Congress 101st; Working Poor

This document comprises hearings on the poverty and educational aspects of the labor shortage. Twenty witnesses testified, including Secretary of the U.S. Department of Labor Elizabeth Dole, Secretary of the U.S. Department of Education Lauro F. Cavazos, legislators, program administrators, and three working mothers. Testimony included the following information: (1) welfare recipients need remedial education and job training as well as support services to move from dependency to self-sufficiency; (2) the JobPlus program (Minneapolis, Minnesota) is an example of how the private sector can work with social service agencies to provide job readiness training; (3) the minimum wage is not sufficient to support a family; (4) the Employment and Training Choices Program (Massachusetts) provides comprehensive health care, child care, and employment training for welfare recipients; (5) America must build a first-class work force capable of responding to domestic and foreign competition by improving the basic skills of youth and upgrading the skills of those currently working, and the workplace must adapt to the increasing number of women in the work force by providing special employee benefits; (6) emphasis needs to be placed on educating non-college bound youth because the supply of unskilled and uneducated labor is increasing while the demand for unskilled labor is declining; (7) federal education funds should focus on higher expectations, greater access to education, and more accountability in the educational system; (8) federal, state, and local programs should focus on early childhood education, parent involvement, and teacher preparation. The responses of Secretary Dole and Secretary Cavazos to questions from the Committee and a table illustrating the household budget of a working mother are appended. (FMW)

THE LABOR SHORTAGE—POVERTY AND EDUCATIONAL ASPECTS

The Poverty Surplus

THURSDAY, JANUARY 26, 1989

U.S. SENATE,
COMMITTEE ON LABOR AND HUMAN RESOURCES,
Washington, DC.

The committee met, pursuant to notice, at 1:35 p.m., in room SD-430, Dirksen Senate Office Building, Senator Edward M. Kennedy (chairman of the committee) presiding.
Present: Senators Kennedy, Pell, Thurmond, Cochran, Coats, and Durenberger.

OPENING STATEMENT OF SENATOR KENNEDY

The CHAIRMAN. The committee will come to order.

Today we begin the work of the Labor and Human Resources Committee in the new Congress. In the last Congress, this committee reported 45 pieces of legislation that have since been signed into public law. These include a number of reauthorizations of existing authority, but they also include measures such as requiring notice to workers of plant closings, banning lie detectors in the workplace, establishing a national war on AIDS, linking the Nation's schools by satellite, and creating a literacy corps of college students to teach in the public schools.

While our legislative agenda has been diverse, it has sought three fundamental goals. We want a good job for every worker; we want a good worker for every job; and we want to invest in the future.

Our hearings today and tomorrow will set out the problems we face in reaching these three goals and the strategy we are pursuing to solve them. We will hear this afternoon from the Secretary of Labor, Elizabeth Dole, on the unprecedented labor shortage likely to confront the Nation in the next decade and well into the beginning of the next century, and we will hear tomorrow morning from Secretary of Education Cavazos about the role of the schools in addressing that shortage.

For the first time since the labor shortage caused by the Second World War, America will have more jobs than workers. The labor shortage has already emerged in some parts of the country, notably, Massachusetts, and within certain professions—nursing is a prime example.
These are warning signs. The Workforce 2000 study by the Department of Labor is more comprehensive. It provides unmistakable advance notice that unless we act now, America will soon be without enough hands on deck to get the work of America done.

This problem would be pressing enough even if it signalled merely a shortage of workers. More than in the past, however, the jobs of the future will require solid basic skills in reading and communications, in mathematics and computers.

Recruiting more men and women into the work force will not solve the problem; we must also close the skills gap.

These challenges are serious, but they are also an historic opportunity. Since 1969, the poverty rate has fluctuated between 11 and 15 percent, and that rate has tended to follow the unemployment rate. This suggests that the coming labor shortage may be the catalyst we need to permanently break the cycle of poverty.

In effect, we have a labor shortage and a poverty surplus, and with the right policies, we could use them to solve each other.

Half of those on welfare today have been on welfare for years and are likely to remain on welfare for years to come. The peaks and troughs of the business cycle have been irrelevant to their fortunes. Prosperity passes them by and recession merely brings more company to their misery. But we know now from the experience of Massachusetts and other States that these people can succeed. The right combination of policies enables them to enter the work force and to stay in it.

For many Americans who have been routinely missed by economic prosperity, however, work is a hardship, not an opportunity. For most welfare recipients, a minimum wage job pays less than they receive in AFDC and food stamps. For all AFDC recipients, the decision to take a job means a loss of Medicaid benefits and the added cost of child care.

One result of these three gaps—the wage gap, the health gap, the child care gap—is that parents who do elect to work rather than accept welfare often do so out of a devotion to the work ethic rather than out of a cold calculation of their children’s financial interest. Another result is that many who choose work return to welfare. In Michigan, 80 percent of those who came back to welfare had been placed in jobs that did not provide health insurance.

Sub-poverty wages and lack of child care are also powerful barriers to independence for these potential workers. In other words, the minimum conditions of work are no longer sufficient in many cases to meet the minimum needs of workers.

Employers also face barriers as they look for workers. We are already in the midst of a growing skills gap between what employers need and what schools produce. Business leaders estimate that they are spending tens of billions of dollars a year to raise the skills of their workers to the level that a high school graduate should possess.

As the labor shortage intensifies, as schools continue to decline, and as the jobs of the future become increasingly technical, these costs will accelerate.

Answers are not lacking. We know, for instance, that quality early childhood education dramatically changes the future employment outcomes of children who receive it. Graduates of the Perry...
Preschool Program in Michigan are twice as likely to work, half as likely to be on AFDC, as children who do not receive such education.

The Committee for Economic Development estimates that this country will save five dollars in future costs for every dollar that we invest today in early childhood education. As the dozens of reports on the coming labor shortage, particularly of skilled workers, make clear, the failure to invest these dollars is the highest tax we can pay.

Business leaders have begun to highlight these issues and we shall hear from some of them today. Employers see the enormous stake that they have in the success of schools. Our efforts to close these gaps cannot be modest if only because the cost of failure will be unacceptably high to business and society.

To paraphrase the saying of a generation ago: What is good for Roxbury, Harlem and Watts is good for General Motors, IBM and AT&T. Now is the time to change the terms and goals of our policy debate. In meeting these challenges and opportunities, we can forge a new alliance between business, the schools, Government and workers, and yes, even between Democrats and Republicans.

Demography is destiny. The next decade is inviting us to shape ours now. If we fail, we remain trapped in the old arguments and obsolete allegiances of the past, and we will fail our children, fail our workers and fail our country.

I might just mention here an article in Fortune Magazine, "Saving the Schools." about a conference of corporate leaders, including many of them on this very same issue and question. Really, a very unique opportunity is before us, and I would hope that through the hearings of today and tomorrow we can lay out this premise, which hopefully will set the framework which the Human Resources Committee will attend to over the course of this session of the Congress.

At this point I will enter into the record the prepared statements of Senators Hatch and Simon.

[The prepared statements follow:]
Mr. Chairman, I welcome all of our witnesses this afternoon, especially the new Secretary of Labor, Elizabeth Dole.

I agree that the committee should explore ways of facilitating the training and education of people who have so much to offer to our economy. Perhaps this is a timely topic given the fifth year anniversary of JTPA's implementation last October and the work just beginning on the reauthorization of the Carl Perkins Vocational Education Act.

I would like to make one observation that I think is relevant to this hearing. Federal spending for programs which endeavor to assist low-income citizens in FY 1989 is $149.2 billion. That total includes health care ($47.7 billion), cash assistance ($45.2 billion), food programs ($20.3 billion), and housing assistance ($14.4 billion). We should also add that these figures do not include state, local, or private sector spending on programs for the disadvantaged. All of these, of course, are important programs, and we need them to help families get through tough times.

But, I was struck, Mr. Chairman, by the fact that only $21.6 billion of that total was for job training and education. While funds for health, cash assistance, food programs, and housing have increased an average of 65 percent since 1981, the funds available for job training and education have increased only 13 percent.

In short, Mr. Chairman, we spend billions treating the symptoms of poverty and not the causes of it. Somewhere government got off the track regarding the most effective way to help people. I believe, Mr. Chairman, that the best way is to help them help themselves.

Blame for this derailment is not important. What is important is that we reevaluate the needs of our low-income citizens and use our collective efforts to provide greater long-term help not just day-to-day subsistence that is costly for the taxpayers and demoralizing for the recipients.

Mr. Chairman, I will welcome the opportunity to work with you, as well as the Bush Administration, in developing ideas to make this happen.
Mr. Chairman, today I join you in welcoming our new Secretary of Labor, the Honorable Elizabeth Dole. And I congratulate our new Secretary who was confirmed unanimously just yesterday by the Senate. I personally look forward to working with her over the next four years on a number of issues we have discussed over the last few weeks and I look forward to hearing her comments and proposals on the labor shortage problems we face and the need to educate and train those who are out of school, out of work and out of hope.

I also look forward to hearing the testimony of those here today who have a far more intimate understanding of the value and meaning of a job than I -- those who have wanted to work but have lacked the training, the support, the opportunity to secure full time, long-term employment.

Last year, Congress passed major reforms in our welfare system. Central to these reforms is an understanding that most of those receiving government assistance want to work, want to have the means and the opportunity to take care of themselves and their families. Many of the changes that will be made in government assistance programs recognize this, and recognize that we have failed badly in reaching those who need some level of remedial education and job training before they can become active and productive members of the labor force.

We must continue to expand job opportunities for all Americans. We need to build on the successes of current federal job training programs, reaching those who are harder to move into the workforce. We must go beyond job training programs and also address other needs of those currently receiving government assistance -- child care, medical assistance, transportation expenses. Unless these needs are also met, we will never help many welfare recipients move from dependency on the government to self-sufficiency.

A job is more than a regular income for those who have spent some time on welfare it is confirmation that they can and will be productive and valued members of their communities.

Mr. Chairman, we face a tremendous challenge, yet the possibilities are endless though the resources are limited, but...
the time to act is now. I look forward to hearing the thoughts and recommendations presented by each of our witnesses here today.
The CHAIRMAN. Unfortunately, Secretary Dole had a meeting at the White House and will be joining us at 3:00. Because of this, we will start with what was planned as our second panel.

Ms. Marcia Townley is joining us today from the Dayton-Hudson Corporation in Minneapolis, Minnesota. I am happy to welcome you here today and look forward to hearing about your program. I know that Senator Durenberger would like to present you. He is a member of this Committee, and we look forward to his introduction and to your testimony.

STATEMENT OF HON. DAVE DURENBERGER, A. U.S. SENATOR FROM THE STATE OF MINNESOTA

Senator DURENBERGER. Thank you, Mr. Chairman.

It is a pleasure to hear you talk about the problems and opportunities that face this country, and it is a pleasure for me to have the opportunity to introduce to you and my colleagues who will find time to join with you Ms. Marcia Townley.

If you look at everything from the name to the background—she went to Wellesley, she works for Dayton-Hudson, all that sort of thing—you wonder what she is doing here responding to your invitation to talk about lifting people up through the employer. But if you understand Minnesota, which I know you do, and I think a lot of people do, there is a lot of innovation going on in that State, but nowhere more so than in the role the employer plays in the community.

Dayton-Hudson Company probably is without peer, although there are more people joining it all the time and discharging the social responsibility of the corporate employer.

Marcia and I first met back when we were both in the Citizens' League, which is in and of itself a unique institution in the community—3,000, 4,000, 5,000 people like us who do nothing but explore opportunities and give opinions and sort of change the world in our community. A lot of the public policy issues you will examine during the course of this Congress here, coming out of Minnesota, in education, for example, and in the work force, will be because people like Marcia Townley got involved through this institution.

But her employer is different, and it is the Dayton-Hudson Company that gave the leadership in our community, the so-called Five Percent Giving Club. The Dayton-Hudson Foundation has been very creative in influencing not only the community, but influencing the company itself. And I think it is in that regard that Marcia comes here today to talk to all of us about the JobPlus Program and what it has meant to a lot of young women and some not-so-young women, I guess, in the Twin Cities community.

So it is my personal pleasure and with pride in my community that it keeps people like Marcia there, even though right now, her husband, Pete, who used to run the business school at the university is off running the Conference Board, so they have sort of a long-distance marriage here at the present time. But you cannot get somebody this good to get out of the Twin Cities, and I am glad she came today, and I very much appreciate your invitation to her to be here.

[The prepared statement of Senator Durenberger follows;]
Thank you Mr. Chairman, I want to thank you for holding this hearing today on the future shortage of skilled labor in this country. I believe this is a severe problem that we must begin to address today. According to a report published by the Project on Adult Literacy, seventy-five percent of the American workforce in the year 2000 are already above the age of 18. They are out of school and in the workforce. Of these people, it is estimated that 20-30 million have serious problems with basic skills. Faced with a declining labor supply, the United States simply cannot remain competitive in the global marketplace, unless we begin now to address the problem of upgrading the skills and education of our workforce.

I am especially pleased that we have here today Marcia Townley of the Dayton-Hudson Company to share with us an example of a successful program in which the private sector works together with local social service agencies to provide a job readiness program to give low-income, at risk individuals the skills, self confidence, and experience they need to get and maintain a job.

A major component of this program involves a retreat in which participants experience a two day "outward bound" experience in which they are challenged to take risks and work together as a team. It is this sort of hands-on experience that teaches the participants how to set goals, and how to work to achieve them. With the goals they achieve on the retreat, they
begin to build the self respect they need to achieve in the workplace.

What strikes me most about the program is the sense of motivation the participants seem to gain due to the special interest shown by the employer in their employment. Also, important in this program is the continued support provided by Dayton-Hudson. The business-social service link helps move beyond the simple employer-employee relationship that these individuals often need to overcome the social and personal problems that have prevented them from succeeding in the marketplace before.

It is innovative programs like Jobs Plus that bring together the private and public sectors that will be vital to the economic well being of this country as we begin to face increased labor shortages and fewer people capable of filling the jobs necessary for America to compete successfully in the global marketplace. We are faced with a situation of increasing market supply of unskilled labor coupled with an increasing market demand for skilled labor. Allowing this trend to continue will directly threaten the economic well-being of our economy and the ability to maintain our current standard of living.

Faced with current budgetary problems we know that the public sector cannot solve this problem alone. Nor can the private sector solve the problem alone. If we are going to meet the challenges of tomorrow's workforce and remain competitive in the global marketplace, we must work together and provide innovative solutions similar to the Jobs Plus program sponsored by the Dayton-Hudson Corporation and the YWCA. We must encourage the public and private sectors to together to achieve the common goal of a better, stronger America.
The CHAIRMAN. Thank you, Senator.
Ms. Townley, with that very fine introduction, we look forward to your comments and living up to it here today.

STATEMENT OF MARCIA TOWNLEY, DIRECTOR OF PUBLIC AFFAIRS, DAYTON-HUDSON CORP., MINNEAPOLIS, MN

Ms. Townley. Thank you, Mr. Chairman, and thank you, Senator. That was a very nice introduction, and I appreciate it very much.
I am here today to tell you about an exciting program that Dayton-Hudson Department Store Company created four years ago through a grant from the Dayton-Hudson Foundation.
The program tests a job partnership concept to recruit and place teen mothers at risk of long-term welfare dependency in entry-level jobs.
The exciting news is that after four years of experience with this program, it works.
JobPlus is a public/private partnership between an employer with jobs and a willingness to hire "perceived at risk" employees and a human service agency with expertise in working with clients at risk of long-term welfare dependency.
JobPlus works for five basic reasons. The first two have to do with attitude, the last three have to do with unique components of the program.
First, the partners—Dayton’s, and the Minneapolis YWCA, the human service agency—believe that the participants in the program will make valuable, competent employees. As an employer, we have expanded our views of who are eligible employees. We have moved beyond what had been our traditional work force. We no longer can rely on walk-in applicants from the ranks of college students and homemakers to meet our employee needs.
Second, we believe that given the opportunity for a real job and support in overcoming the barriers to employment, these young women want to work. But it must be a rational choice. These women are bright. The benefits from work must outweigh the benefits of remaining on welfare.
Now, the three unique program components that help guarantee success.
First, the nonprofit agency provides a two-week job readiness program. Included is a two-day retreat at a wilderness camp, where the participants experience "Outward Bound" type challenges and self-esteem-building exercises.
Second, when each participant begins her job, she is assigned a peer partner, someone in our company in a similar job who knows the ropes and will serve as a friend or mentor. This was the component about which I was most concerned. Would our employees be willing to make this extra effort? Well, it turned out to be one of the more successful aspects of the program. Our peer partners received as much as they gave.
The third unique component has to do with follow up. The nonprofit agency staff does not abandon the employee after the first day on the job. Instead, agency staff keeps in close touch with both the participant and the employer to anticipate and respond to
issues before they become problems that might interfere with job performance.

Human resource departments and supervisors do not have the time or the experience to help employees with a daycare or housing crisis, a parenting problem, or other personal issues that could impact job success. These are areas where the human service agency’s expertise is invaluable. Many times, an employee might have become discouraged, quit or been fired, if it had not been for the advocacy and problem-solving of the nonprofit agency staff.

This is truly a win-win partnership with all three partners contributing what each does best and receiving in return rewards or benefits.

The nonprofit agency works with the future employee to remove the barriers to employment, and once the participant is employed, continues to work with the employer and employee to help guarantee success on the job. In return, the agency experiences the satisfaction of contributing to the successful employment of the participant and receives funding to pay for staff expenses, in the case of this program from the Dayton-Hudson Foundation the first three years and now from the State of Minnesota through a special program to encourage experimentation in welfare reform.

The employer provides a job, a peer partner, and good supervision; in return, the employer gains a valued, competent employee.

The program participant—the young woman—makes a commitment to employment and to life changes in return for support from the human service agency and a job from the employer.

Now, how do we know that JobPlus works?

During the first two years of the program, we contracted with an outside consultant to evaluate the results of the first 100 participants. Less formal follow-up since then with all participants confirms the continued success of the program.

Success is measured from two perspectives—from that of the employer and from that of the program participants. It is extremely important that the program be viewed as a success from a business point of view—and it is.

Seventy-five percent of the participants receive satisfactory or good job performance ratings on standard job performance measures.

Job retention is as good or better than control groups of regular employees hired for similar jobs.

Good performance and good retention are results that would guarantee success to any employer.

From the participant’s point of view, success is determined by evaluating individual progress in four areas. The areas are continued employment, education progress, reduced dependence on public assistance, and no unplanned pregnancies.

If progress is made in three or four of those areas, the participants are viewed as successful or very successful. Sixty-five percent of the first 100 participants were successful or very successful after six to eight months in the program. The good news is that 16 months later in a follow-up study, 63 percent were still evaluated as successful.

In preparation for this testimony, we did a quick follow-up of all 160 young women we had hired since 1985. Of the 160, we were
able to reach 93, or 58 percent of the total. We were thrilled with the results. Remember, some of these women started working with us as long as four years ago. Eighty-eight percent, or 82 of those 93 we reached, were successful or very successful on the four measures I described a bit earlier. Ninety percent had no unplanned pregnancy. So we think that the self-esteem emphasis in the program has worked.

Seventy percent, or 65 of those 93, are still working. Forty-two of those working are also in school or completed some additional training. Seventeen percent are in school and not employed. And only 12 percent, or 11 individuals, are neither in school nor employed.

Even if we assumed that all the women we did not reach were unsuccessful, the program would have a 51 percent success rate.

Finally, we must ask what have we learned from this experience with JobPlus that could help other employers hire less traditional employees or public policymakers grapple with issues of moving individuals off the welfare rolls onto the work rolls?

First, we need to create the right attitude. We must believe that, given the chance and the resources, these individuals want to work, and trust that given the appropriate support and supervision, they will make valuable employees.

Second, the transition from welfare to economic self-sufficiency does not happen overnight. It occurs over a period of time and by taking many, sometimes small, steps in the right direction.

Do not expect the first job to be the ultimate career fit or lifetime occupation. Remember it is a first job—and maybe is best, considering often the child-rearing responsibilities of these young women, that it be a part-time job. But just make sure that it is the best first job you can make.

So often I hear stories of young AFDC moms with two kids and no real work history taking on a full-time job or a full course load at a local technical institute and failing because a housing crisis or a sick child has made them miss too much work or school to continue. After a setback like that, it is really hard to start again.

I often think it would be better if the young woman had perhaps taken a part-time job or a part-time course load and had greater success of making it.

Remember, it is progress we want, not overnight miracles. What we want are people moving up the job ladder from entry-level positions on. The purpose of JobPlus is to help individuals take those first steps.

Third, because we want progress and cannot expect miracles, it is important for transitional support to be there. Daycare or subsidized daycare should continue during the first six months to a year on the job. Medicaid should continue until the employee is eligible for company benefits. Funds should be available for caseworker follow-up during the first months on the job to help solve the unexpected but predictable crisis.

The provision of these transitional services and support should be the role of the public sector and appears to be the direction that welfare reform experiments and legislation are moving.

But finally, success comes down to self-esteem. All the daycare, health benefits and training money can buy will not make a differ-
ence if the participant does not believe in herself. That is why we need caseworkers who are sensitive to the needs and aspirations of their clients and not bogged down in paperwork. We need follow-up and tangible support to handle the transitional issues during the early months on the job. And we need job supervision that is fair, caring and expectant of positive results. Each person must be treated as a special individual with unique needs and talents. Given that kind of support and encouragement, chances of success are great.

We know from experience it can be done. We have done it, and we are doing it again. We have expanded JobPlus to Flint, Michigan through the YWCA there, and to Metro Detroit through Michigan Human Services. And you might be interested to know that we are going to be serving young men in Metro Detroit as well as young women. We know other employers and human service agencies can do it, too.

To help with the replication of JobPlus, we have a manual and a videotape that will help others to adapt the program to their own needs. We are eager to share this information with the committee and with others who are interested.

Mr. Chairman, I thank you very much for this opportunity to share JobPlus and would be happy to respond to any questions.

[The prepared statement of Ms. Townley follows:]
Mr. Chairman, Members of the Committee. My name is Marcia Townley. I am Director of Public Affairs for Dayton Hudson Department Store Company, a division of Dayton Hudson Corporation. Dayton Hudson Corporation is made up of four retail divisions, Dayton Hudson Department Store Company, Target, Mervyn's and Lechmere, with 627 stores in 37 states. (Dayton Hudson Corporation is the nation's 6th largest retailer with approximately 150,000 employees.) The department store division for which I work has 37 Dayton's and Hudson's stores and 23,000 employees in 7 states. Most of its stores are in Minnesota and Michigan.

I am here today to tell you about an exciting program which Dayton Hudson Department Store Company created four years ago with a three year new initiative grant from the Dayton Hudson Foundation. The program tests a job partnership concept to recruit and place teen mothers at risk of long term welfare dependency in entry level jobs.

The exciting news is that after four years of experience with JobPlus the program works!

JobPlus is a public/private partnership between an employer with jobs and a willingness to hire 'perceived at risk' employees, and a human service agency with expertise in working with clients at risk of long term welfare dependency.

JobPlus works for five basic reasons. The first two reasons have to do with attitude - the last three have to do with unique components of the program.
First the partners, Dayton's, and the Minneapolis YWCA, the human service agency that does the recruitment and provides job readiness training—believe that the participants in the program will make valuable and competent employees. As an employer we’ve expanded our views of who are eligible employees. We’ve moved beyond what had been our traditional work force. We no longer can rely on walk in applicants from the ranks of college students and home makers to meet our employee needs.

Second, we believe that given the opportunity for a real job and support in overcoming barriers to employment, these young women want to work. But it must be a rational choice. The benefits from work must outweigh the benefits of remaining on welfare.

Now the three unique program components that helped guarantee success.

First, the non-profit agency provides a two-week job readiness program. Included is a two day retreat at a wilderness camp where the participants experience “Outward Bound” type challenges and team-building exercises.

Second, when each participant begins her job, she is assigned a peer partner, someone in the company in a similar job who knows the ropes and will serve as a friend and mentor. This was the component about which I was most concerned. Would our employees be willing to make that extra effort? Well, it turned out to be one of the most successful aspects of the program. Peer partners received as much satisfaction as they gave.
The third unique component has to do with follow-up. The non-profit agency staff does not abandon the employee after the first day on the job. Instead, agency staff keeps in close touch with both the participant and the employer to anticipate and respond to issues before they become problems that might interfere with job performance.

Human resource departments and supervisors do not have the time nor the experience to help employees with a day care or housing crisis, a parenting problem or other personal issues that could impact job success. These are areas where the human service agency's expertise is invaluable. Many times an employee might have become discouraged, quit or been fired, if it had not been for the advocacy and problem solving of the non-profit agency staff.

This is truly a win/win partnership, with all three partners - the agency, the employer and the employee - contributing what each does best and receiving in return rewards or benefits.

The non-profit agency works with the future employee to remove barriers to employment - something neither the employer or the employee could accomplish alone - and once the participant is employed continues to work with employer and employee to help guarantee success on the job. In return the agency experiences the satisfaction of contributing to the successful employment of the participant and receives funding, in this case from the Dayton Hudson Foundation for the first three years and now from the State of Minnesota, to pay for staff expenses.
The employer provides a job, a peer partner, and good supervision; in return, the employer gains a valued, competent employee.

The program participants make a commitment to employment and life changes in return for support from the human service agency, and a job from the employer.

Now, how do we know JobPlus works?

During the first two years of the program, we contracted with an outside consultant to evaluate the results of the first 100 participants. Less formal follow-up since then with all participants confirms the continued success of the program.

Success is measured from two perspectives—from that of the employer and from that of the program participants.

It is extremely important that the program be viewed as a success from a business point of view—and it is, 75% of the participants receive satisfactory or good job performance ratings on standard job performance measures.

Job retention is as good or better than control groups of regular employees hired for similar jobs. Good performance and good retention are results that would guarantee success to any employer.
From the participant's point of view, success is determined by evaluating individual progress in four areas. The areas are:

- continued employment
- education progress
- reduced dependence on public assistance
- no unplanned pregnancies

If progress is made in 3-4 of those areas the participants are viewed as successful or very successful. 65% of the first 100 participants were successful or very successful after 6-8 months in the program. The good news is that in a 16 month follow-up, 63% were still evaluated as successful.

In preparation for this testimony we did a quick follow-up of the 160 young women we had hired since summer 1985. Of the 160, we were able to reach 93 or 58% of the total. We are thrilled with the results. Remember some of these women began the program almost four years ago. 88% (82) of those we reached were successful or very successful on the four measures described earlier.

90% (84) had no unplanned pregnancy. The self esteem support has worked.

70% (65) are still working - 18% at Dayton's (12)
42 of those working are either in school now or have completed additional schooling.

17% (16) are in school and not employed
12% (11) are unemployed and not in school
Even if we assumed that all we didn’t reach were unsuccessful, the program would have a 51% success rate.

Finally, one must ask what have we learned from our experience with JobPlus that could help other employers hire less traditional employees or public policy makers grapple with issues of moving individuals off the welfare roles onto the work roles?

First - we need to create the right attitude. We must believe that given the chance and the resources, these individuals want to work. And trust that given the appropriate support and supervision, they will make valuable employees.

Second - the transition from welfare dependence to economic self sufficiency does not happen over night. It occurs over a period of time and by taking many - sometimes small steps - in the right direction.

Don’t expect the first job to be the ultimate career fit or lifetime occupation. Remember it is a first job - and maybe it is best, considering child rearing responsibilities, that it be a part time job. Just make it the best first job you can.
So often I hear stories of AFDC moms with two small kids and no real work. A story of taking a full time job or a full course load at a technical institute and falling because a housing crisis, or even a sick child, has made them miss too much work or too much school to continue. After a setback like that, it is hard to start again. Maybe she would have made it, if it had been a part time job or a 1/2 course load.

Remember it's progress we want, not overnight miracles. What we want are people moving up the job ladder from entry level positions on. The purpose of JobPlus is to help individuals take those first steps.

Third - because we want progress and cannot expect overnight miracles, it is important for transitional support to be there. Day care or subsidized care should continue during the first six months to a year on a job. Medicaid should continue until the employee is eligible for company benefits. Funds should be available for case worker follow-up during the first months on the job to help solve the unexpected, but predictable, crisis. The provision of these transitional services and support should be the role of the public sector and appears to be the direction of welfare reform experiments and legislation.
But finally - success comes down to self-esteem. All the daycare, health benefits and training money can buy will not make a difference if the participant does not believe in herself. That is why we need case workers who are sensitive to the needs and aspirations of their clients and not bogged down in paper work, follow-up and tangible support to handle the transitional issues during the early months on the job and job supervision that is fair, caring and expectant of positive results. Each person must be treated as a special individual with unique needs and talents. Given that kind of support and encouragement, chances of success are great.

We know from experience it can be done. We've done it and we're doing it again. We're expanding JobPlus to Flint, Michigan through the YWCA, and to metro Detroit through Michigan Human Services. We know other employers and human service agencies can do it, too. To help with replication of JobPlus, we have a manual and video tape to assist others develop and shape a JobPlus program to their own environment. We are eager to share these materials with the committee and others who are interested.

Mr. Chairman, I appreciate this opportunity to appear before the committee and would be happy to respond to questions.
The CHAIRMAN. Thank you very much. That was an excellent presentation, and I think it is enormously impressive how you developed that program and how helpful and beneficial it can hopefully be to millions of people.

You probably answered a bit of this question in your final comments, but if I can give you some of the points that will be raised by those who might question the program. And that is basically that you are really sort of skimming these individuals, that these individuals would be able to get the work in any event even if they did not get these kinds of services, and therefore it really is not terribly innovative, not very creative—they would get the jobs anyway.

How do you answer that?

