Bicentennial; Continental Congress; North Carolina; *Signers of the United States Constitution; United States Constitution; *Williamson (Hugh)

As a scholar of international renown, Hugh Williamson came into contact with some of the leading intellectuals of the patriot cause and their political ideas transformed him into an adroit politician and leader. This booklet on Williamson is one in a series on Revolutionary War soldiers who later signed the U.S. Constitution. The booklet reviews his education, his involvement with the patriot cause, his military service as North Carolina's Physician and Surgeon General, and his public service to North Carolina as a representative to the Constitutional Convention, the Continental Congress, and the state legislature. Personal data about Williamson and a bibliographic essay of further readings are also included.

Hugh Williamson

Soldier-Statestmen of the Constitution
A Bicentennial Series
Introduction

In September 1987 the United States commemorates the bicentennial of the signing of the Constitution. Twenty-two of the thirty-nine signers of the Constitution were veterans of the Revolutionary War. Their experiences in that conflict made them deeply conscious of the need for a strong central government that would prevail against its enemies, yet one that would safeguard the individual liberties and the republican form of government for which they had fought. Their solution is enshrined in the Constitution.

The President of the United States is the Commander in Chief of the nation's military forces. But it is the Congress that has the power to raise and support those forces, and to declare war. The Founding Fathers established for all time the precedent that the military, subordinated to the Congress, would remain the servant of the Republic. That concept is the underpinning of the American military officer. These twenty-two men were patriots and leaders in every sense of the word: they fought the war, they signed the Constitution, and they forged the new government. They all went on to careers of distinguished public service in the new Republic. Their accomplishments should not be forgotten by those who enjoy the fruits of their labors. Nor should we forget the fortieth man whose name appears on the Constitution. The Secretary was the twenty-third Revolutionary veteran in the Convention, who continued his service to the nation as one of its first civil servants.

This pamphlet was prepared by the U.S. Army Center of Military History with the hope that it will provide you with the background of a great American; stimulate you to learn more about him; and help you enjoy and appreciate the bicentennial.

John O. Marsh, Jr.
Secretary of the Army
Hugh Williamson, who represented North Carolina at the Constitutional Convention, was a scholar of international renown. His erudition had brought him into contact with some of the leading intellectuals of the Patriot cause and, in turn, with the ferment of political ideas that eventually found expression in the Constitution. During the Revolution, Williamson contributed his considerable talents as physician and natural scientist to the American war effort. His experiences in that preeminent event of his generation transformed the genial scholar into an adroit politician and a determined leader in the campaign for effective national government. This leadership was evident not only at the Convention in Philadelphia but also, with telling effect, during the ratification debates in North Carolina.

Williamson's career demonstrates the rootlessness that characterized the lives of many Americans even in the eighteenth century. Born on the frontier, he lived for significant periods of his long life in three different regions of the country. This mobility undoubtedly contributed to the development of his nationalistic outlook, an outlook strengthened by wartime service with interstate military forces and reinforced by the interests of the planters and merchants that formed his North Carolina constituency. These experiences convinced him that only a strong central government could foster and protect the political, economic, and intellectual promises of the Revolution.

THE PATRIOT

Williamson was born in Chester County in what was then the frontier region of Pennsylvania. His fragile health as a youth weighed against his beginning a career in the family's clothier business. His parents instead sent him to a private academy and then to the College of Philadelphia (today's University of Pennsylvania). A member of the college's first graduating class, Williamson obtained a license to preach in Connecticut, but factional disputes among the local clergy and a resurgence of ill health led him to abandon a career in the ministry. Further study and a Master's degree led to employment in 1760 as a professor of mathematics at his alma mater.

In another career shift four years later, Williamson turned to the study of medicine. Armed with a degree from the prestigious University of Utrecht in the Netherlands, he returned to Philadelphia to open a private practice. At the same time, he pursued a number of independent scientific and educational projects, and his work in these areas eventually led to membership in
the American Philosophical Society as well as acclaim in Europe's intellectual circles.

