This revised edition focuses on the prevention of drug use among school students, with increased attention to alcohol, tobacco, and other drugs. The handbook, which begins with an introduction by Secretary of Education, Lauro F. Cavazos, provides new information about the effects of alcohol on young people; statistics on the harm it causes; and information on organizations that parents, students, and educators can turn to for help with questions about all drugs. After outlining a plan for achieving schools without drugs, the first section, "Children and Drugs," describes the nature and extent of the drug problem and summarizes the latest research on the effects of drugs on students and schools. Included are fact sheets on drugs and dependence, youth and alcohol, and cocaine/crack. The second section, "A Plan for Action," is divided into four parts according to what parents, schools, students, and communities can do. Suggestions for parents include instilling responsibility, supervising, activities, and recognizing drug use, while suggestions for schools focus on assessment, policy setting and enforcement, teaching about drug prevention, and enlisting the community's help. Fact sheets are included on signs of drug use, tips for selecting drug prevention materials, legal questions on search and seizure, and legal questions on suspension and expulsion. Students are advised to learn the facts in order to help fight drug use, while communities are advised to provide support and involve law enforcement in efforts to control drug traffic and use. Special sections are appended on teaching about drug prevention and using the law. Resources are provided on specific drugs and their effects, sources of information, and references. (TE)

Lauro F. Cavazos  
Secretary of Education  

As Secretary of Education, it has been my privilege to travel across this nation talking with students, parents, teachers, school administrators, and other citizens about the challenges confronting public education today.

I have found a broad consensus on three basic issues: first of all, ensuring that every person in America is educated to his or her full potential; second, providing access to a quality education for all students regardless of economic status, gender, handicaps, or racial and ethnic background; and third, holding accountable each participant in the educational process.

The biggest threat that now stands in the way of achieving the kind of educational system we know is needed is the widespread use of illegal drugs by our nation's young people.

I am firmly convinced that the most effective weapon we have in the battle against drug use is prevention. As an aid to schools and communities seeking to develop and implement comprehensive drug prevention programs, the Department of Education in 1986 offered What Works: Schools Without Drugs. Since that first edition was published, more than 2 million copies of the handbook have been distributed.

Now I am proud to offer this newly revised edition featuring the latest information about drugs and their effects as well as examples of school-based programs that have successfully combatted student drug use. Like the earlier edition, this handbook builds on research which shows that the most promising approaches to drug prevention are comprehensive programs that involve schools, communities, parents, students, and law enforcement, and it offers practical guidance on issues such as setting and enforcing policies, teaching about drug prevention, and how the law can help.

This revised edition of Schools Without Drugs gives increased attention to alcohol, the number one drug of choice for America's youth. Studies show that by the time seniors graduate from high school, 92 percent of them have tried alcohol and more than one-third are heavy drinkers. The handbook provides new information about the effects of alcohol on young people, statistics on the harm it causes, and information on
organizations that parents, students, and educators can turn to for help with questions about all drugs.

Also new in this edition is information about tobacco and its enormous cost to health, as well as the growing threat of steroids used by young people to enhance athletic performance or alter appearance.

I believe young people are not only concerned about drugs, but are enthusiastic about getting rid of them. Studies show that attitudes are changing. Young people are getting the message that drugs are dangerous and drugs can ruin lives. We as parents, educators, and concerned citizens must continue to provide support and guidance for youngsters to make healthy choices. Each of us must play a role in the war against drugs, and by joining our efforts we can achieve not only schools without drugs, but communities without drugs, and finally a drug-free society.
A Plan for Achieving Schools Without Drugs

PARENTS:
1. Teach standards of right and wrong, and demonstrate these standards through personal example.
2. Help children to resist peer pressure to use alcohol and other drugs by supervising their activities, knowing who their friends are, and talking with them about their interests and problems.
3. Be knowledgeable about drugs and signs of drug use. When symptoms are observed, respond promptly.

SCHOOLS:
4. Determine the extent and character of alcohol and other drug use and monitor that use regularly.
5. Establish clear and specific rules regarding alcohol and other drug use that include strong corrective actions.
6. Enforce established policies against drug use fairly and consistently. Ensure adequate security measures to eliminate drugs from school premises and school functions.
7. Implement a comprehensive drug prevention curriculum for kindergarten through grade 12, teaching that drug use is wrong and harmful, and supporting and strengthening resistance to drugs.
8. Reach out to the community for support and assistance in making the school's anti-drug policy and program work. Develop collaborative arrangements in which school personnel, parents, school boards, law enforcement officers, treatment organizations, and private groups can work together to provide necessary resources.

STUDENTS:
9. Learn about the effects of alcohol and other drug use, the reasons why drugs are harmful, and ways to resist pressures to try drugs.
10. Use an understanding of the danger posed by alcohol and other drugs to help other students avoid them. Encourage other students to resist drug use, persuade those using drugs to seek help, and report those selling drugs to parents and the school principal.

COMMUNITIES:
11. Help schools fight drugs by providing them with the expertise and financial resources of community groups and agencies.
12. Involve local law enforcement agencies in all aspects of drug prevention: assessment, enforcement, and education. The police and courts should have well-established relationships with the schools.
"I felt depressed and hurt all the time. I hated myself for the way I hurt my parents and treated them so cruelly, and for the way I treated others. I hated myself the most, though, for the way I treated myself. I would take drugs until I overdosed, and fell further and further behind in school and work and relationships with others. I just didn't care anymore whether I lived or died. I stopped going to school altogether. . . . I felt constantly depressed and began having thoughts of suicide, which scared me a lot! I didn't know where to turn. . . ."

—Stewart, a high school student
When 13- to 18-year-olds were asked to name the biggest problem facing young people today, drug use led the list. In 1987, 54 percent of teens cited drugs as their greatest concern—up from 27 percent only 10 years earlier.

Eighty-nine percent of teens oppose legalization of marijuana, and 77 percent believe it would be wrong to decriminalize the possession of small amounts of marijuana.

Drugs and alcohol rank high on the list of topics that teens wish they could discuss more with their parents—42 percent want more discussions with parents about drugs, and 39 percent feel the need to talk about drinking.

—The Gallup Youth Surveys, 1987 and 1988

Adults share this concern, ranking student drug use as the most serious problem facing our nation's schools for the third consecutive year.

—20th Annual Gallup Poll of the Public's Attitudes Toward Public Schools, 1988
Americans have consistently identified drug use as being among the top problems confronting the nation's schools. Yet many do not recognize the degree to which their own children, their own schools, and their own communities are at risk.

Research shows that drug use among children is 10 times more prevalent than parents suspect. In addition, many students know that their parents do not recognize the extent of drug use; as a result, some young people believe that they can use drugs with impunity.

School administrators and teachers often are unaware that some of their students are using and selling drugs on school property. As Ralph Egers, former superintendent of schools in South Portland, Maine, put it, "We'd like to think that our kids don't have this problem, but the brightest kid from the best family in the community could have the problem."

The facts are:
- Drug use is not confined to young people in certain geographic areas or from particular economic backgrounds; drug use affects young people throughout the nation.
- Drugs are a serious problem not only among high school students but among middle and elementary school students as well.
- Heavy drinking, defined as five or more drinks on one occasion, is reported by 35 percent of high school seniors, and two-thirds are occasional users of alcohol.
- All illegal drugs are dangerous; there is no such thing as safe or responsible use of illegal drugs.
- Although drug trafficking is controlled by adults, the immediate source of drugs for most students is other students.

Continuing misconceptions about the drug problem stand in the way of corrective action. The following section outlines the nature and extent of the problem and summarizes the latest research on the effects of drugs on students and schools.
Percentage of 6th Graders Who Report Peer Pressure to Try Drugs

Source: 1987 Weekly Reader Survey - "tugs and Drinking"
Figure 2

Percentage of High School Seniors Who Have Used Cocaine

Source: Institute for Social Research, 1988
Drug use is widespread among American schoolchildren. Although a national study of high school seniors in 1988 shows that drug use among young people is declining, the figures remain unacceptably high (see Figure 2). The United States continues to have the highest rate of teenage drug use of any nation in the industrialized world. Fifty-four percent of high school seniors have tried an illicit drug by the time they graduate. Alcohol is the most widely used drug. By their senior year, 92 percent of students in the class of 1988 had used alcohol; 85 percent had used alcohol in the past year, and 64 percent had used it in the month prior to the survey. Thirty-five percent of seniors surveyed reported at least one occasion of heavy drinking in the two weeks prior to the survey—an occasion in which they had five or more drinks in a row. Thirty-three percent of 1988 seniors reported using marijuana in the past year, and 18 percent said they had used it at least once in the previous month. Eight percent of seniors indicated that they had used cocaine in the past year. Nearly 5 percent of seniors had used crack and 3 percent had used it within the last year.

Many students purchase and use drugs at school. Reports of teenagers contacting a cocaine hotline revealed that 57 percent of the respondents bought most of their drugs other than alcohol at school. Among 1988 high school seniors, 28 percent of the marijuana users reported that they had smoked marijuana at school. Of the seniors who used amphetamines during the past year, 53 percent reported having taken them at school.

The drug problem affects all types of students. All regions and all types of communities show high levels of drug use. Thirty-four percent of 1988 high school seniors in nonmetropolitan areas reported illicit drug use in the previous year, while the rate for seniors in large metropolitan areas was 39 percent. Although higher proportions of males are involved in illicit drug use, especially heavy drug use, the gap between the sexes is closing. The extent to which high school seniors reported having used illicit drugs is slightly higher for whites than for blacks.

Initial use of alcohol and other drugs occurs at an increasingly early age. The percentage of students using drugs by the sixth grade has tripled since 1975. In the early 1960s, marijuana use was virtually nonexistent among 13-year-olds, but now about one in six 13-year-olds has used marijuana. Twenty-six percent of fourth graders and 42 percent of sixth graders have used alcohol.
Drugs cause physical and emotional dependence. Users may develop a craving for specific drugs, and their bodies may respond to the presence of drugs in ways that lead to increased drug use.

- Regular users of drugs develop tolerance, a need to take larger doses to get the same initial effect. They may respond by combining drugs, frequently with devastating results. Many teenage drug users calling a national cocaine hotline report that they take other drugs just to counteract the unpleasant effects of cocaine.

- Certain drugs, such as opiates, barbituates, alcohol, and nicotine, create physical dependence. With prolonged use, these drugs become part of the body chemistry. When a regular user stops taking the drug, the body experiences the physiological trauma known as withdrawal.

- Psychological dependence occurs when taking drugs becomes the center of the user’s life. Among children, psychological dependence erodes school performance and can destroy ties to family and friends, as well as cause the child to abandon outside interests, values, and goals. The child goes from taking drugs to feel good, to taking them to keep from feeling bad. Over time, drug use itself heightens the bad feelings and can leave the user suicidal. More than half of all adolescent suicides are drug-related.

- Drugs can remain in the body long after use has stopped. The extent to which a drug is retained in the body depends on the drug’s chemical composition, that is, whether it is fat-soluble. Fat-soluble drugs such as marijuana and phencyclidine (PCP) seek out and settle in the fatty tissues. As a result, they build up in the fatty parts of the body such as the brain. Such accumulations of drugs and their slow release over time may have effects on the mind and body weeks or even months after drug use has stopped.
How Drug Use Develops

Social influences play a key role in making drug use attractive to children.

The first temptations to use drugs may come in social situations in the form of pressures to "act grown up" by smoking cigarettes or using alcohol or marijuana.

A 1987 Weekly Reader survey found that television and movies had the greatest influence on fourth through sixth graders in making drugs and alcohol seem attractive; the second greatest influence was other children.

The survey offers insights into why students take drugs. Children in grades four through six think that the most important reason for using alcohol and marijuana is to "fit in with others," followed closely by a desire "to feel older." Students also have incomplete or inaccurate information. For example, only 44 percent of sixth graders polled in a national survey think alcohol should be called a drug. This finding reinforces the need for prevention programs beginning in the early grades—programs that focus on teaching children the facts about drugs and alcohol and the skills to resist peer pressure to use them.

Students who turn to more potent drugs usually do so after first using cigarettes and alcohol, and then marijuana. Initial attempts may not produce a "high"; however, students who continue to use drugs learn that drugs can change their thoughts and feelings. The greater a student's involvement with marijuana, the more likely it is the student will begin to use other drugs in conjunction with marijuana.

Drug use frequently progresses in stages—from occasional use, to regular use, to multiple drug use, and ultimately to total dependency. With each successive stage, drug use intensifies, becomes more varied, and results in increasingly debilitating effects.

But this progression is not inevitable. Drug use can be stopped at any stage. However, the more deeply involved children are with drugs, the more difficult it is for them to stop. The best way to fight drug use is to begin prevention efforts before children start using drugs. Prevention efforts that focus on young children are the most effective means to fight drug use.
Alcohol is the number one drug problem among youth. The easy availability, widespread acceptability, and extensive promotion of alcoholic beverages within our society make alcohol the most widely used and abused drug.

- Alcohol use is widespread. By their senior year of high school almost all students will have tried alcoholic beverages; 2 out of 3 will be current users; 1 in 20 will be daily users; and almost 4 out of 10 will consume 5 or more drinks in a row at least once every 2 weeks.

