand tools.

RESOURCES:
1. Manufacturer's service manual.
2. Fundamentals of Service -- Electrical Systems, pp. 4-41.

TEACHING ACTIVITIES:
1. Discuss the function of the heat sink.
2. Explain the steps in replacing a heat sink.
3. Have the student list the steps in replacing a heat sink.
4. Demonstrate the proper way to replace a heat sink.
5. Have the student perform the task of replacing a heat sink.

CRITERION REFERENCED MEASURE:

Practical Application:
Given the necessary tools and equipment replace a heat sink on a designated alternator.

Method of Evaluating Practical Application:
Using the checklist for Performance Objective 60, all items must be rated satisfactory.

DUTY: MAINTAINING AND SERVICING THE CHARGING CIRCUIT

PERFORMANCE OBJECTIVE V-TECS 61

TASK: Service the alternator regulator.

STANDARD OF PERFORMANCE OF TASK:
Service the alternator regulator on the designated tractor. The results of service and adjustments should be 100 percent accurate as indicated in the service manual.

SOURCE OF STANDARD:
Kentucky Writing Team -- Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given necessary tools, equipment, and service manual, test the alternator regulator.

ENABLING OBJECTIVE(S):
1. Ability to read.
2. Use of hand tools.

RESOURCES:
1. Manufacturer's service manual.

TEACHING ACTIVITIES:
1. Discuss the importance of servicing the alternator regulator.
2. Explain how to service the alternator regulator.
3. Have the student list the steps in servicing the alternator regulator.
4. Demonstrate the proper way to service the alternator regulator.
5. Have student perform the task of servicing the alternator regulator.

CRITERION REFERENCED MEASURE:

Practical Application:
Given the necessary tools and equipment, service the alternator regulator.

Method of Evaluating Practical Application:
Using the checklist for Performance Objective 61, all items must be rated satisfactory.

DUTY: MAINTAINING AND SERVICING THE CHARGING CIRCUIT

PERFORMANCE OBJECTIVE V-TECS 62

TASK: Test alternator diodes.

STANDARD OF PERFORMANCE OF TASK:
Test the diode in the alternator on the designated tractor. The reading on the ohmmeter should be 100 percent accurate when compared to the reading obtained by the instructor.

SOURCE OF STANDARD:

CONDITIONS FOR PERFORMANCE OF TASK:
Given a 1/2 ohm ohmmeter and necessary tools and equipment, test the alternator diode.

ENABLING OBJECTIVE(S):
1. Ability to read.
2. Use of hand tools.

RESOURCES:
1. Fundamentals of Service — Electrical Systems, pp. 2-8, 4-45 thru 4-47.

TEACHING ACTIVITIES:
1. Explain the purpose of the diodes.
2. Describe the proper way to test alternator diodes.
3. Have student list the steps in testing diodes.
4. Demonstrate the proper way to test alternator diodes.
5. Have student test alternator diodes.

CRITERION REFERENCED MEASURE:

Practical Application:
Given a 1/2 ohm ohmmeter and the necessary tools and equipment, test the alternator diode.

Method of Evaluating Practical Application:
The reading on the ohmmeter should be 100 percent accurate when compared to the reading obtained by the instructor.

PERFORMANCE GUIDE:
1. Connect one ohmmeter lead to the diode case and the other ohmmeter lead to the diode lead.
2. Note the ohmmeter reading.
3. Reverse the ohmmeter leads and note the reading. A good diode will give a high and low reading. If only a slight difference in reading is noted from one diode lead to the other diode lead, the diode is probably defective.
DUTY: MAINTAINING AND SERVICING THE CHARGING CIRCUIT

PERFORMANCE OBJECTIVE V-TECS 63

TASK: Test charging circuit using a voltmeter, ammeter, and/or carbon pile.

STANDARD OF PERFORMANCE OF TASK:
Test the charging circuit on the designated tractor. The readings on the test equipment should be 100 percent accurate when compared to that of the instructor.

SOURCE OF STANDARD:
Kentucky Writing Team -- Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a voltmeter, ammeter, carbon-pile resistor, and necessary tools, test the charging circuit.

ENABLING OBJECTIVE(S):
1. Ability to read.

RESOURCES:
1. Fundamentals of Service — Electrical System, pp. 4-59 thru 4-61.

TEACHING ACTIVITIES:
1. Discuss the reasons for testing the charging circuits.
2. Demonstrate how to use a voltmeter, ammeter, and carbon pile.
3. Demonstrate the steps in testing a charging circuit.
4. Have student list the steps in testing a charging circuit.
5. Have student test charging circuit using a voltmeter, ammeter, and carbon pile.

CRITERION REFERENCED MEASURE:

Practical Application:
Given a voltmeter, ammeter, carbon-pile resistor, and necessary tools, test the charging circuit on a designated tractor.

Method of Evaluating Practical Application:
Using the checklist for Performance Objective 63, all items must be rated satisfactory.

MAINTAINING AND SERVICING
THE STARTING CIRCUIT
DUTY: MAINTAINING AND SERVICING THE STARTING CIRCUIT

PERFORMANCE OBJECTIVE V-TECS 65

TASK: Check armature and fields.

STANDARD OF PERFORMANCE OF TASK:
Check the armature and fields of the starter on the designated tractor. All checking procedures on an instructor's checklist will be completed.

SOURCE OF STANDARD:
Kentucky Writing Team - Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK: Using a mechanic's tool set, an armature tester (growler), a continuity tester voltmeter, ammeter and tachometer (speed indicator), check the armature and fields of the starter on the designated tractor.

ENABLING OBJECTIVE(S):
1. Know safety precautions.
2. Ability to read.
3. Use of hand tools.

RESOURCES:
1. Fundamentals of Service - Electrical Systems, pp. 4-5 through 4-17.
2. Equipment service manual.

TEACHING ACTIVITIES:
1. Discuss the reasons for checking armature and fields.
2. Explain the steps in checking armature and fields.
3. Demonstrate the proper procedure in checking armature and fields.
4. Have student to list the steps in testing armature and fields.
5. Assign the student task of checking armature and fields.
6. Discuss the starter, its function and purpose.
7. Identify all the parts of a starter.

CRITERION REFERENCED MEASURE:

Practical Application:
Given a starter, mechanics tool set, armature tester, continuity tester, voltmeter, ammeter, and tachometer, check the armature and fields.

Method of Evaluating Practical Application:
Using the checklist for PO #65. All items must be rated satisfactory.

139
DUTY: MAINTAINING AND SERVICING THE STARTING CIRCUIT

PERFORMANCE OBJECTIVE V-TECS 66

TASK: Check ignition switch.

STANDARD OF PERFORMANCE OF TASK:
In the laboratory area, check an ignition switch on the designated tractor. The continuity tester readings should agree with those of the instructor.

SOURCE OF STANDARD:
Kentucky Writing Team - Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK: Given a set of screwdrivers, pliers, ignition wrenches, and a continuity tester or ohmmeter, check an ignition switch on the designated tractor.

ENABLING OBJECTIVE(S):
1. Know safety precautions.
2. Ability to read.
3. Use of hand tools.

RESOURCES:
1. Manufacturer's service manual.
2. Fundamentals of Service - Electrical Systems, pp. 5-9 through 5-10, 7-15.

TEACHING ACTIVITIES:
1. Discuss the reason for checking the ignition switch.
2. Explain the steps in checking the ignition switch.
3. Demonstrate the proper procedure in checking the ignition switch.
4. Review the steps in checking the ignition switch.
5. Have student to check the ignition switch.

CRITERION REFERENCED MEASURE:

Practical Application:
Given a set of screwdrivers, pliers, ignition wrenches, and continuity tester or ohmmeter, check the ignition switch on a designated tractor.

Method of Evaluating Practical Application:
The continuity tester readings should be 100% accurate when compared to the readings obtained by the instructor.
PERFORMANCE OBJECTIVE V-TECS 66

PERFORMANCE GUIDE:
1. Disconnect all wires from switch (noting their position so they can be reconnected).
2. Attach continuity tester across "Battery" and "Ignition" terminals of the ignition switch.
3. Turn switch to "Start" and check for contact. Shake switch to check for shorts.
4. Attach continuity tester across "Battery" and "Start" terminals of the switch.
5. Turn switch to "Start" and check for contact.
6. Remove continuity tester and reconnect wires to switch or replace ignition switch if faulty.
DUTY: MAINTAINING AND SERVICING THE STARTING CIRCUIT

PERFORMANCE OBJECTIVE V-TECS 67

TASK: Check safety switches.

STANDARD OF PERFORMANCE OF TASK:
In the laboratory area, check the safety switch on the designated tractor. The reading on the continuity tester or ohmmeter should agree with the instructor's reading.

SOURCE OF STANDARD:
Kentucky Writing Team - Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK;
Given a set of screw drivers, pliers, ignition wrenches and a continuity tester, ohmmeter, check the safety switch on the designated tractor.

ENABLING OBJECTIVE(S):
1. Ability to read.
2. Use of hand tools.

RESOURCES:

TEACHING ACTIVITIES:
1. Discuss the reason for checking safety switches.
2. Explain the steps in checking safety switches.
3. Demonstrate the proper procedure in checking safety switches.
4. Have student to list the steps in checking safety switches.
5. Have student to check safety switches.
6. Discuss and list the functions of safety switches.

CRITERION REFERENCED MEASURE:

Practical Application:
Given a set of screwdrivers, pliers, ignition wrenches, and a continuity-tester, ohmmeter, check the safety switch on a designated tractor.

Method of Evaluating Practical Application:
The continuity tester readings should be 100% accurate when compared to the readings obtained by the instructor.
PERFORMANCE OBJECTIVE V-TECS 67

PERFORMANCE GUIDE:
1. Disconnect wires from safety switch.
2. Attach continuity tester across switch terminals.
3. Activate switch and check for contact. If there is continuity, the safety switch is shorted.
4. Remove continuity tester and reconnect wires to safety switch.
5. Replace safety switch if faulty.
DUTY: MAINTAINING AND SERVICING THE STARTING CIRCUIT

PERFORMANCE OBJECTIVE V-TECS 68

TASK: Check solenoid.

STANDARD OF PERFORMANCE OF TASK:
In the laboratory area, check the solenoid on the designated tractor. The voltmeter reading should agree with the instructor's reading.

SOURCE OF STANDARD:
Kentucky Writing Team - Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK: Given a set of ignition wrenches, an open-end wrench set, a D.C. voltmeter or a multi-meter, check a solenoid on the designated tractor.

ENABLING OBJECTIVE(S):
1. Ability to read.
2. Use of hand tools.

RESOURCES:
1. Manufacturer's service manual.

TEACHING ACTIVITIES:
1. Explain the importance and function of the solenoid.
2. Discuss the steps in checking the solenoid.
3. Demonstrate the proper procedure in checking the solenoid.
4. Have student identify the steps in checking the solenoid.
5. Have student to check solenoid.

CRITERION REFERENCED MEASURE:

Practical Application:
Given a set of ignition wrenches, an open-end wrench set, a D.C. voltmeter or a multi-meter, check a solenoid on a designated tractor.

Method of Evaluating Practical Application:
The student's voltmeter reading should be 100% accurate when compared to the reading obtained by the instructor.
PERFORMANCE OBJECTIVE V-TECS 68

PERFORMANCE GUIDE:
1. Disconnect solenoid to starter cable connection from the solenoid.
2. Connect voltmeter from starter terminal of the solenoid to ground.
3. Activate starter switch and observe reading on voltmeter for battery voltage.
4. Remove voltmeter and reconnect starter cable.
DUTY: MAINTAINING AND SERVICING THE STARTING CIRCUIT

PERFORMANCE OBJECTIVE V-TECS 69

TASK: Replace bearing and bushings.

STANDARD OF PERFORMANCE OF TASK:
In the shop area, replace the bearings and bushings on the designated starter. The bushings will be installed without damage to other parts and the starter will function properly. All steps on an instructor's checklist will be completed.

SOURCE OF STANDARD:
Kentucky Writing Team - Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK: Given an open-end and a box-end wrench set, screwdrivers, bushing puller and driver set, an adjustable reamer, and specified bearing lubricant, replace the bearings and bushings on the designated starter.

ENABLING OBJECTIVE(S):
1. Know safety precautions.
2. Use of hand tools.

RESOURCES:

TEACHING ACTIVITIES:
1. Emphasize the importance of replacing bearings and bushings.
2. List the steps in replacing bearings and bushings.
3. Demonstrate the proper procedure in replacing bearings and bushings.
4. Review the steps in replacing bearings and bushings.
5. Have student to perform the task of replacing bearings and bushings.

CRITERION REFERENCED MEASURE:

Practical Application:
Given the necessary tools and equipment, replace the bearings and bushings on a designated starter.

Method of Evaluating Practical Application:
Using the checklist for PO #69. All items must be rated satisfactory.
CHECKLIST FOR PERFORMANCE OBJECTIVE V TEC6 69 EVALUATION

PERFORMANCE TEST FOR REPLACING BEARINGS AND BUSHINGS

Student's Name

DUTY: MAINTAINING AND SERVICING THE STARTING CIRCUIT

PERFORMANCE OBJECTIVE V-TECS 70

TASK: Replace ring gear.

STANDARD OF PERFORMANCE OF TASK:
In the shop area, replace a ring gear on the flywheel of the designated tractor. The ring gear will be installed without damage to any parts (except the old ring gear) and the starter will function properly.

SOURCE OF STANDARD:
Kentucky Writing Team - Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK: Given ring gear, complete tool set, and oven or torch to heat ring gear, replace the ring gear on the flywheel of the designated tractor.

