Revising and Updating the Plant Science Components of the Connecticut Vocational Agriculture Curriculum.

Jun 89

250p.; Plant science units printed on colored paper.

Guides - Classroom Use - Guides (For Teachers) (052)

ABSTRACT

This curriculum guide provides the plant science components of the vocational agriculture curriculum for Regional Vocational Agriculture Centers. The curriculum is divided into exploratory units for students in the 9th and 10th grades and specialized units for students in grades 11 and 12. The five exploratory units are: agricultural pest control; care and management of a vegetable garden; greenhouse business management; soils and fertilizer; and plant anatomy, physiology, and classification. Production and marketing; floral design; fruit production; greenhouse crop production and marketing; greenhouse structures; interior landscaping; landscape construction; landscape design; landscape maintenance; nursery management; operation and care of horticultural equipment; perennial plant identification, production, and marketing; plant nutrition; plant propagation; retail flower shop management; turf management; vegetable producing and marketing; beekeeping; plant tissue culture; and hydroponic culture. Each unit contains these components: length (time); objectives; related job titles and relevant competencies; content outline; teacher and student activities; evaluation suggestions; bibliography; and individual teacher unit review. Validated competency lists and job descriptions for relevant job titles are appended. (YLB)

Reproductions supplied by EDRS are the best that can be made from the original document.
REVISING AND UPDATING THE PLANT SCIENCE COMPONENTS OF THE CONNECTICUT VOCATIONAL AGRICULTURE CURRICULUM

Plant Science Curriculum

June, 1988

This project was supported by funds made available to Connecticut through P.L. 98-524.

All opinions expressed reflect the views of the authors and are not necessarily those of The State Department of Education.

BEST COPY AVAILABLE
This printing of the Plant Science components of the suggested Connecticut Vocational Agriculture Curriculum has been designed for use in the Connecticut Regional Vocational Agriculture Centers. These centers are multi-staffed with three or more teachers of Vocational Agriculture who have each developed an expertise in one or more of the major areas of agriculture. The curriculum is based on the following major areas of agriculture: Animal Science, Plant Science, Agriculture Mechanics and Natural Resources.

This printing includes an emphasis in the Plant Science Curriculum on Technology. It is a reflection of the ever-changing field of Plant Science in Connecticut.

A full program of Vocational Agriculture is based on four years of enrollment. The student would, in the first two years, be enrolled in exploratory units of study covering all four major areas of study. Development of fundamental skills would be stressed during the exploratory units.

The third and fourth year of enrollment would be made up of an election of units designed to best prepare the individual student to meet his or her vocational objective in agriculture.

Students enrolled in the program will be involved in areas of study common to all of agriculture. These areas include career awareness, agricultural business management, leadership development through involvement in the Future Farmers of America chapter and the practical application of units studied through involvement with the supervised occupational experience program.

This revision includes the integration of a new section in each unit of instruction entitled, "Related Job Titles and Relevant Competencies" for Plant Science. The section is designed to highlight for teachers and students the potential employment or entrepreneurship job titles and relevant competencies needed for employment or self-employment success. The job titles and relevant competencies were identified and validated in the National Agriculture Occupations Competency Study and are included as an integral part of the curriculum.

The curriculum is organized and color coded for ease of use. The Plant Science Units are printed on green paper, just as they were in the original printing. The introductory material and Related Job Titles and Competencies are printed on white paper. The page numbers on the units of instruction are coded as follows:

EP - Exploratory Plant Science
SP - Specialized Plant Science
Exploratory units are generally appropriate for students in the ninth and tenth grades, while specialized units are designed for students in grades eleven and twelve.

The Related Job Titles and Relevant Competencies have two page numbers. They are numbered consecutively at the top. The number at the bottom refers to the Page number in the National Agriculture Occupations Competency Study. This page number is maintained for easy reference to the original document.

The organization for sequence of instruction will be at the discretion of certified teachers, administration, and consulting committee members in each center in accordance with availability of staff and facilities. The primary objective is to serve the individual interests and needs of the students.

The original development of the Plant Science Component of this curriculum involved the cumulative efforts of the staff of Plant Science teachers in Connecticut Regional Vocational Agriculture Centers. Teachers authored the units of study. Each unit was pilot tested by a teacher other than the author. Editing to produce a common format has been done by the teachers. It has not been possible to bring into this revised curriculum all of the information which is available. However, teachers are encouraged to use the curriculum as their basic teaching document and to supplement and enrich the curriculum as appropriate. It is intended that as additional information becomes available to teachers while using this curriculum, such information will be entered into the individual teacher's copy on the new unit evaluation form, for use in future curriculum revisions.

The Related Job Titles and Relevant Competencies were identified for each unit of instruction. Much time and effort was spent on identifying those validated activities needed by employed workers to help ensure that the curriculum is competency-based.
ACKNOWLEDGMENTS

The Project Director and Project Assistant wish to express their appreciation to those who have contributed to the success and completion of the curriculum. Ronald Carle, Sandy Dawson, James Dick, Robert Gambino, Francis Lineberry, Bruce Sahlin and Peter Wolcott contributed to the revision of specific units.

A sincere thank you is extended to the curriculum writers for their conscientious efforts throughout the project. Special recognition is due to Dr. Patrick B. Mullarney, Head, and Carol Lindlau, Secretary, Department of Educational Leadership, whose knowledge of University procedures and expert skills made the completion of the project possible.

Special appreciation is extended to Mr. Roger Lawrence, State Consultant, Vocational Agriculture, Mr. Milton Natusch, FFA Executive Secretary, Dr. Valerie Pichanick, Project Officer and Mr. Errol Terrell, Chief, Bureau of Vocational Services, for their involvement in the initiation and direction of the study. We would also like to extend our gratitude to Carolyn W. Sikora for her efficiency and expertise in entering the curriculum on the word processor. Her efforts will make future revisions of the curriculum much easier.

Finally, to the teachers of vocational agriculture in Connecticut, for whom this curriculum is designed to serve, appreciation is extended for their cooperation in providing input and support throughout the study.

Dr. Alfred J. Mannebach
Project Director

Brenda J. Johnson
Project Assistant
TABLE OF CONTENTS

PLANT SCIENCE CURRICULUM UNITS - EXPLORATORY

Agricultural Pest Control  (3 weeks)
Terminology - safe use of chemicals - methods for application - control programs - licensing exams - careers ........................................ EP 1

Care and Management of a Vegetable Garden  (3 weeks)
Site selection - planting and care of garden - pest and weed control program - identify common vegetables and plants ........................................ EP 5

Greenhouse Business Management  (3 weeks)
Facilities and equipment - operation of greenhouse business - handling crops - recordkeeping, merchandise planning ........................................ EP 9

Soils and Fertilizer  (3 weeks)
Terminology - careers - test soils - identify soil types - liming and fertilizing program - soil maps - match crops to soils ........................................ EP 13

Plant Anatomy, Physiology and Classification  (6 weeks)
Plant identification keys - botanical names - specimen collection - relate plants to environmental requirements - growth processes ........................................ EP 17
# Table of Contents

## Plant Science Curriculum Units - Specialized

### Bedding Plants (3 weeks)
- Preparing medium - planting seeds - transplanting - care of growing plants - marketing vegetables and flowers - environmental controls

### Christmas Holiday Production and Marketing (3 weeks)
- Procuring and marketing of trees, wreaths, seasonal plant and flowers - skills of wreathmaking, sales, recordkeeping and materials care

### Floral Design (6 weeks)
- Materials - design - pricing - colors - costs - packaging

### Fruit Production (6 weeks)
- Developing and managing orchards - developing and managing small fruit production - methods of harvest - storage and marketing

### Greenhouse Crop Production and Marketing (6 weeks)
- Propagating and raising greenhouse vegetables - harvesting and marketing - specific crop requirements stressed

### Greenhouse Structures (3 to 6 weeks)
- Component parts and systems of various types of greenhouses - structure - function - operation and control of systems - planning and construction (reviewed)

### Interior Landscaping (3 weeks)
- Design - materials - installation and maintenance - commercial applications stressed - identification of plants - recognitions of problems
Landscape Construction (3 to 6 weeks)

Installation of materials of a landscape design - site quality control - cost estimation - procuring materials

Landscape Design (6 weeks)

Selection of materials and location - drawing and constructing models - function and appeal

Landscape Maintenance (3 to 6 weeks)

Pruning - fertilizing - mulching - pest control - lawn care

Nursery Management (6 weeks)

Propagating - fertilizing - pruning - watering - spraying - pest control - harvesting - identification of nursery stock - recognizing specialized culture care

Operation and Care of Horticultural Equipment (6 weeks)

Safe tool and equipment use - small engine type equipment - maintenance procedures

Perennial Plant Identification, Production and Marketing (3 weeks)

Perennial identification, propagation and growing procedures - fertilization - cultivation - hydration - protection - marketing

Plant Nutrition (3 to 6 weeks)

Nutritional requirements - nutrient testing - fertilizing programs - fertilizer application

Plant Propagation (3 weeks)

Propagating by various methods - cutting and grafting - producing and handling seeds - understanding formation of root systems
Retail Flower Shop Management (3 weeks)
Stock methods - display - advertisement and marketing - shop arrangement - public relations - recordkeeping - product handling

Turf Management (6 weeks)
Establishment of turf - watering - fertilizing - moving - protecting turf

Vegetable Producing and Marketing (6 weeks)
Crop planning - site preparation, fertilizing and cultivating - disease and pest control - harvesting and marketing

Beekeeping (6 weeks)
Beehive establishment and care - value of bees for pollination and honey production

Plant Tissue Culture (3 weeks)
Importance of micropropagation - value of plant tissue culture in research - applications of plant tissue culture

Hydroponic Culture (3 weeks)
Growing techniques of a hydroponic greenhouse - applications of hydroponic growing - uses for hydroponics

*This column contains the original document page number.*
UNIT: Agricultural Pest Control

LENGTH: Three weeks. Select areas of content by student needs and time available.

WHEN TAUGHT: Grade 9 or 10

OBJECTIVES: The students will be able to:

1. safely and correctly apply pesticides.
2. pass the examination for the operator's license from the state.
3. assess and make recommendations dealing with specific pest control.

RELATED JOB TITLES AND RELEVANT COMPETENCIES:

- Small Fruit Farming: 169:2(b, f, g, m)
- Tree Fruit Grower: 191:8(a-k)
- Vegetable Grower: 195:2(a, b)
- Chemical Applicator: 198:1(a-f), 199:1(h), 199:2(a-e, l), 200:3(a-f, h), 201:3(j, k, l, n), 202:3(q-t), 202:4(a-c), 203:4(d-g), 203:5(a1-2), 205:6(a)
- Arboriculture: 408:6(a, b, y, k, m, n), 409:6(o)
- Greenhouse Foreman: 421:2(a-b), 422:3(a)
- Greenhouse Worker: 425:4(a-f), 428:12(a-p), 429:12(q, r), 429:13(a-j)
- Golf Course Pesticide Specialist: 463:1-3

CONTENT:

I. Career opportunities

II. Reasons for learning about pesticide

A. laws and certification

III. Toxicity of pesticides

A. kinds
B. labeling
C. first aid

IV. Ecology and environment

A. protection
B. food chain
V. Safety
   A. equipment
   B. storage
   C. mixing
   D. application
   E. records
   F. Federal and State regulations

VI. Types of pesticides

VII. Application
   A. the label
   B. formulations
   C. calculations
   D. equipment
   E. records

TEACHER ACTIVITIES:

1. Provide workbooks and assignments.
2. Provide materials for preserving, mounting, and labeling pests.
3. Provide texts for identification of pests and their control.
4. Provide examples of pests for identification and testing.
5. Demonstrate proper use of pesticide application and safety equipment.
6. Provide examples of labels and materials.

STUDENT ACTIVITIES:

1. Complete workbooks and assignments.
2. Identification of common insect disease, weed, and animal pests and their control.
3. Calibrate and adjust hydraulic sprayer, shop spreader and/or cyclone type spreader.
4. Simulate mixing, apply pesticides (simulate).
5. Neutralize or clean out sprayers (simulate).
6. Collect and properly preserve, label, and identify pest specimens.
EVALUATION:

1. Multiple choice and short answer test on factual information.
2. Test on pests and how to control.
3. Observation of safety procedures used by the students.
4. Student's collection.
5. Grade on Operator's License test.

UNIT: Care and Management of a Vegetable Garden

LENGTH: Three weeks. Select areas of content by student needs and time available.

WHEN TAUGHT: Grade 9 or 10

OBJECTIVES: The students will be able to:

1. plan, sow seed, plant, care for, and harvest vegetables from the home garden.
2. take soil samples and submit to local extension center; and evaluate the garden's soil - both physically and chemically.
3. make a scale drawing of a garden and calculate the expected yield.
4. identify selected common vegetables.

RELATED JOB TITLES AND RELEVANT COMPETENCIES:

Vegetable Grower

195:1(a-k), 195:2(a, b)

CONTENT:

I. Definition of a vegetable
   A. vegetable vs. fruit
   B. cool season vs. warm season

II. The vegetable garden
   A. Importance of a plan
   B. selection (water, light, soil, slope)
   C. soil test and interpretation
   D. planting
      1. seed vs. plants
      2. timing
      3. cool vs. warm season crops
      4. successive crops
      5. crop rotation
E. pest identification and control

1. weeds
2. insects
3. animals
4. diseases
5. selection of recommended pest control methods
6. Integrated Pest Management (I.P.M.)

F. harvesting and storage
G. post-season care of garden

III. The garden plan

A. definition of a scale drawing
B. garden size

1. space available
2. time available
3. family harvest needs

C. draw a vegetable garden plan

1. list varieties
2. list expected yields for later comparison
3. examples of successive plantings and crop rotation

TEACHER ACTIVITIES:

1. Introduce common vegetable crops.
2. Use lecture periods to explain the proper planning, planting, care and harvesting of vegetable crops.
3. Demonstrate how to take a soil sample and interpret the results.
4. Demonstrate the use of drawing equipment in creating a garden plan.
5. Demonstrate how to read and interpret various charts used to plan out space and harvest amounts.
6. Demonstrate how to read and interpret labels for appropriate fertilizers and pesticides.

STUDENT ACTIVITIES:

1. Maintain a notebook on lecture and discussion sessions.
2. Take test and interpret a soil test for a vegetable garden.
3. Draw a vegetable garden to scale; listing varieties and expected yield.

4. Interpret charts of expected yields and planting distances of varieties used in the garden plan.

5. Select pesticides and fertilizers recommended for vegetable garden use.

6. Complete I.D. cards on cultural requirements for selected vegetables.

7. Complete a seed catalog order form to correspond with garden drawing.

EVALUATION:

1. Review notebooks periodically.

2. Evaluate students' soil testing technique and interpretation of results.

3. Complete I.D. cards for selected vegetables.

4. Evaluate and correct student vegetable garden plan.

RESOURCES:

1. Drawing material.

2. Soil sample envelopes from agriculture experiment station or soil test kit.

UNIT: Greenhouse Business Management

LENGTH: Three weeks. Select areas of content by student needs and time available.

WHEN TAUGHT: Grade 11 or 12

OBJECTIVES: The students will be able to:

1. become acquainted with career opportunities associated with the greenhouse business.
2. become familiar with methods of recordkeeping used in a greenhouse.
3. become acquainted with the operation of a greenhouse business.

RELATED JOB TITLES AND RELEVANT COMPETENCIES:

Greenhouse Foreman 421:1(a-f), 421:2(a, b), 422:2(c-k), 422:3(l-e)
Flower Shop Manager 423:1(a-d), 423:2(a-h), 424:3(a-j), 424:4(a-f)

CONTENT:

I. Career opportunities, wholesale and retail

A. types of greenhouse operations

1. fresh flowers
2. flowering and holiday plants
3. foliage plants
4. bedding plants
5. vegetables
II. Starting a greenhouse business
   A. investment considerations
   B. sources of capital
   C. assess profit potential
   D. analyze assets
   E. analyze market
   F. location

III. Services provided by trade organizations
   A. specific crop organizations
   B. nursery associations
   C. local organizations
   D. state organizations
   E. national organizations
   F. experimental station and extension services

IV. Business management
   A. accounting principles
   B. business use of computers
   C. employee productivity

V. Recordkeeping
   A. crops produced
   B. quantity produced
   C. quantity sold
   D. prices sold for
   E. cultural records
   F. environmental records
   G. computer assistance

VI. Merchandise planning and advertising, wholesale and retail
   A. purchasing
   B. pricing
   C. grades and standards
   D. packaging and shipping
   E. quality control
   F. advertising and marketing

TEACHER ACTIVITIES:

1. Arrange field trips to various greenhouses, both wholesale and retail. Develop worksheet or questionnaire for field trips.

2. Explain skills necessary for computer use.

3. Explain skills necessary for management of a greenhouse operation.

4. Orient students to the use and function of the school greenhouse.
STUDENT ACTIVITIES:

1. Visit various retail and wholesale greenhouses.
2. Students will use a computer for business and recordkeeping.
3. Students will maintain a notebook on lecture and discussion sessions.

EVALUATION:

1. Review student notebooks.
2. Evaluate learning through quizzes.
3. Evaluate student's work in computers.

RESOURCES:

1. Local greenhouses and school greenhouse.
2. School computer.

UNIT: Soils and Fertilizer

LENGTH: Three weeks. Select areas of content by student needs and time available.