Interest in science and education indirectly led Williamson to politics and the Patriot cause. Sailing for England in 1776 to raise funds for a local educational project, Williamson stopped on route at Boston. There he witnessed the famous Tea Party, in which Patriots dressed as Indians destroyed a cargo of tea in protest over a newly enforced Parliamentary tax on imported commodities. On reaching London he was summoned before the Privy Council to testify on this act of rebellion and on colonial affairs in general.

Williamson came of age politically during this encounter. In response to questions by Council members, who were in the process of formulating punitive measures against Massachusetts, he bluntly warned that repression would provoke rebellion. He then went on to express the argument that was becoming the core of the Patriot position: Americans were entitled to the full rights of Englishmen, including representation in the decisions of the English government. This testimony brought him to the attention of other Americans in London. A mutual interest in scientific matters cemented a solid working relationship with Benjamin Franklin, and Williamson soon found himself joined with the famous American scientist and others in appealing for support among those Englishmen who, in opposition to their own government, sympathized with American claims.

Williamson continued on to the Netherlands where, taking advantage of the cover afforded by his attendance at meetings on scientific and educational subjects, he organized the publication of pamphlets and other papers that supported the Patriot cause. While there he learned that the colonies had declared their independence. Narrowly avoiding capture at sea, he rushed back to Philadelphia in early 1777 and volunteered for service in the Medical Department of the Continental Army. The Department had no opening at that time, so Williamson decided to form a partnership with a younger brother to import medicines and other scarce items from the West Indies through the British blockade. Believing that he could best contribute to the war effort by using his contacts and reputation in this manner, Williamson made Edenton, North Carolina, his base of operations. Settlement in North Carolina soon led to his establishing a medical practice to serve the planters and merchants of the region.

**THE SOLDIER**

These various activities brought Williamson to the attention of North Carolina’s political leaders. Facing the threat of a British invasion of the region from the sea and bases in Florida, the state legislature voted to raise a force of 4,000 men to assist South Carolina. When Governor Richard Caswell, with
the rank of major general, took to the field at the head of these citizen-soldiers, he named Williamson to serve as the state’s Physician and Surgeon General, a post Williamson held until the end of the war.

The capture of Charleston in 1780 not only marked a stunning defeat for American forces, but also signaled the end of the first phase in a new British war strategy. Under this strategy British forces would continue to tie down Washington’s main army in the north while a Royal army under General Charles Cornwallis would advance northward. Using Savannah and Charleston as their bases of operations, the British expected their regular units to push through North Carolina and Virginia while a militia composed of local Loyalists secured areas captured by the regular forces. If successful, this strategy would have led to the conquest of the colonies from the south. To counter Cornwallis’ efforts, the Continental Congress sent Horatio Gates, the hero of Saratoga, to command a small force composed of a division of continentals, Caswell’s units from North Carolina, and a group of hastily assembled Virginia militia units.

Gates attempted to attack the British advance base near Camden, South Carolina, but his tired militia units, which were still forming when the battle began, were easily routed, and the Americans suffered another defeat. Williamson, who witnessed the disaster, volunteered to pass behind enemy lines to care for the American wounded. He spent two months on this mercy mission. When smallpox threatened the prison camp, he argued strenuously with Corn-
wallis and other British officers over the proper method to combat the disease. His perseverance and scientific reputation paid off. The British followed his advice, and an epidemic was averted.

In the fall of 1780 Williamson returned to the field. Major General Nathanael Greene, Gates' replacement, had begun his brilliant campaign to recover the south through the joint efforts of continentals and militia. While his main force engaged the British in a series of battles, the militiamen concentrated on picking off small outposts and isolated enemy parties. Francis ("Swamp Fox") Marion and others who operated mainly in South Carolina are most remembered for this type of guerrilla warfare, but North Carolina units also adopted these tactics. Williamson was attached to a force under Brigadier General Isaac Gregory whose mission was to limit British activity in eastern North Carolina. Gregory established his base in the vast reaches of the Dismal Swamp where he could pin the British down in Wilmington without jeopardizing his small force. Williamson's bold innovations in preventive medicine, especially his strenuous efforts to indoctrinate troops in the importance of sanitation and diet, kept the command virtually free of disease during the six months that it inhabited the swamp—a rare feat in eighteenth century warfare.