ENABLING OBJECTIVE(S):
1. Know safety precautions.
2. Use of hand tools.

RESOURCES:
1. Manufacturer's service manual.
2. Fundamentals of Service Engines, pp. 2-61 through 2-62.

TEACHING ACTIVITIES:
1. Discuss the function of the ring gear.
2. Explain the reasons for replacing ring gear.
3. Discuss the steps in replacing a ring gear.
4. Demonstrate the proper procedure in replacing ring gear.
5. Have the student identify the steps in replacing ring gear.
6. Have student to replace ring gear.

CRITERION REFERENCED MEASURE:

Practical Application:
The necessary tools and equipment, replace the ring gear on the flywheel of a designated tractor.

Method of Evaluating Practical Application:
The student will replace a ring gear on the flywheel of a designated tractor. The ring gear will be installed without damage to any other part (except the old ring gear) and the starter will function properly.
PERFORMANCE OBJECTIVE V-TECS 70

PERFORMANCE GUIDE:
1. Remove flywheel. (This generally requires the removal of the clutch from the flywheel).
2. Remove old ring gear with hammer and chisel or torch, being careful not to damage the flywheel.
3. Heat new ring gear in the oven until it expands enough to slip easily on the flywheel.
4. Install ring gear on flywheel with rounded end of gear teeth toward the starter.
5. Reinstall flywheel.
DUTY: MAINTAINING AND SERVICING THE STARTING CIRCUIT

PERFORMANCE OBJECTIVE V-TECS 71

TASK: Replace starter brushes.

STANDARD OF PERFORMANCE OF TASK:
Replace the starter brushes on the designated starter. There will be no damage to any parts, all parts will be torqued to specifications, and the starter will operate when current is supplied.

SOURCE OF STANDARD:
Kentucky Writing Team - Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Using the designated engine, a mechanic's tool set, an inch/pound torque wrench and new starter brushes, replace the starter brushes.

ENABLING OBJECTIVE(S):
1. Ability to read.
2. Use of hand tools.

RESOURCES:
2. Fundamentals of Service - Electrical Systems, pp. 5-1 through 5-34.

TEACHING ACTIVITIES:
1. Have students read FOS - Electrical Systems pp. 5-1 through 5-34 and discuss.
2. Discuss the reasons for replacing starter brushes.
3. List the steps in replacing starter brushes.
4. Demonstrate the procedure followed in replacing starter brushes.
5. Have student list steps in replacing starter brushes.

CRITERION REFERENCED MEASURE:

Practical Application:
Given the necessary tools and equipment, replace the starter drive on a designated tractor.

Method of Evaluating Practical Application:
There will be no damage to any parts, all parts will be torqued to specifications, and the starter will operate when current is applied.
PERFORMANCE OBJECTIVE V-TECS 71

PERFORMANCE GUIDE
1. Take all brushes out of their retainers and hang them outside of starter frame.
2. Put starter drive yoke return spring into recess of drive end housing and install housing to starter frame.
3. Install brush end plate with end plate boss aligned with starter frame slot and install the through bolts. Tighten to 55-75 inch/pounds torque. (Make sure that stop ring retainer is correctly seated in the drive end housing).
4. With a hook, pull back on the brush springs and insert the brushes into their holders.
5. Cover the brush openings with water-proof tape. Install the drive yoke cover and gasket. Install the brush cover bank and tighten the retaining screw.
6. Lubricate the drive end of the armature and install drive end housing seal using a socket or other suitable tool.
7. Connect starter to battery, being careful not to over tighten cable, and check operation.
DUTY: MAINTAINING AND SERVICING THE STARTING CIRCUIT

PERFORMANCE OBJECTIVE V-TECS 72

TASK: Replace starter drive.

STANDARD OF PERFORMANCE OF TASK:
Replace the starter drive on the designated tractor. All steps on an instructor's checklist must be completed acceptably.

SOURCE OF STANDARD:
Kentucky Writing Team - Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a new starter drive and a tool set, replace the starter drive on the designated tractor.

ENABLING OBJECTIVE:
1. Use of hand tools.

RESOURCES:
1. Manufacturer's service manual.

TEACHING ACTIVITIES:
1. Discuss the reasons for replacing starter drive.
2. Explain the steps in replacing starter drive.
3. Demonstrate the proper procedure in replacing starter drive.
4. Have student list the steps for replacing starter drive.
5. Have student to replace starter drive.

CRITERION REFERENCED MEASURE:

Practical Application:
Given the necessary tools and equipment, replace the starter drive on a designated tractor.

Method of Evaluating Practical Application:
Using the checklist for PO #72. All items must be rated satisfactory.

DUTY: MAINTAINING AND SERVICING THE STARTING CIRCUIT

PERFORMANCE OBJECTIVE V-TECS 73

TASK: Replace starter motor solenoid.

STANDARD OF PERFORMANCE OF TASK:
Replace the starter motor solenoid on a designated starter motor. The disassembly and reassembly order will follow the steps outlined in the service manual. There will be no damage to any parts and the solenoid will operate according to manufacturer's specifications.

SOURCE OF STANDARD:
Kentucky Writing Team - Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given the necessary replacement parts, a manufacturer's service manual, and mechanic tool set, replace a starter motor solenoid.

ENABLING OBJECTIVE(S):
1. Ability to read.
2. Use of hand tools.

RESOURCES:
1. Manufacturer's service manual.

TEACHING ACTIVITIES:
1. Explain the function of the starter solenoid.
2. Discuss the steps in replacing starter motor solenoid.
3. Demonstrate the proper procedure in replacing starter motor solenoid.
4. Have the student identify the steps in replacing starter motor solenoid.
5. Have the student perform the task of replacing starter motor solenoid.

CRITERION REFERENCED MEASURE:

Practical Application:
Given the necessary tools and equipment, replace a starter motor solenoid.

Method of Evaluating Practical Application:
Replace the starter motor solenoid on a designated starter motor. The disassembly and reassembly order will follow the steps outlined in the service manual. There will be no damage to any parts and the solenoid will operate according to manufacturer's specifications.
PERFORMANCE OBJECTIVE V-TECS 73

PERFORMANCE GUIDE:

Note: The starter motor solenoid is usually a "built-in" component. Check the service manual for specific instructions.

Solenoid contact assembly replacement:
1. Remove the starter components as outlined in the service manual, identifying parts during disassembly to facilitate reassembly.
2. Unsolder the contact post from the field coil connecting strap, using a heavy duty soldering iron or a small flame propane torch.
3. Cut off the head of the contact spring retaining rivet with a sharp chisel and throw away the contact spring. (Use an 8/32" N.C. tap to cut threads in the rivet hole).
4. Remove the contact post retaining screw and insulating washer; discard both.
5. Put the new contact spring and ground brush assembly, paper insulator, and contact post in position on the starter frame.
6. Install the insulating washer and retaining screw. Center the contact points and tighten the retaining screw securely. Stake the threaded end of the screw from inside the starter frame to manufacturer's specifications.
7. Clean the end of the field connecting strap and the slotted area of the contact post with fine sandpaper.
8. Insert the end of the field connector strap through the slot of the contact post and bend the end of the connector strap against the clean surface of the contact post.
9. Solder the connection with rosin core solder.
10. Remove the upper ground brush retaining screw and discard the brush.
11. Place the field ground lead terminal and new ground brush terminal block together and install the original retaining screw.
12. Install the armature and drive assembly, drive yoke, and drive yoke pivot pin. Add a few drops of oil to both ends of the armature shaft.
13. Slide the stop ring retainer into place on the armature shaft and position the drive yoke return spring in the drive end housing; then install the housing to the starter frame.
14. Install the end plate and the through bolts, and tighten securely. Insert the brushes in their holders.
15. Press on the starter drive yoke until the movable pole shoe is bottomed. Check the clearance between the new contact points and adjust to a .020 - .100 clearance.
16. Install protective tape over the brush openings of the starter frame, then install the drive yoke cover and gasket, and the brush cover band.
17. Install and tighten the brush cover band retaining screw.
DUTY: MAINTAINING AND SERVICING THE STARTING CIRCUIT

PERFORMANCE OBJECTIVE V-TECS 74

TASK: Replace starter motors.

STANDARD OF PERFORMANCE OF TASK:
Replace the starter motor on the designated tractor. The starter will fit correctly, be fastened securely, and all connections will fit tightly. The replacement process will include the completion of all the steps on an instructor's checklist.

SOURCE OF STANDARD:
Kentucky Writing Team - Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given an open-end and box-end wrench set, a socket set, and a new starter, replace the starter motor on the designated tractor.

ENABLING OBJECTIVE:
1. Use of hand tools.

RESOURCES:
1. Manufacturer's service manuals.

TEACHING ACTIVITIES:
1. Discuss the function of the starter motor.
2. Explain the steps in replacing starter motor.
3. Demonstrate the proper steps in replacing starter motors.
4. Review the proper procedure in replacing starter motors.
5. Have student to replace starter motor.

CRITERION REFERENCED MEASURE:

Practical Application:
Given the necessary tools and equipment, replace the starter motor on the designated tractor.

Method of Evaluating Practical Application
Use the checklist for PO #74. All items must be rated satisfactory.

MAINTAINING AND SERVICING
GASOLINE FUEL SYSTEM
DUTY: MAINTAINING AND SERVICING GASOLINE FUEL SYSTEM

PERFORMANCE OBJECTIVE V-TECS 76

TASK: Adjust carburetor float.

STANDARD OF PERFORMANCE OF TASK:
Adjust the carburetor float on the designated tractor. The float will be adjusted to the right height as checked with a ruler, and engine will run smoothly after carburetor has been reassembled and installed. After engine has run and been turned off, the gasoline will not overflow in the carburetor bowl.

SOURCE OF STANDARD:
Kentucky Writing Team -- Supervisor.

CONDITIONS FOR PERFORMANCE OF TASK:
Given the manufacturer's service manual, end wrenches, screwdriver, pliers and a ruler, adjust a carburetor float.

ENABLING OBJECTIVE(S):
1. The student will be able to read a service manual.
2. The student will follow safety rules concerning hand tools and fuel systems.
3. The student must be able to read a ruler.

RESOURCES:
1. Fundamentals of Service — Engines, pp. 3-16 to 3-19.
2. I and T Service Manual for specific tractor

TEACHING ACTIVITIES:
1. Explain to the students the importance of having the float set properly in a carburetor as related to engine performance and fuel economy.
2. Have students read FOS-Engines, Chapter 3, pp. 3-16 to 3-19.
3. Show them how to adjust a carburetor float.
4. Have them find the float setting for a specific carburetor in the service manual.
5. Give the student a carburetor and have them set the float level.

CRITERION REFERENCED MEASURE:

Practical Application:
Have students adjust carburetor float using the steps in the checklist.

Method of Evaluating Practical Application:
Use Instructor Checklist for Performance Objective 76. All steps must be rated satisfactorily.

DUTY: MAINTAINING AND SERVICING GASOLINE FUEL SYSTEM

PERFORMANCE OBJECTIVE V-TECS 84

TASK: Service fuel tanks and fuel lines.

STANDARD OF PERFORMANCE OF TASK:
Service the fuel tank and fuel lines on the designated tractor. There will be no dirt in the settling bulb (sediment bowl) and no leaks in the fuel valve, settling bulb, or fuel line connections.

SOURCE OF STANDARD:
Kentucky Writing Team -- Supervisor.

CONDITIONS FOR PERFORMANCE OF TASK:
Given assorted wrenches and clean rags, service a fuel tank and fuel lines.

ENABLING OBJECTIVE(S):
1. The student will be able to read a service manual.
2. The student will follow safety rules concerning hand tools and fuel system safety.

RESOURCES:
1. Fundamentals of Service -- Engines, pp. 3-1 to 3-8.

TEACHING ACTIVITIES:
1. Discuss with students the importance of having a clean fuel tank and lines.
2. Read FOS -- Engines, Chapter 3, pp. 3-1 to 3-8.
3. Explain to student the importance of safety when cleaning and servicing fuel tanks and lines.
4. Show students how to service fuel tanks and lines.
5. Assign students a tractor and have them service the full tank and lines.

CRITERION REFERENCED MEASURE:

Practical Application:
Have students service fuel tanks and full lines using the steps in the performance guide.

Method of Evaluating Practical Application:
Use instructor checklist for Performance Objective 84. All steps must be rated satisfactorily.

MAINTAINING AND SERVICING
DIESEL FUEL SYSTEM
DUTY: MAINTAINING AND SERVICING DIESEL FUEL SYSTEM

PERFORMANCE OBJECTIVE V-TECS 85

TASK: Bleed a diesel fuel system.

STANDARD OF PERFORMANCE OF TASK:
Bleed the diesel fuel system on the designated tractor. The fuel system will be bled in such a way as to removal of all air from the lines. There will be no damage to any parts and the engine will start again.

SOURCE OF STANDARD:
Kentucky Writing Team - Supervisor.

CONDITIONS FOR PERFORMANCE OF TASK: Using the designated tractor, operator's manual, suitable wrenches, and diesel fuel, bleed a diesel fuel system.

ENABLING OBJECTIVE(S):
1. Use of hand tools.
2. Ability to read manuals.

RESOURCES:
1. Tractor manufacturer's manual.

TEACHING ACTIVITIES:
1. Discuss diesel fuel.
2. Explain problems resulting from air in the fuel system.
3. Discuss the reasons why an engine will not crank with air in the system.
4. Demonstrate the removal of air from the fuel system.
5. Have student explain how the air is removed from the system.

CRITERION REFERENCED MEASURE:

Practical Application:
Student will bleed a diesel fuel system

Method of Evaluating Practical Application:
Use checklist for PG #85. All items must be rated satisfactory.

