This manual was developed to help Peace Corps volunteers assist local craftspeople in developing nations in initiating and operating small businesses to produce and market their products. The manual is organized in eight chapters that cover the following topics: the crafts environment, common problems and solutions for a crafts business, organizing and managing the crafts project, production, marketing, distribution, case studies of two crafts industries, and resource groups and marketing channels. Extensive appendixes provide information on the loan or grant application process, international trade terms and conditions, international shipping conversions, international shipping procedures, shipping and collection, documentation, methods of receiving payment, and packing requirements. A risk matrix for international terms of payment, several sample documents, a list of Peace Corps resources, and an annotated bibliography are also included. (KC)
Peace Corps' Information Collection & Exchange (ICE) was established so that the strategies and technologies developed by Peace Corps Volunteers, their co-workers, and their counterparts could be made available to the wide range of development organizations and individual workers who might find them useful. Training guides, curricula, lesson plans, project reports, manuals and other Peace Corps-generated materials developed in the field are collected and reviewed. Some are reprinted "as is"; others provide a source of field-based information for the production of manuals or for research in particular program areas. Materials that you submit to the Information Collection & Exchange thus become part of the Peace Corps' larger contribution to development.

Information about ICE publications and services is available through:

Peace Corps
Information Collection & Exchange
Office of Training and Program Support
806 Connecticut Avenue, N.W.
Washington, D.C. 20526

Add your experience to the ICE Resource Center. Send materials that you prepared so that we can share them with others working in the development field. Your technical insights serve as the basis for the generation of ICE manuals, reprints and resource packets, and also ensure that ICE is providing the most updated, innovative problem-solving techniques and information available to you and your fellow development workers.
Prepared for the Peace Corps by
Walker A. Williams and Company, Inc.

full without payment of royalty.
Please give standard acknowledgement.
ACKNOWLEDGEMENTS

The author wishes to thank Donna Frelick, Bill Gschwend, Maureen Delaney and Gary Ladig for their extensive and helpful editing.

Appreciation is offered to J. Philip Eason, Project Manager, who was most helpful with the business sections and charts as well as with overall guidance and encouragement.

I wish to express my thanks to Kim Winnard for his original and pertinent illustrations.

Other thanks go to Cathy Smith for excellent editing, Pat Murray for valuable research, Hilary Richardson for sharing her retailing expertise, and both Gail Reardon and Carolyn Taylor for getting each draft into final form.

Caroline C. Ramsay

ABOUT THIS MANUAL

Peace Corps Volunteers and other development workers often find themselves in a town, village, or rural outpost where a great need exists for income-generating projects. Sometimes the resources available for such activities are slim: raw materials are hard to come by; the labor pool often lacks technical, business or literacy skills; even the local markets may be unreachable because of impassable roads or a lack of vehicles. But even in these circumstances, people are anxious to supplement their income and hope to find a product that can be made for sale. Often they look to a community worker for assistance.

Then, too, many Peace Corps Volunteers, struck by the beauty of local crafts, cannot help but imagine how excited the folks back home would be to have authentic crafts. But the perceptive Volunteer realizes that one must walk before one runs. Exporting to the Western nations is possible only after achieving success in local and regional marketplaces. Exporting will take the kind of planning and execution described in this manual.
The challenge the development worker faces is to help a group of trained or trainable people choose a product, produce it, and market it successfully. Local artisans who have never before operated as business people must be introduced to a new way of thinking about their work. They must come to understand what is meant by "marketable". They must organize themselves to produce the amount, quality and type of crafts needed to make the business profitable.

They must learn to strike a balance between quantity and quality control. Billing, packing, shipping, accounting -- all the details of commerce which Western business takes for granted -- will be new concepts to the uninitiated. Getting a grasp on them will present a challenge to local craftspeople.

In many cases, the traditional crafts -- especially decorative ones -- will not be the best choice of product for a profitable venture. A new, more utilitarian product may more likely be needed by the local populace. Making the new product may require adapting traditional skills and/or training for the artisans.

Launching a small business anywhere requires a big commitment of time, thought and energy; doing so in a developing country is a monumental undertaking. It can be done, however, provided that a logical plan of action is followed. This handbook is intended to provide just that.
INTRODUCTION

In ancient times, everything produced for use, for ritual, or for decoration was crafted, since everything was made by hand. As time passed, individuals, villages, and even countries began to specialize in certain products, which were then traded for others. Trade has evolved into the complex system we have today, in which parts of products may be made in one country, assembled in another nation, and sold in a third country.

In this context, handcrafted items are a very small part of the worldwide economy. Yet, they represent a significant part of the export market because, in underdeveloped countries, even the small amount of income generated by these products makes a big difference to the families involved.
The Allure of Third World Handcrafts in the West

The definition of crafts includes both the traditional definition of crafts as works of folk art, and trades, which includes any product made by hand. Craftsmanship implies skill and knowledge and, in some cases, artistic expression.

In the West, during the Renaissance, a distinction was made between crafts and "fine art" which came to be regarded as superior. As a result of the Industrial Revolution, crafts were again redefined, to distinguish them from "industrial products".

Traditional crafts declined in popularity until the late 19th Century, when Britons John Ruskin and William Morris argued for a revival of craft guilds and for a renewed appreciation of handmade objects. A similar movement was spearheaded in the U.S. by Louis Comfort Tiffany who helped elevate crafts to a recognized art form. Later Frank Lloyd Wright and others incorporated natural materials into architecture and art. Thanks to their leadership, a popular revolt against over-mechanization (and the exploitation of labor that accompanied it) dominated the first half of the 20th Century.

The post-World War II years saw an upsurge of exuberant popular design, although it was relatively devoid of traditional craftsmanship. The Pop Art of the 1960's, with its emphasis on synthetics and materialism, gave way to a desire for handcrafted items in the late 1970's and 1980's. It seems that, as the world became increasingly perceived as being at risk from industrialized processes, a hunger was created for objects individually crafted by hand.
Today, Western craftsmanship usually means studio art, often realized in abstract forms too esoteric for popular taste. As a result, Western crafts shops generally are not able to satisfy customers who are eager for visibly handmade objects but who are unwilling or unable to pay for expensive, sophisticated, and impersonal Western crafts.

Crafts from Third World nations are marketable in the West not only because they are less expensive, but because they embody an intrinsic craft tradition. However, even Third World crafts have evolved: traditional crafts, unchanged for centuries, have been altered in response to Western taste, heavy demand, and competition from inexpensive but attractive assembly-line crafts. Wooden figures once handcarved now bear ink lines, as craftspeople attempt to cater more to the tourist market or to their own concept of what is "modern".

In some cases, this trend is reversing yet again as Western consumers become increasingly sophisticated and discriminating. Crafts which tourists have been bringing home for years — like wood carvings, brightly-colored baskets, and straw hats — are losing ground as products with more aesthetic appeal and utilitarian value gain in popularity. Textiles are a big growth market: handmade clothes, tapestries, rugs, bedspreads, and tablecloths remain popular despite high import duties imposed by the U.S. and other countries. Woven wicker, cane, bamboo, and rattan furniture is also popular.

Third World artisans can indeed find markets in the United States and other countries. But most local craftspeople do not market internationally and, indeed, need and want to first take advantage of local opportunities. These opportunities may not take the form of traditional crafts. Instead craftspeople may need to either alter their designs or find entirely new items to produce and sell.
Although the history of crafts is one of peaks and valleys in popularity, it seems clear that traditional methods and items will continue to be valued. Once local artisans understand this and see their crafts as a way to earn a living, they can move on to the next step: producing for sale.
Assisting craft production fits well with the development philosophy of Peace Corps and other development agencies which emphasize community involvement. Craft groups promote community participation and self-reliance and can make maximum use of locally available traditional skills and resources, including local materials. Successful crafts products not only produce income and develop marketable skills but also provide participants with experience in a development process that can be used to address other community needs — for education, potable water or improved crop production, for example.
Crafts can provide a point of entry into the cash economy for those who may have traditionally remained outside it. Properly managed, crafts groups can help to increase both the income of artisans and the production of processed goods for local, national and even export markets. Moreover, by providing a supplement to agricultural activities in rural areas, crafts can comprise part of an integrated employment strategy to help the un- and underemployed. Successful crafts enterprises also contribute to the status of participants both as professionals and as significant income producers.

Yet governments and planning institutions too often view crafts projects as marginal, not central, development activities. Usually crafts are not considered an integral part of national economic development programs. If considered as a means of economic development at all, crafts are usually viewed in terms of increasing the gross national product and securing more foreign exchange through exports. The economic situation of individual artisans is rarely considered. Yet crafts development programs can be a means of expanding employment as a significant part of an overall local, regional or national plan.

Despite their potential, however, crafts activities rarely provide the community benefits they are capable of producing. Like other small businesspeople in developing countries, crafts producers face a number of obstacles in seeking to carve out a niche in the economy. In general, crafts producers in developing countries are untrained in organization, management and business techniques. They are undercapitalized, lack access to market information, and operate under precarious market conditions. Consequently, they are often either at the mercy of and exploited by the market and its intermediaries or outside the cash economy, producing only for home use.
Common problems of crafts producers include:

- **Poor product selection.** Products are seldom created with a market in mind. Artisans either make what they always have, with no concept of what is needed by the consumer, or scatter their efforts by creating many types of products, only a few of which may be marketable. Lacking market knowledge, artisans fail to consider products which they have never made before, but which might be more saleable. Learning what the market demands can help them focus their time and effort on production of the most popular items, which would mean more profits. Expanding this knowledge to include trends in foreign markets presents an additional challenge.

- **Lack of capital.** Few banks or foreign assistance organizations are willing to invest in small enterprises. Large numbers of small accounts are costly to administer; loan requests are complicated and time-consuming to process. The result is that lending institutions often refuse to make loans to small crafts groups. The problem is compounded for groups composed primarily of women, who rarely have an opportunity to participate in financial transactions in many developing countries. Because they lack experience, these groups are often considered to be poor credit risks.

- **Lack of organization.** Most artisans work singly or in small, isolated groups at home, with little access to information about potential customers or competitors. Large buyers and wholesalers, who can serve as intermediaries between producers and markets, find
it difficult and frustrating to locate and buy from these widely-dispersed groups. Most producers could benefit from pooling their resources and talents in an organization that could buy collectively and both bargain and market more effectively.

- **High production costs.** Labor-intensive, handcrafted items require considerable price mark-up if a profit is to be made. The time, overhead and materials required for crafts production make it hard to strike a balance between a fair price to producers and an acceptable one to consumers. Often, producers underestimate their costs and ask a price which does not fully cover their labor and materials.

- **Insufficient production capacity and quality control.** Many small groups and individuals find it difficult to fill orders because they lack the ability to produce sufficient amounts of quality goods on a regular basis. In many cases, technical assistance in product design, appropriate technology and the development of product standards could alleviate these problems.

- **Transportation.** Craftspeople working in small communities or remote areas face transportation problems. Roads are rough, trucks overloaded and irregularly scheduled, air and water transport expensive. Proper packaging and labeling is important but often lacking. Export shipping requires yet another set of considerations: packing against the many problems of handling;
theft and pilferage; rough handling by forklifts, slings, chutes, and nets; bumping and moisture — both from rain while loading and unloading and seawater in the ship's hold; weight/volume relationship costs; certificates of origin, invoices, and all other shipping and collection documentation needed. (Freight forwarders can be helpful with much of this.)

- **Lack of suppliers** and access to them. Often the supplies artisans need are not available. They may prefer the synthetic to natural fibers. For example, many artisans involved in needlework find a polyester/cotton blend easier and faster to use than pure cotton — cheaper, more flexible, and often unavailable. It is important to realize that many artisans in Third World countries prefer newer to traditional supplies and tools — particularly the young craftspeople.

- **Lack of business skills.** Craftspeople generally lack skill in many management, purchasing, bookkeeping, and other business practices. Many even lack basic literacy or numeracy skills.

- **Insufficient knowledge of market trends.** Judging what is likely to be profitable in local markets is difficult enough for most crafts producers. Information about market trends, buying habits and buying cycles is not readily available even in communities with which producers are familiar. Determining those trends and tasks for distant foreign markets presents an on-going challenge to even the best producers.
Clearly, crafts projects can have a tremendous positive impact on a community. But local craftspeople and their supporters in the community may need a great deal of help in overcoming the problems just described in order to get the maximum benefit from crafts activities.
In any developing community, there are a host of problems to be addressed. The needs for better health and nutrition, a reliable source of water, education for children, and improved roads or housing all compete for the time, resources and attention of community members. Even if income generation and increased employment are high on the list of community priorities, it is necessary to assess whether a crafts project is really the best route to take toward achieving those goals. Too often people seize upon crafts projects as the ideal solution to the problem of low income without considering other alternatives.

For example, whenever planners, program developers, and project directors are asked how to develop income-generating activities for women, they invariably mention crafts. The myth that crafts are women's work persists because stitching, weaving, basketry, pottery and the like are skills women have historically developed as part of their domestic responsibilities. Using these traditional skills to produce items for sale, the theory goes, does not interfere with the women's responsibilities at home and does not threaten work usually considered the province and privilege of men. (This theory applies even to work newly introduced into a community.)

Although crafts can be a solid source of income and provide women with a link to their heritage, crafts industries often concentrate women in labor-intensive and exploitive situations that require long hours and generate meager income. Crafts which do provide good returns, such as
What we call issues of "comparable worth" in the U.S. are common in the crafts industries of many countries. In tailoring, for instance, the best paid job (cutting) is most often done by men; women are paid less for stitching, finishing, and button-work, even though these jobs may require a high degree of skill. If crafts are to benefit the community in more ways than by simple income generation, care must be taken to avoid such exploitive situations. This can be done by urging sensitivity to exploitation on the part of the community so that tasks and income are equitably shared or by seeking more appropriate alternatives.
Therefore, it is best to move slowly at first, taking time to assess the community's true needs. One way to do this is to first become familiar with the community informally — by meeting people, learning about neighborhoods, and establishing contacts.

**Explore all possibilities first.**

If, in getting to know the community, the development worker discovers a high level of concern for income generation, a range of options exists for addressing the problem. These options can be explored with community members either by meeting with established community groups (such as the village council or women's society) or by calling together people who may have expressed a special common interest (such as local artisans or women involved in seasonal agriculture). There are any number of possibilities for income generation in addition to crafts, including:

- **Horticulture.** The discussion might cover possible crops and their cultural requirements; sources of seeds or seedlings; fertilizer and land; resources; degree of interest and skills; whether produce will be sold fresh or processed into jams, juices or prepared foods first and what possible markets exist for both types of products;

- **Animal husbandry.** The group might discuss raising animals cooperatively, instituting improved methods, initial costs and anticipated profits, and possible products and markets;
- **Fish culture.** The group might look at the availability of pond sites; special skills, such as net-making, that may be required; pooling of labor and profit-sharing;

- **Grain processing.** In many countries people are proficient in the processes of parboiling, drying, husking, winnowing, and storing rice or other staple grains. The possibility of owning and managing a small grain processing association, using mechanized methods, might be discussed.

In some cases the process of exploring all these options and choosing an appropriate project may take considerable time and effort. For groups whose primary background and interest is in crafts to begin with, the process may focus instead on what kind of enterprise would make best use of their expertise. But for both kinds of groups, the discussions should attempt to answer a few fundamental questions:

- Is the business under discussion **suitable**, given what they know about their community?

- Is it is **feasible**, given the size of the group, the resources available, other community interests or needs, and priorities of the local government?

- Is the group willing and able to develop the business skills necessary to maintain the enterprise?
- Can the scattered efforts of many producers become organized into a coherent, centralized group, able to fill orders on a timely basis?

- Is the business or product in question of enough interest to consumers to be marketable?

- Can the project can be developed soundly enough to operate efficiently and independently, especially once the community worker leaves?

- Can the sources of credit, technical assistance, materials, equipment, and available training be tapped, and in what ways?

Once you know crafts is the answer...

If the group decides that a crafts project is indeed the most likely vehicle for successful income-generation, the next step is to determine the level of expertise which already exists in the group. Assistance must be built on what the group already knows. Skilled artisans who are already part of formal or informal craft groups may have moved beyond the initial concerns of assessment, organization, and marketing awareness. In these cases, the artisans often require assistance in expanding an established business.

Beginning crafts groups will need help in acquiring both basic skills and an understanding of the nature of a crafts enterprise. It will have to be stressed at the outset that crafts projects often involve intricate work,
can be time-consuming, must be run in a business-like way, and involve nume-
rate and literacy skills. The groups will need to appreciate the complexity
of crafts production and marketing, the amount of planning needed, the level
of workload, the impact on the community, and the energy needed to devote to
marketing and other issues.

Efforts to motivate and encourage the group as it develops should
strive to maximize participation by group members. A series of group meet-
ings will build group cohesion, encourage involvement, and foster confidence
in the group process. The development worker's role will be to provide
guidance as the group itself:

- defines objectives;

- identifies the range of skills available and needed;

- makes decisions about the diversity of products to be made and
marketed;

- determines the level of production capacity possible;

- identifies and explores sources of credit, materials, and technical
assistance; and

- performs all the other assessments which comprise part of a
successful business plan.
One of the ways a development worker can be most valuable is in helping the group members learn from the experience of others involved in crafts marketing and making it possible for them to tap the sources of information and assistance that exist to help them.

**COMMON PROBLEMS AND SOLUTIONS**

There are some problems all groups must face when deciding whether or not to begin a new small business; there are also some common sources of help which can be essential to solving these problems, regardless of whether the source of income-generation is to be crafts or something else.

Some of the common problems include government investment incentives that favor medium- to large-scale industries; complex licensing or permit procedures; the general unavailability of start-up capital and loans for would-be exporters; complex tariff structures and other issues which require experienced, professional understanding; and detailed research into potential markets before an approach is realistic.

Many times the local community has businesspeople, bankers, accountants, lawyers, and others who can help identify and solve these problems. Other sources of assistance can be grouped under the related problem, as we have attempted to outline below.

**Getting Cash and Credit**

All groups share a need for financing the start-up and operation of the enterprise. There is generally a need for both capital investments and
working or operating capital which, together, cover most costs necessary for an enterprise to become self-sustaining.

Capital costs are initial expenses which cover such things as the purchase of machinery, equipment, land and buildings. Operational costs, comprised of both fixed and variable costs, are based on day-to-day operations of the enterprise.

Since all too often entrepreneurs underestimate their expenses and collapse under the weight of indebtedness, it is important that the group start off on a sound financial basis.

The following are major cost categories which must be considered:

**Capital costs** are those needed to acquire, build, and install equipment, machinery, and other elements of the production unit to insure that it is ready for the artisans to start producing crafts.

**Fixed costs** are those that the enterprise will incur regardless of the level of production. They include 1) **financing** to begin production, 2) **depreciation** for the costs incurred in using and wearing out machinery and equipment, generally viewed as a cost of producing a product, 3) **maintenance and repair**, 4) **rental or lease fees**, and 5) **salaries**.
Variable costs relate directly to the level of production, principally raw materials and direct labor. Start-up costs. These are one-time costs specifically related to getting the project going and not already covered by capital costs. Examples: legal fees, licensing.

It is unrealistic to expect any project to become self-sufficient financially when it begins production. There will have to be a provision for carrying the project for at least six months until production problems are ironed out, sufficient stocks of finished goods are completed and enough funds are on hand to buy raw materials. Therefore, all costs of operation (both fixed and variable) should be covered for the six month period. This planning will give the project the liquidity to operate in a stable way until profits are sufficient to sustain the enterprise. Many times this provision is overlooked and the viability of projects is affected as the facility and equipment are set up without the funds to get into production. (A chart to assist in estimating these costs is supplied at the end of the chapter.) Because donor agencies are inclined to fund start-up costs but not recurring costs, it is important to expand the definition of start-up capital to include six months worth of working capital.

Some community groups may be able to pool resources and have enough money, materials, and manpower to start a business, using profits later to expand it; others need credit to support a level of production that will be profitable.
Access to credit in the Third World is a real problem. Funds are generally unavailable, both inside and outside the local community. Once sources of funds are identified, tapping them usually requires the group to endure a long and involved application process, often demanding detailed schedules, budgets, and project evaluations. Preparing the information needed for this process may be useful but can also be overwhelming to a group applying for the first time. (See Appendix 1 for a sample application form.)

Despite these discouraging facts, there is some hope. Many host governments are encouraging small businesses by attaching craft bureaus to ministries of industry, commerce, finance, social services, or agriculture. They are trying to encourage banks to do more small-scale lending. Some international and regional institutions now have special intermediary programs in a number of countries to help create capital for small businesses. Examples of these efforts follow:

- The Village Polytechnic Program within Kenya's Ministry of Housing and Social Services funds crafts training centers.