WHEN TAUGHT: Grade 9 or 10

OBJECTIVES: The students will be able to:

1. state how and why soils differ.

2. list the components of soil, major soil separates (sand, silt, clay) and the soil textures they create.

3. list the soil nutrients essential for growth and their function and symptoms of deficiency.

4. define soil structure and list the factors that promote it.

5. define soil acidity and alkalinity in terms of PH and explain how PH effects growth.

6. list and compare types of fertilizers.

7. describe the functions and benefits of soil life.

RELATED JOB TITLES AND RELEVANT COMPETENCIES:

Tree Fruit Grower 189:1(b), 189:3(a-g), 190:4(d-f), 190:6(a-1)
Greenhouse Foreman 422:2(d)

Grounds Supervisor 433:5(e, f), 433:6(e)
Grounds Worker 437:1(c, m)
Nursery Worker 446:1(e, f, h)
Plant Propagation 449:2(c, d, f, i)
Maintenance Worker 458:1(a-d), 458:2(d), 458:3(a)

CONTENT:

I. What is soil

II. Types of soil and their uses

III. Soil horizons/soil profile
IV. Soil texture
   A. sand
   B. silt
   C. clay
   D. soil texture triangle

V. Soil structure

VI. Soil nutrients
   A. organic matter
   B. cation exchange

VII. Soil acidity and alkalinity
   A. liming

VIII. Fertilizers
   A. organic
   B. inorganic

IX. Soil life
   A. organisms
   B. microorganisms

TEACHER ACTIVITIES:

1. Review content and concepts through lectures, handouts, media and text.
2. Provide study questions to monitor student progress.
3. Use land lab or outdoor site to study soil profiles, texture, and structure.
4. Provide soil sample mailers for students to use.
5. Illustrate fertilizing techniques in school greenhouse and land lab.
6. Visit fertilizer suppliers to study different types.
7. Visit the local soil conservation service.
8. Provide soil maps for student analysis.
STUDENT ACTIVITIES:

1. Maintain notebook of lecture notes and handouts.
2. Answer study questions.
3. Dig an observation hole to examine soil profile.
4. Take a soil sample of their home garden or lawn to send to UCONN for analysis.
5. Have students apply recommendations of soil tests, i.e., apply fertilizer to their lawn as prescribed by test.
6. Demonstrate mastery of concepts through quizzes and lab reports.

EQUIPMENT

1. Soil test kit.
3. Pails, shovels, clipboards.
4. Samples of various soil types.

PLANT SCIENCE CURRICULUM

UNIT: Plant Anatomy, Physiology, and Classification

LENGTH: Six weeks. Select areas of content by student needs and time available.

WHEN TAUGHT: Grade 9 or 10

OBJECTIVES: The students will be able to:

1. identify plant parts and their role in plant growth and reproduction.
2. describe plant growth processes.
3. list the requirements for plant growth and describe the general effects of a lack or an excess of the requirements.
4. describe how plants are classified.
5. identify plant taxonomic classifications.
6. recognize parts of plants that can be used for identification.
7. use scientific equipment to examine plant parts.
8. classify plants.
9. use a plant identification key.

   2. fruit
   3. seeds
   4. cones
   5. spores

E. modifications
   1. modified stems
   2. modified leaves

III. Plant processes and their function

A. photosynthesis
B. respiration
C. transpiration

IV. Plant growth requirements and their function

A. water
B. light
C. nutrients
D. support
E. carbon dioxide
F. the effects of too little or too much of these requirements

V. Plant classification

A. growth habit (tree, shrub, vine, etc.)
B. herbaceous vs. woody
C. life cycle
D. evergreen vs. deciduous
E. use of scientific and common names
F. use of plant keys

VI. Use of scientific equipment to examine plants

A. magnifying glass
B. microscope
C. dissecting kit
TEACHER ACTIVITIES:

1. Use lecture periods to explain the various parts of plants, plant processes, growth requirements and plant classification systems.
2. Display plant material to demonstrate plant classification.
3. Use school grounds and greenhouse as a laboratory.
4. Demonstrate correct use of scientific equipment.
5. Describe the use of plant keys.

STUDENT ACTIVITIES:

1. Examine plant parts with and without the use of scientific equipment.
2. Draw and label plant structures.
3. View plants on the school grounds and in the greenhouse to study plant classification.
4. Study and document plant reactions to environmental changes.
5. Collect plant specimens to study plant parts and classification.

EVALUATION:

1. Review student notebooks periodically.
2. Evaluate student drawings.
3. Give written examinations on plant processes.
4. Give quizzes on identification of plant parts.
5. Have students outline the classification of selected plants.
6. Evaluate students on the correct use of scientific equipment.
7. Evaluate students on correct use of plant keys.

RESOURCES:

1. Greenhouse
2. Native plant material (school grounds).

INDIVIDUAL TEACHER UNIT REVIEW

This addition to the Curriculum Guide is included after each unit. After teaching this unit of instruction, please complete the form below. It is intended to be used by curriculum writers the next time this curriculum undergoes revision. It is also intended for your use as an aid in periodic updating as you continually teach this unit.

A. ADDITIONAL AND UPDATED TEACHING METHODS:
   1. Student Activities--
   2. Teacher Activities--
   3. Evaluation Methods--

B. ADDITIONAL AND UPDATED REFERENCES:
   1. Media--
   2. Bibliography--

C. ADDITIONAL AND UPDATED RESOURCES INCLUDING ADDRESSES AND PHONE NUMBERS:
   1. Resources Address Phone

D. WHEN TAUGHT AGAIN I WOULD MAKE THESE CHANGES:
   1. 
   2. 
   3. 

UNIT: Bedding Plants

LENGTH: Three weeks. Select areas of content by student needs and time available.

WHEN TAUGHT: Grade 11 or 12, Winter - Spring

OBJECTIVES: The students will be able to:

1. know various types of bedding plants.
2. understand that bedding plants require special environmental conditions to develop high quality plants.
3. understand that the time of sowing the seeds will determine the flowering time and plant size.
4. identify germinating mediums used for the propagation of bedding plants.
5. know the various types of plant containers used in the bedding plant industry.
6. produce several varieties of bedding plants from the seed sowing to flowering or maturity.
7. apply growth regulators in correct proportions and understand how these regulators affect the growth of the plant.
8. apply fertilizers and pesticides to develop high quality plants.

RELATED JOB TITLES AND RELEVANT COMPETENCIES:

Floriculture Salesperson
Floral Designer
Greenhouse Foreman
Greenhouse Worker

CONTENT:

I. Optimum growing conditions for bedding plants

A. mist systems
B. CO2
C. temperature
D. water and feeding
E. insects and disease
II. Scheduling the crop
   A. seed growing
   B. transplanting
   C. pinching
   D. time of bloom
   E. growth regulators

III. Bedding plant mediums
   A. pasteurization
   B. soil mediums
   C. soilless mediums

IV. Bedding plant containers
   A. market pack
   B. thin-walled plastic packs
   C. thick-walled plastic packs
   D. pots

V. Varieties and identification of bedding plants
   A. annuals
   B. biennials
   C. perennials

VI. Growth regulators
   A. types
   B. dilutions
   C. application methods

VII. Fertilizers
   A. liquid vs. dry
   B. rate and analysis
   C. schedule

VIII. Pest control
   A. damping off
   B. botrytis
   C. insects
   D. recognition and control

IX. Marketing
   A. wholesale
   B. retail
   C. preparation of flowers for market
   D. cost of production
X. Use of bedding plants

A. shade
B. sun
C. landscaping principles regarding annuals

TEACHER ACTIVITIES:

1. Demonstrate the procedures for selecting bedding plant mediums.
2. Use lecture and laboratory periods to explain environmental conditions needed for high-quality bedding plants.
3. Provide information concerning the sowing dates of bedding plants.
4. Display plant containers for identification purposes.
5. Demonstrate the procedures followed in seeding, transplanting, and maintaining bedding plants.
6. Select and demonstrate proper procedures in using pesticides.
7. Discuss marketing of bedding plants.
8. Arrange field trips to local retailers and growers of bedding plants.

STUDENT ACTIVITIES:

1. Start bedding plants from seed and follow their plants through a desirable schedule until they are ready for marketing.
2. Keep records of sowing dates, transplanting dates, fertilizer and growth regulator dates.
3. Practice the following skills in lab: sowing, transplanting, fertilizing, mixing growth medias, use of growth regulators, insecticides, and pinching.
4. Design and plant an annual garden.
5. Make a cost analysis of a class project.

EVALUATION:

1. Check periodically the care being given to class project.
2. Evaluate quality of student-grown bedding plants.
3. Evaluate student log/record book of activities.
4. Supervise planting, evaluate design.
5. Give quizzes on skills obtained in lab.
6. Give test on the identification of bedding plants.

RESOURCES:
1. Visit large bedding plant grower in your area.
2. Visit local garden centers.

UNIT: Christmas Holiday Production and Marketing

LENGTH: Three weeks. Select areas of content by student needs and time available.

WHEN TAUGHT: Grade 11 and 12, December

OBJECTIVES: The students will be able to:

1. snow familiarity with Christmas tree plantation establishment and care.
2. describe assembly-line production of Christmas wreaths.
3. demonstrate proper salesmanship and marketing techniques.
4. construct and decorate wreaths.
5. identify Christmas trees and greens.
6. display characteristics of leadership and responsibilities through group participation.

RELATED JOB TITLES AND RELEVANT COMPETENCIES:

Floriculture Salesperson 418:3(a-h)
Floral Designer 420:3(a-g)
Flower Shop Manager 424:3(a-g, i, j), 424:4(a-f)

CONTENT:

I. Construction of wreaths

A. hauling greens
B. cutting to proper length
C. tying
D. decorating
E. tagging
F. pricing
G. recordkeeping
H. use and care of tools and equipment

II. Salesmanship and marketing

A. setting up sales area
B. grading, tagging and pricing trees
C. display products for sale
D. customer approach
E. presenting the merchandise  
F. closing the sale  
G. making change  
H. keeping records of sales  
I. advertising

TEACHER ACTIVITIES:
1. Coordinate land-use and development of plantation.  
2. Locate sources of greens.  
3. Arrange with Board of Education and town officials for development.  
4. Demonstrate proper tree planting, care and harvesting.  
6. Demonstrate wreath-making and decorating.  
7. Demonstrate proper sales techniques.

STUDENT ACTIVITIES:
1. Plant, care for, and harvest trees.  
2. Grade and price trees according to U.S.D.A. standards.  
3. Make and decorate wreaths.  
4. Sell trees and wreaths using accepted sales procedures.

EVALUATION:
1. Observation of students work habits.  
2. Records of all sales by each student.  
3. Records of all production by individual students.  
4. Written evaluation made of students production, work habits and attitudes after conference.  
5. Grade given on production and sales.
RESOURCES:

1. Equipment

A. truck
B. chain saw
C. bow saws
D. clippers
E. shears
F. wire
G. coat hangers
H. ribbon
I. cones
J. tags
K. order books
L. pencils
M. bow tying jig

PLANT SCIENCE CURRICULUM

UNIT: Floral Design

LENGTH: Six weeks. Select areas of content by student needs and time available.

WHEN TAUGHT: Grade 11 or 12

OBJECTIVES: The students will be able to:

1. identify different design styles in floral arranging.
2. describe the basic principles of floral design.
3. describe the basic elements of floral design.
4. use appropriate color combinations in floral arrangements.
5. identify materials used in floral design/the floral industry.
6. select appropriate containers and materials for different types of floral arrangements.
7. construct various types of floral arrangements.
8. figure costs of completed designs.
9. package floral arrangements for display, sale and delivery.
10. describe the proper care of cut flowers and floral arrangements.
11. identify selected flowers.

RELATED JOB TITLES AND RELEVANT COMPETENCIES:

Floriculture Salesperson 417:1(a-3, 417:2(a-g), 418:3(a-h)
Floral Designer 419:1(a-g), 419:2(a-f), 420:3(a-g)
Flower Shop Manager 424:4(a-f)

CONTENT:

1. Design styles in floral arranging
   A. line
   B. mass
   C. line-mass (American)
   D. naturalistic
   E. free-form
   F. abstract
II. Principles of floral design
   A. balance
   B. scale
   C. harmony
   D. rhythm
   E. repetition
   F. unity
   G. focus or accent

III. Elements of floral design
   A. line
   B. form
   C. space
   D. pattern
   E. texture

IV. Color concerns in floral arranging
   A. color terminology (use of the color wheel)
      1. hue
      2. tint
      3. tone
      4. intensity
   B. emotional responses to color
      1. warm colors
      2. cool colors
      3. symbolic significance of colors
   C. color harmony
      1. monochromatic color harmony
      2. analogous color harmony
      3. complementary color harmony

V. Identification of materials used in floral arranging
   A. plant materials
      1. fresh
      2. dried
      3. artificial
   B. containers
   C. holding materials
   D. accessories
VI. Creating various arrangements

A. centerpieces - round and oval, vase arrangements
B. one-sided arrangements - horizontal, vertical, Hogarth curve, inverted "T", right angle, Asymmetrical triangle, symmetrical triangle, crescent, circle, oval, zig-zag, spiral, diagonal, line, free-form
C. baskets
D. sprays
E. bouquets
F. nosegays
G. corsages
H. boutonnieres
I. holiday arrangements
J. wedding design
K. funeral design
L. other special occasions

VII. Figuring costs of floral arrangements

A. cost of materials
B. mark-up

VIII. Packaging floral arrangements for sale and delivery

A. packaging cut flowers
B. packaging floral arrangements for safe delivery
C. packaging corsages, boutonnieres and nosegays

IX. Care of cut flowers and floral arrangements

A. care of fresh flowers and fresh arrangements
   1. use of floral preservatives
B. care of dried and artificial plant materials

X. Obtaining supplies for floral arranging

A. wholesale floral supplier
B. mail order supplier
C. gathering natural materials
   1. preserving natural materials

TEACHER ACTIVITIES:

1. Use lecture periods to explain principles and elements of design and color concerns in floral design.
2. Display and describe different floral design materials.
3. Demonstrate the construction of various designs.

4. Arrange a field trip to a local retail florist.

5. Arrange a field trip to a wholesale floral supplier.

6. Supervise student floral design activities.

STUDENT ACTIVITIES:

1. Maintain a notebook on lecture and discussion sessions.

2. Explain the principles and elements of design and the appropriate use of color in floral design.

3. Choose materials for specific designs.

4. Create various designs.

5. Figure costs of materials and retail price of various arrangements.

6. Package floral arrangements for sale and delivery.

EVALUATION:

1. Review notebooks periodically.

2. Give oral and written tests on the principles and elements of design, the use of color, the different styles and types of floral arrangements and the care of floral arrangements.

3. Evaluate student's floral arrangements.

4. Test student's ability to figure costs of materials and retail prices of floral arrangements.

5. Test student's ability to package floral arrangements correctly.

RESOURCES:

1. Floral material and arranging.

2. Floral design magazines.

3. Local wholesale and retail florists.

4. Teleflora and FTD printed materials.

PLANT SCIENCE CURRICULUM

UNIT: Fruit Production

LENGTH: Six weeks. Select areas of content by student needs and time available.

WHEN TAUGHT: Grade 11 and 12

OBJECTIVES: The students will be able to:

1. be familiar with practices involved in the production and marketing of fruit.
2. acquire knowledge necessary to produce quality fruit.

RELATED JOB TITLES AND RELEVANT COMPETENCIES:

Small Fruit Farmer

Tree Fruit Grower

167:1(a, b), 168:1(d-1), 168:2(a-j), 169:3(a, c, d, f, g), 189:1(b), 189:2(a-d), 189:3(a, c, f, g), 190:4(a-f), 190:5(a-e), 190:6(a-c), 191:8(a-h), 191:9(a, b, d), 191:10(a, b), 191:11(a, c), 192:13(a, b), 193:14(a-c)

CONTENT:

I. Small fruits - strawberries, grapes, blueberries, brambles

A. site selection

1. exposures
2. acreage
3. soils

B. planting and care

1. planting
2. pruning
3. harvesting
4. storage

B. planting and care

1. planting
2. pruning
3. harvesting
4. storage
5. pest control

a. Integrated Pest Management (I.P.M.)

III. Marketing

A. truck farming
B. roadside stand
C. pick your own
D. large scale production for supermarkets

TEACHER ACTIVITIES:

1. Arrange field trips to local orchards.
2. Prepare tools for pruning of fruit trees.
3. Collect specimens for class identification.

STUDENT ACTIVITIES:

1. Maintain a notebook on lectures, discussions, and field trips.
2. Prune fruit trees.
3. Prune small woody fruit.
4. Plan small orchard.

EVALUATION:

1. Review student notebooks.
2. Evaluate plants pruned by students.

RESOURCES:

1. Local orchards.

PLANT SCIENCE CURRICULUM

UNIT: Greenhouse Crop Production and Marketing

LENGTH: Six weeks. Select areas of content by student needs and time available.

WHEN TAUGHT: Grade 11 or 12

OBJECTIVES: The students will be able to:

1. develop competency in such practices as watering, propagation, fertilization, soil preparation and pest control.
2. understand the effects of photoperiods.
3. understand the grading, packing, and shipping of crops.
4. understand pricing and marketing.
5. understand the specific requirements of various greenhouse crops.
6. maintain accurate record of crop production.

