TITLE High School Graduate Follow-Up Report, June 1987 Graduates.

INSTITUTION Connecticut State Dept. of Education, Hartford.

PUB DATE 88

NOTE 65p.; For June 1985 graduates report, see ED 291 838.

PUB TYPE Reports - Research/Technical (143) -- Statistical Data (110)

EDRS PRICE MF01/PC03 Plus Postage.

DESCRIPTORS \*Career Choice; \*Employment; Equivalency Tests; High School Equivalency Programs; \*High School Graduates; High Schools; High School Students; Minority Groups; Nontraditional Education; Postsecondary Education; Private Schools; Public Schools; \*Racial Differences; Statistical Analysis; \*Unemployment; Vocational Schools

IDENTIFIERS \*Connecticut; General Educational Development Tests

ABSTRACT

This report covers the October 1987 educational and career postsecondary activities of the June 1987 graduates from 145 Connecticut local public high schools (136 comprehensive high schools, 6 alternative high schools, and 3 endowed and incorporated academies) and 105 nonpublic high schools, and the February 1988 activities of the June 1987 graduates from the 17 regional vocational-technical schools (RVTS). Summary findings include the following: (1) the number of 1987 high school graduates increased two percent over 1986; (2) the highest percentage of high school graduates ever continued their educations, and the highest percentage ever went to four-year colleges and universities; (3) the number and percentage of graduates entering careers declined; (4) minority representation among graduates decreased; and (5) there were substantial differences by race in after-graduation education and career activities. Statistical data are included on 10 graphs and 9 tables. The appendices include the following tables of statistical data: (1) summary data for 1987 local public high schools, vocational-technical schools, and nonpublic schools; (2) 1987 state profiles for high school, public high school, nonpublic high school, and vocational-technical school graduates; (3) the October activities of the June 1987 public high school, nonpublic high school, and vocational-technical school graduates; and (4) the October higher education activities of the June 1987 public and nonpublic high school graduates. ## PREFACE

This report covers the October 1987 activities of the June 1987 graduates from 145 Connecticut local public high schools (136 comprehensive high schools, six alternative high schools and the three endowed and incorporated academies) and 105 nonpublic high schools, and the February 1988 activities of the June 1987 graduates from the 17 regional vocational-technical schools (RVTS). The report highlights the educational and career postsecondary activities of these graduates.

Data in the report are from form ED158p, Public High School Graduate Follow-Up; form ED158np, Nonpublic High School Graduate Follow-Up; and form ED404a, Completer Follow-Up for Vocational Education Programs.

The local public high school, nonpublic high school and vocational-technical school survey forms used to collect the data are not identical. There are several differences in the survey forms. Data for vocational students (ED404a) are collected as of February, while data for local public and nonpublic graduates are collected as of October. Forms ED158p and ED158np request greater detail on postsecondary education activities, while form ED404a requests greater detail on employment activities. Also, if a graduate is engaged in both postsecondary education and employment, the employment takes precedence on form ED404a while the education takes precedence on forms ED158p and ED158np. The only difference between form ED158p and form ED158np is that form ED158p requests details on activities by race and sex for local public school graduates, while form ED158np requests complete detail by sex with summary data detailed by race and sex for nonpublic school graduates. (See Appendices A-F.)

### Definitions used in this report:

<b>Nonpublic Schools</b>	all private schools including religious, independent and special education schools
<b>Local Public Schools</b>	local and regional comprehensive high schools, alternative schools and academies
<b>Public Schools</b>	local public high schools and regional vocational-technical schools

This report has been prepared by the Office of Research and Evaluation as part of its effort to report more completely to the State Board of Education on the condition of education in Connecticut and to respond to the Board's concern for the educational interests of the state. For additional information on education in Connecticut, see *Meeting the Challenge: Condition of Education, Elementary and Secondary, 1986* (Connecticut State Department of Education, 1987).

## HIGHLIGHTS

There was a 2.0 percent increase in the number of Connecticut high school graduates from June 1986 to June 1987. The highest percentage of high school graduates ever continued in education, and the highest percentage ever went to four-year colleges and universities. Correspondingly, there was a decline in the number and percent of graduates entering careers. Minority representation among graduates decreased in 1987, and there were substantial differences in after-graduation education and career activities by race. Highlights identified by '●' denote Connecticut education indicators as identified in *Meeting the Challenge: Condition of Education in Connecticut, Elementary and Secondary, 1986* (Connecticut State Department of Education, 1987). Some highlights, based on the reports received by the department, are:

- The proportion of local public ninth graders who complete high school four years later was 77.9 percent in 1987 compared to 77.2 percent in 1986 (see Table 3). In the past ten years, this rate has varied from 74.7 percent (1980) to 78.9 percent (1977). These data do not include students who drop out and later obtain a high school equivalency diploma.
- Between 1986 and 1987, the difference in graduation rates between white and minority students widened. In 1987, the graduation rate for white students was 82.5 percent. The comparable white graduation rate for 1986 was 81.1 percent. Between 1985 and 1986 the black graduation rate improved from 61.7 percent to 64.3 percent and the Hispanic rate improved from 46.2 percent to 49.2 percent, but the graduation rate for blacks dropped to 61.1 percent in 1987 and the graduation rate for Hispanics dropped to 48.2 percent in 1987 (see Table 3).
- 64.3 percent of the students admitted to the class of 1987 in the state's regional vocational-technical schools were graduated from a regional vocational-technical school. The comparable graduation rate for the class of 1986 was 67.5 percent. Many students return to their local or regional high schools to complete their education.
- The total number of high school graduates in Connecticut rose in 1987. The 1987 total of 45,639 was a 13.2 percent drop from 1977 and a 2.0 percent increase from 1986 (see Table 1).
- The number of local public high school graduates was 31,129 in 1987 -- 650 higher than 1986, and 9,264 fewer than 1977. There were 2,282 graduates from the 17 regional vocational-technical schools compared to 2,479 in 1986, and 2,233 in 1977 (see Table 1).
- There were 7,705 graduates from 105 nonpublic schools, 364 more than last year, and 175 more than five years ago (see Table 1).
- In 1987, 4,523 people were awarded General Educational Development (GED) diplomas, compared to 4,690 in 1986 and 3,877 in 1977 (see Table 1). The percentage of students in adult basic education programs who passed the GED test increased. In 1987, 78.0 percent of the 2,904 students in adult education passed the GED compared to 70.0 percent of the 2,745 students in 1986.

