Adult Reading Programs; Annotated Bibliographies; Class Activities; Classroom Techniques; Elementary Secondary Education; Higher Education; Learning Problems; Reading Difficulties; Reading Research; *Reading Strategies; *Reading Teachers; *Remedial Reading

Focusing on recent research and strategies for the remedial reader, this FAST Bib offers a 27-item list of annotated selections. It includes sections on overview and research, suggestions for reading specialists, strategies and activities for classroom teachers, and strategies for assisting adults. All selections in the bibliography date from 1987 through 1989. (NKA)
This FAST Bib focuses on recent research and strategies for the remedial reader. Included is an overview and recent research, resources on specific strategies for the reading specialist in a pull-out situation, and citations for suggestions and activities for the classroom teacher working with remedial readers. The fourth section contains sources with strategies for those working with the adult remedial reader.

Two types of citations are included in this bibliography: citations to ERIC documents and citations to journal articles. The distinction between the two is important only if you are interested in obtaining the full text of any of these items. To obtain the full text of ERIC documents, you will need the ED number given in square brackets following the citation. For approximately 98% of the ERIC documents, the full text can be found in the ERIC microfiche collection. This collection is available in over 800 libraries across the country. Alternatively, you may prefer to order your own copy of the document from the ERIC Document Reproduction Service (EDRS). You can contact EDRS by writing to 3900 Wheeler Avenue, Alexandria, Virginia 22304, or by telephoning them at (800) 227-3742 or (703) 823-0500.

Full text copies of journal articles are not available in the ERIC microfiche collection or through EDRS. Articles can be acquired most economically from library collections or through interlibrary loan. Articles from some journals are also available through University Microfilms International at (800) 732-0616 or through the Original Article Tear Sheet Service of the Institute for Scientific Information at (800) 523-1850.

Overview and Research

Determines whether less able readers could use the strategies they had been taught by investigating the transfer effects of training in the use of graphic organizers and summary writing on readers’ recognition of the compare/contrast text structure. Finds that transfer of training to real-world tasks did occur at each of the ability levels tested.

Addresses the negative effects of poor decoding on reading comprehension, and reviews successful remedial strategies used with poor readers. Proposes an extensive exposure to printed discourse as well as phrase and sentence reading used in successful remediation as keys to improving poor readers’ comprehension.

Identifies the poor reader and offers assistance for that student. Points out that recent research has shown that phonics instruction is important in the early stages of reading, but some students simply do not learn the decoding skills to advance their reading skills. States that explicit phonics instruction appears not to work beyond the second grade, so other remediation techniques, such as computer-assisted instruction, peer tutors, and the “vowel-sound-stick” method, should be implemented.

Kerstin, Frank; Ferguson, Janice. “Narration in Reading Remediation.” 1988. 21p. [ED 299 536]

Examines the whole-part application of the language experience approach to reading as used for students whose reading development is severely delayed. Finds that the language experience approach could prove to be a viable technique
in reading instruction for prereaders, readers, and illiterate adults.

Reviews 13 supplementary reading material series that are useful for providing instruction and practice with a variety of comprehension skills. Includes evaluative comments for each series, noting series' emphases, levels, and publisher.

Describes research in a repeated measure design using third-grade students with learning disabilities who read under three treatment conditions: corrective feedback on every oral reading error, correction on meaning change errors only, and no feedback regardless of error. Finds that corrective feedback on oral reading errors improved both word recognition accuracy and reading comprehension.

Refutes the notion that remedial readers are unable to use context clues, arguing that poor readers simply have difficulty with automatic word identification. Suggests three approaches to heighten students' sensitivity to the use of context clues.

Investigates the effects of goal setting on children's self-efficacy and skillful performance during reading comprehension instruction. Uses fourth and fifth graders who had regularly received remedial reading comprehension instruction and a pretest consisting of a self-efficacy test assessing their perceived capabilities for correctly answering different types of questions. Assigns subjects randomly to process goal, product goal, and instructional goal groups. Results supported the theory that providing students with a specific learning goal can have important effects on achievement behaviors.

Tests different methods of teaching how to identify the main idea of expository paragraphs, using 47 remedial reading sixth and eleventh graders. Includes strategy training, classification training, combined training, and practice only. Reports that strategy training improved performance; classification training improved performance only for same-content material.