Ms. TOWNLEY. Well, that is a question we often are asked, you are right. We look for individuals who have a degree of motivation. We look for individuals who are at a point in their lives where they are willing to make some changes. But they are people who had children when they were in high school, many of them do not have high school degrees. If they had walked in off the street to Dayton's Human Resources Department, our people tell us we would not have hired them, we would not have given them the chance, without knowing that many of the barriers that they face to employment are being addressed by the YWCA.

So we have the confidence as we hire these young women that some of the issues that might have prevented them from being successful are being addressed and solved.

The CHAIRMAN. Well, it would seem to me that just by definition of the people that you are taking, as I understand it, the dropouts and those who have not completed high school, just that definition responds best to that charge, because all the studies that have been done over the last 20 years would indicate that those individuals are going to continue to be on welfare—92 or 93 percent continue to be.

Ms. TOWNLEY. Right.

The CHAIRMAN. It is very difficult when you are talking about a dropout and also an unwed mother who has not completed high school—there is much cream in that group—I mean, it would seem to me you have targeted the most difficult group just by definition of your program, if I understand it correctly.

Ms. TOWNLEY. Yes. I think we are targeting the most difficult group. But even with that group, there are degrees of motivation.

The CHAIRMAN. True. Well, if it is the most difficult group, and we are at least able to get some things going, it certainly seems to me to be worthwhile.

Again, with respect to your belief of its applicability in other communities and with other groups—as I understand, you are starting now with males in Detroit. What about other places?

Ms. TOWNLEY. We are doing that in Michigan, in both Flint and Metro Detroit. We have an example in Minneapolis of Pillsbury Company making a grant to the YWCA to adapt this program a bit to their needs for Burger King. So other employers are beginning to take a look at it. We wish there were many more. And I think what really prevents additional employers from taking this on is the lack of the support services, the transitional services, that the
"Y" provides in this case—the link, really, between the agency and the employer is what is so important and unique to this program, I think.

The CHAIRMAN. In the last Congress, we passed a program called the JEDI Program. Through this program we recognize that the group you are selecting has a 90 percent chance of continuing to be on welfare for ten years. If we figure out what the Federal cost of that is going to be—roughly $40,000, it obviously varies around the country—and if we get those individuals whom we know are going to be on welfare over a period of time, and we are able to demonstrate that those people now hold jobs, we will try to create a bonus for the States, because the Federal Government is going to be saving, and the States are going to be saving, to create this revolving fund to reward that kind of initiative—that saves the Federal Government money. We do not spend a nickel until we actually find a success story.

It would seem to me to be a pretty useful way of committing ourselves to taking this whole process, which I believe can be replicated and can be successful, and encouraging it.

Do you have any reaction to that?

Ms. TOWNLEY. I think that is exactly the direction that we should be going in, and I believe very much in the reward theory. Agencies like the YWCA and others around the country that can work with clients like this do not have the funds to do the job that they need to do, and that kind of program is exactly the kind of thing that will really stimulate replication of this program. So I look forward to telling them about it and finding out how they can take advantage of it.

The CHAIRMAN. What does it basically cost you to provide those services to an individual?

Ms. TOWNLEY. Per client, it is in the range of $1,600 to $1,800, and that includes about $400 worth of child care direct costs that are charged to the program.

The CHAIRMAN. This seems to be in the range we find; I think in Massachusetts it was about $2,100. But we are somewhere in the $1,600 to $2,100 range, where we are able to provide some of these essential services.

Finally, you mentioned the importance of continuation of both the daycare and the Medicaid. I think you know we built some of that into the welfare programs last year—of course, they are taking a little time to get phased in. I think one of the worst things would be if we were able to get people moving, and then they get into that situation where they found employment and then there is a termination of those services. I think the words that you use are correct—they should continue the Medicaid until they get company benefits. The unfortunate thing is there are many companies that do not provide those kinds of benefits. And without getting involved in some of the crossfire of which way is the best way to do it, I think you make an important point, and I do not know what more you would want to add about the importance of continued daycare and some kind of health program.

I am not asking you to endorse any particular one, but to the extent that the concept is important, I would like to hear from you.
Ms. Townley. Well, our experience is that those are two of the most important barriers, or difficult barriers to employment for this population, and so any way those issues can be addressed would certainly help this group. The State of Minnesota has been able to some extent to address that issue for them so they have that transitional support.

The Chairman. I think it is important, too, that it be ongoing to the extent that we are able to do that as well—as I understand you, that is what you are saying.

Ms. Townley. That is correct.

The Chairman. I mean, the transition was good to get them moving, and then to have that contamination so they do not slide back.

Ms. Townley. They need the ongoing support group support; they need to make sure there is not a gap in the health care for their families, and that daycare is available. That is a big issue.

The Chairman. I think the idea of having a "helper", so to speak, in the company is rather interesting, and one I had not heard before and makes a good deal of sense.

Ms. Townley. I hope you get a chance to see the video, because there is a piece in the video where some of our peer partners are interviewed, and you can see the satisfaction that they get from helping someone else make it. And it was something I was not sure would work, but it has been important to the program.

The Chairman. I think it is an excellent suggestion.

Senator Durenberger?

Senator Durenberger. Mr. Chairman, I do not know if you have ever had this experience, but on my return up here from that brief introduction of Ms. Townley, I found a very profound opening statement that I would like to have you accept as part of the record.

The Chairman. It will be so included.

Senator Durenberger. I have no particular questions, and I appreciate yours very much, Mr. Chairman. It is a welcome introduction for me to hear your concerns for this problem and the role the committee is going play.

Marcia, thank you.

Ms. Townley. Thank you.

The Chairman. I hope you will keep us informed of the progress. We are trying to find out in this what works and what does not, and clearly, from your record, you have found a way that is being effective and successful, and I think it is important that we try and find out what our whole role in this area should be.

We want to thank you very much for appearing.

Ms. Townley. Thank you.

The Chairman. We are pleased to welcome our second panel of three women who are with us today, especially well-positioned to explain the problems and benefits in moving from welfare to the work force.

We welcome Ms. Wendy Dipilato, from Worcester, Massachusetts, Ms. Renee Goldinger, from Kittanning, Pennsylvania, and Ms. Taffie Lloyd, from Kittanning, Pennsylvania. I want to thank all of you for travelling and being with us here.
At the outset of this panel, I want to say how much I appreciate your presence here. I think it is part of our whole tradition and culture not to be willing to talk very much about hardships in our family and to share those particular human conditions. We are all private individuals and have a great sense of pride in terms of our own families, and your willingness to come up and share your life's experience here we know is not terribly easy, and we are very grateful for your willingness to do it. We hope from this that we are going to be able to at least recognize our role in trying to help address some of these matters, and that is our best way of expressing our appreciation to all of you. I say that very sincerely. So we want to thank you all very much for coming.

We will start off with Ms. Dipilato.

STATEMENT OF WENDY MOTT DIPILATO, ET CHOICES GRADUATE, WORCESTER, MA; TAFFIE LLOYD, KITTANNING, PA; AND RENEE GOLDINGER, KITTANNING, PA

Ms. Dipilato. Mr. Chairman, members of the committee, my name is Wendy Dipilato. I am 31 years old, and I live in Worcester, Massachusetts. I have one daughter, Jessica, who is now five.

For the last two and a half years, I have been working as a secretary for two real estate attorneys at the law firm of Simonian & Murray in Worcester. When I began my job, I was making $7 an hour; today, I am making $9 an hour, or $17,000 a year plus bonuses.

Before I got my job, I had been on welfare for two years. I was working as a visiting nurse's aide, and I had health insurance through Blue Cross/Blue Shield. But when I got pregnant, I found out my health insurance would not cover the cost of my baby. When I learned that, I switched to Central Mass Health Care, an HMO, for a month and then collected three months of benefits after the baby was born as sick leave and vacation time. But then I had no health care or daycare for my child, and I could not afford to pay for that, so I was forced to go on welfare. But I knew that I did not want to be on welfare and that I would try to get a better job with health care as soon as I could.

While I was on welfare, I learned about the ET Program through flyers in the local welfare office. I enrolled in ET in January of 1986 and got job training as a word processor through Central Massachusetts Job Training. I took the six-month course, graduated, and found a job first at Accountemps and three months later at the attorneys' office. I would have never taken my present job if it had not been for the health insurance that went along with it.

Soon after I enrolled in ET, the training program opened an onsite daycare center, and Jessica started to go there. In fact, she was the first child at the daycare center. Today, Jessica is in kindergarten. She stays in school until 2:00 p.m., when I pick her up and bring her to my office, where she stays until my husband picks her up at 3:30—I just got married this past May.

The CHAIRMAN. Congratulations.

Ms. Dipilato. Thank you.

I cannot stress enough how hard it is to be on welfare. It is degrading. It is a myth that you can just be on welfare and sit around
and not work. I could hardly make ends meet. Before I went on welfare, I had an excellent credit rating. By the time I got off of welfare, I had lost good credit, and ended up owing the electric company hundreds of dollars. I just could not keep up with my bills and care for my daughter on the little bit I did get on welfare.

When you are on welfare, you are not yourself. I felt claustrophobic being in the house all day, and I had a bad attitude about myself. I would never go back on welfare again.

I cannot say enough good things about my employers. They are so supportive—even letting Jessica stay at the office for a little while during the day. There are not many employers that would allow that.

My life has really turned around since I was on welfare. Jessica loved daycare, it was good for her educationally to be with other children. I know that leaving welfare was the best thing that happened to both Jessica and me. I like myself better since I have gone back to work, and I think Jessica likes me better, too.

Thank you.

The CHAIRMAN. Thank you very much.

Would you tell us a little bit how important the daycare and the health benefits were to you in moving off welfare into the employment possibilities which you now have?

Ms. DIPILATO. I had priced daycare for Jessica before I actually went to the ET training program, and it is outrageous. I could not afford it. There is no way that I could afford it.

And as far as insurance went, a lot of places will offer a single insurance plan, but for a family plan, you have to pay a big portion of it. Between the two, there was just no way I could do that. When they opened up this new program, it worked out really well that she could go to the daycare, and now my employer offers insurance.

The CHAIRMAN. What we sort of miss out on is daycare for people who are on welfare. People stay home and look after their children, and that is a form of daycare.

And how important was the health care, in terms of health care for you and your child?

Ms. DIPILATO. If I did not have health insurance for it, I would not have taken my present job. I mean, I wouldn't want to get stuck with her being sick and not having coverage for her. That would be an important factor. That was the main reason I went on welfare in the beginning.

The CHAIRMAN. Thank you.

Ms. Lloyd?

Ms. LLOYD. My name is Taffie Lloyd. I am 30 years old, and I live with my husband, Richard, who is 38 years old. We have two children, Amanda and Michael, aged nine and eight.

In January of 1989, my husband got laid off from the Gregg Security System, where he was earning $3.75 per hour. We have applied for public assistance. From past experience, I know we will not receive any money for approximately two months. Consequently, we have to live for two months with no income.

When my husband worked, his take-home pay was $132 per week. We pay $150 per month for rent, plus utilities. On this amount of money, there is no money for clothes or shoes. Rarely do
I have any extra money to buy my children clothes, even at the Salvation Army or yard sales. When my husband worked, we received a green medical card from public assistance which did not entitle us to prescriptions. A bill for medicine of $20 puts us behind on another bill, which starts a cycle from which we can never get caught up. A trip to McDonald's or a movie would blow the whole budget, so you know that would be completely out of the question.

It costs money to take a job; the car must be in working condition, and sometimes you need special boots or clothes. Help is available, but only if you qualify. When my husband got his job for minimum wage, we went into debt for him to take a job that paid $2,000, but which did not qualify him for unemployment when he got laid off.

I am an intelligent woman. I graduated from high school, and I attended college for one semester. I have taken computer courses through Manpower. I have tried to break out of this cycle of poverty. I am where I am, not from not trying, but rather from lack of opportunities.

When my children ask if we are poor, I tell them that we are. When they say to me that we do not live in a cardboard box like the homeless people do, I just think to myself, "Not yet."

As poor people, we have no social life. We have no phone, and we cannot afford to buy a newspaper. It gets down to the point that if it costs 25 cents to mail a letter, I do not have it. The glasses I am wearing now were bought with the help of the local Lion's Club. They paid $40 toward their purchase. Because I could not make payments on the balance of $65, I could not pick them up until I had saved up the money. I had not had a new pair of glasses in 10 years.

On a day I receive no mail, I am very happy. Because I do not have a phone, I am not harassed by phone, but I do get letters constantly saying that someone is going to take legal action against me for nonpayment of a bill. So the simple act of picking up the mail makes me frightened of another problem that I will be expected to handle with no means to do it.

When you work for minimum wage, you are still poor. I am trained as a secretary, but I will take any job, from housecleaning to waitressing. When I apply for a minimum wage job, there are many, many applicants for the job who all say, "I will work hard and do anything you ask me to do." Desire to do a good job does not get you a job. You have to have money in order to get a job. You have to look good and have available transportation and babysitting.

My husband and I do not blame each other for our situation. We believe in each other. We just want to provide for our family. One of the hardest parts of our problem is that you feel so alone. I know no one else is going to pick up my responsibilities, but all I would like is someone who would understand my situation.

I do not know what the answer is. I do know that if I continue to exist under these circumstances, I will lose myself. The person I always thought I was is being replaced by a person I hardly know, a person afraid of tomorrow, afraid to smile, afraid to enjoy living,
afraid to trust anyone, and most of all, I am afraid it will not ever change.

The CHAIRMAN. Thank you, Ms. Lloyd. That is very powerful testimony and is really a tragic indictment about our whole society.

Let me ask you, what has been the impact of all this upon your children? Can you tell us a little bit about that?

Ms. LLOYD. My children know they are different from their schoolmates. My daughter got invited to a birthday party, and I had to tell her no, she could not go, just because I did not have a dollar for a card or a dollar to put in that card, and I am too embarrassed to send her without a gift.

The CHAIRMAN. We talk about a dollar or a few dollars, questions of minimum wage and so on, but it is extremely difficult, certainly, in this institution to focus on the fact that even a few dollars has such an important and significant bearing in terms of people's lives. That is certainly an institutional reality, and I think you make the point very eloquently.

Let me ask you, if you had some daycare and you were not so worried about health problems in terms of your children, what would be your attitude then about working?

Ms. LLOYD. I want to work, I really do. It is just that you have to look at what is going to happen if you take a job. I mean, you have to know what is going to happen to your children. You are trying to make your life better, you do not want to make your life worse.

The CHAIRMAN. But if you had the daycare for your children, and were assured of some minimum health benefits in terms of illness or hospitalization or caring for your children, and you got in this case, I suppose, even a minimum wage—hopefully, we are going to be able to raise it—would you work?

Ms. LLOYD. I would go to work right now.

The CHAIRMAN. Ms. Goldinger?

Ms. GOLDINGER. My name is Renee Goldinger. I live in Western, Pennsylvania with my two sons, Richard, 19, and Christopher, 15.

I have medical problems, high blood pressure and an overactive heartbeat caused by stress. I have to take medication. The medication costs me $27 for a 28-day supply. I have had numerous operations that were covered by medical cards from welfare which I no longer have.

In addition to my own medical problems, my 19-year old son has been diagnosed as having congenital spina bifida, and I am paying the cost of him seeing specialists, which run as much as $60 a visit. Since Christmas of 1988, he has been to see three different specialists, all of which are located in the Pittsburgh area, a distance of 45 miles from where we live. With his condition, he cannot get a factory job because he cannot pass the physical. He has been trying to get a minimum wage job, but in our area it is really hard to get one at this time of year.

I have worked at minimum wage jobs since 1974, except for a period of six months in 1978, when I was hired for a temporary position and received $5.25 an hour. The job was at a plant that was 40 miles away from my house, and in addition to transportation costs, I had to pay a babysitter.
In 1974 and 1975, I worked in a department store for minimum wage for 35 hours a week and had to pay babysitters.

From 1977 to 1983, I worked in a restaurant and a bar as a cook, kitchen helper, and sometime bartender, all for minimum wage. I worked 30 hours a week, from nine to three, Monday through Friday. At the time I was working this job, my children were small, aged four and seven, and I sent my youngest one to a daycare center in 1977. In 1978, he went to a daycare center in the morning and took a taxi, which I had to pay for, to kindergarten for the afternoon. I also worked as a waitress on Friday and Saturday evenings at two local bars, for $15 a night. At this time, I was receiving $15 a month in food stamps and had a medical card.

In 1979, I needed an operation, and had to stop working and go on cash assistance for eight weeks.

In 1983, I moved into a private home and took a job as a housekeeper and caretaker of two young children. I took this job because I was able to have my sons with me, since they were teenagers, I felt that they needed me more at home. I received $80 per week and living accommodations for the three of us.

I am presently employed at a restaurant and earn $2.10 an hour plus tips. Taxes are taken from my pay for tips that I do not receive because the taxes are based on the gross sales of the restaurant, not what I actually get. I am required to buy my own uniform at a cost of $35 and supply my own white slacks and shoes to go with it.

With a job like mine, I have no life insurance—I cannot afford it—I have no savings account, I am on a strict budget. There is little money for emergencies. If something happens to my car, I cannot make it to work, and I cannot afford to fix it. Paying for heating costs with what I earn is very difficult. When my kids were little, from 1973 to 1977, we either had food and no heat, or heat and no food. I could not pay for both of these things on my paycheck. My kids and I stayed with friends who helped us at the time.

Now my rent is $275 a month, and with what I earn, I still must make decisions about what bills I pay or what food I buy.

Along with the difficulties I have had with providing for my kids and myself, and the health problems that my son and I have, there is the feeling of guilt I get because I feel I should be giving my kids more and doing more for them.

The CHAIRMAN. I will put in the record your household budget, which shows the take-home, rent, phone bill, gas, school lunches, car insurance, and leaves you with $18.

** For emergencies, food, necessities and around $1500 back medical bills plus current medical bills - every three months I have to see my doctor ($35.00).
The CHAIRMAN. Sc you have been receiving minimum wage since 1974, with a brief period, as you mentioned, at a temporary job in 1978 when you were making $5.25 an hour, and three months on welfare when you had the hernia operation. We listened on the Floor last year to arguments about minimum wage, and how families are not really impacted or affected by this. I wish my colleagues could hear your testimony and your statement. But we are going to get minimum wage raised, I will give you that assurance—it will not do as much as it should, but we are going to get it raised this year for sure.

Tell me what drives you to continue to work? We have looked at the difference between hourly benefits on welfare in Pennsylvania—it is $4.41 an hour if you add up all the different benefits, without child care—and the $3.35 you make an hour while working.

Ms. GOLDINGER. I work 58 hours a week sometimes. I just do not want to be on welfare.

The CHAIRMAN. In the minimum wage bill, one of the issues will be the tip credit. I notice you say you get $2.15, and then you get tips. I think there is sort of a perception that every waiter is waiting tables at Duke Zeibert's or Mr. K's, where they get those big tips. Generally, if you averaged it out an hour, what do you think your tips come to? If you get 33.35, the way it exists now, 60 percent—there is a proposal that I think will pass to reduce that to 50 percent. That is in Gus Hawkins' bill, and I think the votes are there in the Senate, because they have been able to give this perception that people working in restaurants by and large make far beyond the minimum wage.

What is your experience?

Ms. GOLDINGER. Well, I do not. If I work nine hours in one day, I will be lucky if I make a dollar an hour in tips. It varies. If there is a banquet, which is only at holidays, I could make as much as $7 an hour, but since three months ago I have only had three days that I have made $7 or $8 an hour.

The CHAIRMAN. Those are really the exceptions, then.

Ms. GOLDINGER. Yes.

The CHAIRMAN. Well, I think that is much more realistic. If you had had some health benefits, would you have had to return to welfare for those few months when you needed that operation?

Ms. GOLDINGER. No. I could have just taken time off from work.

The CHAIRMAN. I understand there was one point in your life when you actually had no home at all; is that right?

Ms. GOLDINGER. Yes. That was last year.

The CHAIRMAN. Can you tell us how that came about?

Ms. GOLDINGER. I had to leave the job in the private home, and I had no place to go. I stayed with a friend. My son stayed with my sister so he could go to school in his school district and not change schools. I had no job, and I had to have an operation at the time. I was hospitalized.

The CHAIRMAN. What about now?

Ms. GOLDINGER. Community Action Agency helped me get a home, because I had no money for the security deposit and first month's rent. I had none. They helped me get that going, and then
I got my job. I got hired and got a house at the same time. But I have been working 50 to 60 hours a week since then, since November 1st.

The CHAIRMAN. You have brought two children up, one is 19 and one is 15, is that correct?

Ms. GOLDINGER. Yes.

The CHAIRMAN. So your whole life has obviously been spent hard-working and providing for your sons. Now, looking back, do you see the importance of daycare and health benefits? Do you see those as important ingredients for keeping people off welfare?

Ms. GOLDINGER. Yes. My son was one of the first ones in our area in one of the first classes of daycare, and they adjusted the pay that you paid them according to what you were bringing in, which is a big help. Now, I understand there is a waiting list, a really long waiting list, to get your children in there. So if you get a job this week, you cannot get your kid into welfare for three months, and you have to find a babysitter until you can get him into the daycare. You have to wait.

The CHAIRMAN. So you have difficulty doing the job, if you are worried about that.

Ms. GOLDINGER. And the daycare in our town, I think it is mostly just day shift; you have to get a dayshift job, like eight to four or nine to three or something.

The CHAIRMAN. Let me ask Ms. Lloyd. You have had problems finding child care, is that correct?

Ms. LLOYD. Not so much child care, because either I was not working or my husband was not working, one was home when the other was working.

The CHAIRMAN. Have any of you had trouble finding daycare?

Ms. GOLDINGER. When mine were little, yes, before I got them in daycare, yes.

The CHAIRMAN. Ms. Dipilato, I think you had indicated there is a daycare program in your company.

Ms. DIPILATO. Yes, there is. They opened up an onsite right at the training center, and I worked right on the same street when I got my job, so it was really convenient.

The CHAIRMAN. It makes a big difference. We have a few companies up in our area—for example, Stride-Rite in Massachusetts—who have developed that type of program. Some daycare programs are for the employees and some for the local community. They say as a business investment, it makes sense. You do not have people going to the phone at 3:00 in the afternoon, or late for work, if it is raining or snowing, and all these kinds of things, just in terms of a business's narrow, bottom-line interests. But that has not generally been the case.

Senator Pell?

Senator PELL. I have no questions, Mr. Chairman. I just want to say that I appreciate the honesty and the pain that this testimony must cause each one of you. I appreciate it very much. The country should be more conscious of the people who fall between the cracks as three of you have.

I wish you well.

The CHAIRMAN. I, too, want to thank you. We do hear similar stories over the course of our hearings, but I think it is important
that we continue to try and shake the conscience of our Nation, let alone the conscience of this institution, to try and respond to some of these needs. And it seems to me that if you begin to get the day-care and to deal with the health concerns of young families, if you provide some skills—and we are going to hear more details later, Ms. Dipilato, about the ET Program—if you give a person at least a liveable wage—which the current minimum wage is not—people are going to move away from dependency. And what it means as a bottom line—and unfortunately, that is put first around here—is that it makes sense financially, but more importantly, it makes enormous sense in terms of the family. And most importantly, it makes enormous difference in terms of the children. So maybe we will be able to get moving on those particular issues. It is certainly my intention to do so, and we will do everything we can to try and achieve that, and that will be the best way we can express our appreciation.

I want to thank all of you very much for joining us today.

We are pleased to welcome our next panel of two witnesses who will draw from their extensive experience, explaining what it is that's necessary to move people from welfare. Our panel consists of Patricia Wright, Director of Homeless and Employment Training for the Armstrong County Community Action Agency in Kittanning, Pennsylvania; and Charles Atkins, who is Commissioner of Public Welfare for the Commonwealth of Massachusetts.

We are glad to welcome you both back today. It is especially nice to see you, Chuck. You have been rather busy this last year, and we are glad to have you here.

Mr. Atkins. Thank you, Mr. Chairman.

The CHAIRMAN. Ms. Wright?

STATEMENT OF PATRICIA WRIGHT, ARMSTRONG COUNTY COMMUNITY ACTION AGENCY, KITTANNING PA; AND CHARLES ATKINS, COMMISSIONER OF PUBLIC WELFARE FOR MASSACHUSETTS, BOSTON, MA

Ms. Wright. Good afternoon.

My name is Patricia Wright. I am the Director of Homeless and Employment Training Programs for Armstrong County Community Action.

Over the last three years, our program has had an employment readiness class to help people to upgrade their interviewing skills so that they would be able to present themselves well on an interview. Of the 200 or so people who have participated in these classes, we have been able to assist more than 65 percent of them to gain employment. Consistently, we have found that many of the employers were not willing to pay more than minimum wage and provide health benefits and child care for these employees.

The reasons that they give us have been. they would have to raise the price of the products that they sell, they would be forced to lay off some of their employees, or they could not continue in business because of a lack of profit.

You have heard about personal experiences from the previous witnesses. I would like to say to you that these experiences are not unique with these people. I have talked to many people who are
working for minimum wage who have no medical benefits, are not eligible for any type of assistance of any kind, and yet they continue to work and struggle.

I have also talked to many families who have tried, but due to circumstances over which they had absolutely no control, they have found that it was impossible for their families to remain intact living on a minimum wage salary. Some were forced to go on the welfare rolls, which was able to provide a larger income than they could make on a minimum wage and also provided them with a medical assistance card.

The loss of self-esteem and the necessity of explaining all expenditures to an agency has caused many families so much stress that they have broken up.

This loss of self-esteem is only the tip of the iceberg. The people we are talking about here must explain to their children why there are so few or no gifts at Christmas time or birthdays. A lack of money also contributes to a segregation of these children from normal school activities children participate in, such as parties, because a gift cannot be purchased and treats cannot be provided for the classmates in the schoolroom. Even the children experience the fact that they are different, and their desire to socialize decreases as their desire to keep from being hurt increases.

In families where both husbands and wives are working, and both are receiving minimum wage, it is possible that their combined paychecks are not enough to pay the cost of their food, rent and utilities. These people just cannot see their way clear to ever get ahead, there is always something that is left unpaid. Even with the strictest budget and the most careful person, an unforeseen crisis can occur, and when this happens it takes two months, sometimes more, to make up for the money that they need to use at that time.

This crisis could be anything. It could be a sick child, a sick parent, an auto repair or utility bill that is unexpectedly high due to the cold months.

Most of these families do not have things that we take for granted. They do not have medical insurance because there is no money to pay for it. And most of the jobs that pay minimum wage do not provide for that benefit. These people are waiting longer to take their children to the doctor or to the hospital. They have to search longer to find a doctor who will allow them to make payments, or a doctor who will accept the medical card that they have.

I would like to give you an example of a family that is trying to survive on a minimum wage income. First, I would like to tell you that this is what we hear so often called the traditional family. There is the father, two children, and the mother. The father is working for minimum wage. They are very careful with their spending. He said to me that they watch every dime. I asked him where the dimes were going, and he showed me the bill for a minimum order of heating fuel. That was $95. Of course, he needed to pay the lease, he had to keep his family warm. He was behind in his rent because he was making payments, since he was not able to pay the full amount of rent. He had an electric bill, and he had not been able to pay all of that, the electric bill is now $111.16. Again,
he has been trying to make payments, but he is still unable to get that bill completely paid off.

We looked at the amount of money he was taking home, the amount of the bills that he had and the cost of food and clothing for his family, and we wondered if he would not be better off receiving public assistance. He said he probably would, but he is a man, and it is his responsibility to support his family.

The stress of this situation has caused his wife some emotional problems; it has led to her hospitalization. Of course, this also led to another bill that he needed to pay.

Many of the minimum wage jobs have no benefits. Not only don’t the employees have medical insurance, they do not have sick days, vacation time, or other benefits that we have and take for granted. If they are off work for any reason, that just cuts into the money that they have to work with.

One of the things that we have found happens with so many of these people is that because they cannot pay the bills, because they cannot pay the rent, they become our hidden homeless. They are the ones that are living in doubled-up family arrangements or living in with friends because they have no place to go.

One of the things that parents find very important to them is affordable child care. Parents, like Renee, who have children in daycare centers not only have the cost of child care, but also the expense of getting the child to and from that care. Because traditional daycare programs are only available from six a.m. to six p.m., and parents who are working shifts find that they cannot put their children in our current daycare programs. What they have to do is find private daycare, and that is more expensive.

It is a very large drain on the family’s budget, and families care about what happens to their children. Parents on minimum wage care about what happens to their children. And they cannot work and do their very best if they are not sure who is taking care of them.

Another problem that occurs is that even when a family takes part of their income and sends their children to daycare, there is a waiting list. If I have a job open for you today, and you tell me you cannot get your child into daycare or you cannot get affordable daycare for two months, I am going to hire someone who can.

We live in a rural area that does not have ample public transportation. Therefore, when people look for employment, they must be able to provide their own transportation. That means before they can get employment, they have the cost of a vehicle, upkeep, gas, oil, and insurance, and any needed repairs. It is impossible to take a job that requires a person to drive 15 to 20 miles for an hourly wage of $3.35. It is not that people do not want to work, it is that they cannot afford to.

These are some of the situations that we encounter every day. There are no easy answers, and it is very difficult to tell people who come to us seeking help and solutions that we are limited in what we can do to assist them. We try to provide options and give them the help that we have available. The solution does not lie with us. It is up to the people that we elect to look out for our interests and to provide fair and equitable solutions so that we may
all have the opportunity to enjoy the freedoms that are guaranteed to us.

The CHAIRMAN. Very good. Thank you.