- o 14.1 percent (or 4,378) of the graduates from local public high schools were reported to be minorities, down from 14.7 percent (or 4,831) in 1986. Of nonpublic school graduates, 8.6 percent were minorities in 1987, up from 8.5 percent in 1986 (see Table 2).
- The proportions of white and minority local public graduates pursuing educational activities in general, and attending four-year colleges specifically, have both increased. In 1987, 71.9 percent of white and 58.7 percent of minority high school graduates pursued educational activities, compared to 67.3 percent and 52.8 percent, respectively, three years earlier.
- The percentages of high school graduates from both local public and nonpublic high schools going to four-year colleges and universities increased to their highest levels. 50.7 percent of local public high school graduates and 83.5 percent of nonpublic high school graduates continued their education at four-year schools (see Figure 8).
- o The proportion of graduates continuing their education at four-year schools who attended out-of-state schools declined in 1987. In 1987, 54.6 percent of local public graduates (8,616) and 71.7 percent of nonpublic graduates (4,611) continuing their education at four-year schools attended out-of-state schools, a small drop from 1986 but up considerably from 1977 when 49.7 percent of local public graduates (7,894) and 60.0 percent of nonpublic graduates (2,397) did so (see Figure 8).
- In 1987, 97.6 percent of the local public high school graduates and 96.4 percent of the regional vocational-technical school graduates were in civilian or military employment, postsecondary education, or training programs. In 1986, the percentages were 96.7 and 97.2, respectively.
- In 1987, 67.7 percent of regional vocational-technical school graduates had either obtained a full-time job related to their training, pursued additional education or entered the military, compared to 69.7 percent in 1986 and 66.6 percent in 1985.
- o The percentage of graduates in career-related activities decreased in 1987 to 24.2 percent from 26.2 percent in 1986. Specifically, 1,506 RVTS graduates (66.0%) were in careers, along with 8,012 local public high school graduates (25.7%), and 420 nonpublic high school graduates (5.5%) (see Figure 4).
- The unemployment rate for high school graduates was considerably lower than the unemployment rate for all teenagers: 11.1 percent of all 16-19 year olds were unemployed, vs. 5.2 percent of local public high school graduates, 7.8 percent of nonpublic graduates and 2.4 percent of regional vocational-technical school graduates (see Table 8).
- o Unemployment rates for black and Hispanic graduates of local public high schools were more than double the corresponding rate for whites. The unemployment rate was 4.3 percent for whites, 9.4 percent for blacks and 10.7 percent for Hispanics (see Table 9).

## STATE PROFILE

In 1987, there were 41,116 graduates from all high schools in Connecticut (see Table 1). The largest number of these graduates, 31,129 (75.7%), were from 145 local public high schools, while 2,282 (5.6%) graduated from 17 regional vocational-technical schools and 7,705 (18.7%) graduated from 105 nonpublic high schools. In addition, in 1987, 4,523 people received high school equivalency diplomas by passing the General Educational Development (GED) examination.

\*Data by residence incomplete for 1978.

As Figure 1 shows, until 1987, there has been a general decline in the number of students graduating from Connecticut's high schools. The most dramatic change has been in the local public high schools. There has been a 23 percent decrease in the number of graduates from local public high schools since 1977. The 1987 number of graduates from regional vocational-technical schools represented a drop of 197 from the 1986 number as declining enrollments continued to affect the number of regional vocational-technical school graduates. The number of Connecticut students graduating from nonpublic schools rose in 1987 to 6,005, 169 higher than in 1986.

Although the number of graduates in 1987 exceeded the number in 1986, the trend in the number of graduates will be downward over the next seven years. Connecticut's enrollment projections and high school graduation rates reflect national patterns. The latest Connecticut Department of Education enrollment projections for local public and regional vocational-technical schools (unpublished) predict that the class of 1994 will have fewer than 27,000 students in 12th grade in September of 1993. Since the number of graduates is approximately 96% of fall 12th grade enrollment, we anticipate a graduating class of about 25,600, making 1994 the smallest graduating class since 1963. There will be 7,800 fewer graduates (23.4%) than the class of 1987.

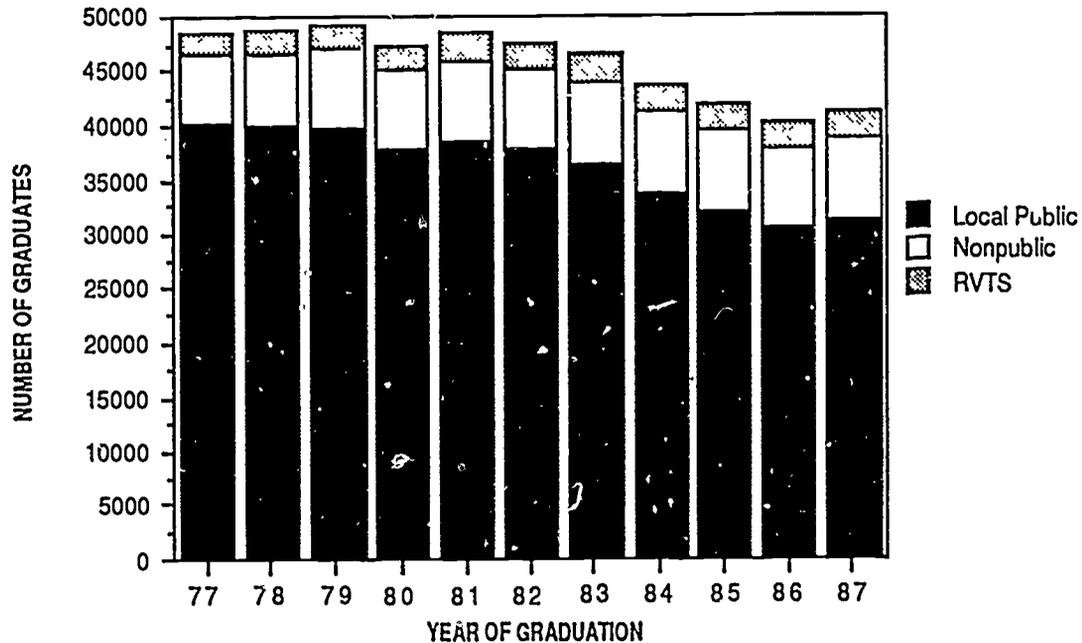

Figure 1  
High School Graduates  
By Type of School, 1977-1987

Over the ten-year period from 1977 to 1987, the total number of local public graduates in the state declined 23 percent. Changes in the number of graduates by school district ranged from a loss of 58 percent in New Britain to a gain of 55 percent at Woodstock Academy. Generally, school districts in older urbanized areas experienced declines while emerging suburban areas grew. The number of graduates from schools in the five major urban centers (Hartford, Bridgeport, New Haven, Waterbury and Stamford) declined 1,371 (27%).

New Britain and Stamford had declines of 400 or more graduates from 1977 to 1987, and Enfield and Fairfield declined from 300 to 400. An additional 15 districts, primarily large and medium cities, declined from 200 to 300 over the decade. During the same period, only six districts and Woodstock Academy had an increase of 40 or more graduates from 1977 to 1987. The six districts are Bethel, Guilford, New Fairfield, New Milford, Region 15 and Region 17.

Enrollment projections by district show a continuation of this trend. Total 12th grade public school enrollment is expected to decline about 17 percent from 1987 to 1997. The only major city projected to have an increase in 12th grade enrollment over the next decade is Hartford. The other four are expected to have a combined 12th grade enrollment about 300 lower than in 1987.

Twelfth grade enrollment in three districts (Fairfield, Greenwich and Milford) is expected to decline over 200 in the next decade, and an additional three districts (Westport, East Hartford and Trumbull) are expected to decline 150. All six of these districts had dropped 199 or more graduates in the previous decade as well. Only eight districts are expected to have 25 or more 12th graders in 1997 than in 1987. These districts are Bolton, Cromwell, East Haddam, Hartford, Plainfield, Somers, South Windsor and Windsor.

## General Educational Development (GED)

The General Educational Development (GED) testing program was established nationally in 1942 as an instrument to measure the outcomes and concepts generally associated with four years of high school education. In 1967, the Connecticut State Department of Education adopted the GED English-language test to afford persons who have not graduated from high school an opportunity to demonstrate educational attainment equivalent to a high school program of study. In 1972, Connecticut added the Spanish GED form, as well as large print and braille editions of the test.

