This curriculum guide provides an outline for an eight-unit course to train automobile air conditioning and electrical system technicians. Each unit focuses on a duty that is composed of a number of performance objectives. For each objective, these materials are provided: a task, a standard of performance of task, source of standard, conditions for performance of task, enabling objectives, resource list, teaching activities, a criterion-referenced measure and answer key, and a checklist for the performance objective, which is really a performance test. A total of 180 performance objectives are covered in these eight units: auto heating, cooling, and air conditioning system diagnosis; maintaining and repairing automobile air conditioning systems; maintaining and repairing automobile cooling and heating systems; maintaining and repairing air conditioning and heating control units; diagnosing the automobile electrical systems; maintaining and repairing automobile electrical accessories; and conducting shop operations. Appendixes include a cross-reference table of duties, tasks, and performance objectives; definition of terms; tools/equipment/work aids; state-of-the-art literature; bibliography; and source of standard. (YLB)
V-TEC® GUIDE
FOR
AUTOMOBILE AIR-CONDITIONING
AND
ELECTRICAL SYSTEM TECHNICIAN

Prepared by
Project Coordinator Technical Coordinator

SOUTH CAROLINA DEPARTMENT OF EDUCATION
Dr. Charlie G. Williams, State Superintendent of Education

Division of Instruction
Sidney B. Cooper, Deputy Superintendent

Office of Vocational Education
Dr. Moody Otwald, Director

South Carolina Department of Education: An Equal Opportunity Agency
Columbia, South Carolina 29201

1988

"PERMISSION TO REPRODUCE THIS MATERIAL HAS BEEN GRANTED BY

TO THE EDUCATIONAL RESOURCES INFORMATION CENTER (ERIC)."
ACKNOWLEDGMENTS

The Automobile Air Conditioning and Electrical System Technician V-TECS Guide was developed from the Automobile Air Conditioning and Electrical System Technician V-TECS Catalog by a committee of Automobile Mechanic instructors in South Carolina. These instructors are to be commended for their expertise in the field and for their ability to complete the tedious work required in developing this V-TECS Guide. The writers are:

Mr. Richard Cribb
Airport High School
West Columbia, South Carolina

Mr. Terry Varner
Colleton County Area Vocational Center
Walterboro, South Carolina

Mr. Harry Sanders
Cope Area Vocational Center
Cope, South Carolina

The State Office of Vocational Education staff members who assisted the committee were Robert Lee (Consultant), Shirley S. Cullen (Sex Equity Consultant), Elizabeth Yergason (Editor), Jim Lewallen and Barbara Richardson (Word Processors).

Upon completion of the writing of Automobile Air-Conditioning and Electrical System Technician V-TECS Guide, six educators and seven incumbent workers were selected to field review the material for validity and reliability. These individuals are to be commended for their thoroughness in providing their expertise in modifying and approving this guide for classroom use. The field reviewers are:

David Sloan
R. D. Anderson Area Vocational Center
Moore, S.C.

Alber Black
Daniel Morgan Vocational Center
Spartanburg, S.C.

Charlie Herring
Sumter County Career Center
Sumter, S.C.

Chuck Green
Hearn Motors
Rock Hill, S.C.

Tracy Motley
Burns Chevrolet
Rock Hill, S.C.

Jim Miller
Burns Chevrolet
Rock Hill, S.C.

Terry Jetton
Burns Chevrolet
Rock Hill, S.C.

Donald Guisto
Beaufort-Jasper Career Center
Ridgeland, S.C.

Emery Sanstrum
McDuffie Vocational High School
Anderson, S.C.

Floyd W. Thomas
Lancaster Vocational Center
Lancaster, S.C.

Mike Williams
Hearn Motors
Chester, S.C.

Danny Patterson
Burns Chevrolet
Rock Hill, S.C.

Freddie Campbell
Burns Chevrolet
Rock Hill, S.C.

INTRODUCTION

V-TECS guides are an extension or continuation of the V-TECS catalogs. While the V-TECS catalog is a composition of duties, tasks, performance objectives, and performance guides, it deals only with the psychomotor aspect of an occupation. It deals only with the identification of the "hands on" aspect of the occupation. It does not take into consideration such things as the background information surrounding a task, how to make inferences, generalizations and decisions from a body of knowledge, nor does it deal with attitudes, job seeking skills, safety or energy conservation practices. V-TECS guides take these aspects of teaching and learning into consideration.

Experience has shown that the art of learning can also be taught while teaching subject matter. People need to learn how to learn. V-TECS guides take into consideration how students learn and are an efficient way for instructors to assist them to learn.

V-TECS guides are centered around all three domains of learning: psychomotor, cognitive, and affective. The following is a brief explanation of each.

Psychomotor

Any manipulative skill such as tightening a nut, replacing a hubcap, sharpening a pencil, machining a key slot in a steel shaft, or replacing a SCR in a solid state control panel are examples of manipulative or psychomotor skills. Tasks such as these are identified in V-TECS catalogs. V-TECS catalogs also group tasks by duties and objectives. Each performance objective has a performance standard which must be met to prove student proficiency in the manipulative aspect of the task. The V-TECS catalog, however, does not include any suggestions as to how to learn to do these tasks.

V-TECS guides are developed around psychomotor tasks which are worker oriented.

Cognitive

To perform psychomotor tasks, students must think. To tighten a nut they must know which way to turn it and when to stop turning it so that they won't strip the threads or shear the bolt off. If replacing a hubcap, there is a certain technique that may vary from one to another. For example, start the hubcap by placing the cap in a tilted position and tapping it all the way around until it is properly seated. On a different model, it may be necessary to position the hubcap and snap it all at once. At any rate, students must think about what is being done. This is cognition or a mental activity. Cognition is what goes on in the mind about any job being done. V-TECS guides provide both the collateral knowledge and the impetus to apply cognition to psychomotor tasks.

Students gain cognition through both real and vicarious experiences. They may read, view tapes, memorize or practice a process or procedure until they are certain of it. To test their knowledge, students may be required to decide the proper procedure, method or sequence for performance. This decision making process or cognitive activity provided the basis for higher thinking skills.
Cognition, then, is that process by which information is stored and used. That voice that warns one of potential dangers is cognition. Anything that goes on in the mind is cognition. Students may become the best workers in their jobs; but if they fail to think a process through and apply their experience, they may become just one more statistic. It is cognition that tells them to lock and tag out the power supply to an electrical apparatus before starting to repair it. However, cognition does not apply only to safety. Good cognition or thinking can help employees do a job better and quicker. V-TECS guides provide for the cognition aspects of learning.

Affective

Curriculum writers, supervisors, and instructors often fail to assist students in acquiring a positive attitude toward themselves, their jobs, their school, or their fellow students. V-TECS guides seek to provide assistance to the instructor in achieving this. It is difficult for the instructor to identify little bits and pieces of desirable behavior for every unit and often harder yet to teach them. In this area, students might be judged as to how well they clean up their work area, whether they show up to do the job on time, or whether they must be told several times to do something. Potential employers are interested in student attitude because persons angry at themselves or uncertain of themselves are often poor workers.

A student's ability to succeed on the first job and every job thereafter depends largely on attitude. If, for example, students have the attitude of "let someone else do it," they could be in trouble. Students using V-TECS guides will have activities dealing with how to get along with other students, supervisors, or staff members both in large and small groups.
USE OF V-TECS GUIDE

The guide is designed to provide job-relevant tasks, performance objectives, performance guides, resources, learning activities, evaluation standards and achievement testing in selected occupations.

A V-TECS guide is designed to be used with any teaching methods you may choose. If a lecture/demonstration method is best for you, you will find sufficient help to meet your needs. If you prefer to use discussions or other methods that require student participation, you will find ample help. Regardless of which method is successful for you, a V-TECS guide can save preparation time and offer innovative methods and procedures. For example, students may work either alone or in teams while in class and learn skills in direct relation to what is actually done on the job. This work also takes into consideration student attitudes, thinking skills, and mathematical reading skills.

The use of small groups in teaching can be helpful in two ways: (1) many students may feel inadequate due to their lack of background information in mechanical things; and (2) some students may feel that they are physically incompetent or lack the necessary background experiences. A successful program (course) can provide students with a sense of security by reinforcing positive attitudes while improving skill and knowledge of the subject. By allowing students to interact on a personal level, this task/learner-centered approach can achieve this. As students gain confidence and discover that they are an essential part of a team engaged in the learning-teaching process, their confidence increases. Too, the student in this setting can learn to work without direct supervision. In addition, use of the small-group method permits the instructor to vary instructional routines away from lecture or other full-class methods to activities for single students, pairs of students or any number so desired.

You will find suggestions for specific classroom activities. The activities are not meant to restrict you or your students, but only to suggest a variety of learning activities for each task statement. Please do not feel that you must take your students through all the activities. Although the Guide is comprehensive, teachers will be able to select the content which is applicable to the instructional offering in their schools. Teachers are encouraged to use creativity as they adopt the materials to meet the particular needs of their students.
AUTO HEATING, COOLING, AND AIR CONDITIONING SYSTEM DIAGNOSIS
DUTY: AUTO HEATING, COOLING, AND AIR CONDITIONING SYSTEM DIAGNOSIS

PERFORMANCE OBJECTIVE 01

TASK: Identify causes of engine overheating.

STANDARD OF PERFORMANCE OF TASK:

All potential causes of engine overheating must be checked and all abnormal conditions must be identified.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

- Standard tool kit
- Radiator cap tester
- Thermometer
- Timing Light

ENABLING OBJECTIVES:

1. Use radiator cap tester.
2. Recognize and identify all parts of a cooling system.
3. Use timing light and thermometer.

RESOURCES:

1. Cooling System Service, Filmstrip at ATJE-A.

TEACHING ACTIVITIES:

1. Have students read and discuss textbook chapter 19 The Cooling System.
2. Review and discuss filmstrip Cooling System Service.
3. Class will draw a cooling system and identify parts.
4. Demonstrate the steps in The Performance of Task as identified in the Performance Evaluation.
5. Have students complete Performance Evaluation Checklist.
PERFORMANCE OBJECTIVE 01

CRITERION-REFERENCED MEASURE:

Questions

1. Vacuum is prevented in the cooling system by a:
   a. Pressure cap
   b. Recovery system
   c. Thermostat
   d. All of the above.
2. When an engine is cold coolant flows:
   a. Into the bottom of the radiator
   b. Through the heat exchanger
   c. Through the block: only
   d. All of the above.
3. Name the types of cooling systems used today.

Answers

1. a
2. c
3. Liquid, air, combination of both

Practical Application:

Identify the causes of engine overheating.

Method of Evaluation:

Use Checklist Performance Objective 01 to determine if the assignment was completed with 100% accuracy.
**CHECKLIST FOR PERFORMANCE OBJECTIVE 01 EVALUATION**

**PERFORMANCE TEST FOR IDENTIFYING CAUSES OF ENGINE OVERHEATING**

DUTY: AUTO HEATING, COOLING, AND AIR CONDITIONING SYSTEM DIAGNOSIS.

PERFORMANCE OBJECTIVE 02

TASK: Inspect cooling system components for coolant leaks.

STANDARD OF PERFORMANCE OF TASK:

All potential sources of leaks must be inspected and all leaks must be identified.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit

ENABLING OBJECTIVES:

1. Use radiator pressure tester.
2. Recognize all sources of potential leaks.
3. Observe all safety rules

RESOURCES

1. Cooling System Service, Filmstrip ATJ5-A.

TEACHING ACTIVITIES:

1. Have students read and discuss textbook chapter 20 Auto Mechanics.
2. Review and discuss filmstrip Cooling System Service.
3. Demonstrate steps in task.
4. Have student complete performance evaluation checklist.
5. The student will list the steps in replacing defective parts.
PERFORMANCE OBJECTIVE 02

CRITERION-REFERENCED MEASURE:

Questions

1. Coolant strength can be tested by a:
   a. Pump
   b. Hydrometer
   c. Pressure tester
   d. None of the above.

2. Coolant loss may be caused by a:
   a. Defective cap
   b. Worn pump
   c. Bad hose
   d. All of the above.

3. Overheating can be caused by:
   a. Low coolant level
   b. Loss of coolant flow
   c. Loss of air flow across radiator
   d. All of the above.

4. Poor air flow will be caused by:
   a. Bent or broken radiator fins
   b. Loose fan belt
   c. Fan clutch
   d. All of the above.

Answers

1. b
2. d
3. d
4. d

Practical Application:
Inspect the cooling system components for coolant leaks.

Method of Evaluation:
Use Checklist Performance Objective 02 to determine if the assignment was completed with 100% accuracy.

PERFORMANCE OBJECTIVE 03

TASK: Identify the source of unusual operating noises.

STANDARD OF PERFORMANCE OF TASK:

All potential causes of unusual operating noises must be checked and abnormal operating conditions must be identified.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Stethoscope or sound rod
Belt tension gauge

ENABLING OBJECTIVES:

1. Use stethoscope or sound rod
2. Use belt tension gauge
3. Use standard tool kit

RESOURCES:

1. Cooling System Service, Filmstrip ATJ5-A.
2. Webster Auto Mechanics, pp. 192-197.

TEACHING ACTIVITIES:

1. Have students read and discuss chapter 20 Auto Mechanics.
2. Review and discuss filmstrip Cooling System Service.
3. Demonstrate steps in task.
4. Have student complete performance evaluation checklist.
5. The student will list the steps in replacing defective part or parts.
PERFORMANCE OBJECTIVE 03

CRITERION-REFERENCED MEASURE:

Questions

1. A _________ is the most accurate tool used to diagnose water pump noise.
2. A squealing noise that occurs only when the blower motor is switched on indicates:
   a. Bad A/C compressor
   b. Blower motor defective
   c. Water pump defective
   d. None of the above.
3. Loose belts will cause a _________ when the engine is accelerated suddenly.

Answers

1. Stethoscope
2. b
3. Squeal

Practical Application:

Identify the source of unusual operating noises.

Method of Evaluation:

Use Checklist Performance Objective 03 to determine if the assignment was completed with 100% accuracy.

PERFORMANCE OBJECTIVE 05

TASK: Test air conditioner charge.

STANDARD OF PERFORMANCE OF TASK:

A high-low pressure ratio outside of manufacturer's specifications must be identified.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Manifold gauge set
Manufacturer's Specifications

ENABLING OBJECTIVES:

1. Use manifold gauge set
2. Read and use manufacturer's specifications
3. Follow all safety precautions

RESOURCES:

TEACHING ACTIVITIES:

1. Have students read and discuss textbook chapter 50, Auto Mechanics.
2. Have students read and discuss brochure Air Conditioning Diagnosis (PTF-9-85-10).
3. Demonstrate steps in the performance of the task.
4. Have students complete Performance Evaluation Checklist.
5. Explain safety measures that must be followed.
6. Student will identify cold and hot components of the air conditioning system.
PERFORMANCE OBJECTIVE 05

CRITERION-REFERENCED MEASURE:

Questions

1. Low pressure readings on the gauge set may indicate _________ refrigerant level.
2. A rapid cycling compressor may indicate:
   a. Overcharge of refrigerant
   b. Undercharge of refrigerant
   c. Defective Compressor
   d. None of the above.
3. A very high reading on the gauge may indicate:
   a. System overcharged
   b. Belt is slipping
   c. Defective evaporator
   d. All of the above.

Answers

1. Low
2. b
3. a

DUTY: AUTO HEATING, COOLING, AND AIR CONDITIONING SYSTEM DIAGNOSIS.

PERFORMANCE OBJECTIVE 06

TASK: Test the air conditioning system for refrigerant and oil leaks.

STANDARD OF PERFORMANCE OF TASK:

All oil and freon leaks of air conditioning system must be detected.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Refrigerant liquid leak detector
Electronic leak detector
Air conditioning charging station

ENABLING OBJECTIVES:

1. Use refrigerant liquid leak detector
2. Use refrigerant electronic leak detector
3. Use air conditioning charging station
4. Observe safety precautions.

RESOURCES:

TEACHING ACTIVITIES:

1. Have students read and discuss textbook Auto Mechanics pp. 498-504.
2. Have students read and discuss brochure Air Conditioning Diagnosis (PTF-9-85-10).
3. Demonstrate steps in the performance of the task.
4. Explain safety measures that must be followed.
5. Have students complete Performance Evaluation Checklist.
PERFORMANCE OBJECTIVE 06

CRITERION-REFERENCED MEASURE:

Questions

1. Wet or oily spots on lines or other parts of the air conditioning system.
   a. Indicates refrigerant leak
   b. Indicates oil leak
   c. Both a and b
   d. Neither a or b.
2. Oily streaks on underside of hood above the compressor indicates the compressor ________ is leaking.
3. Air conditioning component parts are of the ________ pressure type.

Answers

1. c
2. Seal
3. High

Practical Application:

Test the air conditioning system for refrigerant and oil leaks.

Method of Evaluation:

Use Checklist Performance Objective 06 to determine if the assignment was completed with 100% accuracy.

DUTY: AUTO HEATING, COOLING, AND AIR CONDITIONING SYSTEM DIAGNOSIS.

PERFORMANCE OBJECTIVE 07

TASK: Inspect belts and pulleys.

STANDARD OF PERFORMANCE OF TASK:

All cracked, frayed or broken belts must be noted; all loose, bent or broken pulleys must be noted; all abnormal noises pertaining to belts and pulleys system must be detected.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Belt dressing
Belt tension gauge

ENABLING OBJECTIVES:

1. Use standard tool kit.
2. Use belt dressing.
3. Use belt tension gauge.
4. Follow safety regulations

RESOURCES:

1. Webster, Auto Mechanics chapter 50, pp. 498-504.

TEACHING ACTIVITIES:

1. Have students read and discuss textbook, Auto Mechanics, pp. 498-504.
2. Explain safety measures that must be followed.
3. Have students read manufacturer's recommended procedure in appropriate shop manual.
4. Demonstrate steps in the performance of the task.
5. Have students complete Performance Evaluation Checklist.
PERFORMANCE OBJECTIVE 07

CRITERION-REFERENCED MEASURE:

Questions

1. A belt that is loose should be:
   a. Replaced
   b. Tightened
   c. Ignored
   d. None of the above.
2. Belts that are glazed or oil soaked should be __________.
3. A pulley that wobbles or is noisy should be:
   a. Repaired
   b. Replaced
   c. Good
   d. All of the above.

Answers

1. b
2. Replaced
3. b

Practical Application:

Inspect Belts and Pulleys.

Method of Evaluation:

Use Checklist Performance Objective 07 to determine if the assignment was completed with 100% accuracy.
CHECKLIST FOR PERFORMANCE OBJECTIVE 07 EVALUATION

PERFORMANCE TEST FOR INSPECTING BELTS AND PULLEYS

PERFORMANCE OBJECTIVE 08

TASK: Inspect refrigeration components and hoses for restrictions.

STANDARD OF PERFORMANCE OF TASK:

All malfunctions caused by restrictions in refrigeration system must be detected.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Air conditioning charging station

ENABLING OBJECTIVES:

1. Use standard tool kit.
2. Use air conditioning charging station

RESOURCES:

1. Webster, Auto Mechanics, chapter 50, pp. 498-504.

TEACHING ACTIVITIES:

1. Have students read manufacturer's procedure in appropriate shop manual.
2. Demonstrate steps in the performance of the task.
3. Explain safety measures to be followed.
4. Read and discuss Air Conditioning Diagnosis (PTF-9-85-10), pp. 9-15.
5. Have students complete Performance Evaluation Checklist.
PERFORMANCE OBJECTIVE 08

CRITERION-REFERENCED MEASURE:

Questions

1. The inlet on the evaporator side of the orifice tube feels _______ to the touch of a properly operating system.
   a. Cold
   b. Hot
   c. Warm

2. An item used to store and dry refrigerant.

3. A restriction in the condenser would reduce:
   a. Cooling
   b. Pressure
   c. Refrigerant flow
   d. A and C.

Answers

1. Cold
2. Receiver/Drier
3. d

Practical Application:

Inspect refrigeration components and hoses for restrictions.

Method of Evaluation:

Use Checklist Performance Objective 08 to determine if the assignment was completed with 100% accuracy.

TASK: Check heater water control valve operation.

STANDARD OF PERFORMANCE OF TASK:

All leaks and all binding or broken parts must be detected.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit.

ENABLING OBJECTIVES:

1. Use standard tool kit.
2. Read and interpret Manufacturer's Shop Manual.
3. Use vacuum gauge and vacuum pump.

RESOURCES:

TEACHING ACTIVITIES:

2. Have the students read service procedure in manufacturer's shop manual.
3. Have students explain manufacturer's service procedure.
4. Demonstrate safety measures and steps in tasks.
5. Have students demonstrate the steps in the performance of the task identified in the performance evaluation.
6. Demonstrate the use of a vacuum gauge and pump for testing vacuum leaks.
PERFORMANCE OBJECTIVE 16

CRITERION-REFERENCED MEASURE:

Questions

1. Most heater control valves operate by:
   a. Vacuum
   b. Manual
   c. Both a and b
   d. Neither a or b.

2. If a heater control valve leaks it must be
   a. Repaired
   b. Replaced
   c. Ignored

3. A heater valve that is stuck open will:
   a. Increase coolant flow
   b. Decrease coolant flow
   c. Not have any effect on coolant flow
   d. No control of coolant flow through heater.

Answers

1. c
2. b
3. d

Practical Application:

Check heater water control valve operation.

Method of Evaluation:

Use Checklist Performance Objective 16 to determine if the assignment was completed with 100% accuracy.
# CHECKLIST FOR PERFORMANCE OBJECTIVE 16 EVALUATION

## PERFORMANCE TEST FOR CHECKING HEATER WATER CONTROL VALVE OPERATION

**Student's Name**

**Date**

### DIRECTIONS TO STUDENT:

- Set-up proper equipment.
- Follow the verbal directions given by the instructor.
- Complete each step in the sequential order listed.

### DIRECTIONS TO EVALUATOR:

- Observe the student. Pay close attention to items to be evaluated. Be sure the student completes the tasks within a reasonable time. A score of 100% is required for competency.

### ITEMS TO BE EVALUATED

MAINTAINING AND REPAIRING AUTOMOBILE
AIR CONDITIONING SYSTEMS
DUTY: MAINTAINING AND REPAIRING AUTOMOBILE AIR CONDITIONING SYSTEMS

PERFORMANCE OBJECTIVE 17

TASK: Test vacuum components.

STANDARD OF PERFORMANCE OF TASK:

All causes of vacuum leaks or obstructions must be identified.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Vacuum gauge/pump

ENABLING OBJECTIVES:

1. Use vacuum gauge/pump
2. Use standard tool kit

RESOURCES:

1. Air Conditioning Diagnosis PTF-9-85-10, pp. 7, 10, 11.

TEACHING ACTIVITIES:

1. Have students read and discuss manual, Air Conditioning Diagnosis pp. 7, 10, 11.
2. Have students read service procedure in manufacturer's manual.
3. Demonstrate safety measures.
4. Demonstrate steps in task.
5. Have students demonstrate the steps in the performance of the task, identified in performance evaluation.
PERFORMANCE OBJECTIVE 17

CRITERION-REFERENCED MEASURE:

Questions

1. A vacuum motor that is leaking must be:
   a. Replaced
   b. Reaired
   c. Plugged
   d. Ignored.

2. A leaking vacuum control valve that is broken must be:
   a. Glued back together
   b. Adjusted
   c. Repaired
   d. Replaced.

3. Vacuum components that do not work properly could be:
   a. Loose manifold vacuum hose
   b. Needing to be replaced
   c. Stuck
   d. All of the above.

Answers

1. b
2. d
3. d

Practical Application:

Test vacuum components.

Method of Evaluation:

Use Checklist Performance Objective 17 to determine if the assignment was completed with 100% accuracy.
CHECKLIST FOR PERFORMANCE OBJECTIVE 17 EVALUATION
PERFORMANCE TEST FOR TESTING VACUUM COMPONENTS

Student's Name  Date

DIRECTIONS TO STUDENT: Set-up the proper equipment. Follow the verbal
directions given by the instructor. Complete each
step in the sequential order listed.

DIRECTIONS TO EVALUATOR: Observe the student. Pay close attention to items
to be evaluated. Be sure the student completes
the tasks within a reasonable time. A score of
100% is required for competency.

ITEMS TO BE EVALUATED  Satisfactory  Unsatisfactory

1. Gained access to manifold.  
2. Checked component for operation visually, if possible.  
3. Attached vacuum test gauge to vacuum control line.  
4. Created and measured vacuum for each mode.  
5. Compared readings with manufacturer's specifications.  
6. Identified cause of variation (leak or restriction).  
7. Reattached lines.  
8. Repaired or replaced malfunctioning component.  

Approved: Yes ___  No ___

Evaluator's Signature  Date
DUTY: MAINTAINING AND REPAIRING AUTOMOBILE AIR CONDITIONING SYSTEMS

PERFORMANCE OBJECTIVE 18

TASK: R & R Refrigerant lines.

STANDARD OF PERFORMANCE OF TASK:

Connections must not leak and the lines must be routed according to manufacturer's specifications.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Manifold gauges
Vacuum pump
Refrigerant oil
New line
O-ring assortment
Cleaning rag
Halide or electronic leak detector

ENABLING OBJECTIVES:

1. Use vacuum pump
2. Use leak detector
3. Use manifold gauges

RESOURCES:

TEACHING ACTIVITIES:

2. Show and discuss filmstrip, Basic Air Conditioning Systems MPI-8010.
3. Have students list two dangers of working with R-12, i.e., danger to skin, danger to eyes etc.
4. Demonstrate steps in task.
5. Have students demonstrate the steps in the performance of the task, in the performance evaluation.
PERFORMANCE OBJECTIVE 18

CRITERION-REFERENCED MEASURE

Questions

1. A leaking hose should be:
   a. Replaced
   b. Taped
   c. Repaired
   d. None of the above.

2. A hose that is leaking at a fitting could possibly be:
   a. Tightened
   b. Loose
   c. Missing an "O" ring
   d. All of the above.

