The result of a comprehensive search for writings about the Educational Resources Information Center (ERIC) published between 1985 and 1988, this annotated bibliography lists 107 documents and journal articles about ERIC that were entered in the ERIC database during that period. The 1964-1978 edition cited 269 items. The 1979-1984 edition cited 131 items. With the 107 items cited in this 1985-1988 edition, this series of bibliographies now documents a total of 400 items written on the subject of ERIC (e.g., documents of historical interest in the development of ERIC; "How to" items whose object is to initiate the user into the system; cross-database comparisons involving ERIC; user surveys; evaluations of ERIC performance; reports describing particular computer search programs or efforts; ERIC in the context of educational R&D dissemination; reviews of ERIC practices or results; how to teach ERIC; thesaurus development; how ERIC relates to some subset of the educational community; ERIC and microforms; ERIC's current attributes, size, products, etc.). Entries are listed by ERIC accession number with the ED accession numbers (for documents) appearing first, followed by the EJ accession numbers (for journal articles). The usual ERIC abstracts (or annotations) and indexes (subject, author, and institution) are included. (MES)

An Annotated Bibliography of Documents And Journal Articles About ERIC
1985-1988

Introduction
The Educational Resources Information Center (ERIC) began operations in the early 1960's. Since that time, there has been a steady production of literature about ERIC. These materials approach ERIC in several different ways, e.g., documents of historical interest in the development of ERIC, "How to" items whose object is to initiate the user into the system, cross-database comparisons involving ERIC, user surveys, evaluations of ERIC performance reports describing particular computer search programs or efforts, ERIC in the context of educational R&D dissemination, reviews of ERIC practices or results, how to teach ERIC, thesaurus development, how ERIC relates to some subset of the educational community, ERIC and microforms, ERIC's current attributes, size, products, etc. As one of the most economical and frequently searched databases, ERIC has played a major role in the dramatic growth of online searching. As one of the first major bibliographic databases to be offered on compact disk (CD-ROM), ERIC has figured heavily in the evaluations made by librarians and information scientists of this new medium.

These materials are of interest from several points of view. They will often answer a user's question about ERIC. They are essential to any studies of ERIC. Some are appropriate to classroom use in the teaching of ERIC. They are indicative of what is considered worth writing about in ERIC.

Given these uses, ERIC has attempted to maintain some degree of bibliographic control over the more substantive materials. This bibliography represents the results of a comprehensive search for documents about ERIC published during the period 1985-1988 that can be found in the ERIC database.

Each item has been screened for suitability. Items that were simply news announcements have been eliminated, as have items of poor quality, bibliographies based on ERIC accessions (but without other ERIC relevance), repetitive brochures explaining the well-known basic facts about ERIC, and general material on the dissemination of educational R&D, but without sufficient ERIC connection.

This is the third bibliography in a series that began in 1978. The first edition, covering 1964-1978, contained 269 entries (arranged by Author) and was first issued in December 1978 (see ED-169 955). This first bibliography was comprehensive in that it was not limited to items found in the ERIC database, however, abstracts were not provided for the entries and there were no indexes. The second bibliography covering the period 1979-1984, contained 131 entries (arranged by accession number), and was issued in September 1985 (see ED-262 784). In order to be able to produce abstracts and indexes, an effort was made to accession every entry found into the ERIC database so that the system itself could be used to produce its own bibliography.

This third bibliography, covering the period 1985-1988 (except for a few earlier stragglers), contains 107 entries and follows the same methodology. All items found were accessioned into ERIC and the bibliography provides the usual ERIC abstracts (or annotations) and indexes (Subject, Personal Author, Institution). Entries are arranged by their ERIC accession number (ED for documents in Resources in Education (RIE); EJ for journal articles in Current Index to Journals in Education (CIJE), with the ED accessions appearing first, followed by the EJ accessions. Full ERIC records have been printed, including abstract and index terms, in order to make apparent the relevance of each item to ERIC.

These three bibliographies supplement one another. All three together cover the period 1964-1988 and contain a total of 407 citations.