To be eligible for the Connecticut GED test, a person must be a Connecticut resident who is at least 19 years of age or whose ninth grade class has graduated from high school. There are 97 registration sites (usually adult education offices or the offices of local public high school guidance counselors) and 28 test sites located throughout Connecticut. Tests are scheduled on a regular basis at 13 sites and on an "as requested" basis at other sites. Each approved registration site is contracted to meet with each potential test applicant to verify identity and eligibility. Registrars also interview the applicant and may administer the official GED practice test or refer the individual to a local adult education GED preparation program.

Each applicant is expected to complete successfully all five subtests in the GED test battery. The five subtests are Writing Skills, Social Studies, Science, Reading Skills and Mathematics. To pass the GED test one must obtain a total score of 225 with no subtest score lower than 35 points. (Subtests have maximum scores of between 74 and 80.)

In 1987, 6,711 GED tests were administered and 4,523 people passed and were awarded GED diplomas. Twenty-nine percent of the examinees were between 17 and 19 years old, and 19 percent were between 20 and 22, indicating that about half of the examinees take the test within 5 years of their class's high school graduation. Twenty percent of the examinees had completed ninth grade prior to leaving school; 30 percent had completed tenth grade; 35 percent had completed eleventh grade; and 4 percent had completed twelfth grade but had not been awarded a diploma.

More than one-third of those tested in 1987 prepared for the test in an adult education GED preparation program. In 1987, 78.0 percent of those preparing in an adult education class passed the test and were awarded diplomas (67% of all those taking the test passed).

GED examinees reported the following reasons for taking the test: to gain admission to school or a training program (29.1%); personal reasons (28.3%); future job requirements (27.2%); present job requirements (3.0%); and military requirements (1.3%).

### Adult education diplomas

In Connecticut, 33 local boards of education grant adult education diplomas upon successful completion of a prescribed curriculum of adult courses. The Connecticut General Statutes (10-67 - 10-73b) require 20 credits for a diploma with each credit equating a minimum of 48 hours of instruction. In addition to classroom preparation, credits can be gained by work experience, military, independent learning, occupational training and successful completion of a test.

In 1987, 8,463 people attended adult classes preparing for a diploma, and 2,063 diplomas were awarded. This is up substantially from 1983 when only 840 diplomas were awarded. Of the 8,463 people preparing for a diploma, 58 percent were age 16-24 and 32 percent were 25-44. Sixty-one percent were female and 39.0 percent were male. Almost half of adult education participants (49.9%) were minorities: 15.0% Hispanic, 32.3% black, 2.5% Asian American, and 0.1% American Indian.

### High school graduates by race

Data on the racial breakdown of graduates has been collected since 1983. Nonpublic schools do not provide details by race, but most schools do provide a racial breakdown of total graduates. In 1987, 97 percent of the nonpublic schools (102 of 105) representing 95 percent (7,331 of 7,705) of the graduates reported graduates by race. Two private schools and one Christian school did not have racial data available. In 1986, 97 percent of the schools representing 96 percent of the enrollment reported data by race. In 1987, minorities made up 14.1 percent of the total number of local public school graduates, 18.9 percent of the graduates from vocational-technical schools, and 8.6 percent of the graduates from nonpublic high schools. Blacks made up 62.1 percent and Hispanics 27.9 percent of local public high school minority graduates; blacks comprised 55.5 percent and Hispanics 41.5 percent of the minority RVTS graduates. According to the *Minority Students and Staff Report* (Connecticut State Department of Education, 1987), in October 1986, 15.2 percent of the 12th grade public school students were minorities. Thus, the percentage of minorities graduating from Connecticut local public schools in 1987 (14.1%) was lower than the percentage of the state's 12th grade public school enrollment (15.2%).

Table 2  
Graduates by Race, 1983-1987

	Local Public School Graduates			Vocational-Technical School Graduates			Nonpublic School Graduates		
	1983	1985	1987	1983	1985	1987	1983	1985	1987
White	86.0%	86.1%	85.9%	87.1%	85.3%	81.1%	n.a.	93.1%	91.4%
Black	9.2%	9.0%	8.8%	9.4%	8.9%	10.5%	n.a.	3.6%	4.7%
Hispanic	3.4%	3.6%	3.9%	3.2%	5.5%	7.9%	n.a.	2.2%	2.3%
Other	1.4%	1.3%	1.4%	0.3%	0.3%	0.5%	n.a.	1.1%	1.6%

The racial composition of students graduating from local public high schools has remained relatively stable for the five years in which racial data have been collected. For 1987, 85.9 percent of all local public school graduates were white, 8.8 percent were black, 3.9 percent were Hispanic and 1.4 percent were Asian American or American Indian. In regional vocational-technical schools, 81.1 percent of graduates were white, 10.5 percent black, 7.9 percent Hispanic and 0.5 percent Asian American or American Indian. Minority representation among the regional vocational-technical school graduates has increased from 12.9 percent in 1983 to 14.7 percent in 1985, and to 18.9 percent in 1987.

Females made up somewhat more than one-half of local public graduates (52.9%), somewhat less than one-half of nonpublic graduates (48.1%) and only one-quarter of regional vocational-technical school graduates (24.9%). Female representation among regional vocational-technical school graduates has increased, however, from 21.4 percent in 1983 to 24.9 percent in 1987.

## GRADUATION RATES

The high school graduation rate is an estimate of the percentage of ninth graders enrolled in public schools who are graduated four years later. The rate is calculated by comparing the number of students enrolled in the ninth grade for any given year and the number of diplomas awarded to members of that class upon graduation four years later. Graduation rates are used as an indicator of the "holding power" of high schools. This statistic, when aggregated statewide, provides a good indication of the overall number of students from each class who successfully complete high school in Connecticut. The graduation rate does, however, have a weakness: it provides no information about the progress of individual students through the system. It does not, for example, account for student migration, accelerated completion or mortality. The graduation rate simply describes the behavior of each successive ninth grade class, but gives no information about individual members of the class. Consequently, little can be said about the turnover rate or the relative impact of such factors as transfers, retention and dropouts on the overall graduation rate for each class. Nevertheless, the graduation rate offers some very important insights.

**Figure 2**  
**Graduation Rates**  
**By Type of School, 1977-1987**

After remaining stable for three years, the total graduation rate for local public high schools fell from 77.9 percent in 1985 to 77.2 percent in 1986 and rose to 77.9 percent in 1987. In 1983, there were 39,952 students enrolled in the ninth grade in Connecticut local public schools. In 1987, 31,129 students graduated from these high schools, resulting in a graduation rate of 77.9 percent for the class of 1987. Over the past decade the graduation rate has remained fairly stable, ranging from a high of 78.9 percent in 1977 to a low of 74.7 percent in 1980. Nonpublic high schools consistently have higher graduation rates than local public high schools, ranging from a low of 91.9 percent in 1985 to a high of 95.8 percent in 1982. The graduation rate for nonpublic high schools in 1987 was 93.7 percent. These graduation rates for nonpublic schools include all students, regardless of residence. The regional vocational-technical school graduation rate was 67.0 percent in 1987. This rate has declined steadily since 1982.