3. When a hose is replaced it should be:
   a. Same size and length of original
   b. Routed same as original
   c. Both a and b
   d. Neither a or b.

Answers

1. a
2. d
3. c

Practical Application:

Remove and replace refrigerant lines.

Method of Evaluation:

Use C1-cklist Performance Objective 18 to determine if the assignment was completed with 100% accuracy.

DUTY: MAINTAINING AND REPAIRING AUTOMOBILE AIR CONDITIONING SYSTEMS

PERFORMANCE OBJECTIVE 19

TASK: Fabricate refrigerant lines.

STANDARD OF PERFORMANCE OF TASK:

Hose must be of proper length and angle and leak proof at fittings.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Knife or razor blade
Refrigerant oil
Bulk hose
Hose fittings
Clamps

ENABLING OBJECTIVES:

1. Follow safety regulations
2. Select proper tools

RESOURCES:

2. Manufacturer's Shop Manual

TEACHING ACTIVITIES:

2. Have students read service procedure in manufacturer's shop manual.
3. Demonstrate the proper procedure of fabricating a refrigerant line.
4. Have the students demonstrate his/her ability to determine hose size and length.
5. Have the student demonstrate the steps in the performance of the task, identified in the performance evaluation.
PERFORMANCE OBJECTIVE 19

CRITERION-REFERENCED MEASURE:

Questions

1. When replacing an air conditioning hose, the replacement hose should be of the same:
   a. Structure
   b. Material
   c. Length
   d. Diameter
   e. All of these.

2. In fabricating new hoses care should be taken to insure against:
   a. Dirt in hose
   b. Bits of loose particles in hose
   c. Moisture in hose
   d. None of the above
   e. All of the above.

3. What type of clamp should be used on air conditioning hoses?

Answers

1. e
2. e
3. Follow manufacturer's recommendations.

Practical Application:

Fabricate refrigerant lines.

Method of Evaluation:

Use Checklist Performance Objective 19 to determine if the assignment was completed with 100% accuracy.

PERFORMANCE OBJECTIVE 20

TASK: R & R vacuum motor.

STANDARD OF PERFORMANCE OF TASK:

Motor must be mounted in design position, all line connections are secure, doors and cover correctly reinstalled, and the system operates as designed.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Vacuum gauge/pump
Replacement motor and hardware
Putty sealer

ENABLING OBJECTIVES:

1. Use vacuum gauge/pump
2. Use standard tool kit

RESOURCES:

TEACHING ACTIVITIES:

1. Have the students draw a vacuum motor, and explain how it operates.
3. Have student explain repair in procedure.
4. Demonstrate safety measures.
5. Demonstrate steps in the performance of the task.
6. Have the students demonstrate the steps in the performance of the task, identified in the performance evaluation.
PERFORMANCE OBJECTIVE 20

CRITERION-REFERENCED MEASURE:

Questions

1. Vacuum motor action causes the mode door:
   a. To open
   b. To close
   c. Both a and b
   d. Neither a or b.

2. Always replace defective vacuum motor(s) with the same ________ and type as original.
   a. Color
   b. Size
   c. Gearing
   d. None of the above.

3. Vacuum motors usually are either:
   a. Single action
   b. Double action
   c. Both a and b
   d. Neither a or b.

Answers

1. c
2. b
3. c

Practical Application:

Remove and replace vacuum motor.

Method of Evaluation:

Use Checklist Performance Objective 20 to determine if the assignment was completed with 100% accuracy.

DUTY: MAINTAINING AND REPAIRING AUTOMOBILE AIR CONDITIONING SYSTEMS

PERFORMANCE OBJECTIVE 21

TASK: Test clutch thermostatic switch.

STANDARD OF PERFORMANCE OF TASK:

Any deviation from manufacturer's specified operating temperature must be detected.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Voltmeter or test light
Thermometer

ENABLING OBJECTIVES:

1. Use voltmeter
2. Use ohmmeter
3. Use test light

RESOURCES:

1. Air Conditioning Diagnosis, PTF-9-85-10, pp. 9, 10.
3. Air Conditioning Diagnosis, Filmstrip, MPI-8009.

TEACHING ACTIVITIES:

2. Have students read Air Conditioning Diagnosis, PTF-9-85-10, pp. 9, 10.
3. Have students explain the differences between an open circuit and continuous circuit.
4. Show and discuss filmstrip, Air Conditioning Diagnosis, MPI-8009.
5. Demonstrate the steps in the performance of the task.
6. Have students complete the performance evaluation.
PERFORMANCE OBJECTIVE 21

CRITERION-REFERENCED MEASURE:

Questions

1. A thermostatic switch that is staying closed too long:
   a. Causes high pressure readings.
   b. Causes low pressure readings.
   c. Does not have any effect on cooling
   d. None of the above.
2. A thermostatic switch that opens too early:
   a. Has no affect on cooling
   b. Causes low pressure reading
   c. Reduces cooling
   d. Both b and c
   e. None of the above.
3. The thermostatic switch controls when compressor:
   a. Cuts off
   b. Cuts on
   c. Cycles
   d. All of the above
   e. None of the above.

Answers:

1. 
2. d
3. d

Practical Application:

Test clutch thermostatic switch.

Method of Evaluation:

Use Checklist Performance Objective 21 to determine if the assignment was completed with 100% accuracy.

TASK: R & R magnetic clutch assembly.

STANDARD OF PERFORMANCE OF TASK:

Clutch assembly must engage and disengage fully and be installed according to manufacturer's procedures.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Clutch holding tool
Clutch hub puller
Snap ring pliers
New clutch and coil assembly
Torque wrench

ENABLING OBJECTIVES:

1. Use clutch tools
2. Use torque wrench
3. Use standard tool kit

RESOURCES:

2. Air Conditioning Specialist (Local auto shop).

TEACHING ACTIVITIES:

2. Have students read and discuss manufacturer's service procedure.
3. Discuss the different types of magnetic clutches in use.
4. Have a local air conditioning specialist demonstrate the task.
5. Have the students demonstrate the steps in the performance of the task identified in the performance evaluation.
PERFORMANCE OBJECTIVE 23

CRITERIO "REFERENCE"D MEASURE:

Questions

1. A clutch magnetic coil that is burned or cracked:
   a. Should be replaced
   b. Should be repaired
   c. Both a and b
   d. Neither a or b.

2. A magnetic clutch that is slipping may need:
   a. Air gap adjusted
   b. To be cleaned
   c. Neither a or b
   d. Both a and b.

3. The magnetic clutch bolt or nut, should always be:
   a. Tightened with socket
   b. Torqued to specification
   c. Hand tightened
   d. Tightened with air wrench.

Answers

1. a
2. d
3. b

PERFORMANCE OBJECTIVE 24

TASK: R & R Compressor Seals.

STANDARD OF PERFORMANCE OF TASK:

Seals must be installed according to manufacturer’s procedures without leaks.

SOURCE OF STANDARD:

Standard tool kit
Manifold gauge set
O-ring seal kit
Refrigerant oil
Shop cloths
Leak detector
Refrigerant

ENABLING OBJECTIVES:

1. Use manifold gauge set
2. Use leak detector
3. Use standard tool kit

RESOURCES:

2. Compressor Seals (3 types).
4. Air Conditioning Diagnosis Filmstrip, MPI-8009

TEACHING ACTIVITIES:

1. Have the students read and discuss textbook, Auto Mechanics: Theory and Service, pp. 725, 726.
2. Have the students identify two types of compressor seals.
3. Have students read service procedure in Manufacturer's Shop Manual.
4. Show and discuss filmstrip Air Conditioning Diagnosis MPI-8009.
5. Demonstrate the task and safety procedures.
6. Have students demonstrate the steps in the performance of the task, identified in the performance evaluation.
PERFORMANCE OBJECTIVE 24

CRITERION-REFERENCED MEASURE:

Questions

1. When removing old shaft seal, care should be taken not to:
   a. Damage old seal
   b. Damage compressor shaft
   c. Loose air conditioner charge
   d. None of the above.

2. When installing new seal, always lubricate seal with:
   a. Motor oil
   b. 3 inch machine oil
   c. Air conditioning oil
   d. Vaseline.

3. It is normal for a new seal to:
   a. Leak a small amount
   b. Leak a large amount
   c. Never leak
   d. All of the above.

Answers

1. b
2. c
3. c

Practical Application:

R & R Compressor seals.

Method of Evaluation:

Use Checklist Performance Objective 24 to determine if the assignment was completed with 100% accuracy.

PERFORMANCE OBJECTIVE 25

TASK: Check compressor oil level.

STANDARD OF PERFORMANCE OF TASK:

Oil level not in accordance with manufacturer's specifications must be detected.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Manifold gauge set
Shop cloths
Air conditioner oil level dipstick set
Graduated measure container

ENABLING OBJECTIVES:

1. Use service manuals
2. Use manifold gauge set
3. Use graduated measure container

RESOURCES:

1. Air Conditioning Diagnosis, PTF-9-85-10, pp. 13, 14
2. Air Conditioner Service Manual

TEACHING ACTIVITIES:

1. Have students read and discuss manual, Air Conditioning Diagnosis pp. 13, 14, PTF-9-85-10.
2. Have the students read and list manufacturer’s service procedure.
3. Demonstrate safety measure.
4. Demonstrate steps in the performance of the task.
5. Have the students demonstrate the steps in the performance of the task, identified in the performance evaluation.
PERFORMANCE OBJECTIVE 25

CRITERION-REFERENCED MEASURE:

Questions

1. If oil needs to be added to system, always follow:
   a. Your own belief
   b. Manufacturer's recommendations
   c. Instructor's recommendations
   d. None of the above.

2. When adding oil to the compressor, usually the system:
   a. Must be purged
   b. Must be recharged
   c. Must be evacuated
   d. All of the above.

3. Most auto air conditioners use what type of oil?
   a. Motor oil
   b. SAE 10E300 Oil
   c. Special Air Conditioner Oil
   d. None of the above.

Answers

1. b
2. d
3. c

Practical Application:

Check compressor oil level.

Method of Evaluation:

Use Checklist Performance Objective 25 to determine if the assignment was completed with 100% accuracy.

DUTY: MAINTAINING AND REPAIRING AUTOMOBILE AIR CONDITIONING SYSTEMS

PERFORMANCE OBJECTIVE NO. 26

TASK: R & R dryer.

STANDARD OF PERFORMANCE OF TASK:

Dryer must be installed according to manufacturer's procedures without leaks.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Replacement dryer unit
Manifold gauges and vacuum pump
Refrigerant oil
Shop cloths
Refrigerant
Leak detector.

ENABLING OBJECTIVES:

1. Use vacuum pump.
2. Use standard tool kit.

RESOURCES:

1. Air Conditioner Service Manual

TEACHING ACTIVITIES:

2. Have the students draw a schematic of air conditioner system, showing placement of dryer.
3. Explain safety measures to be followed.
4. Have students list manufacturer's service procedure.
5. Demonstrate steps in the performance of the task.
PERFORMANCE OBJECTIVE NO. 26

CRITERION-REFERENCED MEASURE:

Questions
1. The air conditioner dryer:
   a. Stores oil
   b. Removes moisture
   c. Both a and b
   d. Neither a or b.
2. When replacing a dryer, you should always:
   a. Measure amount of oil in old dryer
   b. Replace same amount of oil taken from old dryer
   c. Follow manufacturer's instructions
   d. None of the above.
3. New dryer should be same:
   a. Type as old
   b. Size as old
   c. As recommended by manufacturer
   d. All of the above.

Answers
1. c
2. c
3. c

Practical Application:
R & R dryer.

Method of Evaluation:
Use Checklist Performance Objective 26 to determine if the assignment was completed with 100% accuracy.

DUTY: MAINTAINING AND REPAIRING AUTOMOBILE AIR CONDITIONING SYSTEMS

PERFORMANCE OBJECTIVE 27

TASK: R & R condenser.

STANDARD OF PERFORMANCE OF TASK:

Condenser must be installed according to manufacturer's procedures without leaks.

SOURCE OF STANDARD:
Writing Team, State of Pennsylvania.

STANDARD OF PERFORMANCE OF TASK:

Standard tool kit
Replacement condenser
O-ring kit
Refrigerant oil
Manifold gauge set and vacuum pump
Refrigerant
Leak detector

ENABLING OBJECTIVES:

1. Use manufacturer's shop manual
2. Use leak detector
3. Use manifold gauge set

RESOURCES:

1. Manufacturer’s Shop Manual.

TEACHING ACTIVITIES:

1. Have students read and discuss service procedure in Manufacturer’s Shop Manual.
2. Identify items to be removed to gain access to condenser.
3. Explain procedure to be followed in removing condenser.
4. List all safety procedures to be followed.
5. Have the students demonstrate the steps in the performance of the task, identified in the performance evaluation.
PERFORMANCE OBJECTIVE 27

CRITERION-REFERENCED MEASURE:

Questions

1. When replacing a condenser always:
   a. Use the same size
   b. Measure oil taken from condenser
   c. Follow manufacturer's recommendations
   d. Both b and c
   e. Both a and b

2. A replacement condenser should be mounted:
   a. With screws
   b. With bolts
   c. Both a and b
   d. Per manufacturer's instructions.

3. Replacement of a condenser requires:
   a. Recharging system
   b. Leak testing
   c. Both a and b
   d. None of the above.

Answers

1. c
2. d
3. c

Practical Application:

R & R condenser.

Method of Evaluation:

Use Checklist Performance Objective 27 to determine if the assignment was completed with 100% accuracy.

DUTY: MAINTAINING AND REPAIRING AUTOMOBILE AIR CONDITIONING SYSTEMS

PERFORMANCE OBJECTIVE 28

TASK: R & it evaporator.

STANDARD OF PERFORMANCE OF TASK:

Evaporator must be installed according to manufacturer's procedures without leaks.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Replacement evaporator
Refrigerant oil
O-ring kit
Putty sealer and prestite tape
Manifold gauge set
Refrigerant

ENABLING OBJECTIVES:

1. Select tools
2. Use manifold gauge set
3. Apply putty sealer or prestite tape

RESOURCES:

TEACHING ACTIVITIES:

2. Compare the differences in various manufacturer's air conditioning evaporators.
3. Have the students draw a schematic of an evaporator showing refrigerant flow.
4. Explain safety precautions.
5. Have the students demonstrate the steps in the performance of the task, identified in the performance evaluation.
PERFORMANCE OBJECTIVE 28

CRITERION-REFERENCED MEASURE:

Questions

1. When replacing evaporator always use the same:
   a. Type as original
   b. Sizes as original
   c. Neither a or b
   d. Both a and b.

2. Always measure the amount of ________ removed from old evaporator.
   a. Oil
   b. Refrigerant
   c. Moisture

3. When replacing evaporator, there should not be any:
   a. Air leaks at housing
   b. Oil leaks at lines
   c. Refrigerant leaks
   d. All of the above.

Answers

1. d
2. a
3. d

Practical Application:

R & R evaporator.

Method of Evaluation:

Use Checklist Performance Objective 28 to determine if the assignment was completed with 100% accuracy.

PERFORMANCE OBJECTIVE 29

TASK: R & R expansion tube.

STANDARD OF PERFORMANCE OF TASK:

Expansion tube must be installed according to manufacturer's procedures without leaks.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Replacement expansion tube
Refrigerant oil
O-ring kit
Manifold gauge set
Vacuum pump
Freon and leak detector
Refrigerant
Fix... orifice tube puller

ENABLING OBJECTIVES:

1. Identify expansion tube
2. Use expansion tube puller
3. Use leak detector

RESOURCES:

TEACHING ACTIVITIES:

2. Illustrate placement of expansion tube by various manufacturer's specifications.
3. Have the students draw an expansion tube and be able to explain its function.
4. Have students read and follow manufacturer's repair procedure.
5. Explain safety precautions.
6. Have the students demonstrate the steps in the performance of the task, identified in the performance evaluation.
PERFORMANCE OBJECTIVE 29

CRITERION-REFERENCED MEASURE:

Questions

1. A missing orifice tube could cause:
   a. Low pressure on low side
   b. High pressure on low side
   c. Low pressure on both sides
   d. High pressure on both sides.

2. High pressure on the low side may be caused by:
   a. Bad orifice tube
   b. Clogged evaporator
   c. Too much refrigerant
   d. A bad compressor.

3. The evaporator side of the orifice tube should feel __________ to the touch.
   a. Cold
   b. Warm
   c. Hot

Answers

1. b
2. c
3. a

Practical Application:

R & R expansion tube.

Method of Evaluation:

Use Checklist Performance Objective 29 to determine if the assignment was completed with 100% accuracy.

PERFORMANCE OBJECTIVE 30

TASK: R & R measured orifice valve/expansion valve.

STANDARD OF PERFORMANCE OF TASK:

Replacement valve must not leak oil or refrigerant and it must be positioned according to manufacturer's specifications.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Manifold gauge set
Vacuum pump
Replacement expansion valve
Solvent
Sandpaper
Refrigerant

ENABLING OBJECTIVES:

1. Use standard tool kit
2. Use manifold gauge set
3. Identify expansion valve

RESOURCES:

1. Manufacturer's Shop Manual

TEACHING ACTIVITIES:

1. Have students draw an expansion valve to illustrate refrigerant flow.
2. Have students list manufacturer's repair procedure.
3. Discuss safety measures.
4. Explain steps in the performance of the task.
5. Have students complete criterion referenced material listed.
PERFORMANCE OBJECTIVE 30

CRITERION-REFERENCED MEASURE:

Questions

1. A defective expansion would probably cause:
   a. Extremely low side reading
   b. Extremely high side reading
   c. Low high side readings
   d. None of the above.

2. A restricted expansion valve screen would cause:
   a. Erratic cooling
   b. No cooling
   c. Less cooling
   d. More cooling.

3. Expansion valves that do not work properly:
   a. Should be replaced
   b. Should be repaired
   c. Ignored.

Answers

1. a
2. c
3. a

Practical Application:

R & R measured orifice valve/expansion valve.

DUTY: MAINTAINING AND REPAIRING AUTOMOBILE AIR CONDITIONING SYSTEMS

PERFORMANCE OBJECTIVE 31

TASK: Test suction throttling valve.

STANDARD OF PERFORMANCE OF TASK:

All defects of suction throttling valve which cause unsatisfactory operation of A/C system must be detected and any leaks must be detected.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Charging station

ENABLING OBJECTIVES:

1. Use standard tool kit
2. Attach charging station

RESOURCES:

1. Automotive Air Conditioner Explained, Filmstrip B-442.

TEACHING ACTIVITIES:

1. Show and discuss Automotive Air Conditioner Explained, Filmstrip B-442.
2. Have the student explain the operation of suction throttling valve.
3. Have the student explain the two methods of controlling suction throttling valve.
4. Explain the procedure of adjusting suction throttling valve.
5. Have the student demonstrate the steps in the performance of the task identified in the performance evaluation.
PERFORMANCE OBJECTIVE 31

CRITERION-REFERENCED MEASURE:

Questions

1. Suction throttling valves are:
   a. Manually controlled
   b. Electronically controlled
   c. Both a and b
   d. Both a and c.

2. A leaking suction throttling valve diaphragm could:
   a. Leak refrigerant into atmosphere
   b. Leak refrigerant into engine
   c. Neither a or b
   d. Both a and b.

3. What type of gas would be a result of burning R-12?
   a. Nitrogen
   b. Carbon monoxide
   c. Phosgene
   d. None of the above.

Answers

1. d
2. d
3. c

Practical Application:

Testing suction throttling valve.

Method of Evaluation:

Use Checklist Performance Objective 31 to determine if the assignment was completed with 100% accuracy.

Note: This document contains performance objectives and a checklist for evaluating a student's ability to test a suction throttling valve. It includes directions for both the student and the evaluator, as well as specific tasks to be completed. The checklist items are evaluated as satisfactory or unsatisfactory, with indications for improvement or approval.
DUTY: MAINTAINING AND REPAIRING AUTOMOBILE AIR CONDITIONING SYSTEMS

PERFORMANCE OBJECTIVE 32

TASK: R & R suction throttling valve.

STANDARD OF PERFORMANCE OF TASK:

Valve must control evaporator temperature to manufacturer's specifications.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Suction throttling valve
O-ring seals
Charging station
Refrigerant Oil

ENABLING OBJECTIVES:

1. Select special tools
2. Secure parts
3. Use charging station or manifold gauge set

RESOURCES:

TEACHING ACTIVITIES:

1. Have the student read service procedure in manufacturer's service manual.
2. Explain service procedure recommended by manufacturer.
3. Have the student list service procedure.
4. Discuss safety precautions with students.
5. Have the student demonstrate the steps in the performance of the task identified in the performance evaluation.
PERFORMANCE OBJECTIVE 32

CRITERION-REFERENCED MEASURE:

Questions

1. A replacement suction throttling valve should be of the same:
   a. Size
   b. Type
   c. Color
   d. Brand.

2. After replacement valve is installed, it should be:
   a. Adjusted
   b. Performance tested
   c. Checked for leaks
   d. All of the above
   e. None of the above.

3. Suction throttling valves control:
   a. Air pressure
   b. Refrigerant speed
   c. Cooling temperature
   d. None of the above.

Answers

1. b
2. d
3. c

Practical Application:

R & R suction throttling valve.

Method of Evaluation:

Use Checklist Performance Objective 32 to determine if the assignment was completed with 100% accuracy.

DUTY: MAINTAINING AND REPAIRING AUTOMOBILE AIR CONDITIONING SYSTEMS

PERFORMANCE OBJECTIVE 33

TASK: R & R compressor.

STANDARD OF PERFORMANCE OF TASK:

Replacement compressor must be installed securely in position specified by manufacturer with all hoses and belts in specified positions with no leaks.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Manifold gauge set
Vacuum pump
R-12 Refrigerant
Compressor
Refrigerant

ENABLING OBJECTIVES:

1. Select proper tools
2. Identify correct parts
3. Use charging station or manifold gauge set

RESOURCES:

TEACHING ACTIVITIES:

1. Explain the safety measures that must be taken when handling refrigerant.
2. Demonstrate procedure for evacuating system prior to compressor removal.
3. Discuss manufacturer's repair procedure for compressor removal and installation.
4. Have the students list the steps for removal and installation of various types of compressors.
5. Have the students complete the steps in the performance of the task identified in the performance evaluation.
PERFORMANCE OBJECTIVE 33

CRITERION-REFERENCED MEASURE:

Questions

1. When replacing a compressor, you should always use oil that is recommended by:
   a. Students
   b. Auto shops
   c. Manufacturer
   d. Owner.
2. After replacing compressor, it is necessary to:
   a. Performance test system
   b. Check for noise
   c. Check for leaks
   d. All of the above.
3. If the replacement compressor does not have a clutch, should you?
   a. Install new clutch
   b. Inspect and use old clutch if serviceable
   c. Consult instructor and owner
   d. All of the above.

Answers

1. c
2. d
3. c

Practical Application:

R & R compressor.

Method of Evaluation:

Use Checklist Performance Objective 33 to determine if the assignment was completed with 100% accuracy.

DUTY: MAINTAINING AND REPAIRING AUTOMOBILE AIR CONDITIONING SYSTEMS

PERFORMANCE OBJECTIVE 34

TASK: Install air conditioner system.

STANDARD OF PERFORMANCE OF TASK:

Installation is done so as to perform to manufacturer's cooling specifications with no unusual noises, all fasteners are secure and hoses and wiring are routed to avoid premature wear.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Charging station
Refrigerant oil
Air conditioning kit

ENABLING OBJECTIVES:

1. Identify all parts to be used
2. Follow diagrams and instructions
3. Use torque wrench

RESOURCES:

TEACHING ACTIVITIES:

1. Explain type of air conditioner that is being installed.
2. Show schematic of installation procedure of all items.
3. Have the student study schematic and list all items to be removed and special tools to be used.
4. Have the students list items to be installed in the proper sequence.
5. Have the students complete the steps in the performance of the task identified in the performance evaluation.
PERFORMANCE OBJECTIVE 34

CRITERION-REFERENCED MEASURE:

Questions

1. List three items to be checked on air conditioner drive system.
   a. ___________
   b. ___________
   c. ___________

2. Air conditioner system should be ___________ tested after installation.

3. An air conditioner system that is operating properly will drop inside to outside air:
   a. About 20 degrees
   b. About 40 degrees
   c. About 50 degrees
   d. None of the above.

Answers

1. a. Belt alignment
    b. Pulley noise
    c. Pulley wobble

2. Performance

3. a

Practical Application:

Installing air conditioning system.

Method of Evaluation:

Use Checklist Performance Objective 34 to determine if the assignment was completed with 100% accuracy.

DUTY: MAINTAINING AND REPAIRING AUTOMOBILE AIR CONDITIONING SYSTEMS

PERFORMANCE OBJECTIVE 35

TASK: R & R low pressure cut-out switch.

STANDARD OF PERFORMANCE OF TASK:

Switch must function to manufacturer's specifications for pressure cut off points and must not leak and must be securely installed.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Low pressure cut-out switch and seal
Charging station
Refrigerant oil
Refrigerant

ENABLING OBJECTIVES:

1. Select proper parts and tools
2. Use standard tool kit
3. Follow manufacturer's instructions

RESOURCES:

1. Air Conditioning Diagnosis, Filmstrip MPI-8009.

TEACHING ACTIVITIES:

1. Review, Air Conditioning Diagnosis, pp. 6, 7 PTF-9-85-10.
2. Review, Air Conditioning Diagnosis, Filmstrip MPI-8009.
3. Explain function of low pressure cut-out switches.
4. Have the students list the location of various low pressure cut-out switches.
5. Have the students list the procedure recommended by manufacturer in replacing low pressure cut-out switches.
PERFORMANCE OBJECTIVE 35

CRITERION-REFERENCED MEASURE

Questions

1. In the event of a major refrigerant loss and a drop in pressure the low pressure cut-off switch:
   a. Will not allow the compressor to engage
   b. Will cycle the compressor as normal
   c. Both a and b
   d. Neither a or b.

