The paper describes a joint effort by the Easter Seal Society and the Arkansas State Department of Education to help rural districts provide appropriate services to orthopedically impaired students. The resulting outreach program provided on-site (school or home) evaluation of students' needs and practical guidelines in non-technical terms to meet those needs. Evaluation covered the psychological, therapy, special educational, and adapted physical education domains. Consultation was offered in both direct services (such as equipment loan, instruction in therapeutic handling and facilitation, and adaptation of games and activities) and indirect services (including help in finding funding sources for equipment and providing inservice training for staff). Program impact over a 7-year period is analyzed and ongoing challenges are noted. A program flowchart and an equipment list are appended. (CL)
AN OUTREACH PROGRAM: ADDRESSING THE NEEDS OF THE PHYSICALLY IMPAIRED IN RURAL COMMUNITIES

Deborah Allen, M.S., CCC-SP
Arkansas Easter Seal Society
P.O. Box 5148
Little Rock, Arkansas 72225

This presentation outlines the implementation of an interdisciplinary approach to providing on-site evaluation and consultation to nonspeaking orthopedically handicapped students in public schools. Background information regarding the development of this program as it impacted the delivery of services to a low incidence population in a predominately rural state will be presented. Additional factors for enhancing the quality of service delivery will be discussed.

October 1986
The 1960's was a decade of heightened interest in the civil rights of all citizens. This growing concern for individual rights produced many changes. One of the most important being the changing attitudes of the general population towards the handicapped. A significant result of this phenomenon was that legislation began to reflect those concerns. Parents, professionals and educators questioned the benefits of institutionalizing handicapped children. Many parents were convinced that the home and community setting was the best environment for their child. Consequently they sought local services for their children and this led to the adoption of a series of laws which culminated in the passage of the "Education for All Handicapped Children Act of 1975". This law required State and local educational agencies that accepted federal funds to provide a free and appropriate public education for all handicapped children. Emphasis was to be placed on special education and related services, designed through the Individual Education Plan (IEP) process, to meet the unique needs of each child.

Financial resources in many areas of the United States were inadequate to meet the special education needs of the handicapped. For that reason the 1975 act extended federal assistance to States for developing research, surveys, demonstration projects and model programs relating to education of handicapped children. According to the federal guidelines of PL 94-142, a minimum distribution of Title VI-B funds required that 75% go directly to school districts, 5% be applied to administrative costs, and 20% be used by each state at their discretion. In Arkansas, 76% was provided to individual school districts and 19% was to be used in the discretionary pool.

The availability of these discretionary funds, coupled with an acute awareness
of the need for specialized services prompted the coordinated efforts of the Arkansas Easter Seal Society and the Arkansas State Department of Education to develop an Outreach program that would assist rural school districts in providing appropriate services to orthopedically impaired students. A dual purpose was served in targeting the orthopedically impaired. Arkansas' Title VI-B discretionary funds were designated specifically for low incidence handicapping conditions. Easter Seals already served this population through its preschool, residential school and outpatient infant program. A staff of therapists and educators already possessed the expertise necessary to facilitate optimum physical and educational performance. Further motivation was supplied as former Easter Seal residents were mainstreamed into public schools throughout the state. It quickly became apparent that public school teachers were unprepared to meet the special needs of these students and few therapists were available to provide the related services these students required in order to benefit from special education.

PROGRAM DESCRIPTION

During the first grant year, 1979-80, the Executive Director of Easter Seal's and the Federal Grants officer for the State Department of Education organized program objectives and procedures outlining the delivery of evaluations and on-site consultations utilizing a team of Easter Seal therapists and educators. The primary objective was to maximize the school performance of orthopedically impaired students through the delivery of direct and indirect services by assisting school districts in providing an appropriate educational program for orthopedically impaired students in compliance with PL 94-142.
To meet these goals, the evaluation/consultation process was geared toward helping school staff, the orthopedically impaired student and his/her family solve educational, behavioral and physical management problems that prevented these students from receiving the full benefit of a public education.

Originally, students were to be evaluated at Easter Seals in Little Rock, Arkansas, by a team of therapists, including occupational and physical therapists, speech-language pathologists, educators, a social worker and psychological examiner.

Following the evaluation, Easter Seal personnel would travel to the school to provide inservice training to the individuals delivering direct services. Reference material and written instructions were provided and Easter Seal personnel were available for consultation when special problems arose. Follow up visits to the school during the year were planned to assure that therapies and programs were effective in reaching the goals established for that student.