CONTENT:

I. Identification of various crops

II. Cultural requirements of various crops

III. Propagation

A. stock plants
B. cuttings
C. seeds
D. other
IV. Recordkeeping and crop scheduling
   A. temperature
   B. application of pesticide, growth regulators, and fertilizer
   C. crop scheduling
   D. watering
   E. lighting

V. Grading and packaging flower crops
   A. care of finished crops

VI. Wholesale and retail sales
   A. marketing and advertising

VII. Cost accounting (profitability)
   A. heating
   B. labor
   C. supplies

TEACHER ACTIVITIES:
1. Use lecture periods to explain the various crops and their requirements.
2. Arrange field trips to various wholesale and retail greenhouses.
3. Arrange purchase and delivery of various greenhouse crops and materials.

STUDENT ACTIVITIES:
1. Maintain a notebook on lectures and greenhouse crop observations.
2. Assist in growing various crops as well as maintaining, picking, grading and packing various crops.
3. Do cost analysis on crops.

EVALUATION:
1. Review notebooks and greenhouse records periodically.
2. Observe student competency in working with various crops both in planting and growing.
3. Evaluate student cost records of crops.

RESOURCES:

1. Greenhouse and its equipment or supplies.
2. Local greenhouses for field trips.
3. Wholesale greenhouse supplier.

PLANT SCIENCE CURRICULUM

UNIT: Greenhouse Structures

LENGTH: Three to six weeks. Select areas of content by student needs and time available.

WHEN TAUGHT: Grade 11 or 12

OBJECTIVES: The students will be able to:

1. identify the various types of greenhouse structures and their uses.
2. identify the parts of a greenhouse structure.
3. list the factors involved in building a greenhouse structure in any location.
4. describe the disadvantages and advantages of different types, sizes, and shapes of structures and coverings.
5. understand the proper terminology for greenhouse structures.
6. understand the construction and maintenance of structures.
7. describe the controlling light, temperature, humidity, and CO₂ levels in greenhouse structures.
8. describe the importance of proper ventilation in greenhouse structures.
9. understand the importance of the heating and cooling systems in the various structures.
10. describe the use of special structures for plant production including their construction and maintenance.
11. understand why there is a need for some special equipment in the growing of greenhouse crops.

RELATED JOB TITLES AND RELEVANT COMPETENCIES:

Greenhouse Worker 430:16(a-c, 1, j), 431:17(b-j)

CONTENT:

I. Greenhouses are built with specific objectives in mind

   A. hobbies
   B. teaching
C. research
D. botanical gardens
E. commercial horticulture

II. Types of greenhouses and their use and construction

A. even span solitary
B. ridge and furrow
C. uneven span
D. Quonset hut or Bartlett
E. gothic arch
F. Trox (commercial)
G. panel houses
H. air supported
J. others
J. manufacturers of greenhouses

III. Special structures, construction, maintenance and use

A. coldframes
B. hotbeds
C. lath house or slatted shed
D. cloth house

IV. Factors to consider when locating a greenhouse range

A. access to a good road
B. nearness to electricity and an adequate supply of clean water
C. greenhouse should be build on deep, well-drained soil
D. good air and water drainage
E. do not build near trees or buildings as they will cause shade
F. do not build where limbs, stones or other debris may be dislodged and cause damage
G. be protected from strong winds and winter storms to help save fuel
H. locate close to market, and a source of reliable labor
I. a north-south orientation would be the best

V. Parts of a greenhouse

VI. Greenhouse terminology

VII. Glazing materials and primary requirements

A. glass
B. plastic films
C. polyethylene film
D. vinyl film (PVC)
E. mylar polyester film
F. fiber glass
VIII. Heating systems
A. steam
B. hot water
C. solar heat
D. unit heaters
E. forced air
F. radiant heat
G. electric

IX. Cooling systems
A. fan and pad
B. mist system
C. shading compound

X. Ventilation
A. ridge
B. plastic tubes
C. fans
D. ridge ventilators and at the eaves (sash)

XI. Controlling light, temperature, humidity and CO2 in the greenhouse
A. light controls
B. temperature controls
C. humidity controls
D. CO2 control (generator, liquid, dry ice, alcohol)
E. atmospheric control for refrigeration

XII. Greenhouse benches and beds
A. type of material used for the benches
B. bench arrangement and dimensions
C. advantages and disadvantages of using benches for growing plants
D. rolling benches--ebb and flow type benches

XIII. Additional special equipment in modern greenhouses
A. fertilizer injection equipment
B. automatic watering systems--capillary mats
C. misting systems
D. bottom bench heat provided by heating cables
E. temperature alarms
F. day-night time clocks

TEACHER ACTIVITIES:

1. Arrange class field trip to several greenhouse ranges to familiarize students with the greenhouse structures and equipment.
2. If possible, develop a slide collection for classroom use as a follow-up at end of unit.

3. Provide laboratory demonstrations for the following: types of glazing materials, how to glaze a greenhouse, the parts of a greenhouse and others.

4. Provide classroom time for lectures and individual study.

5. Divide class into various groups and have each group prepare a bill of materials and equipment for different types of greenhouse structures for class presentation.

STUDENT ACTIVITIES:

1. Maintain notebooks on lectures and discussions.

2. Complete all worksheets, drawings, quizzes, outside reading or other assignments.

3. Repair and adjust any environmental control devices in the school greenhouse if possible and know how they are to operate. Make use of company manual.

4. Prepare a bill of materials for various greenhouse structures.

5. Prepare a list of equipment and costs for a greenhouse structure. (Might use the school greenhouse layout.)

6. Glaze a section of the greenhouse and/or cover a temporary greenhouse with plastic.

7. Demonstrate that they know how to provide proper ventilation for a greenhouse either by drawing or by use of a model. (It could be a class project by building one.)

8. Demonstrate that they know the various kinds of glazing materials and where they are used.

EVALUATION:

1. Check all notebooks on a weekly basis.

2. Evaluate student quizzes and tests (pre-test and post-test).

3. Evaluate class project.

4. Evaluate the student's bill of materials and equipment analysis.

5. Evaluate each student's laboratory technique.

6. Evaluate the field trip follow-up.
RESOURCES:

1. Invite a resource person from a large operation to discuss such subjects as atmospheric controls.

2. Cooperative Extension Service for resource personnel and/or publications such as bulletins, leaflets or other media.

4. Lord and Burnham Representative or other greenhouse manufacturer.

5. List of materials
   
   A. samples of all kinds of glazing materials
   B. materials for glazing temporary greenhouse (plastic)
   C. materials for glazing school greenhouse or other
   D. glazing tools
   E. greenhouse catalogs from various manufacturers
   F. hand tools for repair or maintenance of equipment in greenhouse
   G. materials for building a coldframe, lath house or cloth house, if one is to be built
   H. plans for building
   I. solar heat greenhouse

INDIVIDUAL TEACHER UNIT REVIEW

This addition to the Curriculum Guide is included after each unit. After teaching this unit of instruction, please complete the form below. It is intended to be used by curriculum writers the next time this curriculum undergoes revision. It is also intended for your use as an aid in periodic updating as you continually teach this unit.

A. ADDITIONAL AND UPDATED TEACHING METHODS:
   1. Student Activities--
   2. Teacher Activities--
   3. Evaluation Methods--

B. ADDITIONAL AND UPDATED REFERENCES:
   1. Media--
   2. Bibliography--

C. ADDITIONAL AND UPDATED RESOURCES INCLUDING ADDRESSES AND PHONE NUMBERS:
   1. Resources Address Phone

D. WHEN TAUGHT AGAIN I WOULD MAKE THESE CHANGES:
   1. 
   2. 
   3. 
PLANT SCIENCE CURRICULUM

UNIT: Interior Landscaping

LENGTH: Three weeks. Select areas of content by student needs and time available.

WHEN TAUGHT: Grade 11 or 12

OBJECTIVES: The students will be able to:

1. identify common plants used in interior designs.
2. determine the light and temperature requirements of interior landscape plants.
3. recognize the cause of abnormal plant growth conditions.
4. fertilize interior landscape plants.
5. select plants for a specific set of environmental conditions.
6. select appropriate soil mixtures for individual plants.
7. select containers appropriate for both the individual plant and its location.
8. design an interior landscape.
9. determine rental, maintenance, and establishment costs for an interior landscape design.
10. identify sources of interior landscape materials.
11. establish an interior landscape.
12. maintain an interior landscape

RELATED JOB TITLES AND RELEVANT COMPETENCIES:

Greenhouse Worker 425:4(a-f), 427:10(a, e, g, j, k, l), 428:11 (a, b), 428:11(a-g), 429:14(g)
Floral Designer 420:3(c, e)
Flower Shop Manager 424:3(a, g), 424:4(b)
Landscape Planter 436:4(h, j, k), 436:5(b)
Greenhouse Foreman 421:2(a-c)
I. Identification of interior landscape plants

II. Environment of interior landscape plants
   A. light
   B. temperature
   C. moisture
   D. fertility

III. Identify abnormal plant conditions
   A. yellowing
   B. leaf drop
   C. whit
   D. spotting

IV. Maintaining interior landscape plants
   A. watering
   B. fertility
   C. controlling pests and diseases

V. Designing/establishing an interior landscape
   A. determining light levels
   B. selecting plants for existing environmental conditions
   C. selecting plants for function
   D. select appropriate soil mixtures
   E. select appropriate container
   F. provide drainage
   G. place plants in the landscape
   H. selecting plants for beauty

VI. Developing cost estimates
   A. rental contract
   B. maintenance contract
   C. establishment contract

VII. Maintain interior landscapes
   A. check for plant needs
      1. fertilize
      2. water
      3. pesticide
      4. clean
   B. trim/prune
TEACHER ACTIVITIES:

1. Provide material, illustrations, and slides of interior landscape plants for the students.
2. Demonstrate techniques of watering and fertilizing interior landscape plants.
3. Demonstrate methods of determining existing light levels.
4. Provide finished interior landscape plans for the students to study.
5. Provide trade journals which contain sources and prices of plant material.
6. Invite an interior landscaper to talk to the class.
7. Conduct field trips to shopping malls and other public places which contain interior landscapes.
   b Conduct field trips to interior landscape plant growers and wholesalers.

STUDENT ACTIVITIES:

1. Develop a card file containing descriptions of interior landscape plants and their environmental requirements.
2. Determine light levels for various rooms.
3. Water and fertilize plants growing in an interior landscape.
4. Design an interior landscape taking into consideration the existing light levels and function of the landscape.
5. Develop an establishment contract, rental contract, and maintenance contract for an interior landscape.
6. Establish an interior landscape borrowing plant material from a wholesaler if necessary

EVALUATION:

1. Grade card file.
2. Rate ability to water landscape plants.
3. Rate ability to mix fertilizer and apply it to landscape plants.
4. Grade interior landscape design.
5. Grade establishment, rental and maintenance contracts.
6. Rate ability to establish an interior landscape.

RESOURCES:
1. Trade journals.
2. Wholesalers and growers of interior landscape plants.
3. Shopping malls, banks, etc., which contain interior landscapes.
4. Interior landscapers.

   3.
PLANT SCIENCE CURRICULUM

UNIT: Landscape Construction

LENGTH: Three to six weeks. Select areas of content by student needs and time available.

WHEN TAUGHT: Grade 11 or 12, Fall or Spring

OBJECTIVES: The students will be able to:

1. become familiar with various structures used in the landscape.
2. become familiar with the various construction materials used in the landscape.
3. become familiar with estimating cost of material, supplies and labor.
4. become familiar with plant material, their growth habits and use.
5. demonstrate knowledge of planting procedures.
6. become familiar with landscape construction, equipment and tools.

RELATED JOB TITLES AND RELEVANT COMPETENCIES:

Grounds Supervisor 432:5(a, b), 434:9(a-h)
Landscape Planter 435:2, 435:3(a-g), 435:4(a-h), 436:6(a-d)
Groundworker 438:3, 438:4(a-1), 438:5(a-1)
Landscape Aide 440:1(a-e), 440:2(a-g), 441:4(a-g)

CONTENT:

I. Identifying landscape needs of family

II. Analyzing the site

III. Interpreting a landscape plan

IV. Selection of various landscape construction elements

A. fences
B. walls
C. retraining walls
D. patios
E. decks
F. outdoor fireplaces
V. Selection of construction material

A. wood
B. brick
C. patio block
D. cinder blocks
E. railroad ties
F. rock walls
G. mulches
H. other

VI. Construction equipment tools

A. hand tools
B. power equipment

VII. Preparing the site

A. grading
   1. slope
   2. drainage

B. fitting plants to the design
   1. planting procedures

IX. Estimating costs - preparing a bid

A. practice basic math problems
   1. percent problems
   2. area problems
   3. volume problems

B. material
C. supplies
D. labor
E. profit
F. overhead
G. travel and contingencies

TEACHER ACTIVITIES:

1. Use lecture periods to identify landscape needs of the family.
2. Take field trips to compare various elements used in the landscape.

3. Use lecture periods to estimate costs of material, supplies and labor.

A. Use both lecture time and arrange for field trips to demonstrate use of plants in the landscape.

5. Use both lecture time and arrange for field trips to demonstrate use of plants in the landscape.

6. Assist in landscape construction project.

STUDENT ACTIVITIES:

1. Maintain a notebook.

2. Identify landscape needs of family.

3. Select various elements for their landscape plan.

4. Estimate cost of material, supplies and labor of his/her landscape plan.

5. Construct a section of fence, brick walk, or deck.

6. Install plants from a planting plan.

EVALUATION:

1. Review notebook periodically.

2. Have student demonstrate a landscape plan.

3. Have students critique sites visited.

RESOURCES:

1. Local family house and school grounds.

2. Local nurseries.

3. Local commercial landscapers.

PLANT SCIENCE CURRICULUM

UNIT: Landscape Design

LENGTH: Three to six weeks. Select areas of content by student needs and time available.

WHEN TAUGHT: Grade 11 or 12

OBJECTIVES: The students will be able to:
1. develop an understanding of types of occupations in landscape design.
2. understand the importance of landscaping.
3. analyze various landscapes and their requirements.
4. determine the landscape needs of the site and occupants of the site.
5. develop various solutions to landscape problems.
6. gain knowledge about kinds of plants and their correct uses for a site.
7. develop the ability to estimate landscape costs.

RELATED JOB TITLES AND RELEVANT COMPETENCIES:

- Grounds Supervisor 432:3, 433:5(e, f, j), 433:6 (a-m)
- Landscape Planter 435:3(a-g), 436:4(a, b, g, h, j, k, l, n)
- Grounds Worker 437:1(m), 438:2(e, i, l, n)
- Landscape Worker 440:1(a-e), 440:2(a-i)

CONTENT:

I. Occupations in the landscape industry
   A. landscape architect
   B. landscape designer
   C. horticultural extension agent
   D. landscape nurseryman

II. Importance of landscaping
   A. landscaping for use
   B. landscaping for beauty
   C. landscaping increases property value
III. Analysis of landscape requirements

A. site analysis

B. on-site factors
   1. slope
   2. soil
   3. rock outcroppings
   4. water
   5. existing vegetation
   6. structures
   7. climate of site
   8. utilities
   9. legal aspects

C. off-site factors

D. analysis of family needs
   1. "Analysis of Family Needs Check-Off List"

E. area layout plan

IV. Ideas for solving landscape problems

A. layout of the landscape areas
   1. the public area
   2. the private area
   3. the service area

B. ideas for involving landscape problems

V. Structures and plants

A. planning landscape structures
   1. walks and drives
   2. walls
   3. fences
   4. terraces and lawns

B. structural materials
   1. asphalt
   2. concrete
   3. brick
   4. flagstone
   5. loose aggregates
   6. wood
   7. garden lighting
C. The structural plan
   1. Fixed features

D. The kinds of plants
   1. Habit of growth
   2. Hardiness
   3. Maintenance
   4. Fruit, flower, foliage, and branching characteristics
   5. Evergreen and deciduous plant materials
   6. Trees
   7. Shrubs
   8. Groundcovers
   9. Vines

E. The planting plan

F. Selection of plant materials
   1. Environmental factors
      a. Soil
      b. Light
      c. Moisture
      d. Exposure
      e. Hardiness zone
   2. Plant identification for the finished landscape plan

G. Estimating landscape costs

Teacher Activities:
   1. Lectures and lab presentations.
   2. Prepare handout material.
   3. Prepare lab assignments.

Student Activities:
   1. Maintain notebook.
   2. Completion of lab assignments.
   3. Completion of homework.
   4. Draw and design home landscape.
EVALUATION:

1. Review notebook periodically.
2. Quizzes.
3. Evaluation of lab assignments.
4. Evaluation of homework.
5. Class participation.
6. Unit exam.
7. Evaluation of home landscape.

UNIT: Landscape Maintenance

LENGTH: Three to six weeks. Select areas of content by student needs and time available.

WHEN TAUGHT: Grade 11 or 12

OBJECTIVES: The student will be able to:

1. prune shrubbery and trees.
2. fertilize landscape plantings.
3. mulch and water landscape plants.
4. control weeds, insects, and diseases of landscape plants.
5. maintain lawns and flower beds.

