Guides - Non-Classroom Use (055)

Elementary Secondary Education; Learning Strategies; *Parent Materials; Parent Teacher Cooperation; Standardized Tests; Study Skills; Teacher Made Tests; *Test Anxiety; *Test Coaching; *Test Wiseness

This leaflet describes simple techniques for developing children's ability to do well on tests, as derived from research done through the Office of Educational Research and Improvement. Suggestions for parents are divided into five sections: (1) Why Test?; (2) Ask the School; (3) Avoid Test Anxiety; (4) Do's and Don'ts; and (5) After the Test. Check lists offer step-by-step methods for reducing test anxiety, preparing for tests, taking tests, judging a child's progress, and encouraging good study habits. (LMO)
Help Your Child Improve In Test-Taking
"We must make sure we have put our children first and that their education is a top priority."
President Ronald Reagan

TEST. It’s a loaded word. Important...something to care about...something that can mean so much we get apprehensive thinking about it.

Tests are important, especially to schoolchildren. A test may measure a basic skill. It can affect a year’s grade. Or, if it measures the ability to learn, it can affect a child’s placement in school. So it’s important to do well on tests.

Besides, the ability to do well on tests can help throughout life in such things as getting a driver’s license, trying out for sports, or getting a job. Without this ability, a person can be severely handicapped.

Your child can develop this ability. And you can help the child do it. Just try the simple techniques developed through Office of Educational Research and Improvement (OERI) research. This leaflet tells you how.

Why Test?

I T’S helpful for a child to understand why schools give tests. And to know the different kinds of tests.

Tests are a yardstick. Schools use them to measure, and then improve, education. Some tell schools that they need to strengthen courses or change teaching techniques. Other tests compare students by schools, school districts, or cities. All tests determine how well your child is doing. And that’s very important.

Most of the tests your child will take are “teacher-made.” That is, teachers design them. These tests are associated with the grades on report cards. They help measure a student’s progress—telling the teacher and the student whether he or she is keeping up with the class, needs extra help, or, perhaps, is far ahead of other students.

Now and then your child will take “standardized” tests. These use the same standards to measure student performance across the country. Everyone takes the same test according to the same rules. This makes it possible to measure each student’s performance against that of others. The group with whom a student’s performance is compared is a “norm group” and consists of many students of the same age or grade who took the same test.
doing this, the student should feel prepared at exam time.)

- Don't "cram" the night before—cramming increases anxiety which interferes with clear thinking. Get a good night's sleep. Rest, exercise, and eating well are as important to test-taking as they are to other schoolwork.

- Read the directions carefully when the teacher hands out the test. If you don't understand them, ask the teacher to explain.

- Look quickly at the entire examination to see what types of questions are included (multiple choice, matching, true/false, essay) and, if possible, the number of points for each. This will help you pace yourself.

- In taking an essay exam, read all the questions first and use the margin for noting phrases that relate to the answers. These phrases will help in writing the essay answer.

- If you don't know the answer to a question, skip it and go on. Don't waste time worrying about it. Mark it so you can identify it as unanswered. If you have time at the end of the exam, return to the unanswered question(s).

"Parents are our children's first and most important teachers; classroom teachers are parents' trustees."

William J. Bennett, Secretary of Education
**Do’s and Don’t’s**

YOU can be a great help to your children if you will observe these do’s and don’t’s about tests and testing:

- Don’t be too anxious about a child’s test scores. If you put too much emphasis on test scores, this can upset a child.

- Do encourage children. Praise them for the things they do well. If they feel good about themselves, they will do their best. Children who are afraid of failing are more likely to become anxious when taking tests and more likely to make mistakes.

- Don’t judge a child on the basis of a single test score. Test scores are not perfect measures of what a child can do. There are many other things that might influence a test score. For example, a child can be affected by the way he or she is feeling, the setting in the classroom, and the attitude of the teacher. Remember, also, that one test is simply one test.

- Meet with your child’s teacher as often as possible to discuss his/her progress. Ask the teacher to suggest activities for you and your child to do at home to help prepare for tests and improve your child’s understanding of schoolwork. Parents and teachers should work together to benefit students.

- Make sure your child attends school regularly. Remember, tests do reflect children’s overall achievement. The more effort and energy a child puts into learning, the more likely he/she will do well on tests.

- Provide a quiet, comfortable place for studying at home.

- Make sure that your child is well rested on school days and especially the day of a test. Children who are tired are less able to pay attention in class or to handle the demands of a test.

**After the Test**

- Give your child a well rounded diet. A healthy body leads to a healthy, active mind. Most schools provide free breakfast and lunch for economically disadvantaged students. If you believe your child qualifies, talk to the school principal.

- Provide books and magazines for your youngster to read at home. By reading new materials, a child will learn new words that might appear on a test. Ask your child’s school about a suggested outside reading list or get suggestions from the public library.

It’s important for children to review test results. This is especially true when they take teacher-made tests. They can learn from a graded exam paper. It will show where they had difficulty and, perhaps, why. This is especially important for classes where the material builds from one section to the next, as in math. Students who have not mastered the basics of math will be unable to work with fractions, square roots, beginning algebra, and so on.

Discuss the wrong answers with your children and find out why they answered as they did. Sometimes a child misunderstands the way a question is worded or misinterprets what was asked. The child may have known the correct answer but failed to express it effectively.

It’s important, too, for children to see how well they used their time on the test and whether guessing is a good idea. This helps them to change what they do on the next test, if necessary.

You and the child should read and discuss all comments written by the teacher. If there are any comments that aren’t clear, the child should ask the teacher to explain.

OERI’s test-taking techniques are helping thousands of children in schools across the country. We hope they will help your child.