DUTY: MAINTAINING AND SERVICING DIESEL FUEL SYSTEM

PERFORMANCE OBJECTIVE V-TECS 87

TASK: Service a diesel fuel injector.

STANDARD OF PERFORMANCE OF TASK:
In the shop area, service a faulty nozzle and make it work correctly. All parts will fit correctly; there will be no leaks, and the nozzle will operate at pressure specified in service manual.

SOURCE OF STANDARD:
Kentucky Writing Team - Supervisor.

CONDITIONS FOR PERFORMANCE OF TASK: Given a Roosa-Master tool set for service of nozzles, an injector nozzle popper, appropriate fittings, and a service manual, service a diesel fuel injector.

ENABLING OBJECTIVE(S):
1. Use of hand tools.
2. Ability to read and interpret technical information.

RESOURCES:
2. Tractor Manufacturer's manual.

TEACHING ACTIVITIES:
1. Explain the function of fuel injectors.
2. Describe how fuel injectors are removed.
3. Demonstrate proper use of Roosa-Master tool set.
4. Demonstrate the correct servicing of a diesel fuel injector.
5. Have student list the steps to be followed in servicing a diesel fuel injector.

CRITERION REFERENCED MEASURE:

Practical Application:
Student will service a diesel fuel injector. The injector will function properly after servicing.

Method of Evaluating Practical Application:
Use checklist for PO #87. All steps must be rated satisfactory.

DUTY: MAINTAINING AND SERVICING DIESEL FUEL SYSTEM

PERFORMANCE OBJECTIVE V-TECS 88

TASK: Service the diesel injector pump.

STANDARD OF PERFORMANCE OF TASK:
Service the specified diesel-injection pump for minor adjustments. Set timing to the manufacturer's specifications and get within 5% of the manufacturer's specifications of the high and low idle, as checked by the instructor.

SOURCE OF STANDARD:
Kentucky Writing Team - Supervisor.

CONDITIONS FOR PERFORMANCE OF TASK:
Given wrenches to fit bolts encountered, a strobe-light tachometer and other special tools to check timing for the pump, service a diesel injector pump for minor adjustments.

ENABLING OBJECTIVE(S):
1. Use of hand tools.
2. Ability to read.

RESOURCES:
1. Tractor manufacturer's manual.

TEACHING ACTIVITIES:
1. Explain the function of injector pumps.
2. Demonstrate use of tools to service injector pump.
3. List the problems which an improperly timed injector pump can cause.
4. Demonstrate the proper procedure for performing minor service on an injector pump.
5. Have students identify the parts of the injector pump.
6. Demonstrate the use of the strobe light tachometer.

CRITERION REFERENCED MEASURE:

Practical Application:
Student will service an injection pump for minor adjustments. Timing will be set within 5% of manufacturer's specifications.

Method of Evaluating Practical Application:
Use checklist for PO #88. All items must be rated satisfactory.
CHECKLIST FOR PERFORMANCE OBJECTIVE V-TECS 88 EVALUATION
PERFORMANCE TEST FOR SERVICING THE DIESEL INJECTOR PUMP

DUTY: MAINTAINING AND SERVICING DIESEL FUEL SYSTEM

PERFORMANCE OBJECTIVE V-TECS 89

TASK: Service a diesel-transfer pump.

STANDARDS OF PERFORMANCE OF TASK:
Service the diesel-transfer pump on the designated tractor. The removal and reinstallation should meet Roosa-Master specifications for its fuel transfer pump, and the job should take no more than one hour.

SOURCE OF STANDARD:
Kentucky Writing Team - Supervisor.

CONDITIONS FOR PERFORMANCE OF TASK:
Using the designated tractor, a Roosa-Master service manual, screwdrivers, a micrometer, and a torque wrench, service a diesel-transfer pump.

ENABLING OBJECTIVE(S):
1. Use of micrometer.
2. Use of torque wrench.
3. Ability to read.
4. Use of hand tools.

RESOURCES:
1. Tractor manufacturer's manual.

TEACHING ACTIVITIES:
1. Discuss diesel transfer pumps, function and purpose.
2. Identify parts of diesel transfer pump.
3. Explain use of Roosa-Master tools.
4. Explain use of micrometer and torque wrench.
5. Demonstrate proper procedure for servicing diesel transfer pump.
6. Have student list the steps in servicing a diesel transfer pump.

CRITERION REFERENCED MEASURE:

Practical Application:
The student will service the diesel transfer pump. The job should be completed in one hour or less and meet Roosa-Master specifications.

Method of Evaluating Practical Application:
Use checklist for PO #89. All items must be rated satisfactory.

MAINTAINING AND SERVICING
BASIC ENGINE
DUTY: MAINTAINING AND SERVICING BASIC ENGINE

PERFORMANCE OBJECTIVE V-TECS 92

TASK: Adjust valve clearance.

STANDARD OF PERFORMANCE OF TASK:
Adjust the valves on the designated tractor. The valves should be adjusted to the manufacturer's specifications.

SOURCE OF STANDARD:
Kentucky Writing Team - Content Specialist

CONDITIONS FOR PERFORMANCE OF TASK:
Using the designated tractor, a mechanic's tool set, tappet wrench, service manual, and a crank, adjust the valve clearance.

ENABLING OBJECTIVE(S):
1. Knowledge of 4 cycle engine.
2. Ability to read.
3. Use of hand tools.

RESOURCES:
1. AAVIM, Tractor Maintenance, pp. 45 - 54.

TEACHING ACTIVITIES:
1. List the procedure used in adjusting the valve clearance correctly.
3. List the parts of the tractor which must be removed in order to adjust valve clearance.
4. List safety steps in working on tractors.
5. Identify the parts of the valve system.
6. Demonstrate the proper procedure for adjusting the valves clearance using feeler gauge.
7. Apply the proper procedure for installing new valve cover gasket when putting valve cover back on.

CRITERION REFERENCED MEASURE:

Questions:
1. List the steps used in adjusting valves.
2. Explain why valve clearance adjustment improves engine performance.

Answers:
1. a. Read your operator's manual to determine whether you should check valve clearances while the engine is hot or cold.
   b. Clean and remove valve cover.
c. Disconnect coil wire.
d. Check cylinder head for tightness.
e. Slowly turn crankshaft until piston in No. 1 cylinder is at top dead center of compression stroke.
f. Select proper thickness of feeler gauge.
h. Check clearance by inserting gage between valve stem and rocker arm of both valves.
i. Loosen adjustment screw on rocker arm.
j. Turn adjustment screw until feeler gage will just slip in and out of gap.
k. Hold adjusting screw with a screwdriver and tighten lock nut.
l. Adjust other cylinder valve. Use same procedure as for #1 cylinder.

2. Valve gives longer service.
   Engine uses fuel more efficiently.
   Engine starts more easily.
   Maximum power is produced.
   Engine is less likely to overheat.
   Smoothest engine operation is provided.

Practical Application:
The student will adjust valve clearance to the manufacturer's specifications.

Method of Evaluating Practical Application:
Use the checklist for PO #92. All items must be rated satisfactory.

DUTY: MAINTAINING AND SERVICING BASIC ENGINE

PERFORMANCE OBJECTIVE V-TECS 93

TASK: Check cylinder head and block for warpage.

STANDARD OF PERFORMANCE OF TASK:
Check the cylinder head and engine block for warpage on the designated tractor. All excessive warpage must be marked.

SOURCE OF STANDARD:
Kentucky Writing Team - Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a cylinder head and block, a straight edge, and a feeler gauge, check cylinder head and block for warpage.

ENABLING OBJECTIVE(S):
1. Ability to use feeler gauge.
2. Use hand tools.

RESOURCES:

TEACHING ACTIVITIES:
1. Define what is cylinder head and engine block warpage.
2. List cause for cylinder head and block warpage.
3. Check reference books for recommended sequence tightening and torque for cylinder head.
4. Explain the steps in removing cylinder head.
5. Demonstrate how to check head and block for warpage.
6. Check and replace, if necessary, head gasket.

CRITERION REFERENCED MEASURE:

Questions:
1. What causes cylinder head and block warpage?

Answers
1. Overheating and head bolts not being torqued to specification or not torqued in proper sequence.

Practical Application:
The student will check cylinder head and engine block for warpage. All excessive warpage will be marked.

Method of Evaluating Practical Application:
Use the checklist for PO #93. All items must be rated satisfactory.

DUTY: MAINTAINING AND SERVICING BASIC ENGINE

PERFORMANCE OBJECTIVE V-TECS 94

TASK: Clean cylinder block, oil passages, and piston.

STANDARD OF PERFORMANCE OF TASK:
Clean the cylinder block, oil passages, and piston on the designated tractor. Upon visual inspection all parts of the cylinder block, oil passages, and piston will be clean and there will be no significant damage to any parts.

SOURCE OF STANDARD:
Kentucky Writing Team - Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a parts cleaning tank, clean the cylinder block, oil passages, and pistons on a tractor.

ENABLING OBJECTIVE(S):
1. Ability to use air compressor.
2. Use steam cleaner.
3. Use of hand tools.

RESOURCES:

TEACHING ACTIVITIES:
1. List safety steps in disassembling an engine and using cleaning agents and equipment.
2. Prepare engine for disassembly by cleaning outside parts of the engine with steam cleaner.
3. Compare a properly cleaned cylinder block with a block that is improperly cleaned.
4. Identify all oil and water passages and other parts of the block.
5. Demonstrate how to clean a cylinder block.
6. Demonstrate removal of cylinder head from the block and remove the block from the tractor frame.

CRITERION REFERENCED MEASURE:

Questions:
1. Name causes of blocked passages in a block.
2. List preventive maintenances that will help to control sludge from forming in the block.

Answers:
1. a. Using wrong oil classifications.
   b. Using oil too long between changes.
   c. Overheating of oil.
2. Oil change at regular interval.
Criterion Referenced Measure Continued:

Practical Application:
The student will clean cylinder block, oil passages and piston. All will have no visual damage and be clean on inspection.

Method of Evaluating Practical Application:
Use the checklist for PO #94. All items must be rated satisfactory.

PERFORMANCE OBJECTIVE V-TECS 95

TASK: Deglaze cylinder.

STANDARD OF PERFORMANCE OF TASK:
Deglaze cylinder on the designated tractor. No abrasive will be allowed to come in contact with the crank shaft and the honing must be adequate to remove most glaze.

SOURCE OF STANDARD:
Kentucky Writing Team - Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a cylinder and a cylinder hone, deglaze a cylinder.

ENABLING OBJECTIVE:
1. Use of hand tools.

RESOURCES:

TEACHING ACTIVITIES:
1. Identify tools needed to hone a cylinder.
2. List safety procedure used when honing a cylinder.
3. Describe why it is necessary to deglaze a cylinder.
4. Prepare engine block for honing by removing all parts from the block which would be in the way or could be damaged during the honing process.
5. Demonstrate how to correctly hone a cylinder.
6. Explain the reasons why it is necessary to thoroughly clean the block after honing.

CRITERION REFERENCED MEASURE:

Questions:
1. Why is it necessary to hone a cylinder?
2. Why is it important to remove all abrasive material after honing?

Answers:
1. For proper ring seating.
2. The abrasive materials get in oil and can damage cylinder walls and crankshaft and oil pump.

Practical Application:
The student will deglaze a cylinder, honing will remove most glaze.

Method of Evaluating Practical Application:
Use the checklist for PO# 95. All items must be rated satisfactory.
CHECKLIST FOR PERFORMANCE OBJECTIVE V-TECS 95 EVALUATION

PERFORMANCE TEST FOR DEGLAZING CYLINDER

TASK: Grind valves.

STANDARD OF PERFORMANCE OF TASK:
Grind the valves removed from the designated tractor so they mate perfectly with their seat.

SOURCE OF STANDARD:
Kentucky Writing Team - Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a mechanic's tool set, a valve spring compressor, and valve grinding machine, grind the valves.

ENABLING OBJECTIVE(S):
1. Ability to use hand tools.
2. Ability to read.
3. Ability to use micrometer and/or caliper.

RESOURCES:

TEACHING ACTIVITIES:
1. Demonstrate how to measure the valve face and stem.
2. Identify the correct valve angle by looking up manufacturer's specifications.
3. List steps in grinding valve.
4. Remove valves from tractor head and place valve in order removed and explain why this is important.
5. Demonstrate how to grind valve.
6. Demonstrate the proper procedure for lapping valve with valve seat.
7. Identify the proper lapping compound for lapping valves.
8. Explain why the head must be cleaned after lapping.

CRITERION REFERENCED MEASURE:

Questions:
1. Explain why valve face angle is important in proper engine operation.
2. List the reasons why a valve may not seat correctly.

Answers:
1. For proper valve seating.
2. a. Burn or warpage of valve.
   b. Improper valve and rocker arm clearance.
PERFORMANCE OBJECTIVE V-TECS 96

**Practical Application:**
The student will guide valves so they mate perfectly with the seat.

**Method of Evaluating Practical Application:**
Use the checklist for PO #96. All items must be rated satisfactory.

DUTY: MAINTAINING AND SERVICING BASIC ENGINE

PERFORMANCE OBJECTIVE V-TECS 97

TASK: Install connecting rods caps.

STANDARD OF PERFORMANCE OF TASK:
Install connecting rod caps on the designated tractor. The bearing will be properly seated as specified in the service manual.

SOURCE OF STANDARD:
Kentucky Writing Team - Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a mechanic's tool set, service manual, micrometers, plastigauge, and a soft face hammer, install connecting rod caps on the designated tractor.