- The Metro Manila Barangay Industries Development Program, initiated by the Philippine Ministry of Industry, aims to increase employment by setting up economic projects, including small businesses.

- The Banco del Pacifico, a private bank with a strong development philosophy which sets it apart from the traditional banking structure of Ecuador, extends credit to individual artisans who have already established good credit ratings. Having attracted many small savings accounts in both urban and rural areas, the bank and
its Department of Community Development have established an Artisan Loan Program designed to meet the needs of small businesses.

Groups with excellent potential as employers and sources of income can consider applying to international sources of funding or credit:

- Grantees of large loans from such banks as the Inter-American Development Bank, Asian Development Bank, and Caribbean Development Bank can, in turn, lend to smaller businesses.

- Some assistance is available from U.S. development agencies such as the Agency for International Development (AID), which funds crafts projects only as part of multi-faceted small business enterprises. Loans and other forms of assistance must be negotiated with AID missions in the host country. Peace Corps and AID jointly manage a Small Project Assistance Fund, which is easily accessible to Volunteers.

- The Organization of American States (OAS) has subcenters (including one in Guatemala) that help groups identify, design, and implement different types of community crafts efforts.

- The Interamerican Foundation can provide both technical assistance and materials.

Addresses of these and other potential sources are listed in Chapter 8.
To summarize, local sources of income and credit are hard to come by but can include loans, grants, or other sources of support from government ministries, particularly those with handcraft boards; credit at local or national banks; and resources pooled by the community, which can include personal savings, cash gifts, or funds raised through fundraising events. International sources of funding can also be tapped, usually by groups whose planned business would result in a significant increase in employment and income.

Getting Technical, Material, Equipment, and Training Assistance

Even when the craft under consideration is well-produced and can be supported by available funding, the method of production can often be improved to make the business more efficient and profitable. Beginning craft groups may need considerable training techniques; advanced groups may need help in adapting their skills to produce a new item. These needs can be met by tapping sources of knowledge about new technology, techniques, and materials. Sometimes local artisans already in business can be a good source of assistance in these areas and can even become buyers or marketers for the newer business's products. Technical assistance and training are also available from a wide variety of organizations:

- Host government handcraft boards, mentioned earlier.

- National affiliates of the United Nations Development Program, UNESCO, the U. N. International Development Organization, the
UNCTAD-GATT International Training Center, and the International Labor Office.

- Alternative Marketing Organizations (AMOs), the majority of which are private voluntary organizations. These help Third World crafts groups become more professional, independent, and less at the mercy of in-country commission agents or the Western commercial market and its intermediaries. As importers from industrialized nations, AMOs educate their customers about how craft purchases improve the social and economic situation of the artisans and their countries.

- Many private voluntary organizations, some of which also receive equipment and materials from multi-national corporations and redistribute them in countries in which those corporations operate.

A list of these resources can be found in Chapter 8.

ANALYZING MARKETS: THE BACKBONE OF SUCCESS

Credit and technical assistance may help the group get a business off the ground, but the true test of the enterprise will be in the marketplace. For that reason, analyzing the market — finding out what people want or need to buy — is one of the most important initial tasks for any crafts group. The following overview will be helpful to group members as they begin to think about this issue.

A thorough analysis of a market will reveal:
whether there are customers;

what kinds of goods are in demand;

when to sell;

how to price products;

why fine quality and consistent production capacity are important;

who the competition is; and

why some products fail.

The community worker needs to help the group gather and analyze the information needed to match the product to the market. Let the artisans identify characteristics of target markets and products and determine how they can be matched. This work gives the artisans and community members a stake in the process from the start. The following questions should be helpful in defining target markets and products:

Customer profile needs to be developed by the group of artisans. This describes the kind of person most likely to buy the proposed product. Is the typical customer likely to be male, female, rich, poor, educated, well traveled? As many characteristics as possible should be considered in making up the profile in order to give a complete picture of the market for which the group is aiming.
- Location of businesses which cater to this market. What do these business owners say they will be willing to stock in their shops?

- Who is the competition? How many similar crafts businesses are there? Are they public or private, widely known, well-regarded, preparing to expand, providing good quality products, marketing themselves effectively?

- Why have some competitors failed?

- How can the group's products be differentiated from those of other enterprises in a way that gives them a competitive edge?

- What constitutes a competitive price?

- How do variables of color, design, texture, and style figure in product development? (For example, some items go in and out of fashion; some local markets may prefer fashions influenced by the West, while Western tourists may be more interested in indigenous products; tradition can dictate needs -- e.g., is white or black used for mourning? what colors signify celebration?)

- What buying and trading cycles need to be considered? Periods of high sales alternate with periods of reduced sales, especially relating to holiday and vacation seasons. If the group is interested in exporting, take into account that buyers plan far ahead to have the necessary goods to sell. For example, Western
stores must have Christmas goods in stock by October. Large Western
gift shows in January and February offer retailers goods for the
coming summer season; shows in June and July offer goods for winter.

- What quantities can be produced and sold? How many producers are
  there in the group? How many items can they produce in a given
  period? Are there times when production will be lower, such as the
  agricultural season?

- What challenges does the group face in setting and meeting a
  reliable schedule for delivering its goods? If time constraints,
  transportation difficulties or erratic supplies of raw materials
  present obstacles, how will these problems be overcome?

A great deal of research will be involved in answering these questions.
It may be wise to have a plan of action which assigns responsibility for
answering various questions to specific members of the group. They can then
re-group and report on findings. The information gathered now will be used
again and again to help the group make decisions about the business — what
to produce, how much to produce and at what price, even what kind of
advertising to choose as most appropriate for the business. The time spent
in information-gathering now will provide enormous benefits as the group
begins planning for production.
**Is exporting a possibility?**

It is wise to have the group members consider all the local outlets before they even begin to think about exporting. Exporting is very complicated and doomed to failure unless the group has a good deal of business experience already.

If the group is ready, willing, and able to undertake the export challenge, they need to acknowledge that the sale of crafts from Third World countries to developed ones is a fairly new phenomenon. The tastes of the buyers are very individualized and unpredictable. It is therefore even more important to do thorough research on potential markets and buyers. Interviewing wholesalers, exporters, freight operators, trade association personnel, department store managers, and others is imperative.

Because countries differ so widely in taste, trend, and tradition, it is important to have a thorough understanding of how the product can be adapted to fit the needs and desires of these markets. For instance, carpets are sold in different sizes from one country to another; wall hangings are popular in some countries but not others; cups are sold in sets of four in some countries and in sets of six in others. Sizes and colors of shirts, baskets, boxes, tables, and a hundred other items vary by country. All of these variables must be considered if a craft item is to succeed.

If the group has reached the point where it has considerable experience and a viable product for export, it should certainly explore the opportunity. Success could mean a great deal to the producers, their families, and even their governments.
Before a crafts group gets anywhere close to the nitty-gritty of production and sales, a great deal of groundwork needs to be done. Research -- about community interest, resources, experience, and abilities -- needs to be coupled with a clear understanding of the vagaries of potential markets. Once this research has been conducted and a product selected as the focus of group effort, the serious business of developing, producing, distributing, and selling the product can begin.

THE WORD MAZE:

ENTER HERE

LOAN:
A form of credit. Banks, friends, etc. all provide loans when they extend credit. There are various kinds of loans:

- Unsecured loan - credit is given based on faith in the borrower. The borrower gives only her promise to repay, rather than offering collateral.
- Secured loan - credit is given only if the borrower has something of value to sign away if the loan cannot be repaid.
- Short-term loan - loans that will be paid back within one year.
- Long-term loan - loans that will be paid back after one year.

EQUITY:
The value of your ownership in your business.

EQUITY CAPITAL:
The long-term, permanent monies/materials of a business. Its value represents the total contribution by owners and investors.

INCOME:
The money a business or individual earns. It includes:

- Gross income - the total money taken in.
- Net income - the amount of money earned after subtracting expenses.

INCOME STATEMENT:
A summary of the income and expenses of a business. Usually, it is figured quarterly, semi-annually and annually.

LIABILITIES:
The amount of money owed; debts.

CASH FLOW:
Chart which shows when money is expected to come in and when expenses need to be met. When applying for a loan, many lending institutions will expect to see a cash flow.
TOWARD A CREDIT VOCABULARY

**INTEREST:**
A charge for borrowed money. It is generally based on a yearly percentage, so if you borrow $1,000 at 10% interest annually, you will have to pay back $1,100.

**INSTALMENTS:**
One of the parts into which loan payments are divided. For instance, you might pay weekly or monthly instalments.

**ENTREPRENEUR:**
One who organizes, manages and assumes the risk of a business or enterprise.

**BALANCE SHEET:**
Monthly statement of your business financial condition—which includes its current assets, liabilities and equity capital.

**CO-SIGNER:**
A person, other than the borrower, who signs an agreement in order to give more credibility to a borrower who may be considered a risk.

**COLLATERAL:**
Something of value that is pledged to guarantee a loan. If the loan is not repaid, the collateral may be taken instead. Jewelry, property, equipment, etc. are forms of collateral.

**DEFAULT:**
To fail to fulfill a financial obligation.

**ASSETS:**
The property or money owned by an individual or group. Assets may be used as collateral or to pay debts.
CHAPTER 3

ORGANIZING AND MANAGING THE CRAFTS PROJECT

Once the decision has been made to pursue a crafts project, the group must organize its efforts, setting goals and planning to meet them. The first step in organizing will be an informal meeting; the group needs to have some successes before it will be able or willing to appreciate the advantages of structure and management. It may be tempting to institute hierarchical structures at the outset, because these forms of organization are so familiar. But, again, it is wise to go slowly. Let the members of the group grow with the project; it may be surprising to see the kind of management that evolves — and who in the group evolves into a manager.

GROUP DYNAMICS
PARTICIPATION IS CRUCIAL TO SUCCESS

There are ways in which the development worker can help the group get things done without subjecting it to rigid and perhaps intimidating business structures. First, realize that people learn by doing; get them to participate in informal sessions where problems are discussed and solutions explored by the group members themselves. The development worker's role should be as catalyst, helping voice the issues and encouraging the group to think creatively about solutions.

Group sessions can be used to brainstorm anticipated problems and possible solutions, to set goals and objectives for the enterprise, to outline and allocate tasks, and even to investigate some specific issues:

- how to get start-up capital;

- where to get tools, materials, office supplies, transportation, etc.;

- how to find out what licenses might be needed to market the product;

- how to keep track of each group member's level of production, and how and when to compensate them;

- how to package and label the goods;

- how and where to collect and store raw materials;
• how to assess the product's acceptability in the marketplace;

• and many, many other issues, the nature of which will depend on the circumstances.

The challenge for the development worker is to foster an atmosphere of enthusiasm and hopefulness in which people volunteer to take on responsibility for solving problems. The power people will feel by doing this will be as valuable to them as any money the project will ever earn them.

FORMAL STRUCTURES

As the group evolves and gains experience both in the business itself and in working as a group, more formal structures may be needed to meet the requirements of a growing organization. Changing circumstances often dictate a change in structure. For example, a group of 15 may grow to include 100 members, making it difficult to solve everyday production problems in a group brainstorming session. Individuals with special skills may emerge to take on the roles of manager, bookkeeper, production chief, or sales manager. In a large, complex enterprise it is not often possible for everyone to be equally familiar with all aspects of the business and "specialization" may be an advantage.

If the group has reached the point where a formal structure is necessary, the development worker can help describe some of the more common types and have the group determine the one that best suits their needs. These are:
Cooperative. This is a business owned by the people it serves. In some countries, cooperatives must be legally registered. Even when in the informal stage, however, cooperatives feature democratic decision-making, open membership, profit-sharing, and goods and services provided to members at cost. In crafts cooperatives, members pool their resources and cooperatively purchase raw materials, machinery, and tools at cost; they then pool their products for sale. The advantages are that members share responsibility, risk, and profits; learn management skills; and get a fair price for their work. Although not hierarchical, cooperatives often do need a manager who operates with the support of the members. In most instances, successful crafts projects evolve into crafts cooperatives.

Sole proprietorship. This is a business owned and operated by one person. It is easy to obtain a license and begin operation, and there is little government intervention or need for approval; however, it is usually harder for one person than a group to get any long-term financing, and a single person will not have the benefit of pooled resources and experience that a group has. Community workers more often work with group projects than with sole proprietors, though some technical assistance projects are aimed at these entrepreneurs.

Partnership. When two or more persons co-own a business, it is called a partnership. This has the advantages and disadvantages of the sole proprietorship, the main difference being that a partnership has greater opportunities for obtaining credit and sharing the workload.

Corporation. A corporation is formed when a number of people invest money in an enterprise in the hopes of earning a profit. The investors usually vote for a board of directors which formulates policies and steers the corporation; it also hires a manager to run the daily affairs of the
business. The usual image of the impersonal corporation, in which workers have little stake in the business, would seem to make it an unlikely structure for a community project. But community members in the United States have themselves formed corporations to take advantage of pooled resources and tax breaks, ensuring their participation in management with carefully written by-laws.

Regardless of the structure which eventually evolves, tasks will need to be done, records kept, purchases made, and products marketed. One or more group members may undertake the role of a manager or leader; this process may work out well informally, or the group may formally designate one person as manager.

The manager should either know or be able to learn the rudiments of sound business practice. Well-run cooperatives need accurate accounting as much as corporations do; keeping track of inventory, cash flow, correspondence, customer relations, and all the other issues that arise take skill as well as willingness.

MANAGEMENT FOR FUN AND PROFIT

Management is a tool, not an end-product. Management does not have to be an esoteric science or the exclusive province of a few highly trained specialists. What is required is a common-sense approach to thinking through the project so that it is possible to plan ahead.

A few guidelines and specific management tools will help the group to do this:
Set goals and chart objectives to reach them. Goals can be monetary (e.g., "We each want to earn ___ pesos a month by November"); they can be related to production ("We want to be making 200 handbags per month by November and double our production by the following June"); or they can be related to the larger community ("We want to make enough money to support the salary of a full-time schoolteacher").

Goals should be arrived at and agreed upon by the group so that people will be working together toward a common end. Clear goals can help the group transcend personal rivalries, frustrations, or financial setbacks. Helping the group set goals should be a priority during initial discussions of the crafts project.

Goals can be identified in a brainstorming session, wherein members are encouraged to express all possible goals and then more objectively determine the achievable short- and long-range goals. These should be written down, even if only one member can read them. Writing goals down makes it possible to remember them, review them, and, if need be, revise them.

Objectives are the steps needed to reach the goal. If the goal is to make 200 handbags in two months, the objective might be to identify twenty artisans who will each make ten bags. Other objectives in this instance might be: to collect the materials needed for the bags by Day 1; distribute materials by Day 4; begin packing bags for transport by Day 25. Objectives need to be realistic but also
flexible. What if materials do not arrive on time? Try to anticipate problems and how they can be overcome. Although setbacks are inevitable, the need for objectives is not diminished. Objectives are the core of a plan of action which needs to be understood by all.

- **Determine a plan of action which involves as many people as possible.** Group members who are directly involved with decision-making and with taking action will have a real stake in the enterprise. Encourage them to make a schedule of activities that will lead to objectives being met. (Again, be sure it is written down.) Responsibility for each task should be clearly allocated and a timeline established for accomplishing each activity.

- **Institute enough record-keeping to keep track of materials, equipment, labor, and sales.** There is a lot of trial and error in small business development. The group will only be able to have realistic new goals in the future only if it keeps track of elements which affected its initial efforts. Such record-keeping will help in future decisions about where money is obtained and spent; what machinery should be purchased or other kinds of investments made; how, when, and in what quantities products can be made.

It is important that the project not be overburdened with formal accounting techniques, but enough records must be kept to be able to assess the level of success. For example, a simple accounting system need have only two sets of books, one for cash and one for
credit transactions. (An easy-to-use method, the MICRON System, is described in the Peace Corps manual Accounting for the Microbusiness available through ICE.) All expenditures and payments should be recorded in the books to keep track of how money is being spent and how much has been received. An inventory of materials and of finished items also allows the group to keep track of how much is being produced and sold and when to order materials. Other simple records may be needed to track how much time each group member has worked or how many items he/she has produced.

Other pointers regarding record-keeping follow:

- Use standard accounting ledger books and other standard supplies, if possible;

- Take a physical inventory of office and craft supplies at least monthly, and justify them in relation to what the books say you should have;

- Get advice about record-keeping from a source knowledgeable about both accounting and the crafts activity the group is developing, if possible (e.g., someone at the U.S. embassy or in the host government);

- Understand and do whatever is necessary to have the crafts group registered, including affirming its tax status according to the laws of the country.
Monitor the group's progress. Making a profit takes time. Indeed, sometimes a group operates at a loss before a profit begins to be realized. Without a way to project when the business should begin to generate a profit and to monitor progress towards that goal, the group can become discouraged. Helping the group members determine their potential breakeven point will prepare them for a possible delay in profits. This is the point at which revenue equals cost. It compares total costs (including costs for rent and raw materials) with total sales. The breakeven point can sometimes be estimated at the outset but may need to be revised over time. A profit-and-loss statement can help track progress toward the breakeven point. This analysis compares expenses against income over a period of time. The statement also includes in its assessment inventories of raw materials, work in progress and completed items, labor, and overhead costs. Also useful are balance sheets, which compare assets (anything owned of monetary value) to liabilities (debts, taxes due, and other expenses). These can give the group an idea of the overall worth of the business.

Cash flow statements deal only with cash and show whether there is enough cash coming in to cover expenses. Tracking cash flow will tell the group, for example, that the rent may come due before the next load of goods is sold. Whoever provides the group with advice on accounting can also assist in preparing these statements.
• Obtain financing, if needed. This point was described in detail in the previous chapter and is mentioned again here to stress that obtaining financing will be more likely if goals are set, a plan of action in place, a work schedule assessed, and record-keeping a possibility. No loan officer will consider an application which does not include these considerations.

• Standardize systems for accomplishing day-to-day business tasks. Responding to orders, requesting and receiving payment, ordering supplies and all the many tasks involved in producing and preparing items for sale make up the day-to-day operations of an enterprise. Agreeing upon a standard way to accomplish these tasks will help eliminate confusion and ensure that orders are filled promptly, materials are always on hand to allow production, bills are paid on time and payment is received for items sold. A plan of action, along with the production schedule and quality standards described in the next chapter, will add to standardizing operations. Becoming familiar with and using some standard business forms and practices will also help:

• An order form that lists the crafts ordered by the customer acts as confirmation and price quotation for goods the customer wants. An order form needs to include the name of the crafts group, the customer's name, the method of transportation, delivery date, method of payment, description of goods, and all costs. (See sample order form in Appendix 2).
An **invoice** accompanies orders and is essentially a demand for payment. This contains all the information on an order form, plus other costs passed on to the customer -- e.g., special packing charges, insurance fees, and, if order is sent abroad, export taxes.

A **statement** records anything that happens with respect to orders. This is the document both the group and the customer uses to settle finances and disputes.

Although many crafts groups operate with cash, it is preferable to open a **bank account**. This facilitates bookkeeping and also helps the local bank transfer payments from remote customers to the crafts group.

There is a strong need for clarity and accuracy when using any forms for communication. Essential details, such as addresses, prices, detailed product descriptions (including dimensions, colors, raw materials, shape, and pattern) are vital if goods are to be delivered as ordered and if payment is to be unobstructed. Customer information also needs to be kept in a safe place and organized in an accessible manner.

Payment within a local market is usually transacted in cash. Other payment agreements are:
- **Cash in advance**, asking the customer to advance funds so that the crafts group may build up stock or buy raw materials (buyers typically do not like this method);

- **Payment on dispatch**, which means that the customer pays as soon as evidence exists that the goods are being delivered; or

- **Payment in arrears** ("net 30"); which means that the group arranges to be paid 30, 60, or 90 days after receipt of goods.

- **Letter of credit** is the payment method most frequently used by importers. They agree to pay the agreed-upon amount of money on receipt of certain bank documents. Once credit has been accepted by the crafts group, it can be altered only by the importer. The exporter can receive payment as soon as the required documents are presented to the crafts group's bank. That all collection charges are passed on to the importer, must be stated in the draft. (See Methods for Receiving Payment, A Risk Matrix for International Terms of Payment, Application for Letter of Credit, and sample Letter of Credit, in Appendices.)

**SUMMARY**

The crafts project at first will be a loosely organized venture which may evolve into a well-run crafts cooperative or other type of business.
The project can be made somewhat cohesive by the use of rudimentary accounting principles and by having written goals and objectives.

Once the group has been organized and management procedures agreed upon, the crafts group needs to begin considering methods of production.

