*Basic Skills; College Bound Students; College Entrance Examinations; Community Colleges; Cutting Scores; Grades (Scholastic); High School Graduates; High Schools; Reading Skills; Remedial Programs; Scores; Student Placement; Two Year Colleges; Two Year College Students; Writing Skills

*Multiple Assessment Programs and Services

This report details the performance of recent high school graduates on entrance exams given at Miami-Dade Community College (MDCC) in fall of school year 1987-88 to assess basic reading, writing, and algebra skills. The following data are provided: (1) the numbers and percentages of MDCC students from Dade County high schools who submitted Scholastic Aptitude Test (SAT) scores and the percentages of those with SAT scores who were referred for further testing; (2) similar data for students submitting American College Testing Program scores; (3) student performance on the subtests of the Florida Multiple Assessment Programs and Services (MAPS) by feeder school; (4) proportions of students falling above the cutoff scores on zero, one, two, or all three of the MAPS subtests, and the proportions falling below the cutoff scores; and (5) grades received in remedial reading, composition, and math courses and in freshman-level core courses by graduates of Dade County high schools.
BASIC SKILLS ASSESSMENT RESULTS OF DADE COUNTY HIGH SCHOOL GRADUATES AT MIAMI-DADE COMMUNITY COLLEGE

Research Report No. 88-13
September 1988

Ron Vorp
Research Associate, Sr.

OFFICE OF INSTITUTIONAL RESEARCH

John Losak, Dean
Basic Skills Assessment Results of
Dade County High School Graduates at
Miami-Dade Community College

Introduction

State of Florida Board of Education Rule 6A-10.038 assigns responsibility to public universities and community colleges for providing feedback to school districts on the performance of recent high school graduates on basic skills assessment exams. These exams are given to entering students in the areas of reading comprehension, written English expression and basic algebra. This feedback is to help school districts identify possible areas of strength or weakness in individual high schools and to monitor changes in performance of students from the different high schools.

Miami-Dade Community College (M-DCC) provides data to the Dade County Public Schools. The present report is a summary of that data on a school-by-school basis determined by enrollment at M-DCC for Fall Term 1987-88. Summary information is presented concerning student performance on the Florida Multiple Assessment Programs and Services (MAPS), the SAT, the ACT, and in selected courses.

Although one intended purpose of the feedback to the high schools is to monitor changes in performance, comparisons to earlier years would not be valid at M-DCC. Data for the current report are based in part on the Computerized Placement Test (CPT) which is currently being used at the South Campus. All campuses had previously used the Multiple Assessment Programs and Services (MAPS) and comparing performance on two different exams may lead to erroneous conclusions. Attempts to equate scores on the two exams have indicated that a degree of latitude exists in the equating formula. The decision of which formula to use is somewhat arbitrary and will not be completely accurate regardless of which is used.
It should be noted that the assessment results are a function of both the quality of student which M-DCC draws from a particular school as well as the quality of education the student receives at that school. For purposes of this report it is impossible to separate out these two factors or to draw definitive conclusions concerning either.

Methods

The report generated for the district contains information for each student from that district concerning performance on the Florida Multiple Assessment Programs and Services (MAPS), which M-DCC uses as its primary basic skills assessment instrument, and is organized according to high school. The first section, the reading and writing section, gives the MAPS Reading Comprehension and Test of Standard Written English Scores, and whether the student was referred to college preparatory reading or English composition courses. If enrolled for either one of the preparatory courses or freshman level composition, the grade awarded in that course is also reported. The Mathematics section gives similar information regarding college preparatory and freshman level mathematics courses, while the General Education section gives results of all three areas of assessment and grades in core courses required of all degree seeking students. These include freshman level English Composition, Humanities, Physical Science, Mathematics, Social Environment, and Psychology.

The information contained in this report is based on enrollment at M-DCC for Fall Term 1987-88. Although the feedback report contains information for four terms (Winter 86-87 through Fall 87-88), Fall Term enrollment is the most stable and therefore least sensitive to extraneous factors which may reflect influences other than true year to year changes. Information is presented for all students entering M-DCC who had graduated from a Dade County Public School within a year prior to the semester being analyzed. Not all entering students have MAPS scores because students can be exempted from MAPS assessment by submitting Scholastic Aptitude Test (SAT) or American College Testing Program (ACT) scores which meet State requirements. However, if the submitted scores do not meet these requirements, students
are referred to further assessment which is done using the MAPS. SAT and ACT scores and results are also included.