- Drinking has acute effects on the body. The heavy, fast-paced drinking that young people commonly engage in quickly alters judgment, vision, coordination, and speech and often leads to dangerous risk-taking behavior. Because young people have lower body weight than adults, youth absorb alcohol into their blood system faster than adults and exhibit greater impairment for longer periods of time. Alcohol use not only increases the likelihood of being involved in an accident, it increases the risk of serious injury in an accident because of its harmful effects on numerous parts of the body.

- Alcohol-related highway accidents are the principal cause of death among young people ages 15 through 24. Alcohol use is the primary cause of traffic accidents involving teenage drivers. Furthermore, about half of all youthful deaths in drowning, fires, suicide, and homicide are alcohol-related.

- Any alcoholic beverage can be misused. Contrary to popular belief, drinking beer or wine can have effects similar to drinking "hard" liquor. A bottle of beer, a glass of wine, or a bottle of wine cooler have about the same amount of ethyl alcohol as a drink made with liquor. Those who drive "under the influence" are most likely to have been drinking beer.

- Early alcohol use is associated with subsequent alcohol dependence and related health problems. Youth who use alcohol at a younger age are more likely to use alcohol heavily and to experience alcohol-related problems affecting their relationships with family and friends by late adolescence. Their school performance is likely to suffer, and they are more likely to be truant. They are also more likely to abuse other drugs and to get in trouble with the law, or, if they are girls, to become pregnant.
The drugs students are taking today are more potent, more dangerous, and more addictive than ever.

Adolescents are particularly vulnerable to the effects of drugs. Drugs threaten normal development in a number of ways:

- Drugs can interfere with memory, sensation, and perception. They distort experiences and cause a loss of self-control that can lead users to harm themselves and others.
- Drugs interfere with the brain's ability to take in, sort, and synthesize information. As a result, sensory information runs together, providing new sensations while blocking normal ability to understand the information received.
- Drugs can have an insidious effect on perception; for example, cocaine and amphetamines often give users a false sense of functioning at their best while on the drug.

Drug suppliers have responded to the increasing demand for drugs by developing new strains, producing reprocessed, purified drugs, and using underground laboratories to create more powerful forms of illegal drugs. Consequently, users are exposed to heightened or unknown levels of risk.

- The marijuana produced today is from 5 to 20 times stronger than that available as recently as 10 years ago. Regular use by adolescents has been associated with an "amotivational syndrome," characterized by apathy and loss of goals. Research has shown that severe psychological damage, including paranoia and psychosis, can occur when marijuana contains 2 percent THC, its major psychoactive ingredient. Since the early 1980s, most marijuana has contained from 4 to 6 percent THC—two or three times the amount capable of causing serious damage.
- Crack is a purified and highly addictive form of cocaine.
- Phencyclidine (PCP), first developed as an animal tranquilizer, has unpredictable and often violent effects. Often children do not even know that they are using this drug when PCP-laced parsley in cigarette form is passed off as marijuana, or when PCP in crystal form is sold as lysergic acid (LSD).
- Some of the "designer" drugs, slight chemical variations of existing illegal drugs, have been known to cause permanent brain damage with a single dose.

Further information about drugs is presented in the Resources Section, pages 61-81.
Fact Sheet

Cocaine: Crack

**Cocaine use is the fastest growing drug problem in America.** Most alarming is the ready availability of cocaine in a cheap but potent form called crack or rock. Crack is a purified form of cocaine that is smoked.

- Crack is inexpensive to try. Crack is available for as little as $5. As a result, the drug is affordable to many potential users, including high school and even elementary school students.

- Crack is easy to use. It is sold in pieces resembling small white gravel or soap chips and is sometimes pressed into small pellets. Crack can be smoked in a pipe or put into a cigarette. The visible effects disappear within minutes after smoking, so detection is difficult.

- Crack is extremely addictive. Crack is far more addictive than heroin or barbiturates. Because crack is smoked, it is quickly absorbed into the blood stream. It produces a feeling of extreme euphoria, peaking within seconds. Repeated use of crack can lead to addiction within a few days.

- Crack leads to crime and severe psychological disorders. Many youths, once addicted, have turned to stealing, prostitution, and drug dealing in order to support their habit. Continued use can produce violent behavior and psychotic states similar to schizophrenia.

- Crack is deadly. Cocaine in any form, including crack, can cause sudden death from cardiac arrest or respiratory failure.
Drug Use and Learning

Drugs erode the self-discipline and motivation necessary for learning. Pervasive drug use among students creates a climate in the schools that is destructive to learning.

Research shows that drug use can cause a decline in academic performance. This has been found to be true for students who excelled in school prior to drug use as well as for those with academic or behavioral problems prior to use. According to one study, students using marijuana were twice as likely to average D’s and F’s as other students. The decline in grades often reverses when drug use is stopped.

Drug use is closely tied to being truant and dropping out of school. High school seniors who are heavy drug users are more than three times as likely to skip school as nonusers. About one-fifth of heavy users skipped three or more school days a month, more than six times the truancy rate of nonusers. In a Philadelphia study, dropouts were almost twice as likely to be frequent drug users as were high school graduates; four in five dropouts used drugs regularly.

Drug use is associated with crime and misconduct that disrupt the maintenance of an orderly and safe school atmosphere conducive to learning. Drugs not only transform schools into marketplaces for dope deals, they also lead to the destruction of property and to classroom disorder. Among high school seniors, heavy drug users were more than three times as likely to vandalize school property and twice as likely to have been involved in a fight at school or at work as nonusers. Students on drugs create a climate of apathy, disruption, and disrespect for others. For example, among teenage callers to a national cocaine hotline, 32 percent reported that they sold drugs, and 64 percent said that they stole from family, friends, or employers to buy drugs. A drug-ridden environment is a strong deterrent to learning not only for drug users but for other students as well.
To combat student drug use most effectively, the entire community must be involved: parents, schools, students, law enforcement authorities, religious groups, social service agencies, and the media. They all must transmit a single consistent message that drug use is wrong and dangerous, and it will not be tolerated. This message must be reinforced through strong, consistent law enforcement and disciplinary measures.

The following recommendations and examples describe actions that can be taken by parents, schools, students, and communities to stop drug use. These recommendations are derived from research and from the experiences of schools throughout the country. They show that the drug problem can be overcome.
WHAT PARENTS CAN DO

- Teach standards of right and wrong, and demonstrate these standards through personal example.
- Help children to resist peer pressure to use alcohol and other drugs by supervising their activities, knowing who their friends are, and talking with them about their interests and problems.
- Be knowledgeable about drugs and signs of drug use. When symptoms are observed, respond promptly.
Instilling Responsibility

Recommendation #1:

Teach standards of right and wrong and demonstrate these standards through personal example.

Children who are brought up to value individual responsibility and self-discipline and to have a clear sense of right and wrong are less likely to try drugs than those who are not. Parents can help to instill these values by:

- Setting a good example for children and not using drugs themselves.
- Explaining to their children at an early age that drug use is wrong, harmful, and unlawful, and reinforcing this teaching throughout adolescence.
- Encouraging self-discipline by giving children regular duties and holding them accountable for their actions.
- Establishing standards of behavior concerning drugs, drinking, dating, curfews, and unsupervised activities, and enforcing them consistently and fairly.
- Encouraging their children to stand by their convictions when pressured to use drugs.
Commodore Stockton Skills School
Stockton, California

Commodore Stockton Skills School in Stockton, California, is a magnet school serving 1,000 students from diverse cultural and social backgrounds in kindergarten through eighth grade.

Four years ago, a drug-related incident involving seventh and eighth graders prompted the formation of a Substance Abuse Task Force for the School District composed of parents, educators, and other local authorities. This task force formulated a school policy that mandates the following:

- Teacher training on the substance abuse policy and curricula.
- An integrated curriculum to prevent drug abuse in all grades.
- Development and implementation of an education program for parents.
- A coordinated intervention system for identifying high-risk students.
- Referrals for counseling or treatment for drug use.
- Parent and student support groups.
- Solicitation of outside funds to help implement anti-drug programs in the school.

Students, parents, educators, and community groups have been especially active in planning and carrying out innovative drug-free activities including a celebrity volleyball game, “Say no” bowling tournaments and dances, and poster and bookmark contests.

Commodore Stockton focuses on honing students’ basic academic skills, instilling good study habits, and training students in responsibility and citizenship. The school’s organization and discipline are highly structured. Parents are asked to monitor homework, to maintain standards of discipline, to reinforce students’ respect for others, and to foster personal responsibility at home. Each month, parents of Commodore Stockton students donate 400 volunteer hours to aid teachers. The school received the California Distinguished Elementary School Award for academic achievement in 1989.

As a result of Commodore Stockton’s program, behavioral problems are infrequent, attendance is high, and more than 80 percent of the students test at grade level or above. In addition, area police report juvenile drug arrests from every school in the city except Commodore Stockton.
Help children to resist peer pressure to use alcohol and other drugs by supervising their activities, knowing who their friends are, and talking with them about their interests and problems.

When parents take an active interest in their children's behavior, they provide the guidance and support children need to resist drugs. Parents can do this by:

- Knowing their children's whereabouts, activities, and friends.
- Working to maintain and improve family communications and listening to their children.
- Being able to discuss drugs knowledgeably. It is far better for children to obtain their information from their parents than from their peers or on the street.
- Communicating regularly with the parents of their children's friends and sharing their knowledge about drugs with other parents.
- Being selective about their children's viewing of television and movies that portray drug use as glamorous or exciting.

In addition, parents can work with the school in its efforts to fight drugs by:

- Encouraging the development of a school policy with a clear no-use message.
- Supporting administrators who are tough on drugs.
- Assisting the school in monitoring students' attendance and planning and chaperoning school-sponsored activities.
- Communicating regularly with the school regarding their children's behavior.
Changing patterns of performance, appearance, and behavior may signal use of drugs. The items in the first category listed below provide direct evidence of drug use; the items in the other categories offer signs that may indicate drug use. Adults should watch for extreme changes in children's behavior, changes that together form a pattern associated with drug use.

**Signs of Drugs and Drug Paraphernalia**
- Possession of drug-related paraphernalia such as pipes, rolling papers, small decongestant bottles, eye drops, or small butane torches.
- Possession of drugs or evidence of drugs, such as pills, white powder, small glass vials, or hypodermic needles; peculiar plants or butts, seeds, or leaves in ashtrays or in clothing pockets.
- Odor of drugs, smell of incense or other “cover-up” scents.

**Identification with Drug Culture**
- Drug-related magazines, slogans on clothing.
- Conversation and jokes that are preoccupied with drugs.
- Hostility in discussing drugs.
- Collection of beer cans.

**Signs of Physical Deterioration**
- Memory lapses, short attention span, difficulty in concentration.
- Poor physical coordination, slurred or incoherent speech.
- Unhealthy appearance, indifference to hygiene and grooming.
- Bloodshot eyes, dilated pupils.

**Dramatic Changes in School Performance**
- Marked downturn in student's grades—not just from C's to F's, but from A's to B's and C's; assignments not completed.
- Increased absenteeism or tardiness.

**Changes in Behavior**
- Chronic dishonesty (lying, stealing, cheating); trouble with the police.
- Changes in friends, evasiveness in talking about new ones.
- Possession of large amounts of money.
- Increasing and inappropriate anger, hostility, irritability, secretiveness.
- Reduced motivation, energy, self-discipline, self-esteem.
- Diminished interest in extracurricular activities and hobbies.
Recognizing Drug Use

Recommendation #3:

Be knowledgeable about drugs and signs of drug use. When symptoms are observed, respond promptly.

Parents are in the best position to recognize early signs of drug use among their children. To inform and involve themselves, parents should take the following steps:

- Learn about the extent of the drug problem in their community and in their children's schools.
- Learn how to recognize signs of drug use.
- Meet with parents of their children's friends or classmates about the drug problem at their school. Establish a means of sharing information to determine which children are using drugs and who is supplying them.

Parents who suspect their child is using drugs often must deal with their own emotions of anger, resentment, and guilt. Frequently they deny the evidence and postpone confronting their children. Yet, the earlier a drug problem is detected and faced, the less difficult it is to overcome. If parents suspect that their children are using drugs, they should take the following steps:

- Devise a plan of action. Consult with school officials and other parents.
- Discuss their suspicions with their children in a calm, objective manner. Do not confront a child while he or she is under the influence of alcohol or other drugs.
- Impose disciplinary measures that help remove the child from those circumstances where drug use might occur.
- Seek advice and assistance from drug treatment professionals and from a parent group. (For further information, consult the Resources Section, pages 61-61.)
WHAT SCHOOLS CAN DO

- Determine the extent and character of alcohol and other drug use and monitor that use regularly.

- Establish clear and specific rules regarding alcohol and other drug use that include strong corrective actions.

- Enforce established policies against alcohol and other drug use fairly and consistently. Ensure adequate security measures to eliminate drugs from school premises and school functions.

- Implement a comprehensive drug prevention curriculum for kindergarten through grade 12, teaching that drug use is wrong and harmful, and supporting and strengthening resistance to drugs.

- Reach out to the community for support and assistance in making the school's anti-drug policy and program work. Develop collaborative arrangements in which school personnel, parents, school boards, law enforcement officers, treatment organizations, and private groups can work together to provide necessary resources.
Recommendation #4:

Determine the extent and character of alcohol and other drug use and monitor that use regularly.