EXPLANATIONS OF:

1. Profit and Loss Statement

2. Balance Sheet

3. Cash Flow Statement

4. Break-even Analysis
A Profit and Loss Statement measures expenses against sales over a definite period of time, such as three months. It shows profit or loss in a business for that period. It involves inventories of raw materials, work in progress, and finished goods, as well as direct labor and overhead.

A crafts group which makes batik items, for example needs to figure expenses incurred by any purchase of production or warehousing facility, tools and machinery such as tubs, racks, and looms. The group will need to figure costs of rent of any facility, utilities, telephone and, if applicable, materials such as wax and indigo, transportation of batik to various markets, and publicity. The group needs to figure the costs of any salaried managers or accountant.

All the expenses go in one column and the sales in another. Profit and loss is thus clearly laid out.
A Balance Sheet looks at the financial situation of a business at a particular moment in time. It has two main sections. The first one shows the crafts group's assets. The second shows its liabilities. Assets are anything the crafts group owns that has monetary value. These include cash on hand; money owed it by customers and anyone else; inventories of raw materials, crafts in-process, and finished products; any land, property, machinery, and equipment it owns, such as a warehouse facility and sewing machine. Liabilities are the money owed by the crafts group — essentially expenses it has incurred but not paid.
The cash flow statement will show the crafts group how money comes in and goes out. On a graph sheet expenses and income will be paid out month by month. Ideally, by the sixth month income and sales will be equal or income will exceed sales. A furniture production group may see that prices should be raised, production volume increased, or expenses cut to bring expenses and income into line.
BREAK-EVEN ANALYSIS

This is used to determine the point at which revenue from sales of crafts equals the cost of its expenses. It is useful in preparing financial projections to show the group how additional sales will produce added revenues but, most likely, increase production costs.

In order to determine a break-even point a number of calculations are needed:

- **Total fixed costs** - those incurred in production, which are not dependent upon the various levels of production. An example is the cost of a production and warehouse facility. This same cost is incurred regardless of the number of units produced.

- **Total variable costs** - those linked directly to production levels such as the cost of rattan for furniture, which vary according to the number of units produced.

- **Total costs** comprise the sum of fixed and variable costs.

- **Total sales** equal the total revenues received at the end of each month.
CHAPTER 4

PRODUCTION

Before the well-organized craft group ever produces its first shirt or basket, group members have put a tremendous amount of effort into the business. They have set goals and objectives and laid out a plan of action for themselves, obtained start-up money, and learned about sources of supplies, information and technical assistance. They have tried to anticipate problems and work out a strategy for overcoming them.

Most importantly, however, the group has done a thorough job of research in the community to identify a product that people will buy. Group members have a good idea of the market they are aiming for and generally what their customers want in terms of quality and price. They have an idea of what will give their product a competitive edge -- some difference in type, design, materials, and price that sets it apart from others. And they have narrowed their search to focus on a single type of product, since too many crafts under production at once may mean a sacrifice in quality and may confuse and discourage consumers. Now they are ready to concentrate on the details of producing the item they have chosen.

MATERIALS AND TECHNOLOGY

Good materials, tools, and methods are essential for efficient production. Materials and tools need to be both affordable and of high
quality. Shabby raw materials and inadequate technology reveal themselves in sloppy-looking products.

To be sure the artisans are in accord about the product to be made and the production method to be used, the group should:

- Evaluate any current or proposed production methods for efficiency and end result. Would production be easier if a sewing machine and more pliable materials were introduced? How would these changes affect the quality?

- Evaluate sources of materials. It is important to locate accessible
sources of natural, indigenous materials which will enhance the authenticity of the product. Fakes or cheap substitutes will be apparent to most consumers and render any product noncompetitive.

- Review the quality, quantity, technical specifications, and price ranges for material and equipment suppliers. Comparing what is offered by a number of suppliers will help the group secure the best quality at an affordable price.

- Learn the sales and credit terms of suppliers. Some sources may offer materials and tools for free, on loan, for cash or credit, or as part of a barter system.

- Determine whether suppliers offer discounts for bulk purchases, and buy accordingly.

- Coordinate supplier's delivery schedule with the production schedule of the crafts group.

PRODUCT DEVELOPMENT

Striking a balance between the costs of a labor-intensive craft production effort and prices the market will bear is often difficult. There are times when materials and methods will need to be adapted so that traditional designs can be kept, but costs can be kept at bay.

For example, the costs of labor and materials for a bedspread entirely hand-embroidered would be exorbitant. It would be impossible to price it so
that a fair return was earned for the craftspeople. Using embroidery as an accent or border only is much more cost-effective.

In another example, Thai craftspeople found that the use of sewing machines speeded the production of wall hangings without sacrificing design or quality; the backing (the piece upon which the designs were placed) was put together by machine, and the applique was done by hand.
Similarly, basket weavers can use their traditional skills and indigenous designs in easily made and highly marketable small items, like coasters, placemats, and planters.

A design expert (if available) could help the group members alter their end products while retaining their traditional skills. Artisans accustomed to making expensive and intricate costumes and coverlets can easily transfer their skills to production of evening bags and eyeglass cases. Indonesian artisans use traditional designs and woodcarving skills on contemporary objects such as television cabinets.

QUALITY CONTROL

If the group has done its market research, it knows what quality of product is marketable. Group members should let this quality be their goal and apply their skills and talents to producing at a consistent and efficient level.

The work done earlier to identify customers and analyze the market will have demonstrated that quality must be good if people are to buy. Errors of poor workmanship can result in product returns, complaints, and eventual rejection by the outlets. A few bad pieces can greatly damage or destroy a group's reputation and affect future orders.

The group should spend time discussing and establishing specific standards for style, volume, materials and weight. Guidelines should also be set for design, color and texture. Once the group has agreed on the standards that must be met, members can devise an appropriate quality control system which allows for regular inspection of products. Artisans should learn from each other to identify good quality. A group review,
wherein all members meet to discuss ideas for improved methods or product enhancements, should also be scheduled regularly.

The guidance of a designer, wherever possible, will help craftspeople improve their quality control skills by helping them to identify details that make for high quality. It will take time and effort but group members will evolve into a working unit. They will learn themselves to accept or reject samples of new products, control the quality of finished items, and plan displays. All of this experience will foster coordination, cooperation, and cohesion and ensure that the group does not become overly dependent on the services of outside experts.
TRAINING

In some cases fledgling groups may need considerable assistance in learning new skills or adapting old ones to allow production of crafts on a commercial scale. Group members may want to consider participating in a formal training program to gain the level of skill they need to launch their enterprise. They may be able to link up with existing programs being offered by government, educational, or private voluntary organizations in-country or ask an appropriate organization for help in designing and delivering a program to meet their own special needs. Groups which offer this kind of training assistance are included in the list of resources in Chapter 8.
WHERE TO PRODUCE: HOME OR SHOP?

The typical crafts group is home-based, located in a rural area, and made up of widely-dispersed members. Consequently, artisans often need help organizing a system of production which is participatory and adapted to their needs.

Issues relevant to efficient, well-integrated production include:

**Time available for crafts production.** The group members need to estimate how many hours a week they can devote to crafts production and to stipulate periods when they are unavailable. For some, crafts will be a secondary activity, taken up in seasons when there is less demand or other work, such as farming.

**Space.** Home-based artisans need adequate space to work; storage space for materials, finished products, and possibly chemicals; and good ventilation. Arrangements must be made for collection of their crafts and for their transportation to an additional production site or warehouse.

**Warehousing.** If all artisans plan to work at home, then there is no need for a production facility. Instead, a warehouse can be established and the group can collect, store, and distribute the products from this location. Such a facility should be centrally located, if possible, and accessible both to home-bound artisans and those responsible for distribution.
Production Facility. If a production facility is established, it ideally should have good ventilation, running water with sink hose attachments, well-marked containers, and adequate storage for chemicals. There should be enough space for storage of raw materials, unfinished and finished products, and outgoing packages. A large production area, a room for meetings and training sessions, staff offices, if needed, space for office supplies and equipment, and a display unit which can double as an outlet are also important. It is best if the production facility is not housed in a community service center or other facility not dedicated strictly to the production effort, since competing needs for the same space may interfere with consistent production.

If a central workshop is necessary or desirable, the added costs of renting, buying and refurbishing, or constructing a building need to be considered. Other costs might include travel to and from the site and the cost of equipment, utilities, maintenance, etc.

Home/Facility Combination. It may be possible to have some artisans working at home and some at a production facility. This situation is generally possible when artisans make parts of a craft which will be incorporated into a larger product. Embroidered pieces, for example, may be made at home and then integrated into a wall hanging or curtains, either at a production facility or by other home-bound artisans.
Once these things have been discussed and decisions made about who will do what where, group members need to allocate those tasks which complement production. For instance, one or more people need to collect the crafts and get them to the warehouse; someone with literacy and numerant skills needs to keep track of raw materials, work in progress, and finished products; and records need to be established and kept. If a plan of action has been devised, the list of things to be done will be very clear.

PRODUCT PRICING

An accurate price is one which covers all production, marketing, and distribution costs, plus a profit and is still acceptable to customers.

The cost of a product is computed by adding labor, materials and overhead costs. It is important to be sure that the estimate of costs allows the crafts producers enough of a share to make their labor financially worth their while.

These are known as production costs. Marketing and distribution costs include packaging, transporting products to outlets, promotion, and advertising.

These two categories make up the total cost of the article. The total cost of the article, including any profits, equals the sale price.

To keep the price accurate and fair, the group should utilize its records of costs and labor. A basket-producing crafts group, for example, might do the following:

- Keep a time sheet of the hours spent by each group member on each basket. A community worker or group member with literacy, numerant,
and, if possible, business skills can help in this process.

- Record the cost of materials used to make each basket.

- Figure indirect costs by dividing the total costs of machinery, equipment, utilities, rent, and general administrative costs by the number of items produced.

- Figure the marketing and related costs by totaling the packaging, transportation, and promotion costs and dividing this total by the number of items produced.

- Determine the profit margin by subtracting total costs from total projected sales. If the margin is too low, then either the price will need to be raised or costs will need to be reduced (perhaps by improved production methods, a reduction in labor costs, or less expensive materials). The profit margin determines how much extra money a business will need to function and progress -- essentially to make a profit.

- The sale price is computed by adding the total cost of the article and the profits.

**SUMMARY**

As the group members work together to agree upon a product, figure out the best production methods, work to establish good pre-market conditions,
and determine a fair price for their product, they will come to know and trust each other. They will pool their knowledge, talents, and resources. They will see that becoming an independent, professional crafts production group is possible with thought and care.

With products identified, under production, and competitively priced, the crafts group is ready to take its goods to market.
As one of its services to women's groups, Kahayag, a service support group for women in the Philippines, decided to set up a market for women-made products. They matched the products of two groups: A Muslim women's group was weaving cloth and mats with traditional designs. Kahayag helped them cost their raw materials, and emphasized that the women must also calculate in the cost of their labor, since women often put a very low price on their own time. Kahayag also helped them determine what "profit" they wanted to make. With the cost of labor, raw materials and profit, they worked together to arrive at a price for the products.

Kahayag bought the Muslim women's products and transported it to the city where a group of low-income women sewed them into finished products. Kahayag worked with the second group, as well, in determining cost of labor, raw materials and profit needed to determine the market price.

Deciding that the tourist and department stores were too big and paid too little for such items, Kahayag worked on developing "alternative markets" for the women's products, and set prices accordingly. Staff approached social development groups countrywide to sell handicrafts in their shops. Kahayag also ran bazaars and promoted these in the community. At first, this strategy worked well and profits were realized.

Due to various economic and political factors, the peso was devalued twice soon after the project started. The price of raw materials increased dramatically. Inflation reduced people's buying capacity. Soon, the market for the products decreased.

Currently, Kahayag is seeking alternative markets outside of the Philippines so that they can charge enough to earn a profit on the product. They are also attempting to diversify the product line to include such necessities as soap that can be sold locally.
Selling a product involves determining an accurate price—one which is neither too high nor too low in relation to the cost of production and market conditions. Remember to add in all production costs. The following chart may help you to assess your costs correctly.

### PRODUCTION COSTS
- Raw Materials
- Input Materials
- Labor
- Machinery & Equipment
- Expenses such as Electricity or Rent, etc.
- Administrative Expenses

### MARKETING & DISTRIBUTION COSTS
- Packaging
- Transportation
- Promotion & Advertising

### TOTAL COST OF THE ARTICLE

### PROFIT MARGIN
How much extra money will your business need to function as it should, and to progress.

### TOTAL COST OF THE ARTICLE + PROFITS = SALE PRICE
For a product to be successful in the marketplace, more is needed than mere introduction. The product must be marketable, that is it must have potential buyers, because either a need already exists or a need is created for it. It must be produced according to the right specifications (e.g., size and color). Packaging and presentation affect its value, and tools like advertising, catalogs, and price lists can increase consumer awareness of the product.

MAP OUT A MARKETING STRATEGY

Determining how a product is to be marketed is called having a "marketing strategy". For a small crafts group, this means identifying customer groups ("target markets") it can serve better than its competitors. Revising the strategy involves tailoring the product to that segment in terms of price, promotional effort, packaging, and distribution method.

Small crafts groups typically have limited resources to spend on marketing. What they do have can be best allocated by concentrating on one or a few key market segments.

Defining key market segments

This is the basis of target marketing. The major ways to "segment a
market" are:

- **By geography.** This means developing a loyal and reliable group of consumers in the local community before expanding into new territories. The local community is usually the most appropriate market segment for a Third World crafts group.

- **By product.** This involves promoting existing products known to sell well.

- **By customer.** In this process, the group identifies and promotes its products to those customers most likely to buy. In other words, it sells to heavy users before trying to develop new users.

Choosing a market segment can take all three of these points into consideration; for instance, straw mats commonly used in the local community and usually purchased by women would be targeted to them in all promotional materials and efforts.

**Test Marketing**

Test marketing locally will help the group identify what sells well and which outlets will buy the most.

Crafts can be tested on a pilot basis first. For instance, artisans could place their crafts in local fairs or at a museum auction to see if a demand exists for them. Or the warehouse/production center could set up a small outlet to showcase and sell prototype products. If these initial test
marketing exercises demonstrate a demand for a certain product, the artisans should venture further with it.

Ask local store owners to carry small quantities of crafts which have proven to be popular. The response, measured by sales, will indicate whether or not the particular product is marketable. Members can then decide whether to branch out into central market centers and stores, open a small outlet themselves, or make changes in their product.

**Market saturation**

A local market can be saturated fairly quickly, especially for luxury items. In Colombia, for example, a sewing group that distributed its products locally with great success found that business decreased as the market absorbed the product to capacity. The group then designed a line of baby clothing and took samples to commercial centers in neighboring towns. A national chain bought these products, and before long the group had contracts throughout Colombia. Several members organize trips throughout the year to scout for new markets and to distribute and sell.

Despite the fact that their home town is isolated, their business has been successful. Exploring local markets first, revising the product to a few marketable utilitarian items, and becoming known as a reliable source all contributed to the group's success.

**MARKET LOCALLY FIRST**

There are many advantages to marketing locally first, and to maintaining these markets.
First, buying habits and purchasing power are more easily known and are less seasonal or faddish than tourist or foreign markets.

Second, capital outlay is much lower; the costs of processing, packaging, insuring, labelling, and shipping are very small compared to exporting regionally or internationally.

Third, the return in terms of income received is consistent because products can be delivered at short, regular intervals.

Fourth, promotional efforts can be much smaller and the audience can be reached easily.

And, lastly, a base for expansion can be solidified, reducing the risks in selling regionally, nationally, or internationally.

Some products may not sell locally. The local populace may already have access to the crafts, lessening their allure. Often crafts traditionally designed and used for domestic purposes are being replaced by cheaper,
plastic ones. Younger people seem especially uninterested in traditional crafts; they reduce the potential consumer base considerably. In addition, most Third World people need money for their families and do not have money to spend on merely decorative crafts. Local markets where goods can be exhibited may also be open only one or two days per week.

The crafts group needs to consider products which are useful locally and which avoid the factors of familiarity, income, and saturated markets. Products which are useful or, better still, in great demand for necessary activities (such as roof tiles for construction) have a much better chance of success than luxury items.

MARKETING REGIONALLY OR NATIONALLY

After an enterprise has been operating successfully for a while in the local market, group members might begin to think about expanding into other markets. If the group has tapped all local sales outlets, finds that sales are levelling off, and yet has the capacity to produce even more items for sale without undue strain, the time may be right for expansion. There are some advantages to this kind of market expansion:

- An increase in the number of buyers and in the potential for profits.

- Although not as accessible as local markets, regional markets are closer than export markets. By comparison, they can deliver income from sales at regular intervals and fairly quickly.
• Products requiring extra skill are often sought by more affluent citizens, government officials, museums, and expatriates, all of whom are more likely to live in the capital or in the larger town.

• In some countries, the crafts industry is almost completely dependent on tourism. Tourist markets are usually in the capital, though some travelers may visit small towns. Tourists who would be unlikely to buy crafts at home often buy them as souvenirs of their trips.

On the other hand, the disadvantages to marketing regionally or nationally also need to be addressed before any effort is made to market at those levels:

• It is difficult to know the buying habits and preferences of the potential consumers.

• Country-wide distribution of the products would be required.

• Again, the indigenous population would be familiar with and might not need the product.

• It may require intermediaries.

MARKETING INTERNATIONALLY

Because crafts categories vary from country to country, there is no
reliable estimate of the total market for crafts exports, although some estimates have been as high as U.S. $25 billion for crafts from all countries. In the U.S. alone there are over 600 importers of Third World crafts. Large chains, as well as an estimated 50,000 smaller shops, are supplied by these importers. The bulk of crafts sales are made through individual specialty, ethnic, and museum shops, and through mail order catalogs.

These figures indicate enormous demand as well as cut-throat competition. It is extremely important for a group to have a well-established track record in local and national markets before it ventures into the export market. As mentioned earlier, many Third World governments favor crafts exports because they are a way to secure foreign exchange. Too often, though, the economic well-being of the craftspeople is overlooked.

The following are advantages of exporting from the vantage point of the crafts person rather than from that of any specific Third World country:

- Greater opportunities for employment of craftspeople and for increased income;

- Access to the buying power of wealthier countries, leading to more sales and capital for reinvestment;

- International exposure which can result in prestige and demand;

- A fostering of interest in international taste and product ideas.
There are also disadvantages:

- A dependency on intermediaries, who translate market trends and requirements and who can charge exorbitant fees;

- An extremely complicated and costly chain of distribution, including transportation, insurance, broker and shipping charges, export duties, etc.;

- The requirement of a sophisticated financial and production system.

By the time it explores exporting, the crafts group should have a solid professional record in domestic markets. This will show its ability to produce the quantity, quality, and type of merchandise required by foreign outlets. The record will also show a history of continuing customer demand and reliable payments. These are the minimal requirements for even marginal success in exporting. Exporting should never be considered by groups which are not already showing substantial profits made in-country.

One way to reduce some of the risks of exporting is to join forces with someone else. If the group is dealing with a local wholesaler, it might be best to let that customer do the exporting; the group could then spare itself some of the effort, time and risk. Some developers or expatriate businesspeople might also be in a good position to form partnerships for export of products. It may also be possible to enter into a cooperative relationship with another crafts group.

If the group decides to export, several points should be kept in mind:
- The Ministry of Trade should be contacted, since most overseas embassies are charged with increasing exports from their countries. Commercial attaches at foreign embassies may also know people who can assist the exporting effort. By discussing their export objectives with these individuals, the group may meet someone knowledgeable enough about foreign markets to act as its agent. Then, of course, the group must factor in the cost of the agent in analyses of its product pricing.

- The crafts warehouse must be centrally located and accessible, both to members of the group and to shipping agents.

- The group should not build up its production level too rapidly, as it might saturate an unstable export market as well as damage quality.

- The group must research the market carefully, keeping in mind that export markets are fickle and trends change quickly.

**CONNECTING WITH MARKETS**

The crafts to be sold need to reach the proper outlets and do so in a way that offers the greatest return to the producers. To cultivate local and regional markets, the crafts group needs to convince customers to order its goods and then supply the promised goods on time.

When approaching a potential market the group needs to:
• Be able to answer all questions on production capacity, ability to make commitments, payment terms desired, delivery schedules, and anything else that has an effect on the relationship between buyer and seller. Certain sales methods, such as consignment sales, may require special types of agreements.

• The group should be as open as possible about factors which may affect its ability to deliver (such as the closing of an airport or periodic gasoline shortages).

Once a sales agreement is reached, the crafts group should supply only what has been requested (substitutes give them a bad name) and do so on time.

**Contacting the customer**

**Brochures or flyers**

The best way to communicate with potential customers, even when selling to them in person, is to provide brochures or catalogs which describe the products and list their wholesale or retail prices.