RELATED JOB TITLES AND RELEVANT COMPETENCIES:

Grounds Supervisor
Grounds Worker
Landscape Planter
Landscape Worker
Retail Landscape and Garden Center Salesperson

CONTENT:

I. Pruning
   A. injured plants
   B. rejuvenation
   C. developing form
   D. maintaining formal hedges
   E. pruning shade trees

II. Fertilizing landscape plants
   A. trees and shrubs
   B. ground covers and vines
   C. turf areas
   D. fertilizing equipment
   E. types of fertilizers
III. Mulching landscape plants
   A. mulching material

IV. Watering landscape plants

V. Weed control
   A. plant beds
   B. edging
   C. herbicides

VI. Insect and disease control
   A. identification of common insect and disease problems of landscape ornamentals

VII. Turf maintenance
   A. mowing
   B. watering
   C. fertilizing and lime application
   D. lawn renovation

TEACHER ACTIVITIES:

1. Demonstrate the proper methods of pruning.
2. Provide fertilizer schedules for landscape plants.
3. Demonstrate the proper methods of fertilizing landscape plants.
4. Provide samples of weeds, and insect and disease damage.
5. Discuss proper turf maintenance.

STUDENT ACTIVITIES:

1. Prune trees, shrubs and hedges.
2. Mulch landscape plants on school grounds.
3. Select and apply chemicals for weed, insect, and disease control.
4. Operate and maintain lawn mowers and lawn fertilizer spreaders.
5. Determine the amount of fertilizer needed for a turf area
6. Maintain a portion of the school grounds.
7. Take field trips to observe professional landscape practice.
EVALUATION:

1. Rate pruning technique on assigned trees and shrubs.
2. Evaluate ability to select and apply mulch to landscape plants.
3. Evaluate ability to select and apply pesticide.
4. Evaluate ability to select and apply fertilizer to a lawn area.
5. Evaluate area of school grounds which was maintained by student.

   3.
PLANT SCIENCE CURRICULUM

UNIT: Nursery Management

LENGTH: Six weeks. Select areas of content by student needs and time available.

WHEN TAUGHT: Grade 11 or 12

OBJECTIVES: The students will be able to:

1. explain the scope of the nursery industry.
2. propagate nursery stock.
3. describe the nursery field practices.
4. recognize common plant disorders.
5. describe scoring, grading and marketing nursery stock.
6. keep records and accounts.

RELATED JOB TITLES AND RELEVANT COMPETENCIES:

Nursery Worker 446:1(b, c, e, f, h), 446:2(a-f), 446:3(a-j), 447:4(a-e), 447:5(a-c), 447:7(a, b)

Plant Propagator 449:2(a-i)

Nursery Salesperson 453:1(a-j)

CONTENT:

I. Scope of nursery industry
   A. nursery industry in U.S.A. and Connecticut
   B. employment skills
   C. job titles
   D. new developments in industry

II. Identification of common nursery stock

III. Plant propagation methods
   A. cuttings
   B. grafting
   C. budding
   D. layering
   E. tissue culture
IV. Nursery field practices
   A. transplanting
   B. staking
   C. pruning
   D. irrigation
   E. harvesting
   F. selecting and maintaining tools

V. Controlling pests
   A. insects and related pests
   B. plant diseases
   C. other pests
   D. weed control
   E. safe use of pesticides

VI. Storing, grading and marketing
   A. storage
   B. grading
   C. advertising
   D. merchandising

VII. Keeping records and accounts
   A. record system
   B. order records
   C. reports
   D. pricing
   E. inventory

TEACHER ACTIVITIES:
1. Arrange class trip to a large commercial (wholesale) nursery.
2. Arrange class trip to local (retail) nursery for plant identification.
3. Arrange class trip to a large commercial nursery to observe propagators performing the various methods of propagation.
4. If the school does not already have a nursery, the teacher should make every effort to establish one for the good of the department, the school, and the community.
5. Arrange for local nurserymen to come to the Vocational Agricultural Department to discuss with the class, container grown stock, field grown stock, propagation methods, career opportunities, or any other subject pertinent to the class at any particular time.
6. Provide propagating bench in the greenhouse.

7. Provide lecture time in the classroom to discuss various principles and operations.

8. Conduct demonstrations where applicable for the different operations.

9. Obtain tissue culture kits for students.

STUDENT ACTIVITIES:

1. Maintain a notebook on all class lectures and discussions.

2. Learn how to propagate different types of nursery stock growing in the school nursery or the community.

3. Sow seed properly in the greenhouse.

4. Do a T bud on roses.

5. Take various cuttings from shrubs and other ornamentals in the school nursery or from the school grounds and propagate them.

6. Collect samples of diseases and insects of ornamentals, correctly identify them and how controlled.

7. Dig bare-root and B & B stock, grade them and label for identification.

8. Plant a container crop in the school nursery.

9. Propagate plants by tissue culture.

EVALUATION:

1. Provide students with a short pre-test at the beginning of the Nursery Management Unit.

2. Students will maintain notebooks during any and all classroom lectures and discussions.

3. Students' response to classroom discussion.

4. Quizzes to be provided at various intervals to include classroom work and laboratory experiences.

5. Students' ability to work to capacity during the laboratory period.
6. Post-test to be given at the end of the Nursery Management Unit.
7. Each student to be graded at the end of each laboratory exercise.

RESOURCES:
1. Contact local extension office for publications relating to the Nursery Management Unit.
2. Contact local area nurserymen to make a presentation on any subject area of concern to you.
3. Land Laboratory (School).
4. Overwintering hoophouse for container stock.
5. Tissue culture lab set up.

WHEN TAUGHT: Grade 11 or 12

OBJECTIVES: The students will be able to:

1. identify selected perennials.
2. design a perennial border.
3. establish a perennial border.
4. describe cultural practices for selected perennials.
5. grow perennials from seed.
6. plan a schedule for sow'ng perennial seed at proper time of year.
7. describe the proper means of protecting plants over the winter.
8. start perennials using asexual propagation.
9. determine proper marketing procedures.

RELATED JOB TITLES AND RELEVANT COMPETENCIES:

Greenhouse Foreman
Greenhouse Worker
Grounds Supervisor
Landscape Planter
Retail Landscape and Garden Center Salesperson

CONTENT:

I. Plant life cycles
II. Plant identification
III. Perennial garden design
   A. color
   B. height
   C. time of bloom
   D. balance
   E. texture

IV. Perennial garden establishment and maintenance
   A. preparation of soil
   B. planting
   C. nutrition
   D. cultivation
   E. watering
   F. staking
   G. protection

V. Propagation
   A. seed
      1. time of year
      2. direct vs. transplanting
   B. cuttings
   C. division

VI. Growing in containers
   A. transplanting
   B. watering
   C. growing medium
   D. fertility
   E. pest control
   F. winter protection
   G. use of coldframes and greenhouses

VII. Marketing
   A. wholesale vs. retail
   B. recordkeeping
      1. varietal popularity
      2. inventory on hand
      3. cost of materials
      4. cost of operations
   C. advertising
      1. highway signs
      2. newspaper advertisements
      3. radio and television
      4. open house
      5. direct mailings
D. Display

1. Organizing sales area
2. Labeling
3. Cultural information

Teacher Activities:

1. Provide pictures and slides of various perennials.
2. Conduct field trip to local perennial grower.
3. Provide students with examples of perennial garden design.
4. Demonstrate techniques of propagating perennials.

Student Activities:

1. Collect pictures from catalogs and prepare 5" x 8" cards with pictures and cultural information.
2. Maintain school perennial garden.
3. Design a perennial garden.
4. Germinate perennials from seed.
5. Take cuttings and divide perennials.

Evaluation:

1. Evaluate student index of perennials.
2. Evaluate student garden design.
3. Give written examinations on content.
4. Evaluate student on ability to propagate perennials.

Resources:

1. School perennial garden.
2. Garden design materials.
3. Propagation tools.

   1.

   2.

   3. 
PLANT SCIENCE CURRICULUM

UNIT: Plant Nutrition

LENGTH: Three to six weeks. Select areas of content by student needs and time available.

WHEN TAUGHT: Grade 11 or 12

OBJECTIVES: The students will be able to:

1. understand the soil factors which influence plant growth and management and how these are essential for optimum growth and yield.

2. understand that physical and chemical properties of soils which will determine the crops growth and the management techniques.

3. test greenhouse and field soils accurately.

4. interpret soil tests results.

5. accurately apply soil additives.

6. correctly send samples to laboratory for testing and be able to interpret results accurately.

RELATED JOB TITLES AND RELEVANT COMPETENCIES:

Greenhouse Foreman 422:2(d, e)
Greenhouse Worker 427:10(a-n), 429:14(b, d, g, h), 429:15(a-1)
Plant Propagator 449:2(a-1), 449:3(a-1), 450:5(d)
Nursery Salesperson 453:1(a-e, h)

CONTENT:

I. Soil science and plant growth
   A. soil factors influencing plant growth
   B. soil fertility and native vegetation
   C. essential plant food elements (plant nutrients)
   D. roles of the major and trace plant nutrients

II. Physical properties of soils
   A. mechanical analysis
   B. soil texture
   C. soil structure
   D. porosity and granulation
III. Soil formation and classification
   A. classification of parent materials
   B. materials transported by wind, water, ice, gravity
   C. disintegration and decomposition of soils
   D. soil maps and surveys

IV. Chemical and colloidal properties of soil
   A. colloidal clay
   B. humus
   C. cation exchange
   D. soil pH
   E. buffering
   F. fixation of elements

V. Life in the soil
   A. fungi and bacteria/nematodes
   B. nitrification
   C. plant roots
   D. soil

VI. Organic matter
   A. functions of organic matter
   B. chemical and biological properties of organic matter
   C. maintaining organic matter in the soil

VII. Soil water
   A. infiltration
   B. permeability
   C. soil water classified
   D. percolation
   E. leaching losses of nutrients

VIII. Fertilization
   A. uptake of nutrients
   B. fertilizers and their characterization
   C. use of fertilizers
   D. lime and liming practices

IX. Related topics to be covered in soils unit
   A. tillage
   B. soil conservation
   C. irrigation
   D. drainage
   E. manure, compost, ecology
TEACHER ACTIVITIES:

1. Use lecture periods to explain the soil factors that influence plant growth.

2. Demonstrate the procedures for taking soil sample and testing nutrient levels of greenhouses and field crops.

3. Plan a field trip to study soil formation and classification.

4. Prepare greenhouse laboratory projects on plant nutrition, i.e., essential elements for plant growth and their symptoms of deficiency.

5. Use lecture periods to discuss the use of synthetic and organic fertilizers and demonstrate the methods of application.

STUDENT ACTIVITIES:

1. Maintain a notebook on lecture and discussion sessions.

2. Answer study questions to be presented after each lecture.

3. Take soil samples.

4. Test their own field of garden soil for N.P.K., pH.

5. Make interpretations from their own tests.

6. In groups of two, carry on a six-week nutrient experiment in the school greenhouse which will demonstrate nutrient deficiencies.

EVALUATION:

1. Review notebooks periodically.

2. Evaluate student learning with quizzes.

3. Have student demonstrate laboratory techniques.

4. Evaluate recommendations of students after testing own soils.

5. Check results of project at end of unit with a post-test.

RESOURCES:

1. Contact your local extension office for publications relating to units in the soils area.
2. Invite the area soil conservationist to give a short talk and guided field trip.

3. List of materials:
   A. spurway soil testing kit
   B. pH meter
   C. pails and shovels
   D. ingredients for synthetic soil media
   E. liquid and dry fertilizers
   F. "hazan" and gallon container
   G. samples of different soil types
   H. visuals, slides of nutrient deficiencies, soil profiles, etc.
   I. sampling tube and auger

D. WHEN TAUGHT AGAIN I WOULD MAKE THESE CHANGES:
   1. 
   2. 
   3. 
UNIT: Plant Propagation

LENGTH: Three weeks. Select areas of content by student needs and time available.

WHEN TAUGHT: Grade 11 or 12

OBJECTIVES: The students will be able to:

1. develop skills necessary to propagate plants using approved techniques.
2. understand the plant's formation of a new root system.

RELATED JOB TITLES AND RELEVANT COMPETENCIES:

Greenhouse Foreman
Greenhouse Worker
Nursery Worker
Plant Propagator

CONTENT:

I. Sexual (seed propagation)
   A. structure and function of seeds
   B. production of seeds
   C. storage of seeds
   D. germination of seeds
      1. scarification
      2. stratification

II. Asexual
   A. significance of cuttings
   B. types of cuttings
      1. leaf
      2. root
      3. stem
   C. factors affecting success in rooting cuttings
   D. procedures in making cuttings
   E. care of rooted cuttings
   F. grafting - "T" budding; cleft; whip/tongue
   G. layering/air-layering
III. Propagation structures

A. mist system  
B. bottom heat

TEACHER ACTIVITIES:

1. Arrange a field trip to a propagation greenhouse.  
2. Demonstrate asexual propagation techniques.

STUDENT ACTIVITIES:

1. Choose correct planting media for different forms of propagation.  
2. Make cuttings according to recommended procedures.  
3. Store rooted cuttings.  
4. Plant rooted cuttings.  
5. Make different types of grafts.  
6. Perform air layering and layering.  
7. Prepare seeds for storage and germination.  
8. Sow seed in varying conditions (i.e., light vs. dark).  
9. Demonstrate scarification and stratification techniques for difficult to germinate seeds.  
10. Log recording propagation and growing information.

EVALUATION:

1. Quizzes on factual knowledge.  
2. Observation of techniques used in making cuttings, grafting, budding and layering.  
3. Percent of takes on various asexual techniques.  
4. Grade for accurate log data.
MATERIALS AND EQUIPMENT:

1. Grafting knife.
2. Grafting tape or rubberbands.
3. Grafting wax.
4. Seed scarification - sand paper, hot water.

UNIT: Retail Flower Shop Management

LENGTH: Three weeks. Select areas of content by student needs and time available.

WHEN TAUGHT: Grade 11 or 12

OBJECTIVES: The students will be able to:

1. work at a retail flower shop.
2. exhibit knowledge of stocking, displaying, advertising and marketing practices.
3. perform various accounting and recordkeeping practices.
4. communicate effectively with floral shop customers.

RELATED JOB TITLES AND RELEVANT COMPETENCIES:

- Floriculture Salesperson
- Floral Designer
- Flower Shop Manager

CONTENT:

I. Employment opportunities
   A. types of positions
   B. local, state and regional employment opportunities

II. Evaluation of potential market for products and services
   A. demographic data
   B. competition

III. Shop lay-out and organization
   A. customer traffic pattern
   B. work area
   C. sales area - permanent display areas, shelving
   D. storage areas
IV. Obtaining supplies
   A. floral supplies
   B. office and other business supplies

V. Management
   A. hiring and training employees
   B. store hours and special sales periods

VI. Marketing flowers and floral materials
   A. advertising and promotion
      1. regular year-round sales and promotion
      2. special holiday promotion
   B. displays and point of purchase promotion
   C. diversification of sales to attract more customers

VII. Accounting, bookkeeping and recordkeeping
   A. financial records to determine profitability
   B. records of sales of different types of items to plan for following year
   C. inventory control

VIII. Communication skills needed in a floral shop
   A. waiting on customers
   B. telephone orders
   C. floral consultation services (weddings, parties, etc.)

IX. Care and handling of floral materials
   A. care of cut flowers when receiving them from wholesaler
   B. packaging customer purchases

TEACHER ACTIVITIES:
1. Use lecture periods to explain the retail florist business.
2. Arrange field trips to local retail and wholesale florists.
3. Provide opportunities for students to practice communication skills and recordkeeping skills.
STUDENT ACTIVITIES:

1. Maintain a notebook of lecture and discussion sessions.
2. Draw the lay-out for a retail florist shop.
3. Evaluate the potential market for a retail florist shop.
4. Design a display advertisement.
5. Make a window display.
6. Design a holiday promotion schedule.
7. Figure wholesale and retail costs for floral shop products and services.
8. Practice accounting and bookkeeping procedures.
9. Practice communication skills using simulation activities.

EVALUATION:

1. Review notebooks periodically.
2. Evaluate student shop lay-out.
3. Have student critique shops visited.
4. Give written examinations on content.

RESOURCES:

1. Local wholesale and retail florists.
2. Drawing materials.
3. Accounting and recordkeeping materials.

UNIT: Turf Management

LENGTH: Six weeks. Select areas of content by student needs and time available.

WHEN TAUGHT: Grade 11 or 12, Fall or Spring

OBJECTIVES: The students will be able to:

1. explore employment opportunities in turfgrass occupations.
2. identify the turfgrasses used in Connecticut.
3. maintain proper soil fertility for turf areas.
4. learn mowing and watering practices.
5. identify and control pests of lawns.
6. plan and establish a new turfgrass area.