School personnel should be informed about the extent of drugs in their school. School boards, superintendents, and local public officials should support school administrators in their efforts to assess the extent of the drug problem and to combat it.

To guide and evaluate effective drug prevention efforts, schools need to take the following actions:

- Conduct anonymous surveys of students and school personnel and consult with local law enforcement officials to identify the extent of the drug problem.
- Bring together school personnel to identify areas where drugs are being used and sold.
- Meet with parents to help determine the nature and extent of drug use.
- Maintain records on drug use and sale in the school over time, for use in evaluating and improving prevention efforts. In addition to self-reported drug use patterns, records may include information on drug-related arrests and school discipline problems.
- Inform the community, in straightforward language, of the results of the school's assessment of the drug problem.
Newsome Park Middle School in Newport News, Virginia, is located in the city's second highest zone for drug-related arrests, and many of its students fit the definition of children "at risk." Eight years ago, liquor bottles littered the school grounds, and students walked to school along streets on which drug paraphernalia had been discarded.

Today, school premises are immaculate, students and faculty show great pride in their school, and there have been no recorded incidents of drug use by students since 1985.

At the heart of this turnaround is a tough anti-drug policy that is strongly endorsed by students, parents, teachers, and administrators. The policy forbids the possession, use, or sale of tobacco, alcohol, and other drugs. Parents are notified of violations of the school's anti-drug policy, and law enforcement authorities are notified, consistent with confidentiality requirements, of violations of laws regarding drugs or alcohol.

Suspensions for use or possession range from 4 to 10 days, at the discretion of the principal. In addition, to be readmitted to school following a drug-related suspension, student violators must complete an education or intervention program designated by the city's school board. Students are expelled after a third violation.

The anti-drug program is integrated into the school's curriculum through the Advisory Program for Students (APS) and through health and social studies classes. Parents are asked to participate in parent workshops, and community agencies are involved as resources in the school.

Factors contributing to the success of Newsome Park Middle School's program are the leadership of an excellent principal, the commitment of concerned faculty and staff, and the active participation of parents and community groups in the school's efforts.

Newsome Park has won State and local clean community awards and a national award for a program sponsored by employees of Newport News Shipbuilding for special education students.

In addition, strong developmental and remedial programs have resulted in substantial gains in the number of students at grade level in reading and math. The school's programs to aid at-risk youth were recognized recently by the Commonwealth of Virginia.
Recommendation #5:

Establish clear and specific rules regarding alcohol and other drug use that include strong corrective actions.

School policies should clearly establish that drug use, possession, and sale on the school grounds and at school functions will not be tolerated. These policies should apply both to students and to school personnel, and may include prevention, intervention, treatment, and disciplinary measures.

School policies should have the following characteristics:

- Specify what constitutes a drug offense by defining (1) illegal substances and paraphernalia; (2) the area of the school’s jurisdiction, for example, the school property, its surroundings, and all school-related events, such as proms and football games; and (3) the types of violations (drug possession, use, and sale).
- State the consequences for violating school policy; punitive action should be linked to referral for treatment and counseling. Measures that schools have found effective in dealing with first-time offenders include the following:
  - A required meeting of parents and the student with school officials, concluding with a contract signed by the student and parents in which they both acknowledge a drug problem and the student agrees to stop using and to participate in drug counseling or a rehabilitation program.
  - Suspension, assignment to an alternative school, in-school suspension, after-school or Saturday detention with close supervision, and demanding academic assignments.
  - Referral to a drug treatment expert or counselor.
  - Notification of police.
Penalties for repeat offenders and for sellers may include expulsion, legal action, and referral for treatment.

- **Describe procedures for handling violations, including the following:**
  - Legal issues associated with disciplinary actions (confidentiality, due process, and search and seizure) and their application.
  - Circumstances under which incidents should be reported and the responsibilities and procedures for reporting incidents, including the identification of the authorities to be contacted.
  - Procedures for notifying parents when their child is suspected of using drugs or is caught with drugs.
  - Procedures for notifying police.

- **Enlist legal counsel to ensure that all policy is in compliance with applicable Federal, State, and local laws.**

- **Build community support for the policy.** Hold open meetings where views can be aired and differences resolved.
Recommendation #6:

Enforce established policies against alcohol and other drug use fairly and consistently. Ensure adequate security measures to eliminate drugs from school premises and school functions.

Ensure that everyone understands the policy and the procedures that will be followed in case of infractions. Make copies of the school policy available to all parents, teachers, and students, and publicize the policy throughout the school and community.

Impose strict security measures to bar access to intruders and to prohibit student drug trafficking. Enforcement policies should correspond to the severity of the school's drug problem. For example:

- Officials can require students to carry hall passes, supervise school grounds and hallways, and secure assistance of law enforcement officials, particularly to help monitor areas around the school.
- For a severe drug problem, officials can use security personnel to monitor closely all school areas where drug sales and use are known to occur; issue mandatory identification badges for school staff and students; request the assistance of local police to help stop drug dealing; and, depending on applicable law, develop a policy that permits periodic searches of student lockers.

Review enforcement practices regularly to ensure that penalties are uniformly and fairly applied.

- Consider implementing an alternative program for students who have been suspended for drug use or possession. Some districts have developed off-campus programs to enable suspended students to continue their education in a more tightly structured environment. These programs may be offered during the day or in the evening, and may offer counseling as well as an academic curriculum. Other districts have successfully used a probationary alternative that combined a short-term in-school suspension with requirements for drug testing and participation in support groups as a condition of returning to the classroom.
Flowing Wells High School in Tucson, Arizona, combines a tough policy against the possession of drugs or paraphernalia with a unique set of alternative programs for students who violate the policy.

Possession of drugs or drug paraphernalia results in a suspension of 5 to 10 days during which a hearing is arranged to determine the facts and decide disciplinary action. An impartial judge hears the case, and students may be represented by legal counsel. If the charges are sustained, the student is suspended for one to two semesters.

Rather than have the student sit out the suspension, Flowing Wells offers the option of remaining in class if the student complies with the following requirements:

- Attends 5 days of in-school suspension.
- Performs 20 hours of school/community service.
- Participates in a support group.
- Submits to two unannounced urinalyses that are paid for by the student.
- Seeks professional counseling.

Students who test positive on urinalysis or who are found to possess drugs or paraphernalia a second time receive a new hearing and may be required to serve an out-of-school suspension, or they may be expelled.

In addition to the penalties for possession, students who sell drugs are expelled. Students found under the influence of alcohol or other drugs are immediately suspended, and their parents are required to work with the school to correct the problem.

Two other alternative programs available to students who have had drug problems are the Reentry Program, designed primarily to help dropouts resume their education, and Inscape, an off-campus facility that offers counseling and other assistance to students who have trouble functioning effectively in routine classroom settings. Students are interviewed by the director of the Inscape program before being admitted, and participation is limited to between 15 and 20 students.

School officials report excellent results with each of the alternative programs. Inscape, for example, usually has a waiting list for students who want to take advantage of the additional counsel and support it offers. In addition, 80 percent of students who elect the in-school alternative remain drug free throughout the period of their suspension.
Recommendation #7:

Implement a comprehensive drug prevention curriculum for kindergarten through grade 12, teaching that drug use is wrong and harmful, and supporting and strengthening resistance to drugs.

A model program would have these main objectives:

- To value and maintain sound personal health.
- To respect laws and rules prohibiting drugs.
- To resist pressures to use drugs.
- To promote student activities that are drug free and offer healthy avenues for student interests.

In developing a program, school staff should take the following steps:

- Determine curriculum content appropriate for the school's drug problem and grade levels.
- Base the curriculum on an understanding of why children try drugs in order to teach them how to resist pressures to use drugs.
- Review existing materials for possible adaptation. State and national organizations—and some lending libraries—that have an interest in drug prevention make available lists of materials.

In implementing a program, school staff should take the following steps:

- Include students in all grades. Effective drug education is cumulative.
- Teach about drugs in health education classes, and reinforce this curriculum with appropriate materials in classes such as social studies and science.
- Develop expertise in drug prevention through training. Teachers should be knowledgeable about drugs, personally committed to opposing drug use, and skilled at eliciting participation by students in drug prevention efforts.

(For more detailed information on topics and learning activities to incorporate in a drug prevention program, see pages 44-49.)
In evaluating drug prevention materials, keep the following points in mind:

Check the date of publication. Material published before 1980 may be outdated; even recently published materials may be inaccurate.

Look for “warning flag” phrases and concepts. The following expressions, many of which appear frequently in “pro-drug” material, falsely imply that there is a “safe” use of mind-altering drugs: experimental use, recreational use, social use, controlled use, responsible use, use/abuse.

Mood-altering is a deceptive euphemism for mind-altering.

The implication of the phrase mood-altering is that only temporary feelings are involved. The fact is that mood changes are biological changes in the brain.

“‘There are no ‘good’ or ‘bad’ drugs, just improper use.”

This is a popular semantic camouflage in pro-drug literature. It confuses young people and minimizes the distinct chemical differences among substances.

“T’s child’s own decision.”

Parents cannot afford to leave such hazardous choices to their children. It is the parents’ responsibility to do all in their power to provide the information and the protection to assure their children a drug-free childhood and adolescence.

Be alert for contradictory messages. Many authors give a pro-drug message and then cover their tracks by including “cautions” about how to use drugs.

Make certain that the health consequences revealed in current research are adequately described. Literature should make these facts clear: The high potency of marijuana on the market today makes it more dangerous than ever. THC, a psychoactive ingredient in marijuana, is fat-soluble, and its accumulation in the body has many adverse biological effects. Cocaine can cause death and is one of the most addictive drugs known. It takes less alcohol to produce impairment in youths than in adults.

Demand material that sets positive standards of behavior for children. The message conveyed must be an expectation that children can say no to drugs. The publication and its message must provide the information and must support family involvement to reinforce the child’s courage to stay drug free.

A fuller discussion of curriculum selection is offered in Drug Prevention Curricula: A Guide to Selection and Implementation. The guide is published by the U.S. Department of Education and is available from the National Clearinghouse for Alcohol and Drug Information, Box 2345 Rockville MD 20852.
Reach out to the community for support and assistance in making the school's anti-drug policy and program work. Develop collaborative arrangements in which school personnel, parents, school boards, law enforcement officers, treatment organizations, and private groups can work together to provide necessary resources.

School officials should recognize that they cannot solve the drug problem by themselves. They need to enlist the community’s support for their efforts by taking the following actions:

- Increase community understanding of the problem through meetings, media coverage, and education programs.
- Build public support for the policy; develop agreement on the goals of a school drug policy, including prevention and enforcement goals.
- Educate the community about the effects and extent of the drug problem.
- Strengthen contacts with law enforcement agencies through discussions about the school’s specific drug problems and ways they can assist in drug education and enforcement.
- Call on local professionals, such as physicians and pharmacists, to share their expertise on drug abuse as class lecturers.
- Mobilize the resources of community groups and local businesses to support the program.
Fact Sheet

Legal Questions on
Search and Seizure

In 1985, the Supreme Court for the first time analyzed the application in the public school setting of the Fourth Amendment prohibition of unreasonable searches and seizures. The Court sought to craft a rule that would balance the need of school authorities to maintain order and the privacy rights of students. The questions in this section summarize the decisions of the Supreme Court and of lower Federal courts. School officials should consult with legal counsel in formulating their policies.

What legal standard applies to school officials who search students and their possessions for drugs?
The Supreme Court has held that school officials may institute a search if there are “reasonable grounds” to believe that the search will reveal evidence that the student has violated or is violating either the law or the rules of the school.

Do school officials need a search warrant to conduct a search for drugs?
No, not if they are carrying out the search independent of the police and other law enforcement officials. A more stringent legal standard may apply if law enforcement officials are involved in the search.

How extensive can a search be?
The scope of the permissible search will depend on whether the measures used during the search are reasonably related to the purpose of the search and are not excessively intrusive in light of the age and sex of the student being searched. The more intrusive the search, the greater the justification that will be required by the courts.

Do school officials have to stop a search when they find the object of the search?
Not necessarily. If a search reveals items suggesting the presence of other evidence of crime or misconduct, the school official may continue the search. For example, if a teacher is justifiably searching a student’s purse for cigarettes and finds rolling papers, it will be reasonable (subject to any local policy to the contrary) for the teacher to search the rest of the purse for evidence of drugs.

Can school officials search student lockers?
Reasonable grounds to believe that a particular student locker contains evidence of a violation of the law or school rules will generally justify a search of that locker. In addition, some courts have upheld written school policies that authorize school officials to inspect student lockers at any time.

(For a more detailed discussion of legal issues, see pages 50-60).
The following questions and answers briefly describe several Federal requirements that apply to the use of suspension and expulsion as disciplinary tools in public schools. These may not reflect all laws, policies, and judicial precedents applicable to any given school district. School officials should consult with legal counsel to determine the application of these laws in their schools and to ensure compliance with all legal requirements.

What Federal procedural requirements apply to suspension or expulsion?

• The Supreme Court has held that students facing suspension or expulsion from school are entitled under the U.S. Constitution to the basic due process protections of notice and an opportunity to be heard. The nature and formality of the "hearing" to be provided depend on the severity of the sanction being imposed.