If the group is small and seeking to market only in its community, a flyer that lists retail prices may be all that is needed as a product catalog.

For groups selling several items and doing so outside the immediate community, a brochure that contains some sketches and also lists wholesale prices for each product would be helpful to both buyer and seller. The
outlets will determine the mark-up which sets the final price to the consumer.

**Introductory letter**

Groups which progress to a national and/or export market may also find an exploratory or introductory letter helpful. This letter can be photocopied but should have individual salutations and addresses. A letter is an inexpensive and often productive introduction; even if the products do not sell, the group will begin to see from the response what customers want and consider ways to sell to them.

**Group name**

If the group has an interesting name, customers will remember it better. Avoid any word or acronym that might be offensive in the language of a potential importer, however.

**Logo**

A logo will be useful as well. This is a design which captures the tone of an enterprise. It should be attractive, simple yet eye-catching, and original. The Indonesia Crafts Council logo shows two hands, in profile, guarding a flower, which symbolizes creativity.
Trademark

A trademark is any work, name, symbol, or device, or any combination thereof, adopted and used by a crafts group to identify its products and distinguish them from others. A trademark serves not only to indicate who made the product but to suggest a certain level of quality based on past performance. When a crafts group uses a unique symbol to mark its work, it is a trademark.

In the U.S., trademarks are registered with the U.S. Patent and Trademark Office by furnishing a written application, a drawing of the mark, and a fee. In other world countries, trademarks are registered with Patent and Trademark Offices in the Ministries of Commerce.

METHODS OF SELLING

There are many ways for a group to go about selling its wares, from setting up a stall in the local marketplace to selling quantities of items to a large distributor. Group members need to consider carefully which approach is most appropriate for them, given the opportunities that exist in
the business environment in which they work and their own level of production, marketing strategy, and experience.

Common methods of selling follow:

Direct sales. If the group markets its own products, it does not need to pay for the services of an agent and can maintain control over sales and distribution. Crafts groups which sell directly do have to bear the cost and time pressures of finding customers and making sales. But even this is an advantage to beginning crafts groups since it enables them to get a quick reading of a product's marketability. Direct sales might be made through an outlet established at the production facility/warehouse, from a stall in the local marketplace, or at one of the special crafts markets many countries have established to assist local artisans. Once the local market has been saturated, either a group member or a friend who often travels to neighboring towns could begin introducing products there, using the approach that proved successful in the group's home community.

Consignment. Consignment means placing goods in wholesale or retail outlets with the agreement that the artisans will be paid only after the goods are sold. This method enables artisans to sell large and valuable items, such as wall hangings or very large water containers, in a retail outlet. If the consigned item sells, the retailer pays the crafts producer a pre-arranged sum of money—usually around sixty percent of its retail sale price.

Consignment gives the crafts group exposure to a market at no cost. For a group with little or no track record, this can be a way to test the market and to establish a history of success. It also benefits the wholesalers and retailers since none of their capital is involved up front.

Consignment is fraught with dangers, however. The producers receive no
money until their crafts are sold. They will get only a portion of the sale price when and if the goods are sold, rather than the entire price they would receive from a direct sale. The outlet often does not assume responsibility for damage to the exhibited products. And there is risk involved in leaving crafts with under-capitalized, marginal outlets, which are the kind that most favor consignment. These frequently are poor credit risks and many renege on paying for goods sold.

The crafts group can do some things to protect itself when it wishes to take advantage of the free exposure consignment offers. The group can insist, for instance, that the consignees be responsible for damages, that they sell the goods at a specified price or at a specified level of commission, and that the group can demand the return of products at any time.

Wholesaling. Wholesaling involves selling the product at a wholesale price (usually twice the cost) to a wholesaler who will then mark it up (at whatever the market will bear) and sell it. Wholesalers are also distributors and place goods in retail outlets. Some craft groups act as their own wholesaler/distributors but this is difficult and requires much intricate knowledge of markets.

PACKAGING

No matter where or what the market, packaging is an important part of selling. Crafts should be attractively designed and packaged, professional in appearance, and include any necessary instructions for use.

If possible, attach a legend which describes the product's cultural significance, tradition, and makers. This procedure is good for the morale
of the artisans and is a source of pride to the country. It also piques the curiosity of tourists, expatriates, museum staff, anthropologists, and government officials. Legends usually increase the value of the craft in proportion to the distance between origin and sales outlet.

Even within a country, some minority groups may create crafts considered unusual by the majority. For example, in Southern Africa, the nomadic bushmen make crafts that are considered to be collector's items by people in the nearby capitals of Namibia, Zimbabwe, Angola, and Botswana. Thus, the legend is important even to the artisans' own compatriots.

**ADVERTISING**

Advertising can take the form of leaflets, brochures, posters, billboards, murals, letters, photographs, and catalogs. It could also extend to ads in local newspapers or on radio stations though, due to the expense, these ads would be rare.

Unless the group is involved only in direct sales, most advertising will be targeted to outlet owners and other buyers. Photocopied or mimeographed leaflets that include photos or sketches of the products would be useful, if the cost is not too prohibitive. For a beginning crafts group, sending or delivering to potential buyers a photocopied flyer that lists prices and has wellplaced sketches would be a good start.

One good way to get free advertising is to get local newspapers to run feature stories on the group and its products. Tourists or other customers reading these articles may be interested enough to seek out the places where the products are marketed.

Exhibits are another form of advertising. They can be set up in a
a small area next to the production facility or warehouse or at a donated space in a central location. If possible, a designer could suggest eye-catching techniques to show off the crafts to their best advantage. Arranging crafts in tiers or rows helps do this, as do spotlights, colorful combinations, and the use of plants.

Displays in high traffic areas like airports, hotels, embassies, tourist board offices, and the like can often be arranged. Ask trade promotion officers, ministries, commercial counselors at embassies, and hotel managers about displaying the group's wares.
Distribution samples

The group should avoid furnishing free samples of its products to any outlet, especially one outside the community. If group members do this, they forfeit the time and expense involved in producing them. Doing so also tends to devalue the reputation of a crafts group. An exception must be made for sales agents (who would be used only for marketing outside the community or, perhaps, internationally); they need samples if they are to be effective in representing the group to potential customers.

SUMMARY

When approached systematically, marketing is neither mysterious nor difficult. Making use of the information gathered in the product selection/market analysis process, the craft group can develop a marketing strategy that is geared to both the product and the community. Even small, informal groups can improve their chance of success by using a minimal amount of marketing.
The marketing process is ongoing throughout the life of a business. Below are brief descriptions of the different elements of marketing. Whether you're starting a new business, or introducing a new product or service within your existing business, you should be sure to cover each of the steps described below:

1. Market Research

   In this phase, you should find the answers to the following:
   * What is the exact product or service that you will sell?
   * Who will buy it?
   * What price will they pay for it?
   * How many other businesses are offering the same product or service? What makes your product different?
   * How will you get your product or service to the consumer?

2. Packaging and Production of Your Product or Service

   During this phase, you should be able to determine:
   * What designs and packaging for your product or service does your target audience find most appealing?
   * Do you have the raw materials, skills and equipment necessary to produce the product or service according to what the consumers are buying?
   * Can you meet standards of quality in packaging and design that the market and government regulations require?
3. promotion and sales

During this phase, it is important to determine:

* What do you need to do to make sure that people recognize your product or service as distinctive and want to buy it?

* Which forms of promotion will you use to reach the greatest numbers of people and how much will the promotion cost you?

4. distribution

In this step, you will need to find out:

* What type of transportation will be required to get your product or service to the public?

* Will you sell your product yourself or use an intermediary?

* What will be the time and cost involved in getting your product or service to the market?

5. pricing

To determine the right price to charge for your product or service, it is important to have the answers to these questions:

* What are other businesses charging for the same or similar products or services?

* How much will your target audience be able to pay for this product?

* What will your total production, management and marketing costs be?

* How much of a profit does your business need to earn? That is, after paying for production, management and marketing costs, how much additional money do you want to have to distribute to business owners or re-invest in the business?
WHAT HAPPENS WHEN MARKETING IS NEGLECTED?

COMMON MARKETING MISHAPS:

* You produce more of a product or service than the market can purchase...

* You do not realize that there are many other businesses selling the same product or service and that the market is "saturated"...

* You price your product or service under what the market can afford and thus reduce your profit...

* You price your product or service over what the market can afford so that few people have enough money to buy...

* You design and/or package your product or service in a way that does not attract buyers...

* You do not meet the standards of quality that the market and government regulations demand...

* You choose the wrong sites and audience at which to target your product or service...

Lack of attention to marketing can result in any of the misfortunes described above and will affect your profits. One way to avoid this is to be certain that you and your group think very carefully about precisely who will be buying your product or service...
Small businesses must generally charge more for a product than a big business, because they cannot reduce the per item cost through volume. How can a small business justify the higher cost of the items they produce? How does this affect women who are frequently involved in small, rather than large, businesses?

In larger businesses, there are generally special departments for each business function (i.e., marketing department, accounting division, etc.) In small businesses, the owner or cooperative must generally take charge of each aspect. What effect does this have on the marketing capability of small businesses?

"Marketing" by definition, implies satisfying a need as well as creating demand for a product or service. In regard to creating a need, do we, as women, want to be involved in traditional market tactics of promoting consumerism? How can we satisfy market needs and run profitable businesses without making use of traditional tactics that create needs and manipulate consumers?
Women's businesses frequently lack capital. When it is hard enough to find funds for production and distribution, broader marketing tasks are viewed as "extras". What method can a woman's business use to determine what proportion of precious funds should be devoted to marketing?

Marketing is a specialized science and skill. To obtain experience and know-how it is important to have training and business experience. Acknowledging that women do not have equal access to business experience and training, what special measures can be taken to assure that women gain the know-how to launch successful marketing campaigns?

Keeping all these considerations in mind, it is still important for us to understand and use those marketing procedures which will help us to run better businesses...
CHAPTER 6

DISTRIBUTION

CHANNELS OF DISTRIBUTION

The steps required to get the product from the crafts group to the consumer can be simple or complex, depending on both the craft and the destination. The choice of a distribution channel is best made by the people or organizations who are most familiar with the market. When marketing locally, for instance, these might be the craft group members themselves; when exporting, the group might be better off relying on import/wholesalers or others who are familiar with the complexities of this market.

A distribution channel may involve people at a number of different levels using a variety of approaches:

Boutiques and other small stores. Initial marketing efforts at the local and perhaps regional levels will often be to small store owners and contacts will be made usually in person.

Tourist markets. Craft centers, hotel shops, tourist boutiques, transportation terminals, travel agencies, and airline offices are all possible sales outlets.

Conventions. Conventions, especially those which focus on international development, are natural markets for Third World crafts.

Mail Order. Brochures or catalogs with accompanying price lists can be sent to select markets. Advertisements could also be placed in existing catalogs such as those produced by Alternative Marketing Organizations.
Direct mail is costly, however, and a lot of time can pass between the mailing date and receipt of the first order.

**Fairs and exhibitions.** Another way to reach buyers is to participate in fairs and exhibitions at which new products or product models are shown to the general public. However, these may not be accessible unless there happens to be one held in the country.

**Importer/Wholesalers.** These individuals or groups can be helpful to Third World crafts groups since they assume the burden of warehousing and marketing. They usually are interested only in crafts groups that have the facilities and labor necessary to produce and deliver in volume. After they buy from these groups, they display and sell goods at shows and trade fairs, have their sales staff present goods to potential buyers, and often have permanent showrooms. Importers may also have their own retail shops, which permit them to test the market on a small scale before they make major purchases.

**Retail stores.** All stores buy some of their goods from importer/wholesalers and some directly from the producers. They travel to and buy from many countries so that their operation's inventory is varied and so that they get the best prices. The stores vary in size, number of branches, customer appeal, and price structure.

Department stores are in every major U.S. city and each of these has up to 25 branch stores. Every department store has a full range of products, with one buyer purchasing for each category. These buyers know trends and what people want. Drawbacks to selling to department store buyers are their need for high production capacity, exact schedules, reliable shipping, extensive documentation, the right of cancellation when an order is past due, and slow response and payment time.
While it is the rule that department stores use large quantities of many items, many welcome one-of-a-kind products that will give their store a special image. Some stores have special promotions or departments which highlight the products of a given country for a limited time.

Specialty stores refer to large retail operations carrying a narrower range than do department stores of merchandise that caters to a particular customer. An example is Pier I Imports, which carries inexpensive imported items, largely furnish...-

Chains, such as Sears o. Penney, consist of 1,000 or more stores. They are furnished goods by a central buyer who purchases enormous quantities at the lowest possible prices. A crafts group should contact them only if they have high production capacity.

Buying offices. Buying offices are established by department store groups as headquarters in major commercial cities such as New York and Los...
Angeles. These groups also have overseas buying offices to handle direct imports. Staff in these domestic and foreign offices communicate directly with store buyers on a regular basis.

**Museum shops.** Museum stores and shops are excellent possibilities since they furnish a select clientele, as well as seasonal tourists interested in unusual handmade products.

**Interior designers.** Many interior designers rely on design centers for ideas. Thus producers whose crafts are shown in a design center will reach the numerous designers who visit these centers for decorating ideas.

**Architects.** Architectural commissions often feature large, one-of-a-kind crafts. Increasingly architects use large sculptural crafts from exotic, often Third World, cultures to accent their buildings. This is a growing trend for corporate offices. Thus, it might be worthwhile to check both architectural firms and multinational corporations in the host country as a first step.

**International trade shows.** These are shows for the crafts trade and cater to retailers from all over the world. They include general gift shows as well as specialized shows, such as the International Housewares Exposition. Retailers visit such shows to compare merchandise, collect catalogs, contact new sources of supply, and place orders for the coming season.

**Alternative marketing organizations (AMOs).** These are importers who are often based in developing countries. They usually buy directly from Third World artisan groups and seek to help them succeed in the export market.

AMOs exhibit and sell crafts through their resale stores (set up for retailers), retail shops, bazaars, home parties, and their own mail order catalogs. They sell to both for-profit and non-profit groups.
AMOs account for a very small percentage of international craft sales. They deal in small quantities, have low mark-up, and operate inexpensively, using many volunteers.

OTHER DISTRIBUTION CONSIDERATIONS

There are some considerations common to distribution of crafts regardless of what they are and how far away they are going:

- **Documentation.** Faulty documentation often causes difficulties during shipment or collection. This can result in bad relations with the client and delayed payments. There are two types of export documentation, one for shipping goods (export license, customs manifest, etc.) and one for collecting payment (commercial invoice, bill of lading, etc.) (For further information, see Appendix 4.)

- **Packing.** Rough roads and rough handling are inevitable and necessitate that products be protected. Many craftspeople underestimate the rigors of the journey a product must take and become angry and bitter when the fruits of their labor are damaged beyond repair. Crafts need to be protected from jostling, moisture, theft, and pressure. All this protection is crucial for exports, which are stacked by forklifts or loaded with slings, nets, conveyors, or chutes. (Directions and materials required for exporting can be secured from freight forwarders or shipping agents.) Some packing materials may be found locally, and sometimes private voluntary organizations will donate them. (See Appendix 5)
Labeling. All packages must be clearly marked to avoid confusion and loss of merchandise. All old marks should be erased. Labels need to be printed legibly, in black waterproof ink, and placed on the top and on the sides of cartons. Crafts for export need additional labels based on demand. The United States, for example, requires a "Made in _____" label and, for textiles, a label sewn onto the garment which gives country of origin, fiber content, manufacturer, and care instructions. (Artisans should check with importers, since labels are not universally required.)

Insurance. Insurance is needed to cover the dispatching of crafts, as well as production facilities, equipment, tools, materials, products, display areas, warehouses, etc. It is most necessary when shipping products any distance. Insurance in Third World countries is expensive. Most importers in developed countries can purchase world-wide insurance that covers all goods they purchase, from the time they leave the producer until they reach the consumer. Usually such customers require no insurance from the producer, but it is a good idea to check.

Shipping. Most packages sent locally or regionally which are not carried by hand will be sent by truck, rail, bus, or commercial carriers. Arrangements may even be made to "piggyback" on loads carried by unrelated companies (by asking the local produce distributor to carry a load of crafts to the market, for example).

For exporters, ocean shipping is usually the most economical
means of transporting goods. Its advantages, however, are offset by the potential for damage or theft. The group should use this method of shipping when merchandise is very bulky and heavy and when there is no rush. Ocean shipping is a very slow means of transport but relatively inexpensive.

Air shipping offers fast delivery, better protection of merchandise, and special commodity rates for crafts offered by some airlines.

Packages which are small and valued at less than $250 bypass the cost and time of customs clearance in some countries. This method takes time, though -- usually about three months.
Considerations of weight and volume are essential for groups which plan to export. Ocean and air rates are figured by weight or volume, whichever is more. Craft groups should seek to keep a balanced ratio to minimize costs. (See International Shipping Conversions Table in Appendix 3).

COSTS OF DISTRIBUTION

Local distribution costs include the price of packing materials, transportation and labor charges to truck goods to outlets, and costs associated with billing and collecting payment.

Distribution costs rise sharply when exporting, because of the number of people and methods in the chain of distribution.

Below are common terms relating to distribution:

**Ex Factory.** This is the price that craft producers charge to someone buying from them at the point of origin — their own workshops or warehouse. The group agrees to have the goods ready at an agreed-upon time, and the buyer (usually an importer/wholesaler) picks them up. The crafts group is responsible for the goods only until they are claimed by the buyer.

**F.O.B. (Free on Board).** This is the most common export cost quoted, since the importer/wholesaler has an all-inclusive price. It includes all the costs existing in the country of origin: expenses for inland transportation from place of production to the port, packing, loading expenses, required export taxes, special charges for obtaining documentation, and customs legislation.

**C.I.F. or C&F (Cost, Insurance, Freight, or Cost and Freight).** This is the cost to the importer/wholesaler in the export country. It includes
costs of F.O.B. merchandise and charges for insuring it. (The less frequent C&F method does not include insurance.) The crafts group receives a bill of lading as evidence that the goods have been shipped by the freight forwarder/shipper to the group's customer.

Cost price. This includes importer/wholesaler costs for unloading and port handling, clearance, import duties, and inland freight in the country of destination.

Wholesale price. This includes the broker's business fee; importer's margin for staff costs and overhead, and the importer/distributor's margin for storage, distribution, etc.

Retail price. This includes taxes levied on the retail level and the retailer's capital and operational costs. Large retailers double the wholesale price of a product. This is called 50 percent mark-up. Smaller stores may more than double the price, to a 60-70 percent mark-up.

A summary of the costs added at each stage of distribution can be found at the end of this chapter. As can be seen, an item may retail for between three and ten times the original sale price, with most retail prices hovering at around three to four times the F.O.B. price.

IMPORT RESTRICTIONS AND AGREEMENTS

Every country has legislation regulating the import and export of goods. The main purpose of import restrictions is to make it hard for outsiders to compete with domestic producers. Those protections which involve an added cost are called tariffs, or duties, or taxes. A quota is a restriction on the quantity of importers allowed. A crafts group which hopes to export should have a good working knowledge of the restrictions and
agreements pertaining to the countries of destination.

Also important in this context are agreements which attempt to facilitate the distribution of goods. Some countries have joint trade agreements which enable their products to move easily from one country to the other. The Generalized System of Preference (GSP) is an agreement reached by major industrialized countries which encourages trade from the Third World to developed countries on a non-reciprocal basis. It also provides for duty-free entry of certain types of goods. Quantities are limited under the GSP, but most importing countries make special allowances for handmade products. A Certificate of Origin is required to qualify under the GSP.

The ACP refers to an agreement whereby European countries which have signed the Lome Cooperative Convention provide duty-free entry to products coming from African, Caribbean, and Pacific countries. A EUR-1 Certificate is required to qualify.

Under the CBI, twenty-one Caribbean nations qualify for one-way free trade because of the Caribbean Basin Initiative. A Certificate of Origin is required.

Textiles require special treatment since they enter developed countries under a different agreement and do not qualify under the GSP. Nearly all U.S. textile imports from developing countries are governed by bilateral agreements which the U.S. has negotiated under the auspices of the Multi-Fibre Agreement (MFA). Appropriate documentation can be obtained in most Third World countries from the Ministry of Foreign Trade, Customs, or the Chamber of Commerce.

Some products are governed by rules of the Standard International Tariff Classification (SITC). These include the following kinds of provisions for the products listed:

100

106
Leather has to be treated and tanned carefully, since it can decompose. Additionally, amounts of lime, chrome, and other chemicals used are specified by importing countries.

Wool must be properly washed in certain chemicals.

Wood, rattan, reed, cane can be affected by termites and must have an accompanying certificate that the crafts have been fumigated.