Descriptors—*Comparative Analysis, Glossaries, Guides, Information Seeking, *Online Systems, Records (Forms)
Identifiers—*Educational Information System for Ontario, ERIC
This general user guide to the Educational Information System for Ontario (EISO) deals with the simple logistics of acquiring material from the system. Since EISO was developed as a way for Ontario citizens to use the Educational Resources Information Center (ERIC) data base in the United States, a preliminary description of ERIC is provided. Questions answered by the guide include who uses EISO, how to ask a computer question, who/what is a search analyst, how to make a search request, what kind of answer will be given, how long it takes, and how much it costs. A brief explanation of the way the computer links information using Boolean operators (AND, OR, NOT) is also provided, as well as a sample request form and computer printout, information for ordering microfiche, and a glossary of terms. Identifiers—*ERIC
The ERIC Data Access System (EDAS) is an information retrieval system developed at Eastern Illinois University to access the Educational Resources Information Center (ERIC) database, and make it available to Eastern faculty and students in a convenient and timely fashion. This paper describes briefly why and how Eastern developed and implemented this system, as well as how it is operated at the present time, and some future implications. (Author)

The experiences with ERIC which are profiled for three public school systems reflect specific user requirements in different environments. In "Meeting Professional Education Information Needs: A Profile of How the Alexandria, Virginia City Public Schools Use the ERIC System," Dale Brown discusses the types of searches used by administrators and teachers at the city school system level. Patricia Mauklin in "Watch ERIC Grow!" describes three levels of ERIC use in New York State, through the Educational Programs and Studies Information Service (EPSIS), which provides state-wide support to the Board of Cooperative Educational Services (BOCES) at the county level, and individual user services at the school level. The use of microforms at East Detroit High School is discussed in Lewis Saka's article, "The Little Grey Cells, The Little Black Cards: An Approach to ERIC Microfiche." as well as a recent study done by Pat Glimore which surveyed the use and knowledge of ERIC by teachers in the East Detroit school system. A Bibliography of Publications about the Educational Resources Information Center.
ERIC Processing and Reference Facility, Bethesda, Md.
Spons Agency—National Inst. of Education (DHEW), Washington, D C
Pub Date—Dec 78
Note—18p.; Small type may be marginally legible
The purpose of the National Education Practice File (NEPF) was to define the types of educational materials by the information processors what types of materials would be of value to them; to locate the types of information identified in the NEPF's database; to make the NEPF database available to them through the development of a computerized file of practitioner-oriented materials. The 2-year, 4-phase project, which took place from October 1, 1982 to September 30, 1984, was conducted by the San Mateo Educational Resources Center (SMERC) with two subcontractors—the Social Science Education Consortium, contractor for the ERIC Clearinghouse on Social Studies/Social Sciences Education; and the ERIC Processing and Reference Faculty. Phase I was concerned with the development of criteria for selecting practitioner-oriented materials needed by practitioners to support improvement efforts made at the classroom and building level. The project resulted in a single product: a separate computerized test file of all materials already in ERIC that met these specifications. These specifications were described as the "practitioners," using a new Target Audience tag (see above). Twenty-three appendices to the final report were presented: (1) Report of Working Group Meeting; (2) Search Strategy; (3) ERIC Processing Manual (Guidelines for Applying Target Audience); (4) Revisions in Timelines; (5) Acquisitions and Selection Plan; (6) Document Acquisition Plan; (7) Federal Program Implementation; (8) Recordkeeping Forms. (Guidelines for Applying Target Audience); (9) Identification and Assessment of Needs; (10) Professional Education; (11) New Acquisitions Sources; (12) Journal Articles Compiled; (13) Selected Research Literature; (14) Existing ERIC Information Products; (15) Collection Development; (16) New Acquisitions Sources; (17) New Acquisitions Sources; (18) New Acquisitions Sources; (19) New Acquisitions Sources; (20) New Acquisitions Sources; (21) New Acquisitions Sources; (22) New Acquisitions Sources; (23) New Acquisitions Sources. Identifiers: ERIC, Target Audience Tag (TAX).
This core thesaurus of terms suitable for indexing Australian educational literature was developed by the Australian Council for Educational Research by means of a collaborative committee. Provision of the "Thesaurus of ERIC Descriptors" based on the actual terminology of education in Australia, this thesaurus incorporates all the descriptors used by indexers as subject headings, or "descriptors," in information retrieval systems; an alphabetical display of all these descriptors, extensive scope notes to clarify meaning and usage of terms, and a full introduction and comprehensive explanatory chapter treating the major component ideas include sections on thesaurus development, vocabulary maintenance, the Australian Education Index database, information retrieval services, guidelines for indexing, structure, and format of the thesaurus, and descriptor groups.