Feedback from school personnel and families indicated that the on-site portion of the Outreach consultation was the most effective part of the project. Consequently the following year, the Outreach team (still consisting primarily of Easter Seal staff) provided the evaluation/consultation at the individual's school or home if so arranged by the school.

Services
The services offered during the evaluation/consultation visits included:

A. Evaluation
   1. Psychological
      a. Intelligence (level of functioning)
b. Emotional adjustment  
c. Psychosocial relationships (self-image, school adjustments, peer relationships)

2. Therapy  
a. Speech and language (augmentative communication)  
b. Gross and fine motor skills  
c. Sensorimotor integrative functioning (visual-perceptual skills)  
d. Self-help skills (dressing, feeding, hygiene and assistive devices or equipment needed for these)  
e. Functional mobility (wheelchair, walker, etc.)  
f. Pre-vocational assessment

3. Educational (special)  
a. Achievement testing  
b. Computer use in classroom (accessibility, peripherals)  
c. Behavioral management

4. Adapted Physical Education  
a. Motor skills  
b. Leisure activities

B. Consultation

1. Direct Services  
a. Providing advisory assistance in writing IEP’s  
b. Assessing architectural barriers  
c. Determining activities to promote: pre-speech and language development, augmentative communication systems, articulation; gross and fine motor skills; sensorimotor/perceptual motor skills and classroom functioning, e.g. writing, reading.  
d. Loaning equipment on a short term basis, e.g. augmentative communication devices, feeding systems, positioning equipment, computers, etc.  
e. Instructing in therapeutic handling and facilitation  
f. Adapting classroom seating and wheelchairs  
g. Integrating computers into curriculum, interfacing with augmentative communication devices  
h. Adapting games and activities for physical education and recreation

2. Indirect Services  
a. Locating available services and resources in the community  
b. Assisting in locating funding sources for equipment  
c. Providing inservice training for therapists, teachers and aides  
d. Sponsoring and presenting at regional and statewide workshops

Staff Development:

The 1979-80 grant from the Arkansas Department of Education provided staff
positions for a Project Specialist, a psychoeducational examiner, and an administrative assistant. The Project Specialist served as program coordinator and occupational therapist, while the psychoeducational examiner provided expertise in testing non-speaking and orthopedically impaired students. All other therapy evaluations (speech and physical) were provided by in-house Easter Seal personnel. Requests for services began to surpass the availability of the in-house therapists, and plans for expanding the Outreach staff were incorporated into the 1980-81 grant application. Positions for a physical therapist and a psychoeducational examiner for the hearing impaired were filled that year. In 1982-83 the grant was amended to incorporate augmentative communication evaluation services and a speech-language pathologist was employed. Staff turnover left the program at the end of the year with only a Project Specialist. During the 1983-84 grant year, additional, occupational, physical and speech therapy services were provided on a contract basis. The 1984-85 grant provided positions for a full team of therapists, which was hired by mid-year. Since that time the Outreach staff has consisted of a Coordinator, an occupational therapist, a physical therapist, a speech-language pathologist, a special educator and an adapted physical educator. Additional contract services were provided by a physical therapist and three psychoeducational examiners through 1986-87.

Admission criteria

Orthopedic impairment as defined by PL 94-142 includes the following diagnoses: amputations, arthritis, cerebral palsy, muscular dystrophy, spina bifida and traumatic injury. Students age 5-21 with one or more of these diagnoses who attend public schools were eligible to receive Outreach services. All referrals to Outreach were received through the LEA Supervisor.
Although public schools were Outreach's target sites the program also served orthopedically impaired students placed by their school district in other educational settings, such as Developmental Disabilities Day Service Centers.

Outreach also provided services to preschool students and others who were undiagnosed, but had symptoms of orthopedic impairment, such as limited reach or unusual gait. These children were served under the authority of the Child-Find provisions of PL 94-142 and the States Special Education regulations.

**PROGRAM STRUCTURE**

All students were referred to Outreach through their Local Education Agency Supervisor (LEA). If teachers, parents and/or directors of Developmental Disabilities Day Service Centers referred a student, the LEA for that school district was contacted by the Outreach Coordinator. A referral packet was mailed to the referral source and upon receipt of the completed packet the visit was scheduled. A referral packet contained the following forms: information/referral, social-developmental history, informed consent for release of records and publicity release. The Outreach Coordinator assigned appropriate staff specialists and approved a team leader who would schedule the appointment, plan the evaluation/consultation schedule, and lead the entrance and exit conference.

Upon arrival at a school, the LEA Supervisor and other members of the school
staff who were directly involved with the referred student(s) conferred with the Outreach staff. Parents were invited to attend the entrance conference at the discretion of the school.