**THE STATESMAN**

In 1782 Williamson's neighbors elected him to the lower house of the North Carolina legislature, where he served for several terms. He sat on numerous committees, including those formed to regulate veterans' rights, and he authored the state's copyright law. His fellow legislators also chose Williamson to serve in the Continental Congress in 1782. Appointment to this national body represented a natural political progression for Williamson, who was evolving into a champion of federalism. His experiences during the Revolution, especially his exposure to the pressing need for interstate cooperation during the 1780 and 1781 campaigns in the Carolinas, had convinced him of the military importance of strong national government. This interest increased when he came to realize the economic benefits that might accrue from binding interstate association. In 1786 North Carolina chose Williamson to attend the Annapolis Convention, a meeting called to settle economic questions affecting the middle Atlantic states. Although he arrived too late to play a role in the Maryland proceedings, he was prepared to discuss interstate issues the following year when his state appointed him as a representative at the Constitutional Convention in Philadelphia.

Williamson, a faithful attendee at Convention sessions, lodged with Alexander Hamilton and James Madison, two of the country's best known nationalist leaders. His intellectual stature and international background also propelled
him into a leadership role in the North Carolina delegation. A capacity for hard work and his innate good humor made him invaluable to the Federalists as they worked out the many political compromises necessary for consensus on the new instrument of government.

Shortly before the Convention adjourned, Williamson wrote a series of public letters in defense of a strong federal system. These "Letters of Sylvius" addressed many of the practical concerns of his state, where the rural and frequently debt-ridden farmers favored minimal government regulations, while the mercantile-planter group from the seaboard region wanted an economy strictly regulated by a central government. Using simple examples, Williamson explained to both groups the dual dangers of inflationary finances and of taxes that would stunt the growth of domestic manufacture. He exhorted North Carolinians to support the Constitution as the basis for their future prosperity. The ratification process, he explained, would decide whether the United States would remain "a system of patchwork and a series of expedients" or become "the most flourishing, independent, and happy nation on the face of the earth."

Following adjournment in Philadelphia, Williamson returned to New York to participate in the closing sessions of the Continental Congress and to serve as one of the agents settling North Carolina's accounts with that body. These duties caused him to miss the Hillsboro Convention, where North Carolina first considered and rejected the Constitution, but he played a major role at a second convention that met in Fayetteville in 1789. Here he participated in a successful effort to rally support for the Constitution.

Williamson's neighbors elected him to represent them in the first federal Congress. He served two terms before retiring and settling in New York City, where he continued to pursue a wide range of scholarly interests. He wrote extensively about his research, joined numerous learned societies, and contributed to many charities. He also served as one of the original trustees of the University of North Carolina.

Thomas Jefferson described Williamson's role at the Philadelphia Convention in the following terms: "he was a useful member, of an acute mind, attentive to business, and of an high degree of erudition." As these words suggest, the American people were well served during a critical period in their history when a scientist of international renown volunteered to defend the principles of democracy both on the battlefield and in the government.

The Congress shall have Power...
To raise and support Armies...;
To provide and maintain a Navy;
To provide for organizing, arming, and disciplining, the Militia...;

ARTICLE 1, Section 8.
Personal Data

BIRTH: 5 December 1735, in West Nottingham Township, Chester County, Pennsylvania*

OCCUPATION: Doctor and Merchant

MILITARY SERVICE:
Surgeon General, North Carolina State Troops—3 years

PUBLIC SERVICE:
Continental Congress—6 years
House of Representatives—4 years

DEATH: 22 May 1819, at New York, New York

PLACE OF INTERMENT: Apthorp Tomb, Trinity Churchyard, New York City

*In 1752 the English-speaking world adopted the Gregorian calendar, thereby adding 11 days to the date. Thus Williamson's date of birth was recorded in 1735 as 24 November.