Hides. Many countries do not allow crafts made from the hides of endangered species. Similarly, ivory is not allowed in the U.S., Canada, and Europe.

Toys. The paint must not contain toxic elements, nor may there be nails, protruding parts, or glass. Regulations governing toys are complex and bear thorough investigation.

Beads made from the seeds or other parts of plants are a problem since some of these may be toxic.

It is the crafts group's responsibility to supply correct documentation regarding these kinds of restrictions. Sources of advice include commercial counselors at embassies, chambers of commerce, customs, ministries of foreign trade, export promotion officers, and import promotion officers.
Distribution at the local level needs to be reliable and effective, but it can take many forms. It can be by foot, mule, truck, bus, train, camel, or whatever is available. Still, reliability must be maintained. Methods of distribution increase in complexity as more and more people enter the distribution chain.
COSTS OF DISTRIBUTION

$10.00 ex-factory price (price at door of workshop)

$11.00 F.O.B. $1.00 10%

Cost and Freight $2.75-3.85

Cost price of importer, importer/distributor, or central buying organ.

13.75-14.85 (125-35%)

Ocean freight insurance between 25% and 45% of F.O.B. price

16.50-19.80 (150-180%)

unloading and port handling charges import duties between 25% and 45% of F.O.B. price

22.03-45.94 (210-320%)

Brokerage business between 6% and 7% of cost price

1.39

1.24 Importer's margin low - 7.5%

4.88 high 50%

3.30 Importer/Distributor's margin between 20% and 65%

12.87

Taxes levied at retail level

38.55-101.06 (360-700%)

Retail Price $16.52-55.13

Retail Mark-up between 75% and 120% of cost price to retailer
The following two case studies illustrate many of the points made in this manual. Most importantly, they show in one instance how important participant involvement is to success, and, in the other, how a lack of participant involvement led to failure.

A SWEATER INDUSTRY GROWS IN ECUADOR

Women in the rural village of Mira, Ecuador, already knew how to knit. Then Peace Corps Volunteers Emily and Peter Gladhart arrived in 1965. What they did not know was how to turn this skill into a profit-making venture. The Gladharts, who had learned knitting technology, stitches, and styles in their earlier work in Cuenca, suggested to one family that they consider making sweaters for sale. The Gladharts offered to try and sell the finished products.

From this modest beginning grew a sweater industry that generated a substantial amount of income for the workers, and in the process also turned these rural women into economic activists. By 1979, the cottage industry had grown to include 1,000 families who produced 600 sweaters per month. Fifty to seventy-five percent of these sweaters were exported, with the remainder sold domestically.

Traditionally, the production of hand-knit sweaters in northern Ecuador involved three different groups and phases: sheep raising by people of the
central Highlands; wool spinning near Otavalo; and knitting. The knitters included large- and small-scale entrepreneurs ("mayoristas" and "minoristas"), and the independent and piecework knitters who worked for them.

The Gladharts had brought sample sweaters from Cuenca and contracted with a firm in Mira to have local sheep fleeces spun like the wool in the samples. The Mirenas considered the loosely spun, one-ply wool yarn and the sweaters made from it to be of poor quality. They were attracted, however, by the prices these sweaters earned, which at first seemed too good to be true.

The Gladharts were able to sell the sweaters, and the Mira women soon found that they could earn 68 sucres for each sweater, more than 11 sucres a day for a six-day week. (By comparison, they would have to work eight days in the field to earn 50 sucres.)

At first, the knitters came together primarily as a response to the Volunteers, who assumed all the financial risks of the enterprise. Their commitment was less to the business than to the Volunteers themselves. When the sweaters began to sell, the women began to knit more, and other women began to knit as well. By December, 1965, this larger group required some organization.

A cooperative was organized in February, 1966, with each member investing fifty sucres as a membership fee. The cooperative leadership stressed the need for all members to learn to purchase wool, control the quality of knitting and market the sweaters. The Volunteers made it clear that they would be leaving, and told the artisans that if they found the sweater business useful, they would have to learn to operate and manage it themselves.
When the Gladharts left Mira in October, 1966, the cooperative had 40 members and assets of 6,500 sucres (U.S. $325). Members were knitting two to three sweaters each per month. Between February 1 and October 1, 1967, the cooperative had net earnings of 82,750 sucres (U.S. $4,138), equivalent to three percent of the agriculture production of the community. The cooperative also regularly advanced small loans to members against future production, a practice which has continued to the present.

At first the organizers of the cooperative limited membership to a number they were able to manage. The original members also were not eager to share in the new opportunity outside their circle of families. (From the beginning they relied on relatives living in Quito to help with marketing, merchandising, and wool buying.) Yet the production level continued to grow despite the limit placed on membership because the members presented the knitting of their relatives as though it was their own. This strategy came under fire in 1979, when women who had been denied membership protested and were admitted.

Soon the cooperative influenced the development of a larger industry. The national and provincial governments began assisting artisan cooperatives who wanted to show their wares at international art fairs; they also coordinated their efforts under the regional trade agreements of the Andean Port countries. Many women said that this assistance from the government was critical to the opening up of export markets.

Having access to these markets meant that more women could be involved in production, and women from two neighboring provinces were taught the successful knitting techniques. The entire community got involved when buyers started coming to Mira to buy directly from the knitters.

The National Development Bank's offer to extend loans to artisans under
terms more favorable than to farmers also encouraged more women to get involved in crafts. The knitters’ credit was often used to help meet farm cash shortages, and crop sales were used to help make payments on knitting loans. Crafts activities thus meshed well with traditional farming activities, providing a welcome supplement to farm income.

Although the cooperative increased its sales each year, it eventually became less important as an institution. Instead, a large number of independent family enterprises grew out of the original venture. When the cooperative finally disbanded in March of 1972, it had dwindled to 18 members.

Today, earnings per sweater have increased about 30 percent, despite the fact that the sucre has fallen to one-third its 1967 value. Improvements in design and materials have also allowed a greater profit margin; by using much heavier yarn, the time required to knit a sweater has decreased by 35 percent. The production norm in 1966 was two to three sweaters per month; in 1969, it was six to nine.

**Conclusions**

The Mira project highlights:

- The usefulness of an informal marketing network. The original producers were all members of the same extended family. Though new products are being made today, the production still occurs within old social forms.
• The evolution into a more formal structure (in this case, a cooperative).

• The impact of skill-building within an informal structure, which suggests that this is best done by participatory learning, under the temporary leadership of people whom the group trusts.

• The importance of technology in making production more profitable.

• The importance of gaining experience in local markets before moving to exports markets and the value of government assistance in opening up those markets.
The Development of Botswanacraft

In 1968, Botswana began receiving Mbukushu refugees fleeing the civil war in neighboring Angola. Faced with their need for income, United Nations settlement officers urged the refugees to use their traditional basketweaving skills for income generation.

The baskets which the Mbukushu produced were marketed by United Nations staff, who took them to the capital to sell. As these proved popular and the demand increased, Botswana women from the northwest also began to make baskets.

The increasing production needed a marketing vehicle. In 1969, two Peace Corps Volunteers asked the Ministry of Finance, Development, and Planning for assistance in forming a cooperative to market the baskets. Instead, the Botswana Development Corporation (BDC), a division of the Ministry of Finance, formed Botswanacraft Marketing Company. This national crafts marketing agency was intended to develop, guide, and market rural crafts throughout the country.

In 1973, BDC made a sizable investment in Botswanacraft, and in 1975 took it on as a subsidiary agency. At the same time, a U.N. Trade Center specialist worked with the producers to improve craft design and product development with this assistance, the artisans began to create baskets of superb quality, leading to a widespread interest in Botswana's crafts.

Botswanacraft provided incentives to the artisans which also supported the development of high quality baskets through its annual sponsorship of a summer exhibit at the National Museum and Art Gallery in Gaborone. The crafts exhibited were judged and the best artisans received 25 percent of
any auction prices as a prize.

In 1975, two Peace Corps Volunteers further extended the supply of baskets and expanded the base of marketable items by including Bushmen artifacts in the Botswanacraft marketing effort. From 1976 to 1981, another Peace Corps Volunteer, Ed Henderson, helped Botswanacraft develop its domestic and export markets and assisted other crafts projects.

Unfortunately, despite this good beginning, Botswanacraft sharply deteriorated between 1981 and 1982. After showing profits from 1979 to 1981, the BDC became concerned about a substantial deficit.

Why this occurred is a study in bad management. The managing director operated without a plan and without delegating authority to any of the crafts producers. He knew little about the cultural and business context in which the group operated. This fostered a great deal of distrust between management and staff who did not have a share in the decision-making process. They came to regard the managing director as dictatorial and patronizing.

Botswanacraft's customers were alienated by a series of decisions made by management. Prices were increased by one-third and the firm began to dictate terms under which wholesalers could buy its goods. There was a drop in the quality of production, a lack of response to letters and orders, and shipments became unreliable, damaging the organization's credibility.

Production problems arose when craftspeople felt they were not getting paid their fair share of the profits. At the same time, a large amount of money was spent to purchase two new trucks and refurbish the warehouse.

External pressures compounded Botswanacraft's problems. There was a lack of coordination between the Ministry of Finance, Development, and Planning and the Ministry of Commerce and Industry, both of which adminis-
stered competing crafts efforts. Then a worldwide recession hit the main export market (the United States), which changed the export market situation and slowed demand and sales.

Despite its many problems, Botsvznacraft managed to survive this difficult period with its organizational structure, if not its profits, intact. The organization now has a general manager from Botswana who is instituting good business practices, and the outlook of the business is much improved.

**Conclusions**

- Participatory management is essential. The manager should be chosen by the group and be either a member of the group or, at least, someone intimately familiar with the cultural and business environment in which the group operates.

- Members of the crafts group should themselves become knowledgable about domestic and export markets.

- The group must maintain its level of efficiency and be responsible about quality and reliability.

- Incentives such as the basket exhibit and auction motivate craftspeople and also foster pride in the community.
SUMMARY

These two case studies suggest that community workers need to be culturally sensitive to the values, community and family structures, and political attitudes in the communities and countries where they work.

In the case of Ecuador, the PCVs worked within the family structure, rather than imposing a new form. Conversely, the later management of
Botswanacraft was hierarchical, and the production effort suffered.

In both cases, the PCVs and other development workers encouraged high quality workmanship. In both Ecuador and Botswana, product development did not sacrifice traditional patterns and skills. In both cases the Volunteers discussed with the groups the elements needed to make the products marketable. In Ecuador, the provision of raw materials and simple knitting technology improved the business; in Botswana, the continuous weeding out of inferior baskets and the encouragement of the "premium" over created quality merchandise and an increased demand.

Especially in Ecuador, the Peace Corps Volunteers made it clear that the group must become independent, and saw to it that it happened.
CHAPTER EIGHT

Resource Groups and Marketing Channels

The majority of organizations which can provide financial, technical, and material assistance are based either in the U.S. or other industrialized nations. However, many have offices in developing countries. Therefore, it would be best to contact these affiliates or indigenous organizations which provide help.

212-754-7055

Project request to the Fund must be submitted to the Regional Economic Commission by the local government ministries which work with them. Groups must apply to their own governments which will channel requests through appropriate agencies. 200 projects which contribute to national and regional development by benefitting poor rural and urban women in developing countries. Projects for national development planning, including training workshops and provision of consultants are completed and underway in every developing region.

Inter-American Development Bank
Program for the Financing of Small Projects
Economic and Social Development Department
Office of Technical Cooperation
1722 I Street, N.W.
Washington, D.C. 20577
202-634-3008

Aimed at groups of people with lack of access to conventional sources of credit, production knowledge, and marketing expertise. Reach lowest income groups to carry out self-improvement projects designed to raise their living standards through more effective participation in the economy.

1. Bank provides financing and technical assistance to cooperatives, associations, foundations or other non-profit community organizations and selected public agencies whose principal purpose is to help marginal groups.

2. Criteria
   a. Benefit low-income individuals without access to public or commercial credit
   b. Generate new job opportunities and foster training in use of technologies appropriate to the project and conditions in the country

3. Eligibility of intermediaries
   a. Be registered in country concerned as public development or private non-profit institutions
   b. Low-income persons among basic aims
   c. Governed by legal provisions enabling them to contact operations with the bank to grant subloans or technical assistance to ultimate beneficiaries
d. Must offer institutional conditions that ensure the sound administration of investments

4. Types of projects assisted: crafts, cooperative, small industries such as shoemaking.

5. Examples:

Handicrafts Program of the Center for Social Integration
Casilla 5894
La Paz, Bolivia
353454

Sweaters, ponchos, other woven articles increasingly produced under organized development efforts designed to upgrade living standards in rural areas. $500,000 loan will make possible establishment of self-sustaining community of 100 rural families, steady employment, marketing support, training, access to credit.

Artesanias de Colombia
Carrera 7 A Numero 34-50
Apartado Aereo
Bogota, Columbia
323560

With $450,000 loan Artesanias has established revolving lines of credit which will be lent to craftspeople for working capital and acquisition of tools and equipment. In addition, it provides technical assistance in quality control, design, accounting, marketing.

National Center for Small Industry and Handicrafts
Casilla 3699
Quito, Ecuador
528958

$325,000 technical grant for assisting cooperatives

Corfina/IDB Handicrafts Program
6 a Avenida 6-47
Zone 9
Guatemala City, Guatemala
316690

2000 artisans belong
Handicraft Pilot Project
Port-au-Prince, Haiti

$540,000 technical grant. Channeling talent into new projects.

Coolfacondo Pottery Cooperative
Falconbridge C.X.A.
Apartado 1343
Santo Domingo, Dominican Republic
525-3091

Manos de Uruguay
Reconquista 616
Montevideo, Uruguay

Washington, D.C. 20036
202-634-9853

Public corporation. Grants, loans, loan guarantees to indigenous African groups. Grants range in size from $50 - $250,000. Funds activities that foster growth of local development institutions, increase opportunities for Africans to engage in transfer of development resources, expertise, and knowledge within Africa, enable grantees to acquire technical and other assistance needed to carry out activities; stress self-sufficiency at local level.
Inter-American Foundation
1515 Wilson Boulevard
Rosslyn, Virginia 22207
703-841-3800

Funds selected development projects in Latin America and the Caribbean in all areas except infrastructure. Direct grants to indigenous, non-government, low-income groups. Projects must be planned and carried out by beneficiaries. Community is involved in development and design of project. Many projects deal specifically with artisans.

Organization of American States (OAS)
1889 F Street, N.W.
Washington, D.C. 20006
789-3149

Grants through government or in-country representatives. Inter-American infrastructure and network of institutions help individuals to identify, design, and implement different types of crafts efforts. Inter-American Center on Folk Arts and Crafts in Guatemala has cooperated with member states in establishing and strengthening appropriate resources for crafts development programs. Organizes national offices and institutions responsible for crafts development; provides local training for craftspeople, including obtaining raw materials, technique, design, and tool-making sessions. Adult education programs oriented to specific needs of artisans such as basic math, management, and organization. Various programs:

U.S. INTERNATIONAL DEVELOPMENT AGENCIES

U.S. AGENCY FOR INTERNATIONAL DEVELOPMENT
U.S. Department of State
Washington, D.C. 20523
202-632-3992

Loans and other forms of assistance must be negotiated with AID mission directors at U.S. embassies in host countries. AID funds National Development Foundations in various countries. Concentrates on food production and nutrition, rural development, human resource development, education. Promotes institutions which provide access to improved equipment and the necessary credit to obtain such material.
Established by AID and Regional Development Foundations, National Development Foundations encourage local private sector participation in development activities, including establishment of revolving loan funds and back guarantees to finance community self-help projects and small enterprises.

U.S. Peace Corps
806 Connecticut Avenue N.W.
Washington, D. C. 20580
202-254-7380

Small Project Assistance (SPA) funds managed by Peace Corps and AID. The purpose of the SPA fund is to encourage and support self help efforts by local communities by funding projects directly. The fund is easily accessible by Peace Corps Volunteers. The second part of SPA is the Participating Agency Service Agreement (PASA). This agreement is designed to ensure the maximum benefits offered by SPA. It is directed toward appropriate program delivery and it provides the necessary technical assistance needed in village-based development efforts supported by the SPA fund.

Each country at present has a yearly budget of $40,000. The Peace Corps Office of Training and Program Support (OTAPS), administered locally, determines where and when the financing of technical training and assistance would be beneficial to community development projects supported by in-country SPA funds.

Contact: Peace Corps Director of the respective country or the person designated to coordinate the SPA program.

Funding Criteria:

1. Project completion within one year.

2. SPA amount contributed to completion of a project cannot exceed $10,000

3. Project must involve broad development in areas of food, energy, competitive enterprise development, and/or income generating activities.

5. Project must be conceived and complemented in conjunction with a local community, organization, or group.
Application for SPA Grant

A proposal should be submitted to the Country Director.

Grants to local organization or to Peace Corps Volunteers when a local organization has no financial management capability.

PRIVATE VOLUNTARY ORGANIZATIONS

Accion International/AITEC
10-C Mount Auburn Street
Cambridge, Massachusetts 02138
617-492-4930

Creates programs and assists existing institutions to develop and operate programs to provide managerial training and make loans to micro businesses. Loans are made to individuals who form credit guarantee groups of 6-8 people. Worldwide study, Program for Investment in the Small Capital Enterprise Sector (PISCES), explored methods of assisting very small businesses. Appropriate methodologies are being adapted in six model projects.

High degree of participation among beneficiaries in planning and implementation. Development of project self-sufficiency through more efficient, cost-cutting methodologies.

Aid to Artisans
80 Mountain Spring Rd.
Farmington, Connecticut 06032
203-677-1649

Aid to Artisans (ATA) entered into partnership with Peace Corps in 1983 to provide technical assistance to Volunteers working in small artisan projects around the world. It has made grants of $250 to $1500 to about 18 Peace Corps projects. Volunteers are involved in design and production as well as coordinating Peace Corps/ATA activities. They help artisans to diversify products with the objective of increased markets and income.

ATA introduces Third World artisans to markets not ordinarily available, thus increasing income and employment potential. Assists other government and private groups in U.S. and overseas which are involved in crafts development and marketing.

ATA provides financial assistance to community groups which can demonstrate a need for materials and equipment such as cloth, dyes, raw materials, looms and kilns.
American Baptist Churches in the U.S.A.
Board of International Ministries
Valley Forge, Pennsylvania 19481
215-768-2000

Provides funds for cottage industries and crafts programs and maintenance of equipment. In Thailand taught Thai and Darans women spinning, dyeing, weaving, and knitting for foreign export as well as for their own use. In Limbe, Haiti provides product development training. Items sold locally by Haiti Handcraft. On-site technical assistance, adapting local materials to better and more productive uses.

American Federation of Labor and Congress of Industrial Organizations
American Institute for Free Labor Development (AIFLD)
1015 20th Street, N.W.
Washington, D.C. 20036
202-659-6300

Through AFL-CIO Impact Project AIFLD makes grants and loans, supports urban and rural unions in the development of projects which promote employment and economic development. Assists savings and loans. Provides grants to construct schools for artisans and purchases materials to be used by them. Supports sewing cooperatives. Furnishes raw materials.

American Friends Service Committee
1501 Cherry Street
Philadelphia, Pennsylvania 19102
215-241-7000

Provides training and technical assistance to local village women who wish to start their own cooperatives. Started rug weaving co-op in Mali and secured funding. Purchased looms, wool, and other supplies. Built structure to house operations.

Supports various furniture making, tailoring, and weaving cooperatives.

Provides start-up grants, revolving loan funds for crafts cooperatives.

Conducts workshops covering design, sewing, bookkeeping, appropriate technology.
Appropriate Technology International
1724 Massachusetts Avenue
Washington, D.C. 20036
202-861-2900

Supports specific enterprise development activities by local institutions, including strengthening of local delivery systems, developing appropriate management and financial schemes, operating credit and loan funds, providing training. Operates Small Enterprise Resource Exchange which links enterprises in Third World countries to U.S. enterprises and other private organizations in the developed world with relevant managerial, technical, and financial resources.

Planning for improvement and expansion of village and cottage industries programs to include multipurpose design service centers to support other industries and service centers for materials to repair machines and tools. Kerala Gandhi Smarak Nidhi program in India carried out in fifty centers, giving outreach to two million with undertakings which include spinning and weaving, bamboo and cane product manufacture; production of ceramics. Provides information on technologies approved by U.S. corporations.

Indigenous private development groups play leading role in small enterprise development.

Asia Foundation
550 Kearney Street
San Francisco, California 94108
415-982-4640
Mailing address: Post Office Box 3223
San Francisco, California 94119-3223

Works with Asian organizations, institutions, and individuals dedicated to furthering social and economic progress within their societies.