description—ERIC Digest

This fact sheet offers basic instructions on connecting to the ERIC database for individuals who own or have access to microcomputers and are familiar with ERIC and how to search it through a database. It describes the hardware, software, and telephone line components necessary to make a microcomputer act as a database terminal. The discussion of software describes the need for a terminal emulator and lists desirable features for terminal software, including the capabilities to print and save, access to command mode, format display, default setting, and a status indicator. Considerations in configuring the software to allow interface or access to database vendors is explained and contact telephone numbers for DIALOG, BRS, and SDC (the three major vendors) are listed. Discussion of hardware requirements covers parallel transmission, the communications interface, protocols, and data transmission speed. A list of popular microcomputers and the necessary hardware and software components required to access the vendor includes the following models: Apple II, II Plus, IIc, Commodore VIC-20, Commodore PET/CPM, IBM Personal Computer, Texas Instruments 99/4, 99/4a, and TRS-80 Models I, II, and III. In order to enhance the journal literature included within MEDLINE, a WHO Commission to extend the field of health sciences has been created which will also be shared in the development of new retrieval systems for nursing information. Although some aspects of the project have already been accomplished, the most complete results for retrieval systems for nursing topics have not been made available as reports. Although INI included the greatest number of nursing journal literature and provided the most complete search results for nursing topics, the provision of record entry program to permit local libraries to create this database will also be shared in the development of new retrieval systems for nursing information. The following chapters describe how INI addresses the problems resulting from four conditions that make it difficult to produce a 100% comprehensive coverage in the indexing area: the wide range of nursing journals included in the indexing, the small amount of material which can be stored (1000). This chapter describes how the effective utilization of the indexing area is challenged by the indexers' extensive vocabulary of nursing terms. The conclusions of this chapter indicate that the way INI is used to search the index is also challenged by the indexers' extensive vocabulary of nursing terms. The conclusions of this chapter indicate that the way INI is used to search the index is also challenged by the indexers' extensive vocabulary of nursing terms. The conclusions of this chapter indicate that the way INI is used to search the index is also challenged by the indexers' extensive vocabulary of nursing terms.

Title-Conversion Methods in the Social Sciences: The Term "Cognitive Processes" in the Thesaurus of Two Disciplines-Based Information Systems
Pub Date-10/76
Note-235 p. Ph.D. Dissertation, Case Western Reserve University
Available from University Microfilms Internationa1, 300 N. Zeeb Rd., Ar- Arbor, Mi 48106 (Dissertation Abstracts International, 40A:2, 8404)
Pub Type-Doctoral Dissertations (041)
Document Not Available from EDRS.
Description-Abstracts, Databases, Definitions, Education, Hypothesis Testing, Indexing, Information Systems, Psychology, Social Sciences, Subject Index Terms, Thesaurus, Vertical Organization
Identifiers-Conceptual Equivalence
Analysis of existing methods for achieving comparability or convertibility between two or more indexing languages draws attention to the need for a unifying, database-independent, or domain-independent method. In this analysis, various hypotheses about the term 'cognitive processes' are tested and evaluated by examining current journal articles. The results suggest that the hypothesis that 'cognitive processes' is a single term in the ERIC Thesaurus and the Thesaurus of Psychological Index Terms is false. A hierarchy was constructed to display the arrays under the term 'cognitive processes.' Two hierarchies were constructed. The first made no attempt to accommodate the terms and the relationships of the second. The second hierarchy was examined. Hierarchical structures constructed to display the arrays under the term 'cognitive processes' in the ERIC Thesaurus and the Thesaurus of Psychological Index Terms demonstrate that the term appears in different hierarchical frameworks in the two indexing languages. Three hypotheses were proposed to account for the observed differences. Each hypothesis, that 'cognitive processes' represents different concepts to educators, psychologists, and psychologists who view the concept within different conceptual frameworks. The third hypothesis, that the two hierarchies represent research interests in the two fields, was rejected following an investigation of current journal articles. The results suggest that the terms of the two hierarchies, and problems associated with its use in indexing languages would prove to be a fruitful area of research with specific ramifications for the design of switching languages (Author/BBM)