An alternate graduation rate is calculated for the regional vocational-technical schools by factoring in students admitted at grades 10, 11 and 12. Although lower than the total graduation rate, this graduation rate rose from 65.7 percent in 1982 to 71.8 percent in 1985, and currently is 64.3 percent in 1987. It cannot be assumed that students not graduating from regional vocational-technical schools have dropped out of school. Students repeating grades or transferring back to local high schools would not be listed as graduates. A higher rate of transfers of regional vocational-technical students returning to local high schools may account for the lower completion rate.

There are significant variations in graduation rates by race. The graduation rate for white students is consistently higher than corresponding rates for blacks and Hispanics over the five years for which data have been available. The graduation rate for white students rose 1.4 points from 1986 to 1987 to 82.5 percent. The corresponding rate for black students fell 3.2 points from 1986 to 1987 to 61.1 percent. For Hispanics, the graduation rate was 48.2 percent in 1987, below the 1983 high of 50.8 percent, but above the 1984 low of 45.9 percent. Graduation rates by sex are not available because enrollment data currently are not collected by sex.

**Table 3**  
**Local Public School**  
**Graduation Rates by Race, 1983-1987**

<u>Racial/Ethnic Group</u>	<u>1983</u>	<u>1984</u>	<u>1985</u>	<u>1986</u>	<u>1987</u>
White	81.2%	82.4%	82.5%	81.1%	82.5%
Black	62.9%	61.0%	61.7%	64.3%	61.1%
Hispanic	50.8%	45.9%	46.2%	49.2%	48.2%
Total	77.9%	77.8%	77.9%	77.2%	77.9%

## OVERVIEW OF POSTSECONDARY ACTIVITIES

The postsecondary activities of Connecticut high school graduates are reported in the following categories:

- o Education, including two- and four-year programs at colleges and universities or professional schools, vocational schools or postgraduate study;
- o Career-related, including employment, military service and unemployment;
- o Miscellaneous, including full-time homemaking, noneducation and other noncareer activities, and unknown status. Incapacitated and deceased also are reported here.

Figures 3 and 4, along with Tables 4 and 5, display the activities of 1987 graduates. Over 71 percent (29,400) of the total number of graduates pursued some form of education after graduation, compared with 69.1 percent for 1986 and 61.0 percent for 1977 (see Figure 4). The 1987 rate of 71 percent represents the highest percent of graduates pursuing education ever.

Table 4  
 Activities of Graduates  
 By Type of School, 1977-1987

	LOCAL PUBLIC SCHOOLS			VOCATIONAL- TECHNICAL SCHOOLS			NONPUBLIC SCHOOLS		
	<u>Educ.</u>	<u>Career</u>	<u>Misc.</u>	<u>Educ.</u>	<u>Career</u>	<u>Misc.</u>	<u>Educ.</u>	<u>Career</u>	<u>Misc.</u>
1987	21,798	8,012	1,319	440	1,506	336	7,162	420	123
1986	20,601	8,473	1,405	495	1,649	335	6,760	436	145
1985	21,252	9,186	1,442	513	1,835	286	6,871	482	131
1984	22,005	10,182	1,499	468	1,850	308	6,912	466	161
1983	23,581	10,785	1,838	548	1,667	288	7,058	518	214
1982	24,205	11,298	2,203	523	1,734	261	6,706	617	207

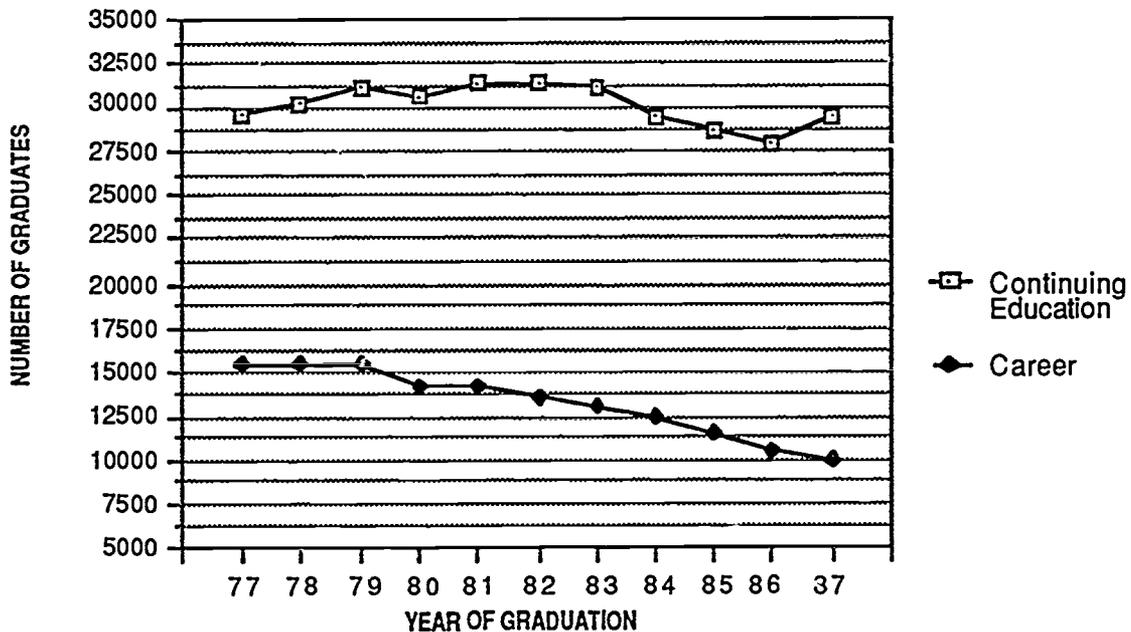

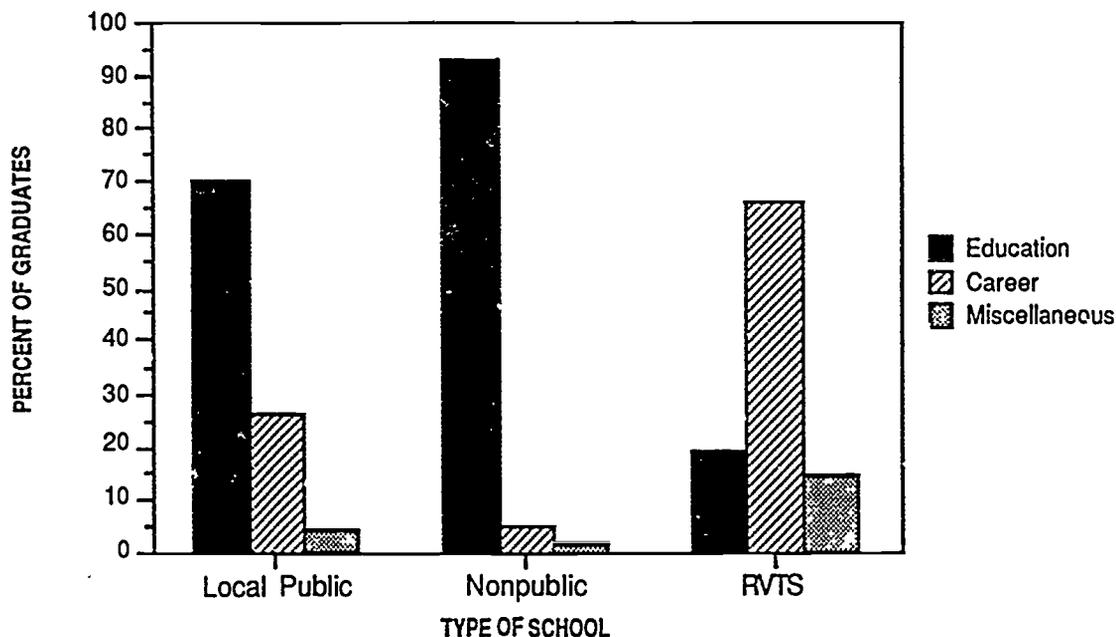

Figure 3  
 Total Number of Graduates  
 Continuing Education and Entering Careers, 1977-1987

Nonpublic schools continued to have the highest percentage of graduates (93.0%) continuing their education. This was followed by local public high school graduates at 70.0 percent (21,798 graduates) and regional vocational-technical school graduates at 19.3 percent (440 graduates).

