This guide was prepared to assist in determining the mathematics that should be included in drafting, electricity, electronics, and machine shop programs. Information for the guide was obtained by asking teachers from every postsecondary vocational school in Kentucky to respond to a questionnaire listing mathematics competencies for their specialty by marking each competency as "needed" or "not needed." The guide is organized in four sections. The first section provides a background for understanding and using the handbook information. The "how" and "why" of what was done are explained in this section. The second section deals with the mathematics competencies for the four programs. Listed are common competencies, competencies specific to programs, and information on using the competency information. Since it may be difficult to visualize a mathematics competency, the third section gives two examples for each mathematics competency selected by the instructors. The fourth section contains resource information provided by the vocational educators. The appendixes include: (1) a list of participants; (2) the survey forms; (3) survey responses; (4) competencies not selected by instructors; and (5) additional competencies submitted by instructors. Acknowledgements

The first thought that comes to mind relates to the instructors. We realized it was asking a lot from this busy group of professionals to complete the lengthy surveys. However, the majority of instructors responded with good information. Our sincere thanks and admiration goes to these instructors.

This project could not have been completed without the assistance of the vocational school principals and counselors. They identified instructors, followed up our requests to complete and return surveys, and showed remarkable patience when we contacted them a number of times to be sure activities were going as planned.

Our planning committee helped us get a good start and their enthusiasm helped us to gain momentum as the project evolved. Many times during the project we looked back at what the committee decided to be sure everything was going as planned. We deeply appreciate the committee's efforts.

The Office of Vocational Education provided essential support when needed. Gary Hess was always available for help and gave timely support throughout the project. Lou Perry, Bill Whalen, and many others always shared their busy schedules to help us solve our project problems.

As project director, my sincere thanks goes to Barbara Sworin and Susan Brown. They took responsibility for activities and completed them in a quality manner. They share in the success of the project.
Forward

This report was intended to be used to assist in determining the math that should be included in drafting, electricity, electronics, and machine shop programs. Information for the report was obtained by asking teachers from every post-secondary vocational school in Kentucky to provide input.

The first section provided a background for understanding and using the handbook information. The "how" and "why" of what was done are explained. This section should be carefully perused to be able to make application of other sections.

The second section deals with the math competencies for the four programs. This section should be of great interest to instructors as they strive to decide what math should and should not be taught.

It may be difficult to visualize a math competency. The third section gives 2 examples for each math competency selected by instructors. This allows one to review examples so the competency definition is clear.

The fourth section presents resource information provided by the vocational instructors.

The Appendices has a variety of information that may be as useful as that found in the handbook sections. This information fills in the gaps for making decisions about the teaching of math in selected vocational programs.

Section 1

Background

High technology is bringing about numerous changes in the workplace. New goods and services are being introduced, established products are phasing out, and processes that have been the basis for production are changing. As a result, many new industries are being introduced while other industries are either upgrading to meet the challenges or going out of business.

Changes in business and industry are having a significant effect on employment. Between 1984 and 1995, the Bureau of Labor Statistics estimates that over 15 million jobs will be available. Many of these jobs will be new with job descriptions that focus on high technology where computers, electronics, automation, robots, and other related systems are integral parts of job performance. Other available jobs are those that have been established over the years, but will require new skills and knowledge to meet job requirements.

Persons applying for these positions will be expected to have certain sets of competencies that enhance working with new industrial innovations. Training will be supplied by employers, but the training will focus on adapting skills workers already have to high technology skills needed to succeed at work. This will require new workers to have strong and diverse backgrounds in practices and principles of their occupational areas, as well as good math backgrounds that
occupational areas, as well as good math backgrounds that allow applications to a variety of technical problems.

Another factor affecting workers is the everchanging nature of business and industry. Workers will always be faced with the possibility of job obsolescence and displacement. Workers can expect to change occupations several times and jobs up to 10 or so times during a career. Workers must be prepared for this and be able to adapt quickly and effectively to meet new job requirements. As jobs become more technical it will be most important for workers to stay current in their occupational areas along with building expertise in skills and knowledges that allow transfer to other related positions. The application of scientific principles through problem solving and math appears to be necessary to make transitions to the available jobs of tomorrow.

The shift in the future is to employment in small businesses. This trend affects the educational preparation of perspective workers because small businesses cannot provide extensive training. Workers entering these small businesses must have relevant and diverse skills and knowledges that allow for direct applications to job responsibilities. They will have to have the training background to deal with many practices and principles of their occupational areas and be able to make quick and efficient applications that are required by the new positions.
It is difficult to predict the exact skills and knowledges that are needed by perspective worker to succeed in the everchanging world of business and industry. However, some assumptions can be made. The move toward high technology requires workers to have more knowledge in principles and practices underlying occupational competence. This must be combined with the ability to make application of the information to problem solve, troubleshoot, adapt to new situations and modify what is known to apply to technical innovations. Workers must be more thoroughly trained in their occupational specialties and be adept at math skills that allow flexibility and efficiency in coping with new situations in the workplace.

Education

Education is a mirror of society. As changes in business and industry make it more difficult for persons to succeed at work, society gives more input into public schools to effect change. Both general and vocational education have reacted to the pressure by making many changes. This will continue into the future and will challenge educators to meet change with change to prepare people to make efficient transitions from training to the world of work.

General education has made many significant changes to be sure students are math literate. More math is required than in the past to graduate from high school, there are fewer electives that students can select, and more math options are available to meet the diverse needs of the
student population. Along with this there seems to be greater attention to ensuring students have appropriate skills before allowing them to progress to other experiences or passing to higher grade levels. At the conclusion of high school, students must pass a competency test to demonstrate their abilities to display and use math skills.

Post-secondary vocational education is also focusing more on math as an important part of vocational training. All incoming students must demonstrate competency through testing in the basics, including math. There are support strategies for helping students learn math in vocational courses and remedial programs are available to help those that are deficient in math. There are continuous efforts in the schools to determine the math students should have when enrolled and instructors are continuously striving to teach the math necessary for successful employment.

Math competencies

The Test of Adult Basic Education (T.A.B.E.) is used in all state vocational technical schools in Kentucky to measure the basic math competencies of entering adult students. The test results are expressed by grade levels and students must attain at least a 10th grade level to satisfy part of enrollment requirements. The T.A.B.E. measuring instrument was used in the project as a reference for definition. The "basic math competencies" were defined as those competencies in math that are listed in the T.A.B.E.

Vocational education focuses mainly on applications of
basic math to a variety of occupational situations. As students progress, more difficult applications require more difficult equations and problem solving. Students learn to identify where, when, and how to apply various basic math specific to succeeding in occupations.

At some point in vocational training, math competencies become more advanced than basic competencies. Instructors teach this math as they would any other course content. In some cases a separate math book is used as reference. At other times, the math competency is integrated with occupational content and is learned through a variety of teaching techniques. The challenge for the instructors is to determine the more advanced math competencies and decide on the degree of emphasis in instruction.

The more advanced math competencies vocational instructors select for teaching are arrived at by analyzing what workers do on the job. Thus, they might be described as math competencies necessary to succeed on the job. For the purpose of this project, these competencies will be called "exit math competencies", that is, those competencies students should have upon graduation from a vocational program so they are prepared to enter jobs for which they are trained.

One of the problems in trying to identify math competencies in vocational programs is that math content and occupational content are often linked so it is difficult to separate one from another. For this handbook, attempts were
made to make math competencies non-occupational and general. However, in some cases this was not possible and resulted in listings that are both occupational and non-occupational related.

Every vocational course has a different set of required math competencies. If courses were placed on a continuum from technical to non-technical, each course would fit somewhere on that continuum. A number of courses would tend to group around the technical end of the continuum and would require a large number of math competencies while a number of courses would be grouped near the other end and would require fewer math competencies. Other courses would fit somewhere in between. For the purpose of this handbook, the 4 programs of electronics, electricity, drafting, and machine shop were selected. These courses would fit somewhere near the technical end of the continuum and have a significant number of exit math competencies. Also, since the courses are very technical in nature there were a number of exit math competencies that were "common" to the 4 selected programs.

Decision making

Early in the project it was recognized that assistance was needed to be sure decision making was appropriate. An advisory committee was formed to help steer the project in the right direction. The committee members were selected to be representative of groups that were very concerned with the teaching of exit math competencies. A meeting was scheduled in October and a number of decisions were made that
formed the basis for program direction. Materials related to advisory committee functioning can be examined in Appendix 1.

Instructors were selected to determine the competencies that should be included in vocational programs. The reasoning for the decision was that instructors can be considered an extension of business and industry. They meet, greet, and relate with workers and managers of business and industry on a continuing basis. They are also involved with staff-industry exchange experiences and many continue working in their occupational areas during off times from teaching.

A number of post-secondary vocational programs have more than one course in the program and a day and night program. This caused some concern as to who should be asked to give information about needed competencies. The decision was made to select one day instructor and, if applicable one night instructor in each school. A guidance counselor in each of the 14 post-secondary schools provided names of instructors who should receive the survey. See Appendix 2 for names of the selected instructors.

The survey

A survey form for each selected program was developed to establish exit math competencies. Math resources for the 4 post-secondary vocational programs were determined by using an information sheet. See Appendix 3 for the surveys and information sheet.

The first step in developing the survey was to seek information about exit math competencies. This started with
a literature search and review of various materials such as a
computerized Eric search and numerous materials provided by
the Office of Vocational Education, Frankfort, Kentucky.

There was a paucity of information that related to "exit math
competencies." There was a significant amount of information
about "basic math competencies."

Because of the limited information the decision was made
to conduct an occupational analysis for the purpose of
identifying exit math competencies. A number of textbooks
were selected as representative of the math content for the 4
programs (see Section 4 for a listing of textbooks). For
each program textbooks were analyzed and a list of math
competencies was compiled. In some instances math
competencies were easily identified and taken directly from
the textbook. In other instances, tasks were analyzed to
determine what math skills were needed to successfully
complete the tasks. The resulting 4 lists of math
competencies were then sorted by whether they were basic or
exit math competencies. The list of basic math competencies
was discarded. Exit math competencies were ordered according
to difficulty (simple to complex) and in certain instances
were grouped by activities (such as graphing). The resulting
lists were used for developing the surveys.

Collecting information

A survey was mailed to each of the instructors. They
were asked to examine their curriculum and teaching materials
to respond to the survey as accurately as possible. Also,
instructors were asked to share the survey with other co-workers so the decisions about competencies would be program oriented. Instructors were asked to return the survey in two weeks.

There were several follow-ups to the survey. Instructors were contacted by phone several times; principals were mailed materials, and; copies of the survey were mailed to many in second mailings. These procedures resulted in a 95% return rate. The numbers of instructors responding from each program can be noted from the N (number responding) in Table 1-5, Section 2.
Section Two

Exit Math Competencies for Selected Vocational Programs

Instructors from the post-secondary vocational programs of drafting, electricity, electronics and machine shop were asked to identify exit math competencies. The explanation to the instructors was:

The purpose of the project is to identify the math skills needed upon graduation from a post-secondary program to gain meaningful employment in the occupation for which trained. The project is designed to determine the technical math skills needed in (program name) above and beyond the math skills identified on the T.A.B.E. test.

The assumption was made that students met entry level requirements for the selected program, therefore only new competencies to be acquired during instruction needed to be listed. These competencies should represent the exit math skills necessary to perform entry level job related tasks upon graduation from the selected program.

The decision had to be made as to how competencies should be selected as necessary for the vocational training programs. The adopted decision rule for this handbook was: A competency was selected as needed for a vocational training program if the competency was indicated as necessary by at least 80% of the instructors responding to the survey. This section listed the competencies selected by instructors.
The tabulations of survey responses can be found in Appendix 4. Competencies not selected were listed in Appendix 5.

Every competency in each of the 4 surveys was assigned a number. All of the information about specific competencies in the sections and appendices were referenced to these numbers. Thus, a specific competency can be identified from a survey and tables 1-5 and appendix 5 used to determine whether or not the competency was selected or not selected.

Also, examples in Section 3 were referenced to the competency numbers so competencies selected by instructors can be defined.

Instructors were given the opportunity to provide other competencies to supplement information from the survey. These competencies were listed in Appendix 6.

Common competencies

As instructors from the 14 post-secondary vocational schools responded to the survey and the results were analyzed, it was apparent that a number of competencies were common to all of the programs. Table 1 listed these competencies. They are non-occupationally specific, that is the competencies were stated without reference to occupations. This does not mean they were used in this form in any of the programs. In a training situation, the competencies may be used as stated, combined with occupational information and/or used with several other competencies to arrive at appropriate solutions to problems.
Competencies specific to programs

Tables 2, 4, 5 displayed competencies selected by instructors for the programs of drafting, electronics, and machine shop. Instructors from these programs selected a number of the competencies listed in the surveys.

To determine electricity competencies the electronics survey was used. This was done because there seemed to be many similar competencies for the 2 programs. Yet, there were disagreements about the appropriateness of the competencies on the survey. Few competencies were selected in comparison to the other programs (see Table 3), and few additional competencies were submitted (see Appendix 6).

Discussion

Asking instructors to identify exit math competencies as differentiated from basic math competencies needs to be discussed. First, instructors must be familiar with the T.A.B.E. and be able to categorize competencies as either basic or exit competencies. This could mean that some of the competencies rejected by instructors were needed in the programs, but were considered basic to entering the programs. This should not happen often as the decision rule for how competencies were selected allows for some error in the recognition of competencies (i.e., 2 out of 10 instructors can reject a competency and the competency will appear on the list as needed in a program).