This study indicates that the ERIC system begins with a brief history of the system; a description of the types and numbers of materials contained in the database; sources of data for evaluation of education and training which are not processed by ERIC; and the various publications and reference materials produced by and for the system. The analysis of ERIC in the United States and in the United States +/ - follows is based on the final report of the Costs and Usage Study of the Educational Resources Information Center (ERIC) System, which was conducted by King Research in 1981. This analysis includes data on 5% of access points for the ERIC system and the services they offer, the level of knowledge of ERIC in the educational community; a qualitative evaluation of ERIC products and services, and ERIC coverage of materials related to the following subject areas: (1) Educational Administration, (2) Educational and Small School Systems (12), Social Sciences, Mathematics, and Environmental Education, (13) Social Studies/Social Science Educations, (14) Testing, Measurement, and Evaluation, and (15) Urban Education A listing of ERIC Digests, i.e., short useful references, is also provided (THC)

Identifiers-Educational Information, *ERIC
The result of a comprehensive search for documents about the Educational Resources Information Center (ERIC) published between 1979 and 1984, this bibliography lists 131 entries which reflect ERIC in several different ways: documentation of historical interest in the development of ERIC, where to find documents about ERIC/CRESS assist the person seeking information? Practical suggestions are made to ERIC and microforms, and ERIC's current attributes including size and products. This supplement to a 1978 bibliography includes subject, personal author, and institution indexes. The 131 entries are arranged by their ERIC accession numbers (ED for documents in Resources in Education; EJ for journal articles in Current Index to Journals in Education), with the ED accessions appearing first, followed by the EJ accessions. Full records have been included, including the journals to which they relate (THC)

An introduction explains the ERIC system, clear- inghouse publications, the organization of this bibli- ography, and the availability of clearinghouse publications. The bibliography is summarized by year (1965-1985). This section presents the following clearing- houses: (1) Adult, Career, and Vocational Education; (2) Counseling and Personnel Services; (3) Reading and Communication Skills; (4) Educa- tional Management; (5) Handicapped and Gifted Children; (6) Social Studies; (7) Science, Mathematics, and Environmental Education; (11) Rural Education and Small Schools; (12) Science, Mathematics, and Environmental Education; (13) Sociol Social Science Education; (18) Teacher Education; (19) Technical Education; (20) Measurement, and Evaluation; and (21) Urban Education. Indexes for subject, author, and title are provided. A listing of ERIC Databases, including recent user-oriented reference sheets formerly called Fact Sheets or Short Reports, is also provided for 1985 (THC)

Identifiers—Bibliographic Databases, Command Language, DIALOG, ERIC INSPEC, Intermediate ScMATE

After receiving training in searching INSPEC or ERIC on DIALOG using either the ScMATE menu or either menu-driven commands, 40 students who had already performed free searches on research topics of their choice. In comparison with 20 control subjects (doc- toral students for whom a free search was performed by a skilled librarian), the experimental subjects were equally satisfied with their retrieval(s), which were smaller but higher in relevance than those pro- duced by the intermediaries, and were more likely to follow up the search by consultation of the refer- enced information. The present study demonstrates that ScMATE is an effective system for teaching students how to use information retrieval systems. (THC)

The Department of Education's Limits on Publica- tions: Saving Money or Censorship? Sixtieth Rept, Council on Library Resources, Inc.
Pub Date—[1986]
Note—87p. The report examines the Department of Education's policies and practices regarding the publication of information. The report includes a discussion of the impact of these policies and practices on the availability and accessibility of educational information, as well as an analysis of the costs and benefits of these policies and practices. The report concludes with recommendations for improving the Department of Education's policies and practices. (THC)
that involved two surveys of users of the ERIC system and its products. The first was a random sample of 500 ERIC Standing Order Customers (SOCs). These sites subscribe to the ERIC microfiche of the full ERIC database and use ERIC. The respondents represented all types of SOCs and included 70 percent of the state departments of education and school districts that subscribe to the ERIC microfiche. Survey II was a sample of 200 administrators and teachers selected from a list of 3,000 schools surveyed. Surveys were conducted through the ERIC Information Reference Center at The Ohio State University. In addition, a sample of 50 U.S. schools and teachers were included in each survey. Each survey is described in terms of (1) sample and population; (2) data collection procedures; and (3) data results and analysis. A summary is provided as well as a discussion of specific user recommendations and survey letter and questionnaires. (ML)

ERIC Digest published in the ERIC/TME Update Series.