**Figure 4**  
**Activities of 1987 Graduates**

Regional vocational-technical school graduates continued to have the highest percentage (66.0%) of their graduates in career-related activities. This was followed by local public high school graduates at 25.7 percent and nonpublic graduates at 5.5 percent.

For 1987 local public school graduates, more females than males continued their education (73.8% vs. 65.8%), while relatively more males entered military service (6.1% vs. 1.0%) and more males were employed (22.6% vs. 19.8%).

**Table 5**  
**Activities of Local Public School Graduates**  
**By Race, 1987**

Racial/Ethnic Group	Pursuing Education	-----Career-Related-----			Other
		Employed	Military Service	Unemployed	
American Indian	60.7%	25.0%	7.2%	0.0%	7.1%
Asian American	80.2%	10.3%	0.2%	1.2%	8.1%
Black	57.9%	23.1%	8.8%	2.4%	7.8%
Hispanic	53.0%	30.2%	5.3%	3.6%	7.9%
White	71.9%	20.7%	2.9%	0.9%	3.6%
Total	70.0%	21.2%	3.4%	1.2%	4.2%

By race, there were significant differences. As Table 5 shows, a greater proportion of Asian Americans and whites pursued additional education after high school, while a greater proportion of blacks, Hispanics and American Indians were in career-related activities.

Looking at the components of career-related activities, more blacks, American Indians, and Hispanics entered military service (8.8%, 7.1% and 5.3% respectively) than whites (2.9%) or Asian Americans (0.2%). There are also large differences in the percentages of graduates unemployed by race. While only 0.9 percent of white graduates were unemployed, 3.6 percent of Hispanics and 2.4 percent of blacks were unemployed. These data represent the percent of graduates unemployed and should not be used as unemployment rates. More information on unemployment rates can be found on page 16.

The "Other" category includes graduates who are full-time homemakers, deceased or incapacitated, other status, and unknown status. Over 70 percent of the graduates in the "other" category are of unknown status. As schools are usually aware of graduates pursuing education, employed or in the military, many of the graduates reported in the unknown status are likely to be unemployed. Because relatively more Hispanics and blacks than whites are in this category, the disparity between percentages of whites unemployed and those of blacks and Hispanics unemployed is probably underestimated.

### GRADUATES CONTINUING EDUCATION

There has been a steady rise in the percent of graduates of both local public and nonpublic high schools continuing their education. The percent of local public graduates continuing education rose from 67.6 percent in 1986 to 70.0 percent in 1987, the highest rate ever. This upward trend has continued for ten years. This represents a substantial increase (10.0 percentage points) over 1977 (see Figure 5.) The rate for nonpublic graduates continuing education also rose from 92.1 percent in 1986 to 93.0 percent in 1987, and represents the highest rate ever. Vocational-technical school graduates continuing education fall from 20.0 percent in 1986 to 19.3 percent in 1987. Even though the percent of graduates continuing education has increased, and the 1987 count represents an increase over the 1986 total, the total number of graduates continuing their education is considerably lower than five years ago. In 1982, there were 31,434 high school graduates from all high schools in Connecticut continuing education. By 1987, that number dropped more than 2,000 to 29,400.

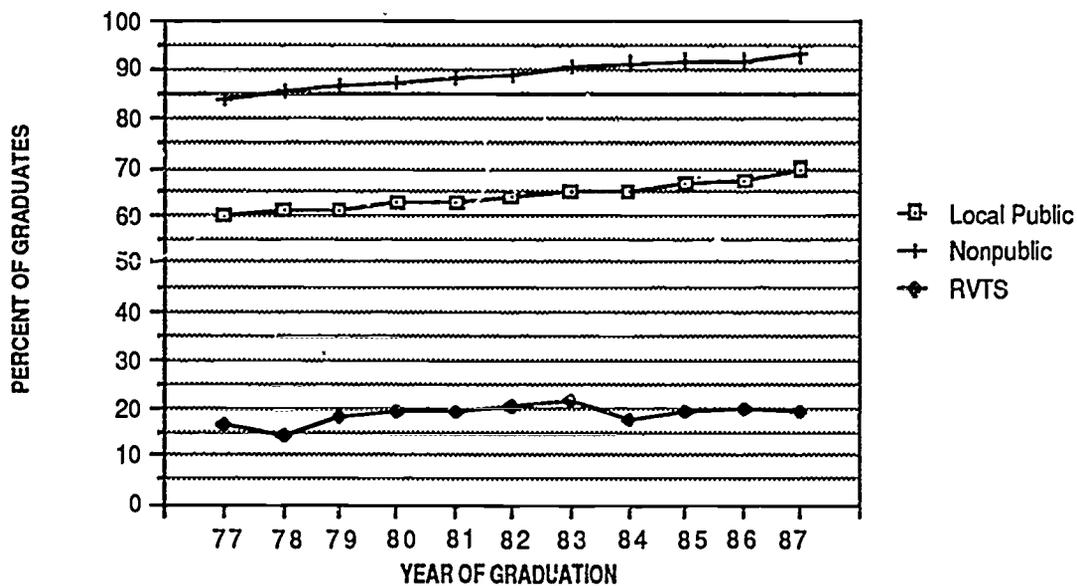

Figure 5  
Graduates Continuing Education  
By Type of School, 1977-1987

Figure 5 illustrates the long-term trend of an increase in the percentage of local public and nonpublic school graduates continuing their education. Regional vocational-technical school graduates have not followed this pattern. There has been an overall rise in the percent of graduates continuing education over the last 10 years, but regional vocational-technical school graduates are influenced by the economy as well, with more graduates continuing education when the unemployment rate is high and, conversely, more graduates pursuing careers when jobs are more plentiful.

The greatest difference between education activities of male and female local public high school graduates continuing in degree programs is that a higher proportion of males attend four-year institutions (82.1% vs. 77.1%). Of those continuing education, slightly over half of both males and females went on to public colleges and universities. About half of both male and female graduates attend in-state schools.

Further differences exist by race in local public high school graduates continuing education in degree programs at in-state versus out-of-state schools and at public versus private schools. Slightly over half (52.3%) of white graduates attended public colleges while 62.1 percent of blacks and 67.5 percent of Hispanics did. Differences between attendance at in-state and out-of-state schools are more dramatic. Minority graduates who attend four-year colleges are more likely to attend in-state schools than their white classmates. About half (50.3%) of white graduates continuing education did so at in-state schools while 63.5 percent of blacks and 75.0 percent of Hispanics did so.