2. Replacement of the low pressure cutout switch can be completed:
   a. Without discharging the system,
   b. By discharging system completely
   c. Both a and b
   d. Neither a or b

3. In some systems the low pressure cutout switch is:
   a. Located in the high side because there is no pressure cycling switch in the system
   b. Always in the low side,
   c. Omitted because the high pressure cutoff switch serves the same purpose,
   d. None of the above.

Answers

1. a
2. b
3. a

Practical Application:

R & R low pressure cutout switch.

Method of Evaluation:

Use Checklist Performance Objective 35 to determine if the assignment was completed with 100% accuracy.

TASK: R & R high pressure cut out switch.

STANDARD OF PERFORMANCE OF TASK:

Switch must perform to manufacturer's pressure cut out specifications and switch must not leak.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
High pressure cut out switch and seal
Charging station
Refrigerant oil

ENABLING OBJECTIVES:

1. Identify necessary parts
2. Use charging station

RESOURCES:

1. Air Conditioning Diagnosis, Filmstrip M-8009
2. Air Conditioning Diagnosis: PTF-8-85-10, pp. 6, 7.

TEACHING ACTIVITIES:

1. Have students read and discuss, Air Conditioning Diagnosis, pp. 6, 7 PTF-9-85-10.
2. Show and discuss, Air Conditioning Diagnosis, Filmstrip MPI-8009.
3. Explain function of high pressure cut out switches.
4. Have the students list the location of various high pressure cut-out switches.
5. Have the student list the steps recommended by manufacturer in replacing high pressure cut-out switch.
PERFORMANCE OBJECTIVE 36

CRITERION-REFERENCED MEASURE:

Questions

1. What is the purpose of the high pressure cut-out switch?
2. How is the high pressure cut-out switch connected to the compressor?
3. What, other than pressure, effects the high pressure cut-out switch?

Answers

1. To prevent excessively high pressures in the system.
2. It acts as a ground to the compressor clutch coil.
3. Temperature.

Practical Application:

R & R high pressure cut-out switch.

Method of Evaluation:

Use Checklist Performance Objective 36 to determine if the assignment was completed with 100% accuracy.

PERFORMANCE OBJECTIVE 37

TASK: R & R drive and idler pulleys.

STANDARD OF PERFORMANCE OF TASK:

Pulleys must be secure to shaft, and in alignment.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Replacement pulleys

ENABLING OBJECTIVES:

1. Use standard tool kit
2. Identify necessary parts
3. Use belt tension gauge

RESOURCES:

TEACHING ACTIVITIES:

1. Have the students read service procedure in Manufacturer's Service Manual.
2. Explain function of drive and idler pulleys.
3. Have the students draw several drive and idler pulley arrangements.
4. Have the students explain necessity of proper pulley alignment.
5. Have the students complete the steps in the performance of the task identified in the performance evaluation.
PERFORMANCE OBJECTIVE 37

CRITERION-REFERENCED MEASURE:

Questions:

1. A drive pulley or idler pulley that is not properly aligned, could cause:
   a. Excessive belt wear
   b. Belt to come off
   c. Both a and b
   d. Neither a or b.

2. When replacing either drive or idler pulleys, always use:
   a. Same diameter as original
   b. Same width as original
   c. Neither a or b
   d. Both a and b.

3. A bent or broken pulley should be:
   a. Straightened and reused
   b. Welded and reused
   c. Replaced
   d. None of the above.

Answers

1. c
2. d
3. c

Method of Evaluation:

Use Checklist Performance Objective 37 to determine if the assignment was completed with 100% accuracy.

PERFORMANCE OBJECTIVE 38

TASK: R & R compressor clutch bearing.

STANDARD OF PERFORMANCE OF TASK:

Bearing must turn freely without abnormal drag or noise and must be securely mounted and seated.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Clutch bearing
Clutch removal tool
Charging station
Compressor hose seals
Refrigerant oil
Refrigerant

ENABLING OBJECTIVES:

1. Identify bearing placement
2. Select special tools
3. Select necessary parts

RESOURCES:

TEACHING ACTIVITIES:

1. Explain the function and placement of various types of compressor clutch bearings.
2. Select and demonstrate replacement of two types of compressor clutch bearings.
3. Explain safety procedures to be followed.
4. Have student list bearing replacement procedure and special tools needed.
5. Have the students complete the steps in the performance of the task identified in the performance evaluation.
PERFORMANCE OBJECTIVE 38

CRITERION-REFERENCED MEASURE:

Questions

1. A compressor or clutch bearing that is noisy, should be:
   a. Repaired
   b. Replaced
   c. Lubricated
   d. None of the above.
2. A compressor clutch bearing that is seized, would require:
   a. Compressor replacement
   b. Clutch replacement
   c. Bearing replacement
   d. All of the above.
3. If the compressor clutch bearing is leaking grease, the:
   a. Seal should be replaced
   b. Bearing should be replaced
   c. Both a and b
   d. Neither a or b.

Answers

1. b
2. c
3. b

Practical Application:

R & R compressor clutch bearing.

PERFORMANCE OBJECTIVE 39

TASK: Add oil to compressor.

STANDARD OF PERFORMANCE OF TASK:

Oil level is checked and corrected to manufacturer's specifications.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Charging station
Refrigerant oil
Oil level dipstick
Refrigerant

ENABLING OBJECTIVES:

1. Use refrigerant properly
2. Select proper tools
3. Read and interpret manufacturer's manual

RESOURCES:

TEACHING ACTIVITIES:

1. Have student read and discuss using Air Conditioner Diagnosis, pp. 13-14.
2. Explain usage of graduated measuring container.
3. Demonstrate proper procedure for adding compressor oil.
4. Have the students list manufacturer's recommended procedure.
5. Have the students demonstrate the steps in the performance of the task, identified in the performance evaluation.
PERFORMANCE OBJECTIVE 39

CRITERION-REFERENCED MEASURE:

Questions

1. Overfilling an air conditioner system with oil will:
   a. Increase efficiency
   b. Reduce efficiency
   c. Increase life of compressor
   d. None of the above.
2. Most air conditioner manufacturers recommend:
   a. 727 oil
   b. 426 oil
   c. 525 oil
   d. Any grn+2 will do.
3. Undercharge of air conditioner oil would:
   a. Increase cooling
   b. Shorten life of unit
   c. Cause high gauge readings
   d. None of the above.

Answers

1. b
2. c
3. b

Practical Application:

Adding oil to compressor.

Method of Evaluation:

Use Checklist Performance Objective 39 to determine if the assignment was completed with 100% accuracy.

DUTY: MAINTAINING AND REPAIRING AUTOMOBILE AIR CONDITIONING SYSTEMS

PERFORMANCE OBJECTIVE 40

TASK: R & R compressor reed valve assembly.

STANDARD OF PERFORMANCE OF TASK:

Reed valve assembly must be installed according to manufacturer's procedures with no internal vacuum or refrigerant leaks, and no leakage around the head gaskets.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Torque wrench
Replacement valve assembly
Replacement gaskets

ENABLING OBJECTIVES:

1. Use torque wrench
2. Use standard tool kit

RESOURCES:

1. Manufacturer's Service Manual

TEACHING ACTIVITIES:

1. Explain the function of the reed valve assembly.
2. Describe the construction of the reed valves.
3. Show examples of various manufacturers reed valves.
4. Have the students draw a set of reed valves and be able to explain how they operate.
5. Have the student list the manufacturer's repair procedure.
PERFORMANCE OBJECTIVE 40

CRITERION-REFERENCED MEASURE:

Questions

1. A bent or broken reed valve could cause:
   a. Decrease in cooling
   b. Increase in cooling
   c. Both a and b
   d. Neither a or b.

2. When servicing reed valve plates in the compressor:
   a. New gaskets should be installed
   b. New gaskets should be coated with refrigerant oil
   c. Neither a or b
   d. Both a and b.

3. No type of sealer should be used on reed valve gaskets because:
   a. Excess sealer could be picked up by refrigerant and be deposited throughout system;
   b. Clogging of the expansion valve screen and other filter screen could result;
   c. Both a and b;
   d. Neither a or b;
   e. None of the above: Sealer should be used on all gaskets.

Answers

1. a
2. d
3. c

Practical Application:

R & R compressor reed valve assembly.

Method of Evaluation:

Use Checklist Performance Objective 40 to determine if the assignment was completed with 100% accuracy.

DUTY: MAINTAINING AND REPAIRING AUTOMOBILE AIR CONDITIONING SYSTEMS

PERFORMANCE OBJECTIVE 41

TASK: R & R muffler hose assembly.

STANDARD OF PERFORMANCE OF TASK:

New hose must be securely mounted in position specified by manufacturer and hose connections must not leak.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Muffler hose assembly
Charging station
Refrigerant oil

ENABLING OBJECTIVES:

1. Use charging station
2. Use standard tool kit
3. Use manifold gauges

RESOURCES:

TEACHING ACTIVITIES:

1. Have student read and discuss Air Conditioning Diagnosis, PTF-9-85-10, pp. 13-14.
2. Show and discuss filmstrip, Basic Air Conditioning Systems MPI-8010.
3. Have the students list three dangers of working with refrigerant-12.
4. Demonstrate the steps in task.
5. Have the students demonstrate the steps in the performance of the task, identified in the performance evaluation.
PERFORMANCE OBJECTIVE 41

CRITERION-REFERENCED MEASURE:

Questions

1. Why must hose and muffler assembly and fittings be aligned and positioned in the original position?
   a. To prevent cross threading of fittings
   b. To prevent cutting new seals
   c. A and b
   d. Neither a nor b.

2. Why are braces or brackets used on the hose and muffler assembly?

3. Why must the system be tested for leaks after recharging?
   a. To prevent further damage to the system
   b. To prevent loss of refrigerant oil
   c. To prevent loss of refrigerant
   d. All of the above
   e. None of the above.

Answers

1. c
2. To help prevent vibration and breakage of the metal lines of the assembly.
3. d

Practical Application:

R & R muffler hose assembly.

Method of Evaluation:

Use Checklist Performance Objective 41 to determine if the assignment was completed with 100% accuracy.

### Directions to Student:
Set up the proper equipment. Follow the verbal directions given by the instructor. Complete each step in the sequential order listed.

### Directions to Evaluator:
Observe the student. Pay close attention to items to be evaluated. Be sure the student completes the tasks within a reasonable time. A score of 100% is required for competency.

### Items to Be Evaluated | Satisfactory | Unsatisfactory
--- | --- | ---
1. Discharged system. |  |  
2. Loosened and removed muffler mounting bolts, brackets etc. |  |  
3. Loosened and disconnected muffler hose fittings at both ends. |  |  
4. Removed muffler hose assembly and O-rings from vehicle. |  |  
5. Lubricated new O-rings and installed on hose ends. |  |  
6. Lubricated hose connection threads and position assembly in original position. |  |  
7. Aligned and tightened fitting being careful not to strip or cross thread or cut or nick seals. |  |  
8. Reinstalled braces, brackets, bolts etc. securing assembly in vehicle. |  |  
9. Evacuated system. |  |  
10. Recharged and leak tested system. |  |  
11. Operated air conditioning and performance test system. |  |  

**Approved:** Yes ____  No ____

DUTY: MAINTAINING AND REPAIRING AUTOMOBILE AIR CONDITIONING SYSTEMS

PERFORMANCE OBJECTIVE 42

TASK: R & R hose seals.

STANDARD OF PERFORMANCE OF TASK:

New seals are installed without cutting or kinking, hose connectors are tight with no stripped or crossed threads, and connections and O-rings must not leak.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Charging station
Refrigerant oil
O-rings

ENABLING OBJECTIVES:

1. Use charging station
2. Use standard tool kit

RESOURCES:

TEACHING ACTIVITIES:

2. Illustrate various types of hose seals.
3. Have the student identify several hose sealing methods.
4. Have the students read and list manufacturer's service procedure.
5. Have the students demonstrate the steps in the performance of the task, identified in the performance evaluation.
PERFORMANCE OBJECTIVE 42

CRITERION-REFERENCED MEASURE:

Questions

1. What purpose does an O-ring seal serve?
   a. Prevent loss of refrigerant oil
   b. Prevent loss of refrigerant
   c. Neither a or b
   d. Both a and b
2. Why must the new seal be lubricated with refrigerant oil before installation?
3. What could happen to the new seal if the hose connections were over tightened?

Answers

1. d
2. To help seat new seal and to prevent damage to seal.
3. The new seal could be damaged.

Practical Application:

R & R hose seals.

Method of Evaluation:

Use Checklist Performance Objective 42 to determine if the assignment was completed with 100% accuracy.
CHECKLIST FOR PERFORMANCE OBJECTIVE 42 EVALUATION

PERFORMANCE TEST FOR R & R HOSE SEALS

Student's Name

Date

DIRECTIONS TO STUDENT:
Set-up the proper equipment. Follow the verbal
directions given by the instructor. Complete each
step in the sequential order listed.

DIRECTIONS TO EVALUATOR:
Observe the student. Pay close attention to items
to be evaluated. Be sure the student completes
the tasks within a reasonable time. A score of
100% is required for competency.

ITEMS TO BE EVALUATED

Satisfactory

Unsatisfactory

1. Determined which seals are leaking by
   using leak detector. (Add small
   amount of refrigerant to system if
   empty to produce a leak).

2. Cleaned connectors or seal area before
disassembling.

3. Discharged system noting amount of oil
   lost, if any.

4. Loosened and disconnected hose
   connection at seal being replaced.

5. Removed old seal or O-ring.

6. Inspected sealing surfaces for nicks or
cuts and corrected as necessary.

7. Lubricated new O-ring or seal with
   refrigerant oil.

8. Installed into recess or over end of
   connector, making sure it was fully
   seated.

9. Replaced any lost refrigerant oil
   previously noted.

10. Reattached hose connection and
tightened securely.

11. Evacuated and recharged system and
    checked repair with leak tester.

Approved: Yes  No

DUTY: MAINTAINING AND REPAIRING AUTOMOBILE AIR CONDITIONING SYSTEMS

PERFORMANCE OBJECTIVE 43

TASK: Clean and straighten condenser fins.

STANDARD OF PERFORMANCE OF TASK:

Any severely bent condenser fins which can cause air flow interruption must be straightened and any debris clogging condenser must be removed.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Compressed air
Water hose
Fin straightening tool

ENABLING OBJECTIVES:

1. Use compressed air
2. Use standard tool kit

RESOURCES:

1. Air Conditioning Diagnosis, Filmstrip M5J-AT-K-2A

TEACHING ACTIVITIES:

1. Show and discuss filmstrip, Air Conditioning Diagnosis M5J-AT-K-2A.
2. Explain the effect a dirty condenser would have on air conditioning performance.
3. Demonstrate the proper procedure of cleaning a dirty air conditioning condenser.
4. Demonstrate the proper procedure for straightening air condenser fins.
5. Compare the differences in air conditioner performance before and after cleaning and straightening condenser fins.
PERFORMANCE OBJECTIVE 43

CRITERION-REFERENCED MEASURE:

Questions:

1. Poor engine idle and driveability can be directly effected by:
   a. Insufficient cooling across the condenser and radiator,
   b. High-high side pressures in the air conditioning system,
   c. Both a and b,
   d. Neither a or b.
2. How could restricted condenser and radiator fins cause poor idle or driveability?
3. Inadequate air flow across the condenser will cause:
   a. Refrigerant temperature to rise,
   b. Refrigerant pressures to rise,
   c. All of the above,
   d. None of the above.

Answers

1. c
2. It would cause the compressor to labor (work harder) and put a greater load on the engine.
3. c

Practical Application:

Have students clean and straighten condenser fins.

Method of Evaluation:

Use Checklist Performance Objective 43 to determine if the assignment was completed with 100% accuracy.

DUTY: MAINTAINING AND REPAIRING AUTOMOBILE AIR CONDITIONING SYSTEMS

PERFORMANCE OBJECTIVE 44

TASK: Test expansion valve.

STANDARD OF PERFORMANCE OF TASK:

An expansion valve which is blocked or closed at room temperature and which fails to close when the sensor is in ice water must be detected.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Ice water

ENABLING OBJECTIVES:

1. Use standard tool kit
2. Follow manufacturer's procedure

RESOURCES:

TEACHING ACTIVITIES:

1. Show and discuss Filmstrip MPI-8010.
2. Explain the function of an internally equalized type expansion valve.
3. Explain the function of an externally equalized type expansion valve.
4. Have the student draw a diagram of each valve showing how it operates.
5. Have the students demonstrate the steps in the performance of the task identified in the performance evaluation.
PERFORMANCE OBJECTIVE 44

CRITERION-REFERENCED MEASURE:

Questions
1. What effect would a blocked inlet screen have on the expansion valve?
2. What effect could moisture have on the expansion valve?
3. During the winter months, what precautions could be taken to prevent damage to the expansion valve and other moving parts of the air conditioning system.

Answers
1. It could make the expansion valve test defective.
2. Moisture could cause corroding and sticking of the expansion valve.
3. Short periods of operation would help lubricate the entire system and help prevent damage of internal moving parts.

Practical Application:
Have students test an expansion valve.

Method of Evaluation:
Use Checklist Performance Objective 44 to determine if the assignment was completed with 100% accuracy.

DUTY: MAINTAINING AND REPAIRING AUTOMOBILE AIR CONDITIONING SYSTEMS

PERFORMANCE OBJECTIVE 45

TASK: R & R expansion valve and inlet screen.

STANDARD OF PERFORMANCE OF TASK:

New valve must be mounted securely, connection must be clean and tight and valve or connections must not leak.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Expansion valve and screen
Charging station
O-ring seals
Refrigerant oil

ENABLING OBJECTIVES:

1. Use charging station
2. Read diagrams and specific instructions
3. Identify expansion valve

RESOURCES:

TEACHING ACTIVITIES:

1. Have the students draw an expansion valve to illustrate refrigerant flow.
2. Explain safety measures.
3. Demonstrate the steps in task.
4. Draw a schematic of the manufacturer's repair procedure.
5. Have the students complete the steps in the performance of the task, identified in the performance evaluation.
PERFORMANCE OBJECTIVE 45

CRITERION-REFERENCED MEASURE:

Questions

1. Why must system be evacuated before removing expansion valve?
   a. Because system is under high pressure
   b. Because refrigerant can cause severe injury
   c. Neither a nor b
   d. Both a and b.

2. What is the purpose of resealing expansion valve thermostatic bulb with insulation putty?

3. Why must a vacuum be pulled on the system before recharging?

Answers

1. d

2. Because the thermostat bulb is sensitive to temperature change and can cause the expansion valve to operate improperly.

3. To remove moisture and impurities from the system.

Practical Application:

Have students R & R expansion valve and inlet screen.

Method of Evaluation:

Use Checklist Performance Objective 45 to determine if the assignment was completed with 100% accuracy.

DUTY: MAINTAINING AND REPAIRING AUTOMOBILE AIR CONDITIONING SYSTEMS

PERFORMANCE OBJECTIVE 46

TASK: Inspect evaporator housing drain.

STANDARD OF PERFORMANCE OF TASK:

Any condition(s) causing no or poor operation of case drain must be detected.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit

ENABLING OBJECTIVES:

1. Use standard tool kit
2. Read diagrams and specific instructions

RESOURCES:

TEACHING ACTIVITIES:

2. Show the diagram of air conditioner evaporator housing, emphasize housing drain.
3. Explain the function of housing drain.
4. Show the difference in housing with and without drain hose.
5. Have the students draw housing showing drain location.
6. Have the students demonstrate the steps in the performance of the task, identified in the performance evaluation.
PERFORMANCE OBJECTIVE 46

CRITERION-REFERENCED MEASURE:

Questions

1. What purpose does the evaporator housing drain serve?

2. The evaporator housing drain is:
   a. Located in the bottom half of the evaporator housing
   b. Sometimes made of a rubber drain hose
   c. Sometimes a simple hole
   d. All of the above
   e. None of the above.

3. A clogged evaporator housing drain could cause:
   a. Insufficient cooling
   b. Excessive water to drain back into the interior of the vehicle
   c. A stagnant smell through the vents of the vehicle
   d. All of the above.

Answers

1. It allows the excessive sweat or water to run off the evaporator and be routed to the exterior of the vehicle.

2. d

3. d

Practical Application:

Have students inspect evaporator housing drain.

Method of Evaluation:

Use Checklist Performance Objective 46 to determine if the assignment was completed with 100% accuracy.

DUTY: MAINTAINING AND REPAIRING AUTOMOBILE AIR CONDITIONING SYSTEMS

PERFORMANCE OBJECTIVE 47

TASK: Repair evaporator housing drain.

STANDARD OF PERFORMANCE OF TASK:

Repair evaporator housing drain.

SOURCE OF STANDARD:

Evaporator case must drain away accumulated water without excessive buildup or dripping into passenger section of vehicle.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Sealer or cement
Hose clamps

ENABLING OBJECTIVES:

1. Select proper tools
2. Use housing sealer or cement
3. Use hose clamps

RESOURCES:

TEACHING ACTIVITIES:

2. Show the diagram of air conditioner housing emphasizing evaporator housing drain.
3. Explain the function of housing drain.
4. Show the difference in housing with drain hose and without drain hose.
5. Have the students demonstrate the steps in the performance of the task identified in the performance evaluation.
PERFORMANCE OBJECTIVE 47

CRITERION-REFERENCED MEASURE:

Questions

1. When repairing or reopening an evaporator drain:
   a. A blunt instrument should be used
   b. Care should be taken not to damage the evaporator core or fins
   c. A and b
   d. Neither a or b.
2. To prevent a drain hose from coming loose you should use __________.
3. A properly operating evaporator housing drain should:
   a. Permit water to run under vehicle only while air conditioning is operating,
   b. Permit water to run under vehicle at all times,
   c. Not permit water to run under vehicle at all,
   d. None of the above.

Answers

1. c
2. Cement or clamps
3. a

Practical Application:

Have students repair evaporator housing drain.

DUTY: MAINTAINING AND REPAIRING AUTOMOBILE AIR CONDITIONING SYSTEMS

PERFORMANCE OBJECTIVE 48

TASK: R & R evaporator pressure control valve.

STANDARD OF PERFORMANCE OF TASK:

Replacement valve must be installed in accordance with manufacturer's procedures.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS OF PERFORMANCE OF TASK:

Standard tool kit
Evaporator pressure control valve
Charging station
Refrigerant oil
Refrigerant

ENABLING OBJECTIVES:

1. Read diagrams and specific instructions
2. Use standard tool kit

RESOURCES:

1. Air Conditioning Diagnosis, Filmstrip M5J-AT-K-2A.

TEACHING ACTIVITIES:

1. Have students review and discuss, Air Conditioning Diagnosis, Filmstrip M5J-AT-K-2A.
2. Identify the location and explain the function of evaporator pressure regulator (EPR) valve.
3. Provide (EPR) valve for student to examine.
4. Emphasize manufacturer's usage of (EPR) valve.
5. Have the student list manufacturer's repair procedure.
PERFORMANCE OBJECTIVE 48

CRITERION-REFERENCED MEASURE:

Questions

1. The evaporator pressure regulator valve is calibrated to produce maximum cooling:
   a. Without causing frost or ice on the evaporator fins and tubing,
   b. While causing frost and ice to build up on the evaporator fins and tubing,
   c. Both a and b,
   d. Neither a or b.

2. What causes insufficient cooling on freeze up?
3. Checking the performance of a new valve after installation insures ____________.

Answers

1. a
2. Changing the factory calibration of the evaporator pressure regulator valve.
3. Maximum cooling without freeze up and no leaks.

Practical Application:

Have students R & R evaporator pressure control valve.

Method of Evaluation:

Use Checklist Performance Objective 48 to determine if the assignment was completed with 100% accuracy.

Evaluator's Signature __________________ Date _____________
DUTY: MAINTAINING AND REPAIRING AUTOMOBILE AIR CONDITIONING SYSTEMS

PERFORMANCE OBJECTIVE 49

TASK: R & R evaporator temperature control valve sensor.

STANDARD OF PERFORMANCE OF TASK:

Sensor must detect evaporator temperature and control same within manufacturer's tolerances and be mounted securely in place with no leaks.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Evaporator temperature control sensor

ENABLING OBJECTIVES:

1. Read diagrams and specific instructions
2. Use standard tool kit

RESOURCES:

1. Air Conditioning Diagnosis, Filmstrip M5J-AT-K-2A.

TEACHING ACTIVITIES:

1. Have students review and discuss, Air Conditioning Diagnosis, Filmstrip M5J-AT-K-2A.
2. Identify the location and function of Evaporator Temperature Regulator (ETR) valve.
3. Provide (ETR) valve for students to examine.
4. Compare (ETR) valve to (EPR) valve and explain difference of each. Emphasize usage of each.
5. Have the students draw and be able to explain function of each valve.
6. Have the students explain why the (ETR) valve would have electrical connections.
PERFORMANCE OBJECTIVE 49

CRITERION-REFERENCED MEASURE:

Questions

1. Why is an (ETR) valve used in some air conditioning systems?
2. What type of air conditioning system uses this valve?
3. What shuts off flow of refrigerant from the compressor?