ENABLING OBJECTIVE(S):
1. Ability to use micrometer.
2. Ability to read.
3. Use of hand tools.

RESOURCES:
2. Tractor manufacturer's service manual.

TEACHING ACTIVITIES:
1. List parts which must be removed to make piston and crankshaft accessible.
2. Explain the reasons for using a soft faced hammer.
3. Discuss the reasons for crankshaft wear.
4. Demonstrate rod cap and bearing insert removed.
5. Demonstrate use of plastigauge.
6. Identify a worn bearing, and discuss the causes of wear.
7. Demonstrate installation of new inserts using a torque wrench.

CRITERION REFERENCED MEASURE:

Questions:
1. Why is it important to use plastigauge when installing rod caps?
2. Why is it important to lubricate bearings before tightening rod caps?

Answers:
1. Plastigauge will tell if there is correct clearance between rod cap and crankshaft bearings.
2. To prevent bearing from over heating and causing wear during start-up before oil pump has time to deliver oil to bearings.
PERFORMANCE OBJECTIVE V-TECS 97

Criterion Referenced Measure:

Practical Application:
The student will install connecting rod caps as specified in the service manual.

Method of Evaluating Practical Application:
Use checklist for PO #97. All items must be rated satisfactory.

TASK: Install a crankshaft.

STANDARD OF PERFORMANCE OF TASK:
In the shop area, install a crankshaft on the designated tractor. All steps on the instructor's checklist will be completed.

SOURCE OF STANDARD:
Kentucky Writing Team -- Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a mechanic's tool set and plastigauge, install a crankshaft on the designated tractor.

ENABLING OBJECTIVE(S):
1. Be able to use plastigauge.
2. Ability to use a feeler gauge.
3. Use of hand tools.

RESOURCES:

TEACHING ACTIVITIES:
1. Demonstrate to students how to examine the old crank shaft and how to measure it with micrometer to determine if it needs replacing.
2. Discuss with student the proper lubricant to lubricate the new part with.
3. Have student list all tools and equipment needed to perform the task.
4. Discuss with student why it is necessary to keep parts in order and to identify each part.
5. Explain why it is important to check each rod bearing cap and main bearing for proper clearance.
6. Demonstrate the replacement of crankshaft and pistons.

CRITERION REFERENCED MEASURE:

Questions:
True or False
1. It is not important to replace parts back in the same place when installing a crankshaft.
2. When installing a crankshaft it is important to check for binding.

Answers:
1. False
2. True

Practical Application:
The student will install a crankshaft to the manufacturer's specification.

Method of Evaluating Practical Application:
Use the checklist for Performance Objective 98. All items must be rated satisfactory.

TASK: Install cylinder heads.

STANDARD OF PERFORMANCE OF TASK:
Install cylinder head on the designated tractor. All parts should be installed with no visible leaks and torqued to service manual specifications.

SOURCE OF STANDARD:
Kentucky Writing Team -- Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a mechanic's tool set and service manual, install a cylinder head on the designated tractor.

ENABLING OBJECTIVE(S):
1. Ability to clean block and head.
2. Ability to grind and seat valves.
3. Use of hand tools.

RESOURCES:

TEACHING ACTIVITIES:
1. Discuss with students the functions that the cylinder head performs.
2. Demonstrate to students how to examine the head for cracks or other signs of damage.
3. Demonstrate to students how to examine the old head gasket to check for oil leaks or water leakage.
4. Discuss with students the importance of head bolt tightening sequence.
5. Demonstrate the task of installing a cylinder head.

CRITERION REFERENCED MEASURE:

Questions:
True or False
1. Torquing head bolts means running them up hand tight.
2. Cylinder head are very study so dropping it will cause no problems.

Answers:
1. False
2. False

Practical Application:
The student must install a cylinder head.

Method of Evaluating Practical Application:
Use the checklist for Performance Objective 99. All items must be rated satisfactory.

TASK: Install piston assembly

STANDARD OF PERFORMANCE OF TASK:
Install a piston assembly in the designated tractor. The piston will be installed without any damage to any part of the engine.

SOURCE OF STANDARD:
Kentucky Writing Team -- Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a mechanic's tool set and piston ring compressor, install a piston assembly in the designated tractor.

ENABLING OBJECTIVE(S):
1. Ability to use plastigauge and micrometer.
2. Ability to read service manual.
4. Use of hand tools.

RESOURCES:

TEACHING ACTIVITIES:
1. List with students the reasons for piston removal and causes for these problems.
2. Demonstrate to students how to install piston on connecting rod.
3. Demonstrate to students proper installation of piston rings.
4. Demonstrate to students how to measure each cylinder for using gap clearance by inserting a ring and measuring the gap with a feeler gauge and checking manufacturer's specifications for proper gap clearance.
5. Explain to students the types of engine damages caused by improper piston assembly and installation.

CRITERION REFERENCED MEASURE:

Questions:
True or False
1. The piston assembly consists of the piston, piston ring, rod, and rod cap.
2. It is okay to drive a piston in with a ball-peen hammer.

Answers:
1. True
2. False

Practical Application:
The student will install piston assembly.

PERFORMANCE OBJECTIVE V-TECS 103

TASK: Install rear main oil seals.

STANDARD OF PERFORMANCE OF TASK:
Install a rear main oil seal on the designated tractor. The new seal will be correctly placed and will hold oil. Other parts will be correctly placed and tightened.

SOURCE OF STANDARD:
Kentucky Writing Team -- Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a mechanic's tool set, a torque wrench, a new gasket, and a seal, install rear main oil seal.

ENABLING OBJECTIVE(S):
1. Ability to use hand tools and torque wrench.
2. Use shop safety.

RESOURCES:

TEACHING ACTIVITIES:
1. Identify the two types of oil seals that are used.
2. Explain the causes of oil seal leakage.
3. List safety procedures needed when removing oil pan.
4. Demonstrate how to correctly replace the rear main oil seals.
5. Explain why you must remove all of the old oil pan gasket.

CRITERION REFERENCED MEASURE:

Question:
True or False
1. To install the rear main oil seals the oil pan must be removed.

Answer:
1. True

Practical Application:
The student will install rear main oil seals.

Method of Evaluating Practical Application:
Use the checklist for Performance Objective 103. All items must be rated satisfactory.

DUTY: MAINTAINING AND SERVICING BASIC ENGINE

PERFORMANCE OBJECTIVE V-TECS 104

TASK: Install rod bearings.

STANDARDS OF PERFORMANCE OF TASK:
Install rod bearings on the designated tractor. The rod bearings will be properly seated. All bearings will be torqued and clearance checked as specified in service manual.

SOURCE OF STANDARD:
Kentucky Writing Team -- Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a complete mechanic's tool set, service manual, micrometers, plastigauge, and a soft-faced hammer, install rod bearings on the designated tractor.

ENABLING OBJECTIVE(S):
1. Use of mechanics tools.
2. Knowledge of shop safety.

RESOURCES:

TEACHING ACTIVITIES:
1. Demonstrate to students the removal of the oil pan and the cleaning of all parts that are exposed.
2. Have students list the reasons for crankshaft and insert wear.
3. Demonstrate to students how to "mic" each journal and record readings.
4. Have students read chapter 14 in Agricultural Power and Machinery by Jacobs/Harrell.
5. Demonstrate to students how to place plastigauge inside each rod bearing and torque each bearing and check and record each reading.
6. Have students list the recommendations for correction if measurements do not meet specification.

CRITERION REFERENCED MEASURE:

Question:
True or False
1. "Mic" the journal for wear means looking at it under bright lights.

Answer:
1. False

Practical Application:
The student will install rod bearing to proper clearance specification.

Method of Evaluating Practical Application:
Use the checklist for Performance Objective 104. All items must be rated satisfactory.

DUTY: MAINTAINING AND SERVICING BASIC ENGINE

PERFORMANCE OBJECTIVE V-TECS 105

TASK: Install timing chain or gears.

STANDARD OF PERFORMANCE OF TASK:
Install a timing chain or gears on the designated engine. All parts will be assembled in correct order and the timing will be to manufacturer's specifications.

SOURCE OF STANDARD:
Kentucky Writing Team -- Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a timing gear or chain, a mechanic's tool set, service manual, and pullers for the engine being worked on, install the timing gear or chain on the designated tractor.

ENABLING OBJECTIVE(S):
1. Use of hand and special tools.
2. Knowledge of shop safety.
3. Ability to read service manual.

RESOURCES:

TEACHING ACTIVITIES:
1. Have students list all parts of the valve train.
2. Discuss with students what is meant by timing an engine.
3. Explain the role of the timing chain and gear in the process of timing the engine.
4. Demonstrate how to tell if a gear or timing chain shows wear.
5. Demonstrate the replacement of the timing chain or gear.
6. Demonstrate how to align the gears before putting on the chain.

CRITERION REFERENCED MEASURE:

Questions:
True or False
1. Timing an engine means timing the spark to the opening and closing of the valves.
2. Timing chains will wear some due to not changing the oil on a regular basis.

Answers:
1. True
2. True

Practical Application:
The student will install timing chain and/or gears and time engine to manufacturer's specification.

Method of Evaluating Practical Application:
Use checklist for Performance Objective 105. All items must be rated satisfactory.

DUTY: MAINTAINING AND SERVICING BASIC ENGINE

PERFORMANCE OBJECTIVE V-TECS 106

TASK: Measure bearing clearance.

STANDARD OF PERFORMANCE OF TASK:
In the shop area, measure the bearing clearance on a designated tractor. The measurement must agree with the instructor's measurement.

SOURCE OF STANDARD:
Kentucky Writing Team -- Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a mechanic's tool set, micrometers, plastigauge, and a soft-faced hammer, measure the bearing clearance.

ENABLING OBJECTIVE(S):
1. Ability to use micrometer and plastigauge.
2. Use of hand tools.

RESOURCES:

TEACHING ACTIVITIES:
1. Demonstrate to students the removal of all parts to make rod cap and crankshaft accessible.
2. Have students list reasons for measure bearing clearance.
4. Discuss with students the importance of lining up the rod cap with the correct rod.
5. Define tolerance.
6. Explain to students the reason correct torquing of the rod bolts is a must to get a correct measurement with the plastigauge.
7. Demonstrate the use of plastigauge to measure bearing clearance.

CRITERION REFERENCED MEASURE:

Question:
True or False
1. Bearing clearance can be checked by using an outside micrometer.

Answer:
1. False

Practical Application:
The student will measure the bearing clearance.

Method of Evaluating Practical Application:
The student measurements must agree with the instructor's measurement.
PERFORMANCE OBJECTIVE V-TECS 106 (Continued)

PERFORMANCE GUIDE

1. Remove all parts necessary to make pistons, crankshaft and bearings accessible.
2. Remove cap and place a piece of plastigage across the insert.
3. Remove cap and torque to specifications.
4. Remove cap and measure plastigage width using card that comes with plastigage.
5. If clearance is within specified limits, clean plastigage from insert and journal. Lubricate, install and torque rod cap.
6. Bend up lock tabs or install lock wires as required.
7. Reassemble engine.
DUTY: MAINTAINING AND SERVICING BASIC ENGINE

PERFORMANCE OBJECTIVE V-TECS 107.

TASK: Measure camshaft for wear.

STANDARD OF PERFORMANCE OF TASK:
Measure the camshaft for wear on the designated tractor. All variations from the specifications will be determined.

SOURCE OF STANDARD:
Kentucky Writing Team -- Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a complete mechanic's tool set, service manual, and a micrometer, measure the camshaft for wear.

ENABLING OBJECTIVE(S):
1. Ability to read.
2. Use of hand tools.

RESOURCES:

TEACHING ACTIVITIES:
1. Discuss the function of camshaft.
2. List the causes for wear of the camshaft.
3. Demonstrate how to examine the camshaft visually for damage.
4. Explain why you replace the cam bearing before replacing the camshaft.
5. Demonstrate how to measure the camshaft for wear with micrometer.

CRITERION REFERENCED MEASURE:

Question:
True or False
1. Cam lobe may show wear because the valve was tightened too much.

Answer:
1. True

Practical Application:
The student will measure camshaft for wear at each lobe.

Method of Evaluating Practical Application:
The student's measurement must agree with the instructors.

PERFORMANCE GUIDE:
1. Remove camshaft and inspect visually for obvious damage.
2. Using appropriate micrometer, measure each lobe of the cam and record measurement.
3. Compare your measurement with specifications for the camshaft.
4. Reinstall or replace camshaft as necessary.
DUTY: MAINTAINING AND SERVICING BASIC ENGINE

PERFORMANCE OBJECTIVE V-TECS 108

TASK: Measure and record the crankshaft main and rod journals.

STANDARD OF PERFORMANCE OF TASK:
Measure and record the crankshaft main and rod journals on the designated tractor. Recorded measurements should be the same as those of the instructor.

SOURCE OF STANDARD:
Kentucky Writing Team -- Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a service manual, micrometer, and a mechanic's tool set, measure and record the crankshaft main and rod journals.

ENABLING OBJECTIVE(S):
1. Ability to read.
2. Use of hand tools.

RESOURCES:

TEACHING ACTIVITIES:
1. List and discuss the reasons for crankshaft wear.
2. Explain the function of the crankshaft.
4. Demonstrate to the students how to check main bearing journals and rod journals for out of round by taking three readings with the correct sized micrometer.
5. Discuss with the students the importance of proper lubrication of inserts when installing a crankshaft.

CRITERION REFERENCED MEASURE:

Question:
True or False
1. Crankshaft rod and main bearing can be measured with an outside micrometer.

Answer:
1. True

Practical Application:
Student will make three measurements and record them for crankshaft main and rod journals.