Figure 6 shows the differences between the local public and nonpublic school graduates continuing their education. Relatively more nonpublic school graduates (89.8%) attend four-year schools than local public school graduates (72.4%). Correspondingly, more local public school graduates attend two-year schools (18.9% vs. 7.0%) and vocational schools (6.8% vs. 1.5%) than nonpublic graduates.

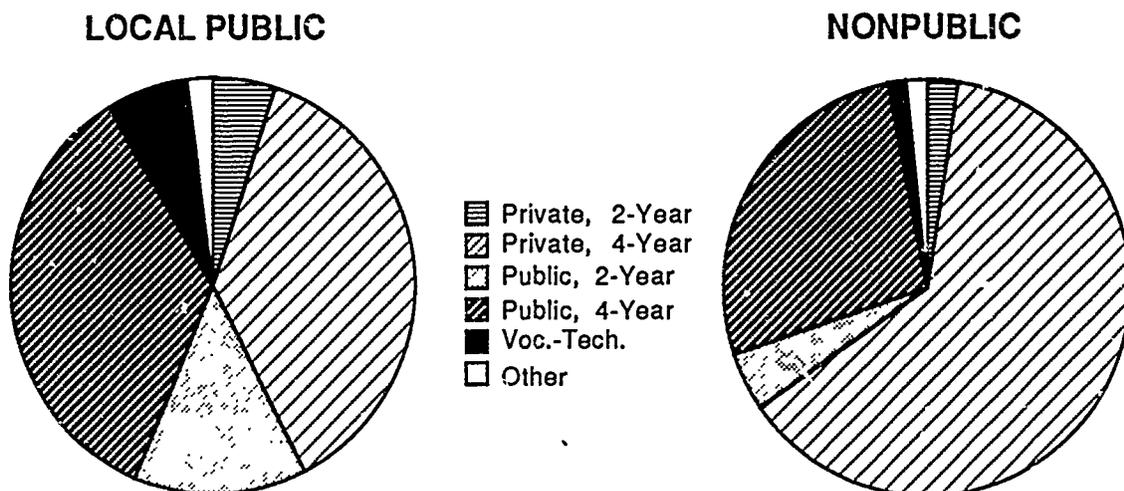

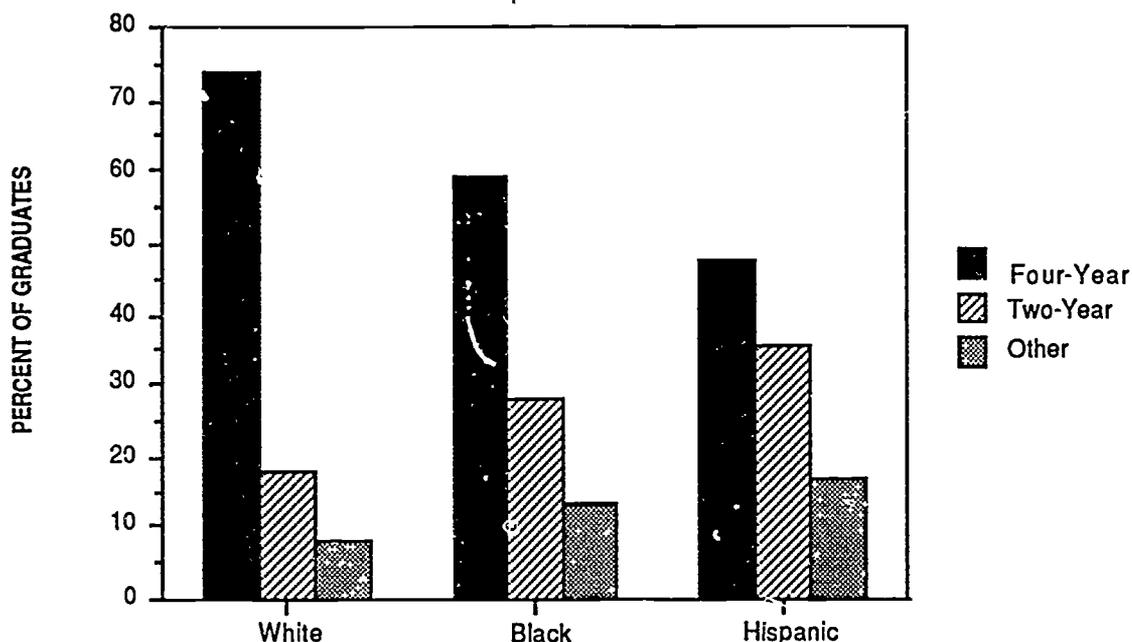

Figure 6  
Local Public and Nonpublic School Graduates  
Continuing Education, 1987

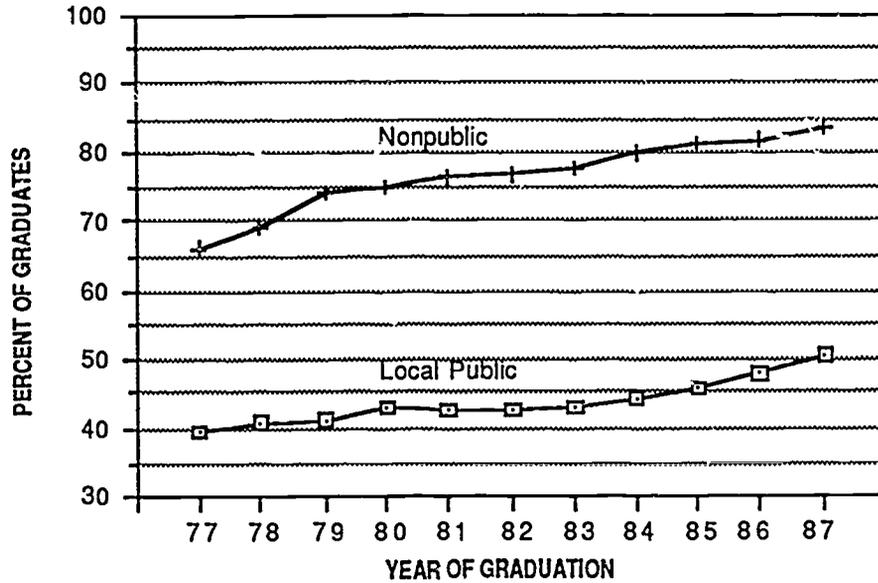

There are significant differences between racial groups for local public school graduates continuing their education. As noted earlier, relatively fewer blacks and Hispanics continued their education following graduation. In 1987, 19,230 white graduates, 1,576 black graduates, 647 Hispanic graduates and 345 other graduates (primarily Asian Americans) continued education. Figure 7 shows that for those graduates who did continue their education, 74.1 percent of whites (14,258 graduates) attended four-year schools compared with 59.0 percent of blacks (930 graduates) and 47.4 percent of Hispanics (307 graduates). This represents an increase over 1986 in the percent of blacks and Hispanics continuing at four-year schools. In 1986, 72.9 percent of whites, 56.3 of blacks, and 46.1 percent of Hispanics continued at four-year schools.