Answers

1. It helps to prevent icing of the evaporator.
2. Automatic temperature control units used on Chrysler vehicles.
3. The (ETR) valve.

Practical Application:

R & R evaporator temperature control valve sensor.

Method of Evaluation:

Use Checklist Performance Objective 49 to determine if the assignment was completed with 100% accuracy.
CHECKLIST FOR PERFORMANCE OBJECTIVE 49 EVALUATION

PERFORMANCE TEST FOR R & R EVAPORATOR TEMPERATURE CONTROL VALVE SENSOR

DUTY: MAINTAINING AND REPAIRING AUTOMOBILE AIR CONDITIONING SYSTEMS

PERFORMANCE OBJECTIVE 50

TASK: R & R system service valves.

STANDARD OF PERFORMANCE OF TASK:

Valves must control refrigerant and be securely mounted with no leaks.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Charging station
Refrigerant oil
Service valves
Refrigerant

ENABLING OBJECTIVES:

1. Use charging station
2. Read diagrams and instructions
3. Use refrigerant safely

RESOURCES:

TEACHING ACTIVITIES:

1. Show the students a systems service valve.
2. Draw a system service valve showing various positions.
3. Explain the difference in a service valve and a Schrader valve.
4. Have the students draw a system service valve.
5. Have the students explain why it is called a 3 way valve; i.e., closed, service, open.
6. Have the students demonstrate the steps in the performance of the task, identified in the performance evaluation.
PERFORMANCE OBJECTIVE 50

CRITERION-REFERENCED MEASURE:

Questions

1. What is one advantage of a three way system service valve?
2. Any system repair done with a ________ type system service valve would require system evacuate and recharge.
3. If a system service valve leaks, it should be:
   a. Replaced
   b. Repaired
   c. Both a and b
   d. Neither a or b.

Answers

1. The system can be shut off from compressor to permit compressor repairs without losing system charge.
2. Schrader.
3. a.

Practical Application:

R & R system service valve.

Method of Evaluation:

Use Checklist Performance Objective 50 to determine if the assignment was completed with 100% accuracy.

### Evaluator's Signature

Evaluator's Signature: [Signature]

Date: [Date]
DUTY: MAINTAINING AND REPAIRING AUTOMOBILE AIR CONDITIONING SYSTEMS

PERFORMANCE OBJECTIVE 51

TASK: R & R high pressure relief valve.

STANDARD OF PERFORMANCE OF TASK:

New valve must function to manufacturer's specifications for pressure release, must not leak and be securely mounted.

SOURCE OF STANDARD:

Writing 1eam, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
High pressure relief valve and seal
Refrigerant oil
Charging station
Refrigerant

ENABLING OBJECTIVES:

1. Read diagrams and specific instructions
2. Identify O-ring seals
3. Use standard tool kit

RESOURCES:

1. Air Conditioning Diagnosis, PTF-9-85-10, p. 6, 7.

TEACHING ACTITIES:

1. Have students read and discuss manual Air Conditioning Diagnosis, PTF-9-85-10, pp 6, 7.
2. Show the location of high pressure relief valve on G.M., Ford, Chrysler, AMC, and other manufacturer's air conditioning units.
3. Explain the purpose and function of high pressure relief valve.
4. Have the students list the location of high pressure relief valve from five different manufacturers.
5. Have the students list the recommended repair procedure of manufacturer.
PERFORMANCE OBJECTIVE 51

CRITERION-REFERENCED MEASURE:

Questions

1. Discharge of air conditioner system is necessary before removal of high pressure relief valve because:
   a. System is under high pressure,
   b. Personal injury could result,
   c. Refrigerant must be safe to recharge system with same refrigerant,
   d. A and b only
   e. A, b, and c.

2. The high pressure relief valve will open and release refrigerant to atmosphere when:
   a. System pressure exceeds a preset level
   b. System temperature exceeds a preset level
   c. Neither a or b
   d. Both a and b.

3. After replacing a defective high pressure relief valve:
   a. Refrigerant level should be checked,
   b. Refrigerant level may not be checked,
   c. Refrigerant should be added,
   d. All of the above
   e. A and b only.

Answers

1. d
2. d
3. a

Practical Application:

Have students R & R high pressure relief valve.

Method of Evaluation:

Use Checklist Performance Objective 51 to determine if the assignment was completed with 100% accuracy.

DUTY: MAINTAINING AND REPAIRING AUTOMOBILE AIR CONDITIONING SYSTEMS

PERFORMANCE OBJECTIVE 52

TASK: R & R P.O.A. valve.

STANDARD OF PERFORMANCE OF TASK:

Valve must provide for maximum cooling without causing condensation on evaporator from freezing within manufacturer's specified temperature range.

SOURCE OF STANDARD:
Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
P.O.A. valve
O-ring seals
Charging station
Refrigerant oil.

ENABLING OBJECTIVES:

1. Read diagrams and specific instructions.
2. Use charging station.
3. Identify P.O.A. valve.

RESOURCES:

TEACHING ACTIVITIES:

1. Define P.O.A. (Pilot Operated Absolute) valve.
2. Explain the function of P.O.A. valve.
3. Identify the location of P.O.A. valve.
4. Have the students draw and identify all parts of a P.O.A. valve.
5. Have students explain the main advantage of P.O.A. valves.
6. Have the students demonstrate the steps in the performance of the task, identified in the performance evaluation.
PERFORMANCE OBJECTIVE 52

CRITERION-REFERENCED MEASURE:

Questions

1. The function of the P.O.A. valve is:
   a. To control evaporator pressure
   b. To control expansion valve pressure
   c. To control pressure of the compressor
   d. All of the above.

2. P.O.A. stands for:
   a. Pressure operated absolute
   b. Pressure outside absolute
   c. Pilot operated absolute
   d. None of the above.

3. The P.O.A. valve setting is factory set for 29.5 pounds per square inch gauge pressure, at 900 feet and:
   a. Is adjustable
   b. Is not to be tampered with
   c. Is self adjusting
   d. None of the above.

Answers

1. a
2. c
3. b

Practical Application:

Have students R & R P.O.A. valve.

Method of Evaluation:

Use Checklist Performance Objective 52 to determine if the assignment was completed with 100% accuracy.

DUTY: MAINTAINING AND PAIRING AUTOMOBILE AIR CONDITIONING SYSTEMS

PERFORMANCE OBJECTIVE 53

TASK: R & R V.I.R. valve.

STANDARD OF PERFORMANCE OF TASK:

Valve must provide maximum cooling without causing condensation on evaporator from freezing within manufacturer's specifications.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

- Standard tool kit
- V.I.R. valve
- O-rings
- Charging station
- Refrigerant oil

ENABLING OBJECTIVES:

1. Follow directions which are specific to the task
2. Use charging station

RESOURCES:

2. Manufacturer's Service Manual

TEACHING ACTIVITIES:

1. Provide a receiver dryer with a V.I.R. in place for demonstration.
2. Explain the function of VIR and usage by manufacturer.
3. Discuss the advantage of VIR control system.
4. Emphasize the service procedure of VIR system; (i.e.,) ease of replacing Desiccant bag.
5. Have the student list manufacturer's service procedure.
6. Have the students demonstrate the steps in the performance of the task, identified in the performance evaluation.
PERFORMANCE OBJECTIVE 53

CRITERION-REFERENCED MEASURE:

Questions

1. Define V.I.R.
2. The V.I.R. system uses:
   a. A desiccant bag inside the assembly
   b. No type of desiccant
   c. Both a and b
   d. Neither a or b.
3. In the V.I.R. system what do the two valves function as?

Answers

1. Valve In Receiver.
2. a
3. One valve functions as the P.O.A. valve, the other valve functions as the expansion valve.

Practical Application:

Have students R & R V.I.R. valve.

Method of Evaluation:

Use Checklist Performance Objective 53 to determine if the assignment was completed with 100% accuracy.

DUTY: MAINTAINING AND REPAIRING AUTOMOBILE AIR CONDITIONING SYSTEMS

PERFORMANCE OBJECTIVE 54

TASK: Charge system.

STANDARD OF PERFORMANCE OF TASK:

The high and low pressure readings must meet manufacturer's specifications considering ambient temperature.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Manifold Gauges and Hose
Vacuum Pump
Scale
Refrigerant
Specifications for system being charged

ENABLING OBJECTIVES:

1. Follow directions
2. Use manifold gauge set
4. Use vacuum pump
5. Use electronic sight glass

RESOURCES:

TEACHING ACTIVITIES:

2. Explain the usage of performance chart, Air Conditioning Diagnosis, PTF-9-85-10 page 15.
3. Demonstrate the usage of manifold gauge set, vacuum pump and/or charging station, (Emphasize safety precautions).
4. Have the students list the steps in recharging system according to manufacturer's procedure.
5. Have the student demonstrate the steps in the performance of the task, identified in the performance evaluation.
PERFORMANCE OBJECTIVE 54

CRITERION-REFERENCED MEASURE:

Questions

1. All automotive air conditioning systems use only:
   a. R-22 refrigerant
   b. R-12 and R-22 mixture
   c. R-12 only
   d. None of the above.
2. When charging an air conditioner system, how do you know how much refrigerant the system will hold?
3. If the system does not have a sight glass, how do you know the system is fully charged?
4. What is the advantage of using an "Electronic Sight Glass?"

Answers

1. c
2. Read manufacturer's specifications.
3. Use an electronic sight glass or fill according to manufacturer's specifications.
4. It will let you know when the system is filled to capacity or if it is undercharged.

Practical Application:

Have students charge system.

Method of Evaluation:

Use Checklist Performance Objective 54 to determine if the assignment was completed with 100% accuracy.

MAINTAINING AND REPAIRING AUTOMOBILE COOLING AND HEATING SYSTEMS
DUTY: MAINTAINING AND REPAIRING AUTOMOBILE COOLING AND HEATING SYSTEMS

PERFORMANCE OBJECTIVE 55

TASK: R & R water control valve.

STANDARD OF PERFORMANCE OF TASK:

The valve must be installed according to manufacturer's specifications for direction of flow, and all fittings must be secure and free from leaks.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Replacement water control valve
Hose clamps

ENABLING OBJECTIVES:

1. Follow directions
2. Use standard tool kit
3. Use cooling system pressure tester

RESOURCES:

TEACHING ACTIVITIES:

1. Explain the operation of vacuum controlled water valve.
2. Explain the operation of manually controlled water valve.
3. Describe the location of various water valves.
4. Have the students draw and explain operation of vacuum controlled water valve and manually controlled water valve.
5. Have the students list the steps in replacement of various water control valves.
6. Have the student demonstrate the steps in the performance evaluation.
PERFORMANCE OBJECTIVE 55

CRITERION-REFERENCED MEASURE:

Questions

1. One of the main precautionary measures to be taken before removal of the water control valve is to:
   a. Allow cooling down of the hot coolant to prevent any injury
   b. Remove radiator cap to relieve pressure
   c. Both a and b
   d. Neither a or b.

2. After installation of the water control valve the engine should be run to normal operating temperature to:
   a. Insure that the water control valve is operating properly,
   b. Insure that the coolant system is full,
   c. Insure that the thermostat is opening and closing,
   d. All of the above
   e. None of the above.

3. If the water control valve is operating properly when closed:
   a. It should be hot on one side and cool on the other,
   b. It should be hot on both sides,
   c. Both a and b
   d. Neither a or b.

Answers

1. c
2. d
3. a

Practical Application:

Have students R & R water control valve.

Method of Evaluation:

Use Checklist Performance Objective 55 to determine if the assignment was completed with 100% accuracy.

PERFORMANCE OBJECTIVE 56

TASK: Test thermostat.

STANDARD OF PERFORMANCE OF TASK:

Any deviations from manufacturer's specifications for opening temperature must be detected.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Heating element
Pan of water
Thermometer

ENABLING OBJECTIVES:

1. Use thermometer
2. Read diagrams and specific instructions

RESOURCES:

2. How to Service the Cooling System, Filmstrip B-423.

TEACHING ACTIVITIES:

1. Lecture Cooling Systems PT-6-81-3, pp. 3, 4.
2. Show and discuss, How to Service the Cooling System, Filmstrip B-423.
3. Demonstrate the procedure for testing a thermostat.
4. Have the students draw two types of thermostats.
5. Have the students explain the function of the thermostat.
6. Have the students demonstrate the steps in the performance of the task, identified in the performance evaluation.
PERFORMANCE OBJECTIVE 56

CRITERION-REFERENCED MEASURE:

Questions:

1. When testing a thermostat and it opens early the thermostat:
   a. Should be adjusted
   b. Should be replaced
   c. Neither a or b
   d. Both a and b

2. The thermostat serves what purpose in the cooling system?

3. A thermostat that will not open could cause:
   a. Engine damage
   b. Engine to overheat
   c. Oil to thin out
   d. All of the above.

4. What effect would a cold thermostat have on engine performance?

Answers

1. b
2. Control engine temperature
3. d
4. Reduce fuel mileage
   Increase engine wear
   Increase exhaust emissions
   Affect driveability

Practical Application:

Have students test thermostat.

Method of Evaluation:

Use Checklist Performance Objective 56 to determine if the assignment was completed with 100% accuracy.

DUTY: MAINTAINING AND REPAIRING AUTOMOBILE COOLING AND HEATING SYSTEMS

PERFORMANCE OBJECTIVE 57

TASK: R & R thermostat.

STANDARD OF PERFORMANCE OF TASK:

The thermostat must be installed according to manufacturer's specifications for placement and the hose connections and gasket must not leak.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Replacement thermostat
Replacement gasket
Container for drained coolant
Gasket Sealer

ENABLING OBJECTIVES:

1. Read diagrams and specific instructions
2. Use gasket sealer
3. Use torque wrench

RESOURCES:

1. How to Service the Cooling System, Filmstrip B-423.

TEACHING ACTIVITIES:

1. Review filmstrip, How to Service the Cooling System B-423.
2. Discuss manufacturer's service procedure.
3. Explain safety precautions.
4. Have the student list the manufacturer's repair procedure.
5. Have the students demonstrate the steps in the performance of the task, identified in the performance evaluation.
PERFORMANCE OBJECTIVE 57

CRITERION-REFERENCED MEASURE:

Questions

1. Where is the thermostat located in the cooling system?
2. Why should you not overtighten the thermostat housing bolts?
3. What is the normal temperature of a thermostat in today's engines?

Answers

1. Between the engine and top radiator tank, usually in the intake manifold.
2. Overtighten could damage thermostat housing or gasket.
3. 195 degrees.

Practical Application:

Have students R & R thermostat.

Method of Evaluation

Use Check.ist Performance Objective 57 to determine if the assignment was completed with 100% accuracy.

PERFORMANCE OBJECTIVE 58

TASK: R & R heater core (outside access).

STANDARD OF PERFORMANCE OF TASK:

The heater core must be installed in the position specified by manufacturer without leaks.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Container for coolant
Replacement heater core
Sponge
Cooling system pressure tester

ENABLING OBJECTIVES:

1. Read diagrams and specific instructions
2. Use standard tool kit
3. Use cooling system pressure tester

RESOURCES:

TEACHING ACTIVITIES:

2. Describe the location of various heater cores.
3. Discuss the procedure for replacement of heater core on non air conditioner equipped vehicles and air-conditioner equipped.
4. Explain the steps in replacing the heater core according to the manufacturer's specifications.
5. Have the students demonstrate the steps in the performance of the task, identified in the performance evaluation.
PERFORMANCE OBJECTIVE 58

CRITERION-REFERENCED MEASURE:

Questions

1. A leaking heater core will cause loss of:
   a. Oil
   b. Heater core fluid
   c. Engine coolant
   d. None of the above.

2. An outside accessible heater core can be pressure tested and will usually leak out:
   a. The top of the heater core housing
   b. The evaporator core drain
   c. The bottom of the heater core housing
   d. Will not show leakage anywhere
   e. B and c only.

3. When refilling a heating system after installing heater core the heater control should be in the __________ position.

Answers

1. c
2. e
3. On

Practical Application:

Have students R & R heater core (outside access).

Method of Evaluation:

Use Checklist Performance Objective 58 to determine if the assignment was completed with 100% accuracy.

ERIC
DUTY: MAINTAINING AND REPAIRING AUTOMOBILE COOLING AND HEATING SYSTEMS

PERFORMANCE OBJECTIVE 59

TACK: R & R heater core (inside access).

STANDARD OF PERFORMANCE OF TASK:

The heater core must be installed in the position specified by manufacturer without leaks.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

- Standard tool kit
- Container for coolant
- Replacement heater core
- Sponge
- Drop cloth
- Cooling system pressure tester

ENABLING OBJECTIVES:

1. Read diagrams and specific instructions
2. Use standard tool kit
3. Use cooling system pressure tester

RESOURCES:

TEACHING ACTIVITIES:

2. Describe the location of various heater cores.
3. Discuss the procedure for replacement of heater core in air conditioner, and non-air conditioner equipped vehicles.
4. Explain the steps in replacing the heater core according to the manufacturer's specifications.
5. Have the students demonstrate the steps in the performance of the task, identified in the performance evaluation.
PERFORMANCE OBJECTIVE 59

CRITERION-REFERENCED MEASURE:

Questions

1. In an inside accessible heater core, one sure sign of a leaking heater core could be ________.
2. Another sign of a leaking heater core (inside access) could be:
   a. A vapor coming from the air conditioner vents
   b. Loss of coolant with no visible signs
   c. A or b
   d. Neither a or b.
3. After installation of the heater core it:
   a. Should be pressure tested
   b. Should be checked for leaks
   c. Should be checked for proper operation
   d. All of the above.

Answers

1. Coolant present in the floor board of the passenger side of the vehicle.
2. c
3. d

Practical Application:

Have students R & R heater core (inside access).

Method of Evaluation:

Use Checklist Performance Objective 59 to determine if the assignment was completed with 100% accuracy.

DUTY: MAINTAINING AND REPAIRING AUTOMOBILE COOLING AND HEATING SYSTEMS

PERFORMANCE OBJECTIVE 60

TASK: R & R hoses.

STANDARD OF PERFORMANCE OF TASK:

Hoses must be routed according to manufacturer's specifications and must not leak when engine is at operating temperature and radiator pressure.

SOURCE OF STANDARD

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Replacement hoses
Cooling system pressure tester

ENABLING OBJECTIVES:

1. Use standard tool kit
2. Use cooling system pressure tester
3. Follow safety instructions

RESOURCES:

1. Cooling System Service, Filmstrip ATJ-5A.

TEACHING ACTIVITIES:

1. Show and discuss Cooling System Service, Filmstrip ATJ-5A.
2. Demonstrate the differences in hose conditions (use new and old hoses).
3. Demonstrate the safety precautions and steps in task.
4. Have the students explain manufacturer's service procedure.
5. Have the students complete the steps in the performance evaluation.
PERFORMANCE OBJECTIVE 60

CRITERION-REFERENCED MEASURE:

Questions

1. When replacing hoses, care should be taken:
   a. Not to overtighten clamps
   b. Not to kink twist hoses
   c. Not to undertighten clamps
   d. All of the above
   e. None of the above.

2. What percentage of antifreeze coolant should be used in most systems?

3. The lower radiator hose should have a spring inside it to prevent
   ____________.

Answers

1. d
2. 50%
3. The hose from collapsing and reducing coolant flow.

Practical Application:

Have students R & R hoses.

Method of Evaluation:

Use Checklist Performance Objective 60 to determine if the assignment was completed with 100% accuracy.

PERFORMANCE OBJECTIVE 61

TASK: Test thermal sensing switch.

STANDARD OF PERFORMANCE OF TASK:

All failures or malfunctions of thermal sensing switch must be detected and identified.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit

ENABLING OBJECTIVES:

1. Use multimeter
2. Read and interpret manufacturer's procedures

RESOURCES:

TEACHING ACTIVITIES:

1. Describe the parts of the electric fan circuit.
2. Explain how the electric fan operates.
3. Discuss what operates the electric fan.
4. Explain how the thermal sensor and relay operate at the correct temperature.
5. Demonstrate how to diagnose problems in the system using a multimeter.
PERFORMANCE OBJECTIVE 61

CRITERION-REFERENCED MEASURE:

Questions
1. The ________ ________ is temperature sensitive.
2. The ________ ________ ________ sends voltage to the fan motor.
3. On G.M. automobiles, the fan motor will start running at ________ ________.

Answers
1. Thermal sensor
2. Cooling fan relay
3. 230°F

Practical Application:
Have students test thermal sensing switch.

PERFORMANCE OBJECTIVE 63

TASK: R & R drive belts.

STANDARD OF PERFORMANCE OF TASK:

Belts must be aligned and tensioned to manufacturer's specifications and attaching hardware must be fastened securely in place.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Replacement belt
Belt tension gauge

ENABLING OBJECTIVES:

1. Read and interpret manufacturer's specifications
2. Use belt tension tester

RESOURCES:

TEACHING ACTIVITIES:

1. Have students read page 83 in Auto Mechanics Fundamentals.
2. Explain the construction of V-belts and Ribbed belts.
3. Using old drive belts, show the student how to recognize a defective belt.
4. Demonstrate how to replace a defective drive belt.
5. Have a student replace a drive belt.
PERFORMANCE OBJECTIVE 63

CRITERION-REFERENCED MEASURE:

Questions

1. Two types of drive belts are _________ and _________.
2. A drive belt that becomes glazed will loose _________ and begin to slip.
3. After a new belt is installed, it is a good idea to check it's tension at about _________ miles of service.

Answers

1. V-Belts - Ribbed Belts
2. Friction
3. 200.

Practical Application:

Have students R & R drive belts.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 63 to determine if the assignment was completed with 100% accuracy.

TASK: Clean cooling system chemically.

STANDARD OF PERFORMANCE OF TASK:

Any blockages or restrictions in the radiator, hoses, or engine water passages must be removed, and manufacturer's procedures must be followed.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

STANDARD OF PERFORMANCE OF TASK:

Standard tool kit
Chemical cleaning solution

ENABLING OBJECTIVES:

1. Read and interpret manufacturer's procedures
2. Select the proper chemical cleaner

RESOURCES:

TEACHING ACTIVITIES:

1. Explain what happens in a cooling system when the coolant is not serviced.
2. Describe the different chemical cleaners.
3. List on the chalkboard all safety precautions.
4. Have students list all safety precautions in their notebooks.
5. Locate all petcocks and drain plugs that have to be removed on an automobile.
PERFORMANCE OBJECTIVE 65

CRITERION-REFERENCED MEASURE:

Questions

1. Heavy duty cooling system cleaners consist of _____________.
2. What is used to neutralize the acid in the cooling system cleaner?
3. What safety precaution must be followed when working with cooling system cleaners?

Answers

1. Phosphoric acid
2. Baking soda
3. Wear safety glasses.

Practical Application:

Have students clean cooling systems chemically.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 65 to determine if the assignment was completed with 100% accuracy.
CHECKLIST FOR PERFORMANCE OBJECTIVE 65 EVALUATION

DUTY: MAINTAINING AND REPAIRING AUTOMOBILE COOLING AND HEATING SYSTEMS

PERFORMANCE OBJECTIVE 66

TASK: Check variable speed fan clutch.

STANDARD OF PERFORMANCE OF TASK:

A clutch which slips at normal operating temperatures, must be detected.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit

ENABLING OBJECTIVES:

1. Read and interpret manufacturer's procedure
2. Identify type of fan clutch

RESOURCES:

1. Controlling Engine Temperature.

TEACHING ACTIVITIES:

2. Discuss why fan clutches are used on automobiles.
3. Explain the two types of fan clutches and how each operates.
4. Have a student identify the types of fan clutches.
5. Explain how to recognize a defective fan clutch.
PERFORMANCE OBJECTIVE 66

CRITERION-REFERENCED MEASURE:

Questions

1. What causes the thermostatic coil fan clutch to engage and pull air across the radiator?
2. Another name for the fluid fan drive is _______ _______.
3. The fan clutch that transfers torque through the use of a special silicone is called a _______ _______ _______.

Answers

1. Under hood temperatures
2. Torque control drive
3. Viscous drive fan clutch.

Practical Application:

Have students check variable speed fan clutch.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 66 to determine if the assignment was completed with 100% accuracy.

PERFORMANCE OBJECTIVE 67

TASK: R & R variable speed fan clutch.

STANDARD OF PERFORMANCE OF TASK:

Clutch must be installed according to manufacturer's procedures and specifications for torque of the attaching bolts, and fan must not strike any parts of the engine compartment.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Replacement clutch unit

ENABLING OBJECTIVES:

1. Use tool kit
2. Read and interpret manufacturer's specifications

RESOURCES:

TEACHING ACTIVITIES:

1. Explain the purpose of the cooling fan.
2. List the types of fan clutches.
3. Explain the viscous drive fan clutch.
4. Discuss the bimetallic spring used in the viscous drive fan clutch.
5. Demonstrate the removal and installation of a fan clutch.
6. Have a student demonstrate the removal and installation of a fan clutch.
PERFORMANCE OBJECTIVE 67

CRITERION-REFERENCED MEASURE:

Questions

1. The __________ regulates the flow of silicone in the fan clutch.
2. The fan clutch is __________ sensitive.
3. The liquid used in a fan clutch is __________ __________.

Answers

1. Bimetallic strip
2. Heat
3. Silicone oil.

Practical Application:

Have students R & R variable speed fan clutch.

TASK: R & R electric cooling fan motor.