 Provides grants to small enterprises. Finds training programs for cooperatives and for establishing producer and marketing cooperatives.

Baptist World Aid
1628 16th Street, N.W.
Washington, D.C. 20009
202-265-5027

Carries out small enterprise related activities in cooperatives with Baptist organizations and other agencies at work in this area. Training in crafts. Makes available revolving loan funds for self-help programs in crafts.
CARE, Inc.
660 First Avenue
New York, New York 10016
212-686-3310

Operates programs to raise income through promotion and sale of local products. Provides training in small business and cooperative management, as well as in the design of new products, improved marketing and sales promotion technologies.

Establishes greater volume in the overall sales level through increased promotion, publicity and marketing expansion. Provides credit for purchase of equipment, forms cooperatives, including incorporating them into a secondary cooperative at national level so that they may eventually become financially viable and self-sufficient.

In Haiti, operates a program to raise income and provide employment for mostly rural women through production and sale of local crafts, including pottery, woven cloth, bamboo, sisal, and palm leaf products. Provides training in small business and cooperative management, as well as in design of new products.

In Lesotho provides rural women with intensive training in the hand processing of mohair spun into yarn. Participants are provided with their own spinning wheels and other equipment to start production.

Primary Production cooperatives reformed as incorporated at the national level. Education and replacement parts are provided. CARE experts to train more spinners develop more cooperatives, train managerial staff and develop a program for market research and product promotion.

Catholic Relief Services
United States Catholic Conference
1011 First Avenue
New York, New York 10022
212-838-4700

Provides financial and material resources to local social welfare and development agencies in Africa, East Asia and the Pacific, Latin America, Near East-South Asia. Promotes and supports resurgence of traditional Indian craft in Latin America. Assumes regular availability of raw materials, equipment and credit and directly involves people in all phases of production, management and marketing. Provides training in crafts such as leather work, sewing, pottery and weaving.
Develops self-help projects for refugees in Thailand especially those projects which promote the use of indigenous skills. Helped establish and supports a crafts cooperative for Hmong refugee women which provides skills training and maintaining quality product control.

Purchase material for sale to the cooperative. CAMACRAFT markets and sells the finished product worldwide.

Provides vocational training for cottage industries crafts development and training assistance. Emphasis on national and local initiative and participation in the promotion and development of small enterprise development.

SERRV markets 1500 quality crafts from 200 producers in over 40 countries. These items are marketed in resale and retail ways. Resale customers are church and civic organizations or individuals who purchase crafts from SERRV to sell. Retail shops around U.S.

Mutual interaction between producers and SERRV is continued through written communications and visits. Natural materials wherever possible with high natural fibre content, natural dyes—many products of metal, as well.

Criteria for development and crafts: increased income, increased level of community participation as result of crafts efforts, vocational and business skills, quality control know-how, cultural consistency with country.
Church World Services
475 Riverside Drive
New York, New York 10115
212-870-2257

Provides financial, material and personnel support to cottage industries, crafts, cooperatives, and rural artisans. Supports crafts made by people living in central Thailand, in growing from one group to operating in ten villages and in finding export markets. In Bangladesh, helps fund the extension of the YWCA Dacca Crafts Center.

Concern America
Post Office Box 1790
Santa Ana, California 92702
714-953-8575

Provides financial and personnel support to crafts development and training center. Helps market crafts produced by village cooperative and self-help women's groups. Provides support for export of crafts.

Congregation of the Sisters of the Holy Cross (C.S.C.)
Saint Mary's
Notre Dame, Indiana 46556
219-284-4659

In Bangladesh, supports the work of a federation of 100 cooperatives which has been formed with 2,000 women members and is under indigenous management. Of these cooperatives, 20 are engaged in jute crafts production and weaving; the remainder sew inexpensive clothing for local sale. Instruction and training in the objectives and methods of cooperative operations and management are provided. This project is carried on through the Jute Works, a central marketing society which exports for all member cooperatives.

Cooperative League of the U.S.A.
1828 L Street, N.W., Suite 1100
Washington, D.C. 20036
202-872-0550

Provides services to member organizations and administers contracts for co-op development in the U.S. and abroad. Provides organizational technical and managerial assistance to cooperative and pilot urban and rural development programs using cooperatives. Assists cooperative projects in crafts production and marketing.
Coordination in Development, Inc. (CODEL)  
79 Madison Avenue  
New York, New York 10157  
212-685-2030

CODEL is a consortium of 40 church-related organizations involved in community development. Provides equipment, tools and materials needed in establishing cooperatives. Currently assists over 150 projects sponsored by its member agencies in 47 countries money and/or technical assistance. Established plant to train youth in pottery making. Provided funds to a development agency run by and for women in the Dominican Republic.

Friends of the Third World  
611 West Wayne Street  
Fort Wayne, Indiana 46802  
219-422-6821

Demonstrates the existence and viability of an alternative system of trade as an effective way to address problems of poverty and unemployment. Sponsors the Union of Third World Shops, an alternative marketing project whose membership includes a network of 18 retail shops in the U.S. The union provides technical assistance in areas such as legal information, publicity, bookkeeping and inventory control. Disseminates much educational material included Union of Shop News, The World Crafts Catalog (with information on crafts and self-help groups which produce them.)

Friends United Meetin,  
101 Quaker Hill Drive  
Richmond, VA 47374  
317-902-7573

Works through leaders to demonstrate simple appropriate technology and bring a holistic approach to meeting human needs. Assists the Friends Crafts Industries, Highgate, Jamaica, a self-supporting enterprise providing employment for 50 persons on premises and 100 women at home.
International Program for Human Resource Development
(outlet: World of Crafts)
7720 Wisconsin Avenue
Bethesda, Maryland 20814
301-656-1200

Supports generation of greater employment opportunities for the disadvantaged around the world, including promotion of cottage and other small scale industries and agriculture.

Provides increased marketing and product development support in addition to technical assistance to small producer group, cooperatives and family-type producer of handicrafts.

Through Aid and Trade International, a profit making corporation and subsidiary of IPHRD, has developed and marketed several products incorporating crafts skills and adapting them to tastes and interest of the U.S. marketplace. Also sponsors World of Crafts, a non-profit international retail gift shop.

International Voluntary Services
1424 16th Street, N.W.–Suite 504
Washington, D.C. 20036
202-387-5533

Provides IVS volunteers with relevant cooperative or small enterprise development, marketing or business management experience to improve staff capability of local organizations working to benefit low-income people.

Provides management and organizational skills to local workers and rural craft groups. Helps groups upgrade crafts skills by securing start-up funds and technical assistance. Emphasis on education and enablement to maximize participation of beneficiaries.

Jubilee Inc.
300 West Apsley Street
Philadelphia, Pennsylvania
215-849-2178

Provides financial and marketing assistance to self-help co-ops which produce crafts which are marketed and sold throughout the U.S. Catalog.
In cooperation with a network of counterpart Christian agencies, operates or supports development projects mainly through the provision of funds, supplies and personnel. Craft projects.

Maryknoll Sisters of St. Dominic
Maryknoll Sisters Center
Maryknoll, New York 10545
914-941-7575

Aids people to become self-supporting through learning of skills and development of talents.

In Tanzania helped initiate and continues to assist cooperative which produces jewelry, crafts, batiks, textiles, leather work, carvings and wood cuts. In Chile provides training in knitting, crocheting and serving.

Mennonite Central Committee
Self-Help Crafts
21 South 12th Street
Akron, Pennsylvania 17501
717-859-1152

Provides technical and financial support to a variety of small enterprises such as the Self-Help Crafts program, which helps local artisans from 21 countries market over 1500 items for sale in North America. Has on-site representatives in many Third World countries.

National Office for Social Responsibility
208 North Washington Street
Alexandria, Virginia 22314
703-549-5305

Development of three-year youth development plan utilizing training centers financed by the Agency for International Development and the government of St. Lucia. Courses include basic business management, crafts, industrial arts, garment manufacturing and mechanical arts.
Long term development and relief assistance. Provides support to small enterprise-related projects, cooperatives such as Grenada Craft Marketing Services which train craftspeople in cooperative production and management and marketing.

Pan American Development Foundation
1889 F Street, N.W.
Washington, D.C. 20006
202-789-3969

Provides funds to smallest producers of Latin America and the Caribbean by providing technical assistance and credits to those without access to commercial banks. Assists in the establishment of National Development Foundations which it strengthens by providing advice on management, project design, small loans administration, training local extension agents, and by helping with accounting practices and fund raising. Trains rural Honduran artisans in ceramic tile production with a view towards export development. Initial assessment of small producers' access to and need for credit; leadership training and on-site advisory services for NDF staffs and boards.

Partners of the Americas
(National Association of the Partners of the Alliance)
2001 S Street, N.W.
Washington, D.C. 20009
202-332-7332

Partners of the Americas draws upon the professional expertise of volunteers from 44 U.S. states and six Latin American and Caribbean nations which work together on self-help projects that have a multiplier effect. Provides funds to start craft centers, as well as cooperatives to support local artisans. Provided a grant of $5,000 to establish and promote a cooperative among reed weavers in Bolivia and to encourage the production and demand for reed items as well as to disseminate the art of reed weaving.
Partnership for Productivity
2001 S Street, N.W.
Washington, D.C. 20009
202-483-0067

Establishes and provides managerial and technical assistance to crafts cooperatives; provides funds managerial assistance, loan education, and procurement aid to locally run loan graduates.

Assists local governments and donors to identify and design enterprise and community development projects. Helps establish industries through provision of funding and both management and vocational training. Prepares training manuals and conducts seminars and lectures on approaches to rural enterprise development.

Assists with the development of a computer-based small enterprise data base. PFP facilitates computer conference through selling accounts on the Electronic Information Exchange System (EIES). This includes CARINET, a group of people and institutions involved with economic development in the Third World and PFP's Miami Free Zone Corporation which provides consulting services for marketing products in the U.S. and computer linkages with 30 countries. PFP can help Peace Corps Volunteers to access EIES whereby they can feed in and receive data on market trends and demands, materials, technical assistance, and credit. This is available to Volunteers with access to any kind of computer.

Pathfinder Fund
1330 Boylston Street
Chestnut Hill, Massachusetts 02167
617-731-1700

Trains rural women in arts and crafts as well as in cooperative administration and marketing.

Private Agencies Collaborating Together
777 United Nations Plaza - Suite 613
New York, New York 10017
212-697-6222

Supports through Project Fund small enterprise development, including crafts cooperatives. Technical and managerial assistance.
SCF promotes community involvement in planning implementation of all projects, including small enterprise efforts. Seeks to increase income generating activities and use of appropriate technology. Strengthens small enterprises at the community level through training in basic skills, management, and cooperative organization.

In Honduras, Guatemalan weavers trained artisans in traditional weaving as well as loom construction and dyeing techniques. After training the weavers formed an association to start a small industry. A Peace Corps Volunteer Weaving specialist joined SCF to assist the association and arranged for further training in Guatemala City. SCF procured a local source of wool through a loan of sheep from Heifer Project International. Provided funds and technical support to build a weaving center to house large looms, store the wool, and offer an official work for the weavers.

In the Dominican Republic, SCF supports a local development foundation which operates demonstration centers for appropriate technology.

Technical expertise developed through International Technologies Development Group (England) was transferred to the SCF Bangladesh field office and to FVO representatives in Sri Lanka for income generating projects which included the formation of craft cooperatives.

In Burkina Faso SCF implements a five year integrated village education program to train committees in cooperative work methods. Provides credit to enable groups to purchase needed materials. Currently a weaving project is beginning to export its finished crafts to Europe.

In Tunisia the Nargom (traditional rug) Production Center trains young girls in production, marketing, buying, selling, and money management. It is marketing large amounts of rugs.

At the Harare Crafts Center in Zimbabwe SCF field workers train women in crafts skills, stock control, quality control, and money management. SCF helps establish the Crafts Center which purchases quality crafts produced by rural women.

SCF is working with the United Nations High Commission on Refugees to help train Afghan refugees in Pakistan to produce crafts as a means of income generation.
Technoserve, Inc.
11 Belden Avenue
Norwalk, Connecticut 06852
203-846-3231

Improves the economic and social well-being of low income people through self-help enterprise development process. Provides managerial and technical services. Assistance covers all aspects of supply, production marketing, organization and administration.

Trickle Up Program
56 Riverside Drive
New York, New York 10024
212-362-7958

Through workshops assists existing agencies with development experience to motivate people to initiate labor-intensive profit-making self-employment enterprises they plan and manage themselves. Grants of $100 are made. Activities include crafts such as embroidery, hats, wicker work.

United Church Board for World Ministries
475 Riverside Drive
New York, New York 10115
212-870-2637

Operates and supports cottage industry development and other small enterprise-related projects.

The United Methodist Church
475 Riverside Drive
New York, New York 10115
212-870-3600

Supports small enterprise development in revolving loan funds and cooperative development, women's centers providing training in crafts.

Works with specialized agencies such as Volunteers in Technical Assistance, International Voluntary Services with emphasis on local participation, community development, empowerment in crafts and cottage industries, cooperatives, credit, and technical assistance.
Volunteer Development Corps
1029 K Street, N.W.
Washington, D.C. 20000
202-223-2072

Provides short-term technical help to cooperatives, including feasibility studies, management training, financial planning, accounting, design, production, marketing, transportation, and member and director education. Provides assistance to worker-owned cooperatives producing crafts and furniture.

Volunteers in Technical Assistance, Inc. (VITA)
1815 North Lynn Street, Suite 200
Arlington, Virginia 22209
703-276-1800

Program development, technical information, publications and other resources in the area of small enterprise development.

Publishes and distributes numerous how-to books, resource guides, bibliographies, slide shows and other material pertaining to small enterprise development. Provides a worldwide computerized roster of 4,000 VITA Volunteers.

Publications: VITA News, catalog of books, bulletins, slide shows and other materials.

World Concern
Post Office Box 33000
Seattle, Washington 98133
206-546-7201

Supports small enterprise-related development projects. Provides advice to local marketing and exporting technology to groups which produce traditional goods on crafts to generate income. Through WORLDCAST, buys crafts from producers in more than eight developing countries and markets them in the U.S.
World Council of Credit Unions
170 Rhode Island Avenue N.W. Suite 510
Washington, D.C. 20036
202-659-4671

Works with credit unions worldwide in the areas of organization and development of credit unions; institutional development, management and staff training, project and financial planning, centralized financing and accounting. CUNA-assisted credit unions include small entrepreneurs, artisans. CUNA provides loans for supplies, equipment and materials, replenishing inventory, expansion and numerous other activities, as well as technical and/or management assistance to their member entrepreneurs. CUNA currently assists a mohair spinning project in Lesotho to enhance the income of rural women in cooperation with CARE and the local credit union movement.

World Neighbors, Inc.
5116 North Portland Avenue
Oklahoma City, Oklahoma 73112
405-946-3333

Vocational training, revolving loan funds, assistance in forming cooperatives to help artisans market goods more profitably. Assists crafts projects designed to provide employment and increase income for women through skills development, crafts production, local and export marketing.

Cooperates with the Human Development Team in Peru. Assists Peruvian crafts program to purchase materials, produce and market crafts. The program also emphasizes leadership training.

World Vision Relief Organization, Inc.
919 West Huntington Drive
Monrovia, California 91010
213-357-1111

Provides support for multi-purpose community development in programs including vocational training and development of income. Assists small businesses and cooperatives in crafts, bread-baking, cottage industries.
Emphasis on small enterprise development through technical and financial support. Helps organize individual artisans into cooperatives and assists in basic small-scale business management, as well as upgrading distribution and marketing of crafts. In Ghana, through Rural Enterprise Guidance Association project 750 individual craftsmen and women in weaving, printing, pot making, and wood carving industries are being organized in cooperatives and helped small-scale business management. Technical assistance includes pre-project evaluation, management and labor market surveys, contacts with local and foreign businesses and industry, co-financing, resource sharing with local governments.

Responds to requests of 84 national Y.W.C.A.s for funding personnel, equipment and facilities in small enterprise such as crafts and cottage industries. In Bangladesh, has helped support training for 330 women in jute crafts at the Y.W.C.A. Crafts Center in Dacca. Other crafts include screen painting and production of bags and wall hangings made from unbleached cotton. Marketing is through the local outlet store, Jute Works, and the Bangladesh Handcrafts Cooperative Foundation in the country and five countries overseas.
Objectives

1. Loan guarantee mechanism to support financing for women's income producing activities

2. Arrange for managerial assistance for ventures receiving loan guarantees, as needed, to assure their viability

3. To expand and strengthen the network of women who participated in financial decision making in their economies

Through Capital Fund WWB provides loan guarantees or other security to banks and financial institutions to encourage them to extend loans to small enterprises

1. Local affiliates made up of professional women and men known as "Friends of Women and World Banking" identify potential borrowers.

2. WWB uses deposits in its central Capital Fund to provide loan guarantee to local banks. Works through letters of credit though may deposit a portion of the guarantee in a local participating bank.

IN-COUNTRY

INTERMEDIARY ORGANIZATIONS

Entities of varying characteristics are the intermediaries or borrowers of small project financing. In following the requisites of the program the entity may be either a private non-profit organization or a public agency responsible for development activities. The organization must have clear legal authority to borrow money, and to relend to third parties. The following are intermediaries:

Cooperatives

Many projects are operated by cooperative organizations, sometime by individual cooperatives directly with the final beneficiaries and sometimes by federations to and through affiliated cooperatives. Examples:

Cooperativa de Ahorro y Credito & Servicos Varios "Katoki"
Provides individual credits.

Federacion Hondurena de Cooperativas Industriales (FEHCIL)
Credit for equipment and working capital to individual cooperatives involved in furniture and clothing production.

Foundations

In some circumstances, international organizations formed under the respective country's foundation laws are operating small projects. Some have programs oriented to economic development. There may be community organizations with broad membership and a program for marshalling local resources. Examples:

Haitian Development Foundation manages credit and training programs for micro enterprises in their respective cities.

Fundacion Guatemalteca para el Desarrollo "Carroll Behrhorst" provides production credit to groups of persons.
Associations

The law of associations in several countries provides means for producers and other interest groups to form non-profit entities with a development purpose. Examples:

Associaci\'on San Jose Obrero, Chohulteca, Honduras. Supports worker owned enterprises engaged a furniture and glove manufacture.

Associaci\'on Obras Sociales La Soledad, Costa Rica. Operates a training center, credit program, and national marketing facility for crafts people.

Asociaci\'on para el Desarrollo de la Provincia de Espaillar, Moca, Dominican Republic, provides credit to micro enterprises.

Public Agencies

Many public agencies have the mandate and means to work effectively in improving the levels of production of low-income persons. Example:

Centro de Desarrollo Industrial, Honduras, manages credit directed to micro-enterprises, specifically craft groups.

MINISTRIES OF COOPERATIVES, FINANCE, INDUSTRY

Often have sections dealing with artisans Central handcraft boards attached to some ministries.

BANKS

Small scale bank lending to businesses being carried out by a variety of banking institutions. Examples:

Bangkok Metropolitan Bank Thrift Credit for Small Investors Program

Borrowers must deposit at least $9.00 a month for two years. They may then borrow up to ten times the total savings, not to exceed $4500. No collateral required. Five year loans repayable monthly, 17 percent interest.
Bangkok Bank
Small loans for businesses. Three to four year loans. 16-18 percent interest.

Krung Thai Bank
$3,275 average loan. Two to three and one half year loans. 16-18 percent interest.

Kenya
Ten formal programs. Sometimes can get loans from Kenya Commercial Bank, Daraja Trust, or National Christian Council.

Banco de Pacifico
Quito, Ecuador
Large, full service, private bank. Loans of 12 percent for 2-5 years. Artisan loan program designed to meet needs of smallest businesses, operates in six large cities.

Philippine Commercial & Industrial Bank
Manila, Philippines
70 money shops throughout the country. This bank provides credit to establish stockholders in public and private markets. Applicants must make at least $750 a day in sales. Loans must be repaid daily.

Banque Camerounaise de Developpement
Yaounde, Cameroon
Provides loans at 11 percent of 2-5 years for small and medium scale businesses.
Royal Bank of Jamaica
Kingston, Jamaica

Guarantee project whereby loans provided entirely for lending to Jamaican owned small enterprises, outside of Kingston and St. Andrew which have no access to loans at commercial rates. Maximum guaranty is 50 percent of loan.

MULTINATIONAL CORPORATIONS

Can give up to five percent of pre-tax earnings to non-profit organizations and get tax deductions.

Grants to U.S. and indigenous private voluntary organizations. Where corporations have operations many set up corporate foundations to which they make grants.

Several give materials, tools, technology to provide voluntary organizations which disburse materials in-country.