[The prepared statement of Ms. Wright follows:]
My name is Patricia Wright. I am the Director of Homeless and Employment Training Programs for the Armstrong County Community Action Agency. Over the past three years I have taught an employment readiness class to help people upgrade their interviewing skills so that they would be able to present themselves well at an interview. Of the two hundred or so people that have participated in these classes, we have been able to assist more than 65% of them gain employment. Consistently we have found that many of the employers are not willing to pay more than minimum wage and provide health benefits and child care. The reasons have been: 1. they would have to raise the price of the products that they sell, 2. they would be forced to lay off some of their employees, 3. they could not continue in business because of a lack of profit.

You have heard about personal experiences from the previous witnesses. I would just like to say that these experiences are not unique to these people. I have talked to many people that are working for minimum wage that have no medical benefits, aren't eligible for any assistance of any kind and yet they continue to work and struggle. I have also talked to many families that have tried, but due to circumstances over which they had no control, they have found that it was impossible for their families to remain intact living on a minimum wage salary. Some were forced to go on welfare which was able to provide a larger income and a medical assistance card, provided by the Department of Public Assistance. The loss of self esteem and the necessity of explaining all expenditures to an agency has caused many families to break up. This loss of self-esteem is only the tip of the iceberg, the people we are talking about here also must explain to their children why there are few or no gifts at Christmas time and on birthdays. A lack of money also contributes to
a segregation of the children from the normal activities children participate in - attending parties, because a gift cannot be purchased and treats cannot be provided for classmates in the schoolroom. Even the children experience the fact that they are different and their desire to socialize decreases as their desire to keep from being hurt increases.

In families where both husband and wife are working and both are receiving minimum wage it is possible that their combined paychecks aren't enough to pay the cost of food, rent and utilities. These people just can't see their way clear to get ahead. There is always something left unpaid. Even with the strictest budget and the most careful person, an unforeseen crisis can occur and when this happens it takes two months or more to make up for the money that was needed at that time. This crisis could be a sick child or parent, an auto repair or a utility bill that was unexpectedly high, due to a very cold month. Most of these families don't have things that we take for granted such as medical insurance because there is no money to pay for it and most of the jobs that pay minimum wage don’t provide that benefit. These people are waiting longer to take their children to the hospital, they have to search longer for a doctor that will allow them to make payments and not ask for the payment on the day that service is rendered.

I would like to give you an example of a family trying to survive on a minimum wage income. First let me tell you that this is what we hear so often called the traditional family. There is the father, two children and the mother. The father is working for minimum wage. They are very careful with their spending, he said that they are watching every dime. I asked him where those dimes were going and he showed me the bill for a minimum order of heating fuel, the cost of that fuel was $95.85, he needed that to keep his family warm. He was behind in his rent because he had been making payments
since he was not able to pay the full amount. His electric bill was $141.16, he again had been making payments, unable to pay that full bill. We looked at the amount of money that he was taking home, the amount of bills that he had and the cost of food and clothing for his family and wondered if he would be better off receiving public assistance. He said that he is a man and it is his responsibility to support his family. The stress of this situation has caused his wife some emotional problems that have led to her hospitalization.

Many of the minimum wage jobs have no benefits. Not only don’t the employees have medical insurance, they also don’t have any sick days, vacation time, or other benefits that we have. If they are off work for any reason, that just cuts into the money that they do have to work with.

One of the things that parents find very important is affordable child care. Parents, like Renee, that have children in daycare centers not only have the cost of the child care but also the expense of getting the child to and from that care. Because the traditional daycare programs are only available from 6:00 A.M. until 6:00 P.M., parents that are working shifts find that their child care costs are more expensive because they cannot use the subsidized care that is available in many areas. Again, this becomes a large but very important drain on the family’s budget. Another problem that occurs is that even when a family takes part of their income to send their children to day care, there are often no openings and the parent must then see alternative babysitting services that may or may not be as reliable. When a service is not reliable, the parent’s job then becomes at risk.

We live in a rural area that doesn’t have ample public transportation. Therefore, when people look for employment, they must be able to provide their own transportation. This means the cost of a vehicle and the money for
upkeep; gas, oil, insurance and any needed repairs. It is impossible to take
a job that requires a person to drive 15 or 20 miles for a hourly wage of
$3.35. It isn't that people don't want to work; it is that they can't afford
to work for minimum wage.

These are just some of the situations that we encounter everyday. There
are no easy answers and it is very difficult to tell people who come to us
seeking help and solutions that we are limited in what we can do to assist
them. We try to provide options and give them the help that we have
available. The solution does not lie with us, it is up to the people whom we
elect to look out for our interests to provide fair and equitable solutions
so that we may all have an opportunity to enjoy the freedoms that are
guaranteed to us.
The CHAIRMAN. Do you think some people just stay on welfare because it is easier than working?

Ms. WRIGHT. No, I do not think the majority of people do that. Of course, you may find some who do that. I think one of the things that happens is that there are very, very few people doing that, but whenever we start to look to give examples, we search and search until we can find someone that we can say these people are struggling to stay on the welfare rolls instead of struggling to get off.

The CHAIRMAN. But people say they can get care for their children, and they can receive health benefits, so why should they work?

Ms. WRIGHT. Because they have the same pride that we do. They want to work.

The CHAIRMAN. What is the real danger of the growth of homelessness among this group that you describe? Is that increasingly a real problem for many people now?

Ms. WRIGHT. Yes, it is. It has increased, and it is increasing daily. And again, one of the things that we see that the general public does not see is that there are so many of our hidden homeless. When you think of "homeless", you think about the people who are on the park benches or out on the sidewalks. I am not talking about those people. I am talking about the ones who have had to move back in with family, who are doubled-up with friends, where there are nine, ten, twelve people living in one house simply because they cannot afford the rent.

The CHAIRMAN. Some of your clients mentioned that they received job readiness training in their discussions with my staff. Can you tell me what that is?

Ms. WRIGHT. Yes. We do an employment readiness training in our agency where we stress things with the people that we work with, like building self-esteem, assertiveness, interviewing skills, we help them to write resumes, we help them to learn basic data entry on the computer, so that they can go out and have something to offer whenever they go out into the employment world.

The CHAIRMAN. What does that cost, generally? Do you know, or is there any way that you can determine what that cost is, approximately? If you could give us some idea about that, it would be very, very helpful.

We are going to go to our next witness, Chuck Atkins. Welcome, Chuck. We have given you an introduction, and we look forward to your testimony.

Mr. ATKINS. Thank you, Mr. Chairman.

It is a pleasure to be back before your committee. Some of us had been hoping to make it down here last week for the inauguration, but as you know, a funny thing happened on the way to the polls.

I am honored, however, to have the opportunity to update you on the progress we have been making in Massachusetts. This certainly is a very serious issue, and the problems that you are addressing are something that I commend you for.

With your permission, Mr. Chairman, I would like to dispense with the formal reading of my testimony and submit it for the record. I would also like to ask that we be able to submit for the record a copy of the "Access" Report that I refer to in my testimo-
ny that the American Public Welfare Association put out last October on their proposal for health care.

What I would like to refer to is a set of charts that I believe you have received that I would like to use to summarize my testimony and bring you up-to-speed as to what has been going on in Massachusetts. It is just a set of about seven charts, and I will go through it just to summarize what I have said in my written statement.

The cover of the charts, Mr. Chairman, “working together to find a route out of poverty”, is literally the mission of the Welfare Department in Massachusetts. We have done something that is rather strange in welfare systems, but something terribly important, we believe, which is to say to our 2,500 caseworkers and our 60 local offices across the State, that while their legal job is to put people on the welfare rolls, that people who are legally entitled to benefits are to be given those benefits in a timely and accurate fashion, that the number one priority of our caseworkers is to help people get off the welfare rolls and out of poverty.

What we have put together in Massachusetts, based upon our experience over the past five years, is what we hope is a fairly comprehensive program to offer people not just education and training through the ET Program, but health care and housing and child support services as well, because we have found that you have to really put all those ingredients together if we are going to get people off the welfare rolls.

We have managed to succeed in doing that in Massachusetts by taking our 2,500 caseworkers and not having them be the “bank tellers” that the welfare system was in danger of becoming in this country, but really turning them into caseworkers to provide the kind of support needed to get out of poverty.

Chart 1 is a progress report, if you will, as to how the ET Program is doing. As you well know, we set for ourselves a goal when we started the program about five and a half years ago of placing 50,000 of our clients into jobs over that five-year period. We were not sure it could be done. As you well know, no other State had managed to do a successful welfare-to-work program before of that magnitude. We had tried twice before in Massachusetts, once in 1977 and again in 1982, with workforce type programs, and they had both failed. So this effort that began in 1983 with the goal of placing 50,000 people over a five-year period into jobs was something that we knew was an ambitious goal, but we had no idea how successful it was going to be.

As Chart 1 shows, we have beaten that five-year goal. We have now placed over 57,000 of our clients into jobs. And to me what is astonishing is that figure that is shown in the middle of Chart 1, which is that 75 percent of all those job placements are off welfare today, some of those people for as long as five years.

Chart 2 tries to answer the question of what about the 25 percent who either never left the welfare rolls, or returned to welfare, what about the ones we have not been able to reach yet. And what Chart 2 shows are the three major reason why ET graduates have returned to welfare, and I think it ties in exactly with what you have been hearing today and with what your committee is looking at.
The number one reason why people are returning to the welfare rolls is that the wages are too low. Quite clearly, at least in our experience, a minimum wage, even a job paying $3.50 or $4.00 an hour, is not going to be enough for that average welfare family in this country, a mother and two children, to make ends meet. And again, we found the number one reason that people who have graduated from ET come back on the welfare rolls is that we have not done our job of helping them find a job paying enough for them to support their families. The actual percentage is 29 percent, that is the major reason why people are coming back on welfare after graduating from ET.

The number two reason is lack of health insurance—another problem that you have very adequately defined. And it is an obvious one. If a single mother takes a job without health insurance provided by the employer which, as you well know, is all too often the case for the working poor in this country—with some 37 million uninsured Americans, two-thirds of whom are working out there—the mother, if she is the sole supporter of her kids, as is the case with anyone on welfare, and if the kids get sick and the mother has no health insurance, she often has no alternative but to return to welfare in order to qualify for Medicaid to provide health care coverage for her children. And, lo and behold, we found that the second major reason ET graduates were not able to stay out there in the world of work was that lack of health care.

The third problem was lack of child care. As you know, under ET, we do provide child care for up to a year after people leave the welfare rolls, but unless they can work out their child care arrangement, again, by definition, since what we are talking about on welfare is a single mother with two children, she is going to be back on the welfare rolls unless we provide that daycare.

Chart 3 and the next three charts try to show what we have done in Massachusetts to address those three major problems. First of all, as to that problem of the wage being too low, Chart 3 shows how we are doing today. Today, I am very proud to be able to tell you that in Massachusetts, the average salary from a full-time job that our clients are getting through ET is today $15,000 a year—obviously, substantially more than what the minimum wage would provide. That works out to about $7.50 an hour.

The contrast is shown on Chart 3; it is twice what we can give in the way of the maximum welfare benefit to that average family of three, that mother and two kids. So we have made it economically worthwhile for that mother to leave the welfare rolls and go to work.

As you know, Mr. Chairman, we have done that in Massachusetts under the ET Program through something called performance-based contracting, which your JEDI legislation which passed the Congress last year in part used. I commend you and the committee for the leadership role you played in getting that legislation through, because I think that kind of performance-based approach to our education and training system is terribly important—a bottom-line approach of saying we will pay you once you place someone into a job, a job meeting certain quality standards. That is an important notion to have in government, it seems to me.
Chart 4 addresses the daycare issue. This chart actually tells me two things. As you know, by Federal law, until the new welfare reform bill that the Congress passed last year takes effect, the work incentive law, the WIN Program, is still in effect, which is that women who have children under the age of six are exempt by Federal law from even having to register for each State's WIN Program.

ET, as you know, is part of the WIN Program, and the rules over the past five years for ET have been those WIN registration rules, which again is that anyone with children under the age of six on welfare in Massachusetts did not even have to register for the ET Program.

What this chart shows is that we have had a very substantial response from that group of our clients who do not even have to register for this program to participate in ET. That tells me two things. One, there is nothing magic about how old the children ought to be when the mother is ready, willing and able to go off and go to work. That ought to be left up to the mother to decide. Two, we must have a good product, because people are buying our product who do not even have to register for the program. But it does show you the importance of daycare.

As the chart shows in Chart 4, over half our budget goes for daycare.

Chart 5, the health care problem. As you know, last April Governor Dukakis signed into law the Nation's first universal health insurance program. It will take full effect, as you know, Mr. Chairman, in 1992, when all employers in Massachusetts, with some small exceptions, will have to provide health insurance to their employees. Until that law takes effect, what we have done in the Welfare Department is to implement the first phase of that law, that we call "CommonHealth." Under the State law, we are able to offer health care benefits for up to 24 months, in particular to people who are leaving welfare for jobs without health insurance. If people take jobs through the ET Program, we can provide them health care coverage. Many of our clients do not even have to wait and go through ET; they can go off and take a job on their own—and we encourage that, since we have limited Government resources to spend on ET.

For those women who are leaving the welfare rolls and taking jobs without health insurance provided by their employer, we can through CommonHealth through that new health insurance law provide coverage with State funds for up to two years after they leave the welfare rolls.

Clearly, that is not the entire answer to that problem, but we hope by 1992, when all employers in Massachusetts have to provide health insurance, that we will have solved that problem as well.

Chart 6 is a progress report on how we are doing on this new CommonHealth program. We have enrolled 10,000 people to date. Sixty percent of those have moved from welfare to work.

Chart 7 is the last chart I wanted to share with you, since we have discussed it before. It shows that, as you know, these programs not only help people, but they save money. And one of the things we are very proud of is that we think these programs can help reduce the Federal deficit. The reason for that is, as you well
Mr. Chairman, the Federal Government puts up most of the money in this country for our welfare programs, AFDC, Medicaid, and of course, 100 percent of the food stamp program. We have now been running the ET Program long enough in Massachusetts so that we have some results to show, and what Chart 7 shows is that since we began the program in October of 1983, after we deduct all program costs, we have saved over $280 million in either reduced welfare benefits or taxes, since these people who are now at work have become taxpayers themselves.

That in sum, Mr. Chairman, is an overview of what was in my written testimony, and I would be glad to answer any questions.

[The prepared statement of Mr. Atkins (with an attachment, and the charts referred to in text follow:)]
Statement of Charles M. Atkins,
Commissioner of the Massachusetts
Department of Public Welfare

Before the Committee on
Labor and Human Resources
United States Senate

January 26, 1989
Mr. Chairman, members of the Committee, thank you for inviting me to testify before you today. Over the past six years during my tenure as Commissioner of the Department of Public Welfare in Massachusetts, I have appreciated the opportunity to share with members of Congress the success story of our Employment and Training Choices, or "ET" program. Since its inception nearly 5 1/2 years ago, ET has enabled over 57,000 welfare clients in Massachusetts to gain employment. An astounding 75% of these clients are still off welfare today. I have described the structure and operation of the ET program in previous testimony before this Committee. Today, I would like to comment on what we have learned through 5 1/2 years of experience with ET -- in particular, the need for child care, health care and a living wage in order to provide a real route out of poverty.

The primary goal of the Massachusetts Department of Public Welfare is to help families on welfare find a permanent route out of poverty, by extending economic opportunity to welfare recipients, particularly those who face serious barriers to self-sufficiency. Today, the ET program has become the cornerstone of the Department's out-of-poverty mission. ET has offered positive proof that given access to education, training and support services that enable welfare clients to obtain good jobs and to become economically self-sufficient, most welfare clients will choose employment over welfare. After deducting
all program costs, ET has saved more than $280 million in reduced welfare costs and increased tax revenues. Since the program began, the average length of stay on AFDC has declined by more than 30%, and the number of families on AFDC five years or more has declined by nearly 38%. And despite the fact that we have increased benefits by 54% over the past six years, the AFDC caseload has actually decreased by 5% -- thanks to ET -- over this same period of time.

A significant aspect of ET's contribution to the Commonwealth has been its timeliness in educating, training and transitioning dependent residents of the state to meet the changing needs of its employers. Over the past five years, the Massachusetts economy experienced the very same labor shortage projected for the U.S. economy in future years. ET, with the help of our Private Industry Council and Job Training Partnership Act partners, has helped meet labor force requirements by broadening participation in the skilled labor force by previously unemployed Commonwealth residents. The ET program has been successful because it recognizes that the local and regional labor force has specific and changing needs that can be matched by the program.

The ET program has also been successful because it recognizes that welfare clients have a wide variety of needs which must be addressed before, during, and after participation in the
program. In order to participate successfully in ET, clients often need essential services such as transportation and day care for their children. Of ET placements who are back on welfare, a survey conducted by the Department indicates they have returned for several reasons, including:

- job-related problems, especially low wages (29%);
- problems with health care, including lack of health insurance (24%); and
- inadequate transitional services including affordable child care (23%).

In order to make a permanent break from the cycle of poverty, welfare clients need access to continued child care, affordable health care for themselves and their families, and a good living wage. The rest of my discussion today will focus on these very points.

The Need for Child Care Services

First, allow me to explain why we are certain that services such as child care are so critical. The statistics speak for themselves. Since 1983, the percentage of the AFDC caseload in Massachusetts headed by unwed, single parents has risen from 37% to 56%. Over two-thirds of all AFDC families include young children. If we examine client participation in the ET program, we find that 57% of current ET participants have children under the age of six -- a dramatic increase from 18% when the program
first began in 1933. While welfare mothers desperately want to work, they will not neglect their children in order to enter the workforce. The ET program's substantial commitment of resources to child care -- nearly half of the ET budget -- is one Massachusetts has willingly made because we also know that young single parents are the group most at risk of becoming long-term welfare recipients.

Each month, almost 10,000 children whose parents are participating in ET, will participate in Massachusetts' day care voucher program. This system provides quick access to needed child care. Unlike traditional subsidized daycare programs, ET participants do not have to add their child's name to long waiting lists. Parents must simply use licensed day care providers and voucher management agencies help them find child care. We are also committed to continuity of care, by allowing ET graduates to keep their daycare vouchers, as long as they are income eligible and up to one year after they have left the welfare rolls, until a subsidized contracted day care slot becomes available. We believe this is critical to helping families leave the welfare system permanently.

The Importance of Health Care

When we developed the ET program, Massachusetts addressed the first and most crucial obstacle to finding a route out of
poverty -- lack of education and skills. But another serious stumbling block that can prevent a family from moving toward self sufficiency is the prospect of losing their medical coverage and the lack of affordable health care. Although only a small number of cases with prior ET placements return to welfare, as I mentioned earlier, one of the major reasons cited among the 25% of ET graduates who are not off welfare today is their lack of health coverage.

For many poor families, a desire to move from dependency to self-sufficiency is thwarted by the absence of affordable health insurance. Too often, the poor are forced to choose between taking a job and losing their health coverage or staying on welfare to continue their Medicaid benefits.

Many entry level jobs simply do not provide health coverage. Nearly seventy-five percent of the people without health insurance in Massachusetts are working people and their children. They are uninsured because their employers do not provide health coverage. Yet escalating costs have put health services and individual insurance coverage out of the financial reach of many workers. Lack of insurance means little or no access to preventive or routine care. Not poor enough to qualify for Medicaid, but without the ability to purchase insurance independently, many of the uninsured rely on expensive emergency room care, often putting off necessary services until
a medical crisis calls for more intensive services. We have begun to address these problems in Massachusetts. On April 21, 1988, Governor Dukakis signed into law the Massachusetts Health Security Act, the nation's first universal health coverage law.

The Massachusetts approach is neither an entirely voluntary approach nor strictly government-sponsored health insurance program. Instead, we are implementing a public-private partnership that builds on the existing, employer-based private insurance system.

The Massachusetts Health Security Act initially encourages and later requires employers to contribute to health insurance for their employees. Persons who are not covered by employers will be able to obtain health insurance through a number of new programs and through a new state agency at state-subsidized rates. All Massachusetts residents will have health insurance available to them by 1992.

On July 1, 1988, the Department of Public Welfare implemented the CommonHealth program, the first phase of the state's universal health care law. Modeled after EPI, CommonHealth helps welfare families move toward self-sufficiency by providing up to 24 months of transitional coverage to families leaving AFDC for employment, but who have no access to employer-sponsored health insurance. The program extends the
services of health maintenance organizations (HMOs) and other managed care programs to former welfare clients and is also available to disabled adults, children, pregnant women and children under five years old.

In just six months since the program began, nearly 10,000 people have been served under CommonHealth -- 6,000 of whom left our welfare roles to go back to work. Like ET, this program will save taxpayers' money as it reduces the need for uninsured individuals to resort to public assistance programs such as Medicaid to pay for their health care. We can now offer welfare clients an incentive to go to work, even if the employer does not yet offer health insurance. In Massachusetts, welfare mothers are no longer forced to choose between employment and health care for their children.

The Importance of a Living Wage

Because the goal of ET is to provide clients with the means to escape poverty permanently, it is essential that the jobs in which clients are placed pay them a good living wage. Consequently, the Department sets very high performance standards for its training and job placement contractors. The current quality standard for payment for a job placement through ET is a fulltime job with health insurance which pays at least $12,000 a year, or $14,000 without health insurance. As a
result, the current average annual salary from full-time jobs obtained through ET is $15,000, more than twice the maximum amount of AFDC benefits in Massachusetts. In FY89, we expect to place 12,000 AFDC recipients into quality jobs through ET.

Recommendations

I believe that many of the policies and programs that we have shown to be effective in Massachusetts can be adopted elsewhere in the nation. Before I describe several initiatives that I believe are needed on the national level, I would like to commend Congress for having the foresight to adopt Welfare Reform legislation last year. The Family Support Act of 1988 tackles some of the problems with our present welfare system. In addition to encouraging states to adopt "welfare-to-work" programs like ET, the Act provides added federal revenues to finance day care services for welfare recipients and transitional day care and medical benefits for a year when individuals leave welfare for work.

Another very important feature of the Family Support Act of 1988 is its call for a study of the "Family Living Standard." My fellow human service administrators and I, under the auspices of the American Public Welfare Association, have been seeking
polities which would require a nationally mandated, state-specific standard for assistance based on a uniform methodology for calculating actual living costs. If we are to protect low-income families, we must provide adequate levels of support after they transition into the workforce.

While I believe that the Family support Act will assist us in our efforts to help the poor become self-sufficient, much more is needed if we are going to provide real employment opportunities for welfare recipients and the working poor. Specifically, there must be national policies and programs to help match training and placements to labor force needs, provide access to universal health insurance, promote the provision of affordable day care, and encourage a living wage.

The working poor and those striving to be independent of the welfare need policies and programs that guarantee their access to health care. Families on welfare should not have to make a choice between work and health coverage and workers should not be reduced to economic dependence or medical indigence by their lack of health insurance. This is a matter of economic necessity, as well as equity. The nation needs a healthy and productive workforce. Every American should have access to health care. The statistics on the uninsured in this country are troubling.
56

some 37 million Americans lack any health insurance coverage—two-thirds of whom are members of families in which at least one family member is working fulltime.

I applaud the Committee, especially you Mr. Chairman, for proposing legislation last year that would have begun to address this problem. S. 1265, "The Minimum Health Benefits for All Workers Act of 1988," would have ensured that "full-time workers and their dependents have the health protection they deserve by requiring employers to provide health coverage. Such legislation deserves the full support of Congress.

I believe, as my colleagues across the nation do, that national policies to address the problems of both the non-working and working uninsured are needed. In a recent report published by the American Public Welfare Association, entitled "Access," state human service executives propose two complementary policies to provide broad but differentiated coverage.

First, employer-sponsored health insurance for all employed individuals and their families with a basic package including hospital and physician services; prenatal, well-baby and well-child care; and diagnostic and screening tests. (Additions to this basic package such as prescription drugs, dental services for children and eye care will be added at a later date.) For small businesses, coverage would be provided through regional insurance pools offering premium rates equal to those available to large firms.
Second, restructured Medicaid programs to cover all nonworking individuals. This dual approach provides access to health care to all the uninsured, making it both a public and private responsibility.

You may note that I did not comment on another health care issue of critical importance today, namely the issue of long-term care. After serving longer than any Massachusetts Welfare Commissioner in recent history, I have come to realize just how critical it is for us to develop adequate long-term care strategies to address the health care needs of the elderly. The costs of long-term care have simply become too much of a burden for the elderly, their families and taxpayers. We must develop creative cost-effective approaches to provide long-term care. Because of my personal commitment to this issue, when I leave state government on March 1 to return to the private sector, I will be heading my own company to develop alternatives to nursing home care. At the national level, I am hopeful that Congress will accept the challenge of developing long-term care legislation -- like the Lifecare bill you introduced last year, Mr. Chairman -- to begin to offer the elderly the long-term services they deserve.

The expansion of child care opportunities for working families is also vital to the well-being of families and to economic growth. As has been demonstrated in Massachusetts, providing
affordable child care is critical for working poor families as well as those striving to become economically self-sufficient. It is important that we reassess national policies to enhance the supply, quality and affordability of child care.

There must be a stronger federal role for the provision of child care. The bipartisan interest in this issue last year is deeply encouraging. The Act for Better Child Care (ABC) sponsored by Senators Dodd, Kennedy, and other members of this committee during the last Congress and reintroduced this week, represents an important step toward our goal of a national public/private daycare partnership. I hope you will take action on this and other child care initiatives in this session of Congress.

Let me conclude my remarks by emphasizing the importance of providing workers a good living wage. I have already mentioned the premium that Massachusetts puts on placing ET graduates into good paying jobs. Furthermore, Governor Dukakis has supported congressional efforts to increase the minimum wage. Massachusetts has already adopted a higher minimum wage than that set by the federal government. This affords workers in lower pay scale jobs the opportunity to maintain a better living wage. I would hope the grass continues to explore proposals to increase the minimum wage.
Today's working poor and those on welfare may be the mainstay of tomorrow's workforce. The future productivity of this country may well depend on our willingness to make investments in this population. Members of the Committee, that concludes my remarks today. I will be happy to answer any questions you may have.
... to health care for America's poor families and children is a human necessity, and an economic one. Health care is critical to strong, stable, self-sufficient families. It is critical for children to grow and thrive. National policy must assure access to health care for America's poor families and children. What follows are recommendations to provide access to basic health care coverage for all Americans.

Recommendations: Access to Health Care for Poor Families and Children 10
Conclusion 26
Selected Bibliography 28
Executive Summary

One out of every six American children has no health insurance, public or private. One child in four is born into poverty. Among poor children, one in three lacks health care coverage. Access to health care for the poor, and poor children in particular, has actually deteriorated in the last few years. Today in America poverty and poor health go hand in hand.

In January 1986, human service commissioners undertook a major review of public commitments to the nation's poor, a review demanded by the devastating statistics on childhood poverty. In November 1986, we released One Child in Four, a proposal for comprehensive reform of the nation's welfare system. By strengthening families and promoting self-sufficiency, we believe that poverty can be substantially reduced among American children and families.

The 100th Congress has taken the first steps toward comprehensive welfare reform, changing what has traditionally been an income maintenance program into a system that promotes individual and family self-sufficiency. In One Child in Four we said that other efforts would be needed, including new national policies to assure access to health care for all Americans. The American Public Welfare Association's Matter of Commitment Steering Committee established the Access and Health Care Task Force to study this issue. This report represents the work of the Task Force.

In Our Children to be strong and self-sufficient, for children to grow and thrive, they must have access to health care today. However, an estimated 17 million Americans have neither insurance through their workplace nor access to protection offered by Medicaid.

Human service commissioners bear a special responsibility to the nation's poor. We are charged with providing services and income assistance. We administer Medicaid programs for individuals poor enough to qualify for its benefits.

We understand the links between poverty, welfare, and access to health care. Today poor families seeking to leave the welfare rolls for employment face a disincentive in the eventual loss of Medicaid benefits. Too many cannot secure employer-sponsored insurance as they enter the workforce, nor can they afford to purchase coverage from the low wages they earn. Many former recipients are forced to leave their jobs and return to welfare in order to meet the health care needs of their children.

This report of the American Public Welfare Association recommends two major strategies to assure financial access to primary health care services for poor uninsured children, families, and individuals.

RECOMMENDATIONS

I. For Workers and Their Families

A. We recommend employers sponsor health insurance for all employed individuals and their families to cover a minimum of well-baby, well-child, diagnostic and screening tests. We recommend phasing in prescription drugs, dental services for children, and eye care at employers in the minimum package at a later date. Vets. to employers (perhaps 5 or fewer employees) would be exempted.

B. We recommend the establishment of state or regional insurance pools to
allow small businesses to offer health insurance at rates equal to those paid by large firms.

II. For Nonworking Individuals and Families

A. We recommend restructuring Medicaid to cover all non-working individuals and dependents with family incomes up to 75 percent of poverty and family assets under $12,000 (excluding the home and other noncountable resources). This group should receive benefits currently covered in a state's Medicaid plan. This recommendation essentially eliminates categorical requirements for Medicaid coverage.

B. For those whose income is at or above, 75 percent of poverty or whose assets exceed $12,000, we recommend that state Medicaid programs provide a minimum benefit package equal to the employer's basic coverage. For those with incomes from 75 to 200 percent of poverty, states would charge an income-based premium for the minimum benefit package.

These recommendations are incremental because they build on existing programs and methods, and comprehensive because they provide financial access for all of those currently uninsured. Like welfare reform, these proposals are critical not only in the future health and well-being of our citizens, our economy, and our nation.
Poverty, Children, and Health

The most disturbing findings of the 1996 National Access Survey involve the deterioration in access to medical care among the nation's poor, minority, and uninsured citizens. These changes are real and have a serious impact on the segments of the American population least able to take advantage of the various new forms of health care delivery, or to pay for the care they so evidently need.