**Figure 7**  
**Local Public School Graduates**  
**Continuing Education by Race, 1987**

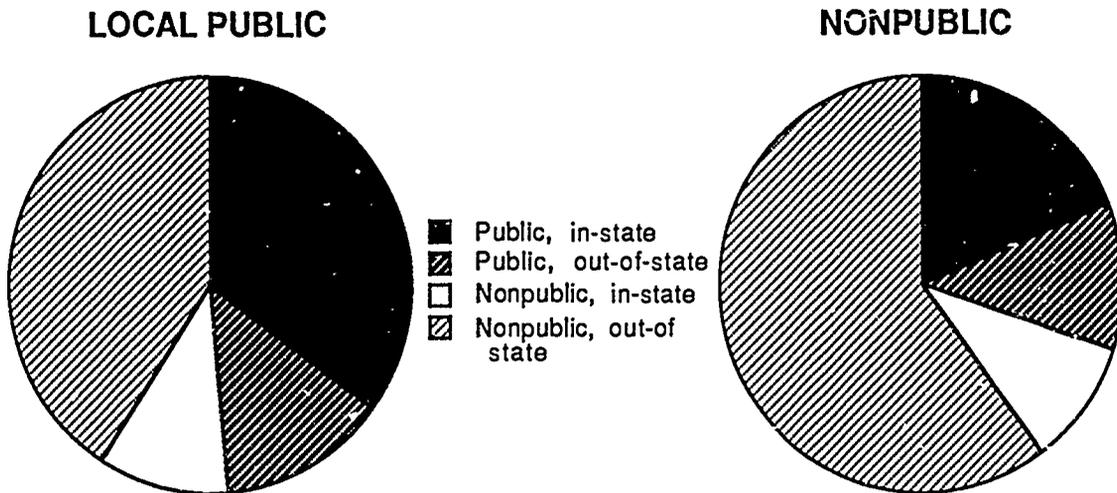

#### **Graduates continuing education at four-year schools**

There has been a rise in the percent of graduates attending four-year colleges and universities. The 1987 rates of 50.7 percent of local public school graduates attending four-year colleges and universities and 83.5 percent of nonpublic school graduates are the highest ever. In 1977, 39.5 percent of local public and 61.7 percent of nonpublic school graduates continued their education at four-year schools. Even though the percent of graduates attending four-year schools is rising, the actual number of graduates doing so had declined through 1986. In 1981, there were 22,073 graduates (16,338 local public and 5,735 nonpublic) continuing their education at four-year schools. By 1986, that number had declined to 20,610 (14,602 local public and 6,008 nonpublic). In 1987, the total rose to 22,208 (15,776 local public and 6,432 nonpublic).

**Figure 8**  
**Graduates Continuing Education**  
**at Four-Year Schools, 1977-1987**

Relatively fewer graduates continuing their education at four-year schools are attending out-of-state colleges and universities than in previous years. In 1987, 54.6 percent of local public graduates (8,616) and 71.7 percent of nonpublic graduates (4,611) continuing their education at four-year schools attended out-of-state schools. This is down from 1986 when 55.7 percent of local public graduates and 71.8 percent of nonpublic graduates did so, but up substantially from 1977 when 48.5 percent of local public graduates (7,675) and 58.1 percent of nonpublic graduates (2,505) did so.

**Figure 9**  
**Graduates Continuing Education**  
**at Four-Year Schools**  
**By Type of School Attending, 1987**

As indicated earlier, 50.7 percent of the state's 1987 local public high school graduates continued their education at four-year colleges and universities. By district, the range is 19 percent for Plainfield, where a majority of students enter the labor market directly after graduation, to 91 percent for Weston. Generally, wealthy suburban area graduates attend four-year colleges and universities with greater frequency than graduates from urban and rural areas.

Figure 10 graphically shows the percent of graduates in each district attending four-year schools. Data are not available by individual town for those towns in regional school districts or for those towns which do not operate high schools. The change shown for these towns is that of the district where students attend school. For example, the town of Salem does not operate a high school and sends students to East Lyme. Salem is therefore shown on the map with the rate for East Lyme.

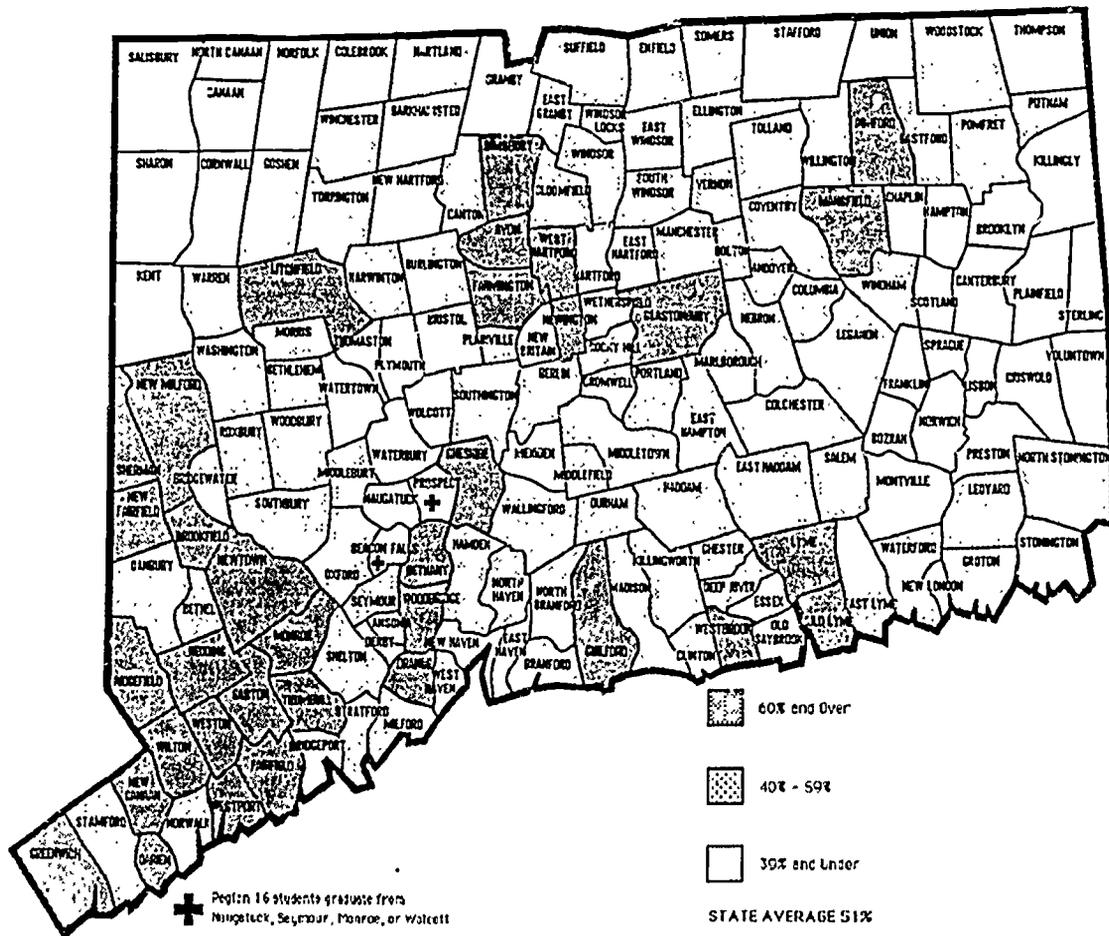

Figure 10  
Map of Graduates Continuing Education  
At Four-Year Schools, 1987

## CAREER-RELATED ACTIVITIES

The percent of graduates in career-related activities has declined for each type of school over the last 10 years. The decline for regional vocational-technical school graduates has not, however, consistently mirrored the decline for other schools. As would be expected, a higher percentage of vocational-technical school students enter careers following graduation (66.0%), more than double the rate for public school graduates (25.7%) and over 10 times greater than the nonpublic school rate of 5.9 percent.