World Crafts Council  
Post Office Box 2045  
DK 1012 Copenhagen  
Denmark

Non-profit, non-governmental organization affiliated with UNESCO in the category of consultative and associate relations. The Council is a United Nations Development Program Cooperating Organization offering technical assistance in its area of competence.

The Council offers assistance to craftspeople and fosters exposure of their work. It serves as an agency for cooperation between crafts organizations.

Membership is available to a national entity such as a group, association, society, or government agency—one from each country, which is accepted as being able to represent the crafts and craftspeople in its country.

There are 79 member countries. Members are grouped in Asia, Africa, Europe, Latin America, and North America regions. An annual international conference provides a significant means for 1000 or more participants to exchange information, ideas, problems, and projects of mutual interest.

Publications

- Crafts of the Modern World
- In Praise of Hands
- Crafts International (Newsletter)
- Geography of Crafts (Survey)

Council provides international information on crafts to individuals, organizations, governments, and private agencies. It is seeking to expand international exchange programs.

APPLICATION PROCESS

Lead Time

A basic fact to remember when applying for a loan or grant is that it takes time to process an application. Be sure that your project implementation schedule allows lead time so funds can be there when needed.

The Application Process

Project proposal guidelines and application forms are usually available by written request and should be obtained before contacting an organization. Knowing an organization's specific application requirements can greatly increase the chance of your project being funded.

When the exact application method is not known, initial contact with an organization should be made with a three page concept paper. Which should include:

1. A concise description of the organization requesting funds. Include name and address, previous history, and its current staffing.

2. How the project is organized, reasons behind it.

3. How goods are produced, will be marketed. Distribution of products.

4. Identification of resources and who provides them.

5. A description of the problems your project intends to solve.

6. A description of the people whose needs are being addressed.

7. A specific account of resources needed from the funding agency and its estimated cost.

8. A plan to analyze and evaluate.

Send concept letters to a number of organizations, write letters specifically for an organization, and tailor your language and focus to best suit the funding priorities of the particular organization being addressed. Funding from national development agencies requires approval from a government department such as commerce or industry. Non-governmental organizations raise their funds from the public for development assistance.
INTERNATIONAL TRADE TERMS AND CONDITIONS

ACCEPTANCE. The signing of a contract or agreement drawn by one party (crafts group) and accepted by a second party (buyer). By signing, the second party indicates that he confirms and agrees to the contract terms.

AFTER DATE. A term used on a draft, bill of exchange or note. If an exporter draws a draft and stipulates payment "30 days after date", the draft is due 30 days after the date on which it was drawn.

AIR WAYBILL. A non-negotiable contract of carriage for air transportation between an air carrier and a shipper.

"ALL RISK" INSURANCE. A clause included in marine insurance policies to cover loss and damage from external causes such as fire, collision, pilferage, etc. but not against innate flaws in the goods, faulty packaging, strike, riots and civil commotions.

ALONGSIDE. The side of the ship. Goods to be delivered alongside are to be placed on the dock or lighter from which they can be loaded onto the ship.

BANK GUARANTY. A bank assumption of responsibility by a document which has several important uses: 1) Frequently shipping papers are late in arriving at the foreign port. To enable a buyer to enter the goods at customs, thereby avoiding charges for delayed entry, a bank may issue a guaranty assuming responsibility for later presentation of shipping papers by the buyer. 2) A buyer may wish to obtain possession of goods covered by a bill of lading drawn to the order of the shipper without being in possession of the bill of lading. A bank may issue a guaranty, holding the steamship company or customs, or both, harmless for any consequences of the premature delivery. 3) Banks in the United States engaged in medium-term financing usually will demand the guaranty of a bank in the buyer's city for stipulated portion of the risk. 4) Sometimes a bank will issue a guaranty in lieu of a letter of credit, undertaking to honor the beneficiary's drafts on compliance with the stipulations of the guaranty. In practically every case, a bank guaranty of any kind is issued on the basis of a counter-guaranty of the person applying for the bank guaranty.

BENEFICIARY. The person in whose favor a draft or letter of credit is opened.

BERTH OR LINER TERMS. An expression covering assessment of ocean freight rates generally implying that loading and
discharging expenses will be for shipowner's account, and usually apply from port of loading to port of discharge.

**BILL OF LADING.** A document signed by the captain, agents, or owners of a vessel, furnishing written evidence for the conveyance and delivery of merchandise sent by sea to a certain destination. It is both a receipt for merchandise and a contract to deliver it as freight.

**BUYING REP OR AGENT.** A company or an individual residing in an exporting country who purchases goods produced or marketed in that country for a principal in another country. Rep or agent receives commission or fixed annual fee for this service.

**CASH IN ADVANCE.** A method of payment for goods in which the buyer pays the seller in advance of the shipment of goods usually employed when the goods are made to order.

**CFS. (CONTAINER FREIGHT STATION).** The term CFS at loading port means the location designated by carriers for the receiving of cargo to be packed into containers by the carrier. At discharge ports area for unpacking and delivery of cargo.

**C. & F. NAMED PORT.** Cost and freight. All costs of goods and freight charges are included in the price quoted. Buyer pays insurance while aboard ship up to overseas inland destination.

**C. & F.** Cost and Freight: same as C.I.F., except that insurance is covered by the buyer.

**C. & I.** Cost and Insurance.; Same as C.I.F., except that freight is paid by the buyer.

**C.I.F.** Cost, Insurance, and Freight. Term is used in connection with price quotation under which the seller defrays all expenses involved in the delivery of merchandise on board the carrying steamer, and, in addition, prepays the freight and insures the goods to an agreed destination. The seller's risk terminates upon the issuance of bills of lading by the transportation company.

**CERTIFICATE OF ORIGIN.** A special document required in connection with shipments to a certain foreign country for tariff purposes in which certification is made as to the country of origin of the merchandise. The signature of the consul of the country of destination is sometimes required.

**CONSIGNEE.** The person, firm, or representative to whom a seller or shipper sends merchandise and who, upon presentation of the necessary documents, is recognized as owner of the merchandise for the purpose of declaration and payment of customs duties. This term is also used to apply to one to whom goods are
shipped, usually at the shipper's risk, when an outright sale has not been made.

CONSULAR INVOICE. A detailed statement regarding the character of goods shipped, duly certified by the consul at the port of shipment. It is required by certain countries, including the United States.

CREDIT RISK INSURANCE. A form of insurance which protects the seller against loss due to default on the part of the buyer.

CUSTOMHOUSE BROKER. A person or firm licensed by the Treasury Department, engaged in entering and clearing goods through Customs. The duties of a broker include preparing the entry blank and filing it; advising the importer on duties to be paid; advancing duties and other costs; and arranging for delivery to client, trucking firm or other carrier.

D/A. Documents Against Acceptance. Instructions given by shipper to bank that documents attached to a draft for collection are deliverable to the drawee against the drawee's acceptance of the draft.

D/P. Documents Against Payment. Instructions given by a shipper to bank that the documents attached to a draft for collection are deliverable to the drawee only against drawee's payment of the draft.

DATE DRAFT. A draft so drawn as to mature on a fixed date, irrespective of acceptance.

DOCUMENTS. The shipping and other papers customarily attached to foreign drafts, consisting of ocean bills of lading, marine insurance certificates, and commercial invoices. Where required, certificates of origin and consular invoices are included.

DRAWEE. The addressee of a draft; i.e., the person on whom the draft is drawn.

DRAWER. The issuer or signer of a draft. Duties:
1) Ad Valorem: According to the value. An assessment at a certain rate percentage in the actual value of an article.
2) Specific: Assessment on weight or quality of an article without reference to its monetary value or market price.
3) Drawback: Recovery in whole or in part of duty paid on imported merchandise at the time of re-exportation whether in the same or difficult form.

ECS CARNET. Sponsored by the International Chamber of Commerce, this is a document which permits samples of merchandise to be
brought into the United States and a majority of the European countries, duty free or with the payment of a minimum of customs duties. Carnets are issued by authorized chambers of commerce which, in addition, guarantee payment of full duties if the goods in question are not re-exported within a specified period of time.

EX-DOCK. An American foreign trade term, under which a seller quotes a price to a buyer that includes the cost of the goods and all additional costs (transportation, marine insurance and other pertinent costs) necessary to place the goods on the dock at the named port of importation with required duty paid.

EX-FACTORY OR EX-WAREHOUSE. American foreign trade terms, under which a seller quotes a price to a buyer that applies only at the point of origin. The seller agrees to place the goods at the disposal of the buyer at the agreed place at the agreed time. The responsibility for the goods remains the seller's only until the goods are claimed by the buyer.

EXPIRATION DATES. Final date which drawing of drafts under a letter of credit may be made.

EXPORT LICENSE. A document secured from a government, authorizing an exporter to export a specific quantity of a particular commodity to a certain country. An export license is often required if a government has placed embargoes or other restrictions upon exports.

F.A.S. Free Alongside (Vessel). Term in connection with a price quotation under which the seller delivers merchandise free of charge to the steamer's side and pays loading expenses up to that point if necessary.

F.O.B. Free on Board (Named Point). Term used in connection with a price quotation under which the seller undertakes at own risk and expense to load the goods on a carrier at a specified point. Expenses subsequent thereto are for account of the buyer.

F.O.B. Free on Board (Vessel) Term used in connection with a price quotation under which the seller delivers the goods at his expense on board the steamer at the point named. Subsequent risks and expenses are for the account of the buyer.

FORWARDER, FREIGHT FORWARDER. A business that dispatches shipments for exporters for a fee. Usually it handles all the services connected with an export shipment: preparation of documents, booking cargo space, warehouse, pier delivery, and export clearance.

FREE PORT. A port which is a foreign trade zone, open to all
traders on equal terms; more specifically a port where merchandise may be stored duty-free, pending re-export or sale within that country.

**GATT.** General Agreement on Tariffs and Trade. Consists of tariff rates agreed to by negotiations and general rules for fair conduct of international trade. It provides a forum for multilateral tariff negotiations and, through semi-annual business meetings, a means for settling trade disputes and discussing international trade problems. Its 58 members account for more than 80 percent of non-Communist world trade. GATT reviews the policies of customs unions and free trade areas in the light of the criteria laid down in the agreement.

**HARD CURRENCY.** A currency which is sound enough to be accepted internationally and which is usually fully convertible.

**IMPORT LICENSE.** A certificate, issued by countries exercising import controls, that permits importation of the articles stated in the license. The issuance of such a permit frequently is connected with the release of foreign exchange needed to pay for the shipment for which the import license has been requested.

**IN BOND.** A term applied to the status of merchandise admitted provisionally to a country without payment of duties, either for storage in a bonded warehouse or for transshipment to another point, where duties will eventually be imposed.

**LETTER OF CREDIT, COMMERCIAL.** A letter addressed by a bank, at the instance and responsibility of a buyer of merchandise, to a seller, authorizing him to draw drafts up to a stipulated amount under certain specified terms and undertaking conditionally or unconditionally to provide eventual payment for drafts thus drawn. **Variations:**

- **Confirmed Irrevocable Letter of Credit.** A letter to which has been added the responsibility of another bank, other than the issuing bank.

- **Irrevocable Letter of Credit.** A letter in which the issuing bank waives all right to cancel or in any way amend without consent of the beneficiary or seller.

- **Revocable Letter of Credit.** A letter in which the issuing bank reserves the right to cancel or amend such portion of the amount involved as has not been availed of prior to the actual payment or negotiation of drafts drawn thereunder.

- **Revolving Credit.** A letter in which the issuing bank notifies a seller of merchandise that the amount involved when utilized will again become available, usually under the
same terms and without the issuance of another letter.

**MARINE INSURANCE.** An insurance which will compensate the owner of goods transported overseas in the event of loss which cannot be legally recovered from the carrier.

**PARCEL POST RECEIPT.** A signed acknowledgement issued by the postal authorities of delivery to them of a shipment made by parcel post.

**PAR VALUE.** The official value given the currency of a nation or its relation to another currency as registered with the International Monetary Fund.

**PAYEE.** The person to whose order a draft is made payable.

**PERILS OF THE SEA.** Most losses covered by a marine insurance policy come within this expression which refers to damage caused by heavy weather, strandings, strikings on rocks or on bottom, collision with other vessels, contacts with floating objects, etc.

**PILFERAGE.** Term denotes petty thievery, the taking of small parts of a shipment, as opposed to the theft of a whole shipment or large unit. Many ordinary marine insurance policies do not cover against pilferage, and when this coverage is desired, it must be added to the policy.

**PORT OF DISCHARGE.** Port where vessel is off loaded and cargo discharged.

**PORT OF ENTRY.** A port at which foreign goods are admitted into the receiving country.

**PREPAID FREIGHT.** Generally speaking, freight charges both in ocean and air transport may be either prepaid in the currency of the country of export or they may be billed collect for payment by the consignee in his local currency. However, on shipments to some countries, freight charges must be prepaid because of foreign exchange regulations of the country of import and/or rules of steamship companies or airlines.

**PRIMA FACIE.** Latin for "on first appearance." A term frequently encountered in foreign trade. When a steamship company issues a clean bill of lading, it acknowledges that the goods were received "in apparent good order and condition" and this is said by the courts to constitute prima facie evidence of the condition of the containers.

**SHIPMENT.** Freight tendered to a carrier by producer at one place at one time for delivery to buyer at one place on one bill of lading.
SHIPPER'S EXPORT DECLARATION. A form required by the Treasury Department and completed by a shipper showing the value, weight, consignee, destination, etc., of export shipments as well as Schedule B identification number.

SHIPS MANIFEST. An instrument in writing containing a list of the shipments comprising the cargo of a vessel.

SIGHT DRAFT. A draft so drawn as to be payable upon presentation to the drawee or within a brief period thereafter known as days of grace.

TARIFF. A general term for any listing of rates, charges, etc. The tariffs most frequently encountered in foreign trade are: tariffs of the international transportation companies; tariffs of the international cable, radio and telephone companies; and customs tariffs of the various countries, which list goods that are duty free and those subject to import duty, giving the rate of duty of each case.

TEMPERATURE CONTROLLED CARGO. Any cargo requiring carriage under controlled temperature.

TIME DRAFT. A draft maturing either a specified number of days after presentation to and acceptance by drawer or a specified number of days after the date of the draft. Examples: "90 days sight;" "120 days date."

TITLE. The passing of title to exported goods is determined in large measure by the selling terms. For example an exporter selling goods c.i.f. may be presumed to pass ownership of the goods may ship on a bill of lading drawn to exporter's own order, to prevent the buyer from gaining possession of the goods until the draft is paid or accepted. In this case exporter retains a title for security purposes only until the financial arrangement is carried out.

WAREHOUSE RECEIPT. A receipt for products deposited in a warehouse, identifying the products deposited. It is non-negotiable if permitting delivery only to a specified person or firm, but it is negotiable if made out to the order of a person or firm or to bearer. Endorsement and delivery of a negotiable warehouse receipt serves to transfer the property covered by the receipt. Warehouse receipts are common documents in international banking.

Gross: Generally, the total weight of the merchandise including all containers and packing material as shipped.

Legal: Generally, the weight of the merchandise itself plus the Immediate container. This definition varies somewhat in
different countries.

**Net**: Generally, the weight of the merchandise unpacked, exclusive of any containers. This definition varies somewhat in different countries.

International Shipping Procedures

EXPORT GUIDE

Shipper
Prepares Domestic Bill of Lading for movement of cargo to pier, and sends copy to his forwarder, along with packing list.

Checks Bill of Lading:
- number of packages
- marks and numbers
- description of cargo
- foreign destination
- gross weight of each box
- local party to be notified

Marks cargo plainly, to show:
- gross and net weights
- cubic measurement
- foreign destination
- identification marks
- country of origin

Motor Carrier
Secures agreement with steamship company.

Accepts cargo for transit to the port.

Advises freight forwarder or shipper's local representative of cargo's arrival in the port.

Obtains the following information from forwarder or representative:
- name of vessel
- sailing date
- pier number and location

Forwarder
Provides Dock Receipt to delivering motor carrier.

Checks Dock Receipt for completeness:
- name of shipper
- name of vessel

Driver
Moves his truck on line upon arrival at pier.

Terminal Operator
Checks driver's papers:
- Dock Receipt
- Permits

Assigns driver a checker and an unloading spot.

Driver
Unloads his vehicle.

Obtains signed copy of Dock Receipt.

Terminal Operator
Retains original of dock receipt and sends original to steamship company.

Steamship Company
Issues Ocean Bill of Lading to shipper or his agent.
- ports of loading and discharge
- number, type, packages
- Gross weight, dimensions, and cubic measurement of each package
- marks and numbers

IMPORT

Steamship Company
Notifies consignee two days prior to shop's arrival.

Provides freight release to terminal operator.

Broker
Obtains Customs release, freight release, Department of Agriculture clearances.

Forwards to motor carrier an original of the Domestic Bill of Lading and an Original Delivery Order, which authorizes pick-up of import cargo.

Checks Bill of Lading for Completeness:
- number of packages
- description of cargo
- marks and numbers
- inland destination
- gross weights of each commodity
- consignee

Checks Delivery Order for completeness:
- forwarder's name
- shipper's name
- ultimate consignee's name
- motor carrier
- vessel
- arrival date
- voyage number
- ocean bill of lading number
- pier number and location
- marks and numbers
- description of goods
- gross weights
- legible signatures

Ascertains expiration of free time and availability of cargo for pickup before dispatching driver to pier.

Provides driver with original and copy of Delivery Order before departure for pier.

Contacts terminal operator to make appointment.

Checks Bill of Lading and Delivery Order for completeness.

Terminal Operator
Issues pass to driver at gate house.

Checks Delivery Order.

Verifies motor carrier's credit rating for loading charges.

Directs driver to pier Customs office.

Customs
Verifies driver's papers against pre-lodged Custom permits.

Stamps Delivery Order.

Terminal Operator
Calls driver for loading.

Assigns checker and loading spot.

Customs
Performs all necessary functions prior to the release of cargo.

Terminal Operator
Loads cargo vehicle with pier personnel. Checker notes exceptions and shortages.

Retains original Delivery Order.

Driver
Assists loading of vehicle.

Signs tally and loading ticket. Exceptions and shortages noted.
Guarantees with terminal operator loading charges and demurrage.

Motor Carrier
Advises broker of completion of cargo pickup.

Motor Carrier
Secures interchange agreement with steamship company on containers.
DOCUMENTATION

Faulty documentation causes difficulties during shipment or collection. This usually results in poor relations with the client and delayed payments. Two types of export documentation, for shipping goods out and for collecting payment, are described below.

Shipping Documentation

All of these documents are prepared by the shipper or his forwarder and are needed to move the shipment through Customs, and onto a carrier, bound for a foreign destination.

Export License. Some countries demand special exporting licenses. Check with government offices dealing with export regulations to ascertain procedures.

Export Registers. While at the government export regulation offices, check to see what documents are needed for clearance out of the country. An export register often requires information on contents, quantities, commercial value, and destination.

Bank Guarantees. Some Third World countries strictly control the entry of foreign currencies. Dollars, or other major currencies received via exportation, must be processed into local currency through a national bank. A bank or personal guarantee may have to be signed to this effect. Some countries impose fines for not complying with this regulation.

Customs Manifest. Local customs agencies check shipments and issue clearances in the form of a manifest.

Collection Documentation

All of these documents are submitted by the shipper to the importer or the importer's bank to release payment.

Commercial Invoices. These should include the full address of the shipper (and seller, if different), date or order, number of order, shipping date, mode of shipment, delivery and payment terms, reference numbers, a complete description of the merchandise prices, discounts, and quantities. Some countries require a special certification that the items are handmade by native labor with native materials.

Parking List. Itemize the materials in each individual package and indicate type of package (e.g., box, crate, bag). Show individual net and gross weights and dimensions for each package. Package markings should be indicated along with references to shippers and buyers.

Consular Invoices. Some importing countries demand that this document accompany merchandise destined for their countries. It must be signed by
the Consul of the importing country prior to shipment.

Certification of Origin (Form A). Many countries favor others by lowering or eliminating tariffs for certain items. A world-wide system, called the General System of Preferences, has been implemented by an organization of the United Nations, UNCTAD/GATT. To take advantage of these lower duties, an importer must have the Certificate of Origin to present to Customs as proof that the product originates from a country included in the system. For information on import duty rates for craft products, obtain a "Generalized System of Preferences" list from the embassy of the country of destination.

For shipment destined for the United States, accurate duty information and a ruling (binding agreement) can be obtained through U.S. Customs. Contract the Commissioner of Customs, Washington, D.C. 20226, including the following information: a complete description of the goods, through samples, diagrams, or photographs; method of manufacture; specifications; quantities and costs of component material, with percentages if possible; and commercial designation in the United States.