STANDARD OF PERFORMANCE OF TASK:

Fan must be securely installed in the position specified by the manufacturer with all wire connections in place.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Replacement fan motor

ENABLING OBJECTIVES:

1. Use multimeter
2. Read and interpret manufacturer's procedures

RESOURCES:

TEACHING TIPS:

1. Explain why electric cooling fans are used on today's automobiles.
2. Have student list some of the automobiles that electric cooling fans are installed on.
3. Using an automobile so equipped, identify the related switches, relays, and wire connectors used by the manufacturer.
4. Discuss with the student the purpose of each switch, relay, and wire connector.
5. Demonstrate the correct diagnostic procedures to follow when troubleshooting the electric fan circuit.
PERFORMANCE OBJECTIVE 68

CRITERION-REFERENCED MEASURE:

Questions

1. The electric fan motor will operate any time the _______ _______
   ________ is turned on.
2. The electric fan motor switch is ________ ________.
3. To help prevent fuel vaporization on an automobile with extreme under hood
temperatures, a _______ _______ is used and mounted on the
carburator.

Answers

1. Air conditioning compressor
2. Temperate sensitive
3. Delay relay.

Practical Application:

Have students R & R electric cooling fan motor.

DUTY: MAINTAINING AND REPAIRING AUTOMOBILE COOLING AND HEATING SYSTEMS

PERFORMANCE OBJECTIVE 69

TASK: Test radiator pressure cap.

STANDARD OF PERFORMANCE OF TASK:

Any difference between the rated pressure of the radiator cap and the actual pressure must be detected.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Radiator pressure tester

ENABLING OBJECTIVES:

1. Use radiator cap pressure tester
2. Read and interpret manufacturer's service manual

RESOURCES:

TEACHING ACTIVITIES:

1. Describe the purpose of a radiator pressure cap.
2. Explain the two types of radiator caps.
3. Identify the parts of the closed cooling system radiator cap.
4. Explain the different cooling system problems the radiator cap can cause.
5. Describe how to check a radiator cap using the radiator cap pressure tester.
PERFORMANCE OBJECTIVE 69

CRITERION-REFERENCED MEASURE:

Questions

1. The boiling point of water is ______ degrees fahrenheit.
2. A current radiator cap of 15 psi will raise the boiling point of water to ______ degrees fahrenheit.
3. The closed cooling system water level should never be checked _______.

Answers

1. 212°
2. 260°
3. Hot

Practical Application:

Have students test radiator pressure cap.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 69 to determine if the assignment was completed with 100% accuracy.

1. Recognize various types of coolant switches.
2. Operate the ohmmeter properly.
3. Use the thermometer correctly.

RESOURCES:

TEACHING ACTIVITIES

1. Demonstrate proper connection between lockout switch and ohmmeter.
2. Discuss and determine proper battery voltage at lockout switch terminal.
3. Explain why the ohmmeter reads either infinity or zero, depending on condition of lockout switch.
4. Show condition of lockout switch under cold and warm engine temperature.
5. Tell why loose/broken terminals cause intermittent operation.
6. Have the students determine if switch meets manufacturer's specification.
PERFORMANCE OBJECTIVE 75

CRITERION-REFERENCED MEASURE:

Questions

1. Test a two terminal switch by touching ________ probes to each terminal.
2. Suspend the switch in a pan of water so that only the ________ is immersed.
3. The ________ is used to measure water temperature while testing the lockout switch.

Answers

1. Ohmmeter
2. Sensor
3. Thermometer

Practical Application:

Have students test cold lockout switch.

Method of Evaluation:

Use Checklist Performance Objective 75 to determine if the assignment was completed with 100% accuracy.

DUTY: MAINTAINING AND REPAIRING AUTOMOBILE COOLING AND HEATING SYSTEMS

PERFORMANCE OF OBJECTIVE NO. 76

TASK: R & R cold lockout switch.

STANDARD OF PERFORMANCE OF TASK:

Switch must be securely mounted without being stripped or cross threaded; all electrical connections must be clean and tight, there must be no coolant leaks, and switch must control blower motor operation at manufacturer's specified temperatures.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Antifreeze drain pan
Thread sealant
Replacement cold lockout switch.

ENABLING OBJECTIVES:

1. Recognize correct type lockout switch.
2. Use standard hand tools. Follow directions.
3. Check coolant strength. Test switch for correct operation.

RESOURCES:

TEACHING ACTIVITIES:

1. Have the students drain the coolant to below the level of the switch.
2. Have the students remove all electrical wires from lockout switch.
3. Have the students remove the switch by unscrewing it.
4. Direct students to apply thread sealant to new switch before installing.
5. Instruct students to tighten new switch securely and check switch for coolant leaks.
PERFORMANCE OF OBJECTIVE NO. 76

CRITERION-REFERENCED MEASURE:

Questions

1. The threads of the new lockout switch should be coated with a __________ or __________ to prevent leakage.
2. The water temperature should be near __________ when testing the new switch.
3. Electrical lockout switches have either one or two __________.

Answers

1. Sealer or tape (Teflon)
2. 212°F or 100°C
3. Terminals

Practical Application:

Have student remove and replace cold lockout switch.

Method of Evaluation:

Use Checklist Performance Objective 76 to determine if the assignment was completed with 100% accuracy.

MAINTAINING AND REPAIRING AIR CONDITIONING AND HEATING CONTROL UNITS
DUTY: MAINTAINING AND REPAIRING AIR CONDITIONING AND HEATING CONTROL UNITS

PERFORMANCE OBJECTIVE 77

TASK: R & R electrical control switches.

STANDARD OF PERFORMANCE OF TASK:

New switch must be securely mounted, all electrical connections must be tight; switch must operate and function as original with no arcing or short circuits, and switch must be adjusted, if required, to manufacturer's specifications.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit replacement control switches.

ENABLING OBJECTIVES:

1. Use a multimeter.
2. Read and interpret manufacturer's service manual.

RESOURCES:

TEACHING ACTIVITIES:

1. Describe an electrical circuit and conductors.
2. Explain how an electrical switch operates.
3. Demonstrate using a schematic drawing, how to identify parts of an electrical circuit.
4. Discuss what affects an open circuit, close circuit, short circuit, and grounded circuit can have on current flow.
5. Have student demonstrate how to read a schematic drawing.
PERFORMANCE OBJECTIVE 77

CRITERION-REFERENCED MEASURE:

Questions

1. A ________ can be used to complete or open a circuit.
2. A special drawing used to indicate electrical circuits is called a ________
3. When a conductor accidentally touches another conductor causing a different flow of electricity it is called a ________ ________.

Answers

1. Switch
2. Schematic Drawing

Practical Application:

Have students R & R electrical control switches.

Method of Evaluating Practical Application:

Have students Use Checklist Performance Objective 77 to determine if the assignment was completed with 100% accuracy.
# Checklist for Performance Objective 77 Evaluation

DUTY: MAINTAINING AND REPAIRING AIR CONDITIONING AND HEATING CONTROL UNITS

PERFORMANCE OBJECTIVE 78

TASK: Test relays.

STANDARD OF PERFORMANCE OF TASK:

All failures and malfunctions of relays must be detected.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Vehicle manufacturer's electrical diagrams
Ohmmeter
12 volt electrical source

ENABLING OBJECTIVES:

1. Use an ohmmeter
2. Read and interpret manufacturer's specifications

RESOURCES:

TEACHING ACTIVITIES:

2. Explain how a relay operates using electricity.
3. Sketch on chalkboard how an electromagnet operates.
4. Describe the different types of relays.
5. Demonstrate how to test relays.
PERFORMANCE OBJECTIVE 78

CRITERION-REFERENCED MEASURE:

Questions

1. An electromagnetic device used to make and break a circuit is called a ________.
2. A relay that limits the amount of current flow in the charging system is the ________ ________.
3. The starting system uses a relay known as a ________ ________.

Answers

1. Relay
2. Voltage regulator

Practical Application:

Have students test relays.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 78 to determine if the assignment was completed with 100% accuracy.

DUTY: MAINTAINING AND REPAIRING AIR CONDITIONING AND HEATING CONTROL UNITS

PERFORMANCE OBJECTIVE 80

TASK: Test blower motor resistors.

STANDARD OF PERFORMANCE OF TASK:

Any broken, shorted or malfunctioning resistors must be detected.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit:
Ammeter
Voltmeter

ENABLING OBJECTIVES:

1. Use multimeter
2. Read and interpret manufacturer's specifications

RESOURCES:

TEACHING ACTIVITIES:

1. Explain the purpose of a blower motor resistor.
2. Describe the construction of a blower motor resistor.
3. Illustrate how the blower motor resistor controls voltage output to the blower motor to control blower speeds.
4. Demonstrate how to use a multimeter to determine the resistance in the blower motor resistor.
5. Have a student demonstrate how to check a resistor using a multimeter.
PERFORMANCE OBJECTIVE 80

CRITERION-REFERENCED MEASURE:

Questions

1. A _________ lowers the amount of voltage in a circuit.
2. The blower motor resistor controls _________ blower speeds.
3. The _________ _________ sends voltage to the resistor.

Answers

1. Resistor
2. Three
3. Blower switch

Practical Application:

Have students test blower motor resistors.

CRITERION-REFERENCED MEASURE:

Questions

1. The heater/A/C control assembly is located in the _______ of an automobile.
2. The _______ _______ allows fresh air to enter the automobile.
3. The _______ _______ directs air to the windshield.

Answers

1. Dash
2. Outside air cable
3. Defroster cable

Practical Application:

Have students adjust air conditioning and heater control cables.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 84 to determine if the assignment was completed with 100% accuracy.
CHECKLIST FOR PERFORMANCE OBJECTIVE 84 EVALUATION

DUTY: MAINTAINING AND REPAIRING AIR CONDITIONING AND HEATING CONTROL UNITS

PERFORMANCE OBJECTIVE 85

TASK: R & P air conditioning and heater control cables.

STANDARD OF PERFORMANCE OF TASK:

Operation of control must cause component to function according to manufacturer's specifications and the operation of the control must be smooth with no sticking or binding.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Replacement control cable

ENABLING OBJECTIVES:

1. Use tool kit
2. Read and interpret manufacturer's procedure

RESOURCES:

TEACHING ACTIVITIES:

1. Explain the purpose of the control system assembly.
2. List the purpose of the control cable.
3. Illustrate the bowden cable.
4. Explain what the bowden cable controls.
5. Discuss how the bowden cable controls the temperature.
PERFORMANCE OBJECTIVE 85

CRITERION-REFERENCED MEASURE:

Questions

1. The __________ _________ controls the temperature of the A/C heating system.
2. The control cable is moved by the __________ _________ _________ _________.
3. The cable should be routed so that the control lever moves _________.

Answers

1. Bowden cable
2. A/C heater control assembly
3. Freely.

Practical Application:

Have students R & R conditioning and heater control cables.

Method of Evaluating Practical Application:

Use Checklist 1 for Performance Objective 85 to determine if the assignment was completed with 100% accuracy.

TASK: Test vacuum pumps.

STANDARD OF PERFORMANCE OF TASK:

Any malfunctions or failures of the vacuum pump must be detected and noted.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Vacuum gauge

ENABLING OBJECTIVES:

1. Use vacuum gauge
2. Read and interpret manufacturer's procedures

RESOURCES:

TEACHING ACTIVITIES:

1. Explain why a vacuum pump is needed on certain automobiles.
2. Discuss what a vacuum pump operates on an automobile.
3. Explain how a vacuum pump operates.
4. Explain the parts of a vacuum pump.
5. Demonstrate the disassembly of a vacuum pump.
PERFORMANCE OBJECTIVE 87

CRITERION-REFERENCED MEASURE:

Questions

1. The vacuum pump is driven by the ____________.
2. Never mount a vacuum pump in a vise because it may damage the ____________
3. The driven gear must turn freely in ____________ ____________.

Answers

1. Camshaft
2. Drive housing
3. Both directions

Practical Application:

Have students test vacuum pumps.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 87 to determine if the assignment was completed with 100% accuracy.

PERFORMANCE OBJECTIVE 88

TASK: R & R vacuum pumps.

STANDARD OF PERFORMANCE ASK:

New pump must be mounted securely and must supply rated output. Worn or cracked drive belt must be replaced and all hose connections must be clean and tight. Pump must operate without unusual vibrations or noises.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Vacuum gauge
New vacuum pump
Belt tension gauge

ENABLING OBJECTIVES:

1. Use vacuum pump
2. Read and interpret manufacturer's procedures

RESOURCES:

TEACHING ACTIVITIES:

1. Explain the reason for not operating engine without vacuum installed.
2. Describe where the vacuum pump is located on engine.
3. Discuss the parts of a vacuum pump.
4. Explain the vacuum hose routing from the vacuum pump.
5. Demonstrate the removal and reassembly of the vacuum pump in the engine.
PERFORMANCE OBJECTIVE 88

CRITERION-REFERENCED MEASURE:

Questions

1. The engine oil pump is operated by the ________ ________.
2. The camshaft drive the ________ at the bottom of the pump.
3. The vacuum pump has ________ mounting bolt.

Answers

1. Vacuum pump
2. Gear
3. One

Practical Application:

Have students R & R vacuum pumps.

DIAGNOSING THE AUTOMOBILE ELECTRICAL SYSTEM
DUTY: DIAGNOSING THE AUTOMOBILE ELECTRICAL SYSTEM

PERFORMANCE OBJECTIVE 89

TASK: Measure voltages in electrical circuits.

STANDARD OF PERFORMANCE OF TASK:

Voltage outside of manufacturer's specifications for the circuit must be detected.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Voltmeter.

ENABLING OBJECTIVES:

1. Use multimeter.
2. Read and interpret manufacturer's specifications.

RESOURCES:

TEACHING ACTIVITIES:

1. Identify elements of a typical automotive electrical circuit.
2. Explain what causes a flow of electricity.
3. Use basic electrical symbols to draw a simple electrical circuit.
4. Identify a series, parallel, and series-parallel circuit.
5. Demonstrate a basic electric circuit with a battery, switch, and light.
PERFORMANCE OBJECTIVE 89

CRITERION-REFERENCED MEASURE:

Questions:

1. Any material that allows electricity to flow easily is called a __________.
2. A __________ is used to cut electricity off or on.
3. All automobiles use __________ __________.

Answers:

1. Conductor
2. Switch
3. Direct current

Practical Application:

Have students measure voltages in electrical circuits.

DUTY: DIAGNOSING THE AUTOMOBILE ELECTRICAL SYSTEM

PERFORMANCE OBJECTIVE 90

TASK: Test for shorts and grounds.

STANDARD OF PERFORMANCE OF TASK:

All test equipment must be attached securely and in the correct sequence and all failures of circuits(s) must be located and noted.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
"Short finder."

ENABLING OBJECTIVES:

1. Use multimeter
2. Read and interpret manufacturer's procedures.

RESOURCES:

TEACHING ACTIVITIES:

1. Explain a short circuit
2. Explain a grounded circuit
3. Describe the safety devices used on automobiles to protect the different circuits.
4. Explain to the student how to identify a blown fuse.
5. Illustrate the use of a multimeter.
PERFORMANCE OBJECTIVE 90

CRITERION-REFERENCED MEASURE:

Questions:

1. A common electrical path back to the source of electricity is known as a __________.
2. A conductor accidentally touching another conductor providing a short path for electricity to flow is called a __________.
3. A safety device used to protect circuits in an automobile is called a __________.

Answers:

1. Ground
2. Short
3. Fuse

Practical Application:

Have students test for shorts and grounds.

PERFORMANCE OBJECTIVE 31

TASK: Inspect fusible links, circuit breakers and fuses.

STANDARD OF PERFORMANCE OF TASK:

Defects such as broken, overheated, or burned parts must be noted and breaks or opens in fuse strips must be detected.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit.

ENABLING OBJECTIVES:

1. Use multimeter.
2. Read and interpret manufacturer's procedures.

RESOURCES:

TEACHING ACTIVITIES:

1. Discuss the different types of electrical circuits.
2. List on chalkboard the different types of protective devices used by manufacturers.
3. Describe how the protective devices operate.
4. Demonstrate on chalkboard how these devices operate.
5. Use a multimeter to test the different protective devices.
PERFORMANCE OBJECTIVE 91

CRITERION-REFERENCED MEASURE:

Questions:

1. A circuit in which a wire is broken or disconnected is called an _________.
2. The circuit protector that uses a bimetallic strip to protect a circuit is a _________.
3. A wire that uses hypalon insulation that will burn off is a _________.

Answers:

1. Open circuit
2. Circuit breaker
3. Fusible link

Practical Application:

Have student inspect fusible links, circuit breakers, and fuses.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 91 to determine if the assignment was completed with 100 percent accuracy.

PERFORMANCE OBJECTIVE 92

TASK: Inspect battery electrolyte.

STANDARD OF PERFORMANCE OF TASK:

Any deviations from manufacturer's specified electrolyte level must be noted as well as any contamination of electrolyte.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Battery.

ENABLING OBJECTIVES:

1. Use battery hydrometer.
2. Follow manufacturer's specification.

RESOURCES:

TEACHING ACTIVITIES:

1. Describe electrolyte in a fully charged battery.
2. Explain how "specific gravity" is used to determine a battery's condition.
3. Demonstrate how to use a battery hydrometer to determine the condition of the electrolyte.
4. Have student demonstrate the use of battery hydrometer.
5. Explain how temperature has an effect on specific gravity.
PERFORMANCE OBJECTIVE 92

CRITERION-REFERENCED MEASURE:

Questions:

1. A fully charged battery has electrolyte containing _______ percent sulfuric acid and _______ percent water.
2. The specific gravity of a full charged battery should be _______ to _______ at 80° F.
3. A _______ _______ is used to check the "specific gravity" in a battery.

Answers:

1. 35, 65
2. 1,260, 1,280
3. Battery Hydrometer

Practical Application:

Have students inspect battery electrolyte.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 92 to determine if the assignment was completed with 100 percent accuracy.

1. Use VAT-40.
2. Read and interpret manufacturer's specifications.

RESOURCES:

TEACHING ACTIVITIES:

1. Explain the different battery tests.
2. Discuss the different battery test equipment used in an automotive shop.
3. Demonstrate how to use the different types of battery test equipment.
4. Identify the different types of batteries.
5. Explain the different battery rating.
PERFORMANCE OBJECTIVE 94

CRITERION-REFERENCED MEASURE:

Questions:

1. The _________ has a voltmeter, an ammeter, and a variable electrical resistance load.
2. If a battery under a load test drops below ________ volts at 70°F, it is defective.
3. A battery that is designed not to need any additional water during their lifetime is called ________ ________ ________ ________.

Answers:

1. Vat-40
2. 9.6
3. Maintenance free batteries

Practical Application:

Have students load test the battery.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 94 to determine if the assignment was completed with 100 percent accuracy.
CHECKLIST FOR PERFORMANCE OBJECTIVE 94 EVALUATION

PERFORMANCE TEST FOR LOAD TESTING THE BATTERY

DIRECTIONS TO STUDENT: Set-up the proper equipment. Follow the verbal directions given by the instructor. Complete each step in the sequential order listed.

DIRECTIONS TO EVALUATOR: Observe the student. Pay close attention to items to be evaluated. Be sure the student completes the tasks within a reasonable time. A score of 100 percent is required for competency.

3(i)
DUTY: DIAGNOSING THE AUTOMOBILE ELECTRICAL SYSTEM

PERFORMANCE OBJECTIVE 95

TASK: Test starter current draw.

STANDARD OF PERFORMANCE OF TASK:

Cranking current (amperes) exceeding manufacturer's specifications must be detected.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Voltmeter
Ammeter (may be part of larger tester)
Manufacturer's specifications for current draw and cranking voltage.

ENABLING OBJECTIVES:

1. Use VAT-40.
2. Read and interpret manufacturer's specifications.

RESOURCES:

TEACHING ACTIVITIES:

1. Explain the operation of the starter motor.
2. Describe the construction of the starter motor.
3. Demonstrate the different starter motor circuits.
4. Describe the different starter drives.
5. Explain the solenoid action.
PERFORMANCE OBJECTIVE 95

CRITERION-REFERENCED MEASURE:

Questions:

1. The starter brushes make sliding contact with the _________.
2. The ________ hold the field coil in the starter housing.
3. The two windings in the solenoid are the ________ and ________ windings.

Answers:

1. Commutator
2. Pole shoe
3. Pulls-in, Hold-in

Practical Application:

Have student test starter current draw.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 95 to determine if the assignment was completed with 100 percent accuracy.

DUTY: DIAGNOSING THE AUTOMOBILE ELECTRICAL SYSTEM

PERFORMANCE OBJECTIVE 96

TASK: Test starter circuit voltage drop.

STANDARD OF PERFORMANCE OF TASK:

Voltage drops in the starter circuit is greater than specified by the manufacturer and must be detected.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Voltmeter

ENABLING OBJECTIVES:

2. Read and interpret manufacturer's specifications.

RESOURCES:

TEACHING ACTIVITIES:

1. Explain how an electric motor operates.
2. Describe the electromagnetic fields in a starter.
3. Illustrate how the armature is designed.
4. Illustrate how the field windings and pole shoes are designed.
5. Explain the starting motor circuits.
PERFORMANCE OBJECTIVE 96

CRITERION-REFERENCED MEASURE:

Questions:

1. The starting motor operates on the principle of _________.
2. The copper segments on the armature that the brushes make sliding contact with is called the _________.
3. The field coils of a starter are wrapped around the ________ _________ to create a magnetic field.

Answers:

1. Electromagnetism
2. Commutator
3. Pole shoes

Practical Application:

Have students test starter circuit voltage drop.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 96 to determine if the assignment was completed with 100 percent accuracy.

DUTY: DIAGNOSING THE AUTOMOBILE ELECTRICAL SYSTEM

PERFORMANCE OBJECTIVE 97

TASK: Check components and wires in starter control circuit.

STANDARD OF PERFORMANCE OF TASK:

Any defective components (i.e. ignition switch, park/neutral switch, relay or solenoid) or wires must be detected.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Voltmeter
Engine starter circuit.

ENABLING OBJECTIVES:

1. Read and interpret manufacturer's specifications.

RESOURCES:

TEACHING ACTIVITIES:

1. Define the following:
   a. Conductor
   b. Insulator
   c. Circuit
   d. Ground
   e. Open.
2. List the parts that make up the starter circuit.
3. Locate the parts of the starter system using an automobile.
4. Discuss the need of the safety switch.
5. Demonstrate how to diagnose a starting problem.
6. Have student demonstrate how to diagnose a starter problem.
PERFORMANCE OBJECTIVE 97

CRITERION-REFERENCED MEASURE:

Questions:

1. Materials that allow easy current flow is called a ________.
2. The _______________ prevents the engine from being cranked when the transmission is in gear.
3. The ignition switch has _________ positions.

Answers:

1. Conductor
2. Starter safety switch
3. 5

Practical Application:

Have students check components and wires in starter control circuit.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 97 to determine if the assignment was completed with 100 percent accuracy.
CHECKLIST FOR PERFORMANCE OBJECTIVE 97 EVALUATION

PERFORMANCE TEST FOR CHECKING COMPONENTS AND WIRES IN STARTER CONTROL CIRCUIT

DUTY: DIAGNOSING THE AUTOMOBILE ELECTRICAL SYSTEM

PERFORMANCE OBJECTIVE 98

TASK: Identify problems that cause dash charge indicator to show no charge.

STANDARD OF PERFORMANCE OF TASK:

Any of the following defects must be detected: broken or shorted wires; loose connections; loose or broken drive belts; malfunctions of dash indicator bulb; malfunctions of alternator or regulator.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Ohmmeter
Voltmeter.

ENABLING OBJECTIVES:

1. Use multimeter.
2. Read and interpret manufacturer's specifications.

RESOURCES:

TEACHING ACTIVITIES:

1. List undercharging or overcharging problems on chalkboard.
2. Discuss the effects of a loose alternator drive belt.
3. Explain alternator internal problems.
4. Discuss voltage regulator problems.
5. Illustrate how to use a multimeter to determine what part is at fault.
PERFORMANCE OBJECTIVE 98

CRITERION-REFERENCED MEASURE:

Questions:

1. The __________ __________ are not adjustable.
2. A broken brush can cause the alternator to __________.
3. The __________ __________ can cause the dash charge indicator light to burn.

Answers:

1. Transistorized regulators
2. Undercharge
3. Diode trio

Practical Application:

Have students identify problems that cause dash charge indicator to show no charge.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 98 to determine if the assignment was completed with 100 percent accuracy.

TASK: Test alternator output.

STANDARD OF PERFORMANCE OF TASK:

Deviation of alternator output from manufacturer's specifications range must be detected.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Battery/starter and charging tester
Tachometer
Alternator specifications.

ENABLING OBJECTIVES:

1. Use multimeter.
2. Read and interpret manufacturer's procedures.

RESOURCES:

TEACHING ACTIVITIES:

1. List the parts of a modern charging system.
2. Explain the function of a charging system and parts.
3. Describe the purpose of a regulator.
4. Identify the alternators used on late model domestic cars.
5. Demonstrate the disassembly procedure.
6. Have a student demonstrate the disassembly procedure.
PERFORMANCE OBJECTIVE 99

CRITERION-REFERENCED MEASURE:

Questions:

1. Alternator regulators must limit _________ output.
2. An alternator must change _________ current into _________ current.
3. The charging system converts mechanical energy to _________ energy through _________.

Answers:

1. Voltage
2. AC -- DC
3. Electrical, induction

Practical Application:

Have student test alternator output.

PERFORMANCE OBJECTIVE 102

TASK: Identify turn signal and hazard light malfunction.

STANDARD OF PERFORMANCE OF TASK:

Any malfunctioning/inoperative bulbs or sockets, loose or broken connections or shorted/bare wiring, turn signal or hazard switch and flashers must be detected.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Test light.