Following this conference Outreach evaluated the student and during the consultation that followed, equipment loan possibilities were explored. If equipment for on-going evaluation purposes was needed, the loan procedure was completed. The need for other referrals was also discussed and assistance provided in locating appropriate resources.

Outreach staff, school personnel, parents and the student, when appropriate, participate in the exit conference. Evaluation findings and recommendations were reviewed orally and a written report followed within one month of the visit.

Equipment, if loaned, was returned by the school within the designated time frame, typically 6-8 weeks. Upon the request of the school, parents or student for a follow-up visit, the Outreach Coordinator notified the LEA Supervisor and the procedural process for a school visit was reinstated.

During the fiscal year, the Outreach Coordinator was responsible for monitoring all aspects of the Outreach Program. The Director of Outpatient Childrens services assisted as needed in program management and the Easter Seal's accounting department provided billing and payroll services. The State Department of Education Special Education Division and the Federal Grants officer monitored the program at the end of each fiscal year.
EVALUATION OF IMPACT

A review of services provided during the first seven years (1979-86) of operation revealed a steady increase in both the quantity and quality of services. Each year, the number of students served, equipment loaned, and workshop participants rose as did the number of services offered. Staff training through continuing education opportunities and experience gained from working as a team also contributed to increased quality of service.

During the 1979-80 grant year approximately 110 students were seen by a combined Outreach team and Easter Seal core staff. Incomplete records prevent comparison of that year to the following six. The number of students served from 1980-1986 reflect a steady increase in requests for Outreach services. Each year all appropriate referrals were completed with the exception of a backlog of cases at the end of the 1982-83 school year. Those students were seen the following year. From 1979-84 service requests were met by a combined Outreach and Easter Seal core staff. By mid-year 1984, the Outreach staff had expanded to three full time and three part time consultants and the Easter Seal core staff was no longer utilized on a regular basis. (See diagram A)

The equipment loan program was established during the third year of operation (1983-84). Loan protocol required that each piece of equipment be evaluated by the Outreach therapists and if continued use was recommended a short term loan was instituted. All appropriate personnel were instructed in the proper care and maintenance of the equipment. This loan program enabled school districts to evaluate the effectiveness of special equipment, such as augmentative communication devices, computers, feeding systems and alternate
positioning systems before making purchase decisions. During the first loan year a total of 35 pieces of equipment was loaned, three of which were augmentative communication devices. In 1985 and 1986 total equipment loan increased to 46 items and 65 items. The number of augmentative systems loaned during those two years was 16 and 24 respectively. (See diagram B) By 1986 over 100 items were available for loan. (See appendix B) As a result, 40 students have utilized augmentative communication systems at home and in school. Funding for augmentative communication systems for students evaluated by Outreach has been obtained through public school districts, Children's Medical Services and private fund raising. Individual public school districts purchased five augmentative communication systems based on the Outreach interdisciplinary team evaluation. Children's Medical Services is a Division of Social Services through the Arkansas Department of Human Services. Criteria for approval on three augmentative communication systems included the interdisciplinary team evaluation and a physician's prescription. Private fund raising for one augmentative communication system included a benefit concert. Presently funding for two ACS's is pending with Arkansas Blue Cross/Blue Shield.

The greatest area of increased services was evident in the number of workshop participants which rose from 160 in 1980 to 740 in 1986. (See diagram C). Outreach was able to provide therapists and educators with valuable training in their own schools and communities. Often professionals in rural communities were isolated and would have been unable to pursue continuing education opportunities otherwise.

Many school therapists and educators were not equipped to deal with the
specialized needs of the orthopedically impaired student. Training was necessary in order to help them more accurately access a student's abilities, especially if that child was non-verbal in addition to his physical limitations. Teachers and aides had to become familiar with techniques to prevent abnormal muscle tone from interfering with class work, and how to position a child to facilitate his best response. Guided hands-on experience was often required before school staff could therapeutically feed a child who was unable to chew and had difficulty swallowing. By providing both statewide and regional workshops that covered these and many other topics, Outreach was able to assist school districts in creating more knowledgeable persons within their own communities.

LONG RANGE PLANS

A number of factors were identified as potential areas of expansion for Outreach services. One such area was the need for consultative services and workshop training for school staff regarding pre-vocational programming and vocational readiness; along with this there would be a greater need for more intensive training of therapists and educators in augmentative communication and computer interfacing. An expansion into this area of need would require the addition of a therapist with experience in pre-vocational programming as it relates to school aged clients. Because this type of service has not been utilized in the past, and only recently has it come to the forefront in education, this position would be best designated on a contract for service basis.