Certification of Origin. Many countries give special advantages for importing handcrafts. For an importer to qualify for these benefits, the importer must present documented proof that the items purchased are truly handmade. A certificate of Origin (not Form A) issued by the Chamber of Commerce in the exporting country aids the importer.

Bill of Lading. Ocean or airway bills, depending on the mode of transportation, can serve as a receipt of the contract between the exporter and the transportation company; a receipt proving that the transportation company has received the merchandise; and a title of ownership of the merchandise.

Special Customs Invoice. This is necessary for all shipments to the United States with commercial values over $500.00. It is prepared by the exporter or forwarder and signed by either one. For shipments of textile items, a visa stamp (from the export regulation offices) is required on the Special Customs Invoice certifying that the merchandise imported falls within U.S. quotas set for the exporting country.
METHODS FOR RECEIVING PAYMENT

The five generally used methods to receive payment for exports are described below.

Cash Advance. This is the most desirable method because the payment can be cashed before shipment to add to the exporter's working capital. Many AMOs realize these benefits and offer to pay at least a certain percentage in advance. Some countries do not permit cashing in advanced payments until the merchandise has actually been shipped. Early payment puts a definite risk on the importer since there is no assurance that the order will arrive.

Consignment Sales. Merchandise is furnished to a foreign concern on a deferred payment basis until the concern has sold the products and can reimburse the seller.

Sight Draft. The bill of lading is endorsed by the shipper and sent to the importer's bank with invoice and documents specified by the buyer. The bank received the documents, and as soon as the importer pays the amount of the bank draft, the bank releases the bill of lading to the importer, who can then obtain the shipment.

Time Draft. The importer can obtain possession of the goods upon acceptance of the bank draft and defer payments 30, 60, or more days.

Letter of Credit. Issued by a bank at the importer's request in favor of the exporter. The importer promises to pay the agreed amount of money upon receipt by the bank of certain documents (usually the same requested for a sight draft) within a specified time.
PACKING REQUIREMENTS

Wrap all fragile items individually in paper, two layers thick.
Place three inches of paper on the bottom of the box.
Place larger, heavier items on the bottom of the box.
Cushion well between layers with two inches of paper.
Start packing by placing wrapped items at outside edge of the box.
Continue this process by filling towards the center.
Place bowls and platters on their edges, never flat.
If only one item is being packed, place it in the center with cushioning on all sides.
Fill the box to within three inches from the top. Then finish by putting cushioning paper to the top.
Mark FRAGILE on all sides of the box.

APPLICATION FOR A LETTER OF CREDIT

under Commercial Letter of Credit Agreement and Security Agreement
dated No.____

UNION TRUST COMPANY OF MARYLAND
P.O. Box 1077
Baltimore, Maryland 21203

Date

To be advised by ☐ Cable (full details) ☐ Cable (in brief) ☐ Airmail

Gentlemen:

Please issue for our account an irrevocable commercial letter of credit as follows:

Beneficiary ____________________________ (Name and Address)

Aggregate Amount ____________________________ (Words and Figures)

Drafts at ________drawn at your option on you or any designated correspondent for ________ per cent of the invoice value of the below described commodity.

DOCUMENTS REQUIRED: Please indicate by check (x)

☐ Commercial invoice in ________copies.
☐ Special customs Invoice in ________copies.
☐ Insurance certificate/police covering ☐ Marine & War Risks ☐ All Risks
☐ Other Risks ____________________________ (State Nature)
☐ Other Documents ____________________________

☐ Full Set "Clean on Board Under Deck" ocean bills of lading.
☐ Full Set "Clean on Board Container" ocean bills of lading.

consigned to order of UNION TRUST COMPANY OF MARYLAND: indicating ☐ freight prepaid ☐ freight collect

Notify ____________________________ (Name and address)

☐ Copy of Air Waybill
☐ Copy of inland Bill of lading

COMMODITY. (in general terms only)

To be shipped from: ☐ F.O.B. (Part of Shipment) to: ☐ C & I. (Destination)
☐ F.A.S. ☐ CIF

Not later than: ____________________________

☐ Insurance effected by applicant ____________________________ (Underwriter and Policy Number)

☐ Partial shipments not permitted ☐ Partial shipments permitted
☐ Transshipment not permitted ☐ Transshipment permitted

SPECIAL INSTRUCTIONS ____________________________

LATEST NEGOTIATION DATE ____________________________ at our counters.

The negotiating/paying bank must forward all documents by airmail. We warrant to you that the importation of the commodity covered by this credit does not contravene any law or regulation of the United States Government.

Name and address of firm ____________________________

Authorized Signature ____________________________

Account Number ____________________________

FOR BANK USE ONLY:

Authorized Signatures checked by ____________________________ ☐ under line ☐ offering

Advised through ____________________________
GENTLEMEN:

Following are the particulars details we wish to have included in your documentary Letter of Credit, issued in reply to our Pro Forma invoice dated __________

We have made every effort in these instructions to provide you with terms which can be easily accommodated. If you or your bank are unable to comply with these terms and conditions, please consult with our offices prior to the issuance of the credit to avoid delay or non-shipment. Thank you for your cooperation.

1. The Letter of Credit shall be irrevocable.
2. The credit shall be __ advised by __ confirmed by
3. The credit shall be payable at the country of ________________
4. The credit shall show as the beneficiary ________________
5. The credit shall be payable in ________________, in the amount ________
   - on sight
   - at ________ days from sight
   - at ________ days from
6. The Letter of Credit shall not be transferable.
7. The credit shall be payable ________ days from sight
8. The credit shall show that all banking charges and expenses payable in the beneficiary's country are for the account of the applicant.
9. The credit shall show that all charges, including related communications expenses, are for the account of __ applicant __ beneficiary.
10. Partial shipments shall be allowed.
11. Transshipments shall be allowed.
12. The credit shall allow for required transport documents dated
   - No later than ________ days from the issuing bank's issuance of written notice to the beneficiary.
13. The credit shall allow for a minimum of ________ days after the required transport document date for presentation of documents at the country of the bank stated in item 9 above.
14. The required documents should include:
   - Commercial Invoice ____________ F.O.B. ____________ C.A.F.
   - ____________ F.A.S. ____________ C.I.F.
   - Commercial Invoice shall cover ____________ Pro Forma invoice ____________
   - the following:
   - Packing list
   - Insurance certificates showing insurance provided by seller in the amount of
   - Ocean Bill of Lading
   - ____________ The credit shall allow for NYC/CC bills of lading.
   - ____________ The Bill of Lading shall be consigned to
   - ____________ The Bill of Lading shall be marked as
   - ____________ Air Waybill consigned to
   - ____________ The credit shall allow for air consignee Airway Bills.
   - ____________ The transport document shall be marked freight prepaid
   - ____________ Inland straight bill of lading consigned to
   - ____________ Any shipping documents required shall show as the origin ____________ and as the destination ____________
   - ____________ Other required documents:
15. If designated, the shipper shall be shown as ____________
16. If designated, the carrier shall be shown as ____________
17. Special instructions:

Remarks
1 TERMS AND CONDITIONS

It is the intention of both parties to this contract, that neither party shall be liable for loss or damage resulting from the failure to perform any part of their obligations under this contract,

7 LIABILITY

The seller shall not be liable for any loss or damage resulting from the failure to perform any part of their obligations under this contract.

8 SHIPMENT

Immediate shipment shall be made within ten (10) days from the date of this contract. Prompt shipment shall be made, to best advantage. The seller shall notify the Buyer, in writing, of any change in the shipping schedule.

9 PARTIAL DELIVERY/REVERABILITY

Partial delivery shall be allowable in any case, at the discretion of the Seller, and the Seller shall be liable for any expenses incurred by the Buyer in connection with the partial delivery.

10 CHANGES IN DUTY AND/or FREIGHT RATES

Any changes, after date of this contract, in duties or freight rates, shall be at the expense of the Seller, and the Buyer shall be responsible for such changes.

11 SELLER'S FINANCIAL RESPONSIBILITY

If the Buyer becomes insolvent, the Seller shall have the right to refuse delivery of the merchandise and to recover any advance payments made by the Buyer.

12 INSURANCE

The Seller agrees to obtain insurance to cover all risks of loss or damage to the merchandise during shipping.

13 RESPONSIBILITY FOR DELAYS

The Seller shall not be liable for any delay in the delivery of the merchandise due to factors beyond the Seller's control.

14 ARBITRATION

Any dispute arising out of this contract shall be submitted to arbitration according to the rules of the American Arbitration Association.

15 INSPECTION

The merchandise shall be inspected by the Buyer's agent or representative prior to delivery, and any non-conformity shall be noted.

16 RESPONSIBILITY OF AGENT OR BROKER

No agent or broker of either party shall be liable for any misrepresentation made in connection with this contract.

17 CANCELLATION OR MODIFICATION

This contract cannot be cancelled or modified except by written agreement signed by both parties.

Gaborone Botswana
NOTES

1. Countries which accept the terms for the purposes of the Generalized System of Preferences (GSP)

   Australia
   Austria
   Belgium
   China
   Denmark
   Federal Republic of Germany
   United Kingdom

   Details of the rules governing admission to GSP in these countries are outlined in the Custom authorities there. The main elements of the rules are indicated in the following paragraphs.

2. Conditions. The main conditions for admission to preference are that the goods sent to any of the countries listed above

   (a) must pass through the country of destination, and

   (b) must comply with the customs requirement specified by the country of destination. In general goods must be consigned direct from the country of production to the country of destination. In some cases passage through one or more intermediate countries with or without transshipment is accepted as provided that the goods are clearly intended for the declared country of destination and that any intermediate between the countries of production and destination is not subject to the normal criteria specified for those goods by the country of destination. A summary indication of the rules generally applicable is given in paragraphs 3 and 4.

3. Origin Criteria. For goods to be eligible for preference, the country of production must be specified in the form. For goods produced in the customs areas of the European Economic Community or of the Arab League, the country of origin shall be specified on the invoice. For goods produced in the customs areas of the Arab League, the country of origin shall be specified on the invoice.

4. Origin criteria for exports to Canada and the United States of America. For exports to these two countries the position is that either

   (a) the goods shall be wholly produced in the country of exportation of which is specified on the invoice (see paragraphs 3 and 4), or

   (b) the goods shall be made wholly of materials or components imported into the country of exportation of which is specified on the invoice. In any event the goods must be clearly intended for the declared country of destination and that any intermediate between the countries of production and destination is not subject to the normal criteria specified for those goods by the country of destination. A summary indication of the rules generally applicable is given in paragraphs 3 and 4.

5. Note. The conditions for the acceptance of goods for preference are that the goods sent to any of the countries listed above

   (a) must pass through the country of production to the country of destination, and

   (b) must comply with the customs requirement specified by the country of destination. In general goods must be consigned direct from the country of production to the country of destination. In some cases passage through one or more intermediate countries with or without transshipment is accepted as provided that the goods are clearly intended for the declared country of destination and that any intermediate between the countries of production and destination is not subject to the normal criteria specified for those goods by the country of destination. A summary indication of the rules generally applicable is given in paragraphs 3 and 4.

6. Description of goods. The description of goods must be sufficiently detailed to enable the goods to be identified by the Customs Officer examining them.

   For Australia, Japan, and the United States, the description of goods must be sufficiently detailed to enable the goods to be identified by the Customs Officer examining them.
Below is an example of a Certificate (blanks of which are obtainable from appropriate authorities in developing countries) and how to fill it in. Blank copies can also be purchased from the printers whose name appears at the foot of next page.

(reverse of EUR1 Certificate)
Appendix 10

Peace Corps Resources

Peace Corps' Information Collection and Exchange (ICE) office maintains a collection of technical information on a variety of development topics, including small business and, specifically, crafts development and marketing. ICE can provide both technical publications and research to support crafts efforts. Copies of the many publications ICE provides and catalogs of ICE resources should be available at the in-country Peace Corps offices. Materials are also available on request directly from ICE to both Volunteers and host country groups.

Specific ICE manuals that may be useful to a crafts project are:

- SB-06  Handcraft Exporting as a Peace Corps Activity: Guidelines from the International Workshop of Third World Producers and Alternative Marketing Organizations
- B-23B  Accounting for the Microbusiness - A Teaching Manual
- M-14   Guidelines for Management Consulting Programs
- M-34   Resources for Development
- R-36   Remote Areas Development Manual
- R-14   Guidelines for Development of a Home Industry
- M-21   Peace Corps Literacy Handbook
- P-5    Cooperatives
- In Process  Supporting Women's Enterprise Development
- SB056  Art in the Eastern Caribbean

Describes how Peace Corps program in Antigua developed crafts efforts into small business. Researched quality materials, trained artisans, who developed quality crafts, improved marketing. Crafts described (with additional references for each) include screen printing, jewelry making, calligraphy, batik, carving, and dollmaking.

In addition, ICE can supply some publications described in the bibliography to volunteers for their own work.

The address for ICE is:

Bibliography

The following studies can be ordered free, citing serial number (if available) and title from:

AID Development Document Information Handling Facility  
7222 47th Street  
Chevy Chase, Maryland 20815  
Attention: User Services

This report focusses on programs of direct assistance to the smallest businesses in the private sector where capital for start-up is minimal. It is a study of ways to help people who, because of their inability to raise capital, cannot move beyond a certain income and living standard.

This is a report on a training workshop given in Jamaica for rural women in Latin America and the Caribbean to improve their income earning abilities.

Compilation of women's professional business and social groups. There are resources for involving all citizens in the development process.

243 241
Books and Periodicals

This book draws on the experience of various international agencies with special emphasis on the International Labor Office. Its guidelines for employment promotion highlight not only the importance of very small enterprise but also the constraints faced by planners, policy makers, various promotional institutions, researchers, project designers, and managers in tackling the unusual needs and circumstances of these production units. Although the book focuses on small, traditional activities, it addresses the needs of modern small and medium size industries.

This is a directory of 497 organizations of which 189 are voluntary. It includes 14 foundations, 207 religious organizations, 87 other non-profit organizations, including professional and membership organizations; affiliates and branches of business, labor, and cooperative sectors; and organizations supported by foundation and public agencies.

Cash Flow/Cash Management. San Francisco: Small Business Reporter (Bank of America, Department 3120, Post Office Box 37000, San Francisco, California 94137), 1984. $1.50. Also available through ICE.

Stresses the importance for small business to maintain effective cash management systems in order to achieve financial stability. Discusses the major elements involved in cash management such as: planning essential cash supply, controlling cash flow, and investing surplus cash. Explains how these functions must be coordinated in order to ensure optimal performance.

This book helps the non-professional crafts person to bridge the gap between crafts as past-time (or custom) and business.

This book concentrates on many facets of Third World crafts. While it discusses organizing and business practices its emphasis is on the market (primarily export) and its structure, rules, and methods of operation. Much information concerns effective ways of reaching the market and the steps in the marketing chain.

Financial Records for Small Business. San Francisco: Small Business Reporter (Bank of America, Department 3120, Post Office Box 37000, San Francisco, California 94137), 1984. $3.00 Also available through ICE.

Detailed yet simple overview of the basic components of a business accounting system. Describes accounting and record keeping procedures, as well as financial statements, budget reports, forecasts, and worksheets. Provides a glossary of key terms and an index of sources for further information on accounting and related subjects.

Gift Stores. San Francisco: Small Business Reporters (Bank of America, Department 3120, Post Office Box 37000, San Francisco, California 94132), 1980. $3.00. Also available through ICE.

Discussed the particular characteristics of gift stores as small or large enterprises, and provides ample information on the basic steps toward establishing, managing, and financing such a business. Pays special attention to the vulnerability of the gift-selling industry to seasonal changes in consumer habits, and to the effects of regular business cycles. Also discusses advertising and promotion, and mail order sales.
The Handcrafts Business. San Francisco: Small Business Reporters (Bank of America, Department 3120, Post Office Box 37000, San Francisco, California 94137), 1984. $3.00. Also available through ICE.

Basic guide to establishing a handcrafts business, and managing its production, marketing, pricing and commercial outlets. Suggests strategies for expansion from home-based enterprises to cooperatives or retail stores. Gives tips on keeping records and using advertising, and includes a list of information sources on craft industries.

This is written for those involved in the promotion and development of small enterprises. The objective is to enable the reader to understand what the system can do and if it can be useful in a given country. The manual provides material necessary for identifying the needs of any particular group and for selecting, training, and managing field staff. The system described is a way of conveying intermediate management to small enterprises. Topics include how to calculate costs and selling prices, how to sell their products, and, generally how to run a successful, profitable enterprise.

This book on small business' trends and developments in Third World countries provided an overview of the global economy, traces historical notions of entrepreneurship, and examines how to more equitably distribute the world's resources within and among countries. The book describes wholesaling capital for small enterprises, channeling blocked funds of multinational corporations toward development goals, and creating an international poverty bank.

This is a handbook for training women to help themselves. It is designed to give women skills for personal, economic and community development.

This evaluates at midpoint a five year program sponsored by Partnership for Productivity under contract to the Agency for International Development to support small producers in eastern Burkina Faso.

This is a fascinating history of crafts from prehistoric to modern times with discussion of current craft and market trends and excellent photographs.

Seeds. New York: Carnegie Corporation, Ford Foundation, Oxfam-America, Population Council, Rockefeller Foundation, and Women in Development Office, Agency for International Development. (Pamphlet series to meet requests for information about innovative and practical program ideas developed for and by low-income women.) Seeds, Post Office Box 3923, Grand Central Station, New York, NY 10163. Also available through ICE.

This book lists 91 U.S. non-profit organizations which are involved in small enterprise development assistance programs abroad. The report covers a full range of activities and services related to small enterprise development, cooperative credit unions, loans, and many crafts-specific efforts.
Steps to Starting a Business. San Francisco: Small Business Reporter (Bank of America, Department 3120, Post Office Box 37000, San Francisco, California 94137), 1984. $3.00. Also available through ICE.

Discusses planning and establishment of a new business. Traces main steps in transforming the entrepreneur's idea into a concrete plan of action. Covers many areas such as financing, licensing, promotion, management, and financial projections.

PAPERS

Publications of Use to Crafts Project Managers

Leach, Bernard. *A Potter’s Book.* Levittown, Long Island, New York: Transatlantic Arts Inc., 1976. $15.00 HB, $7.50 P. Also available through ICE.

Maeier, Manfred. *Basic Principles of Design.* New York: Van Nostrand Reinhold, 1977. Four volumes. $10.00 each or $35.00 for set HB.

Meilach, Dona Z. *Basketry Today.* New York: Crown, 1979. $7.95 P.

A basic how-to manual for the beginning and intermediate potter as well as reference source for the more sophisticated craftsperson. Discusses the origin, composition and types of clay. Explains both hand building and wheel techniques, with step-by-step photos to illustrate each process. Covers glazing, from simple to complex techniques. Includes details on kilns, kiln materials and kiln construction. Also provides recipes, practical and technical information, a bibliography and glossary.

The first half of this guide covers design. Discusses different types of pottery - traditional and modern - for domestic and export use. Filled with illustrations, including a section on traditional African patterns. The second half focuses on the technical aspects of pottery. Provides information on clay (finding, treating and testing), glazes, kilns and firing. Contains a glossary of technical terms.

Discusses the development of kilns from the earliest to the most recent designs. Includes kilns from both the Orient and Europe. Covers strengths and weaknesses of various firing methods along with fuels for firing and energy conservation. Provides a general idea of what kinds of kiln designs are workable with specific descriptions of existing kilns. Designs are illustrated.

Describes alternative weaving technologies for eight types of cloth (four plain and four twills) of particular interest for low-income groups in terms of both price and durability. Provides information on available equipment (looms, pirning equipment, warping equipment). Discusses equipment productivity, quality of output, required quality of material inputs, and more. A framework for evaluation is provided to help textile producers identify the method of production best suited to their own circumstances. Contains many helpful charts and appendices.

Contains fairly detailed technical information about the various technologies used in the tanning process. Includes a list of equipment suppliers in both developing and developed countries. Provides a methodological framework for evaluating alternative technologies and information on the socio-economic impact. Generously illustrated with diagrams and charts.

Small Business Administration

Excellent free series of pamphlets addressing all aspects of small business administration with additional references cited. Small Business Administration and can be ordered from its Washington office, 1111 18th Street, N.W., Washington, D.C. 20006 or from Post Office Box 15434, Fort Worth, Texas 76119. Oriented to U.S.

Since 1961 when the Peace Corps was created, more than 80,000 U.S. citizens have served as Volunteers in developing countries, living and working among the people of the Third World as colleagues and co-workers. Today 6000 PCVs are involved in programs designed to help strengthen local capacity to address such fundamental concerns as food production, water supply, energy development, nutrition and health education and reforestation.