• A formal hearing is not required when a school seeks to suspend a student for 10 days or less. Due process in that situation requires only that:
  — the school inform the student, either orally or in writing, of the charges and of the evidence to support those charges.
  — the school give the student an opportunity to deny the charges and present his or her side of the story.
  — as a general rule, the notice to the student and a rudimentary hearing should precede a suspension unless a student’s presence poses a continuing danger to persons or property or threatens to disrupt the academic process. In such cases, the notice and rudimentary hearing should follow as soon as possible after the student’s removal.

• More formal procedures may be required for suspensions longer than 10 days and for expulsions. In addition, Federal law and regulations establish special rules governing suspensions and expulsions of students with disabilities.

• States and local school districts may require additional procedures.

Can students be suspended or expelled from school for use, possession, or sale of drugs?

Generally, yes. A school may suspend or expel students in accordance with the terms of its discipline policy. A school policy may provide for penalties of varying severity, including suspension or expulsion, to respond to drug-related offenses. It is helpful to be explicit about the types of offenses that will be punished and about the penalties that may be imposed for particular types of offenses (e.g., use, possession, or sale of drugs). Generally, State and local law will determine the range of sanctions permitted.

(For a more detailed discussion of legal issues, see pages 50-60.)
WHAT STUDENTS CAN DO

- Learn about the effects of drug use, the reasons why drugs are harmful, and ways to resist pressures to try drugs.

- Use an understanding of the dangers posed by drugs to help other students avoid them. Encourage other students to resist drugs, persuade those using drugs to seek help, and report those selling drugs to parents and the school principal.
Students
Learning the Facts

Recommendation #9:

Learn about the effects of alcohol and other drug use, the reasons why drugs are harmful, and ways to resist pressures to try drugs. Students can arm themselves with the knowledge to resist drug use in the following ways:

- Learning about the effects and risks of drugs.
- Learning the symptoms of drug use and the names of organizations and individuals available to help when friends or family members are in trouble.
- Understanding the pressures to use drugs and ways to counteract them.
- Knowing the school rules on drugs and ways to help make the school policy work.
- Knowing the school procedures for reporting drug offenses.
- Knowing the laws on drug use and the penalties—for example, for driving under the influence of alcohol or other drugs—and understanding how they protect individuals and society.
- Developing skill in articulating their opposition to drugs and their resolve to avoid drug use.
R.H. Watkins High School of Jones County, Mississippi, has developed this picture setting forth the duties and responsibilities of student counselors in its peer counseling program.

Responsibility Pledge for a Peer Counselor
R.H. Watkins High School

As a drug education peer counselor you have the opportunity to help the youth of our community develop to their full potential without the interference of illegal drug use. It is a responsibility you must not take lightly. Therefore, please read the following responsibilities you will be expected to fulfill next school year and discuss them with your parents or guardians.

Responsibilities of a Peer Counselor

- Understand and be able to clearly state your beliefs and attitudes about drug use among teens and adults.
- Remain drug free.
- Maintain an average of C or better in all classes.
- Maintain a citizenship average of B or better.
- Participate in some club or extracurricular activity that emphasizes the positive side of school life.
- Successfully complete training for the program, including, for example, units on the identification and symptoms of drug abuse, history and reasons for drug abuse, and the legal/economic aspects of drug abuse.
- Successfully present monthly programs or drug abuse in each of the elementary and junior high schools of the Laurel City school system, and to community groups, churches, and statewide groups as needed.
- Participate in rap sessions or individual counseling sessions with Laurel City school students.
- Attend at least one Jones County Drug Council meeting per year, attend the annual Drug Council Awards Banquet, work in the Drug Council Fair exhibit and in any Drug Council workshops, if needed.
- Grades and credit for Drug Education will be awarded on successful completion of and participation in all the above-stated activities.

Student's Signature

Parent's or Guardian's Signature
Recommendation #10:

Use an understanding of the danger posed by alcohol and other drugs to help other students avoid them. Encourage other students to resist drugs, persuade those using drugs to seek help, and report those selling drugs to parents and the school principal.

Although students are the primary victims of drug use in the schools, drug use cannot be stopped or prevented unless students actively participate in this effort.

Students can help fight alcohol and other drug use in the following ways:

- Participating in discussions about the extent of the problem at their own school.
- Supporting a strong school anti-drug policy and firm, consistent enforcement of rules.
- Setting a positive example for fellow students and speaking forcefully against drug use.
- Teaching other students, particularly younger ones, about the harmful effects of drugs.
- Encouraging their parents to join with other parents to promote a drug-free environment outside school. Some successful parent groups have been started as a result of the pressure of a son or daughter who was concerned about drugs.
- Becoming actively involved in efforts to inform the community about the drug problem.
- Joining in or starting a club or other activity to create positive, challenging ways for young people to have fun without alcohol and other drugs. Obtaining adult sponsorship for the group and publicizing its activities.
- Encouraging friends who have a drug problem to seek help and reporting persons selling drugs to parents and the principal.
WHAT COMMUNITIES CAN DO

- Help schools fight drugs by providing them with the expertise and financial resources of community groups and agencies.

- Involve local law enforcement agencies in all aspects of drug prevention: assessment, enforcement, and education. The police and courts should have well-established relationships with the schools.
Recommendation #11:

Help schools fight drugs by providing them with the expertise and financial resources of community groups and agencies.

Law enforcement agencies and the courts can take the following actions:
- Provide volunteers to speak in the schools about the legal ramifications of alcohol and other drug use. Officers can encourage students to cooperate with them to stop drug use.
- Meet with school officials to discuss alcohol and other drug use in the school, share information on the drug problem outside the school, and help school officials in their investigations.

Social service and health agencies can take the following actions:
- Provide volunteers to speak in the school about the effects of drugs.
- Meet with parents to discuss symptoms of drug use and to inform them about counseling resources.
- Provide the schools with health professionals to evaluate students who may be potential drug users.
- Provide referrals to local treatment programs for students who are using drugs.
- Establish and conduct drug counseling and support groups for students.

Business leaders can take the following actions:
- Speak in the schools about the effects of alcohol and other drug use on employment.
- Provide incentives for students who participate in drug prevention programs and lead drug-free lives.
- Help schools obtain curriculum materials for their drug prevention program.
- Sponsor drug-free activities for young people.

Parent groups can take the following actions:
- Mobilize others through informal discussions, door-to-door canvassing, and school meetings to ensure that students get a consistent no-drug message at home, at school, and in the community.
- Contribute volunteers to chaperone student parties and other activities.

Print and broadcast media can take the following actions:
- Educate the community about the nature of the drug problem in their schools.
- Publicize school efforts to combat the problem.
A collaborative effort begun in 1983 by the Los Angeles Police Department and the Los Angeles Unified School District, Project DARE (Drug Abuse Resistance Education) uses uniformed law enforcement officers in classrooms as regular instructors. DARE officers use a drug curriculum that teaches students resistance to peer pressure to use drugs, self-management skills, and alternatives to drug use.

DARE reaches all Los Angeles Unified School District students from kindergarten through junior high school. DARE has also spread outside Los Angeles—police officers from 48 States and 1100 police agencies have received DARE training. The DARE program is also being used by the Department of Defense Dependents' Schools (military police serve as instructors) and at Bureau of Indian Affairs Schools (BIA police officers serve as instructors).

In addition to providing classroom instruction, the program arranges teacher orientation, officer-student interaction (on playgrounds and in cafeterias, for example), and a parent education evening at which DARE officers explain the program to parents and provide information about symptoms of drug use and ways to increase family communication.

Studies have shown that DARE has improved students' attitudes about themselves, increased their sense of responsibility for themselves and to police, and strengthened their resistance to drugs. For example, before the DARE program began, 51 percent of fifth grade students equated drug use with having more friends. After training, only 8 percent reported this attitude.

DARE's parent program has also changed attitudes. Before DARE training, 61 percent of parents thought that there was nothing parents could do about their children's use of drugs; only 5 percent reported this opinion after the program. Before DARE training, 32 percent of parents thought that it was all right for children to drink alcohol at a party as long as adults were present. After DARE, no parents reported such a view.
Recommendation #12:

**Involving Law Enforcement**

Involving local law enforcement agencies in all aspects of drug prevention: assessment, enforcement, and education. The police and courts should have well-established relationships with the schools.

Community groups can take the following actions:

- Support school officials who take a strong position against alcohol and other drug use.
- Support State and local policies to keep drugs and drug paraphernalia away from schoolchildren.
- Build a community consensus in favor of strong penalties for persons convicted of selling drugs, particularly for adults who have sold drugs to children.
- Encourage programs to provide treatment to juvenile first-offenders while maintaining tough penalties for repeat offenders and drug sellers.

Law enforcement agencies, in cooperation with schools, can take the following actions:

- Establish the procedures each will follow in school drug cases.
- Provide expert personnel to participate in prevention activities from kindergarten through grade 12.
- Secure areas around schools and see that the sale and use of drugs are stopped.
- Provide advice and personnel to help improve security in the school or on school premises.
Pleasanton Elementary School, located in a rural region of Texas about 30 miles south of San Antonio, enrolls approximately 630 students in the third, fourth, and fifth grades. Forty-eight percent of the students are Hispanic and 44 percent come from low-income families. Pleasanton instituted a tough anti-drug program 3 years ago in response to concerns about escalating drug use by students.

The school’s policy covers the use or sale of tobacco products and alcohol and other drugs and provides for expulsion of students who violate the policy. Teachers are trained in the anti-drug programs used in the classroom, and they participate in yearly inservice training sessions on the school’s discipline management plan. Parents are given a copy of the school drug policy when their children register, and they are invited to attend a special meeting at which it is explained.

Students are not allowed to leave school premises during lunch unless they are accompanied by a parent. In addition, adult sponsors who have been trained to recognize the signs of drug use monitor all school functions.

Community involvement in the anti-drug effort has been an important feature of Pleasanton’s program. More than 50 area businesses and organizations donated funds for the purchase of drug education materials for all classes. In addition, police officers, lawyers, professional athletes, and members of the clergy have been invited to address the students as part of drug prevention activities.

Pleasanton’s program has several goals: promoting self-esteem; teaching decision-making skills; encouraging the development of strong, healthy bodies and minds; and providing positive peer influences.

The school’s drug education program has had a great influence on other schools and districts in the area.

One evidence of the school district’s success in curbing drug use by students is the drop in drug-related expulsions from 10 during the 1986-87 school year to zero during the 1987-88 school year.
Drugs threaten our children's lives, disrupt our schools, shatter families, and, in some areas, shatter communities. Drug-related crimes overwhelm our courts, social agencies, and police. This situation need not and must not continue.

Across the United States, schools and communities have found ways to turn the tide in the battle against drugs. The methods they have used and the actions they have taken are described in this volume. We know what works. We know that drug use can be stopped.

But we cannot expect the schools to do the job without the help of parents, police, the courts, and other community groups. Drugs will be beaten only when all of us work together to deliver a firm, consistent message to those who would use or sell drugs: a message that illegal drugs will not be tolerated. It is time to join in a national effort to achieve schools without drugs.
Teaching About Drug Prevention: Sample Topics and Learning Activities

An effective drug prevention curriculum covers a broad set of education objectives which are outlined in greater detail in the Department of Education's handbook Drug Prevention Curricula: A Guide to Selection and Implementation. This section presents a model program for consideration by State and local school authorities who have the responsibility to design a curriculum that meets local needs and priorities. The program consists of four objectives plus sample topics and learning activities.

OBJECTIVE #1: To value and maintain sound personal health; to understand how drugs affect health.

An effective drug prevention education program instills respect for a healthy body and mind and imparts knowledge of how the body functions, how personal habits contribute to good health, and how drugs affect the body.

At the early elementary level, children learn how to care for their bodies. Knowledge about habits, medicine, and poisons lays the foundation for learning about drugs. Older children begin to learn about the drug problem and study those drugs to which they are most likely to be exposed. The curriculum for secondary school students is increasingly drug specific as students learn about the effects of drugs on their bodies and on adolescent maturation. Health consequences of drug use, including transmission of AIDS, are emphasized.

Sample topics for elementary school:
- The roles of nutrition, medicine, and health care professionals in preventing and treating disease.
- The difficulties of recognizing which substances are safe to eat, drink, or touch; ways to learn whether a substance is safe: by consulting with an adult and by reading labels.
- The effects of poisons on the body; the effects of medicine on body chemistry: the wrong drug may make a person ill.
- The nature of habits: their conscious and unconscious development.

Sample topics for secondary school:
- Stress: how the body responds to stress; how drugs increase stress.
- The chemical properties of drugs.
- The effects of drugs on the circulatory, digestive, nervous, reproductive, and respiratory systems. The effects of drugs on adolescent development.
- Patterns of substance abuse: the progressive effects of drugs on the body and mind.
What is addiction?
How to get help for a drug or alcohol problem.

Children tend to be oriented toward the present and are likely to feel invulnerable to the long-term effects of alcohol and other drugs. For this reason, they should be taught about the short-term effects of drug use (impact on appearance, alertness, and coordination) as well as about the cumulative effects.

Sample learning activities for elementary school:
- Make a coloring book depicting various substances. Color only those items that are safe to eat.
- Use puppets to dramatize what can happen when drugs are used.
- Write stories about what to do if a stranger offers candy, pills, or a ride. Discuss options in class.
- Take, for a time, to break a bad habit. The teacher emphasizes that it is easier not to start a bad habit than to break one.