One out of every six American children today has no health insurance, public or private. Among poor children, one in three lacks health care coverage. From 1980 to 1985 health insurance coverage for poor children under the age of three declined by 34.9 percent according to a recent Children's Defense Fund study. For these children there is no preventive health care, so well-child visits to the pediatrician are no access to health care at all until it's most dire emergency, and then children are treated as "charity patients" if they are treated at all.

Clearly poverty and poor health go hand in hand. As the American Public Welfare Association reported two years ago, one child in four is born poor in America today. The data on relative poverty by age group are disturbing, to say the least. That children have become the most economically disadvantaged segment of the population says more about the country's values than any other measurable index.

The U.S. currently ranks 19th in infant mortality among its industrialized nations. In too many of our cities the infant mortality rate rivals that of Third World nations.

A half million American children suffer from the effects of malnutrition.

More than a third of the nation's homeless population consists of families with children.

Consequences

Lack of adequate health care early in life has severe, lifelong impact. The pregnant American woman who cannot afford prenatal care is more likely than a counterpart receiving care to give birth to a premature or low birthweight baby. She may suffer severe complications herself. Infants born into poverty are twice as likely to "near nonpoor counts" to suffer low birthweight. They face a significantly greater risk of infant death. If they survive the first year of life, they face a greater risk of physical, developmental, and learning disabilities.

Children who begin life ill or disabled suffer in other ways. They cannot learn well in school. They are vulnerable to lifelong outcomes, pain daily. They risk long-term dependence on their families, on other private resources, and, ultimately, on public institutions. Today too many American children start life with disabilities that compound and are compounded by poverty.

The knowledge that many of the health problems facing poor children can be avoided deeply trougns. Inadequate prenatal care, low birthweight, and infant and child mortality are, in large measure, preventable. The issue has less to do with medical science, and has everything to do with the social and economic costs we are willing to bear. Current policies do provide public dollars to pay the substantial tail costs and consequences of inadequate health care when it results in disease and disability. Yet we have not invested the resources necessary to assure that children begin life healthy and that families remain healthy.

We have a health care system that can provide for the health of all of the nation's families. We must assure that families have access to that system.

With Medicaid, the public health program for the very poorest Americans, progress has been made in improving the health of poor children and their families. But children of the working poor and those whose parents are seeking to become independent of the welfare system have not had access to Medicaid. For all its gains, Medicaid has not solved the problem of financial access to preventive and acute health care services for all poor children. There are significant gaps in the health care safety net that demand attention.

Access to health care turns on the key issue of access to affordable health insurance, and affordability is a major barrier.
In actual numbers, and as a percentage of the workforce, the number of workers without health insurance is increasing.

The Uninsured

There is general agreement that 37 million children and non-elderly adults lacked any health insurance coverage for all or part of the year in 1985. That is fully 15 percent of the population, and the number has grown by a million each year since 1979. Almost 20 percent of all children under 18 had no health insurance in 1985, a 16 percent increase since 1982.

When the underinsured are added—those individuals whose terms of coverage, such as deductibles and copayments, preclude access to care when it is needed—the number jumps to 56 million, almost a quarter of the American population.

The sheer magnitude of the problem drives the need to address broader access to health care coverage. In actual numbers, and as a percentage of the workforce, the number of workers without health insurance is increasing.

Though it is commonly believed that most of those without insurance are unemployed, that is not the case. In 1985 almost 75 percent of the uninsured were either employed or dependents of wage earners. From 1982 to 1985 the number of workers without insurance rose from 13.9 million to 17 million, an increase of 22.5 percent.

The increase in uninsured workers is generally a result of changes in the economy and the types of jobs being created. The service sector, with historically low rates of employer-sponsored health coverage, is growing at a rate four times faster than other sectors. The Joint Economic Committee of Congress has documented that employment growth is occurring in low-wage, part-time jobs that rarely provide health insurance to the workers who fill them.
The Health Care Marketplace

These workforce changes are juxtaposed against a health care industry in which rapidly escalating costs have rendered health services and individual insurance coverage financially out of reach of many workers. Many individuals and families pursue care through emergency rooms and out-of-pocket clinics because they do not have a primary care physician. These "medically indigent" individuals are those most acutely affected by health industry economics and lack of coverage. They also experience more frequent acute care needs and hospitalization. They have no affordable alternative, and this leads to episodic, crisis-oriented care for the patient, at great cost to individual hospitals and to society.

Health care industry economics are adversely affecting uncompensated or charity care, the traditional avenue to acute-care service for the medically...
Los Angeles—Bob Redfield gets up from a kitchen chair slowly, awkwardly using his arms to heave his paralyzed lower limbs, the result of a broken pelvis suffered in a car crash.

He struggles into the living room of his modest apartment, a place shopping bag stuffed near him with hospital and doctor’s bills.

The bills are a result of the Dec. 6, 1986 accident in which Redfield’s car was broadsided by a drunken, uninsured driver. Redfield suffered such massive internal injuries that he needed more than 100 units of blood, spent seven months in three hospitals, and is only now learning to walk again.

Rummaging through the bag with a slight, ironic smile, he finds what he is looking for—a single yellow sheet sent by one of the hospitals. It says: “This is to notify you that you still have an outstanding balance of $16,737.41. As a convenience to you, payment of the balance can be made by cash payment, check, or by use of your Visa or Master Card.”

There is little Redfield can do except laugh. As a sporadically employed actor before the accident, Redfield was earning less than the $2,000 annual minimum to qualify for Screen Actors Guild health insurance. The tavern where he tended bar offered coverage to its workers only if they paid for themselves. But Redfield was 36 and otherwise healthy, could not afford the $100 monthly premium.

He is a classic example of someone who has fallen through the cracks of the American health care delivery system.

Los Angeles Times

Indigents. The health care industry as a whole, but by rapidly rising costs and externally induced cost containment and competition, is less willing to provide uncompensated care.

The volatile health insurance markets also factor. Commercial insurers have increased competition among themselves and with corporations that find it less expensive to insure their own workers. In the battle to keep premiums down, insurers are demanding higher coinsurance payments and deductibles for the insured. While this helps control hospital utilization, high deductibles and coinsurance payments make it difficult, if not impossible, for individuals with low incomes to obtain coverage, and make use of that coverage.

To remain competitive, insurers guard against “cost-shifting,” the traditional practice of charging paying patients more in order to subsidize the cost of uncompensated care. Government programs, particularly Medicare, also guard against cost-shifting to keep costs down. In doing so, government and commercial carriers are responding to demands of taxpayers and the business community to reduce government deficits and the costs of health care.

The prohibition on cost-shifting, leaner reimbursements overall, and increased demands for uncompensated care are adversely affecting health care providers' ability to cover costs.

To a considerable extent health insurance coverage in this country is a matter of luck. Those fortunate enough to be employed by large, unionized, manufacturing firms are also likely to be fortunate enough to have good health insurance coverage. Those who have modest incomes, live in the South and West or in rural areas, and those who are black or minority group members are more likely to bear the personal and economic effects of lack of insurance and the consequent financial barriers to health care.

—Karen Davis, chairman, Department of Health Policy and Management, Johns Hopkins School of Hygiene and Public Health, in testimony, congressional hearings, July 25, 1990
Jackie Flanigan, a sloth sewer, earns $5.50 an hour and works at a rag factory where her work is worth $506 a month. She receives $25 more from welfare than she would if she were unemployed. She started this job last December. Five new young people, ages 10 to 14, were driving her stir crazy, and the characters on the afternoon soap operas had become more familiar than real life.

"I watched those stones so much, I dreamed about them," said Jackie, a round-faced woman who speaks almost in a whisper.

Her routine now is to get up at 5:30, lay out the children's clothes, and dress them before leaving the children with the next door neighbor. She takes the subway downtown. From there, she catches either the No. 23 or the No. 15 bus. Both go down Franklin Road, and it is a short walk to the factory. At 8 a.m., she starts sorting rags from a bolt of cloth.

"I love the week," she said, her voice betraying her uncertainty. "The people are nice. They let you go on break when you feel like it."

"Pleasant or not, the job is hard on her budget. She pays her neighbors $50 a week for baby-sitting. She also pays $8.50 a week in carfare.

Worse yet, the job offers no health insurance. Because she is no longer on Medicaid, the state will soon take away her welfare. "It's a burden, my health care, and Medicaid, too."

Marcia, a 3-year-old, has asthma. "I don't know what's going to happen," she said, tears rolling down her face. "I didn't know how working would end up getting me money. Mentally, I want to keep working. Financially, I don't know if I can."

—Los Angeles Times

For the employed insured, these industry trends mean higher out-of-pocket expenses, reduced benefits, and increasingly limited access to care. For the medically indigent outside an employer group, there are fewer care alternatives as more facilities deny care or close down completely.

Some states have already taken action to assist hospitals with heavily uncompen-sated-care workloads, including increased Medicaid reimbursements to all hospitals, mandatory cost-sharing on hospital payments from private insurers, and the establishment of revenue pools to supplement payments to hospitals.

The fiscal strain on indigent care places on workers, employers, providers, and government points to the need for a national policy that addresses the needs of more equitable financial access to health care, with costs of coverage distributed more equitably than at present. Business spokesmen who have testified before Congress in recent months point to the problems in the current health care marketplace. Businesses providing workers with health care coverage are, in fact, subsidizing businesses that do not provide such care through taxes that ultimately pay the bills for indigent care.

Health care costs and lack of insurance coverage result in a significant segment of the U.S. population living at risk of heart, lung, and other health problems without the ability to pay for care. The lack of coverage among both the employed and the unemployed threatens the ability of Americans and families to be self-sufficient.

Action to Address Poverty and Health Care

In November 1, 1986, the American Public Welfare Association called for national action to reduce poverty among families with children through strengthened families, and promoting their self-sufficiency. The report, One Child in Four, called for sweeping reforms of the
nation's welfare system, reform the 100th Congress has initiated.

The goals of welfare reform also require reform of the health care financing system. Today, poverty, poor health, and welfare dependency are joined in a perverse way. Because entry-level jobs often provide few health benefits, many parents are hesitant to enter the workforce. The availability of Medicaid has inhibited many parents from leaving welfare to work. Economic dependence is thus blocked by the prohibitive costs of health insurance and health care.

APWA's One Child in Four called for review and recommendations on the issue of access to health care for poor families with children. The APWA Matter of Commitment Steering Committee established the Access to Health Care Task Force to study this issue.

The human services administration from across the country joining the task force concluded very quickly that the biggest single barrier to access to health care for poor families is financial—the lack of health insurance coupled with the lack of resources to purchase coverage or pay out-of-pocket for health care. The Task Force also recognized that issues related to access to health care include quality of care and health care delivery systems. Because a source of payment for health care is central to all other issues, however, this report focuses on financial access to health care.

The task force acknowledged that the current health care financing system limits access to care and can be improved. Therefore, the recommendations that follow are both incremental because they build on existing programs and comprehensive because they provide financial access for all of those currently uninsured.

Access to a continuum of long-term care services and financing for those services is also a critical concern, and that issue will be the subject of a companion report to be published in 1989.

We firmly believe that the nation must find a way to make financial access to basic health care services available to all citizens, regardless of economic status. Individuals and families have a responsibility to pursue self-sufficiency through employment. That responsibility should not be undercut by the very real fear of unmet health care needs.

Individuals and families have a responsibility to pursue self-sufficiency through employment. That responsibility should not be undercut by the very real fear of unmet health care needs.
Recommendations:

Access to Health Care for Poor Families and Children
Humar service administrators approach the issue of access to health care for an obvious reason: we provide health care services for the poorest among the uninsured. But the systems we administer do not provide for all of those in need. The working poor and those striving to be independent of the welfare system need policies and programs that assure their access to health care.

It is incumbent upon us as human service administrators, together with our colleagues in health care and the private business sector, to propose alternatives so that families do not face the stark choice between taking a low-wage job without health insurance and remaining on welfare in order to ensure the availability of health care for their children. We must also assure that workers, who are otherwise self-sufficient, are not reduced to economic dependence or medical indigence by their lack of health insurance. This is a matter of equity for families and individuals. It is also an economic necessity. The nation needs a healthy, productive workforce. On the following pages we propose policies to provide financial access to health services so that no member of society is denied basic care when care is needed.

These recommendations derive from principles articulated in One Child in Four that stress the mutual responsibilities of individuals, government, and the private sector:

- The individual has a responsibility to obtain health coverage when it is available and affordable and to seek out health care as needed. Parents have a responsibility to obtain coverage for their children and to seek appropriate providers and services when needed.
- Society has an obligation to ensure that all citizens have access to health care. The public sector has a responsibility to provide assistance to those who cannot afford health care, and the private sector has the obligation to provide health care coverage for employees.

As we stated in One Child in Four, we seek policies that rationalize social insurance models. We call for a new Family Living Standard (FLS)—a nationally mandated, state-specific standard for cash assistance based on a uniform methodology for calculating actual living costs. Cash benefits would replace AFDC, food stamps, and low-income home energy assistance for eligible families with children. FLS benefits would meet the difference between family income—wages, child support, and so forth—and the local FLS. A study of the Family Living Standard is included in welfare reform legislation enacted this year by Congress.

Similarly, we believe health care benefits should eventually reflect a Family Health Standard, a formula that takes into account local health services and insurance costs and their differences across the country, measured in conjunction with the FLS, the Family Health Standard would be used to set eligibility and income levels for the basic health benefits package. The Family Health Standard would help direct further health care policy development. We recommend that the congressionally mandated study of the Family Living Standard include the Family Health Standard approach. Until the FLS methodology is implemented, we propose that the policies we recommend use the federal poverty level as an income determinant of need.

In addition to the two overarching principles outlined above, the Health Care Task Force developed guidelines to evaluate alternative health care policies and formulate our recommendations. We urge other individuals and organizations to use them as well. The "FWA Family Health Guidelines" include:

- Families in similar economic and health circumstances should be treated in the same way.

It is incumbent upon us as human service administrators, together with our colleagues in health care and the private business sector, to propose alternatives so that families do not face the stark choice between taking a low-wage job without health insurance and remaining on welfare. The nation needs a healthy, productive workforce.
Today, companies like ours pay for health care twice—once for our own employees and then again, as taxes and inflated health insurance premiums, for the employees of those businesses who don't provide benefits for their own people. Permitting companies to skimp on employee and retiree benefits like basic pensions and adequate medical insurance in order to gain competitive advantages is simply not sound public policy. If this is the beginning of a trend, our nation is in deep trouble—and now is the time to put a stop to it.

—Robert L. Crandall, chairman and president, American Airlines, Inc., in congressional testimony, June 24, 1997
Recommendation to Meet the Needs of Workers and Their Families: Expansion of Employer-Sponsored Health Care Plans

Most of the U.S. population with insurance has traditionally been covered through employer-sponsored plans. A broad consensus, therefore, already exists that employers have a responsibility to provide coverage. Our proposal for expanded employer-based coverage provides continuity with the current system which will aid implementation and minimize costs.

Mandating employer-sponsored coverage will significantly reduce the problem of lack of insurance since a majority of those now uninsured are employed. Employer-sponsored groups generally benefit from lower premiums, an effect increased with the creation of insurance pools that broaden the community of risk to be covered. While this proposal benefits primarily the uninsured, a mandated basic package will also benefit the low-income underinsured.

A broad consensus already exists that employers have a responsibility to provide coverage.
The intent of this recommendation is to provide universal coverage for workers and their families.

1. Eligibility

The intent of this recommendation is to provide universal coverage for workers and their families. All employees following 28 consecutive days of employment would be covered. This would include self-insured firms. Very small employers (perhaps with six or fewer workers) would be exempted. Employees with firms would have the option of purchasing coverage in state or regional insurance pools, described below.

2. Coverage

Employees and their dependents will be entitled to a basic benefit package to assure an acceptable level of health and self-sufficiency. The basic package includes:
- Inpatient and medically necessary outpatient hospital services
- Physician services
- Prenatal, well-baby, and well-child care
- Dental services for children
- Eye care

3. Financing

For full-time employees with family income greater than a percentage of the state-specific FLS/PHS (50 percent of poverty as an interim measure) the cost of coverage would be split 60/40 between employer and employee. For workers earning below 25 percent of poverty, the employee share of the premium would be subsidized in part by the government on an income-based scale.

**Errata**

On chart, page 20, left column should read "Employee Premium Percentage Contribution."
sliding scale (see chart). Government Subsidy for Low-Income Workers). If family income falls below 75 percent of poverty, the government covers the entire employee share of the premium. For part-time workers with family income at or above 200 percent of poverty, the employer pays a share of the premium based on hours worked—more for the worker who works more hours to assure that an employer does not have to pay full-time benefits for part-time workers (see chart, Premiums for Part-time Employees). This sharing of responsibility for health care costs among the employee, the employer, and government is a public-private partnership consistent with the principle of reciprocal obligations outlined above. For this purpose, a full-time employee is defined as one who works 20 or more hours a week.

4 Small Businesses

To address the problem of increased costs for small businesses, we propose the creation of state or regional insurance pools. Such pools, either privately administered with public oversight or publicly administered, could spread the costs of insurance risk among many small employers in an area. It is the intent of this recommendation to facilitate coverage for all workers and to provide access to state or regional pools to all small businesses for whom pools represent the most efficient means of insuring workers.

The government could assist in the development of pools and facilitate matching small employers with pools. It may be appropriate to develop pools for specific sectors of industry. Careful development and design of pools can also be facilitated through strong managed-care components. A further option to meet the economic concerns of employers would be the possibility of purchasing Medicaid coverage for workers. To minimize the financial impact on small businesses, we recommend phased-in expanded coverage and giving consideration to tax breaks and other assistance.

This sharing of responsibility for health care costs among the employee, the employer, and government is a public-private partnership.

---

**Premiums for Part-time Employees**

![Premiums for Part-time Employees chart](chart.png)
All public and private institutions have a role in ensuring a society of healthy, productive citizens. There is no more important task for America than a national investment in the well-being of poor children and in the strength and self-sufficiency of their families.

—One Child in Four, APWA, 1986

through individual state economic development programs.

5. Self-employed and other specific worker groups

We propose that self-employed individuals, temporary workers, and intermittent workers have access to the system of regional insurance pools. In addition, self-employed individuals would be allowed to deduct 100 percent of the cost of heath insurance as is the case with employers providing group health coverage. Today the self-employed may deduct only 25 percent of their costs.

For temporary and intermittent workers, we propose that insurance pools allow employers to pay for average based on annual averages for their employees. Such financing arrangements could be made so that these workers pay premiums based on annual or quarterly averages of hours worked, with a government subsidy of those premiums based on averaged incomes.

Recommendation to Meet the Needs of Nonworking Individuals and Families: Extension of Medicaid Eligibility

For nonworking individuals and their families, APWA recommends extending Medicaid eligibility so that those not currently covered receive benefits. There are sound reasons to use Medicaid to cover those who would not be affected by expanding employer-sponsored coverage, including the fact that a delivery system is now in place. Broadening Medicaid coverage can be accomplished without additional administrative structures and administrative funding. Certain difficulties within Medicaid now, such as low provider participation, could be addressed by this broadened coverage, and specifically the decoupling of eligibility from cash assistance. Provider participation levels could be enhanced as program enrollment increases and providers respond to increased market share potential. Lack of
Continuity in coverage and uncertainty about reimbursement has been a disincentive for providers. This proposal provides continuity of coverage for the nonworking population and eliminates the uncertainty about reimbursement.

We propose amending the current Medicaid program to require states to provide Medicaid benefits to all nonworking individuals and families. The amended program would provide for all costs of coverage of individuals and families with incomes up to 133 percent of the FPL/FLS/FLS at an income base. States would be required to provide this population all benefits currently included in their Medicaid program. States would also be required to provide a basic package of benefits, and could charge premiums and deductibles to those with incomes at or over 75 percent of poverty.

APW recommends restructuring the Medicaid program to include nonworking individuals and families as follows:

Eligibility would be based on simple tests of income and assets rather than categorical requirements of cash assistance programs.

<p>| COST-EFFECTIVE PROGRAMS |

5. Apologies for Success: Cost-Effective Programs for Children Update 1988
Eligibility would be based on simple tests of income and assets, rather than categorical requirements of cash assistance programs. Individuals and families whose incomes are below the interim measure of 75 percent of poverty and whose resources do not exceed $12,000 (excluding the home and other noncountable resources) would be eligible for Medicaid coverage without premium or deductible obligations. This approach would eliminate current categorical limitations on eligibility for this group. Individuals and families with income above that measure, or assets in excess of $12,000, would be eligible for a basic benefit package but would be subject to premium and deductible obligations on a sliding scale at state option. This coverage would use the Medicaid administrative system.

2 Coverage

For those individuals with incomes below the interim measure of 75 percent of poverty, states would provide the same benefits currently provided in their state plan. For those with incomes equal to or above 75 percent of poverty, states must offer at least a basic package of benefits equal to the basic employer-sponsored package. This includes:

- inpatient and out-of-hospital emergency services
- physician services
- prenatal, well baby, and well-child care
- diagnostic and screening tests

As stated above, with reference to employer coverage, we recommend:

**Premium Schedule for Buy-In Coverage**

On chart, page 24, left column should read "Enrollee Premium Percentage Payment."
phasing in the following services as part of the basic package over time:

* prescription drugs
* dental services for children
* eye care

3 Financing

Financing would remain the same as current Medicaid funding with federal and state contributions based on the established federal matching rate. Enrollees with incomes at or above the specified level of FLSFIS (75 percent of poverty as an interim measure) would pay monthly premiums according to a sliding schedule based on income. A household with an income equal to or above 200 percent of poverty would be required to pay 100 percent of the average costs of providing the particular package of services for which the client enrolled. Individuals below the income level of 75 percent of poverty with assets in excess of $12,000 would pay 20 percent of the premium costs (see chart on page 24). States would have the flexibility to set up multiple benefit packages that would meet or exceed the minimum package and charge higher enrollee fees depending on the benefits included in the particular set of package. States could charge deductibles and copayments in order to control service utilization of these expanded coverage packages.

Both of these proposals, when fully implemented, make access to basic health care a reality for all Americans. These are investment strategies, investments in the well-being of individual Americans, and investments in a strong and productive economy.
Conclusion
In 1986 nearly 19 million Americans needed medical care, but for financial reasons had difficulty getting care, according to a nationwide survey by the Robert Wood Johnson Foundation. The same research found that one third of the nation's poor children had not seen a doctor. The deterioration in access to health care for America's poor families and children demands action—action by the national and state governments and the private sector. Access to health care is critical for the well-being of individuals and families, and critical as well to the economic productivity of the nation.

These recommendations build upon, and are similar to, the proposals of other concerned organizations. While researchers, analysts, and lawmakers have proposed either a broadened Medicaid program, or mandated employer coverage, APWA believes that the only way to equitably address the problem of those lacking health insurance is to implement both proposals. This dual approach will alleviate the problems of the uninsured and underinsured, within a framework that is manageable and equitable for the public and private sectors.

We believe these recommendations are viable and feasible. We understand that expanded Medicaid coverage and a broad mandate for employer-sponsored health insurance coverage represent major changes in our national health policy. This progress will not come about without additional costs. The initial costs can be minimized by phasing in the new policies, including the specific basic benefit package. It is important to keep in mind, however, that this nation is already suffering its greatest social and economic costs through continued inaction. Today many of our health care needs are being borne inequitably. Companies providing health insurance are subsidizing their competitors who do not provide coverage. And the worst burden of all is that borne by individual poor children whose quality of life is diminished because their mothers were unable to obtain prenatal care.

Samuel Johnson wrote that a decent provision for the poor is the true test of a civilization. "That is a test we are failing today. We cannot address the needs of the poor without addressing the need for access to health care."

As a society we have historically dealt only with pieces of the health care puzzle, and not with the puzzle as a whole. It is time to take a comprehensive view of the situation, determine how and where society should be investing in health care for our citizens, and take the actions necessary to assure access to health care for all Americans.

*Estimated cumulative savings for ET placements after all program costs have been subtracted*
The CHAIRMAN. Thanks an awful lot, Mr. Atkins.

Let me sort of play devil's advocate here for a few moments, because these are the kinds of questions that we are going to be asked. First of all, the total welfare numbers in the State have not decreased, but have increased, haven't they?

Mr. ATKINS. No. That is a myth that is not true, Mr. Chairman. There have been some press reports in particular by Warren Brooks, a syndicated columnist, trying to claim that the welfare rolls have actually gone up over the past five and a half years in Massachusetts. I am very proud to be able to tell you that that is not the case at all. In fact, since we began the ET Program in October of 1983, the welfare rolls in Massachusetts, as I have stated in my written testimony, have actually gone down by 5 percent. Now, I admit that that is not a large decrease—and I am sure Mr. Brooks would jump right on me and tell me that is not much of a decrease for the amount of money we have spent on ET—but as you well know, Mr. Chairman, over that same period of time, since October of 1983, we are very proud of the fact that in Massachusetts, we have increased welfare benefits by a record 54 percent, and we have done that, as one of your questions to the previous witness suggested, to do something about the homeless problem in Massachusetts. Many of our homeless are families who are on welfare who were not getting enough money to pay their rents. So we have increased welfare benefits by 54 percent in an effort to prevent homelessness. The fact that the case load has gone down at all, much less by 5 percent, I find proof of the effectiveness of ET.

The CHAIRMAN. There have been some allegations that the program has not been evaluated; the implication being that there is something in there that has not worked.

What is your response to that?

Mr. ATKINS. Well, I think those changes ended when the election ended last November, Mr. Chairman. But more seriously, the ET Program has been evaluated very thoroughly, and I would be glad to give the committee a full list. There is actually a two-page list of evaluations.

We ourselves have contracted with The Urban Institute in Washington to do a full-scale evaluation of the program, which will be ready something this spring. A year and a half ago, in August of 1987, the Massachusetts Taxpayers Foundation which, as you know, Mr. Chairman, is an independent, 50-year-old watchdog-type organization in Massachusetts that worries about how we spend the taxpayers' money, evaluated ET and found it to be very cost-effective. We have other similar evaluations that show the same thing.

The CHAIRMAN. How do you respond to the observation that on the one hand you have this chart that tells us about net ET savings, but what you do not show us are the expenditures—expenditures on training programs, expenditures on health, expenditures on daycare. This sounds like a really expensive program, and you are trying to sell it as a program with savings, but it really will be exorbitantly expensive if we are to try and do this nationally.

Mr. ATKINS. I am glad, Mr. Chairman, you said these questions were somewhat rhetorical. The ET Program is expensive, and I maintain, as I know you agree, that it is a worthwhile investment.
And the purpose of using that last chart, Chart 7, was to prove that in fact it is an investment that does save money.

But I think, as we both agree, this is certainly a population of women with young children who we wish to take care of and have something in our society, both the women and those young children. But what we have found in Massachusetts is that literally, for every dollar that we invest through the ET Program in education, in training, in daycare and health care, added altogether, there literally is a two dollar savings that can be achieved through the reduction in welfare benefits—AFDC, Medicaid and food stamps. Chart 7 shows the results of that. But as we well know, often, as the private sector has proved, one has to invest money in order, as the private sector would say, to make money. In terms of Government, I think we have to look at it in terms of investing money to save money.

We found in Massachusetts that we broke even after an investment of ET funds in the second year of ET. And now that ET has been up and running for over five years, we have achieve a savings of $280 million.

The CHAIRMAN. That is the total program, $280 million over five years?

Mr. ATKINS. In savings after we deduct all the costs of the program—all costs, including administrative costs.

The CHAIRMAN. Finally, how do you respond to the suggestion that you are basically “creaming” off the top—that you are only taking volunteers, the ones who are motivated, and they would find jobs in any event, so why do we really need this?

Mr. ATKINS. We have two statistics that I think are probably the best answer to those people who would worry that the way that we are running the program is not fair or is not right because we are not forcing people to do this against their will. And the two statistics that at least I believe prove the virtue of taking that approach are, (1) the average length of stay on welfare in Massachusetts since we began the ET Program five years ago has declined by a full year, 12 months. When we began the ET Program in October of 1983, the average length of stay on welfare in Massachusetts was 37 months. It is now down to 25 months. My argument is that if all we were doing is “creaming” in Massachusetts, we are at least putting people into jobs a year earlier than they would have gotten jobs on their own.

However, there is a second very important statistic that indicates, at least to me, that that is not at all what is really going on in Massachusetts, and that statistic is that the number of families who have been on the welfare rolls five years or longer in Massachusetts—which all the experts say are the hardest to reach—has declined by an astonishing 38 percent since we began the ET Program. In October of 1983, there were 21,000 families who had been on the welfare rolls in Massachusetts five years or longer. That number is now down to less than 14,000 families who have been on the welfare rolls five years or longer.

I think what is going on is what you have heard in previous testimony, that it is those women and their families who have been on the welfare rolls the longest who know they cannot make ends meet—they cannot make it out there in a minimum wage job, but
when the Government comes along and invests in their education and training, invests in their daycare and health care, they will jump at the opportunity to take a job and get off the welfare rolls.

The CHAIRMAN. One final question. We have had an expanding economy up there in the State, so people could make the point that this process can work up there in Massachusetts, but there are other parts of the country, the Midwest, some of the industrial areas of the country, where this program just would not make sense.

How do you answer that?

Mr. ATKINS. I guess I would give a two-part answer to that, Mr. Chairman. One, it is my belief that a good economy, a growing economy is what I would call a necessary but not a sufficient condition for the success of moving people from the welfare rolls to work. And I say that because as you know, we had the opposite experience in Governor Dukakis' first term. From 1974 to 1978 in Massachusetts, the unemployment rate dropped in half. It had hit a high of 12 percent in 1975, and when Governor Dukakis left office that first time in 1978, it had dropped to 6 percent, a drop of 50 percent. We did not have an ET Program in those days; we had a workforce-type program. And the result was that the welfare rolls, despite the 50 percent decrease in the unemployment rate and thousands of jobs being created, increased. The welfare rolls actually increased by 15 percent in that first Dukakis administration. And we believe it is because we did not provide for welfare recipients the education and training, the daycare and the health care.