ENABLING OBJECTIVES:

1. Use multimeter.
2. Read and interpret manufacturer's procedures.

RESOURCES:

TEACHING ACTIVITIES:

1. List the parts that make up the turn signal and hazard light system.
2. Explain the operating procedure of the turn signals.
3. Explain the operation of the hazard light.
4. Identify by locating each part on an automobile.
5. List the malfunctions of each system and then the cure for each problem.
PERFORMANCE OBJECTIVE 102

CRITERION-REFERENCED MEASURE:

Questions:
1. The turn signal switch is located in the ____________.
2. A defective ________ will cause a hazard light malfunction.
3. The voltage to the turn hazard switch assembly is applied by the ____________.

Answers:
1. Steering column
2. Flasher
3. Fuse

Practical Application:
Have student identify turn signal and hazard light malfunction.

DUTY: DIAGNOSING THE AUTOMOBILE ELECTRICAL SYSTEM

PERFORMANCE OBJECTIVE 103

TASK: Identify cause of incorrect fuel and temperature gauge readings.

STANDARD OF PERFORMANCE OF TASK:

Any malfunctions of dash gauge, sending units, and wiring or connections must be detected.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit.
Fuel gauge tester.

ENABLING OBJECTIVES:

1. Use multimeter.
2. Read and interpret manufacturer's procedures.

RESOURCES:

TEACHING ACTIVITIES:

1. Explain the ignition switch circuit.
2. Demonstrate how to use a multimeter to test ignition switch operation.
3. Have student demonstrate how to use a multimeter to test ignition switch operation.
4. Explain how to test fuel and temperature gauge correct operation.
5. Illustrate how to replace a gauge in the dash of an automobile.
6. Explain how the sending unit operates.
PERFORMANCE OBJECTIVE 103

CRITERION-REFERENCED MEASURE:

Questions:
1. The two types of fuel gauges are __________ __________ and __________
2. The gauge pointer is controlled by a __________ __________.
3. The G.M. tank unit uses a __________ to adjust the resistance of the amount of fuel in a tank.

Answers:
1. Thermostatic type and balancing coil type.
2. Bimetallic arm.
3. Rheostat

Practical Application:
Have students identify cause of incorrect fuel and temperature gauge readings.

Method of Evaluating Practical Application:
Use Checklist Performance Objective 103 to determine if the assignment was completed with 100 percent accuracy.
# Checklist for Performance Objective 103 Evaluation

**Performance Test for Identifying Causes of Incorrect Fuel and Temperature Gauge Readings**

<table>
<thead>
<tr>
<th>Student's Name</th>
<th>Date</th>
</tr>
</thead>
</table>

**Directions to Student:**
Set-up the proper equipment. Follow the verbal directions given by the instructor. Complete each step in the sequential order listed.

**Directions to Evaluator:**
Observe the student. Pay close attention to items to be evaluated. Be sure the student completes the tasks within a reasonable time. A score of 100 percent is required for competency.

## Items to Be Evaluated

<table>
<thead>
<tr>
<th>Item</th>
<th>Satisfactory</th>
<th>Unsatisfactory</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Turned ignition on to activate gauge.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>2. Checked fuse and gauge voltage regulator if several gauges are inoperative at once.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>3. Checked for broken, loose, or corroded wires/connections.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>4. Disconnected lead at sending unit and watched for gauge movement.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>5. Grounded wire from sending unit and noted gauge movement.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>6. Replaced gauge if previous tests cause gauge to move.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>7. Used fuel gauge tester, if available, to test fuel gauge or sending unit. Operated tester according to manufacturer's instructions.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>8. Referred to manufacturer's gauge diagnosis procedures if gauge test results are inconclusive.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>9. Noted any defects on work order.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Approved:** Yes _____ No _____

DUTY: DIAGNOSING THE AUTOMOBILE ELECTRICAL SYSTEM

PERFORMANCE OBJECTIVE 104

TASK: Identify the cause of horn malfunctions.

STANDARD OF PERFORMANCE OF TASK:

Any defect of horn, horn relay or horn switch must be detected; any broken, loose or corroded connections of the horn wiring must be detected.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit.
Test Light.
Horn.

ENABLING OBJECTIVES:

1. Use multimeter.
2. Read and interpret manufacturer's procedures.

RESOURCES:

TEACHING ACTIVITIES:

1. List the parts of the horn circuit.
2. Explain the parts of the horn circuit.
3. Discuss the horn relay.
4. Locate the location of the horn circuit parts.
5. Illustrate how to diagnose horn malfunction.
PERFORMANCE OBJECTIVE 104

CRITERION-REFERENCED MEASURE:

Questions:

1. The horn switch is mounted in the __________.
2. The horn switch activates ________ to transfer voltage to the horns.
3. Two horns are located behind the __________ of an automobile.

Answers:

1. Steering wheel
2. Relay
3. Grill

Practical Application:

Have students identify the cause of horn malfunctions.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 104 to determine if the assignment was completed with 100 percent accuracy.
CHECKLIST FOR PERFORMANCE OBJECTIVE 104 EVALUATION

PERFORMANCE TEST FOR IDENTIFYING THE CAUSE OF HORN MALFUNCTIONS

Student's Name

Date

DIRECTIONS TO STUDENT: Set-up the proper equipment. Follow the verbal directions given by the instructor. Complete each step in the sequential order listed.

DIRECTIONS TO EVALUATOR: Observe the student. Pay close attention to items to be evaluated. Be sure the student completes the tasks within a reasonable time. A score of 100 percent is required for competency.

ITEMS TO BE EVALUATED

<table>
<thead>
<tr>
<th>Satisfactory</th>
<th>Unsatisfactory</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. inspected wiring and components for obviously broken parts or loose connections.</td>
<td></td>
</tr>
<tr>
<td>2. Grounded test light lead and probed horn feed wire while activating horn circuit: if test light comes on, horn is defective.</td>
<td></td>
</tr>
<tr>
<td>3. Gained access to wire from horn switch and checked operation with test light while operating switch.</td>
<td></td>
</tr>
<tr>
<td>4. Probed horn switch wire at horn relay to determine if malfunction is in wiring between the relay and the switch.</td>
<td></td>
</tr>
<tr>
<td>5. Probed horn relay power feed to check for voltage to determine if relay is receiving current.</td>
<td></td>
</tr>
<tr>
<td>6. Probed horn relay output wire to determine if the relay is malfunctioning or if problem is between relay and horn.</td>
<td></td>
</tr>
<tr>
<td>7. Noted any defects on work order.</td>
<td></td>
</tr>

DUTY: DIAGNOSING THE AUTOMOBILE ELECTRICAL SYSTEM

PERFORMANCE OBJECTIVE 105

TASK: Identify the cause of windshield wiper/washer malfunctions.

STANDARD OF PERFORMANCE OF TASK:

Any defects in the following parts must be detected: wiper motor or circuit breaker; loose or broken wires; pinched or leaking hoses; wiper or washer switches; washer pump, hoses or reservoir; wiper linkages.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Ammeter.

ENABLING OBJECTIVES:

1. Use multimeter.
2. Read and interpret manufacturer's specifications.

RESOURCES:

TEACHING ACTIVITIES:

1. Explain how an electromagnet operates.
2. Discuss the electromagnet used in electric motors.
3. Describe how the armature is designed and built.
4. Illustrate, using the chalkboard, how the field windings are constructed.
5. Explain the commutator and brush set-up used in electric motors.
PERFORMANCE OBJECTIVE 105

CRITERION-REFERENCED MEASURE:

Questions:

1. Brushes used in electric motors are usually made of _________.
2. The commutator is made of _________.
3. The windings in the field produce a _________.

Answers:

1. Carbon
2. Copper
3. Magnet

Practical Application:

Have students identify the cause of windshield wiper/washer malfunctions.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 105 to determine if the assignment was completed with 100 percent accuracy.

MAINTAINING AND REPAIRING BASIC AUTOMOTIVE ELECTRICAL SYSTEM
DUTY: MAINTAINING AND REPAIRING BASIC AUTOMOTIVE ELECTRICAL SYSTEM

PERFORMANCE OBJECTIVE 106

TASK: R and R alternator brushes.

STANDARD OF PERFORMANCE OF TASK:

The rotor spins freely and the rated output of the alternator must meet manufacturer's specifications.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Replacement Brushes
Brush Retaining Pin
Crocus cloth.

ENABLING OBJECTIVES:

1. Read and interpret manufacturer's procedures.
2. Use standard tool set.

RESOURCES:

1. Changelon. Engine Performance Diagnosis and Tune-up.

TEACHING ACTIVITIES:

1. Discuss the purpose of the charging system.
2. List the parts of the charging system.
3. Define the term induction.
4. Describe the construction of alternator brushes.
5. Explain why brushes are used in an alternator.
PERFORMANCE OBJECTIVE 106

CRITERION-REFERENCED MEASURE:

Questions:

1. Alternator current must be _________ to direct current for automotive use.
2. The alternator brushes make sliding contact with the _________.
3. The alternator _________ creates a magnet field.

Answers:

1. Rectified
2. Slip Rings
3. Rotor

Practical Application:

Have students R and R alternator brushes.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 106 to determine if the assignment was completed with 100 percent accuracy.

DUTY: MAINTAINING AND REPAIRING BASIC AUTOMOTIVE ELECTRICAL SYSTEM

PERFORMANCE OBJECTIVE 107

TASK: Test alternator diodes and/or rectifier bridge.

STANDARD OF PERFORMANCE OF TASK:

Diodes and rectifiers with readings outside manufacturer's specifications must be detected.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Ohmmeter
Alternator.

ENABLING OBJECTIVES:

1. Use multimeter.
2. Read and interpret manufacturer's specifications.

RESOURCES:

1. Changnon. Engine Performance Diagnosis and Tune-up.

TEACHING ACTIVITIES:

1. Explain why diodes are used in alternators.
2. Discuss the construction of diodes.
3. Describe how diodes are installed in the alternators.
4. Explain the use of heat sinks.
5. Demonstrate how to test diodes.
PERFORMANCE OBJECTIVE 107

CRITERION-REFERENCED MEASURE:

Questions:
1. The ________ prevents the battery from discharging through the alternators.
2. Most alternators have ________ positive and ________ negative diodes.
3. The ________ ________ helps to remove heat from the positive diode.

Answers:
1. Diode
2. Three (3), Three (3)
3. Heat Sink

Practical Application:

Have students test alternator diodes and/or rectifier bridge.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 107 to determine if the assignment was completed with 100 percent accuracy.

APPROVED: Yes _____ No _____

Evaluator's Signature | Date
DUTY: MAINTAINING AND REPAIRING BASIC AUTOMOTIVE ELECTRICAL SYSTEM

PERFORMANCE OBJECTIVE 108

TASK: R and R alternator diodes.

STANDARD OF PERFORMANCE OF TASK:

Diodes or assemblies must be installed observing proper polarity; all connections must be clean and tight; all fasteners must be torqued to manufacturer's specifications. Alternator shaft must rotate freely and when tested alternator must meet manufacturer's specifications.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Alternator Brushes Holder Pin
Yellow Grease Pencil
Diode Assemblies
Soldering Gun
Solder
Alternator.

ENABLING OBJECTIVES:

1. Use multimeter.
2. Read and interpret manufacturer's specifications.

RESOURCES:

TEACHING ACTIVITIES:

1. Explain the purpose of a diode.
2. Demonstrate, on chalkboard, how a diode operates.
3. Discuss how the alternator produces A/C current.
4. Explain the difference between A/C and D/C current.
5. Identify the diodes in an alternator.
PERFORMANCE OBJECTIVE 108

CRITERION-REFERENCED MEASURE:

Questions:

1. The ______ allows current flow in only one direction.
2. A diode is a ________ ________.
3. Diodes change ________ current into ________.

Answers:

1. Diode
2. Semi-Conductor
3. A/C, D/C

Practical Application:

Have students R and R alternator diode.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 108 to determine if the assignment was completed with 100 percent accuracy.

OBJECTIVE 109

TASK: Test alternator rotor.

STANDARD OF PERFORMANCE OF TASK:

Any short or open circuits or current draw outside of manufacturer's specifications must be detected.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Ohmmeter
Ammeter
Test Lead
Automotive Battery
Alternator.

ENABLING OBJECTIVES:

1. Use multimeter.
2. Read and interpret manufacturer's specifications.

RESOURCES:

TEACHING ACTIVITIES:

1. Explain the design of the rotor.
2. Discuss magnetism of the rotor.
3. Describe how the rotor induces high voltage.
4. Explain the stator windings.
5. Illustrate how the rotor and stator produces high voltage.
PERFORMANCE OBJECTIVE 109

CRITERION-REFERENCED MEASURE:

Questions:

1. The magnetic field in an alternator is created in the ________.
2. High voltage is induced in the ________.
3. An alternator produces ________ current without the use of diodes.

Answers:

1. Rotor
2. Stator
3. Alternating

Practical Application:

Have students test alternator rotor.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 109 to determine if the assignment was completed with 100 percent accuracy.

DUTY: MAINTAINING AND REPAIRING BASIC AUTOMOTIVE ELECTRICAL SYSTEM

PERFORMANCE OBJECTIVE 113

TASK: Adjust voltage regulator output.

STANDARD OF PERFORMANCE OF TASK:

Regulator adjustment procedure must conform to manufacturer's recommended procedures and charging output must meet manufacturer's specifications.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Ammeter
Voltmeter.

ENABLING OBJECTIVES:

1. Use VAT-40.
2. Read and interpret manufacturer's specifications.

RESOURCES:

TEACHING ACTIVITIES:

1. Discuss the purpose of the voltage regulator.
2. Explain the different types of voltage regulators.
3. Demonstrate how the voltage regulator operates.
4. Discuss the field relay circuit in a voltage regulator.
5. Demonstrate how to diagnose voltage regulator troubles.
PERFORMANCE OBJECTIVE 113

CRITERION-REFERENCED MEASURE:

Questions:

1. Voltage regulator must limit ________________ of an alternator.
2. Solid state voltage regulators control voltage by use of ________________.
3. The ________________ are used to apply bias current to the regulator transistors.

Answers:

1. Voltage output
2. Transistors
3. Diode trios

Practical Application:

Have students adjust voltage regulator output.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 113 to determine if the assignment was completed with 100 percent accuracy.
CHECKLIST FOR PERFORMANCE OBJECTIVE 113 EVALUATION

PERFORMANCE OBJECTIVE 1

TASK: R and R alternator bearing.

STANDARD OF PERFORMANCE OF TASK:

Alternator shaft must spin freely with no looseness or noise; all bolts must be secure and torqued to manufacturer's specifications.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Small bearing puller
Bearings
Bearing grease
Small hydraulic press
Yellow grease pencil
Alternator brush holder pin.

ENABLING OBJECTIVES:

1. Use bearing puller.
2. Follow manufacturer's procedure.

RESOURCES:

TEACHING ACTIVITIES:

1. Discuss how the alternator operates.
2. Explain the parts of an alternator.
3. Illustrate how the diode changes AC current to DC current.
4. Demonstrate the disassembly and reassembly of an alternator.
5. Have student demonstrate the disassembly and reassembly of an alternator.
PERFORMANCE OBJECTIVE 114

CRITERION-REFERENCED MEASURE:

Questions:

1. The AC current is produced in the _________.
2. The magnetic field is produced by the _________.
3. The alternator rotor is supported by the use of two _________.

Answers:

1. Stator
2. Rotor
3. Bearings

Practical Application:

Have students R and R an Alternator bearing.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 114 to determine if the assignment was completed with 100 percent accuracy.

DUTY: MAINTAINING AND REPAIRING BASIC AUTOMOTIVE ELECTRICAL SYSTEM

PERFORMANCE OBJECTIVE 115

TASK: Clean battery, posts and cable connections.

STANDARD OF PERFORMANCE OF TASK:

Terminals must be clean and tight with all corrosion removed and battery and terminal dry.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Putty knife
Battery terminal and post brush
Air blow gun
Baking soda and water mixture
Battery terminal sealer
Rubber gloves
Protective goggles
Battery.

ENABLING OBJECTIVES:

1. Use battery terminal cleaner.
2. Read and interpret manufacturer's procedures.

RESOURCES:

TEACHING ACTIVITIES:

1. Explain the construction of a battery.
2. Discuss the function and operation of a battery.
3. Describe problems that can shorten battery life.
4. Explain the different ratings for battery capacities.
5. Demonstrate how to service a battery.
PERFORMANCE OBJECTIVE 115

CRITERION-REFERENCED MEASURE:

Questions:
1. The mixture of pure water and sulphuric acid is called _________.
2. The battery is a _________ of electricity.
3. Each cell of a fully charged battery has a voltage of _________ volts.

Answers:
1. Electrolyte
2. Source
3. 2.1

Practical Application:

Have student clean battery, posts, and cable connections.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 115 to determine if the assignment was completed with 100 percent accuracy.

TASK: R and R battery.

STANDARD OF PERFORMANCE OF TASK:

New battery must be secured on battery tray and battery and connections sealed and tight.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Battery carrier
Battery (and acid, if necessary)
Protective goggles and rubber gloves
Battery charger
Battery load tester
Protective goggles.

ENABLING OBJECTIVES:

1. Use VAT-40.
2. Read and interpret manufacturer's procedures.

RESOURCES:

TEACHING ACTIVITIES:

1. Discuss the safety procedure while working with batteries.
2. Explain how to test a battery using a battery hydrometer.
3. Demonstrate how to use a battery hydrometer.
4. Demonstrate how to load test a battery using the VAT-40.
5. Have student demonstrate how to perform both hydrometer and load test.
PERFORMANCE OBJECTIVE 116

CRITERION-REFERENCED MEASURE:

Questions:
1. The battery hydrometer is used to test the ________ ________ of a battery.
2. The ________ is used to load test a battery.
3. The first step in performing any battery test is to secure a pair of ________.

Answers:
1. Specific gravity
2. VAT-40
3. Safety glasses

PERFORMANCE OBJECTIVE 119

TASK: R and R alternator.

STANDARD OF PERFORMANCE OF TASK:

Alternator must be mechanically secure, all electrical connections secure, and alternator drive belt must meet manufacturer's recommended tension.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Battery charging system tester
New alternator
Alternator drive belt
Belt tension gauge.

ENABLING OBJECTIVES:

1. Use tool kit.
2. Read and interpret manufacturer's service manual.

RESOURCES:

TEACHING ACTIVITIES:

1. Define the term "induction" as it is used in the charging system.
2. Identify the two voltage sources that are in the alternator.
3. Explain how a magnetic field is established.
4. Explain how a voltage is produced in the stator.
5. Illustrate how the diode rectifies the A/C current into D/C current.
PERFORMANCE OBJECTIVE 119

CRITERION-REFERENCED MEASUREMENT:

Questions:
1. The charging system converts some engine _________ energy to _________ energy.
2. Alternators use _________ to rectify A/C current into D/C current.
3. The _________ produces the magnetic field in the alternator.

Answers:
1. Mechanical, electrical
2. Diodes
3. Rotor

Practical Application:

Have students R and R an alternator.

PERFORMANCE OBJECTIVE 120

TASK: R and R starter drive.

STANDARD OF PERFORMANCE OF TASK:

Starter drive must be positioned correctly on armature shaft and move freely without binding; solenoid plunger fork must be engaged correctly on drive collar; armature shaft must be able to be rotated without binding.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
New starter
Starter drive
Oil
Vise
Battery charger.

ENABLING OBJECTIVES:

1. Use tool kit.
2. Read and interpret manufacturer's procedures.

RESOURCES:

TEACHING ACTIVITIES:

1. Explain the function of a start drive.
2. List the different types of start drives.
3. Demonstrate the inertia drive starter drive.
4. Demonstrate the overrunning clutch starter drive.
5. Illustrate how to remove and replace a starter drive.
PERFORMANCE OBJECTIVE 120

CRITERION-REFERENCED MEASURE:

Questions:

1. The ratio between the starter drive and flywheel is ________.
2. The ________ ________ transmits the rotating force of the starter to crank the engine.
3. The inertia drive is located on the ________ ________.

Answers:

1. 15:1
2. Overrunning clutch
3. Armature

Practical Application:

R and R starter drive.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 120 to determine if the assignment was complete with 100 percent accuracy.

DUTY: MAINTAINING AND REPAIRING BASIC AUTOMOTIVE ELECTRICAL SYSTEM

PERFORMANCE OBJECTIVE 121

TASK: R and R starter relay and/or solenoid.

STANDARD OF PERFORMANCE OF TASK:

Solenoid/relay must move starter drive to fully engaged position without sticking or binding.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Starter solenoid.

ENABLING OBJECTIVES:

1. Use tools in standard tool kit.
2. Recognize and use starter solenoid or relay.

RESOURCES:

TEACHING ACTIVITIES:

1. Explain the types of starter control switches.
2. Show the operation of a starter solenoid.
3. Draw the wiring connections of the solenoid.
4. Explain the safety measures that must be taken when clamping the field frame assembly in a vise.
5. Demonstrate the proper method of removing a solenoid off a starter.
PERFORMANCE OBJECTIVE 121

CRITERION-REFERENCED MEASURE:

Questions:

1. What are the two electric devices that cause the starting motor to connect with the engine flywheel?
2. The __________ mounted on the starting motor closes the electrical circuit and meshes the pinion with the flywheel.
3. In the starting motor with the __________ the field winding moves the starter drive into the flywheel.

Answers:

1. Solenoid, sliding pole shoe
2. Solenoid
3. Sliding pole shoe

Practical Application:

Remove and replace starter relay and/or solenoid.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 121 to determine if the assignment was completed with 100 percent accuracy.

**Solenoid in Starter Unit**

1. Supported starter by securely clamping field frame in vise. (Caution: Avoid distorting field frame by overtightening vise).
2. Disconnected starter field coil strap at solenoid.
3. Loosened and removed bolts attaching solenoid to starter drive and housing.
4. Rotated solenoid 90 degrees and removed.
5. Installed solenoid onto starter and tightened bolts securely.
6. Reconnected field coil terminal strap to solenoid.

**Solenoid Outside of Starter Unit**

1. Disconnected wires from solenoid; marked correct positions.
2. Loosened and removed bolts holding solenoid to firewall or inside fender.
3. Removed solenoid.
4. Installed new solenoid in place and bolted securely in place.
5. Reconnected solenoid wires.
6. Checked for correct solenoid operations.

DUTY: MAINTAINING AND REPAIRING BASIC AUTOMOTIVE ELECTRICAL SYSTEM

PERFORMANCE OBJECTIVE 122

TASK: R and R voltage regulator.

STANDARD OF PERFORMANCE OF TASK:

Voltage regulator must be fastened securely in place with wires connected according to manufacturer's specifications.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Grease pencil.

ENABLING OBJECTIVES:

1. Use tools in standard tool kit.
2. Recognize external regulator and alternators which have internal regulators.
3. Identify alternators with built-in regulator.

RESOURCES:

TEACHING ACTIVITIES:

1. Review safety procedures for dealing with electrical systems.
2. Discuss the purpose of a voltage regulator.
3. Dismantle an alternator and show where the regulator is located.
4. Have student read and discuss textbook Electronics and Electrical Equipment, pp. 128-137.
5. Discuss the location of regulators on the automobile.
PERFORMANCE OBJECTIVE 122

CRITERION-REFERENCED MEASURE:

Questions:

1. What is the purpose of the voltage regulator?
2. The _______ should be disconnected before you break a connection on any electrical circuit.
3. Internal regulators are located inside the ________.

Answers:

1. To control alternator output.
2. Battery
3. Alternator

Practical Application:

Remove and replace voltage regulator.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 122 to determine if the assignment was completed with 100 percent accuracy.

DUTY: MAINTAINING AND REPAIRING BASIC AUTOMOTIVE ELECTRICAL SYSTEM

PERFORMANCE OBJECTIVE 123

TASK: Inspect starter drive gear.

STANDARD OF PERFORMANCE OF TASK:

Any chipped gear teeth, worn bushings or shaft, or faulty operation of the starter clutch assembly must be detected.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
New starter drive
Starter armature.

ENABLING OBJECTIVES:

1. Use tools in standard tool kit.
2. Recognize a starter drive and starter armature.

RESOURCES:

TEACHING ACTIVITIES:

1. Discuss the operation of the starter drive.
2. Explain how to test the starter drive.
3. Describe the special tools to remove and replace starter drive.
4. Explain the different types of starter drives.
5. Demonstrate how to R and R a starter drive.
PERFORMANCE OBJECTIVE 123

CRITERION-REFERENCED MEASURE:

Questions:

1. The drive on some starting motors are held on by a collar, retainer and __________.
2. If the starter drive is found to slip in the drive direction replace the:
   a. Assembly
   b. Rollers
   c. Drive pinion.
3. Clearance between the pinion and the __________ should be checked when installing a starter drive.

Answers:

1. Snap ring
2. a
3. Thrust washer

Practical Application:

Inspect a starter drive gear.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 123 to determine if the assignment was completed with 100 percent accuracy.

PERFORMANCE OBJECTIVE 124

TASK: R and R starter.

STANDARD OF PERFORMANCE OF TASK:

All electrical connections must be clean and tight and starter must be secured and torqued according to manufacturer's specifications.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
New starter
Medium prybar.

ENABLING OBJECTIVES:

1. Recognize engine starter and battery.
2. Use tools in standard tool kit.
3. Use floor jack and stands or hydraulic lift.

RESOURCES:

TEACHING ACTIVITIES:

1. Discuss safety procedures in the use of electrical components.
2. Demonstrate the proper method of R and R a starter.
3. Explain how to R and R a starter.
4. Discuss the different types of starters.
5. Define wiring connections on a starter.
6. Discuss the purpose of starter shims.
PERFORMANCE OBJECTIVE 124

CRITERION-REFERENCED MEASURE:

Questions:
1. _________ the battery before removing the starter.
2. Check for _________ between starter drive and the flywheel.
3. The starter on some automobiles use _________ between the starter and engine block.