Method of Evaluating Practical Application:
Student measurement of the main and rod journals will agree with the instructor's readings.
PERFORMANCE OBJECTIVE V-TECS 108 (Continued)

PERFORMANCE GUIDE:
1. With crankshaft removed, clean and visually inspect for obvious damage.
2. Using outside micrometer, make and record three measurements for each bearing journal, one in the middle and one near each end of the journal.
3. Compare your measurements with specifications for the crankshaft.
4. Any significant variation between the three measurements on any one journal indicates uneven wear. Record variations.
DUTY: MAINTAINING AND SERVICING BASIC ENGINE

PERFORMANCE OBJECTIVE V-TECS 109

TASK: Measure cylinder taper

STANDARD OF PERFORMANCE OF TASK:
Measure a cylinder taper on the designated tractor. The readings and computations should agree with those of the instructor.

SOURCE OF STANDARD:
Kentucky Writing Team -- Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a cylinder and a feeler gauge, measure the cylinder taper.

ENABLING OBJECTIVE(S):
1. Ability to use a feeler gauge and inside micrometer.

RESOURCES:

TEACHING ACTIVITIES:
1. Discuss the difference in using a ring and feeler gauge and a telescoping micrometer reading to determine cylinder taper.
2. Define cylinder taper.
3. Discuss cause for uneven wear in a cylinder.
4. Demonstrate how to use a ring and feeler gauge to measure cylinder taper.
5. Demonstrate how to use inside micrometer to measure for cylinder taper.
6. Discuss with students how if the taper is not within manufacturer's tolerance, how to solve the problem.

CRITERION REFERENCED MEASURE:

Question:
True or False
1. Cylinder taper refers to the depth a piston travels in a cylinder.

Answer:
1. False

Practical Application:
Student will take at least three measurements inside the cylinder and subtract the smallest from the largest reading and divide by 3.1416 to determine the cylinder taper.

Method of Evaluating Practical Application:
Students answers must agree with instructor's findings.
PERFORMANCE OBJECTIVE V-TECS 109 (Continued)

PERFORMANCE GUIDE:

1. With piston removed, carefully compress a ring and insert it in the cylinder.
2. Be sure the ring is lined up in the cylinder by tapping it down about one inch with the top of an inverted piston.
3. Measure the gap between the ends of the ring with a feeler gauge and record reading. (Cylinder bore gauge or telescoping micrometer may be used).
4. Take readings at one inch intervals down to the lowest point of ring travel.
5. The difference between the largest and smallest readings divided by 3.1416 gives the cylinder taper.
DUTY: MAINTAINING AND SERVICING BASIC ENGINE

PERFORMANCE OBJECTIVE V-TECS 110

TASK: Measure piston ring end gap.

STANDARD OF PERFORMANCE OF TASK:
Measure a piston ring end gap in a laboratory setting. Measurement should agree with that of instructor.

SOURCE OF STANDARD:
Kentucky Writing Team -- Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a piston ring and feeler gauge, measure the piston ring end gap.

ENABLING OBJECTIVE(S):
1. Ability to use feeler gauge.
2. Ability to read a ruler.

RESOURCES:

TEACHING ACTIVITIES:
1. Discuss the need to examine the cylinder for cleanliness and smoothness.
2. List and discuss the reasons for measuring piston ring end gap.
3. Discuss what recommendations are made if piston ring end gap does not meet standards.
4. Demonstrate how to measure piston ring end gap.
5. Explain why it is important to take several readings at different intervals down the cylinder.

CRITERION REFERENCED MEASURE:

Question:
True or False
1. The reason for having piston ring end gap is because of expansion of metal when hot.

Answer:
1. True

Practical Application:
The student will take reading at one inch intervals down to the lowest point of ring travel. The smallest reading is the ring end gap.

Method of Evaluating Practical Application:
Students readings for ring end gap must agree with instructor's reading.
PERFORMANCE OBJECTIVE V-TECS 110 (Continued)

PERFORMANCE GUIDE:

1. With piston removed, carefully compress a ring and insert it in the cylinder.
2. Be sure the ring is lined up in the cylinder by tapping it down about one inch with the top of an inverted piston.
3. Measure the gap between the ends of the ring with a feeler gauge, and record reading.
4. Take readings at one inch intervals down to the lowest point of ring travel. The smallest reading is the ring end gap.
DUTY: MAINTAINING AND SERVICING BASIC ENGINE

PERFORMANCE OBJECTIVE V-TECS 111

TASK: Measure piston ring land clearance.

STANDARD OF PERFORMANCE OF TASK:
On the designated tractor, measure the piston ring land clearance. The recorded measurements should be the same as that of the instructor.

SOURCE OF STANDARD:
Kentucky Writing Team -- Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a piston ring and feeler gauge, measure the piston ring land clearance on the designated tractor.

ENABLING OBJECTIVE(S):
1. Ability to use and read feeler gauge.

RESOURCES:

TEACHING ACTIVITIES:
1. Define piston ring land clearance.
2. Demonstrate how to remove the piston, clean it, and remove carbon.
3. Discuss the importance of having correct land clearance.
4. Explain the procedure for checking piston ring land clearance.
5. Demonstrate how to check piston ring land clearance.
6. Have students read Agricultural Power and Machinery, pp. 268-269.

CRITERION REFERENCED MEASURE:

Question
True or False
1. Piston ring land clearance is the area between the ring and the groove height.

Answer
1. True

Practical Application:
The student will measure piston ring land clearance.

Method of Evaluating Practical Application:
Use checklist for Performance Objective 111. All steps must be rated satisfactory.
CHECKLIST FOR PERFORMANCE OBJECTIVE V-TECS 111 EVALUATION

PERFORMANCE TEST FOR MEASURING PISTON RING LAND CLEARANCE

Student's Name

Date

DIRECTIONS TO STUDENT: Measure the piston land clearance. The recorded instrument should be the same as the instructor.

DIRECTIONS TO EVALUATOR: Provide needed supplies and equipment. Observe student. All items must be rated satisfactory.

DUTY: MAINTAINING AND SERVICING BASIC ENGINE

PERFORMANCE OBJECTIVE V-TECS 112

TASK: Measure valve stem guide clearance.

STANDARD OF PERFORMANCE OF TASK:
In the laboratory area, measure a valve stem guide clearance. The recorded measurement should be the same as the teacher's measurement.

SOURCE OF STANDARD:
Individual instructor.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a mechanic's tool set and a dial indicator, measure the valve stem guide clearance.

ENABLING OBJECTIVE(S):
1. Ability to use hand tools.

RESOURCES:

TEACHING ACTIVITIES:
1. Demonstrate through cleaning of engine head.
2. Have students read pages 244-245 in Agricultural Power and Machinery.
3. Demonstrate using dial indicator to determine valve stem guide clearance.
4. List the importance of proper valve stem guide clearances.
5. List recommendations to solve improper valve stem guide clearances.

CRITERION REFERENCED MEASURE:

Question
True or False
1. Valve stem guide clearance can be corrected by buying large valve stems or by adding more wall surface to the guide.

Answer
1. False

Practical Application:
The student will measure valve stem guide clearance.

Method of Evaluating Practical Application:
Student measurements must be the same as the instructor's.

PERFORMANCE GUIDE:
1. Develop skill in reading dial indicator.
2. With head removed and valve springs and keepers taken off, connect dial indicator to head with the pickup against the valve stem.
3. With the valve off its seat measure the lateral movement of the valve stem. This is "guide clearance." (The stem and guide must be clean and dry to get an accurate measurement). Record measurement.
DUTY: MAINTAINING AND SERVICING BASIC ENGINE

PERFORMANCE OBJECTIVE V-TECS 113

TASK: Reface valve seats.

STANDARD OF PERFORMANCE OF TASK:
Reface the valve seats on the designated tractor, until they mate perfectly with
the valves.

SOURCE OF STANDARD:
Kentucky Writing Team -- Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a mechanic's tool set, a valve grinding machine, lapping compound, and a
tool and valve seat refacing set, reface the valve seats.

ENABLING OBJECTIVE(S):
1. Ability to use inside micrometer.
2. Ability to use valve spring compressor, valve refacer, and seat refacer.
3. Use of hand tools.

RESOURCES:

TEACHING ACTIVITIES:
1. Discuss and list cause for valve damages.
2. Discuss engine symptoms that would make the mechanic think it would be
   valve trouble.
3. Discuss and list type of tests that would determine valve trouble.
4. Explain what is meant by lapping.
5. Demonstrate the proper procedure for grinding the valve face to
   manufacturer's specification.
6. Demonstrate the proper procedure for grinding the valve seat to
   manufacturer's specification.
7. Show the students how to identify valves that can be refaced and valves that
   must be rejected.

CRITERION REFERENCED MEASURE:

Practical Application:
The student will reface the valve seat to the manufacturer's specifications.

Method of Evaluating Practical Application:
Use the checklist for Performance Objective 113. All items must be rated
satisfactory.
# Checklist for Performance Objective V-TECS 113 Evaluation

DUTY: MAINTAINING AND SERVICING BASIC ENGINE

PERFORMANCE OBJECTIVE V-TECS 114

TASK: Remove carbon from ring grooves.

STANDARD OF PERFORMANCE OF TASK:
in the shop area, remove the carbon from the piston ring grooves. The piston will be clean, but no metal will be shaved from the piston.

SOURCE OF STANDARD:
Kentucky Writing Team -- Content Specialist

CONDITIONS FOR PERFORMANCE OF TASK:
Given a mechanic's tool set, a ring groove cleaner, or an old ring and ring expander, remove the carbon from the ring grooves.

ENABLING OBJECTIVE(S):
1. Know shop safety.
2. Use of hand tools.

RESOURCES:

TEACHING ACTIVITIES:
1. List causes for carbon build up on piston.
2. Explain the effects of carbon on the face and inside the piston groove.
3. Identify proper cutter to clean piston groove without removing metal or damaging the piston.
4. Demonstrate the use of an old ring to cleaning the piston ring groove.
5. Demonstrate the proper procedure for removing the piston from the block and removing rings from the piston.

CRITERION REFERENCED MEASURE:

Practical Application:
The student will remove carbon and clean the piston to the teacher's satisfaction.

Method of Evaluating Practical Application:
Student must clean the piston to the teacher's satisfaction.

PERFORMANCE GUIDE:
1. Remove piston from engine.
2. Remove rings from piston.
3. Select proper cutter on ring groove cleaning tool and place tool on piston. Turn tool around piston to clean groove.
4. If groove cleaning tool with correct cutter is not available, a piece of an old ring makes a fair substitute.
5. Be careful not to remove any metal from the piston. Removal of any metal will affect ring side clearance.
DUTY: MAINTAINING AND SERVICING BASIC ENGINE

PERFORMANCE OBJECTIVE V-TECS 115

TASK: Remove cylinder ridge.

STANDARD OF PERFORMANCE OF TASK:
In the shop area, remove a cylinder ridge from the piston cylinder. The ridge will be cut deep enough to allow piston to be removed, but not deeper than the ring wear mark.

SOURCE OF STANDARD:
Kentucky Writing Team -- Content Specialist

CONDITIONS FOR PERFORMANCE OF TASK:
Given a mechanic's tool set and a ridge reamer, remove a cylinder ridge from the piston cylinder.

ENABLING OBJECTIVE(S):
1. Measuring with precision tools
2. Used hand tools.

RESOURCES:

TEACHING ACTIVITIES:
1. Explain what causes cylinder ridges.
2. Demonstrate the use of an inside micrometer to determine the size of the ridge by measuring the ridge and measuring beneath the ridge. The difference will determine the amount needed to be removed.
3. Explain what damage can be caused by not removing the ridge.
4. List tools needed to remove the cylinder ridge.
5. Demonstrate how to properly remove the cylinder ridge.

CRITERION REFERENCED MEASURE:

Practical Application:
The student will remove the cylinder ridge without removing too much.

Method of Evaluating Practical Application:
Use the checklist for Performance Objective 115. All items must be rated satisfactory.

DUTY: MAINTAINING AND SERVICING BASIC ENGINE

PERFORMANCE OBJECTIVE V-TECS 116

TASK: Remove piston assembly.

STANDARD OF PERFORMANCE OF TASK:
Remove the piston assembly from the designated tractor. The piston will be removed without damage to the piston or any other parts of the engine.

SOURCE OF STANDARD:
Kentucky Writing Team -- Content Specialist

CONDITIONS FOR PERFORMANCE OF TASK:
Given a mechanic's tool set and a soft-faced hammer, remove a piston assembly from the designated tractor.

ENABLING OBJECTIVE(S):
1. Use hand tools.

RESOURCES:

TEACHING ACTIVITIES:
1. Discuss and list the engine parts that need to be removed in order to remove piston assembly.
2. Name the parts of the piston assembly.
3. Explain the necessity to realign rod cap with the rod.
4. Demonstrate how to remove the head and oil pan and how to drive the piston out through the top of the block after the ridge has been removed.
5. Have students list all the safety steps used in removing the engine block from the tractor.

CRITERION REFERENCED MEASURE:

Practical Application: The student will remove piston assembly from the designated tractor, without damaging any part of the piston assembly or block.

Method of Evaluating Practical Application: Observe the student during piston removal and check for damage if the piston removal is successful. Check completed work.

PERFORMANCE GUIDE:
1. With head and oil pan removed and cylinder reamed, loosen rod cap bolts or nuts.
2. Check piston and rod for identifying marks. If they are not already marked, mark each piston, rod, and rod cap with cylinder number and direction of placement.
3. Tap rod cap loose with a soft-faced hammer if necessary.
4. Remove rod cap bolts (or nuts) and push piston out of cylinder.
DUTY: MAINTAINING AND SERVICING BASIC ENGINE

PERFORMANCE OBJECTIVE V-TECS 117

TASK: Replace camshaft bearings.