Furthermore, what will the list of accepted competencies represent? From instructors viewpoints, the
survey represents math competencies students need to be prepared for employment in the local area, the state and in other geographic areas. Additionally, competencies could be selected that are needed by workers to receive promotion or to be able to profit from further education. Thus, competencies needed at the local level according to one instructor may not show up on the list because others did not see the need for and did not select the competencies. The math competency list in this handbook will most accurately represent a portion of the math competencies needed in all programs to succeed at employment.

Using the competency information

The above discussion indicates that the competency lists in this handbook must be used carefully. The competencies needed in a vocational program are the total of the basic and exit math competencies needed for employment. The total of these competencies include competencies generally needed to succeed in a particular occupation over a large geographic area and those competencies needed to succeed at specific jobs in local areas served by training programs. Also, additional competencies may be needed to meet student needs, educational aspirations, promotional possibilities, and career mobility. Each like vocational training program may have different math competencies because of particular local situations. The instructors' challenge is to determine when and how to use the information in this handbook to improve program offerings.
The following suggestions are made when using this handbook:

(1) Compare the math competencies being taught in a program with those competencies listed in Section 2. If a competency is not being taught that is listed, the "why" it is not being taught should be addressed. If the competency is taught, this is in line with what other instructors in Kentucky are teaching. The examples in Section 3 will be helpful to define particular competencies.

(2) Compare the math competencies being taught in a program with the rejected competencies listed in Appendix 5. If a rejected competency is taught in a program because it is basic to understanding course material, the competency should continue to be addressed in instruction. However, if the competency is more advanced than a basic competency, the "why" the competency is taught should be analyzed. If the rejected competencies are not taught, this is in congruence with what other instructors in Kentucky are teaching.

(3) If there are additional competencies that are not on any of the lists in the handbook, yet they are taught in the program, an evaluation of "why" they are being taught should be undertaken. Additional competencies may be needed to deal with local situations.

(4) The information in this handbook has implications for programs, students, business and industry. Therefore, any possible changes due to comparisons of what is being done to what is needed according to handbook information should be
shared with others. A suggestion is made to share the resulting information with advisory committee members, relevant business and industry personnel, and other instructors from similar programs. This could help to make more in-depth analysis of the "whys" for teaching competencies and may help in arriving at equitable solutions.

(5) The resource lists can be observed to determine possible resources for teaching exit math competencies. Section 4 will be helpful in this endeavor.

(6) The examples in Section 3 can assist in defining the competencies. Also, they may be used in lessons, for evaluation, and for explaining course requirements and progress to those not familiar with the occupational area.

The suggestions for using this handbook do not cover all situations encountered in planning, implementing, and evaluating vocational programs. The information in the handbook suggests that there will be many uses for the information when discussions evolve around math competencies and resources for the 4 programs. The use of this handbook is limited only by the creativity and intents of the user.

72. Division by logarithms.
73. Multiplication and division by logarithms.
74. Solve electronic problems using logarithms.
75. Express gain or loss of apparatus in decibels.
76. Express gain or loss of quantities in decibels.
77. Graph the equation.
78. Graph the cosine curve.
79. In equations of periodic curves, specify frequency.
80. In equations of periodic curves, specify angle of velocity.
81. In equations of periodic curve, specify the amplitude.
82. In equations of periodic curve, specify period.
83. In equations of periodic curve, specify angle of lead or lag.
84. Find the magnitude and direction of vectors.
85. Find the horizontal and vertical components of vectors.
86. Find the resultant forces of vectors.
87. Use vector diagrams to find instantaneous values in an AC circuit.
88. Determine angles in a vector diagram of an AC circuit.
89. Find the angular velocity of an AC circuit.
90. Write equations for voltage and current using an AC circuit.
91. Draw vector diagrams of circuits and construct vectors for AC circuits.
92. Determine angles in a vector diagram and plot imaginary numbers on a vector diagram.
93. Express AC circuit parameters in polar form.
94. Convert AC circuit parameters from rectangular to polar form and vice versa.
95. Solve problems using parameters expressed in rectangular form.
96. Solve problems using parameters expressed in polar form.
97. Add vectors in rectangular form.
98. Subtract vectors in rectangular form.
99. Multiply vectors in rectangular form.
100. Divide vectors in rectangular form.
101. Multiply polar vectors.
102. Divide polar vectors.
103. Express numbers in the binary number system.
104. Construct and analyze truth tables.
105. Develop a Boolean equation from a logic diagram.
106. Use the sum of products method to solve a Boolean equation.
107. Develop a sum-of-products equation from a truth table.
108. Simplify a Boolean equation.
109. Convert a truth table into a Karnough map.
110. Draw a three and four variable Karnough map from a truth table.
111. Simplify a Karnough map by using octets, quads, or pairs.
112. Use the product of sums method to simplify a truth table.
120. Convert a truth table to an equation.
121. Simplify a product of sums equation.
122. Use multiplexer logic.
123. Find BCD equivalents of decimal numbers.
124. Convert binary numbers to decimal equivalents.
125. Convert octal numbers to decimal equivalents.
126. Find the decimal equivalents of an octal number.
127. Convert hexadecimal numbers to binary numbers.
128. Convert octal numbers to decimal equivalents.
129. Find the decimal equivalent of an octal number.
130. Convert hexadecimal numbers to binary numbers.
131. Express a decimal number in Excess - 3 code.
132. Express an Excess - 3 number as a decimal equivalent.
133. Convert Gray numbers to a decimal equivalent.
134. Give the sum of numbers in base 8 of 16.
135. Sum of binary numbers.
136. Add whole numbers in base 10 using 16 bit numbers.
137. Subtract binary numbers.
138. Subtract whole numbers in the base ten system.
139. Determine overflow of problems with 8 bit unsigned arithmetic.
140. Express positive or negative whole numbers in 8 bit sign magnitude form.
141. Convert sign magnitude numbers into decimal equivalents.
142. Express the complement of numbers in hexadecimal notation.
143. Express the 2's complement of binary numbers.
144. Convert positive or negative whole numbers to 2's complement representation.
145. Show the 8 bit addition and subtraction of decimal numbers in 2's complement representation.

114. Find the outside diameter of a gear, knowing the number of teeth and diametrical pitch.
115. Find the center to center distance for two meshing spur gears.
116. Design a gear train.
117. Use continued fractions to convert speed ratio's into gear combinations.
118. Convert metric module to diametrical pitch.
119. Determine the number of turns on a dividing head for indexing.
120. Index for degrees, minutes, and seconds.
Section 3
Examples of Exit Math Competencies

In order for the competencies listed in the surveys to be meaningful it was necessary to create examples. The examples were designed to be as non-occupational as possible to enhance explanation and demonstration of the math competencies. Textbooks in the four areas (electronics, electricity, drafting, machine shop) were used to develop some examples, while the more general examples were developed independently. Applications of the competencies used in instruction were probably more occupationally specific.

To develop examples a list was made of math competencies selected by instructors that were common to the 4 programs. Twenty two math competencies were identified. Two examples were developed for each competency and listed in Table 6. Table 7-10 displays examples specific to the 4 program areas.

The purpose of the examples in the tables was to provide useful information about exit math competencies to those interested in and/or associated with the 4 training programs. The teacher and student can review the examples to determine if competency has been achieved during instruction. The examples can also serve as an outline for developing problems and tests that will enhance competency attainment in the occupational program. Finally, the examples can be used by advisory committees, parents, students and counselors to describe math competencies required to exit the program of interest.
Table 6

EXAMPLES FOR COMMON MATH COMPETENCIES

1. \(6 - (-2) = 8\)
   \(-3 - 2 = -5\)

2. \(2 \times 3 = 6\)
   \(-2 \times 3 = -6\)

3. \(r = 5\)

4. \(3x - 4y = 0\)

5. \(52 = 5.2 \times 10\)

6. \(4^3 = 16\)

7. \(\sqrt{10} = 3.1623\)

8. \(25^3 = 625\)

9. \(740 = 6.3245\)

10. \(3x^2 - 9xy^3 = 3x(x - 3y^3)\)

11. \(2a - 6a^3b + 4ax - 10ay^3 = 2a(1 - 3ab + 2x - 5y^3)\)

12. \(2x = 1\)
    \(x = 1/2\)

13. \(4y = 2\)
    \(y = 1/2\)

14. \(3i + 5 = 20\)
    \(3i = 15\)
    \(i = 15\)
28. \[ x - z = 2 - z \]
\[ x = 2 \]

29. \[ 4x + 3 = 15 \]
\[ x = 3 \]
Check:
\[ 4(3) + 3 = 15 \]
\[ 12 + 3 = 15 \]

30. \[ E = 30 \text{ v} \]

\[ R = 5 \]
\[ I = \frac{E}{R} \]
Use \[ I = \frac{E}{R} \]

45. Supplementary angles

46. \[ \sin \theta = \frac{\text{opposite leg}}{\text{hypotenuse}} \]
\[ \sin 30\degree = .5 \]
\[ \sin 60\degree = .866 \]

47. \[ \tan 175\degree = -\tan (180\degree - 175\degree) = -\tan 5\degree = -.0875 \]
\[ \tan 234\degree = \tan (234\degree - 180\degree) = \tan 54\degree = 1.3764 \]

48. Second quadrant:
\[ \sin 140\degree = \sin (180\degree - 140\degree) = \sin 40\degree = .6428 \]
\[ \cos 100\degree = -\cos (180\degree - 100\degree) = -\cos 80\degree = -.1736 \]

Third quadrant:
\[ \sin 200\degree = -\sin (200\degree - 180\degree) = -\sin 20\degree = -.3420 \]
\[ \cos 260\degree = -\cos (260\degree - 180\degree) = -\cos 80\degree = -.1736 \]

Fourth quadrant:
\[ \sin 300\degree = -\sin (360\degree - 300\degree) = -\sin 60\degree = -.8660 \]
\[ \cos 285\degree = \cos (360\degree - 285\degree) = \cos 75\degree = .2588 \]

49. \[ b = 3 \quad c = 5 \quad A = 53.1\degree \quad a = ? \quad B = ? \quad C = ? \]
\[ a = 4 \quad B = 36.9\degree \quad C = 90\degree \]
\[ a = 8 \quad b = 5 \quad C = 34\degree \quad c = ? \quad A = ? \quad B = ? \]
\[ c = 4.75 \quad A = 110^\circ \quad B = 36^\circ \]

50. \[ \sin 26.44^\circ = .4452 \quad \cos 88.1^\circ = .0332 \quad \sin 13.6^\circ = .2351 \quad \tan 48.8^\circ = 1.1423 \]

\[ 51. \text{Given: } R = 30 \quad \theta = 25^\circ \text{ Solve for } z, x, \text{ and } \phi \]
\[ \phi = 90^\circ - \theta \]
\[ \tan \theta = \frac{x}{R} \]
\[ x = R \tan \theta \]
\[ z = \frac{x}{\sin \theta} \]
\[ z = 14 \cdot 0.423 = 33.1 \]

53. What is the angle of inclination of a stairway with the floor if the steps have a tread of 11 in. and a rise of 6 in.?

\[ \tan \theta = \frac{x}{R} \]
\[ \tan \theta = \frac{6}{11} = .545 \]
\[ \theta = 28.6^\circ \]

What angle does a rafter make with the original horizontal if it has a rise of 4 ft. in a run of 6 ft?

\[ \tan \theta = \frac{x}{R} \]
\[ = 4 = .6667 \]
\[ \theta = 33.7^\circ \]

58. \[ \frac{3}{2} = 1.5 \]
\[ \frac{697}{4181} = .1667 \]
Table 7

EXAMPLES FOR DRAFTING MATH COMPETENCIES (N = 12°)

31. pitch diameter = 128
   pitch diameter = 216
   Sum of the two pitch diameter = 128 + 216 = 344
   pitch cone angle = 45°
   addendum angle = 22.5°
   face angle = pitch cone angle + addendum angle
   face angle = 45° + 22.5° = 67.5°

32. Mo = 6.15
    N = 32
    pitch diameter = N x Mo = 32 x 6.15 = 196.8 mm
    OD = D + 2A = 196.8 + 2(6.15) = 209.1 mm
    Mo = D/N
    CP = 3.1416 x Mo
    D = 7.0
    N = 12
    Mo = 7.0/12 = .5833
    CP = 3.1416 x .5833 = 1.8326

55. \( \frac{14^2 x^3 y^2 z}{7 x^2 y} = 2xyz \)

57. \( e^3 - 4 = e^3 - 16 \)

77. \( 4 \log x + 3.796 = 4.6990 + \log x \)

78. scale: full size (1/1)
    5" = 5"

79. scale: half size (1/2)
    6" = 3"
80. 

81. 

82. Right angles are angles equal to 90°.

83. Acute angles are angles less than 90°.

84. Obtuse angles are angles that are more than 90°.

85. Complementary angles are angles whose sum equals 90°.

86. Supplementary angles are angles whose sum is 180°.

87. radius = 5  diameter = 10'  area = 3.1416 x r^2
    circumference = 3.1416 x 10 = 31.416
    = 3.1416 x 5^2
    = 78.54

    radius = 7.5 diameter = 15  area = 3.1416 x r^2
circumference = 3.1416 x 15 = 3.1416 x 7.5²
= 47.124 = 176.715

88. Equilateral triangle: all sides and angles are equal.
89. Isosceles triangle: two sides are equal and base angles are equal.

90. Scalene triangle: one angle is obtuse.
91. Right angle: one angle is 90°.
92. hypotenuse = 1 diameter

93. Square: all sides are equal; all angles are 90°.
94. Rectangle: opposite sides are equal; all angles are 90°.
95. Rhombus: all sides are equal.
96. Rhomboid: adjacent sides are unequal.
97. Trapezoid: two sides are parallel.
98. Trapezium: no sides are parallel.
99. Pentagon: a polygon with five sides and five interior angles.
100. Hexagon: a six sided polygon.
102. Octagon: an eight sided polygon.