Answers:
1. Disconnect
2. Mesh
3. Shims

Practical Application:

Remove and replace a starter.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 124 to determine if the assignment was completed with 100 percent accuracy.

DUTY: MAINTAINING AND REPAIRING BASIC AUTOMOTIVE ELECTRICAL SYSTEM

PERFORMANCE OBJECTIVE 125

TASK: R and R starter brushes.

STANDARD OF PERFORMANCE OF TASK:

Brushes must contact commutator squarely; connections must be clean and tight; springs must provide manufacturer's specified brush tension; brush leads must be positioned to avoid shorts or abrasion.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Set of brushes
Brush tension gauge
Battery charger.

ENABLING OBJECTIVES:

1. Use tools in standard tool kit.
2. Use a battery charger.
3. Recognize parts of a starter.
4. Recognize a standard vise.

RESOURCES:

TEACHING ACTIVITIES:

1. Explain the theory of the starting motor.
2. Discuss the parts of the starter.
3. Explain the safety measure to be taken with electrical devices.
4. Demonstrate the proper method or disassembling a starter.
5. Discuss the different kinds of brush holders.
6. Demonstrate how to bench test a starter.
PERFORMANCE OBJECTIVE 125

CRITERION-REFERENCED MEASURE:

Questions:

1. The brushes contact the __________ on the end of the armature.
2. A __________ is used to bench test a starter.
3. Snapping the brushes down may cause the brush to:
   a. Crack
   b. Commutator to bend
   c. Brush holder to distort.

Answers:

1. Commutator
2. Battery charger
3. a

Practical Application:

Remove and replace starter brushes.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 125 to determine if the assignment was completed with 100 percent accuracy.

PERFORMANCE OBJECTIVE 126

TASK: R and R starter bushings.

STANDARD OF PERFORMANCE OF TASK:

Bushings must be seated squarely in end housings and shaft ends must slide into end housings without being too tight or loose.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Bushing puller
Bushings
Snap ring pliers.

ENABLING OBJECTIVES:

1. Use standard tool kit, bushing puller, snap ring pliers.
2. Recognize parts of a starter.

RESOURCES:

TEACHING ACTIVITIES:

1. Explain the purpose of the starter bushings.
2. Discuss different sizes of starting motor bushings.
3. Demonstrate how to use a bushing puller to remove the bushing from a starter.
4. Demonstrate how to check for bushing wear.
5. Show that some bushings can't be replaced.
PERFORMANCE OBJECTIVE 126

CRITERION-REFERENCED MEASURE:

Questions:

1. The bushing holds the starter ______ in place.
2. A bushing ______ is used to remove a bushing from a starter housing.
3. Always check clearance between the bushing and the armature ______.

Answers:

1. Armature
2. Puller
3. Shaft

Practical Application:

R and R starter bushings.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 126 to determine if the assignment was completed with 100 percent accuracy.

DUTY: MAINTAINING AND REPAIRING BASIC AUTOMOTIVE ELECTRICAL SYSTEM

PERFORMANCE OBJECTIVE 127

TASK: Test starter armature.

STANDARD OF PERFORMANCE OF TASK:

Any shorts, grounds or open circuits and any dial indicator readings outside of manufacturer's specifications must be detected.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Armature growler
V-blocks
Dial indicator.

ENABLING OBJECTIVES:

1. Recognize parts of a starting motor.
2. Use tools in a standard tool kit.

RESOURCES:

TEACHING ACTIVITIES:

1. Explain what an armature does.
2. Show a visual illustration of an armature.
3. Define an armature growler.
4. Demonstrate an armature growler.
5. Explain the usage of V-blocks and a dial indicator.
6. Demonstrate how to use V-blocks and a dial indicator.
PERFORMANCE OBJECTIVE 127

CRITERION-REFERENCED MEASURE:

Questions:

1. The growler is used to test the armature for:
   a. Short circuit
   b. Open circuit
   c. Current.
2. Open circuit in the armature will produce a _________ commutator bars.
3. An armature out of round can be checked with a set of V-blocks and a _________.

Answers:

1. a
2. Burned
3. Dial indicator

Practical Application:

Test a starter armature.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 127 to determine if the assignment was completed with 100 percent accuracy.

DUTY: MAINTAINING AND REPAIRING BASIC AUTOMOTIVE ELECTRICAL SYSTEM

PERFORMANCE OBJECTIVE 128

TASK: R and R starter armature.

STANDARD OF PERFORMANCE OF TASK:

Starter armature shaft must be able to rotate freely without binding or play outside of manufacturer's specifications.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Battery charger
New armature
Gil
Vise
Starter.

ENABLING OBJECTIVES:

1. Use a battery charger.
2. Recognize the parts of a starter.
3. Use tools in a standard tool kit.

RESOURCES:

TEACHING ACTIVITIES:

1. Dismantle a starter and identify the names of each part of the starter.
2. Demonstrate how to use a battery charger to bench test a starter.
3. Explain how to check an armature to meet specifications.
5. Demonstrate how to check clearance between the housing and armature.
PERFORMANCE OBJECTIVE 128

CRITERION-REFERENCED MEASURE:

Questions:

1. The ________ ________ has to be replaced on the end of a new armature.
2. Support a starter securely in a ________ before disassembly.
3. To bench test a starter the ________ as to be flashed jumped momentarily.

Answers:

1. Starter drive
2. Vise
3. Solenoid

Practical Application:

Remove and replace starter armature.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 128 to determine if the assignment was completed with 100 percent accuracy.
# Checklist for Performance Objective 128 Evaluation
## Performance Test for R and R Starter Armature

**Student's Name**

**Date**

**Directions to Student:**
Set-up the proper equipment. Follow the verbal directions given by the instructor. Complete each step in the sequential order listed.

**Directions to Evaluator:**
Observe the student. Pay close attention to items to be evaluated. Be sure the student completes the tasks within a reasonable time. A score of 100 percent is required for competency.

DUTY: MAINTAINING AND REPAIRING BASIC AUTOMOTIVE ELECTRICAL SYSTEM

PERFORMANCE OBJECTIVE 129

TASK: Test field circuits.

STANDARD OF PERFORMANCE OF TASK:

Any shorts or open circuits must be detected.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Starter field coil
Frame assembly ohmmeter.

ENABLING OBJECTIVES:

1. Recognize and use an ohmmeter.
2. Recognize a starter field coil assembly.

RESOURCES:

TEACHING ACTIVITIES:

1. Explain the basic theory of electrical current flow.
2. Discuss various types of ohmmeters.
3. Demonstrate how to use an ohmmeter.
4. Explain an open and shorted circuit.
5. Demonstrate how to R and R field coils from the housing.
PERFORMANCE OBJECTIVE 129

CRITERION-REFERENCED MEASURE:

Questions:

1. Electrical current will follow the path with:
   a. Least resistance
   b. Greater resistance
   c. Grounded resistance.

2. An ohmmeter is used to check for _______ and open electrical circuit.

3. When installing the field windings, be sure to replace the _______ strip in their original positions.

Answers:

1. a
2. Shorted
3. Insulating

Practical Application:

Test a field circuit.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 129 to determine if the assignment was completed with 100 percent accuracy.

PERFORMANCE OBJECTIVE 130

TASK: Test solenoid.

STANDARD OF PERFORMANCE OF TASK:

Faulty operation of the solenoid, and any shorts or open circuits must be detected.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Solenoid assembly with starter attached
Heavy duty battery tester
Jumper wire
Ohmmeter.

ENABLING OBJECTIVES:

1. Use tools in a standard tool kit.
2. Recognize and use an ohmmeter.
3. Recognize and use a battery charger.
4. Recognize a starter with a solenoid attached.

RESOURCES:

TEACHING ACTIVITIES:

1. Explain how a solenoid works.
2. Draw the wiring connections of a solenoid and discuss the purpose of each wire.
3. Demonstrate how to check a solenoid using an ohmmeter.
4. Demonstrate how to check a solenoid using a battery charger.
5. Demonstrate how to R and R a solenoid from a starter.
PERFORMANCE OBJECTIVE 130

CRITERION-REFERENCED MEASURE:

Questions:

1. The ohmmeter is used to test the solenoid for a _________ circuit and a _________ circuit.
2. The solenoid is a _________ switch.
3. The solenoid shifts the starter drive in mesh with the flywheel and connects the _________ with the starting motor.

Answers:

1. Open, shorted
2. Electromagnetic
3. Battery

Practical Application:

Test a solenoid.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 130 to determine if the assignment was completed with 100 percent accuracy.

PERFORMANCE OBJECTIVE 131

TASK: R and R field circuits.

STANDARD OF PERFORMANCE OF TASK:

Fields must be secured in place to prevent movement short circuits or abrasion from internal moving parts and field clamp bolts must be tight and staked to prevent loosening from vibrations from starter operations.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
New fields
Impact driver kit
Vise
Battery charger.

ENABLING OBJECTIVES:

1. Use tools in standard tool kit.
2. Recognize and use impact driver.
3. Recognize and use battery charger.

RESOURCES:

TEACHING ACTIVITIES:

1. Demonstrate how to disassemble a starter.
2. Explain safety rules to follow when using a battery charger.
3. Discuss different ways field windings are mounted in a starting housing.
4. Explain the usage of an impact driver.
5. Define the wiring connections of the field winding.
6. Demonstrate how to R and R field winding in the housing.
PERFORMANCE OBJECTIVE 131

CRITERION-REFERENCED MEASURE:

Questions:

1. Field windings are held in place by a field _________ screw.
2. The field windings are wrapped around a field _________.
3. The field windings have to be placed in the same _________ as the windings being replaced.

Answers:

1. Clamp
2. Shoe
3. Position

Practical Application:

Remove and replace a field circuit.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 131 to determine if the assignment was completed with 100 percent accuracy.

PERFORMANCE OBJECTIVE 132

TASK: Test switches.

STANDARD OF PERFORMANCE OF TASK:

Any electrical or mechanical defects in the switches must be detected.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
12 volt source
Volt-ohmmeter.

ENABLING OBJECTIVES:

1. Use tools in standard tool kit.
2. Recognize and use 12 volt battery.

RESOURCES:

TEACHING ACTIVITIES:

1. Explain Ohm's Law.
2. Show how to use a volt-ohmmeter.
3. Draw a wiring diagram using a switch.
4. Discuss safety rules to follow when working with electricity.
5. Show different switches used in the automobile.
6. Demonstrate how to check a switch with an ohmmeter.
PERFORMANCE OBJECTIVE 132

CRITERION-REFERENCED MEASURE:

Questions:

1. An ohmmeter should read __________ when checking a switch in a closed position.
2. Three things are needed to make an electrical circuit; volts, amps, and __________.
3. A typical head light switch has __________ positions.

Answers:

1. Zero
2. Resistance
3. Three

Practical Application:

Test switches.

TASK: Test fuses.

STANDARD OF PERFORMANCE OF TASK:

Any defects in the end caps or terminals, or a high resistance or open circuit must be detected.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Ohmmeter and fuse.

ENABLING OBJECTIVES:

1. Use a standard ohmmeter.
2. Recognize a fuse.

RESOURCES:

TEACHING ACTIVITIES:

1. Explain safety measures to follow when working with electrical components.
2. Show the different types of fuses.
3. Explain how a fuse works and what causes them to go bad.
4. Demonstrate how to check a fuse with an ohmmeter.
5. Illustrate where fuses are located on an automobile.
PERFORMANCE OBJECTIVE 133

CRITERION-REFERENCED MEASURE:

Questions:
1. Most electrical circuits have a ________ or circuit breakers.
2. A bad fuse will have ________ resistance when checked with an ohmmeter.
3. The two types of fuses used are the cartridge fuse and ________ fuse.

Answers:
1. Fuse
2. High
3. U-shaped

Practical Application:

Test fuses.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 133 to determine if the assignment was completed with 100 percent accuracy.

TASK: R and R fuse block assembly.

STANDARD OF PERFORMANCE OF TASK:

New fuse block must be securely positioned in place and all wiring is reconnected in original positions with clean and tight connections.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Fuse puller
Fuse block
Wire marking tags.

ENABLING OBJECTIVES:

1. Use tools in standard tool kit.
2. Recognize fuse block.

RESOURCES:

TEACHING ACTIVITIES:

1. Explain the purpose of fuses.
2. Show a sketch of where the fuse block is located.
3. Demonstrate how to use a fuse puller.
4. Explain how to identify wire so as to replace in the correct order.
5. Explain safety measure to follow when working with electrical components.
PERFORMANCE OBJECTIVE 136

CRITERION-REFERENCED MEASURE:

Questions:

1. The _______ cable must be disconnected before working with electrical systems.
2. Wire must be tagged to insure correct ________.
3. Where are most fuse boxes located?

Answers:

1. Ground
2. Reinstallation
3. Under the dash

DUTY: MAINTAINING AND REPAIRING BASIC AUTOMOTIVE ELECTRICAL SYSTEM

PERFORMANCE OBJECTIVE 137

TASK: Inspect lighting system for faulty bulbs.

STANDARD OF PERFORMANCE OF TASK:

Any defective bulbs must be identified.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Test light.

ENABLING OBJECTIVES:

1. Use test light.
2. Recognize lighting system bulbs.

RESOURCES:

TEACHING ACTIVITIES:

1. Explain an electrical circuit.
2. Demonstrate how to use a test light.
3. Show and discuss a wiring diagram.
4. Discuss how to check a light bulb.
5. Discuss safety rules to follow when working with electricity.
PERFORMANCE OBJECTIVE 137

CRITERION-REFERENCED MEASURE:

Questions:

1. Use a ___________ to check a circuit for current.
2. The ___________ glows and produces light in a bulb.
3. A light socket must have current and a good ___________.

Answers:

1. Test light
2. Filament
3. Ground

Practical Application:

Inspect lighting system for faulty bulbs.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 137 to determine if the assignment was completed with 100 percent accuracy.
CHECKLIST FOR PERFORMANCE OBJECTIVE 137 EVALUATION

PERFORMANCE TEST FOR INSPECTING LIGHTING SYSTEM FOR FAULTY BULBS

Student's Name ___________________________ Date ____________

DIRECTIONS TO STUDENT: Set-up the proper equipment. Follow the verbal directions given by the instructor. Complete each step in the sequential order listed.

DIRECTIONS TO EVALUATOR: Observe the student. Pay close attention to items to be evaluated. Be sure the student completes the tasks within a reasonable time. A score of 100 percent is required for competency.

DUTY: MAINTAINING AND REPAIRING BASIC AUTOMOTIVE ELECTRICAL SYSTEM

PERFORMANCE OBJECTIVE 138

TASK: R and R light bulbs.

STANDARD OF PERFORMANCE OF TASK:
Replacement must light constantly at full intensity compared with other lights and bulb must be at rated capacity of original.

SOURCE OF STANDARD:
Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:
Standard tool kit
Replacement bulb
Scraper.

ENABLING OBJECTIVES:
1. Use standard tool kit.
2. Recognize light bulbs according to size.

RESOURCES:

TEACHING ACTIVITIES:
1. Discuss safety rules to follow when dealing with electrical system.
2. Show and discuss a chart location and types of light bulbs used on automobiles.
3. Demonstrate how to remove lens covers.
5. Show how to check a circuit.
PERFORMANCE OBJECTIVE 138

CRITERION-REFERENCED MEASURE:

Questions:

1. A _________ must be removed to gain access to most tail light bulbs.
2. A bulb which is either _________ or loose will not burn.
3. A new bulb must be at rated _________ of original.

Answers:

1. Lens
2. Corroded
3. Capacity

Practical Application:

R and R light bulbs.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 138 to determine if the assignment was completed with 100 percent accuracy.

PERFORMANCE OBJECTIVE 140

TASK: Adjust headlights.

STANDARD OF PERFORMANCE OF TASK:

Headlights must be aimed to provide maximum allowable road illumination and must also meet state/local authorities and manufacturer's headlamp aiming requirements.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Headlamp aimer.

ENABLING OBJECTIVES:

1. Use standard tool kit.
2. Recognize headlights.

RESOURCES:

TEACHING ACTIVITIES:

1. Discuss the importance of correct headlamp aiming.
2. Show location of aiming screws.
3. Show different types of aiming instruments.
4. Discuss the effect of an uneven floor.
5. Demonstrate how to set headlamps.
PERFORMANCE OBJECTIVE 140

CRITERION-REFERENCED MEASURE:

Questions:

1. When aiming headlamps the car must be parked on _________ surface.
2. Tires must be to _________ pressure.
3. Headlamp adjustment is made by turning the _________ screws.

Answers:

1. Level
2. Specified
3. Spring loaded

Practical Application:

Adjust headlights.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 140 to determine if the assignment was completed with 100 percent accuracy.

DUTY: MAINTAINING AND REPAIRING BASIC AUTOMOTIVE ELECTRICAL SYSTEM

PERFORMANCE OBJECTIVE 141

TASK: R and R dimmer switch.

STANDARD OF PERFORMANCE OF TASK:

Replacement switch must be fastened securely in place of the original and activate high and low beams as designed.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Dimmer switch
Steering wheel puller.

ENABLING OBJECTIVES:

1. Use tools in standard tool kit.
2. Recognize and use a steering wheel puller.

RESOURCES:

TEACHING ACTIVITIES:

1. Discuss safety rules to follow when dealing with electrical equipment.
2. Explain the location of the dimmer switch.
3. Demonstrate how to remove the steering wheel.
4. Draw and discuss the wiring diagram of a dimmer switch.
5. Explain how to test a dimmer switch.
6. Show and discuss various types of dimmer switches.
PERFORMANCE OBJECTIVE 141

CRITERION-REFERENCED MEASURE:

Questions:

1. The ________ must be removed to gain access to same dimmer switch.
2. Before attempting to remove the dimmer switch you must ________ the switch from the electrical circuit.
3. One type dimmer switch has ________ electrical wires.

Answers:

1. Steering wheel
2. Disconnect
3. Three

Practical Application:

R and R dimmer switch.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 141 to determine if the assignment was completed with 100 percent accuracy.

RESOURCES:

TEACHING ACTIVITIES:

1. Discuss safety procedures to follow when working with electrical equipment.
2. Discuss how a horn works.
3. Draw a wiring diagram of a horn circuit.
4. Demonstrate how to R and R a horn.
5. Discuss one and two wire horns.
PERFORMANCE OBJECTIVE 147

CRITERION-REFERENCED MEASURE:

Questions:

1. Automotive horns are of the ______ type.
2. Horns are often used in ______.
3. A loose mounting of a horn will cause a poor ______ and affect the horn tone.

Answers:

1. Vibrating
2. Pairs
3. Ground

Practical Application:

R and R horn.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 147 to determine if the assignment was completed with 100 percent accuracy.
CHECKLIST FOR PERFORMANCE OBJECTIVE 147 EVALUATION

PERFORMANCE TEST FOR R AND R HORN

Studeid Name Date

DIRECTIONS TO STUDENT: Set-up the proper equipment. Follow the verbal directions given by the instructor. Complete each step in the sequential order listed.

DIRECTIONS TO EVALUATOR: Observe the student. Pay close attention to items to be evaluated. Be sure the student completes the tasks within a reasonable time. A score of 90 percent is required for competency.

ITEMS TO BE EVALUATED Satisfactory Unsatisfactory

1. Located horn and removed parts to gain access. 
2. Loosened and disconnected electrical connections at horn.
3. Loosened and removed horn attaching bolts.
4. Removed horn assembly.
5. Positioned new horn assembly into original location.
6. Installed and tightened horn assembly mounting screws.
7. Reattached and tightened electrical connections.
8. Activated horn circuits to verify operation.
9. Reinstalled all parts previously removed to gain access to horn assembly.

PERFORMANCE OBJECTIVE 148

TASK: R and R windshield wiper motor

STANDARD OF PERFORMANCE OF TASK:

Motor must be positioned and fastened securely with all electrical connections clean and tight.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Windshield wiper motor.

ENABLING OBJECTIVES:

1. Use standard tool kit.
2. Recognize wiper motor.

RESOURCES:

TEACHING ACTIVITIES:

1. Discuss safety rules to follow when working with electrical equipment.
2. Explain how wiper system works.
3. Demonstrate how to R and R a wiper motor.
4. Discuss wiring diagram of wiper motor.
5. Explain speed control of wiper motor.
PERFORMANCE OBJECTIVE 148

CRITERION-REFERENCED MEASURE:

Questions:
1. Most wiper motors are _________ speed units.
2. The _________ switch automatically stops the wipers in the down position.
3. If the wiper motor stalls the circuit _________ temporarily interrupts motor current.

Answers:
1. Two
2. Park
3. Breaker

Practical Application:
R and R windshield wiper motor.

Method of Evaluating Practical Application:
Use Checklist Performance Objective 148 to determine if the assignment was completed with 100 percent accuracy.

DUTY: MAINTAINING AND REPAIRING BASIC AUTOMOTIVE ELECTRICAL SYSTEM

PERFORMANCE OBJECTIVE 149

TASK: R and R windshield washer motor.

STANDARD OF PERFORMANCE OF TASK:

Washer motor must be positioned and fastened securely with all electrical connections clean and tight, and nozzles must supply sufficient amount of fluid to clean windshield.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Windshield washer motor
Washer solvent
Washer nozzle cleaning tool.

ENABLING OBJECTIVES:

1. Use tool in a standard tool kit.
2. Recognize and use a nozzle cleaning tool.

RESOURCES:

TEACHING ACTIVITIES:

1. Explain how a windshield washer is connected to a windshield wiper system.
2. Draw and discuss wirings diagram of a washer system.
3. Demonstrate how to test the electrical part of a washer system.
4. Explain the types of washer vents used in a windshield washing system.
5. Demonstrate how to clean fluid reservoir and filter screen.
PERFORMANCE OBJECTIVE 149

CRITERION-REFERENCED MEASURE:

Questions:

1. The wash switch is part of the _________ switch.
2. The windshield washer sends a squirt of washing fluid through _________ to the wiper arms.
3. Contaminated washer fluid will cause the pick up tube to _________.

Answers:

1. Wiper
2. Tubes
3. Stop up

Practical Application:

R and R windshield washer motor.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 149 to determine if the assignment was completed with 100 percent accuracy.

DUTY: MAINTAINING AND REPAIRING BASIC AUTOMOTIVE ELECTRICAL SYSTEM

PERFORMANCE OBJECTIVE 150

TASK: Test instrument gauges.

STANDARD OF PERFORMANCE OF TASK:

Test must detect any gauge malfunctions.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Manufacturer's gauge diagnosis manuals
Manufacturer's specified testing equipment.

ENABLING OBJECTIVES:

1. Use tools in a standard tool kit.
2. Recognize and use a manufacturer's manual.

RESOURCES:

TEACHING ACTIVITIES:

1. Explain the electron theory.
2. Discuss how a gauge works.
3. Demonstrate how a voltmeter works.
4. Explain how to test a sending unit.
5. Demonstrate how to check a meter or gauge.
PERFORMANCE OBJECTIVE 150

CRITERION-REFERENCED MEASURE:

Questions:
1. Most instruments are connected to a ________ circuit.
2. A sending unit is like ________ resistor.
3. A ________ sending unit wire will cause a gauge to read its maximum.

Answers:
1. Printed
2. Variable
3. Grounded

Practical Application:
Test instrument gauges.

Method of Evaluating Practical Application:
Use Checklist Performance Objective 150 to determine if the assignment was completed with 100 percent accuracy.

TASK: Test cruise control servo.

STANDARD OF PERFORMANCE OF TASK:

All failures of servo unit must be detected.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Hand operated vacuum pump.

ENABLING OBJECTIVES:

1. Use tools in standard tool kit.
2. Use hand vacuum pump.

RESOURCES:

TEACHING ACTIVITIES:

1. Explain how a cruise control system works.
2. Discuss what the servo does in the system.
3. Demonstrate how to check the servo with a vacuum pump.
4. Discuss reaction of a malfunctioning servo unit.
5. Draw and discuss vacuum line diagram for a cruise control unit.
PERFORMANCE OBJECTIVE 156

CRITERION-REFERENCED MEASURE:

Questions:
1. A cruise control servo operates off engine ________.
2. A hand __________________ is used to test a servo.
3. A bad servo will not hold ________ inches of vacuum.

Answers:
1. Vacuum
2. Vacuum pump
3. 15

Practical Application:
Test cruise control servo for malfunction.

Method of Evaluating Practical Application:
Use Checklist Performance Objective 156 to determine if the assignment was completed with 100 percent accuracy.

DUTY: MAINTAINING AND REPAIRING AUTOMOBILE ELECTRICAL ACCESSORIES

PERFORMANCE OBJECTIVE 157

TASK: Adjust cruise control system.

STANDARD OF PERFORMANCE OF TASK:

While car is in operation and cruise control engaged, vehicle must operate at set speed with no jerking or surging; cruise control must disengage with slightest touch on brake pedal.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Hand operated vacuum pump.

ENABLING OBJECTIVES:

1. Use tools in a standard tool kit.
2. Use hand vacuum pump.

RESOURCES:

TEACHING ACTIVITIES:

1. Explain how a cruise control works.
2. Discuss each part of control unit.
3. Have student(s) review circuit operation for type to be checked.
4. Demonstrate operation of cruise unit.
5. Demonstrate how to use hand vacuum pump to operate servo.
PERFORMANCE OBJECTIVE 157

CRITERION-REFERENCED MEASURE:

Questions:
1. A cruise control unit operates above _________ miles per hour.
2. Servo chain must have a minimum _________ in linkage.
3. Check vacuum controls for leaks or _________.

Answers:
1. 30
2. Slack
3. Restrictions

Practical Application:
Test cruise control servo for failures.