STANDARD OF PERFORMANCE OF TASK:
Replace the camshaft bearings on the designated tractor. Disassembly and reassembly will be in the order recommended in the service manual and the new bearings will be the same size as those replaced. All parts will be to manufacturer's specifications and there will be no damage to any parts.

SOURCE OF STANDARD:

CONDITIONS FOR PERFORMANCE OF TASK:
Using the designated tractor, a new set of camshaft bearings, the service manual for the tractor, a micrometer for measuring parts to specifications and the necessary tools and lubricants, replace the camshaft bearings.

ENABLING OBJECTIVE(S):
1. Read a micrometer.
2. Use of hand tools.
3. Ability to read.

RESOURCES:

TEACHING ACTIVITIES:
1. Demonstrate how to disassemble the engine until the cam bearings are exposed.
2. Discuss the function of the cam bearings.
3. Demonstrate how to measure the outside diameter of the camshaft ends and how to determine the proper sizes cam bearings.
4. Discuss how the service manual is used to assist in engine disassembly and in determining rejection or acceptance of the camshaft.
5. Show students how to identify worn cam bearings.

CRITERION REFERENCED MEASURE:

Practical Application:
The student will replace camshaft bearings to manufacturer's specifications.

Method of Evaluating Practical Application:
Use the checklist for Performance Objective 117. All items must be rated satisfactory.

TASK: Replace dry sleeves.

STANDARD OF PERFORMANCE OF TASK:
Replace the dry sleeves on the designated tractor. The old sleeves must be removed without damage to the block; the block must be thoroughly cleaned and the new sleeves must be fully seated.

SOURCE OF STANDARD:
Kentucky Writing Team -- Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a mechanic's tool set and a sleeve puller, replace dry sleeves.

ENABLING OBJECTIVE(S):
1. Ability to disassemble the engine.
2. Ability to use arbor press.
3. Use of hand tools.

RESOURCES:

TEACHING ACTIVITIES:
1. Discuss and list the advantages and disadvantages of dry sleeves over wet sleeves.
2. Explain what happens to a new sleeve when it is put in the freezer.
3. Demonstrate how to remove the dry sleeve without damaging the cylinder block.
4. Demonstrate how to hone the sleeve after installation.
5. Explain why dry sleeves are used instead of using the cylinder wall.

CRITERION REFERENCED MEASURE:

Practical Application:
The student will replace dry sleeves.

Method of Evaluating Practical Application:
Use the checklist for Performance Objective 118. All items must be rated satisfactory.

TASK: Replace oil pan gasket assembly.

STANDARD OF PERFORMANCE OF TASK:
Replace the oil pan gasket assembly on the designated tractor. The oil pan will be clean, the gasket will be in place and sealed, and the bolts will be tightened to the correct torque.

SOURCE OF STANDARD:
Kentucky Writing Team -- Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a mechanic's tool set and a torque wrench, gasket and gasket compound, replace the oil pan and gasket assembly.

ENABLING OBJECTIVE(S):
1. Ability to use torque wrench.
2. Ability to use hand tools.

RESOURCES:

TEACHING ACTIVITIES:
1. Discuss how to determine if the gasket needs a sealant added before installing the oil pan.
2. Show the student how to use the manual to find the torque specifications for the oil pan bolts.
3. Discuss the function of the oil pan gaskets.
4. Identify the different materials gaskets can be made from and tell where the different materials are used.
5. Demonstrate the proper procedure for replacing the oil pan gasket.

CRITERION REFERENCED MEASURE:

Practical Application:
The student will replace the oil pan gasket.

Method of Evaluating Practical Application:
Use the checklist for Performance Objective 119. All items must be rated satisfactory.

STANDARD OF PERFORMANCE OF TASK:
Replace the piston rings on the designated tractor. The piston must be clean and unscratched. All steps on the instructor checklist must be completed during the replacement process.

SOURCE OF STANDARD:
Kentucky Writing Team -- Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given new piston rings, a mechanic's tool set, a ring expander, a ridge reamer, a ring compressor, and a groove cleaner, replace old piston rings.

ENABLING OBJECTIVE(S):
1. Use of hand tools.
2. Ability to read.

RESOURCES:

TEACHING ACTIVITIES:
1. Identify and name the functions of the following tools: ring expander, ridge reamer, ring compressor, and groove cleaner.
2. Discuss the reasons for ring replacement.
3. Discuss and list steps needed to prepare the cylinder before installing new rings.
4. Identify the different types of rings and explain their functions.
5. Demonstrate how to correctly install piston rings without damages to piston or rings.

CRITERION REFERENCED MEASURE:

Practical Application:
The student will replace piston rings.

TASK: Replace rear engine oil seal.

STANDARD OF PERFORMANCE OF TASK:
Install a rear engine oil seal on the designated tractor. The new seal will be correctly placed and will hold oil. All parts will be correctly placed and tightened.

SOURCE OF STANDARD:
Kentucky Writing Team -- Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a mechanic's tool set, a torque wrench, a new gasket, and a seal, install rear engine oil seal.

ENABLING OBJECTIVE(S):
1. Ability to disassemble and remove oil pan.
2. Use of hand tools.
3. Use of torque wrench.
4. Ability to read.

RESOURCES:

TEACHING ACTIVITIES:
1. Discuss the functions of the rear engine oil seal.
2. List the safety steps used when removing large engine parts.
3. Explain why the new seals must be lubricated before installation.
4. Identify the two materials that oil seals are usually made from.
5. Demonstrate how to replace rear engine oil seals.

CRITERION REFERENCED MEASURE:

Practical Application:
The student will replace rear engine oil seal.

STANDARD OF PERFORMANCE OF TASK:
Replace the valve guides on the designated engine. All guides needing service will be detected. Old guides will be removed without damage to the head, and new guides will be installed to specified position.

SOURCE OF STANDARD:
Kentucky Writing Team -- Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given new valve guides, a dial indicator, arbor press, and/or valve guide puller-driver, replace valve guides on the designated tractor.

ENABLING OBJECTIVE(S):
1. Ability to remove and disassemble cylinderhead.
2. Use of dial indicator.
3. Use of arbor press or valve guide puller.
4. Use of hand tools.

RESOURCES:

TEACHING ACTIVITIES:
1. Discuss the symptoms that would cause you to check for valve guide trouble.
2. Explain the effect on engines of worn valve guides.
3. List and discuss the methods used for correcting worn valve guides.
4. Demonstrate how to use the measuring devices that are used to measure for valve guide wear and in measuring valves.
5. Demonstrate the use of manufacturer's specification to determine the proper procedure to repair worn valve guides.

CRITERION REFERENCED MEASURE:

Practical Application:
The student will replace valve guides.

Method of Evaluating Practical Application:
Use the checklist for Performance Objective 123. All items must be rated satisfactory.

DUTY: MAINTAINING AND SERVICING LUBRICATION SYSTEM

PERFORMANCE OBJECTIVE V-TECS 131

TASK: Check transmission and/or differential lubricant levels.

STANDARD OF PERFORMANCE OF TASK:
Check the transmission and/or differential lubricant on a designated engine equipped with a dip stick. The dip stick should be clean when inserted and the student's reading should be the same as the instructor's.

SOURCE OF STANDARD:
Kentucky Writing Team -- Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a shop rag, check the transmission and/or differential lubricant level on an engine equipped with a dip stick.

ENABLING OBJECTIVE(S):
1. Ability to read.
2. Knowledge of safety rules concerning hand tools.

RESOURCES:
1. Fundamentals of Service — Engines, pp. 7-1 to 7-19.

TEACHING ACTIVITIES:
1. Discuss with students the damage that can occur when lubricant levels are too low.
2. Have students read FOS — Engines, Chapter 7, pp. 7-1 to 7-19.
3. Pass around and discuss examples of gears damaged from lack of lubrication.
4. Demonstrate to students how to check lubricant levels.
5. Have students check lubricant levels on assigned tractor.

CRITERION REFERENCED MEASURE:

Practical Application:
Have students check lubricant levels with dipstick using the steps in the checklist.

Method of Evaluating Practical Application:
Use checklist for Performance Objective 131, all steps must be rated satisfactory.
CHECKLIST FOR PERFORMANCE OBJECTIVE V-TEC i31 EVALUATION

PERFORMANCE TEST FOR CHECKING TRANSMISSION AND/OR DIFFERENTIAL LUBRICANT LEVELS

DUTY: MAINTAINING AND SERVICING LUBRICATION SYSTEM

PERFORMANCE OBJECTIVE V-TECS 132

TASK: Check transmission and/or differential lubricant levels (continued).

STANDARD OF PERFORMANCE OF TASK:
Check the transmission and/or differential lubricant level on a designated engine equipped with a plug. The engine will have the proper oil level as specified in operator's manual and the plug will be tight when the operation is complete.

SOURCE OF STANDARD:
Kentucky Writing Team -- Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a wrench to fit the type of plug head and proper lubricant, check the transmission and/or differential lubricant level on a plug equipped engine.

ENABLING OBJECTIVE(S):
1. Ability to read.
2. Knowledge of safety rules concerning hand tools.
3. Use of hand tools.

RESOURCES:
1. Fundamentals of Service — Engines, pp. 7-1 to 7-9.

TEACHING ACTIVITIES:
1. Discuss with student the damage that can occur when lubricant levels are too low.
2. Have student read POS — Engines, Chapter 7, pp. 7-1 to 7-9.
3. Discuss and show examples of gears damaged by lack of lubrication.
4. Demonstrate to students how to check lubricant levels on transmissions with a plug.
5. Have student check lubricant levels on transmissions with a plug.

CRITERION REFERENCED MEASURE:

Practical Application:
Have student check lubricant level on transmission with a plug using the steps in the checklist.

Method of Evaluating Practical Application:
Use checklist for Performance Objective 132, all steps must be rated satisfactory.

PERFORMANCE OBJECTIVE V-TECS 133

TASK: Drain and refill differentials.

STANDARD OF PERFORMANCE OF TASK:
Drain and refill the differentials on the designated tractor. Both the lubricant and the lubrication level will be correct according to manufacturer's specifications. Both fill and drain plugs will be tight.

SOURCE OF STANDARD:
Kentucky Writing Team -- Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a container for used oil, plug wrenches, service manual, lubricant, and shop rags, drain and refill the differentials.

ENABLING OBJECTIVE(S):
1. Ability to read.
2. Knowledge of safety rules concerning hand tools.
3. Use of hand tools.

RESOURCES:
1. Fundamentals of Service — Engines, pp. 7-1 to 7-19.

TEACHING ACTIVITIES:
1. Discuss with student the cost of changing oil in the differential as compared to cost of having the rear end repaired.
2. Have students read FOS — Engines, Chapter 7, pp. 7-1 to 7-19.
3. Explain to student different viscosities of lubricating oils.
4. Show students how to drain and refill differential.
5. Have student drain and refill differential on assigned tractor.

CRITERION REFERENCED MEASURE:

Practical Application:
Have students drain and refill differential using the steps in the checklist.

DUTY: MAINTAINING AND SERVICING HYDRAULICS

PERFORMANCE OBJECTIVE V-TECS 143

TASK: Change hydraulic filters.

STANDARD OF PERFORMANCE OF TASK:
Change the hydraulic filters on the designated tractor. The new filters will be the type recommended by the service manual. They will be installed correctly and function as specified. The relief valve will be clean and operative and oil will be replaced if indicated.

SOURCE OF STANDARD:

CONDITIONS FOR PERFORMANCE OF TASK:
Given the new filters recommended in the manufacturer's service manual, new parts and clean oil if needed, and the necessary tools, change the hydraulic oil filters.

ENABLING OBJECTIVE(S):
1. Know shop safety practices.
2. Use of hand tools.
3. Ability to read.

RESOURCES:
1. Operator's manual for designated tractor.

TEACHING ACTIVITIES:
1. Discuss shop safety.
2. Discuss filters, their function, and operation.
3. Discuss relief valves and their function and operation.
4. Discuss proper oil type.
5. Demonstrate filter change procedures.
6. Have students change hydraulic filters on designated tractor.

CRITERION REFERENCED MEASURE:

Practical Application:
Change hydraulic filter on designated tractor.

Method of Evaluating Practical Application:
Using the check list for Performance Objective 143. All items must be rated satisfactory.
CHECKLIST FOR PERFORMANCE OBJECTIVE V-TECS 143 EVALUATION

PERFORMANCE TEST FOR CHANGING HYDRAULIC FILTERS

Student's Name

DIRECTIONS TO STUDENT: Change hydraulic filters on the designated tractor. All steps on the check list must be completed.

DIRECTIONS TO EVALUATOR: Provide needed supplies and equipment. Observe student. All items must be rated satisfactory.

ITEMS TO BE EVALUATED

DUTY: MAINTAINING AND SERVICING HYDRAULICS

PERFORMANCE OBJECTIVE V-TECS 144

TASK: Clean and flush the hydraulic system.

STANDARD OF PERFORMANCE OF TASK:
Flush the hydraulic system on the designated tractor. There will be no damage to the system, flushing will continue until the system is clean and the recommended oil will be used.

SOURCE OF STANDARD:

CONDITIONS FOR PERFORMANCE OF TASK:
Given the manufacturer's service manual, the correct type of hydraulic oil and the tools needed, clean and flush a hydraulic system.

ENABLING OBJECTIVE(S):
1. Ability to read.
2. Knowledge of safety concerning hand tools, creepers, and hydraulic pressure.
3. Use of hand tools.