111. Right square: all sides are equal, opposite sides are parallel, all angles 90°.
112. Oblique triangle: a triangle with no angles equal to 90°.
118. Right circular cylinder: two faces are circular with a curved surface and the axis at a 90° angle.

127. A B

128. (See textbook of your choice.)
129. (See textbook of your choice.)
130. (See textbook of your choice.)

131. (See textbook of your choice.)

132. (See textbook of your choice.)

133. 

134. 

135. 

136. 

\[ P = \frac{1}{\text{no. of threads per inch}} \]

threads/inch = 32  
\[ P = \frac{1}{32} \]

threads/inch = 40  
\[ P = \frac{1}{40} \]

137. Circular pitch of a thread

\[ P = \frac{1}{N} \]  
\[ N = 2 \]  
\[ P = \frac{1}{2} = .5 \]

\[ N = 8 \]  
\[ P = \frac{1}{8} = .125 \]

138. (See textbook of your choice)

139. Diametral pitch of a gear

\[ P = \frac{D}{N} \]  
\[ N = 48 \]  
\[ D = 8 \]  
\[ P = 6 \]

\[ N = 60 \]  
\[ D = 10 \]  
\[ P = 6 \]

140. 

\[ CP = \frac{3.1416 \cdot D}{N} \]  
\[ P = 4 \]  
\[ CP = .7854 \]

\[ CP = \frac{3.1416}{P} \]  
\[ P = 5 \]  
\[ CP = .6283 \]
141. \( \frac{N}{D} = P \) (inches)
    \( N = 32 \quad P = 0.125 \)
    \( D = 32 \times 0.125 = 4 \)
    \( D = 256 \)

\( D = \text{Mo} \times N \) (metric)
    \( N = 45 \quad \text{Mo} = 7.35 \)
    \( D = 45 \times 7.35 = 330.75 \)

142. OD = D + 2A = D + 2Mo
    \( N = 42 \quad P = 4 \)
    \( D = (42 + 2) \quad 6 \)
    \( OD = 44 \quad 6 \)
    \( OD = 6.33 \)

143. RD = D - 2B = (N - 2.314)
    \( N = 60 \quad P = 10 \)
    \( RD = (60 - 2.314) = 5.768 \)
    \( N = 72 \quad P = 12 \)
    \( RD = (72 - 2.314) = 5.8072 \)

144. Addendum
    \( A = \text{Mo} = I/P \)
    \( I = 0.8 \quad P = 0.1122 \)
    \( A = 0.8 \times 0.1122 = 0.09056 \)

145. \( B = \text{Mo} = I/P = 1.57 \times \text{Mo} \)
    \( \text{Mo} = 6.35 \)
    \( B = 1.157 \times 6.35 = 7.347 \)

146. WD = 2.157 x \text{Mo}
    \( \text{Mo} = 6.331 \)
    \( WD = 2.157 \times 6.331 = 13.656 \)

147. Circular Thickness
    \( \text{T} = \frac{3.1416}{2N} \times D = 1.57 \times \)
    \( \frac{2N}{P} \)
    \( N = 44 \quad D = 4 \quad \frac{1.57}{6} \)
    \( \text{T} = \frac{3.1416 \times 4}{2(44)} = 0.1428 \)
    \( \text{T} = 0.1428 \)

148. Prefix
    \( \text{giga} = 1,000,000,000 \)
    \( \text{hecto} = 100 \)
    \( \text{deci} = 0.1 \)
    \( \text{micro} = 0.000001 \)

149. Prefix Symbols
    \( \text{ Prefix Names } \)
    \( \text{giga} \)
    \( \text{deka} \)
    \( \text{micro} \)
    \( \text{nano} \)

150. \text{Mmeter} = 1,000,000 \text{ meters}
\[ \mu \text{gram} = 0.000001 \text{ gram} \]

151. one inch = 25.4 mm = 2.54 cm
   one foot = 304.8 mm = 30.48 cm
   one yard = 1.2144 m
   one mile = 1.609 km

152. \(1 \text{m} = 10 \text{dm} = 100 \text{ cm} = 1000 \text{ mm} \)
   \(1 \text{dm}^3 = 100 \text{ cm}^3 = 1 \text{ litre} = 1000 \text{ ml} \)
   \(1 \text{dm}^3 \text{ of water} = 1 \text{ kg} \)

153. 100 miles = (1.609 \times 100) = 160.9 km
   32 yards = (1.2144 \times 32) = 38.761

154. The sides of a square are all 100 m long. What is the area of the square?
   Area = \((100 \times 100) \text{ m}^2 = 10,000 \text{ m}^2 \)
   The base of a triangle is 25 cm and its height is 10 cm.
   What is the area of the triangle?
   Area = \(\frac{1}{2}(25 \text{ cm} \times 10 \text{ cm}) = 125 \text{ cm}^2 \)

155. 64 km = (.621 \times 64) \text{ miles} = 39.74 \text{ miles}
   44 mm = (.039 \times 44) \text{ inches} = 1.716 \text{ inches}

156. 2'' x 4'' = 50.8 \times 101.6 \text{ mm} = 5161.28 \text{ mm}
   10' x 10' = 304.8 \times 304.8 \text{ cm} = 92903.04 \text{ cm}

157. 2.4 acres = 1 square hectometre (hectare)
   52 acres = 20.8 hectares

158. 4.5 gallons = (3.785 \times 4.5) \text{ litres} = 17.0325 \text{ litres}
   10.25 ft\(^3\) = (10.25 \times .028) \text{ m}^3 = .287 \text{ m}^3

159. \[ \begin{array}{c}
   \text{l. yd.} \\
   \text{1.2 yds} = (1.2 \times 1.2144 \text{ m}) \\
   \text{= 1.4573 m} \\
   \text{2 ft} = .6667 \text{ yd} \\
   \text{= (.6667 \times 1.2144 \text{ m})} \\
   \text{= .8096} \\
   \text{volume} = (1.4573 \text{ m})(1.4573 \text{ m})(.8096 \text{ m}) = 1.7194 \text{ m}^3 \\
   \text{2.2 ft} = 67.056 \text{ cm} \\
   \text{volume} = (2.2 \text{ ft})^3 = (67.056 \text{ cm})^3 = 301517.78 \text{ cm}^3 \\
   \text{= 301.5178 dm}^3 \\

\[ R_1 + R_2 + R_3 + R_4 = 100 \Omega \]
\[ 10 + 20 + 30 + R_4 = 100 \Omega \]
\[ R_4 = 40 \Omega \]
\[ E_1 = 50v \quad E_2 = 125v \quad E_3 = 75v \]
\[ E_c = E_1 + E_2 + E_3 \]
\[ E_c = 250v \]

32. Given: \( E = 110v \quad I = 5a \quad I = 10a \quad E = 110v \)
\[ P = ? \]
\[ R = \frac{E}{I} = 22 \Omega \]
\[ R = \frac{E}{I} = 11 \Omega \]
\[ P = I^2R = 5^2 \times 22 = 550w \]
\[ P = I^2R = 10^2 \times 11 = 1100w \]

33. \( R_1 = 20 \Omega \quad R_2 = 50 \Omega \quad R_3 = 30 \Omega \quad I = 2.5a \)
\[ E_1 = IR_1 = 2.5 \times 20 = 50v \]
\[ E_2 = IR_2 = 2.5 \times 50 = 125v \]
\[ E_3 = IR_3 = 2.5 \times 30 = 75v \]
\[ E_c = E_1 + E_2 + E_3 = 250v \]
\[ R_c = \frac{E}{I} = 250ma \quad E = 120v \]
\[ E_c = IR_c = 250 \times 300 = 75v \]
\[ E_x = E - E_c = 120 - 75 = 45v \]
\[ R_x = \frac{E_x}{I} = 180 \Omega \]

34. \( y^3 - 36 = 0 \quad x^3 = 625 \)
\[ y = \pm 6 \quad x = \pm 25 \]

35. \( 6a^3 + 3a - 7 = 0 \quad 8b + 4a - 6 = 0 \)
\[ a = \frac{-3 \pm \sqrt{19 + 168}}{12} \quad a = \frac{-4 \pm \sqrt{16 + 192}}{16} \]
\[ a_i = 10.304 = .958 \quad a_i = 10.422 = .651 \]
\[ a_2 = -16.304 = -1.359 \quad a_2 = -18.422 = -1.151 \]

37. \( 3x + 3yx = 1 \quad 27b^3a + 3caba = 0 \)
\[ 3x(1 + y) = 1 \quad 3ba(9b + c) = 0 \]

38. \( 3ax^2 + 6ax + 3ay^2 = 0 \quad 5by^2 + 15cby + 25bx = 0 \)
\[ 3a(x^2 + x + y^2) = 0 \quad 5b(y^2 + 3cy + 5x) = 0 \]

39. \( (x + y)(x - y) = x - y \quad (2b + 2a)(2b - 2a) = 4b - 4a \)
\[ 3a(x + y) = 1 \quad (x - y) = 1 \]
\[ + (x - y = 1) \quad 6x + 2y = 12 \]
\[ \frac{2x}{2x} = 14 \quad -(4x - 2y = 3) \]
\[ x = 7 \quad \frac{2x}{x} = 9 \]
\[ x = 9/2 \]

42. \( c + 4b = 8 \quad b + a = 6 \)

47
2c - 6b = 7
   c = 8 - 4b
   2(8 - 4b) - 6b = 7
     -14b = -9
      b = 9/14
      c = 8 - 4(9/14)
       c = 38/7

a - b = 2
   a = 2 + b
   b = 2
   b + (2 + b) = 6
       b = 2
       a = 2 + 2 = 4

43. (1) x - 4y = 14
    (2) 4x + y = 5
    (1) x = 14 + 4y
     (2) x = 5 - y
     14 + 4y = 5 - y

    56 + 16y = 5 - y
    17y = -51
    y = -3
    (1) x + 12 = 14
      x = 2

(1) 2x + y = 14
    (2) 4x - 3y = 8
    (1) 2x = 14 - y
         x = 7 - 1/2y
    (2) 4x = 8 + 3y
         x = 2 + 3/4y

    7 - 1/2y = 2 + 3/4y
    28 - 2y = 8 + 3y
    -2y = 8 + 3y - 28
    2y = -8 + 3y + 28
    5y = 20
    y = 4
    (1) x = 7 - 2
      x = 5

44. x + y = 7
    4
    3
    12
    x = 4
    4

(1) 3x + 4y = 7
    (2) 2x - y = 1
     11x = 11
      x = 1
(1) 3 + 4y = 7
     4y = 4
      y = 1

x - y = 3
    2
    10

(1) 5x - y = 30
    (2) -5y = -50
      y = 10
(1) 5x - 10 = 30
    5x = 40
      x = 8

52.

54. 6x^3y & 7x^3y^3
    Least common multiple: 42x^3y^3

     8x^4y^5 & 9xy^4
    Least common multiple: 72x^4y^5

55. \frac{14x^3y^2}{7x^4y} = 2xyz
    \frac{64x^4y^3z^4}{8x^4yz^3} = 8x^2y^2z
56. \[-\left(\frac{a}{-c}\right) = \frac{a}{c}\]

\[-\left(\frac{d}{e}\right) = \frac{-d}{e}\]

57. \[\frac{e^3}{4} - 4 = \frac{e^3 - 16}{4}\]

\[\frac{12x^3}{4x^3} = \frac{9y^2}{3y^5}\]

59. Ohm’s Law:
Current is equal to the direct proportion of voltage to resistance.

\[I = \frac{E}{R}\]

Kirchhoff’s Law:
The algebraic sum of the currents at any junction of conductors is zero.

\[R_1I + R_2I + R_3I = 0\]

60. \[5^3 = 125\]

\[5^4 = 625\]

61. \[\log_{10}(100 \times 10,000) = \log_{10}100 + \log_{10}10,000 = 6\]

\[\log_{10}(64 \times 2) = \log_{10}64 + \log_{10}2 = 3.5\]

62. \[\log_{10}10 = \log_{10}10 - \log_{10}1 = 1 - 0 = 1\]

\[\log_{10}\frac{625}{64} = \log_{10}625 - \log_{10}64 = 5 - 3 = 2\]

63. \[\log_{10}100^3 = 2 \log_{10}100 = 4\]

\[\log_{10}8^3 = 2 \log_{10}8 = 6\]

64. \[\log_{10}\sqrt{10,000} = 1/2 \log_{10}10,000 = 4/2 = 2\]

\[\log_{10}\sqrt{100} = 1/3 \log_{10}100 = 2/3\]

65. \[\log_{10}140 = 2.1461\]

\[\log_{10}63 = 1.7993\]

66. \[\log_{10}10,000 = 4\]

\[\log_{10}16 = 4\]

\[2^4 = 16\]

67. antilog 2.8401 = 692

antilog .9101 = 8.13

68. \[3.6874 + 2.3265 = 6.0139\]

\[4.3265 = 6.3265 - 10\]

\[\frac{+6.2843}{2.6108} = \frac{12.6108 - 10}{10}\]

69. \[4.1073 = 14.1073 - 10\]

\[\frac{-6.9860}{7.1213 - 10}\]

\[1.6725 = 11.6725 - 10\]

\[\frac{-5.7854 - 10}{5.8869}\]
70. \( p = 2.79 \times 684 \)
\[ \log p = \log 2.79 + \log 684 = 0.4456 + 2.8351 = 3.2807 \]
\( p = 1908 \)
\[ x = 6.28 \times 10,600,000 \times .0000251 \]
\[ \log x = \log 6.28 + \log 10,600,000 + \log .0000251 = 3.2230 \]
\( x = 1671 \)