Method of Evaluating Practical Application:
Use Checklist Performance Objective 157 to determine if the assignment was completed with 100 percent accuracy.
CHECKLIST FOR PERFORMANCE OBJECTIVE 157 EVALUATION

PERFORMANCE TEST FOR TESTING CRUISE CONTROL SERVO FOR FAILURES

DUTY: MAINTAINING AND REPAIRING AUTOMOBILE ELECTRICAL ACCESSORIES

PERFORMANCE OBJECTIVE 158

TASK: R and R cruise control components.

STANDARD OF PERFORMANCE OF TASK:

All parts must be installed and function as original; system must operate and function according to manufacturer's specifications for control of speed variation.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Cruise control component(s) being replaced.

ENABLING OBJECTIVES:

1. Use tools in standard tool kit.
2. Recognize cruise control components.

RESOURCES:

TEACHING ACTIVITIES:

1. Discuss the purpose of each component of a cruise control.
2. Have student(s) review circuit operation of components in service manual.
3. Explain how a cruise control works.
4. Demonstrate how to adjust various cruise control components.
5. Draw and explain electrical circuit for control unit.
PERFORMANCE OBJECTIVE 158

CRITERION-REFERENCED MEASURE:

Questions:

1. The ________ is electrically engaged and disengaged.
2. The ________ operates the throttle when the system is activated.
3. The cruise control unit is disengaged by ________ the brake pedal.

Answers:

1. Transducer
2. Servo
3. Depressing

Practical Application:

R and R cruise control.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 158 to determine if the assignment was completed with 100 percent accuracy.

PERFORMANCE OBJECTIVE 159

TASK: Test automatic alarm system.

STANDARD OF PERFORMANCE OF TASK:

Any defects in alarm system causing failure of alarm to activate or to activate falsely must be detected.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Alarm system manuals.

ENABLING OBJECTIVES:

1. Use ignition switch key.
2. Read and interpret service manual.

RESOURCES:

1. Cadillac Shop Manual, 1976, pp. 15.29--15.34

TEACHING ACTIVITIES:

1. Discuss safety rules to follow when working with electrical components.
2. Describe how various alarm systems work.
3. Demonstrate how to arm an alarm.
4. Draw and discuss the wiring diagram of various alarm systems.
5. Demonstrate how to disarm various alarm systems.
PERFORMANCE OBJECTIVE 159

CRITERION-REFERENCED MEASURE:

Questions:
1. An alarm system shut down is accomplished by _________ the door.
2. Once the system is set off it will continue to operate for approximately _________ minutes.
3. The alarm pulsates the vehicles _________ at a rate of 50 cycles a minute.

Answers:
1. Unlocking
2. 3-7
3. Horn

Practical Application:

Test automatic alarm system for defects.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 159 to determine if the assignment was completed with 100 percent accuracy.

TASK: Inspect radio speaker.

STANDARD OF PERFORMANCE OF TASK:

Any malfunction of the speaker must be detected.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit.

ENABLING OBJECTIVES:

1. Use standard tool kit.

RESOURCES:

TEACHING ACTIVITIES:

1. Discuss safety rules to follow when working with electrical components.
2. Draw and discuss wiring of radio speaker.
3. Demonstrate how to check radio speaker for distortion.
4. Demonstrate how a distorted speaker sounds.
PERFORMANCE OBJECTIVE 161

CRITERION-REFERENCED MEASURE:

Questions:

1. Listen for distortion or _______ in a bad speaker.
2. Sound should be checked at moderate volume with both full bass and full _______.
3. Speaker connections should be made out between the speaker and the _______.

Answers:

1. Rattle
2. Treble
3. Radio

Practical Application:

Inspect radio speaker for malfunction.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 161 to determine if the assignment was completed with 100 percent accuracy.

DUTY: MAINTAINING AND REPAIRING AUTOMOBILE ELECTRICAL ACCESSORIES

PERFORMANCE OBJECTIVE 165

TASK: Trim radio antenna.

STANDARD OF PERFORMANCE OF TASK:

Radio trimmer must be adjusted to maximum signal strength available from radio.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit.

ENABLING OBJECTIVES:

1. Use tools in standard tool kit.
2. Read and interpret service manual.

RESOURCES:

TEACHING ACTIVITIES:

1. Explain operation of a radio receiving set.
2. Discuss when an antenna needs to be trimmed.
3. Demonstrate how to trim an antenna.
5. Discuss safety rules to follow when working with electrical equipment.
PERFORMANCE OBJECTIVE 165

CRITERION-REFERENCED MEASURE:

Questions:

1. To trim an antenna tune the radio to __________ kilohertz.
2. Antenna adjustment is usually located behind __________ radio knob.
3. Antenna trimming should always be performed after any radio or __________ repair work.

Answers:

1. 1400
2. Right
3. Antenna

Practical Application:

Adjust radio for maximum signal strength.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 165 to determine if the assignment was completed with 100 percent accuracy.

DUTY: MAINTAINING AND REPAIRING AUTOMOBILE ELECTRICAL ACCESSORIES

PERFORMANCE OBJECTIVE 166

TASK: R and R power antenna motor.

STANDARD OF PERFORMANCE OF TASK:

Antenna must extend and retract fully without binding and with no unusual noises; all electrical connections must be clean and tight.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Power antenna motor.

ENABLING OBJECTIVES:

1. Use tools in standard tool kit.
2. Read and interpret shop manual.

RESOURCES:

TEACHING ACTIVITIES:

1. Discuss safety rules to follow when working with electrical equipment.
2. Draw and discuss electrical wiring diagram of a power antenna.
4. Explain how an electrical antenna works.
5. Demonstrate how to check the operation of various power antennas.
PERFORMANCE OBJECTIVE 166

CRITERION-REFERENCED MEASURE:

Questions:

1. The __________ must be removed off the car before the motor can be removed.
2. Electrical wires on the motor are color __________.
3. Always check __________ operation before reinstallation.

Answers:

1. Antenna
2. Coded
3. Motor

Practical Application:

R and R power antenna motor.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 166 to determine if the assignment was completed with 100 percent accuracy.

DUTY: MAINTAINING AND REPAIRING AUTOMOBILE ELECTRICAL ACCESSORIES

PERFORMANCE OBJECTIVE 168

TASK: R and R power seat components.

STANDARD OF PERFORMANCE OF TASK:

Electrical connections must be clean and tight; transmission cables must be properly routed with no binding or kinking. Wiring and cables must be routed so as not to interfere with travel of seat. Seat controls must operate in correct sequence and all control options must operate to full limits of travel without jerking or binding.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Power seat components
Power seat manual.

ENABLING OBJECTIVES:

1. Use tools in standard tool kit.
2. Recognize and use electrical trouble shooting tools.

RESOURCES:

TEACHING ACTIVITIES:

1. Discuss safety rules to follow while working with electrical components.
2. Discuss the various types of front seats which use power controls.
3. Demonstrate how to remove a front seat.
4. Explain how to test the controls of a power seat.
PERFORMANCE OBJECTIVE 168

CRITERION-REFERENCED MEASURE:

Questions:
1. The seat is removed with the ________ and ________ attached.
2. Detach cables from seat adjusters by squeezing ________ plastic connectors.
3. Check operation of transmission and seat adjuster to limits of ________ and vertical travel.

Answers:
1. Transmission motor
2. Oblong
3. Horizontal

Practical Application:
R and R power seat components.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 168 to determine if the assignment was completed with 100 percent accuracy.

PERFORMANCE OBJECTIVE 169

TASK: R and R cigarette lighter receptacle.

STANDARD OF PERFORMANCE OF TASK:
Lighter must operate in receptacle without excessive looseness or tightness.

SOURCE OF STANDARD:
Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:
Standard tool kit
New receptacle.

ENABLING OBJECTIVES:
1. Use tools in standard tool kit.
2. Read and interpret manufacturer's specifications.

RESOURCES:

TEACHING ACTIVITIES:
1. Discuss safety rules to follow when working with electrical components.
2. Draw and discuss wiring diagram for various cigarette lighters.
3. Demonstrate how to R and R the lighter.
5. Demonstrate how to operate cigarette lighter.
PERFORMANCE OBJECTIVE 169

CRITERION-REFERENCED MEASURE:

Questions:

1. Always disconnect the _______ before working on electrical connections.
2. Remove lighter base from sleeve by holding sleeve and rotating _______ base.
3. Operate lighter by _______ in on lighter assembly.

Answers:

1. Battery
2. Lighter
3. Pressing

Practical Application:

R and R cigarette lighter receptacle.

PERFORMANCE OBJECTIVE 170

TASK: Test rear defogger.

STANDARD OF PERFORMANCE OF TASK:

All defects and malfunctions of rear window defogger must be detected.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
Manufacturer's diagnosis manual
Test light.

ENABLING OBJECTIVES:

1. Use tools in standard tool kit.
2. Read and interpret diagnosis manual.

RESOURCES:

TEACHING ACTIVITIES:

1. Discuss safety rules to follow when working with electrical components.
2. Explain theory of operation of various rear defoggers.
4. Demonstrate how to use a test light to test defogger circuit.
5. Draw and discuss the wiring diagram of various defogger circuits.
PERFORMANCE OBJECTIVE 170

CRITERION-REFERENCED MEASURE:

Questions:
1. The defogger is an ________ heated window.
2. A non-powered ________ is used to test a defogger.
3. A ________ indicator light is illuminated whenever the defogger is operating.

Answers:
1. Electrical
2. Test light
3. Green

Practical Application:
Test rear defogger for defects and malfunctions.

Method of Evaluating Practical Application:
Use Checklist Performance Objective 170 to determine if the assignment was completed with 100 percent accuracy.

TASK: R and R rear defogger components.

STANDARD OF PERFORMANCE OF TASK:

Defogger must operate and cycle according to manufacturer's specifications.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Standard tool kit
New components for rear window defogger
Defogger system manual.

ENABLING OBJECTIVES:

1. Read and interpret shop manual.
2. Use tool in standard tool kit.

RESOURCES:

TEACHING OBJECTIVE(S):

1. Discuss safety rules to follow when working with electrical components.
2. Have student(s) read Cadillac Shop Manual, 1976, pp. 15, 26, 27 on defogger.
3. Draw and discuss the wiring diagram of a window defogger.
4. Explain purpose of each component of various defogger systems.
5. Demonstrate how to test component of a defogger system.
PERFORMANCE OBJECTIVE 171

CRITERION-REFERENCED MEASURE:

Questions:

1. The defogger system is fed through a _________ amp fuse located in the fuse block.
2. The time delay relay is located on the lower _________ _________.
3. Service information pertaining to the rear window defogger is covered in the _________ manual.

Answers:

1. 25
2. Steering column
3. Body

Practical Application:

R and R defogger components.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 171 to determine if the assignment was completed with 100 percent accuracy.

CONDUCTING SHOP OPERATIONS
DUTY: CONDUCTING SHOP OPERATIONS

PERFORMANCE OBJECTIVE 176

TASK: Estimate time and cost for a job.

STANDARD OF PERFORMANCE OF TASK:

All elements of the job must have been identified and correctly looked up in Labor Time Guide, and all parts must be identified and costed without error.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Labor Time Guide
Parts manual
Job cost form.

ENABLING OBJECTIVES:

1. Read and interpret labor guide.
2. Read and interpret parts manual.

RESOURCES:

TEACHING ACTIVITIES:

1. Explain how to write an estimate using a parts and labor guide.
2. Discuss contents and index page of a section in manual.
3. Explain the skill level for each job.
4. Discuss hourly rate conversion table.
5. Demonstrate how to estimate the cost of a job using a parts and labor guide.
PERFORMANCE OBJECTIVE 176

CRITERION-REFERENCED MEASURE:

Questions:
1. When two part numbers are listed together the first number is the ______ and the second number is ________ hand part.
2. The labor ________ table allows you to convert hours to dollars.
3. The hour’s rate is listed in ________ of an hour.

Answers:
1. Right, left
2. Conversion
3. Tenths

Practical Application:
Estimate time and cost for a job using the labor guide.

Method of Evaluating Practical Application:
Use Checklist Performance Objective 176 to determine if the assignment was completed with 100 percent accuracy.
CHECKLIST FOR PERFORMANCE OBJECTIVE 176 EVALUATION

PERFORMANCE TEST FOR ESTIMATING TIME AND COST FOR A JOB USING THE LABOR GUIDE

Student's Name: __________________________ Date: ______________________

DIRECTIONS TO STUDENT: Set-up the proper equipment. Follow the verbal directions given by the instructor. Complete each step in the sequential order listed.

DIRECTIONS TO EVALUATOR: Observe the student. Pay close attention to items to be evaluated. Be sure the student completes the tasks within a reasonable time. A score of 100 percent is required for competency.

PERFORMANCE OBJECTIVE 177

TASK: Complete work order form.

STANDARD OF PERFORMANCE OF TASK:

All required information must be recorded on work order form without error.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Work order form.

ENABLING OBJECTIVES:

1. Read and interpret a labor and parts guide.
2. Recognize and use a work order form.

RESOURCES:

TEACHING ACTIVITIES:

1. Discuss the information needed from a customer work order.
2. Discuss how to diagnose a problem with the help of a customer.
3. Demonstrate how to write a work order.
4. Explain why a customer's signature is needed on a work order.
5. Have students act out the part of a customer with an automobile to be repaired.
PERFORMANCE OBJECTIVE 177

CRITERION-REFERENCED MEASURE:

Questions:

1. Using a ___________ guide you can estimate the time of a job.
2. The customer's ___________ authorizes the work to be done.
3. Vehicle data includes make, model, year and ___________ number plus odometer reading.

Answers:

1. Labor
2. Signature
3. Identification

Practical Application:

Compile information on work order.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 177 to determine if the assignment was completed with 100 percent accuracy.

PERFORMANCE OBJECTIVE 178

STANDARD OF PERFORMANCE OF TASK:

All new pages or pen and ink changes must be entered in their correct locations without error.

SOURCE OF STANDARD:
Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Service Manual and new pages and/or description of changes to be made.

ENABLING OBJECTIVES:

1. Read and interpret service manual.
2. Recognize update sheets.

RESOURCES:

TEACHING ACTIVITIES:

1. Explain reason for having to add pages to a manual.
2. Demonstrate how to disassemble a manual.
3. Have student(s) read Mitchell Manual Tune Up I, page 2 on how to put in new material.
4. Demonstrate how and where pen and ink changes are to be made.
5. Demonstrate how to destroy old pages.
PERFORMANCE OBJECTIVE 178

CRITERION-REFERENCED MEASURE:

Questions:

1. The old page must first be ________ from the manual.
2. Insert ________ pages in place of old pages.
3. Make changes only on ________ pages as instructed.

Answers:

1. Removed
2. New
3. Old

Practical Application:

Update service manual files.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 178 to determine if the assignment was completed with 100 percent accuracy.

PERFORMANCE OBJECTIVE 179

TASK: Schedule customer appointments.

STANDARD OF PERFORMANCE OF TASK:

Job must be scheduled with a minimum of lost shop time and a minimum wait for the customer.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Flat Rate Manual.

ENABLING OBJECTIVES:

1. Read and interpret Flat Rate Manual.
2. Select and use scheduling sheets.

RESOURCES:

TEACHING ACTIVITIES:

1. Explain customer relations.
2. Demonstrate how to look up time required for a job.
3. Demonstrate how to set up jobs for time slots.
4. Discuss scheduling work among other jobs.
5. Demonstrate how to fill out a scheduling sheet.
PERFORMANCE OBJECTIVE 179

CRITERION-REFERENCED MEASURE:

Questions:

1. A _________ _________ manual is used to estimate time required for a job.
2. If parts are not available they must be _________.
3. Estimate work hours available when setting up _________ to be performed.

Answers:

1. Flat Rate
2. Ordered
3. Jobs

Practical Application:

Scheduling customer appointments.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 179 to determine if the assignment was completed with 100 percent accuracy.

DUTY: CONDUCTING SHOP OPERATIONS

PERFORMANCE OBJECTIVE 180

TASK: Schedule outside shop work.

STANDARD OF PERFORMANCE OF TASK:

Job must be delivered to and received from specialty shop as scheduled.

SOURCE OF STANDARD:

Writing Team, State of Pennsylvania.

CONDITIONS FOR PERFORMANCE OF TASK:

Telephone.

ENABLING OBJECTIVES:

1. Select and use outside work scheduling forms.
2. Read and interpret a flat rate manual.

RESOURCES:

TEACHING ACTIVITIES:

1. Discuss how to use manual to determine work hours to complete jobs.
2. Explain where to find outside shops.
3. Demonstrate how to set up outside work.
4. Explain how to use the telephone to set up outside work.
5. Demonstrate how to set up a schedule for delivery of workpiece.
PERFORMANCE OBJECTIVE 180

CRITERION-REFERENCED MEASURE:

Questions:
1. When scheduling outside work always get an estimate of cost and __________.
2. Always telephone customer to determine if work schedule is __________.
3. You should make arrangements to __________ workpiece to specialty shop.

Answers:
1. Time
2. Satisfactory
3. Deliver

Practical Application:

Schedule outside shop work.

Method of Evaluating Practical Application:

Use Checklist Performance Objective 180 to determine if the assignment was completed with 100 percent accuracy.

APPENDIX A

CROSS-REFERENCE TABLE OF DUTIES, TASKS, AND PERFORMANCE OBJECTIVES
APPENDIX A

CROSS-REFERENCE TABLE OF DUTIES, TASKS, AND PERFORMANCE OBJECTIVES

The purpose of this table is to cross-reference changes made since compiling the original task inventory and completing the survey of the incumbent workers. The information contained in the cross-reference table is described below:

1. * Indicates a performance objective was not written due to recommendations from the Writing Team and/or Field Review Team.

2. ** Indicates a write in task to catalog by incumbents during development of catalog. Since these tasks did not appear on the occupational inventory, there is no survey data available on them.

3. Task statements listed below the numbered task statements and enclosed in parenthesis reflect the wording of the original statement as it appeared on the occupational inventory.

Example: Fabricate fiberglass duct
(Fabricate fiberglass elbow).

These changes were made by the Field Review Team in order to further clarify the performance objective.

4. Task number in parenthesis which precedes the task statement indicates that a task has been subsumed or subdivided.

APPENDIX B

DEFINITION OF TERMS

A number of terms frequently used in this guide may be unfamiliar to the reader; others may be familiar, but in the context of this handbook have been assigned special meanings.

AFFECTIVE.
Skills which emphasize an attitude, feeling, emotion, or degree of acceptance and rejection.

CATALOG.
A comprehensive collection of performance objectives, performance guides, and related data developed in a specific domain.

CBVE (COMPETENCY-BASED VOCATIONAL EDUCATION).
A methodology of instruction that (a) identifies the abilities and skills needed for on-the-job performance; (b) informs students and teachers of the precise and detailed learning objectives required to achieve these competencies; (c) emphasizes performance standards in testing, course requirements, and/or graduation; and (d) facilitates learning by letting each student master the tasks prior to advancing to another.

CHECKPOINT.
A point in the development of the V-TECS product when material must be sent to V-TECS central office for quality review.

CIP (CLASSIFICATION OF INSTRUCTION PROGRAM) CODE.
A code developed by the U.S. Office of Education to identify a specific cluster of related jobs for training program identification.

COGNITIVE.
Skills which emphasize the recall of knowledge and development of intellectual abilities.

COMPETENCY.
The ability (including knowledge, skills, and/or attitudes) to perform a specific task or duty successfully.

CONDITIONS.
Describes the situation for competent task performance, including tools and equipment to be used, and limitations under which the tasks will be performed.

CONSORTIUM.
A group of state agencies, institutions, or other entities which have been legally constituted through letters of commitment, agreements, or by assignment of higher authorities to work together toward the solution of problems in education. A consortium, for the purposes of this work, must have membership from autonomous agencies and institutions which cut across state boundaries as they attempt to solve problems or meet goals.
CRITERION-REFERENCED MEASURES.
An evaluative procedure used to determine if a student has mastered a performance objective.

CROSS-REFERENCE TABLE.
A table that identifies the relationship among duties and tasks found in the occupational inventory and the performance objectives in the final catalog. Also noted are percentages of incumbents performing the tasks by D.O.T.

CURRICULUM GUIDE.
An instructional resource developed from a V-TECS catalog to guide CBVE for an occupation.

DICTIONARY OF OCCUPATIONAL TITLES (D.O.T.).
A document published by the U.S. Department of Labor, Employment and Training Administration. This publication groups occupations into systematic occupational classification structures based on interrelationships of job tasks and requirements.

DISTRACTOR.
An incorrect response to a multiple-choice or true/false test item.

DOMAIN (OCCUPATIONAL DOMAIN).
A group of job titles that are related on the basis of required skills and knowledge.

D.O.T. CODE.
A nine-digit number used to identify a specific job within a given calendar year.

DUTY.
A cluster of related tasks performed by incumbent workers in an occupational domain.

ENABLING OBJECTIVE.
An objective related to background knowledge or skills that are prerequisite to the mastery of a given task.

FIELD TEST.
The process of using and refining drafts of V-TECS materials for the purpose of identifying content errors or technical problems.

GUIDE SHEET.
Instructional information including the duty, performance objective, task, performance of standard, survey of standard, conditions for performance of tasks, enabling objectives, resources, teaching activities, criterion-reference measures, and performance guide.

JOB.
A group of tasks performed by a job incumbent.

JOB INCUMBENT.
An individual who is currently employed in an occupation.
OCCUPATIONAL ANALYSIS (Task Analysis).
The process of reviewing elements of a job for the purpose of improving training program content across program levels of vocational-technical education.

OCCUPATIONAL INVENTORY (Task Inventory Booklet).
A survey instrument listing tasks performed and tools and equipment used by job incumbents in an occupational domain.

OCCUPATIONAL SURVEY.
The procedures for collecting data to identify the duties and tasks that comprise one or more jobs, job types, or career field ladders for the collection and analysis of information concerning such duties.

O.E./CIP CODE.
A code developed by the U.S. Office of Education to identify a specific cluster of related jobs for training program identification.

PERFORMANCE-BASED INSTRUCTION.
Instruction which required the learners demonstration of specific competencies. The desired abilities are selected before the instruction is described and are clearly defined as observable performance objectives.

PERFORMANCE CHECKLIST.
A list of performance steps derived from the performance guide to record acceptable or unacceptable performance of each step of a task.

PERFORMANCE GUIDE (PG).
A series of steps required for performance of a task arranged in the sequence ordinarily followed.

PERFORMANCE OBJECTIVE (PO).
A statement, in precise measurable terms, of a particular behavior to be exhibited by a learner under specified conditions, including a standard of performance.

PSYCHOMOTOR.
Skills which emphasize manipulation of material or tools.

QUALITY REVIEW.
A review of content by V-TECS staff or designated representative to examine quality of content, format, and style of V-TECS product(s).

RESOURCES.
Materials which are used to develop instruction and/or learner-specific objectives.

SOURCE OF STANDARD.
A person or origin from which the information establishing the standard is received.

STANDARD.
The criteria used to determine if a task has been successfully or unsuccessfully performed.
STATE-OF-THE-ART REFERENCE.
Current materials from which information or resources can be found to facilitate instruction.

STATE-OF-THE-ART (SOA) STUDY.
Research conducted to determine the current status of performance-based instructional materials and practices in the domain area under study and to obtain other information that might be useful in catalog development.

SUBJECT-MATTER EXPERT.
A highly experienced person (job incumbent instructor) who assists in identifying task performance steps, skills, and knowledge necessary to perform the job.

TASK.
A unit of work activity which constitutes logical and necessary steps in the performance of a duty. A task has a definite beginning and ending point in its accomplishments and generally consists of two or more definite steps.

TASK ANALYSIS.
The process of reviewing elements of a job for the purpose of improving training program content across program levels of vocational technical education.

TASK CRITICALITY.
That aspect of a task statement which makes its accomplishment crucial to the acceptable performance of a worker or student.

TASK LIST.
A list of tasks performed by incumbents in a specific occupation domain.

TEACHING ACTIVITIES.
Methods and/or procedures for delivering instructional content to students.

TEST-ITEM BANK.
A collection of criterion-referenced test items coded for input and retrieval by computer or manual methods.

VALIDATION.
The process of assuring that all aspects of an occupational task analysis identifies the skills, knowledge, and attitudes performed in the occupation.

VERIFICATION.
The procedure of collecting data to substantiate an existing product; for example, task list verification.

V-TECS.
An acronym representing: Vocational-Technical Education Consortium of States; 1866 Southern Lane, Decatur, GA 30033-4097.

V-TECS CATALOG.
WORKING CONDITIONS.
The atmospheric and environmental conditions under which a worker performs a specific job.

WRITING TEAM.
A team of people representing instructors with subject matter expertise; persons having knowledge and experience in developing criterion-referenced measures; local or state supervisors in the domain being developed; workers and supervisors of incumbent workers whose function is to analyze occupational data and develop performance objectives for specific D.O.T. areas.

STANDARD TOOL KIT

A "standard tool kit" was defined by the Writing Team to include the following tools:

Battery Post Cleaner
Bench, Work
Cart, Service
Channel Lock Pliers
Chisel and Punch Set
Diagonal Cutting Pliers
Drop Light
Hammers, Assorted
Measuring Tape
Needle nose Pliers, Assorted
Scratch Awl
Screwdrivers, Philips
Screwdrivers, Slot head
Slip Joint Pliers, Assorted
Vise Grip Pliers
Vise, Machinist
Wrenches, Adjustable, Set
Wrenches, Allen
Wrenches, Box
Wrenches, Open End and Combination Box
Wrenches, Socket Set, 1/4 inch Drive
Wrenches, Socket Set, 3/8 inch Drive
Terminal Kit and Crimping Tool
Putty Knives -- Wide and Narrow
Torque Wrench
Soldering Kit
Test Light with Lead
Electrician's Tape
Mechanics Wire