RELATED JOB TITLES AND RELEVANT COMPETENCIES:

Grounds Supervisor
Landscape Planter
Grounds Worker
Landscape Worker
Retail Landscape and Garden Center Salesperson
Golf Course Maintenance Worker
Maintenance Worker
Work Foreman
Golf Course Pesticide Specialist

CONTENT:

I. Exploring employment opportunities
   A. specific job classification
   B. outlook, nature of work, and qualifications needed

II. Identify turfgrasses
   A. parts of grass plant
   B. growth habits and cultural requirements
III. Soil fertility
   A. soil sampling and understanding soil tests
   B. lime requirements
   C. fertilizer recommendations per use, variety, etc.
   D. applying lime and fertilizer

IV. Mowing and watering
   A. mowing height, frequency, and practices
   B. thatch control and aeration
   C. amount of frequency, time and rate of watering
   D. different watering equipment

V. Turf pests
   A. identification of weeds
   B. control of weeds using chemicals
   C. disease identification, causes and control
   D. insect control and identification
   E. types of equipment used to control pests

VI. Establishing turfgrass
   A. time of planting
   B. seedbed preparation
   C. grass seed mixtures
   D. lime, fertilizer, seed, mulch, etc., amounts and types
   E. methods of preparation, and cost estimating

TEACHER ACTIVITIES:

1. Show slides to acquaint students with turf jobs.
2. Plan a field trip to turf farm or golf course.
3. Provide turf plants for identification, and use slides.
4. Demonstrate soil sampling procedures, and discuss the recommendations.
5. Demonstrate lime and fertilizer handling and application.
6. Discuss and demonstrate mowing, watering, and thatch removal equipment.
7. Provide examples of weeds, insects, and disease damage.
8. Demonstrate weed, insect, and disease control practices.
9. Develop a turf establishment contract for students to practice steps in turfgrass establishment.
STUDENT ACTIVITIES:

1. View slides on turf occupations.
2. Take field trip to turf operation, such as golf course.
3. Study slides on turf grass identification.
4. Prepare mounts of different turf grass species.
5. Plant a flat of a turf grass species or variety.
6. Take soil samples of turf area, fill out information sheet, and analyze results of test.
7. Apply lime and fertilizer to turf area.
8. Operate different lawn mowers, and thatch removal equipment.
9. Determine water distribution pattern of different watering devices.
10. Preserve specimens of weeds, insects, and diseases of turf for study and display.
11. Operate turf sprayer equipment at local golf course or on school grounds.
12. Write up a turf establishment contract detailing date of planting, methods to use, amounts of materials, estimate time and cost to complete.
13. Set up a turf test plot at least 50 feet by 50 feet to observe seed mixtures, seeding rates, and fertilizer amounts.

EVALUATION:

1. Turf grass identification quiz.
2. Test ability to calculate, select, and apply lime, fertilizer, seeds, etc.
3. Score section of the turf test plot.
4. Write turf contract for turf management.
RESOURCES:
1. Local golf course.
2. Local tree farm.
3. Seed samples.
4. Trial plots.
5. Turf equipment - lawnmower.
6. Local small engine service shop.

UNIT: Vegetable Production and Marketing

LENGTH: Six weeks. Select areas of content by student needs and time available.

WHEN TAUGHT: Grade 11 or 12, Spring

OBJECTIVES: The students will be able to:

1. display a working knowledge of a vegetable production enterprise.
2. identify and describe cultural requirements of common vegetable crops.
3. select a site for a vegetable farm.
4. describe methods of a marketing vegetables.

PLANT SCIENCE CURRICULUM

UNIT: Beekeeping

LENGTH: Six weeks. Select areas of content by student needs and time available.

WHEN TAUGHT: Grade 11-12

OBJECTIVES: The students will be able to:

1. identify bees.
2. identify and use beekeeping equipment.
3. start a hive.
4. know how and when to feed a hive.
5. remove honey from a hive.
6. be able to identify and know how to treat foul brood.
7. extract honey.
8. prepare a hive for winter.

RELATED JOB TITLES AND RELEVANT COMPETENCIES:

Apiculturalist

139:1(a), 139:3(a, b), 140:5(b), 140:6(a-d), 140:10(a-c), 140:12(a-c)

CONTENT:

I. Set up a hive from a kit
   A. build supers
   B. build frame
   C. add foundations

II. Bee safety
   A. demonstrate and explain proper use of all protective clothing and smoker

III. Starting a hive
   A. purchase a package and queen
   B. disease prevention
   C. feeding
IV. Honey production
   A. remove honey from a hive
   B. extract honey
   C. bottle and sell product

TEACHER ACTIVITIES:
1. Purchase starter hive, protective clothing and extractor.
2. Check with area beekeepers about possible field trips (In Connecticut, Beekeepers register their hives with the Town Clerk at a minimal cost per hive. They are then inspected by the State.).

STUDENT ACTIVITIES:
1. Compile a list of beekeepers in the area.
2. Construct a hive.
3. Install foundations in frames.
4. Work with bees where possible.
5. Read assigned reading.

EVALUATION:
1. Observe students assembling hives.
2. Observe student handling bees.
3. Score tests and quizzes.

UNIT: Plant Tissue Culture

LENGTH: Three weeks. Select areas of content by student needs and time available.

WHEN TAUGHT: Grade 11 or 12

OBJECTIVES: The students will be able to:
1. understand the importance of micropropagation.
2. become acquainted with the value of plant tissue culture in research.
3. become acquainted with the applications of plant tissue culture.

CONTENT:

I. What is plant tissue culture?
   A. clones
   B. rapid mass production
   C. virus free stock

II. Advantages of micropropagation
   A. cost efficient
   B. genetically uniform
   C. disease free
   D. saves time and space
   E. no seasonal requirements

III. Disadvantages of micropropagation
   A. high initial cost
   B. long-range planning
   C. high overhead
   D. contamination

IV. Using the laboratory
   A. mixing and transferring
      1. media preparation
      2. aseptic technique
B. lab organization

1. wash area for glass
2. media preparation area
3. transfer area
4. incubation area
5. equipment
6. observation and experimentation area

V. Stages of micropropagation

A. Stage 0 - plant preparation
B. Stage 1 - disinfestation
C. Stage 2 - multiplication
D. Stage 3 - rooting
E. Stage 4 - acclimation

VI. Growth regulators

A. cytokinins
B. auxins
C. gibberellic acid
D. abscisic acid
E. ethylene

VII. Applications of plant tissue culture

A. micropropagation
B. virus elimination - meristem culture
C. physiological studies
D. germlasm preservation
E. callus culture
F. suspension culture
G. anther culture - pollen culture
H. embryo rescue

VIII. Future research

A. botanical substance production
B. somaclonal variation
C. plant improvement

1. disease resistance
2. herbicide tolerance
3. insect resistance
4. environmental stress tolerance
5. increase yield
TEACHER ACTIVITIES:
1. Arrange tissue culture lab trips.
2. Assist student in micropropagation lab project.
3. Order laboratory kit.

STUDENT ACTIVITIES:
1. Visit tissue culture lab.
2. Students will maintain a notebook on lectures and discussions.
3. Students will perform a micropropagation experiment.

EVALUATION:
1. Review student notebooks.
2. Evaluate learning through quizzes.
3. Evaluate micropropagation project.

RESOURCES:
2. Local State Universities.

BIBLIOGRAPHY:

PLANT SCIENCE CURRICULUM

UNIT: Hydroponic Culture

LENGTH: Three weeks. Select areas of content by student needs and time available.

WHEN TAUGHT: Grade 11 or 12

OBJECTIVES: The students will be able to:

1. learn the growing techniques of a hydroponic greenhouse.
2. understand the applications of hydroponic growing.

CONTENT:

I. History and terminology
   A. past
   B. present
   C. future

II. Uses for hydroponics
   A. plant physiology research
   B. crop production
      1. food
      2. ornamentals

III. Plant culture
   A. plant requirements
      1. seeding
      2. temperature
      3. light
      4. CO₂
      5. transplanting
      6. spacing
      7. fertilizing
      8. pollination
      9. diseases and insects
   B. nutrient solutions
      1. inorganic salts
      2. plant requirements
      3. calculations
      4. preparing nutrient solutions
      5. maintenance of solution volume
      6. injector or proportioner system
IV. Hydroponic growing medium

A. water culture
   1. commercial systems
   2. home units
   3. tube culture
   4. aeroponics

B. gravel culture and sand culture
   1. media characteristic
   2. sub-irrigation of gravel culture
   3. trickle irrigation
   4. sterilization of media
   5. advantages and disadvantages

C. sawdust culture
   1. media characteristics
   2. nutrient solution distribution systems

D. other soilless cultures
   1. peat
   2. vermiculite
   3. perlite
   4. pumice
   5. soilless medium
   6. plastoponics

V. Culture of the plant

A. seeding
B. temperature
C. watering
D. light
E. CO₂ enrichment

TEACHER ACTIVITIES:

1. Order chemical fertilizer and supplies.
2. Demonstrate small hydroponic growing system.
3. Field trips.
STUDENT ACTIVITIES:

1. Students help grow plants using a hydroponic system.
2. Students observe and record plant growth.
3. Students will maintain a notebook.

EVALUATION:

1. Review student notebooks.
2. Evaluate learning through quizzes.
3. Evaluate student's work with hydroponic system.

APICULTURIST

Other Titles: Beekeeper, Honey Producer, Honey Farmer.

Job Description:

The occupation of Apiculturist involves a wide range of activities in the management and operation of bee colonies. The size of the operation varies considerably. The duties may include preparing hives, providing suitable flowering plants, maintaining bees during winter, operating equipment to handle bees, feeding bees, controlling diseases and pests, harvesting honey, processing, and marketing honey and beeswax.

    b. Uncap honey. 3.2
c. Strain honey.  
d. Package honey.  
e. Check honey flavor.  
f. Determine honey color.  
g. Heat honey.  

   a. Secure wholesale or bulk markets.  
   b. Grade honey.  
   c. Establish selling prices.  
   d. Establish retail outlet.  
   e. Haul honey.  
   f. Prepare advertisement for honey.  
   g. Operate a roadside honey stand or store.
MUSHROOM GROWER

Other Titles: Mushroom Producer, Mushroom Farmer, Mushroom Worker, Mushroom Cultural Expert, Mushroom Supervisor, Mushroom Farm Manager, Mushroom Technician, Mushroom Coordinator, Mushroom Production Supervisor.

Job Description:
Secures optimum environment of temperature and moisture for growing mushrooms; manages wharf area for preparing compost; provides compost; fills beds in house with compost; pasteurizes compost; secures spawn and spawns beds; cases beds after spawn run; cares for the growing crop; picks the crop; markets crop; cleans out and cleans up house in preparation for growing next crop; helps keep financial records of the business. Often supervises other workers. Keeps up-to-date by reading industry publications and attending industrial seminars and short courses. Is employed by the owner of the business.

* Responses from 51 Mushroom Growers in 14 states. Survey conducted by Department of Agricultural Education, The Pennsylvania State University, University Park, Pennsylvania 16802.

** 4.0 = Essential; 3.0 = Important; 2.0 = Some Importance; 1.0 = Not Important; 0 = Does Not Apply.

\# No* included on questionnaire but recommended by some experts surveyed.
3. Provide compost.
   a. Recognize properly prepared compost for filling beds and trays.
   b. Turn the compost as needed, for aeration.
   c. Understand reasons for composting.
   d. Recognize the need for different turning cycles for various types of composting materials and weather conditions.
   e. Know and provide the proper moisture requirements in the composting process.
   f. Provide optimum amount of nitrogen in compost by adding nitrogen supplement if needed.
   g. Recognize the quality requirements of basic ingredients used in composting.
   h. Prepare compost from horse manure or synthetic materials, gypsum, and other additives.
   i. Recognize anaerobic bacterial action in both the pile and the pit water.

4. Fill the beds or trays with compost.
   a. Recognize the need for more or less moisture in the compost at filling for long or short compost and take corrective action.
   b. Clean and disinfect house for filling.
   c. Fill beds or trays level full and of uniform density with compost.

5. Provide proper curing of compost by cookout.
   a. Know the purpose of the cookout procedure.
   b. Be able to determine the absence of free ammonia at the end of cookout.
   c. Know when there is adequate oxygen.
   d. Recognize the need for a thorough air kill.
   e. Determine the best cookout procedure for a particular house and follow that procedure.

6. Prepare for spawning the compost beds.
   a. Know that pre-spawn preparation is the most critical time during the entire cycle, that recontamination must be prevented.
   b. Test for the presence of free ammonia.
   c. Have the knowledge and skill to properly use the insect fogger.
   d. Paint wood surfaces with insecticide to aid in fly control and install electric fly traps.
e. Prepare a fly control program for entire growth period.

7. Spawn the compost beds.
   a. Understand and practice good sanitation procedures during the spawning process.
   b. Know and provide optimum bed moisture requirements during spawning and the spawn run.
   c. Provide optimum temperature continuously during spawn run.
   d. Apply appropriate insecticides during spawn run.
   e. Know the best method of spawning for your facilities.
   f. Select the spawn which will produce the best crop, yields for your market.
   g. Determine when spawn run is complete.
   h. Prepare the optimum bed surface shape for the facilities.
   i. Provide optimum spawning rate for the mushroom production operation considering price of spawn.
   j. Provide plastic cover for spawned beds and trays.

8. Case the spawned beds or trays.
   a. Water casing layer using best techniques, to provide optimum moisture content.
   b. Be alert to potential disease and fly problems.
   c. Pasteurize casing materials.
   d. Understand the reasons for casing.
   e. Know optimum temperature and CO₂ requirements after casing.
   f. Apply casing materials using optimum amounts.
   g. Follow the most desirable procedures in preparing materials for casing.
   h. Know the casing materials that may be used and the advantages and disadvantages of each.
   i. Store pasteurized casing materials following sanitary practices.

9. Grow the mushroom crop.
   a. Provide optimum temperature, humidity, and fresh air to the growing crop.
   b. Provide maximum cleanliness throughout house during crop growing period including the removal of dead mushroom tissue, diseased or blemished mushrooms.

# Not included on questionnaire but recommended by some experts surveyed.
c. Provide maximum disease and fly control to the growing crop by the use of appropriate insecticides, fungicides, and bactericides.

d. Know when to water, how much, and where; understand the meaning of some beds drying, others not. #

10. Harvest and market the crop.

a. Pick or harvest mushroom crop at optimum stage of maturity desired by the market.

b. In picking, select "tight" mushrooms and avoid damage by handling.

c. Ship the crop as soon as possible after picking or store the crop until marketed in a cool environment.

d. Recognize when it is uneconomical to continue cropping.

e. Know the most convenient and profitable marketing outlets for the crop.

11. Clean-out and clean-up the house.

a. Eradicate all diseases and insects within the house before clean-out.

b. Follow the most efficient practices (for the facilities) in clean-out and disposal.

c. Clean-up and repair the empty house for next filling.

12. Supervise workers.

a. Develop harmonious relationships with workers.

b. Train workers for various jobs.

c. Suggest to workers improvements of methods of accomplishing work.

d. Observe employee compliance to safety regulations.

e. Assist in planning work schedules of employees.

f. Judge prospective employee qualifications.

g. Is competent in explaining to subordinates the meaning of environment and relationship to mushrooms. #

# Not included on questionnaire but recommended by some experts surveyed.
NUT PRODUCER

Job Description:

Nut Producers are persons who establish and/or manage a grove of nut producing trees. They apply the cultural practices necessary to produce quality nuts. They also are responsible for harvesting, storing, and marketing the nuts.

11. Operate equipment and machinery.
   a. Adjust equipment for maximum efficiency.
   b. Recognize malfunction in equipment.
   c. Service machinery and equipment according to operator's manual.
   d. Use safety standards relating to the operation of a particular piece of equipment.
   e. Prepare equipment and machinery for storage.

12. Participate in local, state and national organizations and meetings relevant to nut production.

13. Adjust production techniques based on latest research findings.
POTATO PRODUCER

Other Titles: Commercial Potato Production Worker, Potato Grower, Potato Farmer.

Job Description:

The experience commercial Potato Production Worker selects the land, prepares it for planting, determines soil nutrient requirements, plans a fertility program, and applies fertilizers, determines soil moisture requirements, plans and applies an irrigation program; evaluates, selects, and prepares seed potatoes; determines time and methods of planting, plants the crop, evaluates weed control methods; and plans and applies a weed control program; determines degree of insect threat, compares control methods, plans and applies an insect control program, recognizes disease symptoms, evaluates control methods, and plans and applies a disease control program; selects harvesting and storage methods, determines time to harvest, and operates harvest and storage equipment; evaluates market news, marketing systems, and buyer-seller contracts; sells potato crop, calculates profits, and analyzes future production; operates and maintains the machinery and equipment, and maintains the buildings and structures.

* Responses from 55 Potato Producers in 10 states. Survey conducted by Department of Agricultural Education, University of Idaho, Moscow, Idaho 83843.