72. \( q = 948 \)
\[ \log q = \log 948 - \log 237 = 2.9768 - 2.3747 \]
\[ q = 4 \]
\[ p = \frac{-24.68}{682,700} \]
\[ \log p = \log 24.68 - \log 682,700 = (11.3923 - 10) - 5.8342 = 5.5581 - 10 \]
\[ p = -3.615 \times 10^{-5} \]

73. \( \log 642 \times 8.63 = (\log 642 + \log 8.63) - \log 37.2 \)
\[ \frac{37.2}{37.2} = (2.8075 + .9360) - 1.5705 = 2.173 \]
\[ \log \frac{3793 \times 70.2}{265} = (\log 3793 + \log 70.2) - \log 265 \]
\[ = (3.5790 + 1.8463) - 2.4232 = 3.0021 \]

78. \[ i = \frac{E}{R} (1 - \epsilon \frac{e^{-\frac{R\epsilon}{C}}}{15}) \]
\[ i = 0.8(1 - \epsilon \frac{e^{-\frac{R\epsilon}{C}}}{15}) \]
\[ i = 0.8 - \frac{8}{3.32} \]
\[ i = 0.8 - 0.6 \]
\[ \log_{10} \epsilon = 1.2 \log_{10} \epsilon \]
\[ \log_{10} \epsilon = 1.2 \log_{10} \epsilon = 1.2 \times .4343 = .5212 \]
\[ \epsilon = 3.32 \]
\[ i = .8 - .8 \]
\[ i = .559a \]
\[ i = \frac{E}{E - \frac{R\epsilon}{C}} \]
\[ i = \frac{.3E}{E - \frac{R\epsilon}{C}} \]
\[ i = .3 x 110 = .066a \]
\[ .066 = \frac{110}{500} (E^{-\frac{e}{5c}} + 2c \times 10^{-6}) \]
\[ .066 = .22E^{-\frac{e}{10c}} = .22E^{-\frac{e}{10c^2}} \]
\[ .3 = E^{-\frac{e}{10c^2}} = \frac{1}{E^{-\frac{e}{10c^2}}} \]
\[ .3 \epsilon^{10c^2} = 1 \]
\[ \epsilon^{10c^2} = 3.33 \]
\[ \log_{10} \epsilon^{10c^2} = \log_{10} 3.33 \]
\[ \log_{10} \epsilon^{10c^2} = \log_{10} 3.33 \]
\[ 100t \log \epsilon = \log 3.33 \]
\[ 43.43t = .5224 \]
\[ t = .012 \text{ sec} \]
79. \[ \text{db} = 10 \log \frac{P_1}{P_0} \]
\[ \text{db} = 10 \log \frac{120}{10} = 10 \log 12 = 10.8 \text{ db gain} \]

\[ P_1 = 6 \quad \text{db} = -64 \]
\[ -64 = 10 \log \frac{P'_1}{P_0} \]
\[ 3.6 - 10 = \log \frac{P'_1}{P_0} \]
\[ P'_1 = 2.39 \times 10^{-6} \text{ mw} \]

80. **How much power is represented by a gain of 23 db?**

\[ 23 = 10 \log \frac{P_1}{P_0} \]
\[ \text{antilog} 2.3 = \frac{P_1}{P_0} \]
\[ P_1 = 1197 \text{ mw} \]

**How much power is represented by -64 db?**

\[ -64 = 10 \log \frac{P'}{P_0} \]
\[ \text{antilog} -6.4 = \frac{P'}{P_0} \]
\[ 3.98 \times 10^{-7} = \frac{P'}{P_0} \]

84. \[ y = \sin x \]

85. \[ y = \cos x \]

86. \[ f = \frac{w}{2\pi} \quad \Rightarrow \quad w = 377 \]
\[ f = \frac{277}{2 \pi} = 60 \]
\[ w = 455 \]
\[ f = \frac{455}{2 \pi} = 72.4 \]

87. \[ w = 2\pi f \]
\[ f = 30 \]
\[ w = 2\pi \times 30 = 188.4 \text{ rad/sec} \]

\[ w = 2\pi \times 56 = 351.86 \text{ r/s} \]
88. \( y = 25 \sin (2\pi t + 30^\circ) \); \( r = 25 \)

Table 10

EXAMPLES FOR MACHINE SHOP MATH COMPETENCIES

78. 20.48 miles = (20.48 x 1.069 km) = 21.893 km

79. Hole size: 1.498 to 1.502 inches
   Tolerance: .004 inch

   Open-end wrench (opening size): .562 - .567 inches
   Tolerance: .005 inch

80. Circumference = \( \pi \times D \)
   Radius = 2.1 ft.
   Circumference = 13.19 ft.
   Diameter = 1/2 inch
   Circumference = 1.5708 inches

81. Perimeter of any Polygon = Sum of its Sides
    S = 4 inches; Perimeter of a square = 4 + 4 + 4 + 4
    = 16 inches

   S = 2.378 mm
   Perimeter of a hexagon = 2.378 + 2.378 + 2.378 + 2.378
   + 2.378 + 2.378 = 14.268 mm

82. Area of a circle = \( \pi \times r^2 \)
   r = 3 inches
   Area = \( \pi \times 9 \) in. = 28.274 in
   r = 15.4715 feet
   Area = \( \pi \times 239.36731 \) ft. = 752 ft.

83. Pitch of a thread = \( \frac{1}{\text{number of threads per inch}} \)
   N = 8.5
   P = \( \frac{1}{8.5} \) = .1176
   N = 14
   P = \( \frac{1}{14} \) = .07142

84. Cutting speed = \( \pi \times D \times \text{rpm} \)
   Rpm = 400
   Diameter = 2"
   CS = \( \pi \times 2 \times 400 = 2513.274 \text{ in/min} = 209.44 \text{ ft/min} \)
   Rpm = 170
   Diameter = 1 1/8"
   CS = \( \pi \times 9/8 \times 170 = 600.83 \text{ in/min} = 50.069 \text{ ft/min} \)

85. In a working year of 2400 hrs Maddie was absent from work for 72 hours. What percent of time was she absent?
   \( \frac{72}{2400} \times 100\% = 3\% \)

946 pounds of brass has 138 pounds of zinc. What percentage of the brass is zinc?
   \( \frac{138}{946} \times 100\% = 14.59\% \)

86. 7 graduations exposed thimble reading is 8
Reading: .183 in.
Six full turns starting from zero; reading .150 in.

87. Zero is at 2" and 6 graduations and the vernier coincides with the tenth line.
    Reading: 2.160 in
Zero is at 1" and 3 graduations and the vernier coincides with the eighth line.
    Reading: 1.083 in

88. 30 spaces on the vernier
The vernier zero is between 35°30' and 36°
The coinciding line is at 14
Total reading: 35°44'

Vernier zero between 15° and 15°30'
Coinciding vernier line at 12
Total reading: 15°12'

89. \(90° - 21°53' = 68° 07'
\)
\(69°18' - 68°19'31" = 58°29"
\)

90. \(\frac{30'}{60} = .5° \quad \frac{19'}{60} = .317°\)

91. \(6.53° = 6° + (.53 \times 60) = 6° + 31.8' = 6°32'
\)
\(11.7251° = 11° + (.7251 \times 60) = 11° + 43.506'
\)
\(= 11° + 43' + (.506 \times 60) = 11°43'30"\)

92.

93. Area of a triangle
Sides are: 5 cm, 8 cm, and 11 cm
Area = 18.33 sq. in.

Area of a parallelogram
Base: 2'9"
Altitude: 5'4"
Area = 14.67 sq. ft.

Area of a rectangle
Diagonal : 125'
Altitude : 75'
Area = 7500 sq. ft.
Area of a square
Diagonal : 12"
Area = 72 sq. in.

94. Distance across the flats of a square nut : 2 7/8
Diagonal = 4 1/16 in
Side of a square = 8.485 in
Diagonal = 12 inches

95. F = Distance Across Flats = \( \frac{c}{1.155} \)
c = Distance Across Corners

96. \( \tan 36°50' = .74900 \)
\( \cos 77°20' = .21928 \)

97. \( \sin 15°23' = ? \)
\[
\begin{align*}
10 \cdot 3 \sin 15°23' &= 0.26443 \\
\sin 15°30' &= 0.26724 \\
\sin 15°20' &= 0.26443 \\
\sin 15°23' &= 0.26527 \\
\end{align*}
\]

98. \( \sin C = \frac{d}{\sin D} \)
\( \frac{b}{\sin B} = \frac{C}{\sin C} \)
\( \frac{b}{\sin B} = \frac{d}{\sin D} \)
B = 25°
D = 80°
b = 15 inches
Find C, c and d
\[
\begin{align*}
\frac{15}{\sin 25°} &= \frac{d}{\sin 80°} \\
C &= 75° \\
c &= \frac{b \sin C}{\sin B} \\
\end{align*}
\]

99. b = 10 ft
d = 12 ft
\( C = 36° \)
Find c
Find \( c \)
\[
c^2 = b^2 + d^2 - 2bd \cos C = 100 + 144 - 194.165 = 49.835
\]
\[c = \sqrt{49.835} = 7.059 \text{ ft}
\]
Find \( B \)
\[
\sin B = \frac{10 \cdot .58779}{7.059} = .83268
\]
\[B = 56° 23'
\]
100. Find the taper per inch
\[
D = 4.576 \quad .d = 4.013 \quad L = 10 \text{ inches}
\]
\[
\text{TPI} = \frac{(D - d)}{L} = \frac{(4.576 - 4.013)}{10} = .0563 \text{ in per in}
\]
\[
D = .200 \text{ inch} \quad d = .162 \text{ inch} \quad L = 1 \frac{13}{16}
\]
\[
\text{TPI} = \frac{(.200 - .162)}{1.8125} = .02096 \text{ in per in}
\]
101. Offset = TPI x Total Work Length Between Centers
\[
\text{TPI} = .0357 \text{ in}
\]
\[\text{Length between centers} = 14
\]
\[\text{Offset} = .0357 \times 14 = .250 \text{ in}
\]
\[
\text{TPI} = .0778
\]
\[\text{Length between centers} = 15
\]
\[\text{Offset} = .0778 \times 15 = .5833 \text{ in}
\]
102. Length = 6 inches \( D = 4.665 \text{ inches} \quad d = 3.105 \text{ inches}
\]
\[
2 \times \tan \text{taper} = \text{corresponding angle}
\]
\[
\frac{2 \times .26}{24} = 14° 48'
\]
\[\text{Length} = 12 \text{ in} \quad D = 2.005 \text{ in} \quad d = 1.03 \text{ in}
\]
\[\text{Taper} = \frac{2.005 - 1.03}{12} = .08125
\]
\[\text{Corresponding angle} = 4° 40'
\]
103. TPI = .026 in; in 3 inches, TPI should be .078 in
\[
D = 1.562 \quad d = 1.500 \quad D - d = .062 \text{ in}
\]
\[\text{Error per inch} = \frac{.078 - .062}{3} = .0053 \text{ in}
\]
\[
\text{TPI} = .0208 \text{ in}; in 4 inches, TPI should be .0804 in
\]
\[
D = 1.251 \text{ in} \quad d = 1.232 \text{ in} \quad D - d = .019 \text{ in}
\]
\[\text{Error per inch} = \frac{.0804 - .019}{4} = .01535 \text{ in}
\]
104. \( T \) = Number of Teeth on Driver \( S \) = Speed of the Driver
\[t = \text{Number of Teeth on the Driven Gear}
\]
\[s = \text{Speed of Driven Gear}
\]
\[T \times S = t \times s
\]
\[t = 20 \quad s = 150 \text{ rpm} \quad T = 30
\]
\[ S = \frac{t \times s}{T} = \frac{(20)150}{30} = 100 \text{ rpm} \]

\[ T = 20 \quad s = 200 \text{ rpm} \quad t = 40 \]

\[ s = \frac{T \times S}{t} = \frac{20 \times 200}{40} = 100 \text{ rpm} \]

105. \[ T = 64 \quad S = 700 \text{ rpm} \quad s = 400 \text{ rpm} \]

\[ t = \frac{T \times S}{s} = \frac{64 \times 700}{400} = 112 \text{ rpm} \]

Rpm of Final Driven Gear =
Product of all Driving Teeth \times Rpm of First Driving Gear
Product of all Driven Teeth

Rpm of A = 300 \quad A = 24 \text{ T} \quad B = 64 \text{ T} \quad C = 36 \text{ T}
D = 20 \text{ T}
Rpm = \frac{300 \times 24 \times 64}{20 \times 36} = 640 \text{ rpm}

106. Rpm of Gear \times Thread Number = Speed of Worm \times Number of Teeth on Worm Gear

Rpm of gear = 120 \text{ rpm}
Thread number = 1
Number of teeth on worm gear = 60
Speed of worm gear = \frac{120 \text{ rpm} \times 1}{60} = 2 \text{ rpm}

Number of teeth = 40
Speed of gear = 80 \text{ rpm}
Thread number = 1
Rpm of gear = \frac{80 \times 1}{40} = 2 \text{ rpm}

107. Rpm = \frac{4CS}{D} \quad D = 3 \quad CS = 300

\[ \text{Rpm} = \frac{4(300)}{3} = 400 \]

\[ D = 5 \quad CS = 375 \]

\[ \text{Rpm} = \frac{4(375)}{5} = 300 \]

108. Rpm = \frac{4CS}{D} = 250

\[ 250 \times .75 = 188 \text{ rpm} \]

\[ \text{Rpm} = \frac{4(125)}{.5} = 1000 \text{ rpm} \]

\[ 1000 \times .75 = 750 \text{ rpm} \]