Sample learning activities for secondary school:
- Discuss the properties of alcohol and other drugs with community experts: physicians, scientists, pharmacists, or law enforcement officers.
- Interview social workers in drug treatment centers. Visit an open meeting of Alcoholics Anonymous or Narcotics Anonymous. These activities should be open only to mature students; careful preparation and debriefing are essential.
- Research the drug problem at school, in the community, or in the sports and entertainment fields.
- Design a true-false survey about drug myths and facts; conduct the survey with classmates and analyze the results.
- Develop an accessible lending library on drugs, well stocked with up-to-date and carefully chosen materials.

When an expert visits a class, both the class and the expert should be prepared in advance. Students should learn about the expert's profession and prepare questions to ask during the visit. The expert should know what the objectives of the session are and how the session fits into previous and subsequent learning. The expert should participate in a discussion or classroom activity, not simply appear as a speaker.
OBJECTIVE #2: To respect laws and rules prohibiting drugs.

The program teaches children to respect rules and laws as the embodiment of social values and as tools for protecting individuals and society. It provides specific instruction about laws concerning drugs.

Students in the early grades learn to identify rules and to understand their importance, while older students learn about the school drug code and laws regulating drugs.

Sample topics for elementary school:
- What rules are and what would happen without them.
- What values are and why they should guide behavior.
- What responsible behavior is.
- Why it is wrong to take drugs.

Sample topics for secondary school:
- Student responsibilities in promoting a drug-free school.
- Local, State, and Federal laws on controlled substances; why these laws exist and how they are enforced.
- Legal consequences of drug use; penalties for driving under the influence of alcohol or drugs; the relationship between drugs and other crimes.
- Personal and societal costs of drug use.

Sample learning activities for elementary school:
- Use stories and pictures to identify rules and laws in everyday life (e.g., lining up for recess).
- Imagine how to get to school in the absence of traffic laws; try to play a game that has no rules.
- Name some things that are important to adults and then list rules they have made about these things. (This activity helps explain values.)
- Solve a simple problem (e.g., my sister hits me, or my math grades are low). Discuss which solutions are best and why.
- Discuss school drug policies with the principal and other staff members. Learn how students can help make the policy work better.
- Explain the connection between drug users, drug dealers, and drug traffickers and law enforcement officers whose lives are placed at risk or lost in their efforts to stop the drug trade.

Sample learning activities for secondary school:
- Resolve hypothetical school situations involving drug use. Analyze the consequences for the school, other students, and the individuals involved.
- Collect information about accidents, crimes, and other problems related to alcohol and other drugs. Analyze how the problem might have been prevented and how the incident affected the individuals involved.
• Conduct research projects. Interview members of the community such as attorneys, judges, police officers, State highway patrol officers, and insurance agents about the effects of alcohol and other drug use on the daily lives of teenagers and their families.

• Draft a legislative petition proposing enactment of a State law on drug use. Participate in a mock trial or legislative session patterned after an actual trial or debate. Through these activities, students learn to develop arguments on behalf of drug laws and their enforcement.

OBJECTIVE #3: To recognize and resist pressures to use drugs.

Social influences play a key role in encouraging children to try alcohol and other drugs. Pressures to use drugs come from internal sources, such as a child's desire to feel included in a group or to demonstrate independence, and external influences, such as the opinions and example of friends, older children and adults, and media messages.

Students must learn to identify these pressures. They must then learn how to counteract messages to use drugs and gain practice in saying no. The education program emphasizes influences on behavior, responsible decision making, and techniques for resisting pressures to use drugs.

Sample topics for elementary through high school:
• The influence of popular culture on behavior.
• The influence of peers, parents, and other important individuals on a student's behavior; ways in which the need to feel accepted by others influences behavior.
• Ways to make responsible decisions and to deal constructively with disagreeable moments and pressures.
• Reasons for not taking drugs.
• Situations in which students may be pressured into using alcohol and other drugs.
• Ways of resisting pressure to use drugs.
• Effects of drug use on family and friends, and benefits of resisting pressure to use drugs.

Sample learning activities for elementary through high school:
• Describe recent personal decisions. In small groups, discuss what considerations influenced the decision (e.g., opinions of family or friends, beliefs, desire to be popular) and analyze choices and consequences.
• Examine ads for cigarettes, over-the-counter drugs, and alcohol, deciding what images are being projected and whether the ads are accurate.
• Read stories about famous people who held to their beliefs in the face of opposition. Students can discuss how these people withstood the pressure and what they accomplished.
• Give reasons for not taking drugs. Discuss with a health educator or drug counselor the false arguments for using drugs. Develop counterarguments in response to typical messages or pressures on behalf of drug use.
• Given a scenario depicting pressure to use drugs, act out ways of resisting (simply refusing, giving a reason, leaving the scene, etc.). Students should then practice these techniques repeatedly. Demonstrate ways of resisting pressures, using older students specially trained as peer teachers.
• Present scenarios involving drug-related problems (e.g., learning that another student is selling drugs, learning that a sibling is using drugs, or being offered a drive home by a friend under the influence of drugs). Students practice what they would do and discuss to whom they would turn for help. Teachers should discuss and evaluate the appropriateness of student responses.
• Discuss how it feels to resist pressures to take drugs. Hold a poster contest to depict the benefits derived both from not using and from saying no (e.g., being in control, increased respect from others, self-confidence).

OBJECTIVE #4: To promote activities that reinforce the positive, drug-free elements of student life.

School activities that provide opportunities for students to have fun without alcohol and other drugs, and to contribute to the school community, build momentum for peer pressure not to use drugs. These school activities also nurture positive examples by giving older students opportunities for leadership related to drug prevention.

Sample activities:
• Make participation in school activities dependent on an agreement not to use alcohol and other drugs.
• Ensure that alcohol and other drugs will not be available at school-sponsored activities or parties. Plan these events carefully to be certain that students have attractive alternatives to drug use.
• Give students opportunities for leadership. They can be trained to serve as peer leaders in drug prevention programs, write plays, or design posters for younger students. Activities such as these provide youthful role models who demonstrate the importance of not using drugs. Youth training programs are available that prepare students to assist in drug education and provide information on how to form drug-free youth groups.
• Form action teams for school improvement with membership limited to students who are drug free. These action teams campaign against drug use, design special drug-free events, conduct and follow up on surveys of school needs, help teachers with paperwork, tutor other
students, or improve the appearance of the school. Through these activities, students develop a stake in their school, have the opportunity to serve others, and have positive reasons to reject drug use.

- Survey community resources that offer help for alcohol or other drug problems or ways to cope with drug use by a family member.
- Create a program in the school for support of students returning from treatment.
Federal law accords school officials broad authority to regulate student conduct and supports reasonable and fair disciplinary action. The Supreme Court recently reaffirmed that the constitutional rights of students in school are not "automatically coextensive with the rights of adults in other settings." Rather, recognizing that "in recent years ... drug use and violent crime in the schools have become major social problems," the Court has emphasized the importance of effective enforcement of school rules. On the whole, a school "is allowed to determine the methods of student discipline and need not exercise its discretion with undue timidity."

An effective campaign against drug use requires a basic understanding of legal techniques for searching and seizing drugs and drug-related material, for suspending and expelling students involved with drugs, and for assisting law enforcement officials in the prosecution of drug offenders. Such knowledge will help schools identify and penalize students who use or sell drugs at school and enable school officials to uncover the evidence needed to support prosecutions under Federal and State criminal laws that contain strong penalties for drug use and sale. In many cases, school officials can be instrumental in successful prosecutions.

In addition to the general Federal statutes that make it a crime to possess or distribute a controlled substance, there are special Federal laws designed to protect children and schools from drugs:

- An important part of the Controlled Substances Act makes it a Federal crime to sell drugs in or near a public or private elementary, secondary, vocational, or postsecondary school. Under this "schoolhouse" law, sales within 1,000 feet of a school are punishable by up to double the sentence that would apply if the sale occurred elsewhere. Even more serious punishments are available for repeat offenders.

- Distribution or sale to minors of controlled substances is also a Federal crime. When anyone age 18 or over sells drugs to anyone under 21, the seller runs the risk that he or she will receive up to double the sentence that would apply to a sale to an adult. Here too, more serious penalties can be imposed on repeat offenders.

By working with Federal and State prosecutors in their area, schools can help to ensure that these laws and others are used to make children and schools off-limits to drugs.

The following pages describe in general terms the Federal laws applicable to the development of an effective school drug policy. This section is not a compendium of all laws that may apply to a school district, and it is not intended to provide legal advice on all issues that may arise. School officials must recognize that many legal issues in the school context are also governed, in whole or in part, by State and...
local laws, which, given their diversity, cannot be covered here. Advice should be sought from legal counsel in order to understand the applicable laws and to ensure that the school's policies and actions make full use of the available methods of enforcement.

Most private schools, particularly those that receive little or no financial assistance from public sources and are not associated with a public entity, enjoy a greater degree of legal flexibility with respect to combating the sale and use of illegal drugs. Depending on the terms of their contracts with enrolled students, such schools may be largely free of the restrictions that normally apply to drug searches or the suspension or expulsion of student drug users. Private school officials should consult legal counsel to determine what enforcement measures may be available to them.

School procedures should reflect the available legal means for combating drug use. These procedures should be known to and understood by school administrators and teachers as well as by students, parents, and law enforcement officials. Everyone should be aware that school authorities have broad power within the law to take full, appropriate, and effective action against drug offenders. Additional sources of information on legal issues in school drug policy are listed at the end of this handbook.

**SEARCHING FOR DRUGS WITHIN THE SCHOOL**

In some circumstances, the most important tool for controlling drug use is an effective program of drug searches. School administrators should not condone the presence of drugs anywhere on school property. The presence of any drugs or drug-related materials in school can mean only one thing—that drugs are being used or distributed in school. Schools committed to fighting drugs should do everything they can to determine whether school grounds are being used to facilitate the possession, use, or distribution of drugs, and to prevent such crimes.

To institute an effective drug search policy in schools with a substantial problem, school officials can take several steps. First, they can identify the specific areas in the school where drugs are likely to be found or used. Student lockers, bathrooms, and "smoking areas" are obvious candidates. Second, school administrators can clearly announce in writing at the beginning of the school year that these areas will be subject to unannounced searches and that students should consider such areas "public" rather than "private." The more clearly a school specifies that these portions of the school's property are public, the less likely it is that a court will conclude that students retain any reasonable expectation of privacy in these places and the less justification will be needed to search such locations.
School officials should therefore formulate and disseminate to all students and staff a written policy that will permit an effective program of drug searches. Courts have usually upheld locker searches where schools have established written policies under which the school retains joint control over student lockers, maintains duplicate or master keys for all lockers, and reserves the right to inspect lockers at any time. Although these practices have not become established law in every part of the country, it will be easier to justify locker searches in schools that have such policies. Moreover, the mere existence of such policies can have a salutory effect. If students know that their lockers may be searched, drug users will find it much more difficult to obtain drugs in school.

The effectiveness of such searches may be improved with the use of specially trained dogs. Courts have generally held that the use of dogs to detect drugs on or in objects such as lockers, ventilators, or desk, as opposed to persons is a "search" within the meaning of the Fourth Amendment. Accordingly, school administrators are generally justified in using dogs in this way.

It is important to remember that any illicit drugs and drug-related items discovered at school are evidence that may be used in a criminal trial. School officials should be careful, first, to protect the evidentiary integrity of such seizures by making sure that the items are obtained in permissible searches, because unlawfully acquired evidence will not be admissible in criminal proceedings. Second, school officials should work closely with local law enforcement officials to preserve, in writing, the nature and circumstances of any seizure of drug contraband. In a criminal prosecution, the State must prove that the items produced as evidence in court are the same items that were seized from the suspect. Thus, the State must establish a "chain of custody" over the seized items which accounts for the possession of the evidence from the moment of its seizure to the moment it is introduced in court. School policy regarding the disposition of drug-related items should include procedures for the custody and safekeeping of drugs and drug-related materials prior to their removal by the police and procedures for recording the circumstances regarding the seizure.

**Searching Students**

In some circumstances, teachers or other school personnel will wish to search a student whom they believe to be in possession of drugs. The Supreme Court has stated that searches may be carried out according to "the dictates of reason and common sense." The Court has recognized that the need of school authorities to maintain order justifies searches that might otherwise be unreasonable if undertaken by police officers or in the larger community. Thus the Court has held that school officials,
Unlike the police, do not need "probable cause" to conduct a search. Nor do they need a search warrant. 2

Under the Supreme Court's ruling:

- School officials may institute a search if there are "reasonable grounds" to believe that the search will reveal evidence that the student has violated or is violating either the law or the rules of the school.
- The extent of the permissible search will depend on whether the measures used are reasonably related to the purpose of the search and are not excessively intrusive in light of the age and sex of the student.
- School officials are not required to obtain search warrants when they carry out searches independent of the police and other law enforcement officials. A more stringent legal standard may apply if law enforcement officials are involved in the search.