It may be true that "a rising tide lifts all boats," but you really have to have programs like ET to provide that boat for welfare recipients to get into.

In terms of States with economies that may be not as booming as the Massachusetts economy has been over the past six years, my fellow welfare commissioners in other States, where there are economies that are not doing as well, will tell you that they want programs like this in place for a couple of reasons. One, there is always turnover out there in the workplace. There are always jobs that become available, even if thousands of new jobs are not being created, and these women can have a shot at those jobs if we have programs in place like ET. Two, as we well know, the economy is cyclical, and those States will turn around, we hope, and the economies will improve, and then these programs ought to be in place to take advantage of them.

The CHAIRMAN. Senator Thurmond, do you have any questions?

Senator THURMOND. I have no questions. Thank you very much. I understand Mrs. Dole is here.

Thank you very much for your testimony.

The CHAIRMAN. Yes. I want to thank both of you very, very much.

Mr. Atkins, those were good responses, and I wanted to get those answers on the record. I am going to be using them as we move through the debate and discussion. So we again want to thank you for coming.

Ms. Wright, I want to thank you very much for joining us here today.
Ms. WRIGHT. Thank you.
The CHAIRMAN. We have as our final witness, the Secretary of Labor, whom we had intended to start our hearing with, but she was necessarily absent to be at a White House meeting, and we will welcome her back to the committee and congratulate her on the Senate vote of yesterday.

We recognize the distinguished Senator from South Carolina for any words of introduction that he has.

Senator THURMOND. Thank you very much, Mr. Chairman.

It is a pleasure for me to be here today and welcome Secretary Dole to this hearing. I regret that I must leave to attend another meeting that has been scheduled for several weeks, at 3:00 in the Capitol, and therefore, I will not have the opportunity to stay for her remarks. However, I am looking forward to reviewing the testimony that she gives.

Also, I would like to congratulate you again, Mrs. Dole, on your confirmation by the Senate. I do not know of a more competent or finer person to serve our Government than Mrs. Dole.

Thank you very much, Mr. Chairman.

The CHAIRMAN. Secretary Dole, we look forward to your testimony.

STATEMENT OF HON. ELIZABETH HANFORD DOLE, SECRETARY, U.S. DEPARTMENT OF LABOR

Secretary Dole. Thank you very much, Mr. Chairman.

I am pleased to have this opportunity to testify before you today, and if I may, I would like to submit my longer statement for the record and just summarize the statement now.

By now, we are all familiar with the Workforce 2000 trends, such as the slowing growth of our work force and new jobs with higher skill requirements. Because of these trends, many employers are already finding it difficult to recruit new workers, particularly in Massachusetts and other New England States.

Job openings for skilled workers, such as nurses, lab technicians and machinists, are going begging in some areas. Because the number of new workers will continue to fall, businesses will be scrambling for talent throughout the 1990's. Tighter labor markets are good news for U.S. working men and women because issues once defined as social problems will have to be dealt with out of economic necessity.

For example, in tighter labor markets, employers have a greater incentive to reach out to the disadvantaged, to ensure a healthy and safe workplace, and to address workers' obligations to their families. Employers who do not will simply lose out to employers who do.

The problem, of course, is that many of the new workers will not be qualified because of inadequate basic skills. It is estimated that three-fourths of these new workers will have only limited verbal and writing skills, suited to only about 40 percent of the new jobs.

Thus the Nation faces the prospect of a surplus of people without the skills demanded by a highly-competitive information-based economy, while a growing number of higher-skilled jobs go begging at the same time. This is becoming known as the "skills gap", and
sets up a scenario for waste of human potential and breakdown of our labor markets. It also hinders the growth of our economy.

The Department of Labor has a unique role to play in helping to address this situation because it is the only Federal agency that intervenes regularly on both sides of labor markets.

I am prepared to use the considerable resources of the Department to augment our current pace of job creation with a strategy of “growth plus”—growth plus policies to help those for whom the jobs of the future are now out-of-reach because of the skills gap or family pressures or the lack of supportive policies.

I see two broad policy challenges arising from the Workforce 2000 trends. The primary challenge is to build a first class work force that is capable of responding to the competitive challenges we face at home and abroad. As our work force grows more slowly than at any time since the 1930's, minorities, the disadvantaged, persons with disabilities and other groups traditionally left behind will be in demand by employers as never before—but only if they are qualified.

We have within our reach the fulfillment of a long-awaited dream—that every American who wants a job can have a job. First, though, we must overcome some substantial obstacles.

Currently, only one-third of disabled Americans work, even though two-thirds of those who are not working would like to have a job. While the school dropout rate has declined, there are still 900,000 dropouts annually, and the rate is close to 50 percent in some inner-cities.

Young people who stay in school are not necessarily being prepared for the jobs of the future. Nearly one-quarter of recent high school graduates read below the eighth-grade level. A failure rate this high in business would surely result in bankruptcy.

While the opportunities for employment are growing, poorly-educated black males are working less. In central cities, the percentage of black male dropouts who are working has declined from 80 percent in 1969 to just 50 percent today.

There is a distinguishing characteristic among disadvantaged young adults, those who are arrested, unwed mothers on welfare, dropouts, and the unemployed. That distinguishing characteristic, common to all these groups, is low-level basic skills.

Many youth do not have an appreciation for the dignity of work. A job promotes self-esteem and a feeling of self-worth, and we need to reinstill an appreciation for the value of work and change these youths' expectations regarding work. They need to understand that millions of unskilled jobs can become the first rungs of career ladders.

And, Mr. Chairman, we must act now if we are to avoid the haunting possibility of a permanent underclass of unemployables, concentrated in poor, inner-city neighborhoods afflicted by drugs and crime, and isolated from the Nation's economic and social mainstream. If this occurs, the cost in economic, social and human terms will be enormous. The poor themselves will bear a large proportion of the cost.

To fulfill the dream of a job for every American who wants one, we as a Nation must change the expectations and outlooks for those entering the work force. We must set a literacy goal and
invest in education and training for at-risk youth. We must better target resources on minority populations and demand higher standards for the education, job training, job placement and welfare systems.

Building a first-class work force also requires that we address the skills gap for current workers. About three-quarters of today's workers will still be on-the-job in the year 2000. Many do not have the basic skills they need to function in the jobs available now, much less the jobs of the future. Many need literacy instruction or skills upgrading.

The second challenge is to tailor the workplace to the new work force. We are becoming a society in which nearly everyone works. Two-thirds of the labor force growth, between now and the year 2000 will be made up of women, most in their childbearing years. As competition for able workers increases, managers will have to pay more attention to the concerns of the new work force. To recruit better employees, or to keep them, companies are starting to offer new benefits that today's workers need, often providing a range of services and allowing the employee a greater degree of choice.

Employers are coming to grips with workplace issues which can limit a woman's ability to work to her full potential—needs such as child care and eldercare, equal pay for equal work, parental leave and flexible work schedules. Government, too, must examine policies that were designed in an era of male breadwinners and female homemakers.

And Mr. Chairman, in support of the President's stated interest in enlightened, supportive child care, I intend to be very active in pursuing with you a child care policy for this country.

As I have stated before, I also believe that we must ensure that work and family be complementary, not competing, activities, that the American workplace be as safe and secure as we can make it, and that inclusion policies bring a measure of rationality to the demographic and social changes now upon us.

Let me conclude by expressing a simple but essential truth. The most valuable asset we as a Nation possess is our work force. If we are to meet the challenges I have discussed, all of us, all levels of Government, business, labor, the education community and nonprofit organizations must join together.

The importance of integrating the lower-skilled and less-educated into our mainstream economy demands a comprehensive human resource policy. Billions of dollars are now spent on a multitude of training, employment and related programs under separate committees of Congress, separate departments of the Federal Government, and separate State and local delivery systems. It is imperative that we work together to establish a system that is more efficient and understandable to both participants and employers.

Some States have already moved aggressively to coordinate programs for welfare recipients. Massachusetts has ET Choices, and California and New Jersey have programs. And we are promoting this kind of cooperation at the Federal level as the new JOBS program under the Family Support Act is implemented. The Department is working with HHS to see that JTPA is closely linked to the JOBS program.
I am sure we will learn a great deal from these State efforts, and I know that you welcome them, Mr. Chairman, for you have a long history of working to ensure that welfare recipients have a greater opportunity to participate in our economy and our society.

I look forward to working with you and the committee on these important issues.

This concludes my summary of my long statement, Mr. Chairman, and I will be happy to answer any questions you may have.

[The prepared statement of Secretary Dole follows:]
Mr. Chairman and Members of the Committee:

I am pleased to have this opportunity to testify before you today on Workforce 2000. I believe the Committee could not have picked a more important subject on which to hold one of its first hearings in the 101st Congress.

By now, we are all familiar with the Workforce 2000 trends:

- In the face of intense international competition, our economy has expanded and created 19 million new jobs since 1982 -- 90 percent of which have been in full-time positions;
- The average age of the American worker will rise from 36 to 39 in the next dozen years;
- At the same time, the decline in our birth rate has slowed the growth of our work force and severely reduced the number of young people available to fill the new jobs;
- The majority of the new, young entrants will be women, minorities and immigrants;
- Employment growth continues to shift from manufacturing to the service sector; and
- Most of the new jobs have higher skill requirements -- at least one or more years of college.
Because of these trends, many employers are already finding it difficult to recruit new workers. Labor markets are particularly tight in Massachusetts and other New England States, and in metropolitan centers like Boston, Washington, D.C., Los Angeles, Atlanta and Greensboro. This is giving us a glimpse of tomorrow. Job openings for skilled workers such as nurses, lab technicians and machinists are going begging in these areas, and wages for lower skilled jobs in retail trade, for example, have risen sharply. Because the number of new workers will continue to fall, businesses will be scrambling for talent throughout the 1990's.

Tighter labor markets are good news for U.S. working men and women, because issues once defined as social problems will have to be dealt with out of economic necessity. For example, in tighter labor markets employers have a greater incentive to reach out to minorities and other disadvantaged, to ensure a healthy and safe workplace, and to address workers' obligations to their families. Employers who don't will simply lose out to employers who do.

The problem is that many of the new workers will not be qualified because of inadequate basic skills. It is estimated that three-fourths of these new workers will have only limited verbal and writing skills, suited to only about 40 percent of the new jobs. Thus, the nation faces the prospect of a surplus of people without the skills demanded by a highly competitive, information-based economy while a growing number of higher-skill jobs go begging at the same time. This is becoming known as the
"skills gap" and sets up a scenario for waste of human potential and breakdown of our labor markets. It also hinders the growth of our economy.

The Department of Labor has a unique role to play in helping to address this situation because it is the only Federal agency that intervenes regularly on both sides of labor markets. On the workplace side, the Department is responsible for improving the quality of jobs through employment and labor standards, pension policies, and occupational safety and health policies. On the workforce side, employment and training programs aim to improve the competency and mobility of our labor force. The Department also acts at the intersection to match workers with jobs and to promote cooperation between labor and management. Finally, the Bureau of Labor Statistics is our "window" on labor markets, developing and disseminating information.

I am prepared to use the considerable resources of the Department of Labor to augment our current pace of job creation with a strategy of "growth plus" -- growth, plus policies to help those for whom the jobs of the future are now out of reach because of a skills gap, family pressures, or the lack of supportive policies. I wish to devote the remainder of my time to discussing the broad policy challenges I see for the Department and the nation.

The primary challenge is to build a first-class work force that is capable of responding to the competitive challenges we face at home and abroad. We have an unusual opportunity before
us. As our work force grows more slowly than at any time since the 1930's, our rate of job growth will continue to outdistance all western industrialized countries -- an additional 15 million jobs by the year 2000. The result is that minorities, the disadvantaged, persons with disabilities, and other groups traditionally left behind will be in demand by employers as never before, but only if they are qualified. We have within our reach the fulfillment of a long-awaited dream -- that every American who wants a job can have a job.

First, though, we must overcome some substantial obstacles:

- Currently, only one-third of disabled Americans work, even though two-thirds of those who are not working would like to have a job. We must facilitate access to jobs for those with disabilities through training and help in overcoming barriers to employment.

- While the school dropout rate has declined, there are still 900,000 dropouts annually and the rate is close to 50 percent in some inner cities.

- Young people who stay in school are not necessarily being prepared for the jobs of the future. Nearly a quarter of recent high school graduates read below the eighth grade level. And blacks and Hispanics test far below the remainder of their classmates. A failure rate this high in business would surely result in bankruptcy.

- A Carnegie Foundation report found that the school
reform movement of the 1980's has largely bypassed large urban school systems, particularly those whose students are predominantly black and Hispanic.

- While total college enrollment grew by more than a million students between 1976 and 1986, enrollment of black males fell by more than 7 percent.
- While the opportunities for employment are expanding, poorly educated black males are working less, not more. In central cities, the percentage of black male dropouts who are working has declined from 86 percent in 1969 to just 50 percent today.
- Among disadvantaged young adults, low level basic skills is a distinguishing characteristic of those who are arrested, unwed mothers, welfare dependents, dropouts, and the unemployed.
- Many youth do not have an appreciation for the dignity of work. A job promotes self-esteem and a feeling of self-worth. We need to reestablish an appreciation for the value of work and change these youths' expectations regarding work. They need to recognize that millions of unskilled jobs can become the first rungs of career ladders.

We must act now if we are to avoid the haunting possibility of a permanent underclass of "unemployables," concentrated in poor, inner city neighborhoods afflicted by drugs and crime, and isolated from the nation's economic and social mainstream. If
this occurs, the cost in economic, social, and human terms will be enormous. The poor themselves will bear a large portion of the cost. What is more effective in the war on drugs, alcoholism, crime, and poverty, than a good job? This nation's economic wellbeing requires that we move toward a society that ensures that its young people, its minorities, its disadvantaged, its older citizens, and all of its working families, are equipped with the skills and the support they need both to seize their share of prosperity -- and to help create more of it.

To fulfill the dream of a job for every American who wants one, we as a nation must change the expectations and outlooks for those entering the work force, invest in education and training for at-risk youth, better target resources on minority populations, and demand higher standards for those coming out of the education, job training, job placement, and welfare systems.

Building a first-class work force also requires that we address the skills gap for current workers. About three-quarters of today's workers will still be on-the-job in the year 2000. Many of these workers don't have the basic skills they need to function in the jobs available now, much less the jobs of the future. Those who lack a solid foundation in basic skills will be unable to cope with the required changes in work. It is estimated that as many as 30 million current workers will have to be retrained in the next 12 years. While this retraining will be costly, the cost of not training will be higher. Although businesses already invest some $30 billion annually training its
employees, the skills gap costs businesses billions of dollars in lost productivity, accidents, absenteeism, poor product quality and lost time. It also costs society and individuals in terms of unemployment, welfare, and associated social ills such as crime, drugs and alcoholism.

We can make significant strides towards eliminating the skills gap by:

- Setting a national literacy goal;
- Enhancing literacy instruction in all training programs, with a particular focus on JTPA;
- Making adult literacy programs available at or near the workplace; and
- Exploring new, non-threatening, non-stigmatizing ways to reach people, such as television programming, video discs, and computer assisted instruction.

The second challenge is to tailor the workplace to the new work force. We are becoming a society in which nearly everyone works. Two-thirds of the new entrants between now and the year 2000 will be women, most in their childbearing years. As competition for able workers increases, managers will have to pay more attention to the concerns of the new work force. To recruit better employees (or to keep them), companies are starting to offer new benefits that today's workers need -- often providing a range of services and allowing the employee a greater degree of choice. Employers are coming to grips with workplace issues which can limit women's ability to work to their full potential,
such as child care and elder care, pay equity, parental leave and flexible work schedules. Government, too, must examine policies that were designed in an era of male breadwinners and female homemakers.

In support of the President’s stated interest in enlightened, supportive child care, I intend to be very active in pursuing with you a child care policy for this country. I believe that any child care policy should allow parents, particularly those with low incomes, to choose the type of child care they prefer among the wide variety of options now available.

Another distinguishing feature of the new workplace is the rapid and widespread implementation of advanced technologies. About 90 percent of all scientific knowledge has been generated in the last 30 years. This pool of knowledge will double again in the next 10-15 years. This is causing product and production life-cycles to shorten considerably.

New technologies are changing the culture of the workplace. Many jobs have higher skill requirements. The way work is organized often changes, resulting in a greater interdependence among employees. A more highly educated work force is likely to be more involved in decision making and problem solving. New technology may also foster changes in the relationship between management and workers.

As I have stated before, I also believe we must ensure that the American workplace is as safe and secure as we can make it; that pension policies bring a measure of rationality to the
demographic and social changes now upon us; and that work and family be complementary, not competing activities.

Lastly, the changing culture of work is forcing employees to take more responsibility for their own career development and employment security. Job security and promotions can no longer be guaranteed by company loyalty, hard work, or membership in a union. Rather, the best long-term guarantor of employment security is the individual worker who is armed with up-to-date skills, adequate retirement benefits, sound labor market information and flexible career attitudes.

I will conclude by expressing a simple but essential truth: the most valuable asset we as a nation possess is our workforce. If we are to meet the challenges I have discussed, all of us, all levels of government, business, labor, the education community, and nonprofit organizations must join together. The importance of integrating the lower-skilled and less-educated into our mainstream economy demands a comprehensive human resource policy. Billions of dollars are now spent on a multitude of training, employment and related programs under separate committees of Congress, separate departments of the Federal Government, and separate State and local delivery systems. We need to work together to put in place a system that is more efficient and understandable to both participants and employers.

Some States have already moved aggressively to coordinate programs for welfare recipients. Massachusetts has ET Choices, California has GAIN, and New Jersey has REACH. We are promoting
this kind of cooperation at the Federal level as the new Job Opportunities and Basic Skills Training Program (JOBS) under the Family Support Act is implemented. The Department is working with HHS to see that JTPA is closely linked to the JOBS program. In addition, as the statute requires, we are jointly developing regulations on conditions of employment in the work environment. As part of this process, both the Departments of Labor and HHS will strongly urge States to coordinate with JTPA when designing their programs. Mr. Chairman, I know that you have a long history of working to ensure that welfare recipients have a greater opportunity to participate in our economy and society. I look forward to working with you and the Committee on these important issues.

Mr. Chairman, this concludes my prepared statement. At this time I would be pleased to answer any questions.
The CHAIRMAN. Thank you very much, Madam Secretary.

Just to note your final comments about some of the States that are moving aggressively, you were good enough to mention the Massachusetts ET Choices and others. We just had Mr. Atkins here, commenting and responding to some questions about that program, and then you mentioned implementing the Family Support Program.

As you well know, in the review and in the hearings last year, they built into the Family Support Program a number of important elements, but two of the most important are the daycare and the health programs, for the period of a year. I think that this is in recognition—and we have seen it in the earlier part of our hearing today—of the importance of those elements. Mr. Atkins pointed out that the three major reasons why those who were moved off welfare and into employment came back to welfare were the lack of health insurance, the low wage, and the child care problems. Those were the essential reasons—I think he mentioned 75 or 80 percent of the reasons—why 30 percent of those who had gone through the program and had been the most difficult to train and get off dependency, came back.

Certainly, the Family Support Program recognizes the importance both of child care and health care. And we have talked on a number of occasions about trying to do something about minimum wages, too.

You mentioned those who are handicapped and are not employed. We are going to need these individuals involved in the labor pool. We have a rather unique opportunity to address the problems of both unemployment and welfare dependency and the needs that American companies are going to have for additional employees. So this is a general framework in which we are going to be looking at where we are going to go in this committee, and that is why we particularly wanted you here today because your more complete testimony, and the study, cover in a rather panoramic way this perspective.

I was interested in the Workforce 2000 projection of an unemployment rate of over 7,000 in the year 2000. It is interesting to me how, if the demographics are going to be as tight as all of us understand they will be, we are going to continue to have that high percent of unemployment. I do not know whether you have any special insight. I was just kind of amazed at that.

Secretary Dole. I have noted that as well in going through the report, Mr. Chairman. I do not have any special insight on that. But I feel that certainly the challenge now is to do everything in our power to try to match up the skills that are going to be needed and the abilities of those who have not had an opportunity thus far to be involved in the economic mainstream in and meaningful jobs.

And it is not just training and education that is needed. I think you have to really begin with counseling and providing role models, and perhaps helping people work through some of their financial problems. There must also be mentors. There is a whole range of things that must be done to really help lift people out of the ghetto and inspire in them an understanding that they can make a meaningful contribution and can participate in a meaningful way.
There is the importance of literacy, remediation, job training, basic skills, education, and then, as you have mentioned with regard to ET Choices—support services as well—whether it be child care, transportation or health care. There is quite a spectrum of needs here in terms of helping to break through this cycle and help people get their foot on that ladder through meaningful employment, and the dignity, feeling of self-worth and independence that a job can produce.

The CHAIRMAN. I think that is a good response.

We had impressive testimony from Marcia Downley of the Dayton-Hudson Corporation. They have had rather remarkable success in moving some of those who would be considered to be the most difficult individuals, given the historic record of profiling their backgrounds into employment. It is short testimony, and perhaps your staff would make it available to you, you can read through it quickly. But it covers many of the things that you have mentioned here and demonstrates how, in practical terms, they have been able to do it. Hopefully, we can replicate that kind of experience in other communities.

Secretary Dole. Yes. And I think as we have an opportunity to look hard at JTPA, for example, there are a number of things that can be done to more carefully target toward the disadvantaged and those with the lowest skill levels, to target the cities where the majority of people in that category are living and to really try to improve our performance standards in these programs.

JTPA is very good. I think there is more that we can do in terms of enhancing the literacy aspect of it, and perhaps a 3rd title—we will have an opportunity very soon to look at that. Of course, I hope we can move forward with making the summer jobs program year-around, which I think will provide the more in-depth opportunity that we are talking about, and perhaps increased nonresidential training with regard to Job Corps. I think this could open up more opportunities for more people, and that is something that I want to look at very clearly—how do we bring more people into these programs. And certainly, coordination is absolutely crucial. If we do not have unlimited money, then we have got to enhance the efforts that we have now. The first thing to do is to try to make the programs as effective as possible, and then to make them as efficient as possible once we know what is going to be most effective in addressing these problems. Not to thoroughly coordinated would be just unthinkable at this point, because we have got to enhance what we can deliver through the programs that we already have.

The CHAIRMAN. One of the programs that we passed last year virtually unanimously in the Senate and which got adopted in the House, in a conference at the end of the session, was the program called JEDI, in which we have tried to target, given what we know now, those who we know, given the historical background, would be the most difficult to move out of dependency and into gainful employment. After they have been employed a year, some of the savings are shared that would come at the national level if these people continued to be on welfare with the States, and do that annually. The formula does not make a great deal of difference. The bonus payment could be 65 or 75 percent of the federal share of the welfare payment in the first year, and 65 or 75 percent in each of
the second and third years. The final bill provided for 75 percent of all three years. The main point is that we really do not invest a single dollar in bonus payments until the program shows a positive result. There will be savings for the States, but there will certainly be savings at the Federal level, and we could use some of those savings at the Federal level as incentive for the States to get to move somebody else off, using financial incentives.

We saw in Mr. Atkins' testimony today and on earlier occasions that the way this thing really broke open in Massachusetts after they got the training and health care aspects of the program and the daycare, was to give some financial incentives to the groups who get these people out there and gainfully employed, to give them a real reward. So I hope you might be able to take a look at that. We had a good deal of discussion here, both in the Committee and on the Senate Floor. It is one of those bills that got the support of the Heritage Foundation and the New York Times, a strange combination. But I hope you might be able to take a look at this over the period of time.

Secretary Dole. Yes, indeed, I certainly will.

And on the JEDI regulations, as I mentioned last week, there is a February 7th date on that, and we are going to come in just as close to that as we can. We are really aiming to meet that, or very soon thereafter.

The Chairman. Good.

Just looking down the road, I have a few questions on Workforce 2000. The Bureau of Labor Statistics projects that from 1982 to 1995 the 20 occupations with the largest numerical growth in jobs will account for 56 percent of all job growth during that time period. Most of the jobs, or by far the largest increase, are for janitors, clerks, waiters, orderlies, kitchen help and fast food workers. Now, the Budget Committee found in reviewing the jobs created between 1979 and 1987 that half of the jobs paid poverty wages.

I think you have talked about it, and I think all of us recognize that we are going to need additional skills for those people to move on into the other jobs that are created.

Secretary Dole. Right.

The Chairman. But you also spoke of the need to appreciate the dignity of work. And I would hope as we are looking down the road that we are going to be able to develop the kinds of skills training and placement for those jobs that are going to be created over this next period of time. But we should also recognize that there are going to be a number at this other level, and if we are going to make those jobs where individuals have some degree of self-worth, we do not want to miss out and forget those individuals as well.

Secretary Dole. Exactly. And I think what I mentioned about the counseling and mentors are important in terms of really moving a person out of poverty. As I see it, it is a matter of change in attitudes and values to some extent, too, as well as basic skills, literacy, job training, and education. First, they need that foot on the rung of the ladder, and then, hopefully, as they move into those entry-level jobs, they will receive training that will enable them to develop higher skills. The experience of work and what is learned from that experience, such as the requirement of being on
time for a job, is important, I think, with regard to some of our young people.

The Chairman. Yes, I certainly agree with that. But I think also we are going to find out that you have to have those new jobs at least be jobs that have some value for people to be able to maintain some sense of dignity. We can teach people to be on time and all the rest, but as we have heard in a very dramatic way from the individuals who testified earlier today, the real life challenges that they are facing make it difficult. One witness today, was working 56 or 58 hours per week for virtually the minimum wage, and bringing up two children. The only time she had been on welfare was a period of three months because she needed an operation.

So I think part of it is to make sure that we are matching the skills, which is absolutely essential, and we can do that. We have to try to find out how that can best be done. But we also have to make sure that those other jobs that are created, even though they are considered to be jobs that compensate less, at least initially are not jobs that lessen a person's self-value or self-worth. I think that is something we are going to have to face up to.

Secretary Dole. Yes. I look forward to working with you on that particular issue, too.

As you know, in terms of minimum wage, the President has indicated that he would be in support of an increase in minimum wage, tied to a training wage, so that we do not take away the opportunity that a young person might have for an entry-level job.

The Chairman. On the concept of the training wage, in looking at the Workforce 2000, they talk about the "skills gap", and when they talk about it, they define this, as you have mentioned in your testimony, as the lack of reading, writing and math skills among far too many of our workers is something we can no longer tolerate if we are to compete. Clearly, there is a lot of training ahead, but do you include in your concept of a training wage an upgrading of these skills?

Secretary Dole. I would hope so. I think there is no question, in terms of what is needed here. I believe that in our school system we are going to have to have higher standards—certainly, back to reading, writing, arithmetic, and really providing for measurable comparisons. I think there is going to really have to be some testing as far as our schools, our teachers, our students, and a real focus on improving the efforts there. And I think a number of businesses are starting to be involved as well in this area, which is a good trend.

The Chairman. I mentioned earlier the Fortune article on "Saving our Schools", and Brad Butler, who has appeared here, talked very eloquently about the importance of education and he reviewed with us the Perry Preschool Program and the Syracuse program. There are a number of different programs that demonstrate very clearly that getting some appropriate educational and developmental skills in the early years has had an extremely important and significant impact in dealing with the problems of school dropouts, and dealing with the problems of drug dependency, teenage pregnancy, welfare dependency, and run-ins with the law. This is something to which I am very strongly committed and I am hopeful that we will be able to get that additional component
included in the various programs that we are developing as we try to deal with how we are going to focus on children in our society.

Secretary Dole. Yes, and certainly the Head Start Program for the very young has been an excellent program, and is certainly something I feel we ought to increase our commitment to.

The Chairman. It has been a great success. We are keeping our fingers crossed on Mr. Bush’s budget on that program. And as you well know, the Republican Convention endorsed a significant increase in the Head Start Program as part of their platform.

And we find in some of the Head Start programs in my own State, where they use what they call the “High Line” curriculum development, which is very similar to the kind of curriculum developed in the Perry Preschool program, it is having a very positive impact on the children in that area. It is taking place in some of the Head Start programs, but only a few, and that is something that we will have an opportunity to address.

Secretary Dole. Yes, Mr. Chairman. This is something that I certainly look forward to the opportunity to review. Obviously, I have been around just a very short time, and there is a great deal to review. But I think it is absolutely crucial, with all these various programs, that we tie them together into a comprehensive human resources program if we are going to have an opportunity to really make an impact. We have a window of opportunity, and we have got to seize that window of opportunity. So I truly look forward to working with you to see how we can put these together in a way that is most efficient and most effective, by better targeting resources providing goals and establishing better performance standards to really zero in on this in a way that is comprehensive and meaningful.

The Chairman. Thank you very much.

I see other colleagues here. Senator Cochran, we have had, I think, a very impressive overview by the Secretary, talking about employment to the year 2000 and reviewing a lot of the various recommendations and a number of areas which the Secretary thinks ought to have special priority. We look forward to whatever comments or questions you might have.

Senator Cochran. Thank you very much, Mr. Chairman. I appreciate the recognition.

Also, I just wanted to be here to commend our new Secretary of Labor for the fast start in her new job, getting right back to the committee with testimony identifying some of the important goals that she has for dealing with these problems, to try to eliminate the jobs skills gap that exists. I think she has presented the committee with some very thoughtful suggestions, and we will probably be well-advised to consider very carefully the suggestions that she is making.