ERIC Price: MFOI/PC01 Plus Postage.

Identifiers—ERIC, Digests, Mental Measurements Yearbook, Test Collection (Educational Testing Service).

Recent emphasis on stricter educational accountability measures has resulted in a profusion of educational and psychological texts available in today's market. This ERIC Digest has been prepared to meet educators' needs to find information about tests quickly and easily. Three resources discussed are the Test Collection database, the Mental Measurements Yearbook database, and the ERIC database. Three topics are examined: (1) finding tests and other measurement instruments; (2) finding test reviews; and (3) finding studies about a certain test. The Test Collection database can be searched online for tests, using test-related terms as descriptors or identifiers. The Mental Measurements Yearbook database can be searched online using publication type codes, using test-related terms as major descriptors, and by combining publication type codes with test-related descriptors. The Mental Measurements Yearbook database can be searched using subject classifications. Test reviews are available in the ERIC Digest; the test descriptor "Test Reviews," and in the Mental Measurements Yearbook and its monthly updates. A test can also be searched using its specific name (LMO).

Mason, Word S.

ERIis a Dissemination Agents: A Social System

Spencer Agency—Office of Educational Research and Improvement (ED). Washington, DC.

Pub Date: Jun 87

Note:

Identifiers—ERIC. ERIC Digests, Mental Measurements Yearbook, Test Collection (Educational Testing Service).

This study examines the conceptual and theoretical issues associated with the redesign of ERIC (the Educational Resources Information Center) and its potential new roles in the dissemination system. A three-level definition of the ERIC system is provided; the goal of making ERIC a comprehensive dissemination system is refined to one of making it a comprehensive and user-friendly resource, and the relationship of ERIC to other parts of a comprehensive dissemination system is described. Additional considerations that are discussed include the dilemma of choosing between indirect and direct strategies for disseminating information, the question of generalization versus specialization, and the value of cooperative relationships with other programs, particularly regional laboratories and research centers. Finally, the role of information in educational improvement is presented from the three perspectives of technology, strategy, and facilitation. It is concluded that it is essential that ERIC become more firmly grounded in a theory of knowledge use, and that state and local education agencies be involved in making decisions. The text is supplemented with two figures, and 27 references are provided.

components of the College of Education's functions of the college. Diagrams of the major development of a local area network which is to be integrated into the teaching, research, and service facilities on the basis of material submitted by the ERIC Clearinghouse and other components of the ERIC system. The EAB is issued every month or two, depending on the volume of material available. All EAB articles are reviewed and approved by Central ERIC before publication. The EAB is distributed solely within the ERIC system (approximately 20 contractors) and is intended as an integral part of the internal documentation where possible for each database. All EAB articles are reviewed and approved by the publishers. The EAB is distributed solely within the ERIC system as well as to other organizations. The ERIC Clearinghouse is the nationwide Information System (ERIC), which has been used in studies of the Personnel Register, an annual census of the state's personnel, this study found that, on the average, 25.8% of the teachers, librarians, counselors, and administrators in three educational service regions in western Illinois have used Resources in Education. Current Index to Journals in Education, computer searching, and/or ERIC documents. A questionnaire was sent to 2,157 individuals, and the data were based on the number of times a database was accessed (a return rate of 33%). Analyses of the data also indicated that: (1) most of the use occurred while respondents were graduate students; (2) respondents used ERIC materials to improve educational practices and for personal research; (3) when job assignment was related to use of ERIC, counselors, administrators, and librarians reported a higher percentage of use than classroom teachers; (4) years of service were generally inversely related to the use of ERIC products; and (5) with one exception, the higher the degree held, the more the individual had used ERIC as performed online database searching. A brief review of the related literature provides additional insight into the degree to which ERIC is used and recognized by school personnel, and some ways to increase awareness of ERIC among school personnel are suggested. A copy of the questionnaire is appended and nine references are listed.