RESOURCES:
1. Fundamentals of Service — Hydraulics, pp. 11-1 thru 11-10.

TEACHING ACTIVITIES:
1. Discuss the importance of keeping the hydraulic system clean.
2. List and discuss the effects of a dirty hydraulic system on the life of a tractor.
3. Have the students read Chapter 10, pages 1-10 in Fundamentals of Service — Hydraulics.
4. Demonstrate how to clean and flush a hydraulic system.
5. Discuss the use of the service manual in determining the procedure for flushing and cleaning the hydraulic system.

CRITERION REFERENCED MEASURE:

Practical Application:
Have student clean and flush hydraulic system using the steps in the performance guide.

Method of Evaluating Practical Application:
Use check list for Performance Objective 144. All steps must be rated satisfactory.

DUTY: MAINTAINING AND SERVICING HYDRAULICS

PERFORMANCE OBJECTIVE V-TECS 145

TASK: Drain and refill hydraulic system.

STANDARD OF PERFORMANCE OF TASK:
Drain and refill a designated hydraulic system. The system will operate smoothly as determined by the instructor. The oil added will be that recommended by the manufacturer and at the correct level.

SOURCE OF STANDARD:

CONDITIONS FOR PERFORMANCE OF TASK:
Given the service manual, new hydraulic oil and the necessary tools, drain and refill the hydraulic system in a clean area.

ENABLING OBJECTIVE(S):
1. Ability to read.
2. Knowledge of safety concerning hydraulic pressure, hand tools, and creepers.
3. Use of hand tools.

RESOURCES:
1. Fundamentals of Service Hydraulics, pp. 11-1 thru 11-10.

TEACHING ACTIVITIES:
1. Explain to students the importance of changing hydraulic fluid in tractors.
2. Have the students read Chapter 11, pages 1-10 in Fundamentals of Service — Hydraulics.
3. Discuss the causes for need to change hydraulic fluid.
4. Demonstrate how to drain and refill the hydraulic system.
5. Have the students list the steps followed in draining and refilling the hydraulic system.

CRITERION REFERENCED MEASURE:
Practical Application:
Have the student drain and refill the hydraulic system. The system will operate smoothly.

Method of Evaluating Practical Application:
Use checklist for Performance Objective 145. All items must be rated satisfactory.

DUTY: MAINTAINING AND SERVICING HYDRAULICS

PERFORMANCE OBJECTIVE V-TECS 146

TASK: Maintain hydraulic cylinders.

STANDARD OF PERFORMANCE OF TASK:
Maintain the cylinders on the specified hydraulic system. All parts will be clean and correctly lubricated. There will be no damage to parts. New seals will be installed where needed and the hydraulic tester will indicate the system functions to specifications.

SOURCE OF STANDARD:

CONDITIONS FOR PERFORMANCE OF TASK:
Given a hydraulic tester, a service manual, replacement parts as needed, and the necessary tools and lubricants, maintain the hydraulic cylinders.

ENABLING OBJECTIVE(S):
1. Knowledge of safety related to hydraulic pressure and hand tools.
2. Ability to read.
3. Use of hand tools.

RESOURCES:
1. Fundamentals of Service -- Hydraulics, pp. 4-7.

TEACHING ACTIVITIES:
1. Discuss the function of hydraulic cylinders.
2. Show the students how to set up hydraulic tester.
3. Demonstrate the correct procedure for rebuilding a hydraulic cylinder.
4. Demonstrate the use of the hydraulic tester.
5. Have the students list the reasons for rebuilding a hydraulic cylinder.

CRITERION REFERENCED MEASURE:

Practical Application:
Provide students with a hydraulic system that has hydraulic cylinders and have them maintain them. All the steps in the checklist must be completed.

Method of Evaluating Practical Application:
Use checklist for Performance Objective 146. All items must be rated satisfactory.

**Student's Name** ____________________ **Date** __________
DUTY: MAINTAINING AND SERVICING HYDRAULICS

PERFORMANCE OBJECTIVE V-TECS 147

TASK: Operate and analyze with a hydraulic tester.

STANDARD OF PERFORMANCE OF TASK:
Measure the oil flow, pressure, and temperature on the designated tractor. The results of the test will be within 5 percent of the results obtained by the instructor, and all precautions will be taken not to damage any parts.

SOURCE OF STANDARD:

CONDITIONS FOR PERFORMANCE OF TASK:
Given an operator's manual, a hydraulic tester, operating instructions and the needed tools, measure the oil flow pressure, and temperature on the designated tractor.

ENABLING OBJECTIVE(S):
1. Ability to read.
3. Use of hand tools.

RESOURCES:
1. Fundamentals of Service — Hydraulics, pp. 12-5

TEACHING ACTIVITIES:
1. Explain to students the importance of a hydraulic system operating properly.
2. Demonstrate to students how to set up hydraulic tester.
3. Demonstrate to students how to attach hydraulic tester to a hydraulic system and test the system.
4. Have students list the steps followed in testing the hydraulic system.
5. Have students prepare a form for recording temperature, pressure, and oil flow.

CRITERION REFERENCED MEASURE:
Written test on setting up hydraulic tester and testing the system components.
PERFORMANCE OBJECTIVE V-TECS 147 (Continued)

PERFORMANCE GUIDE:

NOTE: A hydraulic tester (analyzer or test gauge) will measure oil flow, pressure, temperature or isolate faulty components.

1. Read instruction manual furnished by the manufacturer of the hydraulic tester, and read the service manual of the tractor for specifications on relief valve pressure, pump output, operating temperature, and engine RPM.
2. Steam clean the machine and plug all openings to keep out dirt.
3. Disconnect the oil lines following instructions from manufacturers of tractor and tester.
4. Connect tester as recommended and check for: temperature, flow, pressure, .eakage.
5. To operate the hydraulic tester: With tester load valve open, record the maximum pump flow at no pressure; close the valve slowly to increase pressure. Record the flow at 250 psi increments from no pressure to maximum pressure. Record results: Open hydraulic tester load valve until the maximum pump flow is again at no pressure, and then shut off engine.
6. Analyze with the hydraulic tester: Check manufacturer's specifications and compare readings, especially for pump test. If the pump test is satisfactory, run a system test following manufacturer's instructions and diagnose problems or freedom from problems by comparing results with specifications. NOTE: If flow at each pressure is the same as for the pump test, it means there are no problems with any component. If not and the (a) pressure drops prior to the time full load is reached, one of the circuits is malfunctioning, or (b) if flow drops the same with the control valves in position, the relief valve may be the cause of trouble. Check service manual.
Performance Objective No. 147

Test for Hydraulic Tester

1. List 3 things we need to know to test a hydraulic system.
   Flow
   Temperature
   Pressure

2. Using the illustration, show the places that we need to connect the hydraulic tester to perform the following tests:
   1. Pump test ___
   2. Relief valve ___
   3. Control valve ___
   4. Cylinder (actuator) ___

DUTY: MAINTAINING AND SERVICING HYDRAULICS

PERFORMANCE OBJECTIVE V-TECS 148

TASK: Repair hydraulic assist transmissions.

STANDARD OF PERFORMANCE OF TASK:
Repair a hydraulic assist transmission on the designated tractor. There will be no damage to any parts. Replacement parts will be those specified by the manufacturer, and the system will function to specifications. All parts will be disassembled and reassembled according to manufacturer's instructions.

SOURCE OF STANDARD:
Kentucky Writing Team -- Content Specialist

CONDITIONS FOR PERFORMANCE OF TASK:
Given the manufacturer's service manual, the necessary tools, replacement parts, and testing equipment, repair the hydraulic assist transmission.

ENABLING OBJECTIVE(S):
1. Ability to read.
2. Knowledge of hydraulic safety practices.
3. Use of hand tools.

RESOURCES:
1. Fundamentals of Service — Power Trains. pp. 4-1 thru 4-11.

TEACHING ACTIVITIES:
1. Explain to students how hydraulic assist transmissions operate.
2. Demonstrate to students how to trouble shoot hydraulic assist transmissions.
3. Have students read chapter 4, pages 1-11 of Fundamentals of Service — Power Trains.
4. Discuss the procedure used in repairing hydraulic assist transmissions.
5. Demonstrate how to repair a hydraulic assist transmission.

CRITERION REFERENCED MEASURE:

Practical Application:
Have students repair a hydraulic assist transmission. All steps in checklist must be completed.

Method of Evaluating Practical Application:
Use checklist for Performance Objective 148. All items must be rated satisfactory.

DUTY: MAINTAINING AND SERVICING HYDRAULICS

PERFORMANCE OBJECTIVE V-TECS 155

TASK: Service hydraulic motors.

STANDARD OF PERFORMANCE OF TASK:
Service the designated hydraulic motor. All parts will be cleaned and worn or damaged parts replaced. The pressure, speed, torque, displacement, load and temperature will be adjusted to manufacturer's specifications.

SOURCE OF STANDARD:
Kentucky Writing Team -- Supervisor.

CONDITIONS FOR PERFORMANCE OF TASK:
Given the manufacturer's service manual, testing equipment, the necessary tools and replacement parts, and fresh oil, service a hydraulic motor.

ENABLING OBJECTIVE(S):
1. Knowledge of hydraulic safety.
2. Ability to read.
3. Use of hand tools.

RESOURCES:

TEACHING ACTIVITIES:
1. Discuss the types of hydraulic motors.
2. Show students examples of hydraulic motors and discuss their applications.
3. Demonstrate the disassembly procedure for hydraulic motor.
4. Using the service manual show the student how you determine if motor parts must be replaced.
5. Demonstrate the repair and reassembly of hydraulic motors.
6. Demonstrate the testing procedure for a repaired hydraulic motor.

CRITERION REFERENCED MEASURE:

Practical Application:
Have students service hydraulic motors. All steps in the checklist must be completed.

Method of Evaluating Practical Application:
Use checklist for Performance Objective 155. All items must be rated satisfactory.

DUTY: MAINTAINING AND SERVICING HYDRAULICS

PERFORMANCE OBJECTIVE V-TECS 156

TASK: Service hydrostatic drive.

STANDARD OF PERFORMANCE OF TASK:
Service the designated hydrostatic drive system. All parts will be disassembled and reassembled following manufacturer's instructions. Working area and all parts will be clean. No dirt, lint, or chaff will enter the system and the system will operate to manufacturer's specifications with no leakage.

SOURCE OF STANDARD:

CONDITIONS FOR PERFORMANCE OF TASK:
Given the manufacturer's service manual, steam cleaning equipment, the necessary clean and grease free tools and supplies, a clean working area, and replacement parts and oil, service a hydrostatic drive pump and motor.

ENABLING OBJECTIVE(S):
1. Knowledge of hydraulic safety practices.
2. Ability to read.
3. Use of hand tools.

RESOURCES:

TEACHING ACTIVITIES:
1. Explain to students how hydrostatic drives operate.
2. Show students how to test hydrostatic drives.
3. Discuss and list the advantages and disadvantages of hydrostatic drives.
4. Demonstrate the procedure for servicing a hydrostatic drive.
5. Have students list the steps followed in servicing a hydrostatic drive.

CRITERION REFERENCED MEASURE:
Practical Application:
Have students repair hydrostatic drive. All steps in checklist must be completed.

Method of Evaluating Practical Application:
Use checklist for Performance Objective 156. All items must be rated satisfactory.

PERFORMANCE OBJECTIVE V-TECS 158

TASK: Service and repair hydraulic valves

STANDARD OF PERFORMANCE OF TASK:
Service and repair the hydraulic valves on the designated tractor. When service is completed, hydraulic circuits will work to within 10 percent of manufacturer's specifications.

SOURCE OF STANDARD:
Kentucky Writing Team -- Supervisor.

CONDITIONS FOR PERFORMANCE OF TASK:
Using a designated tractor, correct wrenches, service manual, a micrometer, a hand hydraulic pump with pressure gauge, fittings to attach pump to valve, hydraulic fluid, repair parts, and clean rags, service and repair hydraulic valves in a clean work area.

ENABLING OBJECTIVE(S):
1. Knowledge of hydraulic safety practices.
2. Use of hand tools.
3. Ability to read.

RESOURCES:

TEACHING ACTIVITIES:
1. Discuss the types of hydraulic control valves.
2. Show examples of control valves to the students.
3. List the different types of control valves and discuss their uses.
4. Have student read Chapter 3, pages 2-18 in Fundamentals of Service—Hydraulics.
5. Demonstrate the repair procedure for each type of valve.

CRITERION REFERENCED MEASURE:

MAINTAINING AND SERVICING POWERTRAIN
DUTY: MAINTAINING AND SERVICING POWERTRAIN

PERFORMANCE OBJECTIVE V-TECS 161

TASK: Measure backlash and clearance in gear train.

STANDARD OF PERFORMANCE OF TASK:
On the designated tractor, measure the backlash and clearance in the gear train. The dial indicator readings will agree with the instructor's readings. Shims will be correctly installed and final adjustment will be to specifications. Disassembly and reassembly will follow manufacturer's instructions.

SOURCE OF STANDARD:

CONDITIONS FOR PERFORMANCE OF TASK:
Given a gear train with too much backlash, a dial indicator, shims, the service manual and the necessary tools, measure the backlash and clearance in a gear train.

ENABLING OBJECTIVE(S):
1. Know shop safety.
2. Ability to read.
3. Use of hand tools.

RESOURCES:

TEACHING ACTIVITIES:
1. Discuss shop safety.
2. Discuss dial indicators and their uses.
3. Discuss backlash and explain what causes it.
4. Demonstrate how to move dial indicator measurements.
5. Demonstrate how to measure backlash and clearance in gear train.