Interpretation of "Reasonable Grounds"

Lower courts are beginning to interpret and apply the "reasonable grounds" standard in the school setting. From these cases it appears that courts will require more than general suspicion, curiosity, rumor, or a hunch to justify searching students or their possessions. Factors that will help sustain a search include the observation of specific and describable behavior or activities leading one reasonably to believe that a given student is engaging in or has engaged in prohibited conduct. The more specific the evidence in support of searching a particular student, the more likely the search will be upheld. For example, courts using a "reasonable grounds" (or similar) standard have upheld the right of school officials to search the following:

- A student's purse, after a teacher saw her smoking in a restroom and the student denied having smoked or being a smoker.10
- A student's purse, after several other students said that she had been distributing firecrackers.11
- A student's pockets, based on a phone tip about drugs from an anonymous source believed to have previously provided accurate information.12

Scope of Permissible Search

School officials are authorized to conduct searches within reasonable limits. The Supreme Court has described two aspects of these limits: First, when officials conduct a search, they must use only measures that are reasonably related to the purpose of the search; second, the search may not be excessively intrusive in light of the age or sex of the student.
For example, if a teacher believes he or she has seen one student passing a marijuana cigarette to another student, the teacher might reasonably search the students and any nearby belongings in which the students might have tried to hide the drug. If it turns out that what the teacher saw was a stick of gum, the teacher would have no justification for any further search for drugs.

The more intrusive the search, the greater the justification that will be required by the courts. A search of a student's jacket or bookbag can often be justified as reasonable. At the other end of the spectrum, strip searches are considered a highly intrusive invasion of individual privacy and are viewed with disfavor by the courts (although even these searches have been upheld in certain extraordinary circumstances).

School officials do not necessarily have to stop a search if they find what they are looking for. If the search of a student reveals items that create reasonable grounds for suspecting that the student may also possess other evidence of crime or misconduct, the school officials may continue the search. For example, if a teacher justifiably searches a student's purse for cigarettes and finds rolling papers like those used for marijuana cigarettes, it will then be reasonable for the teacher to search the rest of the purse for other evidence of drugs.

**Consent**

If a student consents to a search, the search is permissible, regardless of whether there would otherwise be reasonable grounds for the search. To render such a search valid, however, the student must give consent knowingly and voluntarily.

Establishing whether the student's consent was voluntary can be difficult, and the burden is on the school officials to prove voluntary consent. If a student agrees to be searched out of fear or as a result of other coercion, that consent will probably be found invalid. Similarly, if school officials indicate that a student must agree to a search or if the student is very young or otherwise unaware that he or she has the right to object, the student's consent will also be held invalid. School officials may find it helpful to explain to students that they do not have to consent to a search. In some cases, standard consent forms may be useful.

If a student is asked to consent to a search and refuses, that refusal does not mean that the search may not be conducted. Rather, in the absence of consent, school officials retain the authority to conduct a search when there are reasonable grounds to justify it, as described previously.

**Special Types of Student Searches**

Schools with severe drug problems may occasionally wish to resort to more intrusive searches, such as the use of trained dogs or urinalysis, to
screen students for drug use. The Supreme Court has yet to address these issues. The following paragraphs explain the existing rulings on these subjects by other courts:

- **Specially trained dogs.** The few courts that have considered this issue disagree as to whether the use of a specially trained dog to detect drugs on students constitutes a search within the meaning of the Fourth Amendment. Some courts have held that a dog’s sniffing of a student is a search, and that, in the school setting, individualized grounds for reasonable suspicion are required in order for such a “sniff-search” to be held constitutional. Under this standard, a blanket search of a school’s entire student population by specially trained dogs would be prohibited.

  At least one other court has held that the use of trained dogs does not constitute a search, and has permitted the use of such dogs without individualized grounds for suspicion. Another factor that courts may consider is the way that the dogs detect the presence of drugs. In some instances, the dogs are merely led down hallways or classroom aisles. In contrast, having the dogs actually touch parts of the students’ bodies is more intrusive and would probably require specific justification.

  Courts have generally held that the use of specially trained dogs to detect drugs on objects, as opposed to persons, is not a search within the meaning of the Fourth Amendment. Therefore, school officials may often be able to use dogs to inspect student lockers and school property.

- **Drug testing.** The use of urinalysis or other tests to screen students for drugs is a relatively new phenomenon and the law in this area is still evolving. Few courts have considered the use of urinalysis to screen public school students for drugs, and those courts that have done so have reached mixed results. The permissibility of drug testing of students has not yet been determined under all circumstances, although drug testing of adults has been upheld in some settings.

**SUSPENSION AND EXPULSION**

A school policy may lawfully provide for penalties of varying severity, including suspension and expulsion, to respond to drug-related offenses. The Supreme Court has recently held that because schools “need to be able to impose disciplinary sanctions for a wide range of unanticipated conduct disruptive of the educational process,” a school’s disciplinary rules need not be so detailed as a criminal code. Nonetheless, it is helpful for school policies to be explicit about the types of offenses that will be punished and about the penalties that may be imposed for each
of these (e.g., use, possession, or sale of drugs). State and local law will usually determine the range of sanctions that is permissible. In general, courts will require only that the penalty imposed for drug-related misconduct be rationally related to the severity of the offense.

School officials should not forget that they have jurisdiction to impose punishment for some drug-related offenses that occur off-campus. Depending on State and local laws, schools are often able to punish conduct at off-campus, school-sponsored events as well as off-campus conduct that has a direct and immediate effect on school activities.

**Procedural Guidelines**

Students facing suspension or expulsion from school are entitled under the U.S. Constitution and most State constitutions to commonsense due process protections of notice and an opportunity to be heard. Because the Supreme Court has recognized that a school's ability to maintain order would be impeded if formal procedures were required every time school authorities sought to discipline a student, the Court has held that the nature and formality of the "hearing" will depend on the severity of the sanction being imposed.

A formal hearing is not required when a school seeks to suspend a student for 10 days or less. The Supreme Court has held that due process in that situation requires only that:

- The school must inform the student, either orally or in writing, of the charges against him or her and of the evidence to support those charges.
- The school must give the student an opportunity to deny the charges and present his or her side of the story.
- As a general rule, this notice and rudimentary hearing should precede a suspension. However, a student whose presence poses a continuing danger to persons or property or an ongoing threat of disrupting the academic process may be immediately removed from school. In such a situation, the notice and rudimentary hearing should follow as soon as possible.

The Supreme Court has also stated that more formal procedures may be required for suspensions longer than 10 days and for expulsions. Although the Court has not established specific procedures to be followed in those situations, other Federal courts have set the following guidelines for expulsions. These guidelines would apply to suspensions longer than 10 days as well:

- The student must be notified in writing of the specific charges against him or her which, if proven, would justify expulsion.
The student should be given the names of the witnesses against him or her and an oral or written report on the facts to which each witness will testify.

The student should be given the opportunity to present a defense against the charges and to produce witnesses or testimony on his or her behalf.

Many States have laws governing the procedures required for suspensions and expulsions. Because applicable statutes and judicial rulings vary across the country, local school districts may enjoy a greater or lesser degree of flexibility in establishing procedures for suspensions and expulsions.

School officials must also be aware of the special procedures that apply to suspension or expulsion of students with disabilities under Federal law and regulations.

**Effect of Criminal Proceedings Against a Student**

A school may usually pursue disciplinary action against a student regardless of the status of any outside criminal prosecution. That is, Federal law does not require the school to await the outcome of the criminal prosecution before initiating proceedings to suspend or expel a student or to impose whatever other penalty is appropriate for the violation of the school's rules. In addition, a school is generally free under Federal law to discipline a student when there is evidence that the student has violated a school rule, even if a juvenile court has acquitted (or convicted) the student or if local authorities have declined to prosecute criminal charges stemming from the same incident. Schools may wish to discuss this subject with counsel.

**Effect of Expulsion**

State and local law will determine the effect of expelling a student from school. Some State laws require the provision of alternative schooling for students below a certain age. In other areas, expulsion may mean the removal from public schools for the balance of the school year or even the permanent denial of access to the public school system.

**CONFIDENTIALITY OF EDUCATION RECORDS**

To rid their schools of drugs, school officials will periodically need to report drug-related crimes to police and to help local law enforcement authorities detect and prosecute drug offenders. In doing so, schools will need to take steps to ensure compliance with Federal and State laws governing confidentiality of student records.
The Federal law that addresses this issue is the Family Educational Rights and Privacy Act (FERPA), which applies to any school that receives Federal funding and which limits the disclosure of certain information about students that is contained in education records. Under FERPA, disclosure of information in education records to individuals or entities other than parents, students, and school officials is permissible only in specified situations. In many cases, unless the parents or an eligible student provides written consent, FERPA will limit a school's ability to turn over education records or to disclose information from them to the police. Such disclosure is permitted, however, if (1) it is required by a court order or subpoena, or (2) it is warranted by a health and safety emergency. In the first of these two cases, reasonable efforts must be made to notify the student's parents before the disclosure is made. FERPA also permits disclosure if a State law enacted before November 19, 1974, specifically requires disclosure to State and local officials.

Schools should be aware, however, that because FERPA governs only the information in education records, it does not limit disclosure of other information. Thus, school employees are free to disclose any information of which they become aware through personal observation. For example, a teacher who witnesses a drug transaction may, when the police arrive, report what he or she witnessed. Similarly, evidence seized from a student during a search is not an education record and may be turned over to the police without constraint.

State laws and school policies may impose additional, and sometimes more restrictive, requirements regarding the disclosure of information about students. Because this area of the law is complicated, it is especially important that an attorney be involved in formulating school policy under FERPA and applicable State laws.

OTHER LEGAL ISSUES

Lawsuits Against Schools or School Officials

Disagreements between parents or students and school officials about disciplinary measures usually can be resolved informally. Occasionally, however, a school's decisions and activities relating to disciplinary matters are the subject of lawsuits by parents or students against administrators, teachers, and school systems. For these reasons, it is advisable that school districts obtain adequate insurance coverage for themselves and for all school personnel for liability arising from disciplinary actions.

Suits may be brought in Federal or State court; typically, they are based on a claim that a student's constitutional or statutory rights have been
violated. Frequently, these suits will seek to revoke the school district's imposition of some disciplinary measure, for example, by ordering the reinstatement of a student who has been expelled or suspended. Suits may also attempt to recover money damages from the school district or the employee involved, or both; however, court awards of money damages are extremely rare. Moreover, although there can be no guarantee of a given result in any particular case, courts in recent years have tended to discourage such litigation.

In general, disciplinary measures imposed reasonably and in accordance with established legal requirements will be upheld by the courts. As a rule, Federal judges will not substitute their interpretations of school rules or regulations for those of local school authorities or otherwise second-guess reasonable decisions by school officials. In addition, school officials are entitled to a qualified good-faith immunity from personal liability for damages for having violated a student's Federal constitutional or civil rights. When this immunity applies, it shields school officials from any personal liability for money damages. Thus, as a general matter, personal liability is very rare, because officials should not be held personally liable unless their actions are clearly unlawful, unreasonable, or arbitrary.

When a court does award damages, the award may be "compensatory" or "punitive." Compensatory damages are awarded to compensate the student for injuries actually suffered as a result of the violation of his or her rights and cannot be based upon the abstract "value" or "importance" of the constitutional rights in question. The burden is on the student to prove that he or she suffered actual injury as a result of the deprivation. Thus, a student who is suspended, but not under the required procedures, will not be entitled to compensation if the student would have been suspended had a proper hearing been held. If the student cannot prove that the failure to hold a hearing itself caused him or her some compensable harm, then the student is entitled to no more than nominal damages, such as $1.00. "Punitive damages" are awarded to punish the perpetrator of the injury. Normally, punitive damages are awarded only when the conduct in question is malicious, unusually reckless, or otherwise reprehensible.

Parents and students can also claim that actions by a school or school officials have violated State law. For example, it can be asserted that a teacher "assaulted" a student in violation of a State criminal law. The procedures and standards in actions involving such violations are determined by each State. Some States provide a qualified immunity from tort liability under standards similar to the "good faith" immunity in Federal civil rights actions. Other States provide absolute immunity under their law for actions taken in the course of a school official's duties.
Nondiscrimination in Enforcement of Discipline

Federal law applicable to programs or activities receiving Federal financial assistance prohibits school officials who are administering discipline from discriminating against students on the basis of race, color, national origin, or sex. Schools should therefore administer their discipline policies evenhandedly, without regard to such considerations. Thus, as a general matter, students with similar disciplinary records who violate the same rule in the same way should be treated similarly. For example, if male and female students with no prior record of misbehavior are caught together smoking marijuana, it would not, in the absence of other relevant factors, be advisable for the school to suspend the male student for 10 days while imposing only an afternoon detention on the female student. Such divergent penalties for the same offense may be appropriate, however, if the student who received the harsher punishment had a history of misconduct or committed other infractions after this first confrontation with school authorities.

(For legal citations, see Reference Section p. 85.)
TOBACCO

Effects

The smoking of tobacco products is the chief avoidable cause of death in our society. Smokers are more likely than nonsmokers to contract heart disease—some 170,000 die each year from smoking-related coronary heart disease. Lung, larynx, esophageal, bladder, pancreatic, and kidney cancers also strike smokers at increased rates. Some 30 percent of cancer deaths (130,000 per year) are linked to smoking. Chronic obstructive lung diseases such as emphysema and chronic bronchitis are 10 times more likely to occur among smokers than among nonsmokers.

Smoking during pregnancy also poses serious risks. Spontaneous abortion, preterm birth, low birth weights, and fetal and infant deaths are all more likely to occur when the pregnant woman/mother is a smoker.

