ABSTRACT

Average salary increases for 3,384 faculty in the field of sociology are reported for 1983-1984 and 1986-1987, as part of the College and University Personnel Association's annual faculty salary studies. Included are comparative data for 120,580 faculty at 167 public colleges and 235 private colleges, representing 44 academic disciplines. In 1983, 128 public colleges and 191 private colleges reported on sociology faculty salaries, while 133 public and 190 private colleges reported in 1986. Between 1983 and 1986, average salaries of faculty in this field increased 22.1% at public colleges and 16.8% at private colleges. For 1986-1987 the average salary for sociology faculty was below the average faculty salary in the other 43 disciplines (1% below for public colleges and 5% below for private colleges). Included is information on: the number of faculty by academic rank, including new assistant professors; salaries by academic rank; the ratio of average salaries to total salaries of all institutions in both years; comparisons with the Consumer Price Index of changes in cost-of-living for both years; and comparisons with 43 other disciplines. The disciplines and participating institutions are listed. (SW)

SALARY-TREND STUDY OF FACULTY IN SOCIOLOGY

Richard D. Howe
Appalachian State Univ.

FOR THE YEARS

TO THE EDUCATIONAL RESOURCES
INFORMATION CENTER (ERIC)."

1983-84 AND 1986-87

Since 1982-83 the College and University Personnel Association (CUPA) in Washington, D.C., in cooperation with Appalachian State University in Boone, North Carolina, has conducted annual national faculty salary studies by discipline and rank each year through 1986-87. Each year two separate studies are conducted, one for public senior colleges and universities which are members of the American Association of State Colleges and Universities (AASCU) in Washington, D.C., and the other for private senior colleges and universities. The list of private institutions is provided by the American Council on Education in Washington, D.C.

Salary data for each study were collected and tabulated for full-time teaching faculty in 44 selected academic disciplines including sociology. The disciplines were chosen from among those defined by the Higher Education General Information Study (HEGIS) Taxonomy and by A Classification of Instructional Programs (CIP), 1981. The definition of the discipline/major field of sociology in the CIP is as follows:

An instructional program that describes human society, social institutions, and social relationships, including the development, purposes, structures, and functions of human groups.

This article presents a summary of the overall average salary increases in the discipline/major field of sociology from the "baseline year" of 1983-84 to and including the "trend year" of 1986-87 for both public and private institutions. Of the 215 institutions which participated in CUPA's PUBLIC (AASCU)

ED287398

HE 020 814

study of 1983-84, 167 also participated in 1986-87. Data from those same 167 institutions were used in both the baseline year and the trend year. Of the 355 institutions which participated in CUPA'S PRIVATE study of 1983-84, 235 also participated in 1986-87. Data from those same 235 institutions were used in both the baseline year and the trend year.

This study lists the average salaries of sociology faculty for both public and private participating institutions by rank, including "new assistant professor," the FAC MIX PCT (faculty mix percentage) and the salary factor. In addition, comparisons are made with the CPI (Consumer Price Index) of changes in cost-of-living between the two studies for each of the two study years (1983-84 and 1986-87).

The CPI is based on prices of food, clothing, shelter and fuels, transportation, medical care, entertainment, and other goods and services that people buy for day-to-day living. In examining trends in faculty salary it is important to consider any changes in the economy. Therefore, the CPI was used to yield a more precise representation of "real" salary increases over time.

The salary is based on a nine- or ten-month academic year salary of full-time faculty only. It does not include any faculty members teaching less than 51 percent. Salary for summer academic work, fringe benefits, and perquisites are not included in the salary data. The average salary is based on the study information with the assumption that all employees were full-time. The average salary displayed is an average of all faculty salaries reported for a given rank and discipline.

The "NUM" means the number of faculty members whose salaries were included to compute the average salary.

The "N/IN" means the number of institutions that reported salary data for a given academic rank and discipline/major field.

The FAC MIX PCT is the percentage of faculty in a given discipline/major field who hold a given academic rank. For example, a FAC MIX PCT factor of .39 for associate professor of sociology in the 1983-84 public study means that 39 percent of the faculty in that discipline/major field hold the rank of associate professor.