109. Rate of Feed = Chip Load per Tooth \times Number of Teeth \times \text{rpm}

Chip load = .007
Number of teeth = 30
Rpm = 83
Rate = .007 \times 30 \times 83 = 17.43 \text{ per minute}
Chip load = .002
Number of teeth = 12
Rpm = 86
Rate = .002 x 12 x 36 = 2.064

110. Cutting Time = Length of Cut
\[
\text{Feed Rate per Minute}
\]
Length of cut = 5.5
Feed rate = 2.2/min
Cutting time = \( \frac{5.5}{2.2} \) = 2.5 minutes
Length of cut = 2
Feed rate = .75/min
Cutting time = \( \frac{2}{.75} \) = 2.67 minutes

111. Pitch = \( \frac{1}{N} \) . N = 32 \( \frac{P}{32} \) = .0312
N = 13 \( \frac{P}{13} \) = .0769

112. M = D - 1.515P + 3G
\[
G = .57735 P \quad P = .0556 \quad D = .3125
\]
M = .3125 - 1.515(.0556) + 3(.03208) = .3244 inch
h = single depth of a thread = .6495P
P = .0312
h = .6495(.0312) = .0203

113. N x .013 + .060 = Outside Diameter of Machine Screws
N = 10
10 x .013 + .060 = .130 + .06 = .19 inch
Tap Drill Size = TDS = GS - P
OD = 3/8 \( \frac{P}{0.0625} \)
TDS = .375 - .0625 = .3125

114. Outside Diameter = OD = N + 2
\[
\frac{DP}{DP}
\]
DP = 18 \( \frac{N}{44} \) = 44
OD = \( \frac{44 + 2}{18} \) = 2.55
DP = 24 \( \frac{N}{36} \) = 36
OD = \( \frac{36 + 2}{24} \) = 1.58

115. C = \( \frac{N + N}{2DP} \)
\[
\frac{DP}{DP}
\]
DP = 6 \( \frac{N}{18} \) = 18 \( \frac{N}{48} \) = 48
C = \( \frac{18 + 48}{2 \times 6} \) = \( \frac{66}{12} \) = 5.5
DP = 16 \( \frac{N}{36} \) = 36 \( \frac{N}{54} \) = 54
C = \( \frac{36 + 54}{2 \times 16} \) = \( \frac{90}{32} \) = 2.813

117. N = 50 & 127
   (1) \(\frac{50}{127} = 0.3937\)
   (2) \(\frac{3937}{1000} = 0.3937\)

N = 45 & 130
   (1) \(\frac{45}{130} = 0.3461\)
   (2) \(\frac{3461}{1000} = 0.3461\)

118. Diametral pitch = \(\frac{25.4}{\text{Module}}\)

   Module = 10
   Diametral pitch = \(\frac{25.4}{10} = 2.54\)

   Module = 7
   Diametral pitch = \(\frac{25.4}{7} = 3.63\)

119. \(T = \text{number of complete turns} = \frac{40}{D}\)

   D = \text{number of divisions desired}
   D = 8
   \(\frac{T}{8} = 5\)
   \(T = 40 = 20\)

120. \(7^\circ 31'49''\) 41 spaces on the 49-hole circle
     \(5^\circ 1'45''\) 19 spaces on the 34-hole circle
Section 4

Resources for Teaching Exit Math Competencies

An information sheet was distributed with the math competency survey for each of the four selected areas (see Appendix 3). The purpose of the information sheet was to identify the textbooks, curriculum materials, audio-visuals materials, and computer software packages that were currently being used to teach math in each of the four training programs.

The advisory committee suggested that the handbook should include information related to the use of computers to assist in technical math instruction. The information sheet asked each instructor to identify if they used a computer and if they did, what type(s) of computers were being used. As shown in Table 11, 13 of the 50 instructors contacted or 26% used computers to assist them in the instruction of math. The TRS 80 was the most predominant computer used. Five of 13 instructors or 69% used the TRS 80.

A number of instructors said the related teacher used computers so they did not respond to the questions about computer use. This may have been a factor in responses from instructors. It may be that students are using computers for math instruction, but they are doing it in a separate area under the supervision of a related teacher.
Table 11

Numbers of Instructors Using various types of Computers
(N = 13)

<table>
<thead>
<tr>
<th>Computer Type</th>
<th>Number of Instructors</th>
</tr>
</thead>
<tbody>
<tr>
<td>TRS 80</td>
<td>9</td>
</tr>
<tr>
<td>Apple</td>
<td>1</td>
</tr>
<tr>
<td>IBM-PC</td>
<td>2</td>
</tr>
<tr>
<td>Hand Held TI</td>
<td>1</td>
</tr>
</tbody>
</table>
The information sheet asked instructors to name all commercial software used to teach math. Table 12 listed the software that 5 instructors identified. Again, as implied by the instructors, there was the possibility that the related instructors were the ones using the software so the instructors did not respond.

Table 12

Commercial Software Used to Teach Math (N = 5)

-----------------------------------------------

Drafting (N = 1)

Adventures in Math - IBM
Algebraic Expressions - Educational Activities
Basic Algebra Series (8 Programs) - Radio Shack
Math Around the House - Radio Shack
On the Road with Basic Math Skills - Radio Shack
Problem Solving in Algebra - Radio Shack

Electricity (N = 2)

Fundamental Math 1-3, Drill & Practice - Random House

Electronics (N = 2)

Calculus, vector Addition - Tandy (N = 1)
Utilizing Computers in Teaching Secondary Math - National Diffusion Network (N = 1)

Machine Shop

None

-----------------------------------------------
Instructors were also asked to provide information about math related software they had developed. Four instructors indicated they had developed software and three of them said they would be willing to share the information. The names of the software and instructors were listed in Table 13.

Table 13

Software Developed by Instructors to Teach Math (N = 3)

Drafting

Problem Solving in Basic and Related Math - Ralph Brown, Mayo State VTS

Electronics

Ohms Law, (TRS 80, Model 4), Ron Diemer, Jefferson State VTS

Solving Equations for P.E.I.R. & Variations, LW Ritchie, Hazard State VTS

Nine publishing companies were contacted to supply catalogs of math materials (see Appendix 8). These catalogs were analyzed to determine which texts and resource materials would be appropriate to assist with math instruction. Tables 14 -21 were compiled from the information supplied by the vocational instructors and by analyzing publishers’ catalogs.

(502) 825-6544
MINUTES FROM ADVISORY COMMITTEE MEETING ON SEPTEMBER 23

10:00 Greetings and Introductions of the twelve committee members. Each member was formally introduced and gave a brief description of his or her job responsibilities.

10:15 Dr. Crosby discussed the project and project activities that are planned for the project. The project objectives were discussed and Gary Hess gave some background information on how the project was initiated.

10:30 Dr. Crosby discussed the eleven programs and the ways in which he plans to research the exit math criteria needed for each program. He presented an example of the lists supplied from Frankfort, and discussed the ERIC R. search in Frankfort. He plans an independent search in other libraries. He then asked the committee for suggestions. A summary of these follows:
- Identify what type of computers are in each school.
- Identify the types of software used in each school.
- Determine if there are copyright problems in duplicating programs.
- Review the software currently used.
- Survey should include the basic math skills needed at tenth grade level and ask open ended questions about the technical math needed for each vocation.
- Survey should be sent to the technical or academic related teacher of each vocation. Bruce Schaeffer said he could supply the names to us. Gary Hess will send us the master list of math competencies from Frankfort.

11:30 Discussion of math support materials. Jane Hoarn discussed Enright. Marlin Duncan discussed the problem of locating appropriate software which introduced skills instead of just drill and practice. The survey should ask instructors what resources they are currently using and what resources work best for them.

1:00 Discussion of math tests. The group discussed the T.A.B.E. test and the merits of the exam. Some members did not concur that it tests at the tenth grade level.

1:15 Handbook discussion. The Handbook should be distributed to all technical instructors. Final competencies should be examined by Business and
Industry representatives.

1:30 Meeting Adjourned.

Machine Shop Survey
INFORMATION SHEET

NAME _______________________

SCHOOL _______________________

PHONE NUMBER _______________________

1. LIST THE MAJOR UNITS IN YOUR COURSE.
   NOTE - YOU MAY WANT TO INCLUDE YOUR COURSE OUTLINE TO ADD EXPLANATION.

   __________________________________________

   __________________________________________

   __________________________________________

2. ARE YOU A DAY OR EVENING INSTRUCTOR _______?

3. DO YOU USE A COMPUTER TO ASSIST IN TECHNICAL MATH INSTRUCTION ______ (YES OR NO)?

4. IF YOU ANSWERED YES TO #3, WHAT TYPE OF COMPUTER(S) DO YOU USE IN YOUR PROGRAM TO TEACH MATH?

   __________________________________________

   __________________________________________

   __________________________________________

5. HAVE YOU DEVELOPED SOFTWARE TO ASSIST WITH TECHNICAL MATH INSTRUCTION ______ (YES OR NO)?

6. IF YOU ANSWERED YES TO #5, WOULD YOU BE WILLING TO SHARE THE SOFTWARE YOU HAVE DEVELOPED ______ (YES OR NO)?

7. LIST THE TITLES OF THE SOFTWARE YOU DEVELOPED AND ARE WILLING TO SHARE. PLEASE NOTE THE TYPE OF COMPUTER USED.

   __________________________________________

   __________________________________________

   __________________________________________
8. List any commercial software (title, publisher) you are using to teach math. Also, please note the computer used with the software.

9. What other resource materials are you using to teach technical math?

Textbooks: (Please list title, author, publisher)

Curriculum materials: (Please list title, publisher)

Audio - Visual materials: (Please list title, developer)

Other materials:

Note: You may need to attach additional sheets of paper to describe the resources you use to teach math.
EXIT MATH COMPETENCIES
FOR DRAFTING

Directions: Circle the number which indicates whether or not a student needs the competency when exiting your drafting program. Please do not leave any item unanswered.

1. ADD, SUBTRACT, MULTIPLY ON A NUMBER LINE. - 1 2
2. REPRESENT THE PRODUCTS OF TWO NUMBERS ON A GRAPH. __________________________ 1 2
3. FIND THE VALUE OF A RADIUS VECTOR GRAPHICALLY. __________________________ 1 2
4. REPRESENT TRIGOMETRIC FUNCTIONS BY GRAPHING. __________________________ 1 2
5. DETERMINE X AND Y INTERCEPTS ON A GRAPH. -- 1 2
6. SOLVE TWO SIMULTANEOUS EQUATIONS BY GRAPHING. __________________________ 1 2
7. CONVERT A WHOLE NUMBER TO A POSITIVE POWER OF TEN. EXAMPLE: (46 TO 4.6 X 10 = ?) 1 2
8. ADD, SUBTRACT, MULTIPLY, AND DIVIDE POSITIVE AND NEGATIVE POWERS OF TEN. EXAMPLE: \((4 \times 10^3 + (6 \times 10^3) = ?)\) 1 2
9. SQUARE A NUMBER. __________________________ 1 2
10. FIND THE SQUARE ROOT OF A NUMBER. _______ 1 2
11. SQUARE A MONOMIAL. EXAMPLE: \((2a^2) = ? \) _______ 1 2
12. CUBE A MONOMIAL. EXAMPLE: \((3a^3b^3) = ? \) _______ 1 2
13. TAKE THE SQUARE ROOT OF A MONOMIAL. \((\sqrt[4]{4} = ?)\) 1 2
14. FIND THE CUBE ROOT OF A MONOMIAL. EXAMPLE: \((\sqrt[3]{8} = ?)\) __________________________ 1 2
15. SQUARE A BINOMIAL. EXAMPLE: \(((a - b)^2 = ?)\) ____ 1 2
16. TAKE THE SQUARE ROOT OF A TRINOMIAL. EXAMPLE: \((\sqrt[3]{a^2 + 2ab + b^2} = ?)\) __________________________ 1 2
17. **MULTIPLY AND DIVIDE NUMBERS WITH EXPONENTS.** **EXAMPLE:** \(a^3 \times a^4 = ?\)  

18. **MULTIPLY A NUMBER WITH AN EXPONENT BY AN EXPONENT.** **EXAMPLE:** \(a^4 \times b^5 = ?\)  

19. **MULTIPLY A FRACTION WITH AN EXPONENT BY AN EXPONENT.** **EXAMPLE:** \(\frac{x^n}{y^m} \times ? \)  

20. **EXPRESS NUMBERS WITH NEGATIVE EXPONENTS AS NUMBERS WITH POSITIVE EXPONENTS.** **EXAMPLE:** \(a^{-b} \times b^c = ?\)  

21. **FIND THE VALUES OF NUMBERS WITH FRACTIONAL EXPONENTS.** **EXAMPLE:** \(16^{\frac{1}{2}} = ?\)  

22. **SIMPLIFY RADICALS CONTAINING FRACTIONS.** **EXAMPLE:** \(\sqrt[3]{\frac{5}{6}} = ?\)  

23. **ADD AND SUBTRACT RADICALS.** **EXAMPLE:** \(2\sqrt{2} + 2\sqrt{3} = ?\)  

24. **GROUP TERMS IN AN EQUATION.**  

25. **DETERMINE SIGNS IN A COMPLEX EQUATION.**  

26. **SOLVE EQUATIONS WITH ONE UNKNOWN.**  

27. **SOLVE EQUATIONS BY TRANSPOSING.** **EXAMPLE:** \(e + 4 = 13, e = ?\)  

28. **SOLVE AN EQUATION BY CANCELING A TERM.** **EXAMPLE:** \(x - y = 2 - x, y = ?\)  