Cigarette smoke contains some 4,000 chemicals, several of which are known carcinogens. Other toxins and irritants found in smoke can produce eye, nose, and throat irritations. Carbon monoxide, another component of cigarette smoke, combines with hemoglobin in the blood stream to form carboxyhemoglobin, a substance that interferes with the body's ability to obtain and use oxygen.

Perhaps the most dangerous substance in tobacco smoke is nicotine. Although it is implicated in the onset of heart attacks and cancer, its most dangerous role is reinforcing and strengthening the desire to smoke. Because nicotine is highly addictive, addicts find it very difficult to stop smoking. Of 1,000 typical smokers, fewer than 20 percent succeed in stopping on the first try.

Although the harmful effects of smoking cannot be questioned, people who quit can make significant strides in repairing damage done by smoking. For pack-a-day smokers, the increased risk of heart attack dissipates after 10 years. The likelihood of contracting lung cancer as a result of smoking can also be greatly reduced by quitting.
ALCOHOL

Effects

Alcohol consumption causes a number of marked changes in behavior. Even low doses significantly impair the judgment and coordination required to drive a car safely, increasing the likelihood that the driver will be involved in an accident. Low to moderate doses of alcohol also increase the incidence of a variety of aggressive acts, including spouse and child abuse. Moderate to high doses of alcohol cause marked impairments in higher mental functions, severely altering a person's ability to learn and remember information. Very high doses cause respiratory depression and death. If combined with other depressants of the central nervous system, much lower doses of alcohol will produce the effects just described.

Repeated use of alcohol can lead to dependence. Sudden cessation of alcohol intake is likely to produce withdrawal symptoms, including severe anxiety, tremors, hallucinations, and convulsions. Alcohol withdrawal can be life-threatening. Long-term consumption of large quantities of alcohol, particularly when combined with poor nutrition, can also lead to permanent damage to vital organs such as the brain and the liver.

Mothers who drink alcohol during pregnancy may give birth to infants with fetal alcohol syndrome. These infants have irreversible physical abnormalities and mental retardation. In addition, research indicates that children of alcoholic parents are at greater risk than other youngsters of becoming alcoholics.
CANNABIS

Effects

All forms of cannabis have negative physical and mental effects. Several regularly observed physical effects of cannabis are a substantial increase in the heart rate, bloodshot eyes, a dry mouth and throat, and increased appetite.

Use of cannabis may impair or reduce short-term memory and comprehension, alter sense of time, and reduce ability to perform tasks requiring concentration and coordination, such as driving a car. Research also shows that students do not retain knowledge when they are "high." Motivation and cognition may be altered, making the acquisition of new information difficult. Marijuana can also produce paranoia and psychosis.

Because users often inhale the unfiltered smoke deeply and then hold it in their lungs as long as possible, marijuana is damaging to the lungs and pulmonary system. Marijuana smoke contains more cancer-causing agents than tobacco smoke.

Long-term users of cannabis may develop psychological dependence and require more of the drug to get the same effect. The drug can become the center of their lives.

INHALANTS

Effects

The immediate effects of inhalants include nausea, sneezing, coughing, nosebleeds, lack of coordination, and loss of appetite. Solvents and aerosol sprays decrease the heart and respiratory rates and impair judgment. Amyl and butyl nitrite cause rapid pulse, headaches, and voluntary passing of urine and feces. Long-term use may result in hepatitis or liver damage.

Deeply inhaling the vapors, or using large amounts over a short time, may result in disorientation, violent behavior, unconsciousness, or death. High concentrations of inhalants can cause suffocation by displacing the oxygen in the lungs or by depressing the central nervous system to the point that breathing stops.

Long-term use can cause weight loss, fatigue, electrolyte imbalance, and muscle fatigue. Repeated sniffing of concentrated vapors over time can permanently damage the nervous system.

**Cocaine**

**Effects**

Cocaine stimulates the central nervous system. Its immediate effects include dilated pupils and elevated blood pressure, heart rate, respiratory rate, and body temperature. Occasional use can cause a stuffy or runny nose, while chronic use can ulcerate the mucous membrane of the nose. Injecting cocaine with contaminated equipment can cause AIDS, hepatitis, and other diseases. Preparation of freebase, which involves the use of volatile solvents, can result in death or injury from fire or explosion. Cocaine can produce psychological and physical dependency, a feeling that the user cannot function without the drug. In addition, tolerance develops rapidly.

Crack or freebase rock is extremely addictive, and its effects are felt within 10 seconds. The physical effects include dilated pupils, increased pulse rate, elevated blood pressure, insomnia, loss of appetite, tactile hallucinations, paranoia, and seizures.

The use of cocaine can cause death by cardiac arrest or respiratory failure.

OTHER STIMULANTS

Effects
Stimulants can cause increased heart and respiratory rates, elevated blood pressure, dilated pupils, and decreased appetite. In addition, users may experience sweating, headache, blurred vision, dizziness, sleeplessness, and anxiety. Extremely high doses can cause a rapid or irregular heartbeat, tremors, loss of coordination, and even physical collapse. An amphetamine injection creates a sudden increase in blood pressure that can result in stroke, very high fever, or heart failure.

In addition to the physical effects, users report feeling restless, anxious, and moody. Higher doses intensify the effects. Persons who use large amounts of amphetamines over a long period of time can develop an amphetamine psychosis that includes hallucinations, delusions, and paranoia. These symptoms usually disappear when drug use ceases.

DEPRESSANTS

Effects

The effects of depressants are in many ways similar to the effects of alcohol. Small amounts can produce calmness and relaxed muscles, but somewhat larger doses can cause slurred speech, staggering gait, and altered perception. Very large doses can cause respiratory depression, coma, and death. The combination of depressants and alcohol can multiply the effects of the drugs, thereby multiplying the risks.

The use of depressants can cause both physical and psychological dependence. Regular use over time may result in a tolerance to the drug, leading the user to increase the quantity consumed. When regular users suddenly stop taking large doses, they may develop withdrawal symptoms ranging from restlessness, insomnia, and anxiety to convulsions and death.

Babies born to mothers who abuse depressants during pregnancy may be physically dependent on the drugs and show withdrawal symptoms shortly after they are born. Birth defects and behavioral problems also may result.

HALLUCINOGENS

Effects

Phencyclidine (PCP) interrupts the functions of the neocortex, the section of the brain that controls the intellect and keeps instincts in check. Because the drug blocks pain receptors, violent PCP episodes may result in self-inflicted injuries.

The effects of PCP vary, but users frequently report a sense of distance and estrangement. Time and body movement are slowed down. Muscular coordination worsens and senses are dulled. Speech is blocked and incoherent.

Chronic users of PCP report persistent memory problems and speech difficulties. Some of these effects may last 6 months to a year following prolonged daily use. Mood disorders—depression, anxiety, and violent behavior—also occur. In later stages of chronic use, users often exhibit paranoid and violent behavior and experience hallucinations.

Large doses may produce convulsions and coma, as well as heart and lung failure.

Lysergic acid (LSD), mescaline, and psilocybin cause illusions and hallucinations. The physical effects may include dilated pupils, elevated body temperature, increased heart rate and blood pressure, loss of appetite, sleeplessness, and tremors.

Sensations and feelings may change rapidly. It is common to have a bad psychological reaction to LSD, mescaline, and psilocybin. The user may experience panic, confusion, suspicion, anxiety, and loss of control. Delayed effects, or flashbacks, can occur even after use has ceased.

NARCOTICS

Effects

Narcotics initially produce a feeling of euphoria that often is followed by drowsiness, nausea, and vomiting. Users also may experience constricted pupils, watery eyes, and itching. An overdose may produce slow and shallow breathing, clammy skin, convulsions, coma, and possible death.

Tolerance to narcotics develops rapidly and dependence is likely. The use of contaminated syringes may result in disease such as AIDS, endocarditis, and hepatitis. Addiction in pregnant women can lead to premature, stillborn, or addicted infants who experience severe withdrawal symptoms.

## DESIGNER DRUGS

### Effects

Illegal drugs are defined in terms of their chemical formulas. To circumvent these legal restrictions, underground chemists modify the molecular structure of certain illegal drugs to produce analogs known as designer drugs. These drugs can be several hundred times stronger than the drugs they are designed to imitate.

Many of the so-called designer drugs are related to amphetamines and have mild stimulant properties but are mostly euphoriants. They can produce severe neurochemical damage to the brain.

The narcotic analogs can cause symptoms such as those seen in Parkinson's disease: uncontrollable tremors, drooling, impaired speech, paralysis, and irreversible brain damage. Analogs of amphetamines and methamphetamines cause nausea, blurred vision, chills or sweating, and faintness. Psychological effects include anxiety, depression, and paranoia. As little as one dose can cause brain damage. The analogs of phencyclidine cause illusions, hallucinations, and impaired perception.

| Analogs of Phencyclidine (PCP) | PCPy, PCE | White powder | Taken orally, Injected, Smoked
ANABOLIC STEROIDS

Anabolic steroids are a group of powerful compounds closely related to the male sex hormone testosterone. Developed in the 1930s, steroids are seldom prescribed by physicians today. Current legitimate medical uses are limited to certain kinds of anemia, severe burns, and some types of breast cancer.

Taken in combination with a program of muscle-building exercise and diet, steroids may contribute to increases in body weight and muscular strength. Because of these properties, athletes in a variety of sports have used steroids since the 1950s, hoping to enhance performance. Today, they are being joined by increasing numbers of young people seeking to accelerate their physical development.

Steroid users subject themselves to more than 70 side effects ranging in severity from liver cancer to acne and including psychological as well as physical reactions. The liver and the cardiovascular and reproductive systems are most seriously affected by steroid use. In males, use can cause withered testicles, sterility, and impotence. In females, irreversible masculine traits can develop along with breast reduction and sterility. Psychological effects in both sexes include very aggressive behavior known as “roid rage” and depression. While some side effects appear quickly, others, such as heart attacks and strokes, may not show up for years.

Signs of steroid use include quick weight and muscle gains (if steroids are being used in conjunction with a weight training program); behavioral changes, particularly increased aggressiveness and combativeness; jaundice; purple or red spots on the body; swelling of feet or lower legs; trembling; unexplained darkening of the skin; and persistent unpleasant breath odor.

Steroids are produced in tablet or capsule form for oral ingestion, or as a liquid for intramuscular injection.
Sources of Information

The Department of Education does not endorse private or commercial products or services, or products or services not affiliated with the Federal Government. The sources of information listed on this and the following pages are intended only as a partial list of the resources that are available to readers of this booklet. Readers are encouraged to research and inform themselves of the products or services, relating to drug and alcohol abuse, that are available to them. Readers are encouraged to visit their public libraries to find out more about the dangers of drug and alcohol abuse, or to call local, State, or national hotlines for further information, advice, or assistance.

TOLL-FREE INFORMATION

1-800-COCAINE—COCAINE HELPLINE
A round-the-clock information and referral service. Recovering cocaine addict counselors answer the phones, offer guidance, and refer drug users and parents to local public and private treatment centers and family learning centers.

1-800-NCA-CALL—NATIONAL COUNCIL ON ALCOHOLISM INFORMATION LINE
The National Council on Alcoholism, Inc., is the national nonprofit organization combating alcoholism, other drug addictions, and related problems. Provides information about NCA's State and local affiliates' activities in their areas. Also provides referral services to families and individuals seeking help with an alcohol or other drug problem.

1-800-862-HELP—NIDA HOTLINE
NIDA Hotline, operated by the National Institute on Drug Abuse, is a confidential information and referral line that directs callers to cocaine abuse treatment centers in the local community. Free materials on drug use also are distributed in response to inquiries.

1 800-241-9748—PRIDE DRUG INFORMATION HOTLINE
A national resource and information center, Parents' Resource Institute for Drug Education (PRIDE) refers concerned parents to parent groups in their State or local area; gives information on how parents can form a group in their community; provides telephone consultation and referrals to emergency health centers; and maintains a series of drug information tapes that callers can listen to, free of charge by calling after 5:00 p.m.
GENERAL READINGS

Publications listed below are free unless otherwise noted.

Adolescent Drug Abuse: Analyses of Treatment Research, by Elizabeth R. Ruhdert and John Grabowski, 1988. This 139-page book assesses the adolescent drug user and offers theories, techniques, and findings about treatment and prevention. It also discusses family-based approaches. National Clearinghouse for Alcohol and Drug Information, P.O. Box 2345, Rockville, MD 20852.

Adolescent Peer Pressure Theory, Correlates, and Program Implications for Drug Abuse Prevention, 19... U.S. Department of Health and Human Services. This 115-page book focuses on constructive ways of channeling peer pressure. This volume was developed to help parents and professionals understand the pressures associated with adolescence, the factors associated with drug use, and other forms of problem behavior. Different peer program approaches, ways in which peer programs can be implemented, and research suggestions are included. National Clearinghouse for Alcohol and Drug Information, P.O. Box 2345, Rockville, MD 20852.

Building Drug-Free Schools, by Richard A. Hawley, Robert C. Peterson, and Margaret C. Mason, 1986. This four-part drug prevention kit for grades K-12 provides school staff, parents, and community groups with suggestions for developing a workable school drug policy, K-12 curriculum, and community support. The kit consists of three written guides ($50) and a film ($275). American Council for Drug Education, 204 Monroe Street, Suite 110, Rockville, MD 20852. Telephone (301) 294-0600.