The SALARY FACTOR for a given rank of a given discipline/major field is the ratio of the average salary to the total average salary of all institutions in each of the four studies: PUBLIC 1983-84, PUBLIC 1986-87, PRIVATE 1983-84 and PRIVATE 1986-87. For example, a SALARY FACTOR of 0.95 for assistant professors in the discipline/major field of sociology in the 1983-84 public study means that their salaries are 5 percent lower than the average of all assistant professors in all institutions in that study.

NEW ASST PROF is the grouping of assistant professors who were hired for the first time in the fall of the study year (1983-84 or 1986-87). All information for this group was included in the ASST PROF group for reporting purposes. This group is used mainly for new hiring information.

ALL MAJOR FIELDS is the entire data base for all 44 disciplines/major fields in each of the four studies. It is used to compare, among other things, the discipline/major field of sociology with the entire data base for each study.

Of particular import to the reader is noting the size of the sample on which each percentage or dollar value is based. The smaller the number in the group, the greater the effect of extreme scores on a descriptive statistic such as the average. It should be noted also that any large disparity in the sample sizes between the "baseline year" of 1983-84 and the "trend year" of 1986-87 will lessen the reliability and validity of any conclusions that one might make based on a simple comparison of averages.

RESULTS OF THE TWO PUBLIC (AASCU) STUDIES, 1983-84 AND 1986-87

In the PUBLIC 1983-84 salary study in the above table, the reader may note that the discipline/major field of sociology was reported in 128 of the 167 public (AASCU) institutions. The average salary of the 1,000 faculty was \$26,385. This average salary was approximately 2 percent (0.98) lower than the average salary of \$26,895 for all 36,612 faculty in ALL MAJOR FIELDS in the 1983-84 public study.

In the PUBLIC 1986-87 salary study in the above table, the discipline/major field of sociology was reported in 133 of the same 167 public (AASCU) institutions. The average salary of the 1,009 faculty was \$32,227. This average salary was approximately 1 percent (0.99) lower than the average salary of \$32,670 for all 38,815 faculty in ALL MAJOR FIELDS in the 1986-87 public study.

The increase in average salaries for all faculty in sociology after three years in the public institutions studied was 22.1 percent (\$32,227 minus \$26,385 equals \$5,842). The CPI of increased cost-of-living between October 1983 and October 1986 was 9.2 percent. A more realistic increase, therefore, in average faculty salaries over the three-year time period is 12.9 percent or an average of 4.3 percent each year above the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the public institutions studied was 21.5 percent (\$32,670 minus \$26,895 equals \$5,775). In comparison to the discipline/major field of sociology (22.1%), therefore, the faculty in ALL MAJOR FIELDS increased their salaries by 0.6 percent (22.1% minus 21.5% equals 0.6%) less than faculty in the discipline/major field of sociology.

The reader may note that the faculty mix percentage in sociology in the 1983-84 public study is lower at the professor rank than at the assistant professor rank: 0.26 vs 0.31, respectively. However, in the 1986-87 public

study, the professor rank is more in comparison to the assistant professor rank: 0.33 vs 0.29, respectively. The differences in faculty mix percentage at the ranks of professor and assistant professor in ALL MAJOR FIELDS for both public studies is as follows: 0.31 vs. 0.28 (1983-84) and 0.34 vs. 0.28 (1986-87), respectively. In other words ALL MAJOR FIELDS has a higher percentage of professors and a lower percentage of assistant professors compared to sociology in both of the public studies.

Finally, the hiring rate of new assistant professors in sociology was low in the public study of 1983-84 compared to ALL MAJOR FIELDS: 3.4 percent (34/1,000) vs. 3.5 percent (1,290/36,612), respectively. However, the hiring rate of new assistant professors in sociology in the 1986-87 public study was higher in comparison to that of ALL MAJOR FIELDS: 4.5 percent (45/1,009) vs. 3.8 percent (1,487/38,815), respectively.

RESULTS OF THE TWO PRIVATE STUDIES, 1983-84 AND 1986-87

In the PRIVATE 1983-84 salary study in the above table, the reader may note that the discipline/major field of sociology was reported in 191 of the 235 private institutions. The average salary of the 693 faculty was \$25,722. This average salary was approximately 3 percent (0.97) lower than the average salary of \$26,553 for all 21,861 faculty in ALL MAJOR FIELDS in the 1983-84 private study.

In the PRIVATE 1986-87 salary study in the above table, the discipline/major field of sociology was reported in 190 of the same 235 private institutions. The average salary of the 682 faculty was \$30,055. This average salary was approximately 5 percent (0.95) lower than the average salary of \$31,548 for all 23,292 faculty in ALL MAJOR FIELDS in the 1986-87 private study.