CRITERION REFERENCED MEASURE:

Practical Application:
Have students measure backlash and clearance in gear train.

DUTY: MAINTAINING AND SERVICING POWERTRAIN

PERFORMANCE OBJECTIVE V-TECS 165

TASK: Service power-shift transmission

STANDARD OF PERFORMANCE OF TASK:
Service the power-shift transmission on the designated tractor. All parts disassembled and reassembled will follow the instructions and meet the specifications given in the service manual. All excessively worn or defective parts will be replaced.

SOURCE OF STANDARD:

CONDITIONS FOR PERFORMANCE OF TASK:
Given the manufacturer's service manual, solvents, oil, replacement parts and the necessary tools and checking equipment, service a power-shift transmission.

ENABLING OBJECTIVE(S):
1. Know shop safety practices.
2. Ability to read.
3. Use of hand tools.

RESOURCES:
3. Tractor Operation and Daily Care, pp. 1-84.

TEACHING ACTIVITIES:
1. Discuss shop safety.
2. Discuss power shift transmissions -- principles and functions.
3. Discuss oils and solvents.
4. Discuss and demonstrate removal and replacement of transmission.
5. Demonstrate how tolerances for worn or defective parts are determined.
6. Have students service powershift transmission on the designated tractor.

CRITERION REFERENCED MEASURE:

Practical Application:
Service power-shift transmission in a designated tractor.

Method of Evaluating Practical Application:
Using the checklist for Performance Objective 165, all items must be rated satisfactory.

DUTY: MAINTAINING AND SERVICING POWERTRAIN

PERFORMANCE OBJECTIVE V-TECS 166

TASK: Service sliding-gear transmission.

STANDARD OF PERFORMANCE OF TASK:
Service the sliding-gear transmission on the designated tractor. All parts will be clean and operate to manufacturer's specifications, and replacement parts will be installed where necessary. Disassembly and reassembly will follow manufacturer's instructions.

SOURCE OF STANDARD:

CONDITIONS FOR PERFORMANCE OF TASK:
Given the manufacturer's service manual, oil, needed replacement parts, the tools and equipment stated in the service manual, service a sliding-gear transmission.

ENABLING OBJECTIVE(S):
1. Know shop safety.
2. Ability to read.
3. Use of hand tools.

RESOURCES:

TEACHING ACTIVITIES:
1. Discuss shop safety.
2. Discuss sliding gear transmissions -- principle and function.
3. Discuss oils.
4. Discuss disassembly and reassembly procedures.
5. Demonstrate how to service sliding-gear transmission.

CRITERION REFERENCED MEASURE:

Practical Application:
Service sliding-gear transmission.

Method of Evaluating Practical Application:
Using the checklist for Performance Objective 166, all items must be rated satisfactory.
# Checklist for Performance Objective V-TECS 166 Evaluation

**Performance Test for Servicing Sliding-Gear Transmission**

**Student's Name**

**Date**

**Directions to Student:** Service the sliding-gear transmission in the designated tractor. Worn and defective parts must be replaced to follow manufacturer's specifications. All steps on the checklist must be completed.

**Directions to Evaluator:** Provide needed supplies and equipment. Observe student. All items must be rated satisfactory.

MAINTAINING AND SERVICING DIFFERENTIALS
DUTY: MAINTAINING AND SERVICING DIFFERENTIALS

PERFORMANCE OBJECTIVE V-TECS 167

TASKS: Correct adjustment of ring gear and pinion.

STANDARD OF PERFORMANCE OF TASK:
Correct the adjustment of the ring gear and pinion on the designated tractor. The adjustments will be to manufacturer's specifications, all parts will be reassembled and installed according to manufacturer's directions, and there will be no damage to any parts.

SOURCE OF STANDARD:
Kentucky Writing Team -- Content Specialist.

CONDITIONS FOR PERFORMANCE OF TASK:
Given a service manual for the tractor being used, a complete set of mechanic's tools, and a dial indicator, correct the adjustment of the ring gear and pinion on the differentials.

ENABLING OBJECTIVE(S):
1. Know shop safety.

RESOURCES:

TEACHING ACTIVITIES:
1. Discuss shop safety.
2. Discuss dial indicators.
3. Demonstrate the use of dial indicators.
4. Discuss ring gear and pinion, their function and purpose.
5. Demonstrate proper adjustment of ring gear and pinion.
6. Have students correct the adjustment of ring gear and pinion.

CRITERION REFERENCED MEASURE:

Practical Application:
Have students correct adjustment of ring gear and pinion.

Method of Evaluating Practical Application:
Using the checklist for Performance Objective 167, all items must be rated satisfactory.

DUTY: MAINTAINING AND SERVICING FINAL DRIVE

PERFORMANCE OBJECTIVE V-TECS 175

TASK: Service final drives.

STANDARD OF PERFORMANCE OF TASK:
Service the final drive on the designated tractor. All parts will be clean and lubricated. All parts will be torqued according to manufacturer's specifications, and there will be no damage to any parts. Disassembly and reassembly must follow manufacturer's recommendations.

SOURCE OF STANDARD:
Kentucky Writing Team -- Content Specialist

CONDITIONS FOR PERFORMANCE OF TASK:
Using the designated tractor and service manual, proper tools, cleaning solutions, lubrications, and replacement parts, service three types of final drives.

ENABLING OBJECTIVE(S):
1. Know shop safety.
2. Ability to read.
3. Use of hand tools.

RESOURCES:
1. Operator's manual for designated tractor.
2. Operator's manual for torque wrench.

TEACHING ACTIVITIES:
1. Discuss shop safety.
2. Discuss torque wrenches.
3. Demonstrate the use of torque wrenches.
4. Discuss three types of final drives and their function and purpose.
5. Discuss lubricants.
6. Demonstrate the procedures for servicing the three types of final drives.

CRITERION REFERENCED MEASURE:

Practical Application:
Service the final drives.

Method of Evaluating Practical Application:
Using the checklist for Performance Objective 175, all items must be rated satisfactory.
PERFORMANCE OBJECTIVE V-TECS 175 (Continued)

PERFORMANCE GUIDE:

NOTE: There are three major types of final drive systems -- pinion and planetary. Check manufacturer's service manual to determine the type of final drive for the tractor to be serviced.

1. Service pinion drive system. NOTE: There are two types of pinion and gear reductions -- (a) a pinion drive located in the differential case, and (b) a pinion drive located on the outer ends of final drives.
   a. Pinion drive inside differential case:
      -- Following instructions in the manufacturer's service manual, disassemble all parts necessary to reach pinion drive.
      -- Remove pinion gears, clean thoroughly, checking for wear or damage. Repair or replace parts where necessary.
      -- Reassemble pinion gears and torque to manufacturer's specifications.
      -- Reassemble gears in differential case to manufacturer's instructions and specifications.
   b. Pinion drive on outer ends of final drive:
      -- Following instructions in the service manual, remove all parts necessary to reach the case or housing for pinion gears.
      -- Detach gear housing from the differential and wheels.
      -- Remove pinion gear and spur gear from housing, discarding old oil.
      -- Clean, inspect for damage, and repair or replace parts if necessary.
      -- Reassemble gears according to manufacturer's instructions and specifications and replace oil.
      -- Reassemble gear housing and all other parts removed following directions in the service manual.

2. Service planetary drive system. (See Performance Objective 177.)
**CHECKLIST FOR PERFORMANCE OBJECTIVE V-TECS 175 EVALUATION**

**PERFORMANCE TEST FOR SERVICING FINAL DRIVES**

**Directions to Student:**
Service the final drive on the designated tractor. All parts will be torqued according to manufacturer's specifications, and there will be no damage to parts.

APPENDIX A
DEFINITION OF TERMS

The following terms are supplied to establish operational definitions as they apply to this study.

CAREER LADDER: A vertical arrangement of jobs within an occupational area to indicate skill distinction and progression.

CATALOGS: A comprehensive collection of performance objectives, performance guides, criterion-referenced measures, and related data organized by a job structure or career ladder within a domain of interest.

CONSORTIUM: A group of state agencies, institutions, or other entities which has been legally constituted through letters of commitment, agreements, or by assignment of higher authorities to work together toward the solution of problems in education. A membership from autonomous agencies and institutions which cuts across state boundaries as it attempts to solve problems or meet goals.

D.O.T. CODE: A nine-digit number used to identify a specific job within a given domain.

INSTRUCTIONAL SYSTEM DEVELOPMENT (ISD): A deliberate, orderly process for planning and developing instructional programs which insures that personnel are taught the knowledge, skills, and attitudes essential for successful job performance. Depends on a description and analysis of the tasks necessary for performing the job, objectives, evaluation procedures to determine whether or not the objectives have been reached, and methods for revising the process based on empirical data.

OCCUPATIONAL INVENTORY (TASK INVENTORY BOOKLET): A survey instrument containing tasks performed by job incumbents within D.O.T.'s complete with background information and a list of tools and equipment.

PERFORMANCE-BASED INSTRUCTION: Instruction which, when properly designed and applied, results in the learner's demonstration of certain abilities. The desired abilities are selected before the instruction is designed and are clearly defined as observable performance objectives. In V-TECS catalogs, the abilities are primarily psychomotor. This type of instruction is also referred to as competency-based instruction.

PERFORMANCE GUIDE (PG): A series of steps, arranged in a sequence ordinarily followed, which when completed may result in the performance of a task. Also, called "teaching steps."

PROJECT: An occupational domain area selected by a V-TECS member state for catalog; development based upon the U.S. Department of Labor's Dictionary of Occupational Titles (D.O.T.).
STATE-OF-THE-ART (SOA STUDY): Research conducted to determine the current status of performance-based instructional materials and practices in the domain area under study and to obtain other information that might be useful in catalog development.

TASK: A unit of work activity which constitutes logical and necessary steps in the performance of a duty. A task has a definite beginning and ending point in its accomplishments and generally consists of two or more definite steps.

TASK ANALYSIS: A characteristic of a task statement which makes its accomplishments crucial to the acceptable performance of a worker or student. A method of analysis which identifies the critical tasks and aids in determining the consequence of poor performance or lack of performance by the worker or student.

WRITING TEAM: A team of people representing instructors within subject matter expertise, persons having knowledge and experience in developing criterion-referenced measures, and local or state supervisors of incumbent workers whose function is to analyze occupational data and develop performance objectives and criterion-referenced measures for specific D.O.T. areas.

380
Duty and Task

Performance Objective/
Page Number

III. MAINTAINING AND SERVICING THE IGNITION CIRCUIT

Measure resistance using ohmmeter 31/70
Replace distributor points and condenser 32/72
Replace ignition distributor 33/74
Replace ignition wire 34/76
Replace ignition wire 35/78
Service spark plugs 36/80
Set breaker point dwell using a dwell meter 37/82
Set ignition timing using a timing light 38/84
Test distributor advance mechanism 39/86
Test and replace ignition coil 40/88
Test ignition distributor 41/90

IV. MAINTAINING AND SERVICING THE COOLING SYSTEM

Flush and clean radiator 42/93
Replace cooling system thermostat 43/95
Replace radiator hose 44/97
Replace water pump 45/99
Service fanbelts 46/101
Test cooling system for leaks 47/103
Test radiator coolant 48/105
Test radiator pressure caps 49/107
Test thermostat 50/109

V. MAINTAINING AND SERVICING THE CHARGING CIRCUIT

Adjust voltage regulator 51/112
Adjust voltage regulator 52/114
Check armature and fields 53/116
Polarize a tractor generator 54/118
Test a tractor generator on a bench using the 
test for the common A circuit generator 55/119
Replace amperage gauge 56/121
Replace bearings (alternator or generator) 57/123
Replace diodes 58/124
Replace generator brushes 59/126
Replace heat sink 60/128
Service the alternator regulator 61/130
Test alternator diodes 62/132
Test charging circuit using a voltmeter, ammeter 
and/or carbon pile 63/133
Turn armature 64/135
VI. MAINTAINING AND SERVICING THE STARTING CIRCUIT
Check armature and fields 65/138
Check ignition switch 66/140
Check safety switches 67/142
Check solenoid 68/144
Replace bearings and bushings 69/146
Replace ring gear 70/148
Replace starter brushes 71/150
Replace starter drive 72/152
Replace starter motor solenoid 73/154
Replace starter motors 74/156
Turn armature 75/158

VII MAINTAINING AND SERVICING GASOLINE FUEL SYSTEM
Adjust carburetor float 76/161
Adjust carburetor idle air/fuel mixture 77/163
Adjust engine idle speed 78/165
Clean carburetor 79/167
Clean settling bulb (sediment bowl) 80/169
Install carburetor repair kit 81/171
Replace fuel pump 82/173
Service a fuel pump (diaphragm type) 83/175
Service fuel tanks and fuel lines 84/177

VIII. MAINTAINING AND SERVICING DIESEL FUEL SYSTEM
Bleed a diesel fuel system 85/180
Service diesel fuel filters 86/182
Service a diesel fuel injector 87/184
Service the diesel injector pump 88/187
Service a diesel-transfer pump 89/190
Service turbochargers 90/193
Time fuel injector pump to engine 91/195

IX. MAINTAINING AND SERVICING BASIC ENGINE
Adjust valve clearance 92/198
Check cylinder head and block for warpage 93/201
Check cylinder block, oil passages and piston 94/203
Deglaze cylinder 95/206
Grind valves 96/208
Install connections rod caps 97/211
Install a crankshaft 98/214
Install cylinder heads 99/216
Install front oil seals 100/218
Install main bearings and caps 101/220
Install piston assembly 102/223
Install rear main oil seals 103/225