### Suggestions for Reading Specialists

Suggests that the lack of coherence between remedial programs and regular classrooms impedes the progress of students with reading difficulties. Provides an outline for an instructional program in which classroom and specialist teachers collaborate to provide the learner with coherent and balanced instruction.

Identifies essential characteristics of reading and reading acquisition, explains difficulties in learning how to read, explores variables within the individual child which may later affect reading skills, and outlines the implications for at-risk children. Discusses literacy acquisition goals and three areas of possible deficits. Suggests strategies for improving reading skills.

Presents a technique using self-image psychology that enables remedial students to improve their reading and vocabulary skills as they improve their attitudes about their own abilities.

Describes how a remedial reading teacher helped a nine-year-old nonreader progress toward becoming a reader. Points out the importance of
increasing the student's confidence, gaining trust, and providing remedial instruction which is closely connected with other areas of the student's life.

Describes a remediation program designed to promote students' self-confidence, in addition to promoting fluent reading and enhancing comprehension. Notes that the program uses real books with meaningful language patterns, presented so that each student experiences success.

Describes Reading Recovery, a program based on the principle that children learn to read by reading and that the focus of reading is always on meaning. Reports the successes of the program.

Strategies and Activities for Classroom Teachers

Describes two approaches—direct explanation and reciprocal teaching—for helping poor readers understand how the reading process works and how to study and learn from a text. Explains how to plan a lesson, and offers two samples.

Howard, Donald E. “Modifying Negative Attitudes in Poor Readers Will Generate Increased Reading Growth and Interest,” Reading Improvement, v25 n1 p39-45 Spr 1988.

Examines a remedial reading program for grades four and five. Claims that a reading program featuring oral language, good children's literature, interesting reading activities, writing, and attractive reading incentives in an informal classroom structure can change negative reading attitudes and improve reading abilities.

“Practical Teaching Ideas (In the Classroom),” Reading Teacher, v42 n3 p256-64 Dec 1988.

Describes the following teaching ideas: note writing; books supplementing a unit on measuring; parents' activities calendars; quick phonics inventory; map reading; language experience chart stories; predicting activities with titles; summer mail for learning disabled students; role playing; teaching guides for novels; sentence transformation; and recorded and big books.

Contains information on how the principal can make a major difference in the lives of remedial and at-risk students. Lists several useful suggestions and methods for children who are at risk of failing.

Describes a technique called “vowel sound stick,” which uses students' limited abilities in phonics, with an emphasis placed on syllabication to give the remedial reader a simple method of word attack.

Suggests that many reading problems may be caused by insufficient background knowledge rather than lack of reading skills. Provides suggestions about how teachers can integrate concepts and materials from social studies into their reading lessons to build students' background knowledge.

Strategies for Assisting Adults

Identifies research on techniques of formal and informal assessment, psychological and social factors, and remediation programs. Suggests that the causes of reading disabilities are multiple, arising largely from educational and social contexts outside the individual.

Describes a major problem in remedial courses: finding a valid textbook that underprepared students can read. Contains information on an anthology which allows the class to begin on any level using the stories that cover a variety of subjects and evoke a wide range of feelings, representing worthwhile, world-class literature. Reports that the students do not seem to be embarrassed to read children's stories, in part because the book is an actual college text and also because students are encouraged to read aloud to children.

Advocates teaching remedial reading in the context of the liberal arts. Identifies problems with developmental reading texts. Recommends the use of remedial reading materials that address socially and culturally significant topics appropriate for college-level study. Offers a sample lesson sequence illustrating the simultaneous acquisition of skills and content.

Compares freshmen students' perceptions of their reading abilities with their actual abilities and their cumulative grade point averages. Concludes that students' perceptions of their abilities were independent of their actual reading abilities, and students with the least accurate perceptions had the lowest cumulative grade point average after one year.

Argues that reading should be taught as a process. Suggests sources for information on the active reading process (missing in most textbooks). Describes a method for integrating the reading process and collaborative learning in a college writing class.

Whitt, Mary F. "The Metacognition Process and Its Relationship to Reading, Problem-Solving and Comprehension Instruction for Developmental Students in Institutions of Higher Education." 1988. 17p. [ED 299 543] Reviews current research on metacognition. Demonstrates an awareness of and attention to problems developmental readers face using metacognitive skills during instruction that may serve to reduce these readers' tendency to practice improper learning behavior, thereby improving their problem-solving efforts.