Secondly, an early identification screening service would identify children in
public school kindergartens with minimal brain dysfunction or mild cerebral palsy. Planning services for early intervention and remediation would then be more effective. The 1987 legislative session of the Arkansas General Assembly will consider House Bill 1383 which authorizes such a program.

An expansion of the interagency cooperation already in effect would be to utilize Outreach to train and establish other teams, each physically located in Arkansas regional educational cooperatives. Eleven regional centers have been established at this time. If these centers each housed service teams, school districts would then have more immediate access to therapy evaluations, inservice training, workshops and equipment loan. Therapists would travel only in specific regions rather than covering the entire state, thereby allowing frequent follow ups and increasing the quality of service each student received. Gradually, Outreach would concentrate more in the area of training and equipping individual regional centers and less on providing direct services to students. This would allow the state to comply with the Education of the Handicapped Amendments of 1986, in P.L. 99-457.

SUMMARY

The collaboration between the State Department of Education and the Arkansas Easter Seal Society resulted in a service that was able to channel available federal funds to provide a service that neither organization could have provided alone. Over a seven year funding period, the total cost of operation was $809,357.00, bringing the average cost per client served to $924.00. (See appendix C) It is unlikely that the Easter Seal Agency would have operated this program if it depended upon contracts with each school district for reimbursement. Without such federal assistance, the needs of the children
served by this program would, in many cases, have gone unmet.

Various programs geared specifically toward evaluating students' communication and seating needs have been developed throughout the United States. Evaluation centers offer valuable assistance in providing appropriate recommendations, but often those left to carry them out have not received adequate instruction to insure follow through. The greatest strength of the Arkansas Outreach program has been its on-site service delivery model. Each student was evaluated in his school environment, and all recommendations were attempted and demonstrated to school personnel. The reports were written in terms that parents and laymen could easily understand. Follow up visits and telephone conferences allowed continued contact with the student and school in order to resolve any difficulties that arose.

An ongoing challenge identified over the seven year period was the inevitable turnover in school personnel and the need for new staff to be trained. Schools have not always recognized the importance of follow through and carry over from year to year, on their part, regarding solutions achieved in classroom adaptations, the use of special equipment, and educational programming, etc. This information was not always passed on to subsequent teachers. Each year the wheel was reinvented, and valuable time lost from that student's academic schedule. The need to communicate this responsibility was vital if Outreach was to have any lasting impact on the education of orthopedically impaired students.

In an attempt to remediate this situation the Outreach team members must insure that school personnel understand the importance of sharing consultation
results with new teachers, aides and therapists. Prior to scheduling a school visit the team leader should be responsible for helping school personnel determine how they can get the most out of the consultation process. This will require increased pre-site contacts. All consultations should end with an oral review of evaluative findings in an exit conference, and school personnel should be encouraged to write down information reviewed and a tape recording of the conference left at the school. Copies of the report should be kept readily available and be read by all persons working with the student.

The struggle to obtain civil rights for handicapped individuals has not ended simply with the passage of a series of laws mandating equal educational opportunities. Just as attitudes and conventions have begun to change in regard to discrimination against persons due to race and sex, so too will many attitudes and prejudices have undergone radical changes before physically handicapped students experience the fruits of an appropriate education.
BIBLIOGRAPHY

The Outreach program structure is outlined in the following flow chart:

1. **REFERRAL**
   - (Local Education Agency Supervisor & Others)

2. **MAIL REFERRAL PACKET**
   - (Outreach Secretary)

3. **REFERRAL PACKET RETURNED**
4. **STAFF ASSIGNMENT**
   - (Outreach Coordinator)
5. **SCHEDULING**
   - (Outreach Team Leaders and Secretary)

6. **ENTRANCE CONFERENCE**
   - (School District & Outreach Staff)
7. **EVALUATION/CONSULTATION**
   - (Outreach Staff)

   - Need Equipment Loan
     - yes → Equipment Loaned
     - no → Need Other Referral?
       - yes → Referral Made
       - no →

8. **EXIT CONFERENCE**
   - (School District Personnel, Outreach Staff)
9. **WRITTEN REPORT TO LEA SUPERVISOR, REFERRAL SOURCE**
   - (Outreach Secretary)

   - Equipment Loan Returned
     - yes → Notify LEA
     - no → Follow up needed?
       - yes → Notify LEA
       - no →

**Note:** Students exit the program each year but may re-enter each year to age 21.
Comparison of Total Students and Total Consultations from 1980-1986.