I know this Workforce 2000 study is a very important contribution, too, to our understanding of the trends that we see, and to know that the Secretary of Labor is aware and understands these things that are happening is also reassuring. I think they have laid out for us a lot of the complex challenges that we face with expected labor shortages, of all things, at a time when we continue to see projected unemployment among many of our Nation’s younger citi-
zens, particularly inner-city minority young people, which is very unfortunate.

I wonder, Madam Secretary, if there is not a way to use this opportunity when we are reauthorizing the Vocational Education Act this year to try to look at ways to bring to some of these previously ignored or overlooked students some training and job preparation opportunities and to try to design these educational experiences so that they will be attractive. I do not know how we do that; I am not sure anybody has got the answer, or whether there is one answer to it. But I wonder if you share that feeling.

Secretary Dole. Well, I agree with you, absolutely. I think that this is a tremendous opportunity that we have this year with the reauthorization. And certainly the recipients of these programs deserve our very best effort to ensure that there is not a duplication of services for them at the local level in terms of various offices and various forms to fill out which really undercuts effectiveness and efficiency. So I think we have a great opportunity, and now is the time to act. We have got a blueprint before us, we know what the problems are, we want to do everything in our power to coordinate at every level and to make sure that we are as focused and as targeted as possible. And I think the setting of goals is going to be very important, and improving performance standards, things of that sort, will allow us to really measure progress and work very closely together.

In fact, my feeling is that there are many significant opportunities to coordinate with other Departments, such as with HHS on welfare reform and the JOBS program, and with education on the vocational education reauthorization. In fact, there is a literacy effort that has been ongoing with Commerce and Education and the Department of Labor that has been, I think, very meaningful—I think we are going to have to meet regularly and often, both the Secretaries and our senior staff. And I want to see that occur on a schedule, on a regular basis, so that we really move forward very seriously on this effort to coordinate. I think it is crucial.

Senator COCHRAN. I think that is important. And looking at the goals or the targets that you outline in page 7 of your testimony—setting a national literacy goal, making adult literacy programs available at or near the workplace, challenging everyone to tailor the workplace to the new work force—these are very important suggestions in my judgment, and I hope we cooperate with you in every way possible to see that this gets implemented as a matter of national policy.

Secretary Dole. I think it is important, too. I would just add there that the idea of exploring the possibility of television programming—I have been in touch with one of the networks this week that has been very active in this area—and I believe there are some real opportunities there. There are people who just feel a real stigma going to a local center and saying, "I do not know how to read or write"—that is embarrassing to a lot of people, and they are not going to do it. Finding a way through television to do some real education for literacy appeals to me a great deal. So we need to try to work on that particular aspect as well.

Senator COCHRAN. One experience I had visiting a plant site that was under construction in my State a few years ago was that the
first building being constructed at this site was a classroom, in
effect to teach the applicants for jobs at this paper and wood chip
processing plant a lot of the basic skills that they would need to be
employed at that plant. They were going to teach these courses and
some basic mathematics, some reading and writing skills that they
felt would be needed to work effectively and with success at that
plant.

That made quite an impact on me that private industry and busi-
ness is going to have to get involved, as this employer was doing, to
try to make sure that the people who are interested in working
there will be equipped with the skills to succeed if they did have a
job opportunity. And I think we no longer can just sit back and say
let’s measure the effectiveness of our programs by the amount of
money that the Federal Government puts in its budget for an edu-
cation program. I think, of course, financial support at the Federal
level is very important, and we all recognize that. And I was de-
lighted to see the previous Administration increase the request for
funding for the Title I program, targeting money for disadvantaged
children in States like Mississippi where we really do need some
extra Federal assistance to help bring up the level of education
among some of the students to a higher level. There is just not the
resource base in some of the States to do that extra amount that is
needed. So the Federal Government can play a very important role,
and I hope that this Administration will be sensitive to those
needs; I think that it will.

Secretary DOLE. Yes. As a matter of fact, there are
a number of
businesses that already are very active in this area and are doing a
very fine job. I am planning to meet with some of them very short-
ly to talk with them about how we can do more in the business
sector to encourage this sort of thing, and get their thoughts on
what we might put together in the way of more outreach to pro-
mote this kind of involvement to an even greater extent. So I agree
with you thoroughly on that. It is an area of great potential.
Things are moving, but there is a lot more that can be done. And
then, of course, the Federal Government can highlight those
programs that have been particularly successful and e them as
models for others as well.

Senator COCHRAN. Mr. Chairman, I thank you for the recogni-
tion.

Madam Secretary, congratulations again on the fine job you are
doing in the first few days of service in the Cabinet of this new
President.

Secretary DOLLE. Thank you very much, Senator Cochran.

The CHAIRMAN. Senator Coats?

Senator COATS. Welcome again, Madam Secretary, and congratu-
lations. You are now official.

Secretary DOLE. Thank you.

Senator COATS. The last time we talked, you were hoping to be
official, and I do not think there was any doubt in anybody’s mind.

Secretary DOLE. I thank each of you for that honor, too.

Senator COATS. I appreciate your statement. I think we are just
beginning to grasp the significance of what it means to have a
labor shortage. We have struggled for decades in this country with
a labor surplus and struggled to find ways of finding meaningful
employment for people, particularly disadvantaged, lower-skilled people. Now all of a sudden we are faced with what is called a labor shortage.

Just six years ago, in the Congressional District I represented, we lost the main plant of our largest employer, 10,500 jobs left because International Harvester closed their truck manufacturing plant. I remember the depths of that experience in 1982, wondering whether the community would ever come back. And today, just six years later, I visit employers in our area and throughout the State of Indiana, and they say, "I can't find enough skilled workers." They are adding new incentives to attract people, and so forth.

Well, what a tremendous opportunity and time for you to be coming on as Secretary of Labor. There are tremendous challenges, but what a much better dynamic to work with than the opposite. Secretary DOLE. That is right.

Senator COATS. So it seems to me that to the extent that we can foster—and you are going to be in the lead in this, and hopefully we can support you—the kind of cooperative relationship between business and labor and Government, to reach out to the previously unemployed and give them the skills, the training, the incentive, the boost, the head start or whatever it takes to get them into the labor force. What a significant contribution we can make to our society if we can do this.

Secretary DOLE. Absolutely.

Senator COATS. It seems to me that in times of employment where people have a job and they are moving up the job ladder, social problems become much more manageable than they do when the opposite occurs. So I really am happy that you are there, and I am glad that you recognize the challenges that are ahead of you. I certainly want to work with you.

Secretary DOLE. Thank you. And I feel just as you do that, when we look at the problems that we face, whether it is alcoholism, drugs, teenage pregnancy, dropouts, vandalism, or all the rest—if a person has a job, to me that is the crucial thing. The dignity and the self-respect that comes with a job is of critical importance—then you can begin to impact these other areas. So I think we do have a wonderful opportunity to make a real difference for people here, and I certainly feel a sense of very strong commitment—a sense of mission, if you will—about what we are doing. That is why I particularly look forward to working with this committee because, with the years of experience here, there is much that I want to learn from members of the committee who have been involved with the various programs. That will be very helpful to me as I get up and running on these various issues.

Senator COATS. Let me ask you a question about the minimum wage and the so-called proposed youth differential. You may have addressed this—I think you did—before I came, but if you wouldn't mind just touching on it again for my benefit. I have supported that since I first came to Congress in 1981, but I know the dynamic has changed, the demographics have changed. What are the reasons why we should continue to look at a youth differential in conjunction with a potential increase in the minimum wage? What is the justification for that, and how do you see that whole thing coming out?
Secretary Dole. Basically, the reason would be that in the case of starting a new job, a person takes less of a salary to get that on-the-job training. We would not want to see job opportunities lost for young people who are just coming into the work force who are entry-level, who need that first job just to get their foot on the rung of the ladder. We want them to be able to move up and get training for more significant positions. We want to ensure that we do not lose those opportunities for the young and those who are just entering the work force. We would favor the training wage at the same time that we increase the minimum wage.

I believe overall that there has been quite a decrease in the number of workers at minimum wage levels. In 1981, I believe it was double what it is today, so there has certainly been progress in this area. And while about 19 million new jobs have been created since 1982, the number of minimum wage earners declined by 2.6 million. And just last year, the number of workers earning the minimum wage dropped 800,000 at the same time that we created about 3.6 million jobs.

But the profile for those on minimum wage, as I understand it, basically is a young person who is single, living at home, not in poverty, and a part-time worker. So as I say, I think that we can work together to try to figure this out. But I know the President feels that if there is going to be an increase, there should also be the training wage.

Senator Coats. And that would be for a specified period of time?

Secretary Dole. I believe so, though we have really not at this point had an opportunity to work through the legislative agenda. So I do want an opportunity to go through this before I get into very much detail as to what he is ready to support.

Senator Coats. Let me just ask you one more question on that. One of labor's concerns is that it would be used as a means of displacing permanent employees. I assume we could craft legislation designed to build protections in so that an employer could not lay off or terminate employment for a regular, full-time, older worker, just to keep revolving training people on through.

Secretary Dole. Right, I would think so.

Senator Coats. I would hope that we would look for a way of ensuring meeting that concern, which I think has been a legitimate concern.

Secretary Dole. I agree.

Senator Coats. I again want to tell you how pleased I am that you are there and how much I look forward to working with you in dealing with what I think is both a tremendous challenge and a magnificent opportunity in the next decade or so, to getting our people good jobs and making them a part of the system. I think it is a great challenge, but one that is doable.

Secretary Dole. Yes, I agree, and I think the time is now to begin to act on this.

Senator Coats. Thank you, Mr. Chairman.

The CHAIRMAN. I want to thank all of our witnesses for their testimony. This testimony is important because it casts an entirely new light on our proposals to set a minimum floor under the American worker. The evidence we have heard today shows that these proposals are important because they will make it possible for
those who are out of the work force to join it. We do have a floor for those who fall on hard times, and we call it “welfare”. It is less than subsistence, by definition, entails a serious risk of malnutrition, is crushing to the spirit of those supported by it, but it is in case after case better than we offer a family that chooses to work. The social safety net is full of holes and, as miserable as it may be, is often better than the support a family can find in the workplace.

These facts, in light of the coming shortage of workers, change the very nature of the debate on our relations and commitments to American workers. First, the evidence is clear and compelling that those who choose to stay in the webbing of the social safety net often do so out of a commitment to their children’s best interests and not because they are lazy. They leave that protection at the peril of their children’s health and well-being.

Second, the debate on minimum protections for our work force is no longer in dispute over the number of jobs that might be lost if we set a minimum standard of decency for our workers. With the labor shortage on the horizon, these arguments are at best irrelevant.

The real question is how many people will not take jobs until we guarantee that they and their children will be better off working than on welfare.

Demography is destiny, and if we ask the right questions, then the rendezvous with ours shall be a bright chapter in our history and in the lives of those we serve by sweeping out the cycle of poverty with the strong winds of a shared prosperity.

I will submit some questions from Senator Lautenberg for the record.

[Responses of Secretary Dole to questions submitted by Senator Lautenberg follow:]
New Jersey's Economic Policy Council and Office of Economic Policy recently reported that labor shortages are already slowing growth of the State's economy. In a 1988 survey of its membership, the New Jersey Business and Industry Association found that after insurance, labor shortages are their most serious problem. Given demographic trends that indicate a further slowing in the growth of the U.S. labor force, I am concerned that public policy be structured to identify and deal with significant labor shortages. Initially, I am most interested in labor shortage identification, since we must first know what the shortage occupations are, if we are to take appropriate action.

1. Do you believe that there is perfect information in the labor market, and that students, job applicants, and employers make well-informed decisions in terms of considering current and prospective labor shortages?

2. If labor market decision makers don't have adequate information on labor shortages, why does the Department of Labor not routinely develop and publicize a list of shortage occupations?

3. I understand that this topic has over the years been the subject of numerous Department-funded research. In fact, a 1982 study for the Department by the Institute of Labor and Industrial Relations at the University of Michigan spelled-out a methodology by which labor shortages could be identified, using currently available data bases. Has any action been taken to utilize the findings and recommendations of that study or other related research projects? If not, why not?

4. A number of years ago the Department published a monthly newspaper bulletin that identified those occupations most in demand at the public employment service job bank network. While the occupations listed were not necessarily shortage occupations, this was a useful tool to inform students and job applicants of local available job openings. Why was this widely circulated publication discontinued? In the current and forecasted environment of tight labor markets, could the Department resume publication?
1. Do you believe that there is perfect information in the labor market, and that students, job applicants, and employers make well informed decisions in terms of considering current and prospective labor shortages?

I think we all have to accept that labor market information is imperfect and always will be. Still, there is more information available than most students, applicants and employers realize and more information services -- such as testing, counseling, and job search -- than most utilize. Some of the information in question is produced by the Bureau of Labor Statistics; most, however, especially that affecting particular labor markets, is prepared and distributed at the State level by State Employment Security agencies (SESAs). Specific information about current job openings is most likely available in local Employment Security or Job Service offices.

One of the goals of my administration is to increase the intelligent use of labor market information among applicants and employers so that decisions they make will, indeed, be well informed. To do so, we will have to increase access to information that exists and increase our educational efforts regarding its use. Most of this work can best be done by governors and State agencies: SESAs, State Occupational Information Coordinating Committees (SOICCs), State economic development agencies, State planning offices, and the like. Still, I believe we at the Department can encourage States in their labor market information role, provide technical assistance and training, and otherwise facilitate the production and use of good labor market information.
2. If labor market decision makers don't have adequate information on labor shortages, why does the Department of Labor not routinely develop and publicize a list of shortage occupations?

Developing and routinely publishing an accurate list of "shortage occupations" would be a difficult and very costly task. The only real way to determine labor shortages is through direct measures of the imbalance between supply and demand for specific job openings. At the local level, information could only be developed for broad industry and occupation groups. It is not clear that such information would be applicable to the individual employer seeking workers or the individual jobseeker looking for work.

Information on specific vacancies collected by the U.S. Employment Service would be of very limited usefulness in determining the existence of labor shortages. This is because relatively few employers list vacancies with the Employment Service, and those that do may list only a few of their openings. The information would thus not be representative of the overall national situation.
I understand that this topic has over the years been the subject of numerous Department-funded research. In fact, a 1982 study for the Department by the Institute of Labor and Industrial Relations at the University of Michigan spelled-out a methodology by which labor shortages could be identified, using currently available data bases. Has any action been taken to utilize the findings and recommendations of that study or other related research projects? If not, why not?

The study to which you refer was intended to identify ways in which the Department of Labor might reduce the cost of processing individual labor certification requests. It demonstrated how we might, using data currently collected, eliminate from consideration occupations where no shortages exist and also identify occupations where shortages might indeed be occurring. However, such a finding was not necessarily adequate in the case of a given labor certification request. For example, while it might be determined that chefs generally are not in short supply, that finding does not necessarily speak to certification of a Vietnamese chef in Cleveland. Or while machinists might be determined to be a shortage occupation nationally, that might not be an accurate finding for the Denver labor market. Thus, judgment is required in the use of this methodology to determine whether additional information or investigation is necessary. This methodology, while helpful in the context for which it was developed, does not provide sufficient basis for estimating actual labor shortages in specific occupations or geographic areas.
4. A number of years ago the Department published a monthly newspaper bulletin that identified those occupations most in demand at the public employment service job bank network. While the occupations listed were not necessarily shortage occupations, this was a useful tool to inform students and job applicants of local available job openings. Why was this widely circulated publication discontinued? In the current and forecasted environment of tight labor markets, could the Department resume publication?

Publication of monthly newspaper bulletins identifying hard-to-fill openings was discontinued in 1982 because: (1) it was not the most efficient way to make this information available, and (2) the information was limited to those employers choosing to list openings with the employment service and such employers only list some of their openings. The same sort of data are made available to States through microfiche mailings. In addition, seventeen States acquire that information, on a weekly basis, electronically from the Interstate Job Bank (IJB) in Albany, New York, either through on-line connections or via tape. The jobs filed with IJB consist of vacancies that are not readily filled at the local level by employment service offices. The intent of such information sharing is to make job vacancy information available across labor market boundaries.
The CHAIRMAN. Again, we are delighted to have you here, Madam Secretary.

Secretary DOLE. Thank you, Mr. Chairman.

The CHAIRMAN. We will recess until tomorrow morning at 10.00.

[Whereupon, at 3:50 p.m., the committee was adjourned.]
THE LABOR SHORTAGE—POVERTY AND EDUCATIONAL ASPECTS

The Education Agenda

OPENING STATEMENT OF SENATOR KENNEDY

The CHAIRMAN. The committee will come to order.

I want to welcome our witnesses to the second in our series of hearings on the unprecedented labor shortage likely to confront the Nation in the next decade and well into the beginning of the next century.

Yesterday we heard testimony from Secretary Elizabeth Dole on the labor aspects of the shortage. Today we will hear from Secretary Cavazos about the educational aspects.

The coming labor shortage will be most severe among skilled workers, unless we begin now to prepare the class of 2000, the first-graders of today, to meet the challenges of the future.

It is no secret that we have lost ground in recent years because of the low priority assigned to education. We have lived too high on the hog, and we have failed to plant enough seed corn. Too many students will drop out of school in the next few years, too many others will graduate without being able to complete a job application form or read a bus schedule.

As the chart here indicates, Federal education spending today adjusted for inflation is below the level of 1980. This chart is quite revealing. If you take the amount of Federal resources in 1980 and adjust it for inflation, it would be at this level, here. The actual request over the previous Administration is down through here, and the most recent request now has moved it back up to about what was actually appropriated last year. The real question now is where we are going to be going in terms of the next year and following years.

Six years after the report called, “A Nation at Risk”, pointed to the crisis in our schools, we are still spending less in real terms.
than we were in 1980. Now, with a new Administration, perhaps we can fund education as if our future depends on it—because it does. The road to a kinder, gentler Nation begins at the schoolhouse. If we are to have the kind of America we all want, a strong and prosperous society with opportunity for all Americans, we need Federal investment and Federal leadership in education.

President Bush will have no stronger partner than Congress in his effort to be the education President. Just one year ago, he said he wanted to lead a renaissance of quality in our schools and added, "I can say unequivocally that I will not support any further cuts in total Federal funding for education."

One area where we should be doing more is in early childhood education. School failure begins at an early age. Some children live in such deprivation that they are already below their grade level on the day they enter kindergarten. Their chance of ever catching up ranges from slim to nonexistent.

There is strong evidence that effective early education efforts can reach these children. Children in these programs are twice as likely to go on to college. Quite revealing are the results of the Perry Preschool program and other studies. You can see that of those who have been involved in early childhood education—this is over an extensive period of time—a higher percentage graduated from high school, 66 to 49; went on to higher education, 38 to 21, were literate 61 to 38 percent, were employed, 50 percent to 32, almost half fewer were on welfare, and fewer had an arrest or problems with the law. This data is from the early education program, at the Perry Preschool, but there have been a number of other studies that demonstrate similar results.

We also need to improve the recruitment and retention of teachers. One of the serious aspects of the labor shortage is the teacher shortage, particularly in urban areas and in specialized fields. Shortages are particularly significant in subjects where we need to improve our competitiveness.

This chart shows "Principals reported difficulty in hiring fully-qualified applicants for teaching vacancies, by subject." You can see, physics, is 72 percent, chemistry, 63 percent, computer science, 62 percent, and mathematics at 57 percent.

The areas here are key to the United States competing in the world economy, and they have been identified time in and time out as the areas of greatest need in terms of recruiting qualified people to teach our young people.

That gap is increasing, and it is becoming increasingly difficult to be able to recruit those individuals. Many factors account for this—low salaries and prestige, inadequate training, dismal working conditions, and lack of control over decisionmaking.

Finally, we need to address the growing problem of lagging minority participation in the generally favorable trend in high school graduation rates and college enrollment.

Finally, let me say a word about the committee. We need an education President, but we already have an education Senator. Our Education Subcommittee will once again be chaired by Senator Pell. Over the years, Senators on both sides of the aisle have benefitted from his leadership on education matters, and so has the country. The ranking minority member on education will be Sena-
tor Kassebaum, and I look forward to working closely with her on these major issues.

I will now recognize my friend and the chairman of our Education Subcommittee, Senator Claiborne Pell.

OPENING STATEMENT OF SENATOR PELL

Senator Pell. Thank you very much, Mr. Chairman, and thank you particularly for your kind words and the way you have helped us in our work through the years.

I congratulate you on holding this hearing, which will provide us with an overview of the state of education as we begin the 101st Congress.

I also particularly want to extend a warm welcome to the Secretary of Education and to convey to him as the representative of our President that at this end of Pennsylvania Avenue, we gladly accept the President's extended hand of friendship.

At the outset of this new Congress, we have a golden opportunity to forge a bipartisan partnership between the Executive and Legislative Branches on behalf of education. We very much look forward to working with this Administration to strengthen and enhance the critical assistance provided through Federal education programs.

I would be most remiss if I did not welcome my new colleague on the committee and the subcommittee, Nancy Kassebaum, as the ranking minority member. I look forward to working closely with her in the months ahead. The strong spirit of bipartisanship has been the hallmark of our subcommittee and our work and remains a concept to which I am deeply committed. While I personally regret that we no longer have the firm of "Pell and Stafford", or "Stafford and Pell", depending on the vagaries of the political elections, I look forward to forging a new partnership with my colleague from Kansas.

I would add that this has been the mark of the subcommittee when we worked with Senators Prouty and Dominick and in the full committee with Senator Javits and Senator Stafford for the last 10 or 12 years, and I hope this will continue and expect it to.

The 101st Congress will be a busy one with a wide range of issues. We look forward to the work that we will be doing in this regard, and we should bear in mind that, as I have often said, the real strength in our country is not the gold in Fort Knox or the machines of construction we build or the weapons of destruction, the real strength of our Nation is the education and the character of our people. And this is where you, Mr. Secretary, in our work together, will play a very real role.

Thank you, Mr. Chairman.

The CHAIRMAN. Thank you, Senator Pell.

Senator Coats?

OPENING STATEMENT OF SENATOR COATS

Senator Coats. Thank you, Mr. Chairman.

I am very pleased that you have assembled such distinguished panelists to discuss the pressing educational challenges facing our Nation. One of the five education bills in the American Family Act that I introduced last fall in the House of Representatives was a
proposal for school-based management shared decisionmaking. It was developed in large part because of the exciting innovations in Dade County, Florida under the leadership of Dr. Fernandez. This creativity is a breath of fresh air we need to encourage on a national basis.

I also feel Dr. Fernandez' innovations, which maximize local sensitivity as well as the character education programs that parents desire, significantly contributed to the success of the major school funding initiative passed by voters in Dade County. If schools are sensitive to parents, the community will respond to their legitimate educational needs.

Secretary Cavazos has been a leader in identifying the need to raise expectations as well as opportunities for minority youth. He has eloquently spoken out on the need for school restructuring and parental choice.

In my open enrollment and bootstrap school bills that are part of the American Family Act, I based many of the ideas on the amazing success story of District 4 in East Harlem. The Secretary also praised this program at a recent White House Conference on Choice in Education. I am looking forward to discussing these ideas further with the Secretary.

The task we face is formidable, Mr. Chairman. We may disagree on what some of the solutions should be, but like you, I am committed to helping all Americans have the opportunity to reach their full potential.

I thank you and look forward to our panelists.

The Chairman. Thank you very much. The prepared statements of Senators Hatch and Simon (with an attachment) will be inserted in the record at this point.

[The statements referred to follow:]

139
This morning's hearing on a variety of education issues is certainly an appropriate topic, given our current national needs and President Bush's commitment to be the "Education President." I hope this hearing will begin the Labor and Human Resources Committee's effort to address these critical national education issues and to work with the President on his education agenda.

In that regard, I welcome all of our distinguished witnesses here this morning and, in particular, Secretary Cavazos. His recent comments about the necessity of facing our national "education deficit" have been forthright and stimulating. We look forward to examining solutions to this problem in more depth during the 101st Congress.

Allow me to use this opportunity to acknowledge the distinguished Senator from Kansas, Senator Nancy Kassebaum, who has joined this Committee and will serve as the Ranking Minority Member of the Education Subcommittee. She is dedicated to serving students of all ages in all areas of our country, and I look forward to working with her. And, of course, I am pleased once again to be working with the distinguished Chairman of that Subcommittee, Senator Claiborne Pell. With their joint leadership, I am confident that we can all proceed, as in the past, to meet our nation's education needs in a cooperative, bipartisan spirit.

I shall study the testimony from this hearing carefully and am sure it will provide many good insights for the Committee's further discussion.
STATEMENT OF SENATOR PAUL SIMON (D-IL)
SENATE LABOR AND HUMAN RESOURCES COMMITTEE HEARING
"THE EDUCATION AGENDA FOR THE 101st CONGRESS"
January 27, 1989

MR. CHAIRMAN, I JOIN YOU AND EACH OF MY COLLEAGUES IN WELCOMING OUR NEW SECRETARY TO THE FIRST COMMITTEE HEARING ON EDUCATION IN THE 101st CONGRESS. I AM PLEASED AND ENCOURAGED BY PRESIDENT BUSH'S DECISION IN REAPPOINTING SECRETARY CAVAZOS AND I CONGRATULATE THE SECRETARY ON HIS REAPPOINTMENT.

THROUGH CONVERSATIONS WITH THE SECRETARY OVER THE LAST FEW MONTHS, I KNOW THAT WE SHARE SIMILAR VISIONS FOR IMPROVING THE EDUCATION OF OUR YOUTH AND FOR IMPROVING THE EMPLOYABILITY SKILLS OF OUR FUTURE WORKFORCE. I LOOK FORWARD TO WORKING WITH THE SECRETARY DURING THE NEXT FOUR YEARS TO ACCOMPLISH THESE GOALS.

MR. CHAIRMAN, I ALSO JOIN YOU IN WELCOMING EACH OF OUR DISTINGUISHED PANELISTS, MANY OF WHO ARE PERSONAL FRIENDS THAT I HAVE HAD THE PLEASURE OF WORKING WITH FOR A NUMBER OF YEARS. THERE HAVE BEEN COUNTLESS STUDIES DONE OVER THE LAST FIVE YEARS ON OUR EDUCATION SYSTEM, ON OUR YOUTH, ON THE NEEDS OF OUR CHANGING WORKFORCE. MANY OF OUR PANELISTS ARE RESPONSIBLE FOR AUTHORING OR ISSUING THESE REPORTS.

WE MUST CHANGE THE EDUCATIONAL FUTURES OF MANY ECONOMICALLY DISADVANTAGED YOUTH IF WE ARE TO MEET THE CHALLENGE OF THE NEXT CENTURY. WE CAN NO LONGER IGNORE THE NEED FOR A WELL-EDUCATED AND SKILLED WORKFORCE THAT WILL LEAD US INTO THE 21ST CENTURY AND AN INCREASINGLY HIGH-TECH ECONOMY. IN 1987, THE NEW YORK TELEPHONE CO. HAD TO TEST SOME 60,000 APPLICANTS IN ORDER TO FILL...
3,000 ENTRY LEVEL POSITIONS. THIS SITUATION CANNOT BE TOLERATED IN THE WORKPLACE AND IT CANNOT BE ACCEPTED FROM OUR SCHOOL SYSTEM IF WE ARE TO MAINTAIN OUR LEADERSHIP IN A "GLOBAL MARKETPLACE."

THE U.S. IS FACING TWO HUMAN RESOURCE TREND LINES -- THE SUPPLY OF UNSKILLED AND UNEDUCATED LABOR IS INCREASING, WHILE AT THE SAME TIME DEMAND FOR UNSKILLED LABOR IS DECLINING. BY THE YEAR 2000, EMPLOYMENT IN PROFESSIONAL AND MANAGERIAL JOBS WILL INCREASE BY 5.2 MILLION, WHILE LABOR POSITIONS WILL GROW BY ONLY 1.3 MILLION JOBS. IN ADDITION, ONLY 10% OF THE JOBS CREATED BY THE YEAR 2000 WILL BE IN MANUFACTURING -- THE REST WILL BE IN THE SERVICE SECTOR.

AS DISCUSSED IN "THE FORGOTTEN HALF," COMPLICATING THIS TRENDS IS THE FACT THAT OUR NATION HAS SYSTEMATICALLY UNDER-INVESTED IN OUR NON-COLLEGE BOUND YOUTH. CURRENTLY, IN THE JOB TRAINING PARTNERSHIP ACT (JTPA) PROGRAMS, WE SPEND ABOUT $2000 PER PERSON ON FOUR MONTHS OF TRAINING FOR THE NON-COLLEGE BOUND YOUTH. IN COMPARISON, WE SPEND AN AVERAGE OF $20,000 OVER 4 YEARS IN PUBLIC AND PRIVATE FUNDS ON THOSE ELIGIBLE LOW AND MIDDLE INCOME STUDENTS WHO ARE COLLEGE BOUND.

FINALLY, MR. AIRMAN, IN TERMS OF OUR LONG-TERM COMPETITIVENESS AND ECONOMIC SECURITY, WE CAN NO LONGER AFFORD TO IGNORE THESE "FORGOTTEN HALF" AND THE FUTURE OF OUR WORKFORCE. WE NEED TO ADDRESS THE NEEDS OF THESE YOUTH AND WE NEED TO DRAMATICALLY IMPROVE THE "PIPELINE" PREPARING AND EDUCATING OUR CHILDREN TO ENTER THE WORKFORCE. ALL CHILDREN MUST BE PROVIDED THE OPPORTUNITY TO REACH THEIR FULL EDUCATIONAL POTENTIAL.