Results

Table 1 shows the numbers and percentages of M-DCC students from the various Dade County Public Schools who submitted SAT scores and the percentage of those submitted which were referred to further assessment. The highest percentage of students submitting SAT scores was from Miami-Norland Senior High (52.5%) while the lowest was from Miami-Jackson (7.0%). Of the students who did submit SAT scores, South Miami Senior High had the lowest percentage referred to further assessment and therefore the highest percentage at or above State requirements (53.7%).

Table 2 shows similar data for students submitting ACT scores: Homestead Senior High had the highest percentage submitting ACT scores (53.4%) while in general the percentage submitting these were lower than those submitting SAT scores. As with the SAT scores, South Miami had the highest percentage meeting State requirements (86.7%).

Table 3 shows performance on the individual MAPS subtests analyzed by feeder school. The largest number of examinees was from Miami Sunset Senior High, although this does not take into account the size of the graduating classes at the different schools. Totals for all schools show the largest proportion of the Dade County Public School graduates referred to college preparatory courses occurred in mathematics (40.5%). The areas of reading and writing were similar in the percentages of students referred to college preparatory courses with 37.7% and 37.3% respectively.

Table 4 shows the proportion of students falling above the cut score on zero, one, two or all three of the subtests and the proportion falling below on one or more which would indicate referral to college preparatory courses in at least one area. These results show that basic skills assessment resulted in a wide range of Dade County high school graduates being referred to college preparatory work. The highest
proportion was from Miami Northwestern (94.9%) and the lowest from Miami Killian, although the lowest still resulted in having 40.4% of the students qualifying for some type of college preparatory work. Overall, 60.6% of all tested first-time-in-college students from Dade County Public Schools who entered M-DCC during Fall Term 1987 were required to take college preparatory courses in one or more areas. This compares with 66.5% of all first-time-in-college students who entered during this semester and had taken the entry-level exam. Although these data are not precisely comparable with earlier years due to the change in exams, the results indicate that approximately two-thirds of all first-time-in-college students at M-DCC require college preparatory courses in at least one area regardless of which test is used. This is supported by data showing that the change from the Comparative Guidance and Placement exam (CGP) to the MAPS during the 1984-85 school year resulted in a change in percentage requiring college preparatory courses from 67.4% to 65.2%, a change of only 2.2 percentage points (Research Report No. 87-32).

Tables 5-8 show grades received in college preparatory courses for graduates of Dade County high schools. Regulations do not require that a student enroll in all college preparatory work for which he or she has been referred during the first term. Overall (Table 5) 814 students were enrolled in reading preparatory courses, REA0001 or REA0002. This is approximately three fourths of those referred. Of these, 430 (52.8%) received an "S" indicating that they had completed to satisfaction the course requirements, while 244 (30.0%) received a "P" indicating that they had made progress although not completing all requirements. Another 8.6% withdrew from the course while 8.4% made unsatisfactory progress.

Table 6 shows similar data for college preparatory composition courses, ENC0006 and ENC0007. The 834 students enrolled in these courses did slightly better than those in the reading comprehension with 56.9% completing to satisfaction and another 26.7% making progress. Only 6.7% of enrollees did not make satisfactory progress in this area with another 9.6% withdrawing.
Table 7 suggests that upgrading mathematics skills presented the largest problem to M-DCC students from area high schools. Satisfactory progress (16.6%) or completion (45.1%) only characterized 61.7% of these students while 13.7% received marks of "U" and 24.6% withdrew, either from the course or the entire college.

Grades obtained in freshman level core courses are presented in Table 8. Dade County graduates enrolled in 3,843 core courses and received an "A" in 397 (10.3%) of these. This percentage of "A's" in the core courses for recent Dade County Public School graduates is slightly low compared to "A's" awarded in core courses for all students (13.6%) (Research Report No. 88-18). However, the latter figure includes more advanced students who may be expected to perform slightly better. Overall, of the Dade County graduates, 66.9% received a "C" or better in the core courses. Another 17.6% received a grade of "D" or "F" while 14.8% withdrew.