29. **CHECK SOLUTIONS FOR EQUATIONS.**  

30. **FORM EQUATIONS FROM OBSERVED DATA.**  

31. **SOLVE A PROBLEM USING A FORMULA WITH KNOWNS AND ONE UNKNOWN EXPRESSED IN THE SAME UNIT.**  

32. **SOLVE A PROBLEM INVOLVING 2 FORMULAS, 3 OR MORE KNOWNS, AND ONE UNKNOWN.**  

33. **SOLVE A PROBLEM INVOLVING 3 FORMULAS, 3 OR MORE KNOWNS, AND ONE OR MORE UNKNOWNS.**
34. Solve a Quadratic Equation.
Example: \(x^2 - 25 = 0, \ x = \ ?\)------------------- 1 2

35. Solve Equations with the Quadratic Formula. Example: \((2a^2 + 2a - 6 = 0)\) ------ 1 2

36. Solve Quadratic Equations by Graphing. Example: \((x^2 - 10x + 16 = 0)\). 1 2

37. Factor a Simple Equation. 1 2

38. Find the prime factors of equations. Example: \((3ax^2 + 6ax + 3 ay^2 = ?)\). 1 2

39. Find the product with the difference and sum of two equations. Example:
\((a + b) (a - b) = ?\) ------------------- 1 2

40. Factor the sum and difference of 2 cubes. Example: \(b^3 + a^3\)
\(a^3 - b^3\) ------------------- 1 2

41. Solve Simultaneous Linear Equations by Addition and Subtraction. ------------------- 1 2

42. Solve Simultaneous Linear Equations by Substitution. ------------------- 1 2

43. Solve Simultaneous Equations by Comparison. 1 2

44. Solve Fractional Form Simultaneous Equations. Example: \((x/4 + y/3 = 7/12)\).------------------ 1 2

45. Determine Complimentary and Supplementary Angles of a Triangle. ------------------- 1 2

46. Find the arc, sine, cosine and tangent of an angle. ------------------- 1 2

47. Find functions of angles greater than 90. 1 2

48. Find functions of an angle in second, third and fourth quadrants. ------------------ 1 2

49. Solve a Problem Involving Similar Right Triangles. ------------------- 1 2

50. Find trigometric ratios of angles of right triangles. ------------------ 1 2

51. Solve for angles, sides and hypotenuse for a right triangle. ------------------ 1 2
52. SOLVE GRAPHICALLY FOR ELEMENTS OF A RIGHT TRIANGLE. ____________________________ 1 2

53. SOLVE WORD PROBLEMS RELATED TO A RIGHT TRIANGLE. ____________________________ 1 2

54. FIND THE LEAST COMMON MULTIPLE. EXAMPLE:
   \[6x^2y = ?\] ____________________________ 1 2

55. REDUCE A FRACTION TO ITS LOWEST TERM.
   EXAMPLE: \[\frac{12x^2y^3}{24x^3y^2}\] ____________________________ 1 2

56. CHANGE SIGN OF FRACTIONS. EXAMPLE: \[\frac{(+a)}{-b}\] = ? ___ 1 2

57. ADD, SUBTRACT, MULTIPLY AND DIVIDE FRACTIONS.
   EXAMPLE: \[\frac{e^3 - 4}{4}\]
   \[\frac{1 + \frac{e}{5}}{5}\] ____________________________ 1 2

58. CONVERT A FRACTION TO A DECIMAL. _________________ 1 2

59. EXPRESS EQUATIONS IN LOGARITHMIC FORM, EXAMPLE:
   \[(10^5 = 10,000)\] ____________________________ 1 2

60. FIND THE LOGARITHM OF A PRODUCT, EXAMPLE: \[\text{LOG OF} (M \times N = ?)\] ____________________________ 1 2

61. FIND THE LOGARITHM OF A QUOTIENT, EXAMPLE: \[\text{LOG OF} \frac{M}{N}\] ____________________________ 1 2

62. FIND THE LOGARITHM OF A POWER, EXAMPLE: \[(10^3 = ?)\] 1 2

63. FIND THE LOGARITHM OF A ROOT, EXAMPLE: \[(10^{\frac{1}{2}} = ?)\] 1 2

64. FIND THE LOGARITHM OF A NUMBER, EXAMPLE: \[(140 = ?)\] 1 2

65. EXPRESS EQUATIONS IN EXPONENTIAL FORM, EXAMPLE:
   \[(\text{LOG}, 1 = 0)\] ____________________________ 1 2

66. FIND THE ANTILOG OF A NUMBER, EXAMPLE: \[(.8782 = ?)\] ____________________________ 1 2
67. ADD LOGARITHMS.______________________________ 1 2
68. SUBTRACT LOGARITHMS._________________________ 1 2
69. MULTIPLY LOGARITHMS._________________________ 1 2
70. COMPUTE LOGARITHMS WITH NEGATIVE NUMBERS.____ 1 2
71. DIVISION BY LOGARITHMS._______________________ 1 2
72. MULTIPLICATION AND DIVISION BY LOGARITHMS.____ 1 2
73. EXTRACTING ROOTS BY LOGARITHMS._______________ 1 2
74. COMPUTE EQUATIONS USING LOGARITHMS WITH FRACTIONAL EXPONENTS. EXAMPLE: (14.3) = ? ________ 1 2
75. GRAPH A LOGARITHM FUNCTION. EXAMPLEE:(y=log x) 1 2
76. SOLVE A LOGARITHMIC EQUATION. EXAMPLE:
   (log x^3 - log x = 0.3)___________________________ 1 2
77. FIND THE CORRECT PROPORTIONS OF SELECTED OBJECTS.1 2
78. DETERMINE DIMENSIONS TO SCALE._______________ 1 2

   DEFINE THE FOLLOWING.

79. PARTS OF A CIRCLE.____________________________ 1 2
80. CONCENTRIC CIRCLES.___________________________ 1 2
81. ECCENTRIC CIRCLES.____________________________ 1 2
82. RIGHT ANGLE.______________________________ 1 2
83. ACUTE ANGLE.______________________________ 1 2
84. OBTUSE ANGLE.______________________________ 1 2
85. COMPLEMENTARY ANGLES.______________________ 1 2
86. SUPPLEMENTARY ANGLES.______________________ 1 2

87. CALCULATE THE AREA AND CIRCUMFERENCE OF A CIRCLE.____________________________ 1 2
LIST SIDE AND OR ANGLE RELATIONSHIPS FOR THE FOLLOWING.

88. EQUILATERAL TRIANGLE___________ 1   2
89. ISOSCELES TRIANGLE___________ 1   2
90. SCALENE TRIANGLE___________ 1   2
91. RIGHT TRIANGLE___________ 1   2
92. RIGHT TRIANGLE IN A SEMI-CIRCLE___ 1   2

LIST THE SIDE AND OR ANGLE RELATIONSHIPS FOR THE FOLLOWING:

93. SQUARE___________ 1   2
94. RECTANGLE___________ 1   2
95. RHOMBUS___________ 1   2
96. RHOMBOID___________ 1   2
97. TRAPEZOID___________ 1   2
98. TRAPEZIUM___________ 1   2

LIST THE SIDE AND OR ANGLE RELATIONSHIPS FOR THE FOLLOWING:

99. PENTAGON___________ 1   2
100. HEXAGON___________ 1   2
101. HEPTAGON___________ 1   2
102. OCTAGON___________ 1   2
103. NONAGON___________ 1   2
104. DECAGON___________ 1   2
105. DODECAGON___________ 1   2

LIST THE SIDE AND OR ANGLE RELATIONSHIP FOR THE FOLLOWING:

106. TETRAHEDRON___________ 1   2
107. HEXAHEDRON___________ 1   2
108. OCTAHEDRON._________________________ 1 2
109. DODECAHEDRON._________________________ 1 2
110. ICOSOHEDRON.___________________________ 1 2
LIST SIDE AND OR ANGLE RELATIONSHIPS FOR THE FOLLOWING:
111. RIGHT SQUARE._________________________ 1 2
112. OBLIQUE TRIANGLE._______________________ 1 2
LIST SIDE AND OR ANGLE RELATIONSHIPS FOR THE FOLLOWING:
113. RIGHT TRIANGULAR PRISM._______________ 1 2
114. RIGHT RECTANGULAR PRISM.______________ 1 2
115. RIGHT PENTAGONAL PRISM._______________ 1 2
116. OBLIQUE PENTAGONAL PRISM._____________ 1 2
117. OBLIQUE HEXAGONAL PRISM.______________ 1 2
LIST ELEMENTS FOR THE FOLLOWING:
118. RIGHT CIRCULAR CYLINDER._______________ 1 2
119. OBLIQUE CIRCULAR CYLINDER._____________ 1 2
LIST SIDE AND OR ANGLE RELATIONSHIPS FOR THE FOLLOWING:
120. RIGHT TRIANGULAR PYRAMID._____________ 1 2
121. RIGHT SQUARE PYRAMID._________________ 1 2
122. OBLIQUE PENTAGONAL PYRAMID.___________ 1 2
LIST ELEMENTS FOR THE FOLLOWING:
123. RIGHT CIRCULAR CONE.___________________ 1 2
124. OBLIQUE CIRCULAR CONE._________________ 1 2
125. SPHERE._______________________________ 1 2
126. TORUS._______________________________ 1 2
127. DIVIDE LINES INTO EQUAL DIVISIONS.

128. DETERMINE MEASUREMENTS OF ENLARGED AND REDUCED OBJECTS.

129. DETERMINE TOLERANCES AND LIMITS OF DRILL HOLES.

130. DETERMINE CLEARANCE, TRANSITION, AND INTERFERENCE FITS.

131. DETERMINE DIMENSIONS AND TOLERANCES OF AN INTERNAL AND AN EXTERNAL CYLINDRICAL SURFACE.

132. COMPUTE HORIZONTAL AND VERTICAL SPACING OF AN OBJECT.

133. CONSTRUCT A BAR GRAPH.

134. DESCRIBE INFORMATION FROM A LINE GRAPH.

135. CONSTRUCT A CIRCLE GRAPH AND PIE CHART.

136. COMPUTE DIAMETRICAL PITCH OF A THREAD.

137. COMPUTE CIRCULAR PITCH OF A THREAD.

138. COMPUTE VERTICAL SPACING, GIVEN THE WORKING SPACE AND HEIGHT OF AN OBJECT.

139. COMPUTE DIAMETRICAL PITCH OF A GEAR.

140. COMPUTE CIRCULAR PITCH OF A GEAR.

141. COMPUTE PITCH DIAMETER OF A GEAR.

142. COMPUTE OUTSIDE DIAMETER OF A GEAR.

143. COMPUTE ROOT DIAMETER OF A GEAR.

144. COMPUTE ADDENDUM OF A GEAR.

145. COMPUTE DEDENDUM OF A GEAR.

146. CALCULATE WHOLE DEPTH USING A FORMULA.

147. COMPUTE CIRCULAR THICKNESS OF A GEAR.

148. DETERMINE METRIC NUMBERS THAT REPRESENT THE SI PREFIX SYMBOLS.
149. DETERMINE METRIC PREFIX NAMES FOR PREFIX SYMBOLS. ___________________________ 1 2

150. FIND THE EQUIVALENT VALUE IN METRICS OF A VALUE WITH A PREFIX SYMBOL. ________ 1 2

151. DETERMINE CUSTOMARY LENGTHS FOR SELECTED METRIC LENGTHS. ____________________ 1 2

152. CONVERT UNITS IN THE METRIC SYSTEM, EXAMPLE: ( M to mm ). ___________________________ 1 2

153. CONVERT LENGTHS FROM ENGLISH TO METRIC. ___ 1 2

154. CALCULATE AREAS OF OBJECTS IN THE METRIC SYSTEM. ________________________________ 1 2

155. CONVERT LENGTHS FROM METRIC TO ENGLISH. ___ 1 2

156. CONVERT DIMENSIONS OF OBJECTS FROM ENGLISH TO METRIC. ___________________________ 1 2

157. CONVERT AREAS MEASUREMENTS TO METRIC AREAS. 1 2

158. COMPUTE METRIC VOLUMES. ________________________ 1 2

159. CONVERT CUSTOMARY DIMENSIONS TO METRIC DIMENSIONS AND CALCULATE THE VOLUME IN METRIC UNITS. 1 2

FIND THE CORRECT DRAFTING SCALE RATIO IN METRICS FOR:

160. ASSEMBLY DRAWINGS. ________________________ 1 2

161. DETAIL DRAWINGS. __________________________ 1 2

162. WORKING DRAWINGS. _________________________ 1 2

163. SITE PLANS. ________________________________ 1 2

164. SURVEYS. _________________________________ 1 2

165. MAPS. _________________________________ 1 2

PLEASE ADD ADDITIONAL COMPETENCIES YOU BELIEVE ARE NEEDED.