Declines in the total number of graduates, together with increases in the percent of graduates continuing education, have resulted in a decline in the number and percent of high school graduates entering careers. In 1982, 13,649 graduates entered careers, but by 1987 only 9,938 graduates did so, exacerbating shortages of workers in Connecticut's robust economy. If the percent of graduates entering careers remains constant, by 1994 there will be only 8,100 graduates entering careers. If dropout prevention programs at local public and regional vocational-technical schools could increase the graduation rate from 77.9 percent to 85 percent, the number of graduates would increase by 2,000-3,000 per year; presumably, most of these would enter the labor force.

The only difference between career-related activities of male and female graduates is that males enter military service with greater frequency than females. When data for the various racial/ethnic groups are compared, however, there are significant differences. For local public and regional vocational-technical school graduates in career-related activities, higher percentages of blacks enter military service (13.3% for Hispanics and 24.5% for blacks vs. 11.0% for whites) and relatively more Hispanics and blacks are unemployed than whites (8.5% of Hispanics and 6.6% of blacks vs. 3.5% of whites). Correspondingly, lower percentages of Hispanics (78.1%) and blacks (68.9%) are employed than whites (85.6%).

### Vocational program completers

In 1987, 2,282 students completed vocational programs providing occupational preparation at regional vocational-technical schools. Table 6 shows graduates by program area.

**Table 6**  
**Regional Vocational-Technical**  
**School Graduates, 1983-1987**

<u>Program Area</u>	<u>1983</u>	<u>1985</u>	<u>1986</u>	<u>1987</u>	<u>1987</u>	
					<u>Percent Female</u>	<u>Percent Minority</u>
Building Trades	734	802	728	724	3.9	11.9
Metal & Product Fabrication	676	655	622	490	11.8	16.5
Service	482	564	543	515	74.0	35.0
Repair	372	374	350	335	8.1	13.1
Drafting	231	229	232	213	32.4	16.9
Chemical Technology	8	10	4	5	100.0	80.0
<b>Total</b>	<b>2,503</b>	<b>2,634</b>	<b>2,479</b>	<b>2,282</b>	<b>24.9</b>	<b>18.9</b>

Over 30 percent of regional vocational-technical school graduates were trained in building trades, 22.6 percent in service occupations and 21.5 percent in metal and product fabrication.

Although female representation at regional vocational-technical schools has increased from 19.8 percent in 1982 to 24.9 percent in 1987, 67.1 percent of all female graduates are in service trades, particularly cosmetology, food service and health service. Service trades, with graduates earning an average of \$5.72 per hour, are the lowest paying occupations, more than \$1.00 lower than the average wage of \$6.89 per hour for all regional vocational-technical school graduates; this contributes to the general disparity between male and female salaries.

A significant proportion of minorities (41.8%) are also in service trades, followed by 20.0 percent in building trades programs and 18.8 percent in metal and product fabrication programs. Graduates from building and repair trade programs have the largest number of graduates of all regional vocational-technical school programs and the highest wages (\$7.28 and \$7.17, respectively).

As with local public high school graduates, relatively more female completers of vocational programs continue their education, and relatively more minorities enter military service. Unlike local public high school graduates, however, relatively more minority completers of vocational programs continued their education and relatively more whites were employed (see Table 7). The high rate of minority females continuing education (28.0%) can be explained to some extent by the concentration of minority females in programs where further education is needed or desirable in order to obtain employment. Approximately one-fifth of all minority female graduates completed the Fashion Design program, where further education is needed to obtain related employment. Another fifth completed Industrial Electronics or Mechanical Drafting programs where additional education is desirable due to the increasingly complex nature of the occupational requirements. Many graduates from these two programs continue school in engineering programs.

Table 7  
Activities of Vocational-Technical School  
Program Graduates, 1987

<u>Race/Sex</u>	<u>Total Completers</u>	<u>Pursuing Education</u>	-----Career Activities-----			
			<u>Employed</u>	<u>Military Service</u>	<u>Unemployed</u>	<u>Other</u>
Minority Male	242	18.2%	48.3%	12.8%	2.1%	18.6%
White Male	1,472	18.1%	61.5%	6.3%	0.7%	13.4%
Minority Female	189	28.0%	41.3%	1.6%	3.2%	25.9%
White Female	379	20.0%	53.6%	1.3%	3.2%	11.9%
Total	2,282	19.3%	53.8%	5.8%	1.4%	14.7%

## Civilian unemployment rates

Table 8 compares civilian unemployment rates for graduates with the total teenage population for the last three years. The unemployment rates are calculated in the traditional manner; that is, the number of unemployed as a percentage of the labor force (employed plus unemployed).

Table 8  
Civilian Unemployment Rates, 1983-1987

<u>Year of Graduation</u>	<u>Local Public Schools</u>	<u>Vocational-Technical Schools</u>	<u>Statewide 16-19-Year-Olds</u>	<u>Total State</u>
1987	5.2%	2.4%	11.1%	3.3%
1986	6.9%	1.6%	12.5%	3.8%
1985	8.5%	3.5%	14.7%	4.9%
1984	11.8%	4.0%	13.3%	4.6%
1983	13.6%	3.1%	16.5%	6.0%

The rates show the positive effect high school and vocational program completion have in terms of ability to find employment. The highest unemployment rate was for the total 16- to 19-year-old population (11.1% in 1987). At 5.2 percent, the unemployment rate for local public school graduates was 5.9 percentage points lower. Still lower is the unemployment rate for regional vocational-technical school graduates (2.4%). In the same year (1987), the total statewide unemployment rate was 3.3 percent.

Table 9  
Civilian Unemployment Rates by Race,  
Local Public High School Graduates, 1987

<u>Race</u>	<u>Unemployment Rate</u>
White	4.3%
Black	9.4%
Hispanic	10.7%
Other	9.3%

The unemployment rates for black and Hispanic graduates of local public high schools were more than double the corresponding rate for white graduates. As Table 9 shows, the unemployment rate for white graduates was 4.3 percent, while corresponding rates for blacks and Hispanics were 9.4 percent and 10.7 percent, respectively.

In conducting follow-up surveys, local school districts were unable to locate 943 graduates (3% of the total). Because placement offices or counselors are generally aware of graduates who are employed or continuing their education, it is likely that many of the 943 graduates reported as "status unknown" on follow-up surveys are unemployed. If we assume that only half of those reported as "status unknown" are, in fact, unemployed, corresponding unemployment rates by race would rise to: 9.7 percent for whites; 18.4 percent for blacks; 15.6 percent for Hispanics; and 25.8 percent for other races.

## APPENDICES

APPENDIX A 1987 Local Public High Schools, Summary Data

**GRADUATE FOLLOW-UP**

ED-154 (Back)

Report the number of graduates from this school last school year by activity or status as of October of this year. Report all graduates by racial origin and by whether attending an in-state or out-of-state post-secondary institution.