** 4.0 = Essential; 3.0 = Important; 2.0 = Of Some Importance; 1.0 = Not Important; 0 = Does Not Apply.
c. Compare methods of seedbed preparation. 2.7

d. Develop a good system of crop rotation for soil building and soil sanitation. 2.4

e. Recognize land possessing the physical conditions, native fertility, and gross topography suitable for potato production. 2.2

f. Determine seasonal availability of water required for potato production. 2.2

g. Evaluate advantages and disadvantages of spring and fall plowing and select proper method for local situations. 2.2

3. Selecting, obtaining, and preparing seed potatoes. 2.6

a. Operate seed cutting machinery safely. 3.5

b. Perform adjustments and minor repairs on seed cutting equipment. 3.3

c. Understand the purposes and methods of potato seed treatment. 2.8

d. Prepare seed pieces of desirable size and number of eyes per piece. 2.8

e. Determine amount of potato seed required. 2.4

f. Compare the advantages and disadvantages of certified and non-certified or home-saved seed potatoes. 2.3

g. Explain storage methods and requirements of seed potatoes. 2.3

h. Identify and select varieties best suited for local conditions. 2.2

i. Select potato varieties according to utilization (chips, fries, etc.). 2.0

j. Evaluate the effect of potato seed varieties on yield responses. 1.9

4. Establishing potato crops. 2.9

a. Perform field adjustments and minor field repairs on planting equipment and power sources. 3.6

b. Operate planting equipment and power sources safely. 3.6

c. Calibrate and adjust planters for rate and depth of planting. 3.4

d. Care for potato seed pieces before planting. 3.3

e. Determine depth of planting. 3.0

f. Determine rate of planting. 2.9

g. Determine soil and moisture conditions necessary for planting. 2.6

h. Study local weather conditions at time of planting. 1.9

i. Recognize seasonal weather variations to estimate planting time for optimal growing conditions. 1.9
5. Selecting and implementing irrigation methods.
   a. Operate irrigation equipment safely.
   b. Perform field adjustments and minor field repairs on irrigation equipment and power sources.
   c. Set up irrigation equipment.
   d. Identify soil and plant conditions indicating irrigation needs.
   e. Measure and control water distribution.
   f. Evaluate the effects of moisture on quantity and quality of potato crop.
   g. Determine irrigation schedules for greatest economic gains.
   h. Evaluate economic importance of recommended irrigation practices.
   i. Evaluate various irrigation methods and systems.
   j. Determine added costs and returns from proper irrigation.
   k. Determine the type and slope of soil.
   l. Determine available water supply.
   m. Determine cost of installation and cost of operating an irrigation system.
   n. Select an irrigation system according to needs and costs.
   o. Interpret federal and state laws relating to water rights and uses.

   a. Perform field adjustments and minor field repairs on fertilizer equipment and power sources.
   b. Operate fertilizer application equipment and power sources safely.
   c. Calibrate fertilizer application equipment.
   d. Take soil samples.
   e. Identify nutrient deficiency symptoms in growing plants.
   f. Evaluate the effect of fertilizer use on yield responses.
   g. Identify nutrient requirements in potato production.
   h. Interpret and use soil test results.
   i. Determine when to apply fertilizers and soil conditioners.
   j. Determine amount of fertilizer and soil conditioners to apply.
   k. Compare cost per unit of nutrient from available fertilizer sources.
1. Determine the most economic combination of potato nutrient sources.

2. Compare costs of fertilizer application methods.

7. Controlling weeds.
   a. Apply weed control chemicals correctly and safely.
   b. Operate mechanical weed control equipment, herbicide application equipment, and power sources safely.
   c. Perform field adjustments and minor field repairs on weed control equipment and power sources.
   d. Read and comply with manufacturer's label directions and legal requirements affecting recommended herbicide application, timing, and safety.
   e. Calibrate herbicide application equipment.
   f. Store, mix, and handle herbicides conforming to manufacturer's label directions.
   g. Meet state requirements for herbicide use.
   h. Recognize dangers of carry-over of herbicide residues in the soil and in application equipment.
   i. Evaluate the influence cultivation has on yields, soil temperature, and soil moisture.
   j. Identify common weeds.
   k. Recognize weed infestation problems and select the best method of control.
   l. Appraise the performance of recommended herbicides.
   m. Evaluate economic impact of weeds on potato crop.
   n. Identify the methods with which weeds spread.

   a. Operate insect control equipment and power sources safely.
   b. Perform field adjustments and minor field repairs on insect control equipment and power sources.
   c. Calibrate insecticide application equipment.
   d. Identify dangers of insecticide residue carry-over in application equipment.
   e. Read and comply with manufacturer's label directions and legal requirements affecting recommended insecticide application, timing, and safety.
   f. Store, mix, and handle recommended potato insecticides conforming to manufacturer's label directions.
g. Detect insect infestation.  

h. Meet state requirements for use of E.P.A. designated "Restricted Pesticide".  

i. Identify and evaluate damage caused by insects to potato crop.  

j. Identify and distinguish between harmful and beneficial potato crop insects.  

k. Appraise performance of recommended insecticides.  

l. Select the best insect control program in terms of economic costs, returns, and environmental impact.  

m. Evaluate life cycle of insects to determine appropriate control procedures.  

n. Identify methods by which insects are spread.  

a. Operate disease control equipment and power sources safely.  

b. Perform field adjustments and minor field repairs on disease control equipment and power sources.  

c. Calibrate disease control applicators correctly.  

d. Clean and disinfect all potato equipment and storage facilities with live steam or chemicals to control potato diseases.  

e. Read and comply with manufacturer's label directions and legal requirements affecting recommended fungicide application, timing, and safety.  

f. Interpret and follow chemical label directions for fungicide storing, mixing, and handling.  

g. Identify dangers of chemical carry-over of fungicide residues in soil and application equipment.  

h. Meet state requirements for fungicide use.  

i. Identify potato diseases and interpret their effect on potato crops.  

j. Identify and appraise the performance of recommended fungicides.  

k. Identify the methods by which diseases are spread.  

l. Evaluate environmental impact of disease control programs.  

m. Select a recommended disease control program in terms of expected costs and returns.
   a. Operate potato harvest equipment and power sources safely.  
   b. Determine correct field travel and PTO speeds for harvesting operation.  
   c. Perform field adjustments and minor field repairs on harvest equipment.  
   d. Identify weather and soil conditions essential for maximum harvest efficiency and minimum bruising and injury.  
   e. Determine potato crop maturity.  
   f. List and evaluate vine-killing methods to hasten potato maturity.  
   g. Evaluate weather conditions and forecasts in local area.  
   h. Compare and evaluate available potato harvest equipment for local needs.  
   i. Calculate expected costs and returns of custom versus farm-owned harvest equipment.  

11. Storing and handling potato crop.  
   a. Operate potato handling equipment safely.  
   b. Adjust, maintain, and repair potato handling equipment.  
   c. Identify proper filling and removal practices to reduce potato damage.  
   d. Evaluate economic impact of careless potato crop handling.  
   e. Provide and maintain proper storage temperature, humidity, and air circulation to minimize economic loss depending on intended use of crop (seed, fresh, processing).  
   f. Compare and evaluate available storage facilities.  
   g. Evaluate washing, grading, and packing methods in relation to costs and returns.  

12. Marketing potato crop.  
   a. Inspect potatoes for damages and defects.  
   b. Identify various grades of potatoes.  
   c. Calculate expected returns and profits from sales.  
   d. Select appropriate marketing system.  
   e. Select carriers to ship potatoes.  
   f. Interpret payment terms and other contract agreements.  
   g. Negotiate buyer-seller contracts.  
   h. Interpret production statistics and market reports.
1. Determine feasibility of participating in potato futures market and contracts.
2. Analyze market cycles.

   a. Evaluate the role of potato production in the local farming program.
   b. Summarize and evaluate yearly production records.
   c. Calculate anticipated profits from future production.
   d. Evaluate future seasonal and yearly production and demand forecasts.

14. Maintaining equipment and power sources.
   a. Perform proper maintenance and servicing of machinery according to operator's manual.
   b. Inspect equipment for potential breakdowns and safety hazards.
   c. Prepare equipment for storage and removal from storage.
   d. Perform major repairs on equipment and power sources (i.e., replace universal joints, replace bearings and seals, etc.).
   e. Maintain records of maintenance and repair of machinery and equipment.
   f. Maintain a daily log of number of hours each piece of equipment is used.
   g. Compare and select equipment and power sources best suited for local operation.
SMALL FRUIT FARMING

Other Titles: Berry Grower, Fruit Farmer, Fruit-Farm Manager, Commercial Producer of Blueberries, Grapes, Raspberries, and/or Strawberries, Blueberry Grower, Raspberry Grower, Strawberry Grower, Vine Grower, Vineyard Manager, Fruit Gardner.

Job Description:

A commercial producer of small fruit is a person competent in managerial and technical skills needed to carry out timely approved practices resulting in maximum profit from the small-fruit enterprises. These skills are needed by owners, managers, and operators. The broad competency areas needed by small fruit producers are as follows: Planning for Production, including acquiring technical knowledge, managing finances, site and variety selection, and site preparation; Growing Small Fruit Crops, including, soil preparation, propagation and planting, fertilization, pest control, machinery selection and maintenance; Harvesting, Processing, Storing and Marketing Small-Fruit Crops, including those operations involved in commercial marketing or operating a pick-your-own outlet.

SOYBEAN PRODUCERS

Other Titles: Farmer, Cash Grain Grower, Grain Farmer.

Job Description:

Plants, cultivates, and harvests soybeans for cash sales. Selects and buys type and amount of seed to be grown, taking into consideration local growing conditions and market demands. Operates equipment to plow, disk, harrow, and fertilize ground for planting, and to plant grain. Plans harvesting, considering ripeness and maturity of grain and weather conditions and operates soybean-harvesting equipment. Sells soybeans or stores them for future sales.

* Responses from 31 Soybean Producers representing states in the principle soybean producing area of the United States. Survey conducted by the Department of Agricultural Education, University of Nebraska, Lincoln, Nebraska 68583.

** 4.0 = Essential; 3.0 = Important; 2.0 = Of Some Importance; 1.0 = Not Important; 0 = Does Not Apply.
f. Explain the purpose and procedure in inoculating soybean seed. 2.8

g. Describe why one variety matures earlier than another. 2.3

h. Distinguish between determinate and indeterminate types of soybean plants. 2.2

i. Identify the parts of the soybean seed and explain the functions of each part. 1.8

   a. Prepare a good seedbed for soybeans. 3.2
   b. Compare the cost of various tillage systems. 3.1
   c. Identify the characteristics of a good seedbed. 2.9
   d. Discuss the tillage practices used to prepare a good soybean seedbed. 2.9
   e. Compare the relative advantages of using minimum tillage and conventional tillage systems in soybean production. 2.7
   f. Identify and evaluate the various tillage equipment needed to produce a soybean crop. 2.5

4. Planting methods and practices.
   a. Calibrate planting equipment to get the desired planting rate. 3.2
   b. Evaluate the most recent findings pertaining to time of planting, depth of planting, width of rows, spacing within the rows, and method of planting. 3.1
   c. Correctly plant soybeans for specific crop. 3.0
   d. Estimate the number of acres required to pay the cost of changing to narrow row equipment. 2.8
   e. Identify the types of planting equipment. 2.7
   f. Explain the advantages and disadvantages of planting soybeans in narrow rows. 2.6

5. Fertilizers - rates and application.
   a. Calculate the rates of fertilizer to apply to get the maximum return per fertilizer dollar invested. 3.1
   b. Recognize the importance of proper fertilizer placement for soybeans. 3.0
   c. Plan a fertilizer program for a specific soybean enterprise. 3.0
   d. Determine where in the cropping system the recommended fertilizer should be applied. 2.9
   e. Apply fertilizer to soybean enterprise. 2.9
   f. Identify nutrient deficiency symptoms in soybeans. 2.8
   g. Recognize the different methods of applying fertilizer to soybeans. 2.7
h. Determine the optimum pH range for soybean production.

i. Describe the importance of the major nutrients, secondary nutrients, and micro-nutrients in the production of soybeans.

j. Evaluate plant analysis methods of determining nutrient needs.

a. Identify the pests that are of major concern in the production of soybeans in the community.

b. Calibrate pesticide applicators.

c. Recognize the pesticides being used to control soybean pests; forms, rates, methods of application, effectiveness, costs, and dangers.

d. Summarize the precautions which should be followed when using pesticides.

e. Identify pest and pesticide damage in soybeans.

f. Control pests of soybeans on home farm.

g. Recognize the importance of crop rotation.

h. Describe the practices being used in the community to control soybean pests and evaluate their effectiveness.

i. Compare cultural controls to chemical controls of soybean pests.

a. Make the necessary adjustments on soybean harvesting equipment for efficient operation.

b. Harvest beans with less than one bushel per acre field loss.

c. Determine the major sources of soybean harvesting loss, the percentage loss from each source, and the procedure in minimizing each type of loss.

d. Obtain a sample of soybeans, determine whether it is ready for harvesting.

e. Determine whether it is more economical to own harvesting equipment for soybeans or to hire a custom operator.

f. Calibrate the costs of storing soybeans and determine whether it is advantageous to store.

g. Select a harvesting and storage system for soybeans based on efficiency and economy.

h. Identify materials and methods used in cleaning and fumigating storage structures.
i. Treat stored soybeans for pest control.

j. Calculate the volume of a structure needed to store a specified number of bushels of soybeans.

8. Marketing.
   a. Market soybeans to best economic advantage.
   b. Locate market outlets for soybeans.
   c. Determine market grade requirements for soybeans.
   d. Explain the purpose of the futures contract in soybean marketing.
   e. Discount the price of soybeans for test weight, moisture, and damage.
   f. Describe the supply and demand relationship for soybeans.
   g. Select the month when it would be most profitable to market soybeans.
   h. Identify sources of soybean marketing information.
   i. Explain how local soybean prices are determined.
   j. Explain the relationship between the livestock industry and the soybean market.

9. Production economics.
   a. Budget the annual costs and returns in soybean production.
   b. Keep and analyze production records for soybean enterprise.
   c. Determine results obtained from the modification or adoption of new practices and compare the results with those obtained from experimental studies and local demonstration plot.
   d. Calculate various efficiency factors in soybean production.
   e. Determine realistic goals in soybean production.
SUGAR BEET FARMER

Other Titles: Commercial Vegetable Producer, Forage Producer, Farm Manager.

Job Description:

The Sugar Beet Farmer produces sugar beets under contract with a sugar beet company. Determines kind and amount of crop to be grown, according to market conditions, weather and size and location of farm. Selects and purchases seed, fertilizer and farm machinery and arranges with buyers for sale of crop. Hires and directs farm workers engaged in planting, cultivating and harvesting the crop. Performs various duties of farm workers, depending on size and nature of farm, including setting up and operating farm machinery.

TOBACCO FARMER

Other Titles: Tobacco Grower, Tobacco Producer.

Job Description:

A Tobacco Farmer is a person competent in both managerial and decision making skills and in the carrying out of the necessary technical improved (approved) practices which results in high yields of quality tobacco. Significant competencies are needed by both the owner-producer and the tenant-producer. Examples of the broad areas of work (competency areas) Tobacco Farmers perform are: planning to grow tobacco; producing a plentiful supply of sturdy, healthy plants; growing the tobacco, which includes fertilizing, preparing land, tillage practices, and controlling insects, diseases and suckers; harvesting, housing and curing the crop; and stripping and marketing.

** 4.0 = Essential; 3.0 = Important; 2.0 = Of Some Importance; 1.0 = Not Important; 0 = Does Not Apply.
g. Test the soil of proposed sites for toxic salts. 2.2

4. Field planting. 2.8
   a. Plant trees in the orchard according to plan. 3.6
   b. Water newly planted trees. 3.0
   c. Lay out the orchard for greatest efficiency in production and maintenance. 2.9
   d. Minimize erosion in newly planted orchard. 2.8
   e. Mulch newly planted trees where the practice is recommended. 2.6
   f. Use appropriate starter solutions on newly planted trees where recommended. 2.6

5. Pruning. 2.9
   a. Prune newly planted trees. 3.9
   b. Prune trees to establish scaffold branches. 3.5
   c. Select and use appropriate system of training for each kind of fruit. 3.2
   d. Prune trees to remove dead and/or diseased branches. 2.9
   e. Use limb spreaders to make stronger trees and cause earlier fruiting. 2.9
   f. Prune trees for mechanical harvesting. 2.7
   g. Prune trees to avoid parallel branches and/or cross branches occupying the same space. 2.6
   h. Prune trees to encourage optimum color of fruit. 1.8

6. Fertilization. 2.8
   a. Take appropriate soil samples for nutrient and pH testing. 3.6
   b. Specify fertilizer application for the site. 3.0
   c. Apply a fertilizer to the soil via mechanical applicators (granules, liquid, gas). 3.0
   d. Specify application of lime for the site. 2.9
   e. Adjust fertilizer application to provide optimum quality of fruit. 2.8
   f. Make foliar application of plant nutrients to orchard trees. 2.6
   g. Prepare material for foliar feeding. 2.5
   h. Take leaf samples for quantitative analysis by the Agricultural Experiment Station. 2.5
   i. Apply fertilizer to trees via irrigation water. 2.2

7. Irrigation. 2.5
   a. Apply irrigation water according to specifications. 2.9
   b. Make moisture tests of soil to determine need for irrigation. 2.6
   c. Keep daily evaporation records to determine need for irrigation. 2.5
d. Develop a specified irrigation system under supervision.
e. Prepare soil to receive irrigation water.

8. Disease and insect control.
   a. Read and interpret the contents, directions for use, and cautions on the label of insecticides and fungicides.
   b. Apply insecticides and fungicides to fruit trees as recommended using power equipment.
   c. Select and wear protective clothing while working with fungicides and insecticides.
   d. Keep systematic spray records.
   e. Mix insecticides and fungicides for control of insects and diseases of fruit trees.
   f. Protect wounds on trees.
   g. Carry out an insect and disease control program by eliminating breeding and overwintering places.
   h. Control deer, rodents, birds, etc. that are pests in orchards.
   i. Select disease resistant trees for planting.
   j. Select disease resistant varieties where available.
   k. Use attractants and/or traps to anticipate a rise in insect population.

   a. Determine optimum time to harvest fruit crop.
   b. Determine the most appropriate method of harvesting fruit.
   c. Use handling machinery (forklifts, bulk bins, cooling platforms).
   d. Sort harvested fruits into grades.
   e. Operate grading and/or sorting machines.
   f. Use harvesting aids (platforms, squirrels, etc.).
   g. Harvest fruits grown in the area by appropriate methods.