</table>
17. **MULTIPLY AND DIVIDE NUMBERS WITH EXPONENTS.** EXAMPLE: \((a^3 \times a^n) = ? \) 1 2

18. **MULTIPLY A NUMBER WITH AN EXPONENT BY AN EXPONENT.** EXAMPLE: \((a^p \times a^q) = ? \) 1 2

19. **MULTIPLY A FRACTION WITH AN EXPONENT BY AN EXPONENT.** EXAMPLE: \((\frac{x^n}{y^m}) = ? \) 1 2

20. **EXPRESS NUMBERS WITH NEGATIVE EXPONENTS AS NUMBERS WITH POSITIVE EXPONENTS.** EXAMPLE: \((a^{-3}b^2) = ? \) 1 2

21. **FIND THE VALUES OF NUMBERS WITH FRACTIONAL EXPONENTS.** EXAMPLE: \((16)^{\frac{1}{2}} = ? \) 1 2

22. **SIMPLIFY RADICALS CONTAINING FRACTIONS.** EXAMPLE: \((\sqrt[3]{\frac{5}{6}}) = ? \) 1 2

23. **ADD AND SUBTRACT RADICALS.** EXAMPLE: \((2\sqrt{2} + 2\sqrt{3}) = ? \) 1 2

24. **GROUP TERMS IN AN EQUATION.** 1 2

25. **DETERMINE SIGNS IN A COMPLEX EQUATION.** 1 2

26. **SOLVE EQUATIONS WITH ONE UNKNOWN.** 1 2

27. **SOLVE EQUATIONS BY TRANSPOSING.** EXAMPLE: \((e + 4) = 12, e = ? \) 1 2

28. **SOLVE AN EQUATION BY CANCELING A TERM.** EXAMPLE: \((x - y = 2 - x), y = ? \) 1 2

29. **CHECK SOLUTIONS FOR EQUATIONS.** 1 2

30. **FORM EQUATIONS FROM OBSERVED DATA.** 1 2

31. **SOLVE A PROBLEM USING A FORMULA WITH KNOWNS AND ONE UNKNOWN EXPRESSED IN THE SAME UNIT.** EXAMPLE: A PROBLEM ABOUT OHMS LAW. 1 2

32. **SOLVE A PROBLEM INVOLVING 2 FORMULAS, 3 OR MORE KNOWNS, AND ONE UNKNOWN.** 1 2

33. **SOLVE A PROBLEM INVOLVING 3 FORMULAS, 3 OR MORE KNOWNS, AND ONE OR MORE UNKNOWNS.** 1 2
34. Solve a quadratic equation.
   Example: \( x^2 - 25 = 0 \) \( x = ? \)  

35. Solve equations with the quadratic formula.
   Example: \( 2a^2 + 2a - 6 = 0 \)  

36. Solve quadratic equations by graphing.
   Example: \( x^2 - 10x + 16 = 0 \)  

37. Factor a simple equation.  

38. Find the prime factors of equations.
   Example: \( 3ax^3 + 6ax + 3ay^2 \)  

39. Find the product with the difference and sum of two equations.
   Example: \( (a + b)(a - b) = ? \)  

40. Factor the sum and difference of 2 cubes.
   Example: \( \frac{b^3 + c^3}{a^3 - b^3} = ? \)  

41. Solve simultaneous linear equations by addition and subtraction.  

42. Solve simultaneous linear equations by substitution.  

43. Solve simultaneous equations by comparison.  

44. Solve fractional form simultaneous equations.
   Example: \( \frac{x}{4} + \frac{y}{3} = 7/12 \)  

45. Determine complimentary and supplementary angles of a triangle.  

46. Find the arc, sine, cosine and tangent of an angle.  

47. Find functions of angles greater than 90.  

48. Find functions of an angle in second, third and fourth quadrants.  

49. Solve a problem involving similar right triangles.  

50. Find trigonometric ratios of angles of right triangles.  

51. Solve for angles, sides and hypotenuse for a right triangle.
52. SOLVE GRAPHICALLY FOR ELEMENTS OF A RIGHT TRIANGLE. 
53. SOLVE WORD PROBLEMS RELATED TO A RIGHT TRIANGLE.

54. FIND THE LEAST COMMON MULTIPLE. EXAMPLE: 
   \((6 \times 3^2 y) = ?\) 

55. REDUCE A FRACTION TO ITS LOWEST TERM. 
   EXAMPLE: \(\frac{12x^2y^3}{24x^3y^2z} = ?\)

56. CHANGE SIGN OF FRACTIONS. EXAMPLE: \(\left(\frac{a}{b}\right)^{-1} = \frac{b}{a}\)

57. ADD, SUBTRACT, MULTIPLY AND DIVIDE FRACTIONS. 
   EXAMPLE: \(\frac{e^3}{4} - 4\)

58. CONVERT A FRACTION TO A DECIMAL. 
59. SET UP EQUATIONS FROM THEORY. EXAMPLE: 
   KIRCHHOFFS LAW

60. EXPRESS EQUATIONS IN LOGARITMIC FORM, EXAMPLE: 
   \(10^5 = 10,000\)

61. FIND THE LOGARITHM OF A PRODUCT, EXAMPLE: \(\log\) 
   \((M \times N) = ?\)

62. FIND THE LOGARITHM OF A QUOTIENT, EXAMPLE: \(\log\) 
   \(m \div n\)

63. FIND THE LOGARITHM OF A POWER, EXAMPLE: \((10^3) = ?\)

64. FIND THE LOGARITHM OF A ROOT, EXAMPLE: \((10^{1/2}) = ?\)

65. FIND THE LOGARITHM OF A NUMBER, EXAMPLE: \((140) = ?\)

66. EXPRESS EQUATIONS IN EXPONENTIAL FORM, EXAMPLE: 
   \((\log_{10} 1 = 0)\)
67. FIND THE ANTILOG OF A NUMBER; EXAMPLE: (.8782) = ?
68. ADD LOGARITHMS.
69. SUBTRACT LOGARITHMS.
70. MULTIPLY LOGARITHMS.
71. COMPUTE LOGARITHMS WITH NEGATIVE NUMBERS.
72. DIVISION BY LOGARITHMS.
73. MULTIPLICATION AND DIVISION BY LOGARITHMS.
74. EXTRACTING ROOTS BY LOGARITHMS.
75. COMPUTE EQUATIONS USING LOGARITHMS WITH FRACTIONAL EXPONENTS. EXAMPLE: \((1.4.3)^{\frac{1}{3}} = ?\)
76. GRAPH A LOGARITHM FUNCTION. EXAMPLE: \((y = \log_{10} x)\)
77. SOLVE A LOGARITHMIC EQUATION. EXAMPLE: \((\log x^2 - \log x = 0.3)\)
78. SOLVE ELECTRONIC PROBLEMS USING LOGARITHMS.
    EXAMPLE: \(q = CE \left(1 - e^{-\frac{t}{RC}}\right)\)
79. EXPRESS GAIN OR LOSS OF APPARATUS IN DECIBELS, (LOGARITHMS). EXAMPLE: \(20 = 10 \log \frac{p}{6}\)
80. EXPRESS GAIN OF LOSS OF QUANTITIES IN DECIBELS, (LOGARITHMS).
81. FIND THE INDUCTANCE OF A LINE USING LOGARITHMS.
82. FIND THE IMPEDANCE OF A LINE USING LOGARITHMS.
83. FIND THE CAPACITANCE OF A LINE USING LOGARITHMS.
84. GRAPH THE EQUATION \((y = \sin x)\).
85. GRAPH THE COSINE CURVE. EXAMPLE: \((y = \cos x)\).
86. IN EQUATIONS OF PERIODIC CURVES, SPECIFY FREQUENCY.
87. IN EQUATIONS OF PERIODIC CURVES, SPECIFY ANGLE OF VELOCITY.
88. In equations of periodic curves, specify the amplitude.  

89. In equations of periodic curves, specify period.  

90. In equations of periodic curves, specify angle of lead or lag.  

91. Find the magnitude and direction of vectors.  

92. Find the horizontal and vertical components of vectors.  

93. Find the resultant forces of vectors.  

94. Use vector diagrams to find instantaneous values in an AC circuit.  

95. Determine angles in a vector diagram of an AC circuit.  

96. Find the angular velocity of an AC circuit.  

97. Write equations for voltage and current using an AC circuit.  

98. Draw vector diagrams of circuits, and construct vectors for AC circuits.  

99. Determine angles in a vector diagram and plot imaginary numbers on a vector diagram.  

100. Express AC circuit parameters in polar form.  

101. Convert AC circuit parameters from rectangular to polar form and vice versa.  

102. Solve problems using parameters expressed in rectangular.  

103. Solve problems using parameters expressed in polar form.  

104. Add vectors in rectangular form.  

105. Subtract vectors in rectangular form.  

106. Multiply vectors in rectangular form.  

107. Divide vectors in rectangular form.  

108. Multiply polar vectors.
109. DIVIDE POLAR VECTORS. ___________________________ 1 2
110. EXPRESS NUMBERS IN THE BINARY NUMBER SYSTEM. ______ 1 2
111. CONSTRUCT AND ANALYZE TRUTH TABLES. _____________ 1 2
112. DEVELOP A BOOLEAN EQUATION FROM A LOGIC DIAGRAM. ___ 1 2
113. USE THE SUM OF PRODUCTS METHOD TO SOLVE A BOOLEAN EQUATION. ___________________________ 1 2
114. DEVELOP A SUM OF PRODUCTS EQUATION FROM A TRUTH TABLE. ___________________________ 1 2
115. SIMPLIFY A BOOLEAN EQUATION. _____________________ 1 2
116. CONVERT A TRUTH TABLE INTO A KARNOUGH MAP. _______ 1 2
117. DRAW A THREE AND FOUR VARIABLE KARNOUGH MAP FROM A TRUTH TABLE. _________________ 1 2
118. SIMPLIFY A KARNOUGH MAP BY USING OCTETS, QUADS, OR PAIRS. ____________________________ 1 2
119. USE THE PRODUCT OF SUMS METHOD TO SIMPLIFY A TRUTH TABLE. ___________________________ 1 2
120. CONVERT A TRUTH TABLE TO AN EQUATION. ____________ 1 2
121. SIMPLIFY A PRODUCT OF SUMS EQUATION. _____________ 1 2
122. USE MULTIPLEXER LOGIC. ____________________________ 1 2
123. FIND BCD EQUIVALENTS OF DECIMAL NUMBERS. ________ 1 2
124. CONVERT BINARY NUMBERS TO DECIMAL EQUIVALENTS. ___ 1 2
125. CONVERT OCTAL NUMBERS TO DECIMAL EQUIVALENTS. ___ 1 2
126. FIND THE DECIMAL EQUIVALENT OF AN OCTAL NUMBER. ___ 1 2
127. CONVERT HEXADECIMAL NUMBERS TO BINARY NUMBERS. ___ 1 2
128. EXPRESS A DECIMAL NUMBER IN EXCESS - 3 CODE. ______ 1 2
129. EXPRESS AN EXCESS - 3 NUMBER AS A DECIMAL EQUIVALENT. ___________________________ 1 2
130. CONVERT GRAY NUMBERS TO A DECIMAL EQUIVALENT. ___ 1 2
131. GIVE THE SUM OF NUMBERS IN BASE 8 OR 16. ________ 1 2
132. SUM OF BINARY NUMBERS. ___________________________ 1 2
133. ADD WHOLE NUMBERS IN BASE 10 USING 16 BIT NUMBERS. 1 2
134. SUBTRACT BINARY NUMBERS. 1 2
135. SUBTRACT WHOLE NUMBERS IN THE BASE TEN SYSTEM. 1 2
136. DETERMINE OVERFLOW OF PROBLEMS WITH 8 BIT UNSIGNED ARITHMETIC. 1 2
137. EXPRESS POSITIVE OR NEGATIVE WHOLE NUMBERS IN 8 BIT SIGN MAGNITUDE FORM. 1 2
138. CONVERT SIGN MAGNITUDE NUMBERS INTO DECIMAL EQUIVALENTS. 1 2
139. EXPRESS THE COMPLEMENT OF NUMBERS IN HEXADECIMAL NOTATION. 1 2
140. EXPRESS THE 2’S COMPLEMENT OF BINARY NUMBERS. 1 2
141. CONVERT POSITIVE OR NEGATIVE WHOLE NUMBERS TO 2’S COMPLEMENT REPRESENTATION. 1 2
142. SHOW THE 8 BIT ADDITION AND SUBTRACTION OF DECIMAL NUMBERS IN 2’S COMPLEMENT REPRESENTATION. 1 2

</tbody>
</table>
34. SOLVE A QUADRATIC EQUATION.
   EXAMPLE: \((x^2 - 25 = 0) \cdot x = ?\) ------------------ 1 2

35. SOLVE EQUATIONS WITH THE QUADRATIC FORMULA. (EXAMPLE: \(2a^2 + 2a - 6 = 0\)) ------ 1 2

36. SOLVE QUADRATIC EQUATIONS BY GRAPHING. EXAMPLE: \((x^2 - 10x + 16 = 0) = ?\) 1 2

37. FACTOR A SIMPLE EQUATION. 1 2

38. FIND THE PRIME FACTORS OF EQUATIONS. EXAMPLE: \((3ax^2 + 6ax + 3ay^2) = ?\) 1 2

39. FIND THE PRODUCT WITH THE DIFFERENCE AND SUM OF TWO EQUATIONS. EXAMPLE:
   \((a + b)(a - b) = ?\) ------------------------ 1 2

40. FACTOR THE SUM AND DIFFERENCE OF 2 CUBES.
   EXAMPLE: \(b^3 + c^3 = ?\)
   \(a^3 - b^3 = ?\) ------------------------ 1 2