I LOOK FORWARD TO HEARING THE TESTIMONY OF THOSE HERE TODAY AND I LOOK FORWARD TO WORKING WITH EACH OF THEM TO TACKLE THE MULTIPLE CHALLENGES WE FACE. MR. CHAIRMAN, I ASK UNANIMOUS CONSENT THAT AN SEPTEMBER 1988 ARTICLE FROM BUSINESS WEEK, "NEEDED: HUMAN CAPITAL" BE INSERTED IN THE RECORD FOLLOWING MY STATEMENT.
Who will do America's work as the demand for skilled labor outstrips a dwindling supply? The U.S. has lost much ground to competitors, and investing in people looks like the way to retake it. After years of neglect, the problem of human capital has become a crisis.
facturing prowess is in large part due to a highly educated work force. The Yankees have an astonishingly high literacy rate of 90% among the free population. In the industrial heartland of New England, 95% of adults read and write. In contrast, just two-thirds of the people in Britain are literate. The U.S. is the dominant world power, and it is Japan that is No. 2 and closing fast. Americans marvel at the quality of Japanese products flooding their markets. They make pilgrimages to Tokyo. Their findings: Manufacturing superiority is being forfeited to the Japanese. And yes, once again, behind the scenes in manufacturing prowess lies a better-educated work force. In 1980, Japan's functional literacy rate is better than 90%.

Illiteracy is but a symptom of the larger problem afflicting the U.S. economy. The $150 billion yearly trade deficit and a foreign debt of half a trillion dollars reflect the inability of a large percentage of the American work force to compete effectively in an integrated world economy. Much of the success of Japan stems from the fact that its blue-collar workers can interpret advanced mathematics, read complex engineering blueprints, and perform sophisticated tasks on the factory floor far better than blue-collar workers in the U.S. Merry I. White, professor of comparative sociology at Boston University and author of The Japanese Educational Challenge, says: America in short has been scrimping on human capital. After trying to solve its serious competitiveness problems by pouring hundreds of billions of dollars into capital equipment, the country is discovering that it has been blinded when it
comes to workers. Corporate restructuring and a sharply cheapened dollar may have arrested the economic decline, but inventing as people in turning out to be the only way to reverse it.

Society's failure to invest is already haunting the business community. Chemical Bank in New York must interview 40 applicants to find one who can be successfully trained as a teller. And IBM Corp. discovered after installing millions of dollars worth of fancy computers at Burlington (Vt.) factories that it had to teach high-school algebra to thousands of workers before they could run them.

Building up human capital is becoming a national priority. After years of neglect, it has finally entered the political arena, at least on the national level. Just listen to the messages being broadcast by both Presidential candidates. Who will be the "Education President"? Who will do the most to train workers or prepare them to care for working mothers? Those are messages long overdue.

More than two years ago, Adam Smith pointed to "the vast source of economic progress and a means of raising living standards." Wrote Smith in The Wealth of Nations: "A man educated at the expense of much labor and time may be compared to one of those expensive machines." "ABSTRACT MACHINES. The evidence is overwhelming that people, not machines, are the driving force behind economic growth. In the period from 1943 to 1982, the nation's gross national product increased at an average rate of 3.2% per year. Edward Denison, an expert in growth economics, finds that one-third of that gain was caused by the increase in the education level of the U.S. work force and about half the growth was the result of technological innovation and increased knowledge, which also depended on education. But just 15% of the total increase was the result of more capital per worker.

While Washington has been hellbent on throwing incentives at business to increase spending on plant and equipment, outlays for human capital in the past 15 years have lagged behind. In the period from 1969 to 1971, total spending per student in public and private elementary and high schools grew at a brisk 4.7% a year, after adjusting for inflation. That was more than a 2% rate of increase in the U.S. and world, but elementary and high schools are another story. The U.S. spent a lot more on education in 1983 than did Japan and Europe. U.S. students attend class 180 days a year; French and German kids go 220 days, and Japanese children spend 240 days a year at school. American high school students score below both their foreign counterparts in international math and science tests. They test two to three years behind the Japanese, neatly matching the difference in time spent in school from kindergarten through high school. Worse, half of the kids in every public high school drop out. "The same is not true, it's a pattern of the use of money," says Pat Choate, director of the Office of Policy Analysis. "Janitors in New York City schools make more than teachers. Education systems are patronage systems. Community boards give out jobs."

The Education Program, America's future work force reaches beyond the classroom. A fourth of all children born in the U.S. will be on welfare some time in their lives. A quarter of all American
children are born out of wedlock, and 42% of them will live in a single-parent family before they reach their eighteenth birthdays. As a result, education often plays second fiddle to the more pressing needs of survival. The once-pervasive family role in education appears to be seriously eroding. With both parents in most families now working, the question of who's reading to the three-year-old and checking up on Junior's geometry homework is emerging a national concern. In Japan the mother plays such a strong role in teaching her children that she is known as "education mama." Here, the "education woman" is vanishing and "education man" aren't taking up the slack.

One big exception is in the Asian-American community. This year, 22% of high school seniors plan to enter the workforce, compared to 50% of American students. And because of their educational emphasis, Asian-Americans have the highest high school drop-out rates in the country but are significantly behind the national average on test scores.

But there is hope. The needs of the American workplace and the needs of the disadvantaged may be merging for the first time in recent history. The drive to raise productivity and increase international competitiveness is transforming the debate over equal pay into a discussion about economic growth. An eroding workforce. The Reagan years were understandable example of the free-flowing social spending that had peaked in the 1960s, "Another era," said Harvard University economist Lawrence J. Summers. "The educated, the skilled, and people in certain industries and jobs have done well. The rest have not. That inequality can only worsen if the human capital deficit is not solved. The Miller nationabsorption of the economy in the 1980s pitied the U.S. labor force around the entire world. The results: Trade has raised the earnings prospects for those who are better educated," says Freeman. "That should come as no surprise to those people overseas. As long as we compete with Korea, we will have a problem.

That competition has proven devastating. From 1939 to 1969, earnings for young men who left high school fell by 20%, adjusted for inflation. Even high school graduates saw their earnings drop by 9%, while those of college graduates rose by 64. In the final analysis, wage gains and losses mirror what is happening to the workforce productivity. The labor force productivity of America's unskilled labor force shows that it is not working effectively in the international economy. The productivity of the unskilled in plowing an average of 800 working hours, while workers, who are more skilled, have a productivity of 1,600 working hours. The result could signal major losses in the battle for world markets. The U.S. may not be able to get to the bottom of productivity losses in time to avoid the worst of the coming recession.

In the following article, the editor of Business Week, is, put the different views of the economic crisis and what the country ought to do about it.

By Bruce Vaughon in New York
WHERE THE JOBS ARE IS WHERE THE SKILLS AIN'T

As work becomes more knowledge-intensive, employers are fishing in a shrinking labor pool.

In a dynamic economy there is always a gap between job demands and worker skills. Throughout most of its history, the U.S. has managed to keep this gap small. But not anymore. The nation is facing a monumental mismatch between jobs and the ability of America to do them.

Unless the U.S. manages to close this human capital deficit, the economy will be stunted on a lower growth track. The drive to improve technology and productivity could founder on a shortage of competent workers. There will be a social price, too. Lower-skill minorities will find it harder than ever to land good jobs. The economy, differentiated already by growing between the top and bottom halves of the work force, could get even larger. The nation could become further polarized between skilled and unskilled workers.

First, the leap in the skills the economy will require is upgrading the work required in most jobs. The modern workplace needs people with high reading and math capabilities, so millions of jobs go unfilled while the army of the unskilled remains unemployed.

Second, job growth will be fast mainly in high-skill occupations. Most of these jobs will be in the service sector. This kind of work now requires knowledge that wasn't necessary 20 years ago.

Finally, the way in which work now is being organized requires a complete new set of skills. As companies shift from old models of assembly-line production to Japanese-style work systems, employers will have to retrain their workers to communicate.

A detailed look at how new workers will match up against new jobs between now and the year 2000 tells what's on the horizon. The Hudson Institute has devised a method for measuring success of the lack of reading, writing, and vocabulary needed to perform a wide range of jobs. The Hudson Institute, an economic think tank, has matched the new jobs that the economy will create against those scales. Here is what they found.

More than three-quarters of the nation's new workers will have limited reading and writing skills (Levels 1 and 2). But they will be competing for only 42% of the new jobs. Most new jobs will require workers who have added reading and writing skills, but fewer than one in four new workers will be able to function at Level Three. They will have to write up orders, compute new facts, and read merchandise cards. Just 5% of the new employees will be able to function at Level Three or better.

For jobs in nursing or management, the educational cost is higher. Most of these jobs, which often require more than a high school education, need skills at Level Four or above an ability to read journals and manuals, write reports, and understand complex terminology. Just 3% of the new employees will be able to do that.

For too long, too many as 50 million workers may have to be trained or retrained in the next 12 years—21 million new entrants and 29 million current workers. The most daunting task ahead is to educate and train the young work force. The estimate of the number of 16 to 25-year-olds means that employers now must dig deeper into the barrel of the poorly educated. A larger proportion of new workers will be minorities who had it harder than others to complete high school and write up orders. Retail clerks, who have to function at Level Three, will have to write up orders, compute new facts, and read merchandise cards. Just 5% of the new employees will be able to function at Level Three or better.
minorities and immigrants, who tend to have less education and fewer skills than other employees.

Minorities are the neediest of these new workers. But as employers become increasingly dependent on them, minorities are lagging behind in reading and writing skills. And those already working tend to be stuck in occupations that are disappearing, while few have jobs in growing industries (table, page 108).

As the economy continues to expand, big companies are looking harder for new workers. But many minorities with low skills still aren't being hired. Last year, Xerox's New York Telephone Co. had to test some 12,000 applicants—many of whom were minorities—to hire 2,000 people. "There are lots of people who still want jobs, but they're dropping out of the labor force," says Howard Harman, New York Telephone's director of employment.

People who already are working will need massive retraining to keep pace with changing job requirements. They are the 30 million who will need more math and science to operate computers and robots, or the assembly lines or better reading and writing skills to keep up on the job.

True, many companies are using new technology to help shrink the work force, which now numbers about 5,000, compared with 156,000 in the early 1970s. Nevertheless, the company has been forced to increase in-house training rapidly to upgrade the skills of its remaining workers. Xerox has four technical training centers where employees are taught to operate the handheld computers that telephone repairers use to keep track of orders. One five-day course trains skilled splicing technicians who install overhead telephone cable. "Before, they handled 100 pounds that was too heavy," says Bay Borsa, New York Telephone's director of training.

"Now they must learn to use fiber optics, which means splicing very delicate fiber—like a brain surgeon, almost." A growing number of companies are so far as to train the employees of suppliers as well. Xerox Corp., for instance, has implemented some Japanese-style quality control. Typically, a company employee trains the supplier's management, and the supplier then trains its own work force in the new methods. Xerox then will train about 100 of its 250 suppliers at an estimated cost of $10 million. "Training suppliers has become a permanent part of the way we do business," declares Robert Fletcher, who manages Xerox's total-quality-assurance operation. Motorola is doing much the same thing in its suppliers' work force. General Motors Corp. had to retrain workers when it opened a new truck plant a year and a half ago at Fort Wayne Ind. The plant does have some more training. But more important, it has a new test-production.
Both workers and management had to go through intensive training in group dynamics and problem solving to increase manufacturing productivity. "Our people never heard of this until a few years ago," says Don Davis, the union head of a CMNAW joint training program in Detroit. In all, Fort Wayne's 3,000 employees took 1.8 million hours of training, including time to learn the new technology. That's more than 630 hours per worker.

Companies are now spending some $5 billion a year on worker training. A lot of that money is going to upgrade the skills of older workers. Take Mary Ann Morisco. After her father died, she dropped out of school at 16 to work as a clerk in the mail room at Blue Cross/Blue Shield of Massachusetts. She wasn't able to advance on the job for almost a decade. Then she enrolled in a remedial education program run and paid for by Blue Cross, and she learned reading, math, and history. Armed with a new high school diploma, Morisco had three promotions in tow. She compares claims made by hospitals with payments Blue Cross makes to them, finding time to learn the new technology. That's more than 630 hours per worker.

Throughout the country, some 2.3 million workers have been displaced each year, according to the Bureau of Labor Statistics. Roughly 1 million, or 44 percent, of those on the job three years or less have been displaced already. Approximately 30% of these lack basic skills—reading, writing, and arithmetic. Consequently, a third never found new jobs at all. Only one in four workers without a high school diploma has a job.

The shift in power is being felt in the South, where the out-migration of high school students to the states in the Northeast has remained within a narrow band of 37% to 40%, according to the National Source Book on Displacement. If this trend continues, the baby bust could cause growing shortages. If just 4% of students continue to choose science or engineering, the old formula would be a cumulative shortfall of more than 400,000 science and 140,000 for arts throughout the year 2000. Half of all engineering students at the graduate and post graduate levels already are for women. And this country is facing a shortage of 150,000 PhD's by the end of the century.

Economists are quick to point out that as these relatively high paying fields, shortages are likely to push up salaries and attract more people. But there is little evidence that previous shortages raised more students in shortfalls to college.

In addition, market mechanisms may not work well enough to remedy shortages at "vital" who require an additional two to eight years of schooling. "Usually, the decision to enter an occupation in high school," says John H. Moore, deputy director of the NFU, "is based on the fact that we need something to do. We need to do something today, not tomorrow. The situation is about the same in these fields—no one will do it.

FOR AMERICAN BUSINESS, A NEW WORLD OF WORKERS

Employers must look to the nonmale, nonwhite, and nonyoung—and competition will be vicious.

"Oriental" and "Spanish-American" workers always have helped to do America's work, but with a plentiful labor supply few employers had to reach beyond the male Caucasian in his prime except for the least wanted jobs. Indeed, by the late 1960s, as employers awarded well-paying watch for 60-year-olds the first laid off baby boomers were on their way to Personnel. The last of that numerous cohort is now straggling into the world of paychecks and walking in parks. The boat is being that couldn't row. The doctrine in both rates after 1960 has slashed the numbers of young workers available to fill jobs right up to the year 2019 and maybe beyond.

The years of plenty have run out. Viable competition for all jobs era—men—will have a hard time finding work for 60-year-olds. But employers must look to the nonmale, nonwhite, and nonyoung, and competition will be vicious:

AS THE POOL OF YOUNG WORKERS SHRINKS, WOMEN WILL FILL THE GAP, AND MORE WORKING

- 73% of all working women ages 15-54 are of childbearing age
- 60% of all school-age kids have mothers in the work force, up from 54% in 1970
- Women with children under 6 are the fastest growing segment of the work force.
MOTHERS WILL INCREASE THE DEMAND FOR CHILD CARE

In the past 15 years, as women ventured into the workplace in growing numbers, it has been widely expected that employers would take major steps to accommodate their special needs. So far, though, employers have been able to hire only 5% of all women without doing much very differently. That is part because in a world of stagnant real earnings, women and their families have needed the money more than companies needed the women. Feminists, higher educations levels, and rising expectations pushed women into the work force, too.

But as employers fish in a shrinking pool for new workers and try to retain experienced ones, women will be in a position to make demands. Companies will be forced to compete for their time and talents.

Three-quarters of employed women have children younger than 6 make up the fastest-growing segment of the work force. For many such women, as well as for their spouses, balancing work and family presents logistical challenges worth $30 billion a year to the U.S. economy. As the U.S. population becomes older—and by 2000, will be between 

Employers have been able to hire only 5% of all women without doing much very differently. That is part because in a world of stagnant real earnings, women and their families have needed the money more than companies needed the women. Feminists, higher education levels, and rising expectations pushed women into the work force, too.

The productivity issues are greater than a world in which the babyboomer walks out of Grandma breaks her hip. Family leaves,allowing parents time off to care for a new baby or deal with a family crisis, help retain women workers and boost morale and loyalty among others as well. A 1986 report by a research corporation figures that such policies don't cost much even though temporary workers may have to fill in as other staff may "lose to work other legislation requires' employers to provide paid leave for new babies on the supply of 5 billion for the Head Start early childhood program for disadvantaged kids. States, expanding their programs, are crying for more funding. California subsidizes daycare for low-income toddlers. Tex,as school districts provide prenatal care, help through the Head Start early childhood program for disadvantaged kids. Some 43% said employers should share the responsibility with cosubs. Massachusetts is trying to expand the supply of child care with loans to build centers and grants to expand referral programs. Even "care-givers," pay them more.

Over the next 10 years, predicts the Hudson Institute, an economic think tank, only 15% of work force entrants will be native-born white males. Building a new, more diverse work force and making it work will be one of America's biggest challenges in the decade ahead.

MOTHER, DAUGHTER, WORKER, WIFE

In the past 15 years, as women ventured into the workplace in growing numbers, it has been widely expected that employers would take major steps to accommodate their special needs. So far, though, employers have been able to hire only 5% of all women without doing much very differently. That is part because in a world of stagnant real earnings, women and their families have needed the money more than companies needed the women. Feminists, higher education levels, and rising expectations pushed women into the work force, too.

Special Report

Less is the tax dollar by setting aside per cents, to be used for day care in flexible benefit plans, or to provide information and referral advice. Only 230 or 300 companies have helped start child care centers.

Is it likely that more women would enter the job market if they could find good care? In the 19U7 census, 29% of all nonworking mothers with preschoolers said they would look for work if "reasonable and cheap care were available." An additional 13% said they would work more hours. If half the women claiming they were constrained not to work in the labor force, the labor force would gain 850,000 workers, notes Columbia University economist David E. Bloom.

As expected, indeed, some companies are looking at child care as a recruiting device, especially in clerical food service, and hospital jobs, which depend on women workers. But the impetus is growing elsewhere. Prenatal classes are offered by local hospital laboratories. Echo Bay Minit Ltd. at Reno, Montana, Nev., has eased parents to hire on for swing shifts, keeping open its onsite day care center 24 hours a day, seven days a week.

Eastman Kodak Co. helps its American employees look for child care. In addition, the company is experimenting with job-sharing: Two Rochester (N.Y.) teachers with young children split the title "professional recruiter," their 24-hour slots overlap on Wednesdays. Kodak allows up to 11 weeks of unpaid leave to care for a spouse, parent, sick child or new baby, including adopted or foster children. "We've a lot of money invested in training. This is protecting our investment," declares Mary J. Har

region, Kodak's corporate employee relations director.

Corporate efforts to help workers cope with elder care by offering sabbatical leave to workers who provide adult care. A quarter of those responsible for aged parents take extended leaves or cut down their work hours. The challenge is to keep them on the job as much as possible by providing social supports for the parents. As the pressures of labor shortage build, companies will also have to see to it that employees don't

After Rastaman Sandra Brown, single parent of three, told her welfare caseworker she was "out of work," she enrolled in a program of Rappahannock Community College where she's studying medical processing and finishing high school. Her employer is helping with the tuition bills.

Young, Troubled, and in Demand

It has been a long time since America's population profile bore much resemblance to the party that landed at Plymouth Rock. Now, the nation's ethnicity and social fabric is changing. Now it is becoming less white and more Spanish-speaking. Birth rates among blacks exceed those of whites. Immigration, mainly from Latin America and Asia—especially, in the U.S. work force, have a disproportionate number of women who are growing up in families that are poor or headed by single parents. In many communities, many of today's adults lack the skills to fill decent employment. Their kids face worse prospects as a direct result of technological change. A disturbing new term endearingly describes some who are from such disorganized backgrounds that—without intervention of social service—they may never be employable (page 122).

Many young people are caught in a vicious cycle. About a quarter of all kids are born out of wedlock to parents who are poorly educated frequently young, and unmarried, says George Washington University sociologist Evan I. Lewis. In the U.S. about 44% of all residents aged 15 and over are headed by females; 17% of them are more than four times more likely to be poor than two-parent families. A startling one in seven of the women of the Class of 1980 now entering first grade is pregnant. Women are coming out to work to care for their children. "I really think demographics are destiny here," says Dana E. Friedman, work and family research director at the Conference Board.

Minorities: Fast Growth and Too Many Dropouts

* Among white 18- to 21-year-olds, 13.6% have dropped out of high school.
* Among blacks the rate is 17.5%, among Hispanics 20.2%.
* The high school dropout rates in major cities, while minorities are concentrated, range from 54% in New York to as high as 50% in Washington.
OLDER PEOPLE ARE AN UNTAPPED RESOURCE

Retirement is tough. Law Leitz, 81, retired from his sales job a decade ago but six months later he went back to work as a bus driver.

"I think I added life to your years and you actually add years onto your life," he says. As the work force ages, more and more retirees may resemble that of Ern, who put out back his newborn in 49 hours from his

8

movers with child-support orders received less than the full amount due. The average annual payment was $5,129. Another aspect of the poverty problem is women's pay. Women's earnings average $8,232, 57% of men's. Many mothers work part-time for less pay.

Harvard sociologist David Ellwood predicts that more than 2 million children who grew up in a single-parent household will spend at least some of their childhood in poverty. For some, these terms mean they will never drop out of school, and they are more dependent on a Black and Hispanic child. who, at a minority of the poor, are more, means more can be done about them. A National Depo

ment of Education Programs shows that only 4% of some young adults could escape from any poverty mark, 15% of which were at risk. The number was 9.9% for Black, and 6.5% for Hispanic.

WHY THE UNDERCLASS CAN'T GET OUT FROM UNDER

In an era of prosperity, legions of welfare mothers and inner-city youths face dead-end lives.

Terence Mauln, 16, of Madden's F правильные ответы на задания 8. Мальчик, 16 лет, из Madden's. Arbeitet als Reportermischer.Terence has dreams of becoming a teacher in his tough North Side. 'I plan to build my own business,' says the 16-year-old leader of a youth gang known as Two-Post. 'Then I can have people working for me.' Mauln's fantasy of the straight life is likely to remain just that. A high school dropout who's been in and out of juvenile institutions since he was 9, Mauln can't read a fourth-grade level. He never got a job in a high school training program run by the school's instutution. However, he now works at a fast-food restaurant. And Mauln wants to get into a series of temporary jobs after a dispute over pay.

In the past, married and poorly educated black youths such as Mauln had a shot at a decent paying job. But now, many of the barriers that made Mauln and other inner-city youths are shattered. The once highly-skilled black community has been entrenched in jobs that require higher skills than before. Many of the barriers that Mauln and others faced in the past are now gone. Young people such as Mauln can be found doing a variety of jobs in the city. They represent a growing black underclass isolated from the nation's economic and social mainstream. This legion of chronically unemployed males and welfare mothers, concentrated in crime-ridden, desperately poor, inner-city neighborhoods, numbered at least 1.5 million. That figure continues to mount despite a rise in police expansion.

The crime rate of prosperous, left-behind, school, says John D. Kasich, an economist and chairman of the University of North Carolina at Chapel Hill. "The problem is that the economy is not creating enough jobs for the people who need them."

Although the underclass is relatively small in size, it represents a significant portion of society. The main challenges are related to education, job training, and social support systems.
among the complacency of middle-class communities. As labor markets tighten, business has begun to worry about the growing pool of disaffected youth who are equipped to take on new jobs. And the costs of coping with society's failures are staggering. The nation spends $100 billion annually on prisons. Caring for low-birthweight babies born to mothers on welfare who have high school dropout costs another $188 million per year.

The growth of the underclass is the result of many complex forces—from racism to the frustration and equity that persistent poverty can provoke. "It's very difficult to point to any one thing in an environment where so many things are hostile," says David T. Ellwood, professor of public policy at Harvard University. "But everyone agrees that all these negative things start to feed on each other making it more difficult to latch on to any simple solution." Among the most potent factors is the two-tiered education. The economy's general weak-ness during the mid-1960s and early 1980s; "hit people at the bottom of the barrel the hardest," says Brookings Institution economist Robert J. Rubin. Starting in the 1950s white women, higher-paying blue-collar and monotonic feeding the job market, have made it even more improbable that low-birthweight blacks at the end of the hiring queue were chosen for jobs.

Meanwhile, the past two decades manufacturing in industries virtually vanished from the scene. Some closed down, shuttered by international competition. Others moved to converted, sprawling, suburban towns. Just 25 years ago, half of Milwaukee's jobs were of the high-paying blue-collar type. Now 30% are. In other cities, the failed is even more dramatic. Many of the "lower" jobs are knowledge intensive, skilled rather than muscular.

Even when jobs are available few are paying a fair wage. "Pay is how and the poor and for prisoners. It is very little," says Ellwood. "If a prisoner is not hanged and come back in a few months," comments a former member of the Chicago gang. In some tight labor markets, fast-food restaurants offer wages and school dropout rates pose another $188 million per year.

The allure of criminal activity is often attributed to the disintegration of the black family. In 1950, 20% of black families with children were headed by women. Today, half are.

Welfare Trap Contrary to popular perception, the birth rate for unmarried black women actually has declined since 1950. But the marriage rate among black women has dropped even more sharply—has the birth rate for married women—no single women still bear more of the community's babies. For Wilson the explanation is the shortage of marriageable black men. "The increasing inability of many black men to support a family is the driving force behind the rise of female-headed households," he says. Some social analysts, though, believe that cultural factors have become at least as important. As economist Sam Bowles reports, "If you are to be employed you are going to have an advantage." Bowles, as a social scientist, comments. "We do not know how to change the attitudes of even those who have grown up in the underclass." For Wilson, that book was "Living Ground," a story of federal welfare, high crime, and work. He says that in the world of work, there are very few "haves" and very few "have-nots."
Dr James P. Comer, professor of child psychiatry at the Yale Child Study Center, says children of undisciplined parents are less likely to develop the early language skills and competence for learning that will prepare them for school. Fully 60% of daughters of single women who are on welfare for ten years or more will find themselves on welfare for at least a year during adulthood.

The Urban Institute economist Isabel Sawhill notes that underclass communities will be "breeding grounds for an even greater percentage of poor people with little hope of becoming part of the mainstream." Some experts believe that expanding programs such as Medicaid and Head Start is only a first step. Harvard Sociology Professor Mitchell Stark says that social service agencies have to do a better job of coordinating the services they deliver to poor families, who often suffer from a spectrum of problems. An agency that provides preschool education to a child without addressing a parent's depression or the child's nearsightedness won't help much. The programs that work best are comprehensive and intensive, he says.

Sawhill adds that "better off staying home" The system doesn't support them. When nips in consumption is that the government and politics oppose work. When women on welfare are working they pay the low wages that employers are often reluctant to hire inner-city blacks, "have to understand that more people in the next 10 years are going to be different from what they re used to." This realization is the product of demographic studies that some areas are already producing labor shortages among young, entry-level workers. In Boston, a successful business-backed program is reaching 150 poor adults with workplace skills as resume-writing, interviewing procedures, and telephone etiquette. James B. Marshall, Jr., who is in charge of the program, says many youths are intimidated by the prospect of leaving isolated ghettos such as Roxbury to work in a downtown glass tower. Other programs that provide intensive remedial education, job training, and child care have helped long-term welfare mothers enter the labor force. North Carolina's General believes that suburban employers must reach out to well through job information networks and provide transportation pools. Marshall says that employers, who are often reluctant to hire inner-city blacks, "have to understand that more people in the next 10 years are going to be different from what they re used to."
AMERICA’S SCHOOLS STILL AREN’T MAKING THE GRADE

A quarter of high school grads are only marginally literate—and reformers disagree on what to fix.

Americans have always asked a lot of their schools. Civilize the frontier with the three Rs, assimilate immigrants, secure U.S. military might by bottering high school science. At its most fundamental, democracy aspires to produce literate, responsible citizens. But social and economic changes have continually reshaped what school is expected to do—from training homemakers to fostering integration.

A new call for school reform is ringing across the land. This one is different. The nation’s economic problems are being placed at the schoolhouse door. Economic growth, competitiveness, and living standards depend heavily on making investments in human capital. That means attending to the state of America’s schools.

It is a worrisome state. Although top ranked U.S. students compare well with their peers in industrialized nations, the rest do worse. One million young people drop out of high school every year. Rates approach 60% in some inner cities. Of the 2.4 million who graduate, as many as 35% cannot read or write at the eighth-grade, or “functionally illiterate,” level, according to some estimates. Most 17-year-olds in school cannot summarize a newspaper article, write a good letter, or follow a bus schedule.

What’s needed is a do-or-die battle to turn the schools around. But the front lines are as easy and fresh recruits...
are scarce. Between retiree and normal attrition, America could need to replace 1 million teachers—half the current force—before the end of the century. But only 8% of today’s 9 million college freshmen say they’re interested in teaching, and half of those will typically change their minds. Worse, half of all new hires leave teaching within seven years. And with shortages of educated workers looming throughout the economy, schools will be competing with other sectors for quality candidates.

Demand for teacher reform has been building since the mid-1970s, when declining results on standardized tests raised concerns about basic skills. It exploded in 1983, after the National Commission on Excellence in Education released A Nation at Risk. Warning of a “ruining tide of mediocrity” in public schools, it called for rigorous academic standards and a standardized curriculum. Students would study history, Western literature, foreign language, science, and math. Commenting on the report as editor of a New York newspaper, “we would rethink the whole production process,” says Albert Shanker, president of the American Federation of Teachers. This is not a question of a few recalls. The system is producing lemons.”

Most Americans want to do something about it. In a 1987 Harris Poll, 90% of those surveyed endorsed the principle that for the U.S. to become competitive, we must pay more for quality education and get “tangible results.”

The tricky question: how to get those results. Educators are sharply divided. Some endorse the call for strengthening the traditional curriculum. Others say schools must take on new and different roles to nurture the growing numbers of poor or troubled children. Predictably, conservatives deride the idea that schools should depart from traditional teaching formulas to suit individual learning styles or to respond to students’ social problems. They stress the importance of expectation and high standards, holding up such examples as William Lloyd Garrison School, where South Bronx kids, low-income families test at or above grade levels in reading. “You don’t change the principles of medicine when patients have poorer health or a poorer state of nutrition,” asserts outgoing Education Secretary William J. Bennett. When Bennett urges school overhaul, he means a shift of power from the educational establishment—teachers’ unions, administrators, and colleges of education—to parents, citizens, and state legislators.