The Challenge newsletter highlights successful school-based programs, provides suggestions on effective prevention techniques and the latest research on drugs and their effects. Published bimonthly by the U.S. Department of Education and available from the National Clearinghouse for Alcohol and Drug Information, P.O. Box 2345, Rockville, MD 20852.

Courtwatch Manual. A 111-page manual explaining the court system, the criminal justice process, Courtwatch activities, and what can be done before and after a criminal is sentenced. Washington Legal Foundation, 1705 N Street, NW, Washington, DC 20036. Enclose $5 for postage and handling. Telephone (202) 857-0240.

Drug Prevention Curricula: A Guide to Selection and Implementation, by the U.S. Department of Education, 1988. Written with the help of a distinguished advisory panel, this 76-page handbook represents the best current thinking about drug prevention education. It shows what to look for when adopting or adapting ready-made curricula, and suggests important lessons that ought to be part of any prevention education sequence. National Clearinghouse for Alcohol and Drug Information, P.O. Box 2345, Rockville, MD 20852.

Strategies for Controlling Adolescent Drug Use, by Michael J. Polich et al., 1984. This 196-page book reviews the scientific literature on the nature of drug use and the effectiveness of drug law enforcement, treatment, and prevention programs. The Rand Corporation, 1700 Main Street, P.O. Box 2138, Santa Monica, CA 90406-2138, R-3076-CHF. Telephone (213) 393-0411, paperback $15.00.

Team Up for Drug Prevention With America's Young Athletes. A free booklet for coaches that includes information about alcohol and other drugs, reasons why athletes use drugs, suggested activities for coaches, a prevention program, a survey for athletes and coaches, and sample letters to parents. Drug Enforcement Administration, Demand Reduction Section, 1405 I Street, NW, Washington, DC 20537. Telephone (202) 786-4096.

The Fact Is...You Can Prevent Alcohol and Other Drug Problems Among Elementary School Children, 1988. This 17-page booklet includes audiovisuals, program descriptions, and professional and organizational resources to assist educators and parents of young children. National Clearinghouse for Alcohol and Drug Information, P.O. Box 2345, Rockville, MD 20852.

VIDEOTAPES

The following drug prevention videos were developed by the U.S. Department of Education. They are available for loan through the Department's Regional Centers listed on pages 78 and 79 and the National Clearinghouse for Alcohol and Drug Information, P.O. Box 2345, Rockville, MD 20352; (301) 468-2600.

Elementary School

The Drug Avengers. Ten 5-minute animated adventures that urge caution about ingesting unfamiliar substances; encourage students to trust their instincts when they think something is wrong; and show that drugs make things worse, not better.

Fast Forward Future. A magical device allows youngsters to peer into the future and see on a TV screen what will happen if they use drugs and what will happen if they remain drug free.

Straight Up. A fantasy adventure that features information on the effects of drugs, developing refusal skills, building self-esteem, and resisting peer pressure.

Junior High

Straight at Ya. Tips on peer pressure, saying no, and building self-esteem.
Lookin' Good. A two-part series based on actual incidents that convey the dangers of drug use and promote the use of peer support groups.

High School

Speak Up, Speak Out: Learning to Say No to Drugs. Gives students specific techniques they can use to resist peer pressure and say no to drug use.

Dare to Be Different. Uses the friendship of two athletes in their last year of high school to illustrate the importance of goals and values in resisting pressures to use drugs.

Downfall: Sports and Drugs. Shows how drugs affect athletic performance and examines the consequences of drug use, including steroid use, on every aspect of an athlete's life—career, family, friends, sense of accomplishment, and self-esteem.

Private Victories. Illustrates the effects of drug and alcohol use on students and the value of positive peer influences in resisting peer pressure to use drugs.

Other Videotapes

Say No! to Drugs. A videotape that offers a practical, easy-to-follow approach to improve family communications, particularly on the subject of adolescent drug and alcohol use. It includes interviews with experts in the field. NIMCO, P.O. Box 009-GAM, Calhoun, KY 42327. Telephone 1-800-652-6662. $64.95.
SOURCES OF FREE CATALOGS OF PUBLICATIONS

Crimp Care Publications. A source for pamphlets, books, and charts on drug and alcohol use, chemical awareness, and self-help. Telephone 1-800-328-3330 or (612) 559-4800.

National Association for Children of Alcoholics. A source for books, pamphlets, and handbooks for children of alcoholics. Conducts regional workshops and provides a directory of local members and meetings. Telephone (714) 499-3889.
SCHOOL AND COMMUNITY RESOURCES

ACTION Drug Prevention Program. ACTION, the Federal volunteer agency, works at the local, State, and national levels to encourage and help fund the growth of youth, parents, and senior citizen groups and networks committed to helping youth remain drug free. 806 Connecticut Avenue, NW, Suite M-606, Washington, DC 20525. Telephone (202) 634-9757.

American Council for Drug Education (ACDE). ACDE organizes conferences; develops media campaigns; reviews scientific findings; publishes books, a quarterly newsletter, and education kits for physicians, schools, and libraries; and produces films. 204 Monroe Street, Suite 110, Rockville, MD 20852. Telephone (301) 294-0600.

Committees of Correspondence. This organization provides a newsletter and bulletins on issues, ideas, and contacts. Publishes a resource list and pamphlets. Membership is $15.00. 57 Conant Street, Room 113, Danvers, MA 09123. Telephone (508) 774-2641.

Drug-Free Schools and Communities—Regional Centers Program, U.S. Department of Education. This program is designed to help local school districts, State education agencies, and institutions of higher education to develop alcohol and drug education and prevention programs. Five regional centers provide training and technical assistance. For further information on center services, contact the center in your region:

Northeast Regional Center for Drug-Free Schools and Communities
12 Overton Ave.
Sayville, NY 11782-0403
(516) 589-7022

Southeast Regional Center for Drug-Free Schools and Communities
The Hurt Building
50 Hurt Plaza, Suite 210
Atlanta, GA 30303
(404) 688-9227

Connecticut, Delaware, Maine, Maryland, Massachusetts, New Hampshire, New Jersey, New York, Ohio, Pennsylvania, Rhode Island, Vermont

Alabama, District of Columbia, Florida, Georgia, Kentucky, North Carolina, South Carolina, Tennessee, Virginia, West Virginia, Virgin Islands, and Puerto Rico
Midwest Regional Center for Drug-Free Schools and Communities
2001 N. Clybourn
Suite 302
Chicago, IL 60614
(312) 883-8888

Southwest Regional Center for Drug-Free Schools and Communities
555 Constitution Ave.
Norman, OK 73037
(405) 325-1454
(800) 234-7972 (outside Oklahoma)

Western Regional Center for Drug-Free Schools and Communities
101 S.W. Main St., Suite 500
Portland, OR 97204
(503) 275-9479
(800) 547-6339 (outside Oregon)

Indiana, Illinois, Iowa, Michigan, Minnesota, Missouri, Nebraska, North Dakota, South Dakota, Wisconsin

Arizona, Arkansas, Colorado, Kansas, Louisiana, Mississippi, New Mexico, Oklahoma, Texas, Utah

For general program information, contact the U.S. Department of Education, Drug-Free Schools Staff, 400 Maryland Avenue, SW, Washington, DC 20202-6151. Telephone (202) 732-4599.

Drug-Free Schools and Communities—State and Local Programs, U.S. Department of Education. This program provides each State education agency and Governor's office with funds for alcohol and drug education and prevention programs in local schools and communities. For information on contact persons in your State, contact the U.S. Department of Education, Drug-Free Schools Staff, 400 Maryland Avenue, SW, Washington, DC 20202-6151. Telephone (202) 732-4599.

Families in Action. This organization maintains a drug information center with more than 200,000 documents. Publishes Drug Abuse Update, a quarterly journal containing abstracts of articles published in medical and academic journals and newspapers. $25 for four issues. 2296 Henderson Mill Road, Suite 204, Atlanta, GA 30345. Telephone (404) 934-6364.

"Just Say No" Clubs. These nationwide clubs provide support and positive peer reinforcement to youngsters through workshops, seminars, newsletters, walk-a-thons, and a variety of other activities. Clubs are organized by schools, communities, and parent groups. Just Say No Foundation, 1777 N. California Boulevard, Suite 200, Walnut Creek, CA 94596. Telephone 1-800-258-2766 or (415) 939-6666.
Narzotics Education, Inc. This organization publishes pamphlets, books, teaching aids, posters, audiovisual aids, and prevention magazines designed for classroom use: WINNER for Preteens and LISTEN for teens. 6830 Laurel Street, NW, Washington, DC 20012. Telephone 1-800-548-8700, or in the Washington, DC area, call (202) 722-6740.

Parents' Resource Institute for Drug Education, Inc. (PRIDE). This national resource and information center offers consultant services to parent groups, school personnel, and youth groups, and provides a drug-use survey service. It conducts an annual conference; publishes a newsletter, a youth group handbook, and other publications; and sells and rents books, films, videos, and slide programs. Membership is $20. The Hurt Building, 50 Hurt Plaza, Suite 210, Atlanta, GA 30303. Telephone (404) 577-4500; 1-800-241-9746.

TARGET. Conducted by the National Federation of State High School Associations, an organization of interscholastic activities associations, TARGET offers workshops, training seminars, and an information bank on chemical use and prevention. It has a computerized referral service to substance abuse literature and prevention programs. National Federation of State High School Associations, 11724 Plaza Circle, P.O. Box 20626, Kansas City, MO 64195. Telephone (816) 464-5400.

Toughlove. This national self-help group for parents, children, and communities emphasizes cooperation, personal initiative, avoidance of blame, and action. It publishes a newsletter, brochures, and books and holds workshops. P.O. Box 1069, Doylestown, PA 18901. Telephone 1-800-333-1069 or (215) 348-7090.

U.S. Clearinghouse. (A publication list is available on request, along with placement on a mailing list for new publications. Single copies are free.) National Clearinghouse for Alcohol and Drug Information (NCADI) P.O. Box 2345 Rockville, MD 20852 (301) 468-2600

NCADI combines the clearinghouse activities previously administered by the National Institute on Alcoholism and Alcohol Abuse and the National Institute on Drug Abuse.
READINGS ON LEGAL ISSUES

The Journal of Law and Education includes articles on education issues and a section on recent developments in the law. It is published quarterly by Jefferson Law Book Company, P.O. Box 1936, Cincinnati, OH 45201-1936.

School Law Bulletin is a quarterly magazine published by the Institute of Government, University of North Carolina at Chapel Hill, Chapel Hill, NC 27599-3330.

School Law News is a newsletter that describes recent developments in the field. Capitol Publications, Inc., 1300 North 17th Street, Arlington, VA 22209.

The Schools and the Courts contains briefs of selected court cases involving elementary and secondary schools. It is published quarterly by College Administration Publications, P.O. Box 8492, Asheville, NC 28814.

West's Education Law Reporter reprints the full text of Federal and State education law cases. Also included are education articles and comments selected from legal periodicals. West Publishing Company, 50 W. Kellogg Boulevard, P.O. Box 64526, St. Paul, MN 55164-0526.

OTHER SOURCES OF MATERIALS ON LEGAL ISSUES

Council of School Attorneys, National School Boards Association (NSBA), provides a national forum on the practical legal problems faced by local public school districts and the attorneys who serve them. NSBA conducts programs and seminars and publishes monographs on a wide range of legal issues affecting public school districts. 680 Duke Street, Alexandria, VA 22314, Telephone (703) 838-NSBA.

National Organization on Legal Problems of Education (NOLPE) is a nonprofit, nonadvocacy organization that disseminates information about current issues in school law. NOLPE publishes newsletters, serials, books, and monographs on a variety of school law topics; hosts seminars; and serves as a clearinghouse for information on education law. 3601 SW 29th Street, Suite 223, Topeka, KS 66614. Telephone (913) 273-3550.

How the Law Can Help
1Bethel School District v. Fraser, 106 S. Ct. 3159, 3164 (1986)
4See 21 U.S.C. § 845a
6See e.g., Zamora v. Pomeroy, 639 F.2d 662 (10th Cir. 1981) (locker search conducted after trained police dog indicated presence of marijuana inside)
7See e.g., Horton v. Goose Creek Independent School District, 690 F.2d 470, 476-77 (5th Cir. 1982) (en banc) (citing cases and so holding), cert. denied 463 U.S. 1207 (1983).
8New Jersey v. T.L.O., 469 U.S. at 343.
9Ibid. at 340.
10Ibid. at 343-48.
15Horton v. Goose Creek Independent School District, 690 F 2d at 477
17Bethel School District v. Fraser, 106 S. Ct at 3166
19One of the leading cases is Dixon v. Alabama State Board of Education, 294 F 2d 150 (5th Cir.), cert. dened 398 U.S. 930 (1961)
21See generally 20 U.S.C. § 1232g and 34 C.F.R Part 99
The term education records is defined as records that are directly related to a student and maintained by or for the education agency or institution. The term does not include certain records maintained by a separate law enforcement unit of an education agency.

FERPA permits a school to disclose information from education records to its own officials (including teachers) who have a legitimate educational interest in the information. A school may determine in its FERPA policy that one such interest is the need to decide on the appropriateness of discipline.

An eligible student is a student who is 18 or older or attending an institution of postsecondary education.

Under these cases, officials will be immune from personal liability so long as their conduct does not violate clearly established constitutional or Federal statutory rights of which a reasonable person should have known.