41. SOLVE SIMULTANEOUS LINEAR EQUATIONS BY ADDITION AND SUBTRACTION. ------------------ 1 2

42. SOLVE SIMULTANEOUS LINEAR EQUATIONS BY SUBSTITUTION. ----------------------------- 1 2

43. SOLVE SIMULTANEOUS EQUATIONS BY COMPARISON. - 1 2

44. SOLVE FRACTIONAL FORM SIMULTANEOUS EQUATIONS. EXAMPLE: \((x/4 + y/3 = 7/12)\)------------------ 1 2

45. DETERMINE COMPLIMENTARY AND SUPPLEMENTARY ANGLES OF A TRIANGLE. ------------------ 1 2

46. FIND THE ARC, SINE, COSINE AND TANGENT OF AN ANGLE. ---------------------------- 1 2

47. FIND FUNCTIONS OF ANGLES GREATER THAN 90. - 1 2

48. FIND FUNCTIONS OF AN ANGLE IN SECOND, THIRD AND FOURTH QUADRANTS. ---------------- 1 2

49. SOLVE A PROBLEM INVOLVING SIMILAR RIGHT TRIANGLES. ----------------------------- 1 2

50. FIND TRIGOMETRIC RATIOS OF ANGLES OF RIGHT TRIANGLES. ----------------------------- 1 2

51. SOLVE FOR ANGLES, SIDES AND HYPOTENUSE FOR A RIGHT TRIANGLE. --------------------- 1 2
52. SOLVE GRAPHICALLY FOR ELEMENTS OF A RIGHT TRIANGLE. ----------------------------- 1 2

53. SOLVE WORD PROBLEMS RELATED TO A RIGHT TRIANGLE. ----------------------------- 1 2

54. FIND THE LEAST COMMON MULTIPLE. EXAMPLE: 
\( (6 \times x^2y) = ? \) ----------------------------- 1 2

55. REDUCE A FRACTION TO ITS LOWEST TERM. 
EXAMPLE: \( \frac{12x^2y^2}{24x^3y^2z} = ? \) ----------------------------- 1 2

56. CHANGE SIGN OF FRACTIONS. EXAMPLE: \( \frac{+a}{-b} = ? \) --- 1 2

57. ADD, SUBTRACT, MULTIPLY AND DIVIDE FRACTIONS. 
EXAMPLE: \( \frac{e^2}{4} - 4 \) 
\[ 1 + \frac{\frac{e}{5}}{?} = \] ----------------------------- 1 2

58. CONVERT A FRACTION TO A DECIMAL. ----------------------------- 1 2

59. SET UP EQUATIONS FROM THEORY. ----------------------------- 1 2

60. EXPRESS EQUATIONS IN LOGARITHMIC FORM, EXAMPLE: 
\( (10^5 = 10,000) \) ----------------------------- 1 2

61. FIND THE LOGARITHM OF A PRODUCT, EXAMPLE: \( \log (m \times n) = ? \) ----------------------------- 1 2

62. FIND THE LOGARITHM OF A Quotient, EXAMPLE: \( \frac{\log a}{m} \) = \( \frac{n}{?} \) ----------------------------- 1 2

63. FIND THE LOGARITHM OF A POWER, EXAMPLE: \( (10)^n = ? \) 1 2

64. FIND THE LOGARITHM OF A ROOT, EXAMPLE: \( (10) = ? \) 1 2

65. FIND THE LOGARITHM OF A NUMBER, EXAMPLE: \( (140) = ? \) 1 2

66. EXPRESS EQUATIONS IN EXPONENTIAL FORM, EXAMPLE: 
\( (\log_{10} 1 = 0) \) ----------------------------- 1 2

91. FIND MINUTE AND SECOND EQUIVALENTS OF DECIMALS.

92. DETERMINE SIZES OF ANGLES ON DRAWINGS.

93. FIND THE AREA OF A CIRCLE, TRIANGLE, SQUARE, PARALLELOGRAM AND RECTANGLE.

94. FIND THE DIAGONAL OF A SQUARE.

95. FIND THE DISTANCE ACROSS THE FLATS OR CORNERS IN A HEXAGON.

96. USE A TABLE OF NATURAL FUNCTIONS TO FIND A FUNCTION OF AN ANGLE.

97. INTERPOLATE TO FIND VALUES OF ANGLE FUNCTIONS FOR MINUTES.

98. USE THE LAW OF SINES TO SOLVE AN OBLIQUE TRIANGLE.

99. USE THE LAW OF COSINES TO SOLVE AN OBLIQUE TRIANGLE.

100. DETERMINE THE AMOUNT OF TAPER.

101. DETERMINE THE AMOUNT OF OFFSET NEEDED TO PRODUCE A GIVEN TAPER.

102. CONVERT TAPER MEASUREMENTS TO ANGLE MEASUREMENTS.

103. DETERMINE THE AMOUNT OF ERROR IN A GIVEN TAPER.

104. USE A GENERAL SPEED FORMULA FOR TWO GEARS IN MESH TO SOLVE PROBLEMS.

105. SOLVE PROBLEMS INVOLVING SIMPLE AND COMPOUND GEAR TRAINS.

106. SOLVE PROBLEMS INVOLVING WORM GEARING.

107. FIND THE rpm OF A TOOL, KNOWING THE CUTTING SPEED AND DIAMETER.

108. CALCULATE DRILL SPEEDS.

109. FIND THE RATE OF SPEED FOR LATHE TOOLS.

110. DETERMINE A CUTTING TIME FOR LATHE AND MILLING OPERATIONS.

111. FIND THE PITCH OF A THREAD.

112. MEASURE A SCREW THREAD.

113. DETERMINE OUTSIDE DIAMETERS AND TAP DRILL SIZES.
FOR MACHINE SCREWS._________________________ 1 2

114. FIND THE OUTSIDE DIAMETER OF A GEAR, KNOWING:
THE NUMBER OF TEETH AND DIAMETRICAL PITCH.______ 1 2

115. FIND THE CENTER TO CENTER DISTANCE FOR TWO MESHING
SPUR GEARS._________________________________ 1 2

116. DESIGN A GEAR TRAIN._______________________ 1 2

117. USE CONTINUED FRACTIONS TO CONVERT SPEED RATIO’S
INTO GEAR COMBINATIONS._______________________ 1 2

118. CONVERT METRIC MODULE TO DIAMETRICAL PITCH.______ 1 2

119. DETERMINE THE NUMBER OF TURNS ON A DIVIDING HEAD
FOR INDEXING._________________________________ 1 2

120. INDEX FOR DEGREES. MINUTES. AND SECONDS.__________ 1 2

Appendix 5

Competencies not selected by Vocational Instructors
Common Math Competencies Not Selected for Drafting, Electricity, Electronics, Machine Shop (N = 50)

4. Represent trigometric functions by graphing.
6. Solve two simultaneous equations by graphing.
8. Add, subtract, multiply and divide positive and negative powers of ten.
11. Square a monomial.
12. Cube a monomial.
13. Take the square root of a monomial.
14. Find the cube root of a monomial.
15. Square a binomial.
16. Take the square root of a trinomial.
17. Multiply and divide numbers with exponents.
18. Multiply a number with an exponent by an exponent.
19. Multiply a fraction with an exponent by an exponent.
20. Express numbers with negative exponents as numbers with positive exponents.
21. Find the values of numbers with fractional exponents.
22. Simplify radicals containing fractions.
23. Add and subtract radicals.
25. Determine signs in a complex equation.
31. Solve a problem using a formula with knowns and one unknown expressed in the same unit.
32. Solve a problem involving 2 formulas, 3 or more knowns, and one unknown.
33. Solve a problem involving 3 formulas, 3 or more knowns, and one or more unknown.
34. Solve a quadradic equation.
35. Solve equations with the quadradic formula.
36. Solve quadradic equations by graphing.
37. Factor a simple equation.
38. Find the prime factors of equations.
39. Find the product with the difference and sum of two equations.
40. Factor the sum and difference of 2 cubes.
41. Solve simultaneous linear equations by addition and subtraction.
42. Solve simultaneous linear equations by substitution.
43. Solve simultaneous equations by comparison.
44. Solve fractional for simultaneous equations.
52. Solve graphically for elements of a right triangle.
54. Find the least common multiple.
55. Reduce a fraction to its lowest term.
56. Change sign of fractions.
57. Add, subtract, multiply and divide fractions.
59. Set up equations from theory.
60. Express equations in logarithmic form.
61. Find the logarithm of a product.
62. Find the logarithm of a quotient.
63. Find the logarithm of a power.
64. Find the logarithm of a root.
65. Find the logarithm of a number.
66. Express equations in exponential form.
67. Find the antilog of a number.
68. Add logarithms.
69. Subtract logarithms.
70. Multiply logarithms.
71. Compute logarithms with negative numbers.
72. Division by logarithms.
73. Multiplication and division by logarithms.
74. Extracting roots by logarithms.
75. Compute equations using logarithms with fractional exponents.
76. Graph a logarithm function.
77. Solve a logarithmic equation.

Competencies Not Selected For Drafting (N = 12)

List the side and or angle relationships for the following:
103. Nonagon.
104. Decagon.
105. Dodecagon.
106. Tetrahedron.
107. Hexahedron.
108. Octahedron.
109. Dodecahedron.
110. Icosahedron.
113. Right triangular prism.
114. Right rectangular prism.
115. Right pentagonal prism.
116. Oblique pentagonal prism.
117. Oblique hexagonal prism.
119. Oblique circular cylinder.
120. Right triangular pyramid.
121. Right square pyramid.
122. Oblique pentagonal pyramid.
123. Right circular cone.
124. Oblique circular cone.
125. Sphere.
126. Torus.

Competencies Not Selected For Electricity (N = 12)

2. Represent the products of two numbers on a graph.
3. Find the value of a radius vector graphically.
5. Determine x and y intercepts on a graph.
24. Group terms in an equation.
28. Solve an equation by canceling a term.
48. Find functions of an angle in second, third, and fourth
find trigonometric ratios of angles of right triangles.

78. Solve electronic problems using logarithms.

79. Express gain or loss of apparatus in decibels.

80. Express gain or loss of quantities in decibels.

81. Find the inductance of a line using logarithms.

82. Find the impedance of a line using logarithms.

83. Find the capacitance of a line using logarithms.

84. Graph the equation y = sin x.

85. Graph the cosine curve.

86. In equations of periodic curves, specify frequency.

87. In equations of periodic curves, specify angle of velocity.

88. In equations of periodic curves, specify the amplitude.

89. In equations of periodic curves, specify period.

90. In equations of periodic curves, specify angle of lead or lag.

99. Determine angles in a vector diagram and plot imaginary numbers on a vector diagram.

100. Express ac circuit parameters in polar form.

101. Convert ac circuit parameters from rectangular to polar form and vice versa.

102. Solve problems using parameters expressed in rectangular.

103. Solve problems using parameters expressed in polar form.

104. Add vectors in rectangular form.

105. Subtract vectors in rectangular form.

106. Multiply vectors in rectangular form.

107. Divide vectors in rectangular form.

108. Multiply polar vectors.

109. Divide polar vectors.

110. Construct and analyze truth tables.

111. Develop a Boolean equation from a logic diagram.

112. Develop a sum-of-products equation from a truth table.

113. Use the sum of products method to solve a Boolean equation.

114. Develop a sum-of-products equation from a truth table.

115. Simplify a Boolean equation.

116. Convert a truth table into a Karnaugh map.

117. Draw a three and four variable Karnaugh map from a truth table.

118. Simplify a Karnaugh map by using octets, quads, or pairs.

119. Use the product of sums method to simplify a truth table.

120. Convert a truth table to an equation.

121. Simplify a product of sums equation.

122. Use multiplexer logic.

123. Find BCD equivalents of decimal numbers.

124. Convert binary numbers to decimal equivalents.

125. Convert octal numbers to decimal equivalents.

126. Find the decimal equivalent of an octal number.

127. Convert hexadecimal numbers to binary numbers.

128. Express a decimal number in excess - 3 code.

129. Express an excess - 3 number as a decimal equivalent.
130. Convert Gray numbers to decimal equivalent.
131. Give the sum of numbers in base 8 or 16.
132. Sum of binary numbers.
133. Add whole numbers in base 10 using 16 bit numbers.
134. Subtract binary numbers.
135. Subtract whole numbers in the base ten system.
136. Determine overflow of problems with 8 bit unsigned arithmetic.
137. Express positive or negative whole numbers in 8 bit sign magnitude form.
138. Convert sign magnitude numbers into decimal equivalents.
139. Express the complement of numbers in hexadecimal notation.
140. Express the 2’s complement of binary numbers.
141. Convert positive or negative whole numbers to 2’s complement representation.
142. Show the 8 bit addition and subtraction of decimal numbers in 2’s complement representation.

Competencies Not Needed For Electronics (N = 14)

80. Express gain or loss of quantities in decibels.
81. Find the inductance of a line using logarithms.
82. Find the impedance of a line using logarithms.
83. Find the capacitance of a line using logarithms.

Competencies Not Selected For Machine Shop (N = 11)

2. Represent the products of two numbers on a graph.
3. Find the value of a radius vector graphically.
5. Determine x and y intercepts on a graph.
7. Convert a whole number to a positive power of ten.
24. Group terms in an equation.
27. Solve equations by transposing.
28. Solve an equation by canceling a term.
29. Check solutions for equations.
30. Form equations from observed data.
Appendix 6

Additional Competencies Submitted by Instructors
ADDITIONAL COMPETENCIES SUPPLIED BY VOCATIONAL INSTRUCTORS

ADDITIONAL COMPETENCIES IN DRAFTING

2. Calculator trigonometry and scientific notation.
3. Reading a micrometer.
5. Use architects', metric, civil, and mechanical engineer's scales.
6. Use precision measuring instruments.
7. Calculate force.
8. Construct hyperbolas and parabolas.
9. Construct the focieline.
10. Construct the parallelogram ellipse.
11. Construct the helix.
12. Compute surface or rim speed.
13. Compute the area of a sector.
14. Bisect or find the middle point of a line.
15. Bisect an angle.
16. Bisect an arc.
17. Erect a perpendicular.
18. Geometrically construct parallel lines.

ADDITIONAL COMPETENCIES IN ELECTRICITY

2. Calculator--trigonometry and scientific notation.
3. Graphing electrical quantities.

ADDITIONAL COMPETENCIES IN ELECTRONICS

1. Determinants.