10. Pollination and fruit set.
    a. Assure adequate pollination by use of bees where appropriate.
    b. Assure pollination by the choice of varieties where appropriate.
    c. Thin fruit by use of chemicals.
    d. Thin fruit by hand.
    e. Pollinate blossoms by bringing pollen to the trees to be pollinated.

11. Management.
    a. Keep accounts of fruit enterprises which will provide information needed for income tax reports.
b. Determine the most economical sources of supply.  3.0

c. Identify outlets for fruit products of the farm.  3.0

d. Compare costs in relation to production with acceptable standards (labor costs per acre, production per acre, return per man, etc.).  2.9

e. Adjust inputs (labor, machinery, fertilizer, chemicals, etc.) based on relative costs and anticipated returns.  2.9

f. Determine production performance of each fruit enterprise in relation to acceptable standards.  2.8

g. Keep accounts which will allow comparison of performance with farms reported by Cooperative Extension Service.  2.8

h. Identify sources of supplies for fruit production.  2.8

i. Determine outlets offering best returns for fruits from the farm.  2.8

j. Use fruit farm management analyses to determine profitability of the business.  2.7

k. Use farm management analyses of fruit farms to determine uses of credit.  2.6

l. Adjust the fruit farming program based on reports from reliable sources.  2.5

m. Use fruit farm management analyses to determine cash flow in the business.  2.5

n. Use farm management analyses to determine appropriate credit terms.  2.4

12. Labor management.

a. Accept assignments of supervisor with enthusiasm.  3.5

b. Complete tasks in an acceptable manner.  3.6

c. Work constructively with fellow workers.  3.5

d. See and anticipate next task which will contribute to the success of the enterprise.  3.5

e. Stimulate fellow workers to perform tasks at optimum standard of workmanship.  3.4

a. Label varieties of fruit.  2.4

b. Determine method of selling fruit crop.  2.4

c. Select necessary equipment and supplies needed for specific roadside market facility.  2.7

d. Display fruit for retail sale.  2.6

e. Prepare fruit for the roadside market.  2.6

f. Grade fruit to meet government standards for retail sale.  2.6

g. Weigh or measure amount of fruit purchased by "pick-your-own" customers.  2.5
h. Suggest varieties of fruit to meet needs of the customer. 2.5
i. Package fruit for retail sale. 2.5
j. Maintain safe practices among customers for a "pick-your-own" marketing program. 2.5
k. Label varieties of fruit. 2.4
l. Meet customers in the farm market and to determine their needs and desires. 2.4
m. Plan a "pick-your-own" marketing scheme for tree fruits. 2.0
n. Plan access and exit for the roadside fruit market area. 2.0
o. Lay out driveways and parking space for a roadside market. 1.9
p. Plan the layout for a roadside fruit market. 1.8

14. Farm power and equipment.

a. Operate the tractors and other power units commonly found on tree fruit farms of the area. 3.6
b. Identify diesel fueled and gasoline fueled internal combustion engines. 3.6
c. Operate equipment used on tree fruit farms (includes tillage, seeding, fertilizer and pesticide applicators, cultivation, harvesting, handling, storage, and processing equipment commonly used in the area). 3.6
d. Lubricate, change oil and filters, and service air cleaners on the power units commonly found on the power units used on tree fruit farms of the area as specified in the operator's manual. 3.5
e. Check operation of the hydraulic systems on the area as specified in the operator's manual. 3.5
f. Maintain and service tires on machines commonly found on tree fruit farms of the area as specified in the operator's manual. 3.3
g. Adjust equipment used on tree fruit farms (includes tillage, seeding, fertilizer and pesticide applicators, cultivation, harvesting, handling, storage, and processing equipment commonly used in the area). 3.3
h. Perform minor maintenance and service operations on the fuel system of the power units commonly found on the tree fruit farms of the area in accordance with the operator's manual. 3.2
i. Perform minor maintenance and service operations on the cooling systems of the power units commonly used on tree fruit farms of the area in accordance with the operator's manual.

j. Identify four-stroke cycle and two-stroke cycle engines.

k. Diagnose malfunctioning of equipment used on tree fruit farms (includes tillage, seeding, fertilizer and pesticide applicators, cultivation, harvesting, handling, storage, and processing equipment commonly used in the area).

l. Perform maintenance operations on the hydraulic systems of machines commonly found on the tree fruit farms of the area as specified in the operator's manual.

m. Identify defective parts on equipment used on tree fruit farms (includes tillage, seeding, fertilizer and pesticide applicators, cultivation, harvesting, handling, storage, and processing equipment commonly used in the area).

n. Diagnose malfunctioning of the power units commonly found on the tree fruit farms of the area.

o. Replace defective parts on equipment used on tree fruit farms of the area (includes tillage seeding, fertilizer and pesticide applicators, cultivation, harvesting, handling, storage, and processing equipment).

p. Locate equipment parts in the parts book.
VEGETABLE GROWER

Other Titles: Vegetable Farmer, Vegetable Farm Manager, Commercial Producer of Vegetables, Vegetable Gardener, Garden Farmer, Market Gardener, and Truck Farmer.

Job Description:

Raises vegetables. Determines kind and amount of crop to be grown, according to market conditions, weather, and size and location of farm. Select and purchase seed, fertilizer, and farm machinery and arrange with buyers for sale of crop. Hire and direct farm workers engaged in planting, cultivating, and harvesting crop, such as beets, beans, onions, peas, and potatoes. Performs various duties of farm workers, depending on size and nature of farm, including setting up and operating farm machinery.

g. Describe compatibility of equipment and chemicals.

(1) Identify chemical characteristics affecting compatibility: petroleum vs. water base, soluble vs. suspension, and abrasive vs. non-abrasive.

(2) Describe characteristics of equipment which affect compatibility with chemicals.

h. Recommend best and alternative chemicals.

2. Describe equipment characteristics.

a. Describe protective equipment needed to handle agricultural chemicals (protection of humans, facilities, equipment, and animals).

b. Describe protective clothing to avoid contamination of body tissues.

c. Describe places and methods of storage.

d. Describe general characteristics of hand and ground sprayers.

e. Recognize and describe equipment parts and maintenance requirements for: hoses, filters, pumps, pressure gauges, pressure regulators, tanks, nozzles, agitators, and cutoff and diverter valves.

f. Describe general characteristics of multi-purpose sprayers: tractor mounted, self-propelled, and wheel-mounted drawn.

g. Describe features affecting compatibility of equipment and chemicals.

h. Describe specific uses of various nozzles: flat fan, even fan, flooding, boomless, off-center, solid cone, hollow cone, and whirl chamber.

i. Describe equipment required for safe disposal of chemicals and containers.

j. Describe capabilities of granular and dust equipment.

(1) Dust - air and fan; electronic charged.

(2) Granular - gravity-feed; force-feed.

k. Describe general capabilities of fumigator equipment.

(1) Low-volatility liquid (gravity-forced pressure).

(2) Gas type.

l. Describe characteristics of general-use sprayers.
m. Describe general features and characteristics of specialized equipment such as:
   (1) High pressure sprayers.
   (2) Air-blast sprayers.
   (3) Low-volume "mist blowers".
   (4) Ultra-low volume sprayers (hydraulic driven fans) at distribution points.

3. Know how to apply chemicals.
   a. Follow accepted procedures in accident situations (emergency telephone numbers, physicians' names, first-aid centers, and procedures).
   b. Recognize pesticide poisoning symptoms.
   c. Warn persons prior to applications of hazardous chemicals - without undue alarm.
   d. Calculate pesticide quantity to be applied to a given area.
   e. Recognize symptoms of pesticide damage or residues due to chemical selection or application errors (burns, slowed growth, leaf-drop, etc.).
   f. Use human and wildlife safety measures.
      (1) Avoid hazardous environmental conditions (winds, heat, volatile materials, threatening rains).
      (2) Add chemicals to tanks, using approved techniques and materials (funnels, hoses, check valves, etc.).
      (3) Read and obey safety precautions on equipment and packages.
      (4) Use protective clothing (gloves, goggles, masks, rubber apparel).
   g. Calculate pesticide and/or custom application bills.
   h. Select chemicals for specific problems.
      (1) Observe specific warnings and first-aid measures.
      (2) Determine safety guidelines and capabilities of the applicator.
      (3) Match chemicals with available protective equipment.
      (4) Match concentration and specific job.
(5) Calculate pesticide volume required. 3.4
(6) Match chemicals to conditions. 3.3
(7) Determine capability of available equipment. 3.3
(8) Assess compatibility of selected chemicals. 3.1
(9) Select mixing methods. 2.8
(10) Dispose of used containers. 2.8

i. Select time of application.
(1) Identify current legal and moral restrictions on use. 3.3
(2) Select application pattern (broadcast, directed spray, band treatment, post or pre-merge). 3.2
(3) Match rate of application with plant condition, pest population, environment, etc. 3.2
(4) Identify harvest-delay and/or re-entry-delay requirements for specific chemicals and treatments. 2.8

j. Inspect respirators for cleanliness, effectiveness, and proper fit. 2.9
k. Recognize capabilities of hand sprayers (air pumps, CO₂ and compressed air). 2.8
l. Select and match nozzles for equipment type, chemical used, and pattern of application. 2.8
m. Select surfactants or wetting agents for specific situations. 2.8
n. Select and/or supervise storage procedures. 2.7
(1) Select storage facilities for factors of moisture, temperature, etc. 2.8
(2) Determine safe storage distances of various chemicals. 2.8

o. Calculate coverage
(1) Use calibration charts prior to equipment adjustment for coverage. 3.1
(2) Determine critical distances: row-space, boom or coverage width, distance traveled (tape, pacing, etc.). 2.7
(3) Read and interpret rate charts such as "pint jar" or "1/128 Acre" methods. 2.3
p. Determine compatibility of equipment and chemicals.
   (1) Identify chemical characteristics affecting compatibility.
   (2) Identify equipment characteristics which affect compatibility.

q. Recognize and describe symptoms of common pests as follows:
   (1) Symptoms of insects and nematodes (chewir, mining, sucking: holes, wilting, discoloration, etc.).
   (2) Symptoms of fungi and bacteria.

r. Recognize common pests such as:
   (1) Insects or plants and animal enterprises and homesteads.
   (2) Weeds of row crops, pastures, ponds, forests.
   (3) Fungi and bacteria of plant and animal enterprises and homesteads.

s. Select nozzles and adjust pressure for various pesticide applications. (Flat fan @ 30 psi; solid cone @ 60 psi, etc.).

t. Supervise and/or perform the mixing of chemicals and carrying agents.

u. Determine the discharge rate of the following equipment:
   (1) Nozzle capacity.
   (2) Area covered.
   (3) Nozzle pressure.
   (4) Ground speed of applicator.
   (5) For air blast equipment, air velocity.

v. Recognize differing features of various ground sprayers.

4. Adjust and care for equipment.
   a. Check application equipment for leaks, clogs, improper equipment, and/or other malfunctions.
   b. Add chemicals to tanks and hoppers using funnels, hoses, check valves, etc.
   c. Adjust equipment as follows:
      (1) Maintain consistent and appropriate speeds.
(2) Set correct pressures. 
(3) Adjust equipment height and width to achieve desired distribution pattern. 
(4) Adjust mixing apparatus. 

d. Check personal protection equipment such as: 

(1) Check respirators for fit, effectiveness, and proper fit. 
(2) Check gloves, goggles, and other protective clothing. 

e. Replace and/or repair nozzles, hoses, cut-off valves, etc. 

f. Prepare equipment for storage as follows: 

(1) Drain systems prior to storage. 
(2) Flush systems of residues. 
(3) Remove residues of dusts and granules from hoppers, deflectors, fans, etc. 

g. Repair sprayer pumps (rotors, pistons, rollers, seals). 

5. Repair and maintain equipment. 

a. Supervise and/or perform maintenance and repairs. 

(1) Follow operator's manual for adjustments. 
(2) Lubricate according to manuals. 
(3) Repair and/or maintain sprayers. 

(a) Main delivery lines (hoses, clamps, valves, pipes). 
(b) Pumps. 
(c) Agitators. 
(d) Nozzles. 
(e) Strainers. 
(f) Pressure regulators. 
(g) Tanks (flush, clean, patch replace). 
(h) Frame (clean, repair, modify). 

(4) Repair and/or maintain dusters. 

(a) Pulleys and belts. 
(b) Hoppers. 
(c) Distribution lines. 
(d) Fans. 
(e) Frames.
(5) Repair and/or maintain fumigators (including ammonia rigs).

   (a) Hoses and pipes (inspects, flushes, replaces).
   (b) Tanks (inspects, flushes, repairs, replaces).
   (c) Injectors (inspects, flushes, repairs, replaces).

b. Supervise and/or use supporting equipment and tools as follows:

(1) Grease guns.
(2) Trucks - motor vehicle.
(3) Steel tapes and other rulers (linear scales).
(4) Wrenches (box, open end, socket, adjustable, etc.).
(5) Screwdriver.
(6) Pliers.
(7) Grind wheels and wire brushes.
(8) Bearing and gear pullers.
(9) Bearing and seal presses.
(10) Air tanks, hoses, and accessories.
(11) Fire extinguisher.
(12) Billing equipment (manual and/or machine).
(13) Oil cans.
(14) Tractors - garden and/or utility.
(15) Weight scales (balance, spring).
(16) Electric soldering iron.
(17) Jacks - hydraulic, screw, and mechanical.
(18) Steam cleaners.
(19) Cash registers.
(20) Electric arc welders.
(21) Air wrench.
(22) Soil augers.
(23) Paint sprayers and paint brushes.
(24) Electric hand drills and drill presses.
(25) Solvents (alcohol or petroleum distillates).
(26) Power and hand operated hacksaws.  
(27) Fork lifts (manual or power).  
(28) Hammers and/or hand saws.  
(29) Pipe dies and reamers.  
(30) Ammonia solutions.  
(31) Two-way radios.  
(32) Steel squares.  
(33) Oxyacetylene welders.  
(34) Hand trucks (bag).  
(35) Containers (plastic, metal, cardboard, fiberglass, etc.).  

6. Use business procedures and human relations.  
a. Use these personality traits on the job.  
   (1) Honest.  
   (2) Careful.  
   (3) Dependable.  
   (4) Cooperative.  
   (5) Accurate.  
   (6) Conscientious.  
   (7) Responsible.  
   (8) Mature.  
   (9) Alert.  
   (10) Confidence.  
   (11) Enthusiastic.  
   (12) Efficient.  
   (13) Loyal.  
   (14) Patient.  
   (15) Energetic.  
   (16) Kind.  
   (17) Agreeable.  
   (18) Appreciative.  
   (19) Tactful.  
   (20) Tolerant.  
   (21) Realistic.
b. Maintain sales records.
   (1) File and/or post forms for orders or deliveries of products and services. 3.4
   (2) Properly complete charge and cash billing forms for warehouse, retail, or wholesale orders. 3.2
   (3) Receive cash, checks, or purchase orders for supplies and services. 3.0
   (4) Prepare sales tickets.
      (a) Calculate charges (amounts for various services provided to customers). 3.0
      (b) Calculate discounts and sales tax, extend unit prices, etc. 3.2

c. Practice accepted human relations techniques and show personality traits. 2.8
   (1) Take instructions or directions from:
      (a) Employers (use of written and mental notes). 3.9
      (b) Fellow employees.
      (c) Customers.
   (2) Relay verbal and written messages to:
      (a) Employers. 3.1
      (b) Fellow employees.
      (c) Customers.
      (d) Other business contacts such as suppliers. 2.2
   (3) Properly greet:
      (a) Fellow employees. 3.2
      (b) Employers.
      (c) Customers.
      (d) Other business contacts. 2.8
   (4) Recognize the basic human needs which play a part in worker motivation (e.g., life sustenance, physical safety, respect, esteem, self-realization, and actualization). 1.7

d. Manage business resources. 2.8
   (1) Relay and/or receive job instruction. 3.9
   (2) Use radio, telephone, and other communications systems. 3.1
(3) Formulate daily objectives, (jointly and/or independently) for organization and delegation/distribution of manpower, equipment, facilities, and goods. 3.0

(4) Develop awareness of management and ownership responsibilities and general risks and rewards of business operations. 2.8

(5) Use basic business machines for mathematical calculations. 2.6

(6) Monitor capital flow, accounts payable, and accounts receivable. 2.4

(7) Practice inter-departmental (section) coordination of capital, materials, equipment, facilities, processes, functions, and manpower. 2.4

(8) Follow accepted procedures for credit investigation and/or applications prior to delivery of materials. 2.3

e. Maintain quantity and quality inventory. 2.6

(1) Maintain security of merchandise, equipment. 3.1

(2) Maintain freight records and verify bill of laden with merchandise receipt and condition. 2.9

(3) Order, reorder, and receive merchandise. 2.7

(4) Use inventory forms to maintain adequate quantities and varieties of supplies. 2.7

(5) Keep suitable stock on display in an acceptable arrangement. 2.5

(6) Maintain housekeeping standards by directing other employees. 2.3

(7) Perform or supervise housekeeping chores or stock arrangement, dust and debris control, and other "image-forming" activities. 2.2
ARBORICULTURE OCCUPATIONS

Other Titles: Trainee, Groundman, Climber, Foreman, Superintendent, Manager.