The increase in average salaries for all faculty in sociology after three

years in the private institutions studied was 16.8 percent (\$30,055 minus \$25,722 equals \$4,333). The CPI of increased cost-of-living between October 1983 and October 1986 was 9.2 percent. A more realistic increase, therefore, in average faculty salaries over the three-year time period is 7.6 percent or 2.5 percent each year above the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the private institutions studied was 18.8 percent (\$31,548 minus \$26,553 equals \$4,995). In comparison to the discipline/major field of sociology (16.8%), therefore, the faculty in ALL MAJOR FIELDS increased their salaries by 2 percent (18.8% minus 16.8% equals 2.0%) more than faculty in the discipline/major field of sociology.

In the discipline/major field of sociology, the reader may note that the faculty mix percentage at the professor rank is less than the assistant professor rank in the private studies: 0.28 vs. 0.33 (1983-84), respectively; and 0.29 vs. 0.30 (1986-87), respectively. This is similar to ALL MAJOR FIELDS for both private studies: 0.30 vs. 0.32 (1983-84), respectively; and 0.31 vs. 0.31 (1986-87), respectively.

Finally, the reader may note that the hiring rate of new assistant professors in sociology in the 1983-84 private study was lower than the hiring rate in ALL MAJOR FIELDS, 2.9 percent (20/693) vs. 3.9 percent (856/21,861), respectively. However, in the 1986-87 private study, the hiring rate of new assistant professor in sociology was greater in comparison to ALL MAJOR FIELDS, 5.3 percent (36/682) vs. 5.0 percent (1,173/23,292), respectively. In other words the hiring rate of new assistant professor in the discipline/major field of sociology lagged behind ALL MAJOR FIELDS in the 1983-84 private study, but exceeded ALL MAJOR FIELDS in the 1986-87 private study.

CONCLUDING REMARKS

This article presented salary-trend information on the academic discipline/major field of sociology and compared that information with 43 other academic disciplines/major fields over a period of three years: the "baseline year" of 1983-84 and the "trend year" of 1986-87. Two studies, one for public (AASCU) institutions, and the other for private institutions were conducted for the baseline year and for the trend year--a total of four studies. A total of 3,384 faculty in the discipline/major field of sociology participated and were included in the overall total of 120,580 faculty in all 44 disciplines/major fields in all four studies. The same 167 public (AASCU) institutions and the same 235 private institutions in the United States participated in the baseline year and the trend year.

Although many interpolations and extrapolations of the data may be made, a few of the more important ones are as follows. First, the average faculty salary in the discipline/major field of sociology is currently (1986-87) some 1 and 5 percent below the overall average faculty salary of the other 43 disciplines/major fields for both the public and private studies, respectively. The average faculty salary for sociology in the private institutions was 1 percent less in comparison to that in the public institutions in 1983-84. The overall salary factor in the private institutions is now (1986-87) 4 percent lower in comparison to that for the public institutions: 0.95 vs 0.99, respectively.

Second, the CPI of October 1986, in comparison to the CPI of October 1983, indicates that the faculty in sociology, in both the public and private institutions, received overall salary increases for three years above the cost-of-living. Sociology faculty salary increases in the public institutions increased by 0.6 percent in comparison to faculty in ALL MAJOR FIELDS during this same period, whereas sociology average faculty salary increases in the

private institutions lagged behind faculty in ALL MAJOR FIELDS by 2 percent. Sociology faculty in both the public and private institutions have some catching up to do in salary in comparison to ALL MAJOR FIELDS.

Third, in the discipline/major field of sociology the associate professor rank has a greater percentage compared to full and assistant professor ranks for both the public and private studies. The full professor rank appears to be increasing more rapidly in the public institutions, in comparison to the private institutions. It seems a smaller percentage of new assistant professors are being hired in the public institutions.

Now that a rather significant data base on individual faculty member salaries has been developed, it is anticipated that additional salary-trend studies will be effected in sociology, and in other disciplines/major fields, on an annual basis.

Richard D. Howe is the originator and director of the annual CUPA faculty salary studies. He is a professor of leadership and higher education, and history at Appalachian State University, Boone, North Carolina. Co-author M. Faye Sawyer is professor of sociology at Appalachian State University, Boone, North Carolina.