Job Description:
Persons in these occupations transplant, prune, repair, protect, and shape trees and shrubs. They remove unwanted trees and shrubs, remove growth obstructing utility lines, and control brush in utility rights-of-way. Persons in these occupations must be physically strong, mechanically inclined, and have little fear of heights. They usually are employed by private business services, by municipalities, or by utility companies.

# Not included on questionnaire but recommended by some experts surveyed.
FLORICULTURE - FLORAL DESIGNER

Other Titles: Floral Artist, Floral Arranger, Florist, Designer, Design Coordinator.

Job Description:

A floral designer is a person trained in the art of flower arranging and the principles of design and color. The work consists of making floral pieces ranging from corsages to wedding bouquets; wreaths; sprays; funeral designs; birthdays; holidays; and other special occasions. A floral designer is creative and flexible. He or she must be capable of interpreting customer requests (either pictorial or verbal descriptions of the desired arrangement) and filling the customer’s order. He or she should be able to identify and use all the appropriate flowers, tools, and supplies correctly as well as decide the kind and amount of materials needed to satisfy customer tastes and desires. In a small retail flower shop this person may also have sales and delivery duties as well.

GREENHOUSE WORKER

Other Titles: Greenhouse Employee, Laborer.

Job Description:
The Greenhouse Worker assists in growing plants in greenhouse operations. The greenhouse worker is involved with the planting, growth, and harvesting of greenhouse plants for sale directly to the public or to other retail outlets. The greenhouse worker may be involved with either vegetable or flower production. The specific duties performed by the greenhouse worker will depend on the type and size of greenhouse operation. In general, the greenhouse worker usually mixes and prepares the growing medium, sows seeds, starts cuttings, and transplants plants and seedlings; waters, thins, and weeds plants; controls insects and diseases; regulates the greenhouse environment, maintains tools and equipment, and cuts or harvests greenhouse plants.

   h. Place cut flowers in environmental storage. 2.4
   i. Pack cut flowers. 1.9

7. Maintain greenhouse operations equipment and vehicles. 2.3
   a. Clean debris from equipment. 3.0
   b. Add oil to equipment. 2.8
   c. Inflate tires. 2.7
Grease equipment.

Interpret general maintenance instructions in equipment operator's manual.

Add coolant to radiators.

Change oil and oil filters.

Inspect cooling system on vehicles for leaks.

Install and adjust belts.

Remove equipment from storage.

Service air cleaners.

Install and service battery.

Prepare equipment for storage.

Change oil and oil filters.

Inspect cooling system on vehicles for leaks.

Install and adjust belts.

Remove equipment from storage.

Service air cleaners.

Install and service battery.

Prepare equipment for storage.

Use and maintain hand and power tools.

Use hand tools safely.

Use power tools safely.

Clean tools.

Select tools for specific jobs.

Store tools.

Identify tools.

Interpret tool operation instructions.

Sharpen tools.

Adjust tools.

Recondition tools.

Prepare soil to be submitted to testing laboratory.

Interpret soil test results.

Take representative soil samples.

Prepare forms to submit with soil samples.

Use parable kits to determine soil pH.

Prepare plant tissues to be submitted to testing laboratory.

Interpret plant tissue test results.

Prepare forms to submit with plant tissue.

Apply fertilizer in liquid form.

Interpret labels on fertilizer bags.

Use fertilizer injectors.

Interpret manufacturer's fertilization rate charts.

Apply dry fertilizer.

Mix fertilizer solutions.

Identify nutrient deficiency symptoms in growing plants.

Determine kind of fertilizer and lime to apply.

Determine when to apply fertilizer and pH adjustment materials.

Evaluate influence various nutrients have on plant growth.
k. Determine the nutrient requirements of various plants.

l. Determine amount of fertilizer and lime to apply.

m. Differentiate between organic and inorganic fertilizers.

n. Determine costs of fertilizers.

11. Operate equipment and vehicles.
   a. Use appropriate equipment and vehicles for specific jobs.
   b. Interpret safety symbols on equipment.
   c. Interpret gauge readings.
   d. Refuel power units.
   e. Correct potential equipment safety hazards.
   f. Identify equipment safety hazards.
   g. Interpret safety instructions in operator's manual.
   h. Interpret hand operating signals.
   i. Operate equipment and vehicles on public highways.
   j. Adjust equipment safety shields.
   k. Hitch towed equipment.
   l. Operate equipment under work conditions.
   m. Connect front end operated equipment.
   n. Connect hydraulic systems and hydraulic operated equipment.

12. Control insects and diseases in the greenhouse and field.
   a. Use appropriate method to apply chemicals.
   b. Mix chemicals with appropriate carrier.
   c. Identify common insects.
   d. Apply chemicals in liquid form.
   e. Identify common diseases.
   f. Identify damage caused by insects and diseases.
   g. Select appropriate chemicals to control various insect pests and diseases.
   h. Inspect greenhouse crops to determine when infestations require control.
   i. Identify various means by which diseases and pests are spread.
   j. Determine amount of chemical to apply.
   k. Determine when to apply chemicals.
   l. Apply chemicals in dust form.
   m. Evaluate influence of diseases and pests on greenhouse productions.
   n. Evaluate influence of temperature, light, and humidity on disease and insect problems.
   o. Evaluate life cycle of insects to determine appropriate control procedures.
   p. Apply chemicals in aerosol bombs.
q. Identify disease and insect resistant varieties for planting.  
2.4
r. Apply chemicals through steam systems.  
1.9

13. Control weeds in the greenhouse and field.  
2.7

   a. Mix chemicals.  
   b. Use appropriate method to apply chemicals.  
   c. Apply chemicals to control weeds.  
   d. Inspect greenhouse crops to determine when weeds require control.  
   e. Determine amount of chemical to apply.  
   f. Determine when to apply chemical.  
   g. Evaluate influence weeds have on greenhouse crops.  
   h. Identify common weeds.  
   i. Select appropriate method to control weeds.  
   j. Use mechanical tools to remove weeds.  

14. Prepare the greenhouse growing medium.  
2.7

   a. Fill benches and pots.  
   b. Identify greenhouse soil materials.  
   c. Fill soil bins.  
   d. Mix soil with appropriate plant growing materials.  
   e. Shred or screen soil.  
   f. Steam soil.  
   g. Determine appropriate soil mix for specific plants.  
   h. Determine soil texture.  
   i. Spread peat moss.  
   j. Mark soil for planting.  
   k. Level soil surface.  
   l. Prepare compost.  
   m. Sterilize and heat mixed soils with chemicals.  
   n. Evaluate physical, chemical, and biological effects steam has on soil.  

15. Establish greenhouse plants.  
2.4

   a. Water the soil.  
   b. Determine proper planting depth.  
   c. Use rooting hormones with cuttings.  
   d. Mist cuttings.  
   e. Prune plants.  
   f. Identify problems related to propagation failures.  
   g. Use appropriate planting method.  
   h. Transplant seedlings.  
   i. Grade cutting for size.  
   j. Disbud plants.  
   k. Determine soil temperatures.  
   l. Force bulbs.  
   m. Identify various plants.  

n. Place cuttings in flats.  2.9
o. Remove cuttings from propagation benches.  2.9
p. Determine air temperature.  2.8
q. Determine proper time to plant.  2.8
r. Make stem cuttings for appropriate plants.  2.8
s. Place cuttings in rows.  2.8
t. Tie plants.  2.8
u. Determine planting rates for various varieties.  2.7
v. Make leaf cuttings for appropriate plants.  2.7
w. Pencil label planted specimens.  2.7
x. Select cuttings and seeding stock.  2.7
y. Determine number of cuttings to include in a pot.  2.6
z. Interpret information on seed or bulb tags.  2.6
aa. Select appropriate seeds and bulbs.  2.6
bb. Cultivate beds.  2.5
c. Evaluate influence "poor" seed or bulb has on germination.  2.5
dd. Sow seed for greenhouse stock.  2.5
e. Thin seedlings.  2.5
ff. Determine percent germination.  2.3
gg. Clean seeds.  2.1
hh. Inoculate seeds.  1.7
ii. Make an approach graft.  1.4
jj. Graft cacti.  1.1
kk. Make a bark graft.  1.1
ll. Make a machine graft.  1.1
mm. Make a patch-bud graft.  1.1
nn. Make a saddle graft.  1.1
oo. Make a splice graft.  1.1
pp. Make a T-bud graft.  1.1
qq. Make a whip-and-tongue graft.  1.1

16. Construct and maintain greenhouse buildings and structures.  2.3
a. Replace window panes.  2.8
b. Replace plastic covering or temporary greenhouses.  2.8
c. Apply wood and metal preservatives.  2.7
d. Replace belts and pulleys.  2.6
e. Reset circuit breakers.  2.6
f. Replace fuses.  2.6
g. Replace valves in water lines.  2.6
h. Replace or repair water faucets.  2.6
i. Wash greenhouse glass.  2.6
j. Construct and repair benches and frames.  2.6
k. Clean heating and cooling systems.  2.5
l. Replace water pipes.  2.5
m. Clean and oil electric motors.  2.4
n. Repair minor leaks in roof of buildings.  2.4
o. Replace lighting fixtures.  2.4
p. Replace traps in heating system and water line.  2.3
q. Replace electrical switches. 2.2
r. Repair electrical cords and wires. 2.2
s. Wire simple electrical circuit. 2.1
t. Install electrical motors. 2.0
u. Construct and remove concrete forms. 1.9
v. Hang and repair doors. 1.9
w. Develop bill of materials needed for repairs. 1.8
x. Pour, finish, and cure concrete. 1.8
y. Repair bracing in buildings. 1.8
z. Determine cost of repairs needed. 1.7
aa. Lay concrete block. 1.6
bb. Make minor repairs on metal quonset superstructure. 1.6
c. Read and interpret blueprints. 1.6

17. Assemble and install greenhouse equipment and structures. 2.8
   a. Water greenhouse plants. 3.7
   b. Control air temperature. 3.1
c. Control humidity. 3.1
d. Alter spacing of plants. 3.0
e. Apply shading compound to glass. 3.0
f. Control light quantity and quality. 3.0
g. Mist plants. 3.0
h. Evaluate affect temperature has on plants. 2.9
i. Determine appropriate temperatures for various plants. 2.9
j. Evaluate influence relative humidity has on plant growth. 2.8
k. Hand cloth or saran cloth. 2.8
l. Set automatic water timers. 2.8
m. Wet greenhouse walks. 2.8
n. Interpret light meters. 2.5
o. Basin plants for watering. 2.4
p. Temper water. 2.2
q. Regulate carbon dioxide generating equipment. 2.1

18. Harvest greenhouse plants. 2.9
   a. Determine when various plants should be cut or removed. 3.4
   b. Grade plants as to quality and uniformity. 3.3
c. Observe plants to determine stages of bloom. 3.2
d. Evaluate the influence stage of maturity has on quality and value of plant. 3.1
e. Assemble orders. 3.1
f. Weed and tag plant materials for orders. 3.0
g. Label harvested plants by common name. 2.9
h. Load materials into cars or trucks. 2.8
i. Determine whether various flower plants are to be marketed as pots, baskets, or as individual flowers. 2.8
j. Dig plant materials. 2.1
k. Ball plant materials. 2.0
GROUND SUPERVISOR

Job Description:

Grounds Supervisors are responsible to the grounds superintendent for maintenance and upkeep of grounds surrounding structures of an industry or business, school, hospital, private estate, municipal park, airport, cemetery, or any other enterprise or establishment with a sizable amount of grounds to care for. They organize and direct the work of "grounds workers", "assistant groundskeepers" and maintain records and prepare reports concerning maintenance activities. They must be capable of translating blueprints and plans prepared by the landscape architect into reality, and may develop and carry out landscape plans of their own. They must know cultural requirements of all types of plant material; be capable of operating and maintaining groundskeeping equipment; and be able to design, construct, and maintain concrete, wood, and metal landscape structures and conveniences. Post-high school technical training is generally required for entry into the position.

CREW FOREMAN - LANDSCAPE PLANTER

Job Description:

Crew Foremen are responsible for supervising crews of landscape workers efficiently and in harmony. They must be able to translate blueprints prepared by the landscape architect or planner into a workable site layout and plan. They must know and be able to teach their crew members grading techniques, soil preparation procedures, and planting methods for trees, shrubs, vines, flowers, and grasses. Supervising layout and construction of sidewalks, driveways, fountains, patios, and formal garden plans may also be part of their job. To become a crew foreman, completion of a post-high school technical course or several years of on-the-job training will probably be required.

GROUNDS WORKER

Other Titles: Assistant Groundskeeper.

Job Description:

Grounds Workers work under the direction of grounds supervisors in caring for the area surrounding structures of an industry or business, school, hospital, private estate, cemetery, municipal park, airport, or any other enterprise or establishment with a sizable amount of grounds to care for. They plant and care for turf, groundcover, shrubs and trees, as well as for annuals and perennials. They operate, maintain, and service hand and power operated groundskeeping equipment. Year-round employment is provided through construction, maintenance, and repair of walks, drives, equipment, and conveniences. Completion of a high school education with training in ornamental horticulture is highly desirable for entry into this job.

LANDSCAPE AIDE

Other Titles: Landscape Worker.

Job Description:

Landscape Aides work under the supervision of crew foremen in establishing a landscape plan. They may assist in grading the site and installing drainage systems, prepare soil for planting, and plant trees, shrubs, grass, and other plant materials, using manual and power operated equipment. They may help construct walks, driveways, pools, and other landscape structures. To enter the job of Landscape Aide, extensive laboratory or field experience in a high school vocational agriculture program of ornamental horticulture will be helpful.

NURSERY WORKER

Job Description:
Nursery Workers grow seedlings and plants for landscaping, fruit farming, and forest reforestation. They work under the supervision of nursery foremen and must know plant materials and cultural techniques. They need to know how to operate and maintain special equipment such as mowers, tillers, tractors, diggers, and hand tools used in the nursery business. A Nursery Worker prepares seedbeds, plants seedlings, prepares cuttings for rooting, weeds, cultivates, waters, prunes, and may perform other cultural practices, such as spraying, fertilizing, mulching, and grafting. They may dig and pack plants for shipment, and may transplant trees and shrubs. They may also help with construction, maintenance, and repair of buildings and equipment.

PLANT PROPAGATOR

Job Description:

Plant Propagators are responsible to nursery superintendents or the nurserymen. They start new plants from seeds, cuttings, grafting, or other means. They may have several foremen and/or a number of workers in their charge. They must know the cultural techniques of propagating various kinds of woody and herbaceous plants; be capable of managing greenhouses, hotbeds and outdoor seed beds; and have a thorough knowledge of insect and disease control. They must also plan propagation schedules and be able to identify plants readily. The Plant Propagator has generally received training beyond the high school level.

**NURSERY SALESPERSON - RETAIL**

**Job Description:**
Nursery Salespersons are directly responsible to office managers. They must be able to identify all the plant material products and/or sold by their firm and appropriate uses for it. They must know sizes and grades of stock and current prices. They may advise customers concerning planting techniques and cultural practices required for successful growing of plant materials they sell. They may arrange displays of plants and related items, and prepare advertising announcements for various media. They must have sales ability and enjoy dealing with customers. Most Nursery Salespersons have had nursery experience and training beyond the high school level.

GOLF COURSE MAINTENANCE WORKER

Other Titles: Greenskeeper II, Golf Course Laborer.

Job Description:

Golf Course Maintenance Workers must be trained to do many different things. Once on the job they may be assigned a few specific tasks, achieving a certain amount of specialization. This would be true especially on the larger golf courses. Golf Course Maintenance Workers must, therefore, be prepared to do almost any of the kinds of work involved in, and essential to golf course maintenance operations. These tasks may include the mowing of greens, collars, aprons, fairways, and roughs; relocation of tee markers and cups, the raking of sand traps; assisting in the repair and servicing of various types of tools and equipment, and the performing of a great many other related duties. The more complex of these duties include construction of drainage facilities and the installation and repair of irrigation systems. In most golf course operations Maintenance Workers will be responsible to and work under the direct supervision of the golf course superintendents or other supervisory persons.

b. Clean all tools and equipment following use.

c. Sharpen, service and/or adjust hand tools, lawn mowers and all other essential cutting equipment.

d. Clean, repair and otherwise adequately service dusters, chemical sprayers, and fertilizer applicators.
Job Description:

Duties and responsibilities of Work Foremen vary slightly from one kind of operation to another depending on the nature and size of the facility. Normally Work Foremen are responsible to City Managers or some other persons who are appointed to be in charge of a given facility. Generally speaking Work Foreman are responsible for all planting and groundskeeping operations. They supervise laborers and other maintenance workers in the planting and pruning of trees and shrubs, in the application of fertilizers, in irrigating grass, flowers and trees, in cutting grass, in the maintenance of walks and paths, and in performing all similar kinds of work required to maintain a facility in good order. They are familiar with all kinds of planting and maintenance equipment and are able to demonstrate its use to others. They assign work responsibilities to members of the work crew and checks and supervise them effectively in work performance. They must be able to get along and communicate effectively with their subordinates as well as with their superiors. Normally their training and experience is in Ornamental Horticulture or Agronomy.