Traditionalists point to Japan, where students seem to perform as well as or better at all levels than U.S. students. Japanese mothers are highly involved in their children’s schooling, teachers are respected, and homework is given. The school year is longer, and more homework is given. The “Japanese system,” says Bennett, is “pretty close to a system of education that is universal and of quality.”

The public school system was organized along factory lines in the 1920s by a society enthralled by mass production. Classrooms were standardized, and decisions about teaching methods and content...
BUSINESS IS BECOMING A SUBSTITUTE TEACHER

New York's Chemical Bank has an alarming problem. It has to interview 40 high school graduates to find one who makes it through the bank's training program for new tellers. The bank's principal is adopting two schools and a helping form a high school debating league. Chemical Chairman Walter V. Shipley believes parental involvement is the key. "Unfortunately you don't always have that commitment from parents, so business must try to find ways to fill the gap."

For school reform is proving Corporate America, it is marshalling resources, energy, and influence to improve education. Hundreds of partnerships are blooming between school and business. They run the gamut: gifts of equipment, and workstudy programs, teacher training, and literacy volunteers. But there are concerns about the effectiveness and reach of these programs. The biggest is whether business will have the patience to see the course through. Many new-school partnerships have been forged. In 1981, New York industrialist Eugene Lang addressed a math-grade class at last Harlem alma Mater and offered college scholarships to all pupils who stayed in school. He paid for tuition and counseling staff and became involved with the kids. Of the 64 original kids who remained in New York, 34 are in college.

The trope has been followed by corporations as well. More than 2,000 businesses have adopted the city's public schools. The sponsors provide volunteers and donate funds and equipment. At Thirteenth Street Elementary School in Los Angeles, 135 Arco Oil Gas Co. employees—servertly from secretaries to top brass—help in the classrooms, tutoring immigrant and minority students in English, math, geography, and computer science. Pacific Northwest Bell Telephone Co. and Levi's adopted a local school. But the most promising in the nation is a program sponsored by the Chemical Bank.

Businesses are focusing on teachers, as well. Two years ago, the Vice-Chairman Lewis M. Branson headed a Carnegie Forum task force that recommended higher pay, more autonomy, and national competence testing for teachers. Honeywell, Inc., sponsored a summer Teacher Academy in Denver, where Minnesota high school math and science teachers team up with re-
For years the numbers of college graduates seemed to have peaked. The shortage today is real for math and science and for tier college duos. The shortage is sure to grow. Several companies, including Honeywell, are investing in special centers to serve as a laboratory in-actor. Addressing the needs of the very young, "The economics of education are changing," Mr. Butler declares, "and so must the ways we educate our children."

Mr. Butler emphasizes that more corporations are recognizing the need for an educated work force. "The success of the United States in this century will depend on an educated work force," he says. "The business community has done its job. Now it's the schools' turn to do theirs."
Special Report

In poor communities in inner cities, increasing pay can help recruit and retain teachers. But so far it appears that at least part of the reason for teacher shortages is that college graduates in other fields often can acquire skills and experience more quickly. Teachers, on the other hand, work with young children in classrooms, and they cannot be replaced overnight. The teachers' union in Rochester, N.Y., has spent much of the last year trying to attract more teachers, and they say that increasing pay can help recruit and retain teachers.

Moving teachers who have been promoted into management jobs back into classrooms could be one solution to the teacher shortage. Teachers systems are notorious bureaus. According to the AFT, from 1972 to 1986 school districts hired one curriculum advisor, a program director, or a policy worker for every new classroom teacher. Before the teachers' union organized teachers, theusual practice was to hire the lowest paid person available.

In Rochester, N.Y., last year, the teachers' union set down a plan for teachers to return to the classroom with administrators to gain for teachers who have left the teaching profession. This plan, the teachers' union says, is much closer to what teachers want.

IT'S TIME TO PUT OUR MONEY WHERE OUR FUTURE IS

Investments in education and training will yield sure-fire returns we can't afford to ignore.

In the U.S., when you turn 18 or become a citizen, you may register to vote. The process varies from state to state, depending on the requirements of the local board of elections. It's true across the nation. You do not need to be able to read or write. The Voting Rights Act of 1965 and its amendments abolished literacy tests, among other discriminatory local requirements, that had long disfranchised millions of black and disadvantaged citizens.

Yet today the person who can vote but cannot read and write remains disfranchised in another, more fundamental, sense. The right to earn a decent wage and make a productive contribution to society can't easily be exercised by the illiterate, the poorly educated, and the unemployed. Disfranchised, too, is the unemployed worker unable to find the job to fit his unused skills. Then there's the single mother unable to find affordable day care for her toddler so that she can go to work.

The cold, hard, economic facts make a compelling case for action. The direct costs are clear: incomes are flat, and unemployment and welfare benefits are paid out. But the overall loss to the economy is bigger still. A nation's most productive resource, its people, is not being fully utilized.

Some experts in Washington and state capitals around the country will say there is no money available to invest in educating and training tomorrow's work force. And some economists, such as University of Chicago professor and business writer Gary S. Becker, whose pioneering work measured the rate of return to investments in human capital, would prefer that market forces shunt resources to the jobs market. But labor markets take time to work, and time is of the essence. Already the nation has suffered the consequences of the international market place in the future, as former competition, changing demographics, and new tech-
Jobs paid throughout the year are crucial for government programs to thrive. One year's spending on space research could remold Head Start programs or the ref.

In recent years, there is a trend toward downsizing and privatization of many government programs. This is particularly true for the Education Department, which has been facing budget cuts in recent years. Despite these challenges, the department has continued to work on various programs aimed at improving education and reducing poverty.

One such program is the Head Start program, which provides early childhood education and health services to low-income families. The program has faced budget cuts in recent years, but it remains an important tool for helping children from disadvantaged backgrounds.

Another area receiving attention is the development of new technologies and testing. This includes investments in military research, which is important for national security and defense. However, there is also a push for more collaboration and sharing of resources among different federal agencies to ensure that there are no duplications of effort.

In terms of education, the government has also been working on ways to improve the quality of education in schools. One suggestion is to provide tax credits for businesses that invest in education or support programs that benefit children. This could help to address the growing number of children who are not graduating from high school.

The government has also been looking at new ways to retain employees who are leaving their jobs due to burnout or other factors. This includes providing more support for mental health and well-being, as well as offering training and development opportunities to help employees stay engaged and motivated.

Overall, the government continues to grapple with balancing the budget and ensuring that programs are effective in serving the needs of all Americans.
FROM 1973-86, YOUNG FAMILIES LOST OVER ONE-QUARTER OF THEIR REAL INCOME AND FARED FAR WORSE THAN ANY OTHER AGE GROUP

The CHAIRMAN. Our first witness is Dr. Lauro Cavazos, the Secretary of Education. His wife, Peggy, is with him here today. We welcome her.

Dr. Cavazos has a long and distinguished career. Before being Education Secretary, he was Professor and Dean at Tufts University School of Medicine and President of Texas Tech University. We welcome you.

Secretary CAVAZOS. Thank you, Mr Chairman and members of the committee.

I welcome this opportunity to talk with you about our plans for the Department of Education. I hope today marks the beginning of a firm allegiance between this committee and the new President. Only through our combined efforts—the collaboration of everyone—can we hope to turn the tide on one of the most massive and pressing problems before this Nation, which is what I have been calling and others have called “the education deficit”.

Evidence everywhere indicates that our young people are not learning in school what they need in order to lead productive lives and maintain our free way of life in this country.

Recent years have seen education soar to the top of the nation’s agenda. After extensive polling, Louis Harris told the House Subcommittee on Education and Health last year that, quote, “Most Americans clearly see change in education as the biggest key to making the country competitive again.”

Americans are concerned. And they elected to the White House a leader who intends to be the Education President. That Presidency was launched last week by hosting 250 teachers from across the Nation at an Educational Inaugural Symposium. It was a symbolic act, but important. It signaled the kind of Presidency we can expect—reaching out, listening, asking for input from teachers, all of us working together to solve problems in the most urgent challenges we face as a Nation.

As the President’s chief advocate for education policy, I will be active both in presenting the President’s policies to you and in sharing your concerns with him. President Bush has said that education issues will be on his desk and on his mind every day.

Today, I want to talk about the changes we envision. The overriding goal that I intend to pursue during my tenure as Secretary of Education is to educate all Americans to their fullest potential.

As for the education budget, the proposal submitted under the Reagan Administration two and a half weeks ago reflects these priorities. Although limited by the fiscal constraints of the Gramm-Rudman-Hollings targets, we were able to keep the budget of the Department of Education level with the 1989 appropriation. More importantly, we rearranged priorities and redirected spending—roughly $750 million—to assist the needy and the most disadvantaged students.
The Federal Government contributes only 6 percent of the education dollars in this country. Some say this is a sum so small as to be, in the overall scheme of things, insignificant. But I believe the almost $22 billion that taxpayers invest can make a considerable difference—if we focus Federal dollars and the Nation’s attention on building into the system three benchmarks of success for American education: expectations, access and accountability.

First, we must raise expectations of our schools and the students and faculty in them. As I have said, we must expect every American to be educated to his or her fullest potential. That can happen only if every student stays in school and earns a diploma. The current first-graders will graduate in the year 2000. By that time, it truly is our hope that our efforts will make the term “dropout” obsolete.

We must expect a diploma to mean something, to signify that its holder has mastered specific intellectual skills and knowledge. The exact nature of those skills and knowledge must be decided at the State and local levels.

Because we have relaxed our expectations too often in the past, 27 million Americans are functionally illiterate today. The proposed 1990 budget reflects our hope to help correct this by extending basic skills or secondary-level instruction to an additional 700,000 adults.

We must expect schools and teachers to improve instruction in all areas of the curriculum. We requested a 3.4 percent increase for improving the training of teachers and the quality of instruction in the sciences and mathematics. We also must expect all students to be exposed to more significant learning—more English, history and foreign language, as well as the science, and mathematics. Few things better express our educational expectations for youngsters than the subjects they must study and the high school courses we require of them.

In addition to the explicit curriculum, every school has an implicit or invisible curriculum, deliberately or not, every school encourages the development of certain student attitudes, habits, behaviors. Schools need to attend to developing the character of their charges. Furthermore, drugs ought to be met with zero tolerance. We must keep drugs and pushers away from the schoolhouse door and keep every youngster drug-free.

We requested a 3.4 percent increase in the Carl D. Perkins Vocational Education Act, which is up for reauthorization. Strong vocational-technical programs are a critical component of our efforts to educate every student—and to keep America competitive.

States must increase their efforts to meet their own particular challenges in education. The 3.4 percent requested increase for Chapter II block grants to assist elementary and secondary education (Chapter 2) would help meet this expectation.

Second, we must ensure that all our children have access to the kinds of intellectual experiences that will enable them to live up to our expectations for them. A quality education must be available to every student in America, and this includes the disadvantaged, the handicapped, the needy post-secondary students. This is the Federal Government’s overriding goal in education, as reflected by the
fact that funding for services to these groups comprises 8 percent of the budget for the Department of Education.

We were able to increase funding for Pell Grants to serve an additional 46,000 students and, for the first time, some 35,000 less-than-half-time students, many of whom attend community colleges.

The Nation's largest compensatory education program, Chapter I, would be increased to serve more than 100,000 additional preschool, elementary and high school youngsters. Funding for concentration grants would be increased by 52 percent, so that more funds could be targeted to areas of greatest need.

Bilingual education would be extended to 10,000 more youngsters, and funding for special education or early intervention services would be included for over 2 million handicapped children, including 47,000 who will be served for the first time.

We doubled the request for technology assistance grants, enabling twice as many States to receive funds for providing handicapped Americans with services.

Dropout prevention efforts must begin long before high school, for youngsters who leave school usually drop out mentally long before high school. We must begin assistance to the disadvantaged and the at-risk youngsters early. Recent studies suggest that those first few years lay the educational groundwork for the remainder of a child's life.

Third, we must build accountability into the education system. Students must be held accountable for learning certain knowledge and skills. Teachers must be accountable for making sure every student does learn those things. Schools and colleges must be held accountable for students' success.

Our schools must improve the academic performance of all our students, but particularly our disadvantaged students. During the Presidential campaign, President Bush has called for the establishment of a "Merit Schools" Program, which would provide both recognition and financial rewards to schools that improve, among other things, disadvantaged student performance.

Probably the most cost-effective means to improving school and student performance is to involve parents in the education of their children. We often speak of teachers—and I truly do believe and support teachers—as professionals. I believe we should also think of parents as professionals. They direct the learning of their children. Schools should be accountable for involving parents as active partners in supporting their children's learning.

We cannot wait until a child enters kindergarten, however. We must reach parents early and assist them during the critical first year of a child's life. We must coordinate these efforts with other Federal agencies as well as with States and local units that have responsibility in this area.

When a child does begin school, one way to increase and sustain parent involvement is to offer parents a clear incentive to get involved—give them a choice of schools. It has been demonstrated that choice works. Choice increases student learning. Schools of choice can help provide access to an equal, high-quality education for all children. And choice is a natural marketplace mechanism for encouraging every school to develop special strengths and more
effective instructional programs. We in the Department will monitor State and local experiments with choice.

In conclusion, Mr. Chairman, I believe that we can make great strides toward our overall objective of educating every American to his or her fullest potential—if we focus Federal dollars and public attention on higher expectations, greater access, and more accountability in the educational system.

These are the themes I intend to stress as I continue to meet with teachers, principals, parents, students, policymakers, business people, Members of Congress and other Americans.

I know I can count on your support, because we all are on the side of angels on this issue. I look forward to working with you in solving what is one of the most pressing and urgent challenges that we face in this Nation.

Thank you.

[The prepared statement of Secretary Cavazos and responses to questions submitted by the committee follow:]
Testimony of Lauro F. Cavazos, Secretary of Education, before the United States Senate, Committee on Labor and Human Resources

January 27, 1989

Mr. Chairman:

I am pleased to be here this morning to discuss the views of our new President, George Bush, on education policy. A new presidency and a new Congress present a rare opportunity to rekindle hopes for a better future: in this case, for the goal we all share, which is to educate every American to his or her fullest potential. This is indeed an auspicious occasion, and I hope it marks the beginning of a firm alliance between this Committee and President Bush. In my view that alliance would be a powerful force for the betterment of American education.

As George Bush has said, he is absolutely committed to improving education in America. During his campaign, he laid out in detail his future plans for education in a document called "Invest In Our Children." As President Bush has said, "Our children are our future. The way we treat our children reflects our values as a nation and as a people... Children embody our respect for ourselves and for our future." And that is precisely why the President pledged to lead the nation in making a commitment to our children.
In the weeks ahead, I hope to expand on what the President's commitment to be "the education President" means to America, including the education community at large. The Secretary of Education is the President's chief advocate for education policy, and I will be active both in presenting the President's policies to you and in sharing your concerns with him. This President will have hands-on involvement with education policy, and I will be here to counsel, guide, and especially to carry out his policies. Both of us will need and welcome your help.

Since we are speaking of beginnings, I should mention that last week I was honored to join the President in his opening inaugural event, "A Teacher's Inaugural Experience." President Bush invited a group of nearly 250 educators to Washington to join him on this special occasion, and as I told the group, an Inauguration is not only a new beginning, but also a time for taking stock of how far we have come, in order to understand the unfinished business that lies ahead. So let us take stock today, so that together we can get to work.

The Federal Share

First, however, we should take account of the circumstances that unavoidably shape our policy choices. I strongly share the view of President Bush that the Federal role in education
can be a lot stronger than people might imagine -- even without regard to the power of the Federal education budget. That budget, while it represents only 6 percent of the roughly $330 billion that we spend on education each year, is a powerful tool in support of American education, and an invaluable means of leveraging other resources in aid of education.

The Federal education budget is a resource that can be deployed with considerable skill, particularly if it is targeted on areas of urgent national need. I have already begun the process of reordering the Federal education budget in pursuit of my pledge to you to fight for minimum resources for education. President Reagan supported our recommendation for a level-funded Fiscal Year 1990 budget of almost $22 billion that would redirect some spending, roughly $750 million, to assist the needy and the most disadvantaged in our education system.

We asked, for example, for an increase of some $90 million in Chapter 1 concentration grants, money that goes to counties with the largest concentrations of children from poor families. President Reagan also requested an increase in funding for Pell Grants. Changes such as these -- doing more with what we have for the poor, the handicapped, the young people who most need help in reaching the first rung of the ladder of success -- must be a hallmark of our budget policy on education.
Measured by that standard, I believe President Reagan's last budget request for education is a strong start. The budget proposes allocating $6 billion, or 23 percent of the total, for programs aiding at-risk Americans: the poor, minorities, the illiterate, the homeless, immigrants and refugees, and the limited English proficient. Approximately 17 percent of our budget, or $3.9 billion, would go to programs that help the handicapped. Some $8.8 billion, or 40 percent of the budget, is provided for student aid: grants, loans, and work-study for over 6 million needy and deserving college students. Our Pell Grant budget would cover shortfalls in appropriations for 1988 and 1989, so that no reduction in the payment schedule will be necessary for the 1989-90 academic year. In addition, for the first time we will cover about 135,000 less-than-half-time students, many of whom attend community colleges.

All in all, over 85 percent -- or about $18.7 billion -- of our 1990 budget would be directed to programs that are the disadvantaged, the handicapped, and needy postsecondary students. I mention these examples because I know President Bush agrees with priorities in our budget. I look forward to working with him, and with you, to fine-tune this budget and win your support for an education budget that makes more effective use of every taxpayer dollar. This is a skill -- or perhaps an art -- that we will have to learn well in the coming years, as we continue to grapple with the budget deficit in the
interest of securing a strong economic future for our children and grandchildren.

In short, Mr. Chairman, my mission as I see it is to seize upon the challenge of the budget deficit to work some creative policy changes to reaffirm the overriding principle of setting firm, fair, and compassionate priorities when spending the taxpayer's dollar. Let me speak for a moment of how I hope to do that.

First, the Education Department under George Bush will focus on three benchmarks of success: expectations, access, and accountability. Let me expand on each of these points and indicate how they can advance the goal of providing quality education.

Expectations. We expect every person in America to be educated to his or her fullest potential. That will result only when all students stay in school; so I want to see all of this year's first graders go on to graduate in the year 2000. We expect the term "dropout" to become obsolete. Many innovative approaches to the dropout problem are emerging throughout the United States, and we must lend a hand. We also expect every child to have the chance to build self-esteem and positive goals in early childhood. It appears that the first few years of a child's life make a huge difference to future academic
success, so we will look into ways to build on existing early childhood programs and develop other initiatives in consultation with other Federal agencies and the State.

We expect every person in this nation to be literate. Today, twenty-seven million Americans are functionally illiterate. This is a deep concern of the new First Lady, and we have to draw on the many worthwhile educational programs already developed by the private sector. This is one area where a "thousand points of light" can shine brightly indeed.

Further, we should accent the positive and expect that all handicapped people be educated for maximum independence. We already have the programs in place, and we need to work more closely with the States to implement "what works" for the handicapped.

Finally, we should expect all academic programs to demonstrate excellence by producing results. That requires the participation of every citizen in the debate about quality education. Parents, teachers, Federal and State officials, school administrators and others must come together in support of truly meaningful standards of educational excellence. The Department of Education will do its best to nurture a consensus on educational standards and will provide support through research and development programs. We will work with the
States to advance the goal of quality education, and I know we have a lot to learn from them.

Access. Every student should have access to a quality education, and we must do more to target limited resources toward the goal of improving access for the poor, the at-risk students, and the handicapped. But for children to have access to quality education, parents must also be involved in selecting the school of their choice. Now, the word "choice" means many different things to different people. But as both former President Reagan and President Bush have observed, choice works. Some may disagree on the best way to give parents more options from which to choose, and on how choice programs can be used to build better schools. But the jury is already in on this one: choice will be a critical element in education reform for years to come. Indeed, it may prove to be the linchpin in our common efforts to ensure that all Americans -- black and white, rich and poor, Asian and Native American, Hispanic, and the handicapped -- have access to a quality education. We expect schools to compete with one another in academics because we believe that competition produces better results for everyone.

President Bush has asked our Department to move to and focus on State and local experiments with choice, and we will do that in the interest of achieving better public schools. Where
appropriate, we will encourage innovative choice programs with financial incentives, such as awards to magnet schools and grant competitions under programs like the Fund for the Improvement and Reform of Schools and Teaching. Most of all, we will look for success stories and share them. Choice is a powerful tool that can strengthen schools in trouble, not tear them down.

**Accountability.** This applies to all of us, because we are accountable to the nation for the quality of the education we provide. I have mentioned our concern for at-risk children. But there's also another "at-risk" problem facing many of our children, namely, the risk of attending an inadequate school. Choice can help in this area, but teachers must also be accountable in terms of their professionalism. They must be knowledgeable, caring, and unbiased about their children, and they must show results from their programs in education. We can help develop — together with the States — better certification and evaluation systems for our teachers. Further, we expect teachers to be responsible and accountable for their educational programs, and we will urge that they participate actively in decisions about what they teach and how they teach.

We should consider teachers as professionals. In the same manner, we know the crucial role of parents in providing love
and support to their children. Perhaps we should think of parents also as "professionals." They have a joyous and difficult task. "Parents are accountable for helping guide their children through the educational system. They must set a positive example, raise their children's expectations, and urge them to new educational heights. Similarly, students are accountable for their degree of motivation and commitment to learning. They must know why learning matters, and learn respect for themselves, their peers, and their elders. They must appreciate the dangers of drugs and alcohol and demonstrate the self-discipline to just say no.

To help raise expectations and increase accountability, George Bush has called for a "Merit Schools" program to provide both official recognition and financial support to schools that work, using standards defined by the states with some federal guidance. At the Education Department we are working to put the "Merit Schools" concept into concrete form, and we have already reached some conclusions. In our view, "merit schools" are schools that produce results. We don't need another theoretical model to tell us which schools are doing a good job; we just have to look at what they are actually producing. In judging merit, then, we expect the states will want to look at such results as test scores, college participation rates;
successful employment of graduates; and, of critical importance, success in improving school participation and performance of the disadvantaged.

My personal commitment is to shape a Merit Schools program that places strong emphasis on reducing dropout rates. Dropouts are a tragic loss to our society, in both economic and human terms. By some estimates, each year’s class of dropouts costs us over $240 billion over their lifetimes in lost wages and productivity. Keeping students in school must be a number one measure of success -- good schools give children the motivation to stick with it and succeed. Nothing could cap the success of the education reform movement like dramatic strides in reducing the number of dropouts.

I must stress that Merit Schools will be a cooperative program -- Federal, State, and local, as well as the private sector. We are here to support, not to dictate, and we will do whatever we can to help States decide on the best ways to measure merit. But the kinds of criteria I have outlined are, I believe, indisputably among the chief goals of education reform. And without meaningful goals -- a real raising of expectations, accessibility, and accountability -- no program can succeed.
Spreading the Word

I have tried to sketch the framework for a newly invigorated Federal role in education policy under the Education President. But when all is said and done, budgets and programs are only part of the story. There's another equally important aspect to our role: getting out the word on where we're doing well and where we need to improve as a nation in education. Essentially, measuring accountability. For example, for some years we have been releasing a "Wall Chart on State Education Statistics." These statistics show trends and rankings in student performance as measured by factors such as graduation rates and exam scores, and rankings on teacher salaries and other resources. The sixth "Wall Chart" will be unveiled in February, and I hope President Bu... will be able to join me in presenting this information to the American people. I am also glad to announce that beginning this year, the Wall Chart will be the basis for a comprehensive annual report I will submit to the President on the State of Education in America.

In short, we'll be getting out the word about our education successes as a nation as well as our shortcomings. I expect to spend a lot of time with the teachers and educators who are on the frontlines of the battle for better schools, and, I'll be
inviting President Bush and Vice President Quayle to join me, whenever they can fit it into their schedules, as we seek ways to reduce our nation's educational deficit.

Let me close with a personal perspective on education in America as we prepare for the 1990's. Too often I fear we view education as an independent field of endeavor, with its own particular goals, methods, and interests. Nothing can be further from the truth. In America -- as in any free, democratic society -- education is a critical part of the social fabric, not really divisible from the things we care most about in our lives: our families, our homes, our work, our neighborhoods. And, in a real sense, education is the critical link between our personal goals in life and our common goals as a free nation. For, as Thomas Jefferson said, "If a nation expects to be ignorant and free... it expects what never was and never will be."

There is another aspect I consider crucial in the development of young children, particularly in the early years when values and attitudes are firmly shaped, for good or ill. That is that no influence on young children is more powerful than the positive example of strong and caring parents. Nothing is more important than this. When we speak of education in America, we must not neglect the critical issue of strong moral support from family, neighborhood, community, and church in helping our
children succeed. Parents, and teachers as well, must be free to inspire youngsters with proper moral and social values.

In conclusion, Mr. Airman, let me summarize where we're headed in shaping America's education agenda. Working within existing budget constraints we need to target and direct the almost $22 billion now being spent by the Department of Education. Our priorities should reflect our greatest needs, and therefore I believe quite strongly that our dollars must be focused on the neediest members of our society. This means a strengthened, targeted Chapter 1 program, continued access to grants and loans for postsecondary education, a reauthorized vocational education program that prepares students for the jobs most needed to maintain a dynamic economy, support for programs addressing the needs of the handicapped, a strongly supported magnet schools program, and a merit schools program that will help us come to terms with our serious dropout situation.

Additionally, I pledge my support, as well as the Department's resources, for educational choice, parental involvement, and a vibrant, successful state-level reform movement. We can, at the Federal level encourage these efforts in many ways -- through evaluation and information-sharing, among others -- while allowing creativity and responsiveness to flourish at the State and local level.
All of these steps take us back to the three words with which I began: expectations, access, and accountability. In terms of education, these are the goals of the Bush Administration, and I look forward to working with your Committee to achieve the goals on which I am certain we all agree. Together we will find what works best to educate our young people, and together we will decide when more of the same just won't do -- and strike some new ground. For what binds us together -- common educational goals for our children and our nation -- is significantly stronger than anything which divides us. Let us now make common cause, and help the Education President lead us toward the twenty-first century.
Honorable Edward M. Kennedy
Chairman
Committee on Labor and Human Resources
United States Senate
Washington, D.C. 20510

Dear Mr. Chairman:

Enclosed are the responses of Secretary Cavonic to questions posed by the Committee following his testimony on January 27.

Please let me know if there can be of further assistance.

Sincerely,

Carol C. Fox
Acting Assistant Secretary
Question: President Bush has said he wants to increase funding for the Fund for the Improvement and Reform of Schools and Teaching (FIRST) from $5 million to $50 million. Senator Hatch and I authored the legislation that created this program and I am interested in knowing more about your plans and the timetable for expanding it.

Answer: The President has expressed strong support for the Fund for the Improvement and Reform of Schools and Teaching (FIRST). He is very interested in helping States and local school districts find and implement strategies for improving schools and teaching. We are currently considering a number of options to help him best carry out this and his other education priorities. After the President's budget proposals are finalized, and announced on February 9, we will be better able to discuss our plans.
Question: During the election campaign, President Bush promised to "eliminate adult illiteracy in 8 years." I'd like to know how you intend to go about this, how can you accomplish this without substantial increases in the funding for the Adult Education Act?

Answer: In the FY 1990 budget request, the Department requested an 18 percent increase in Adult Education Grants to states to continue the Administration's battle against adult illiteracy. These funds support programs that teach basic skills to illiterate adults and help other adults attain high school equivalency. Funds are also requested to continue national research, demonstration and evaluation efforts and to provide literacy training for homeless adults. Funding for the Even Start program, which assists illiterate parents and their children learn to read, is also requested.

I believe adult illiteracy is one of the most serious problems we face and I am totally committed to tackling the problem. In addition to proposing substantial funding increases for adult literacy programs, the Department will continue its efforts to promote private sector and volunteer participation in literacy programs. States and localities have also joined the battle by increasing their support for these programs. I plan to continue to work with the President and with Mrs. Bush, who has offered her assistance in support to the Department on several projects.
Question: Please tell us the status of the efforts to reduce student loan defaults. Are current period in Secretary Bennett's latest regulations in place until the end of February. What are you likely to do with those regulations? How do these regulations relate to your request for comments and suggestions on defaults?

Answer: I view the student loan default problem as one of the most serious and complex issues facing the Department of Education, the Congress, postsecondary education institutions, and the lending community. Every default in student loan is money that could be spent on another student in need of assistance.

In response to my November 3, 1993, solicitation for public comment, we received over 1,200 comments. For the most part, they were extensive, thoughtful, comments that addressed almost all of the questions posed. There was, obviously, considerable time and effort put into those comments, and we are doing our best to carefully analyze them.

On September 16, 1993, my predecessor, Secretary Bennett published a Notice of Proposed Rulemaking (NPRM) on defaults. We have received over 1,000 comments on this NPRM, and these comments are also being analyzed. The deadline for comments is February 26, 1994.

It is my intention to carefully consider the comments received in response to the September 16 NPRM before making decisions about whether to proceed with a final regulation.

Although the September 16 and the prior initiatives have different purposes, many of the issues are the same and I want to use the best thinking from both of those efforts to address the student loan default problem by whatever means are necessary and effective.

Meanwhile, in consideration of what I have is the unacceptably high costs of student loan defaults, a number of legislative proposals were included in the Department's FY 1990 budget submitted to the Congress in January. These include increased risk-sharing with lenders and guarantees, removal of the statutory prohibition against using the National Student Loan Data System for enforcement of borrower eligibility rules, delayed disbursement for first-time borrowers, requirements for credit checks and improved information collection by institutions.
Question: President Bush said during the campaign that he wanted to increase funding for Head Start in order to serve all eligible 4-year-olds. What is the timeline for achieving that goal?

Answer: In 1979, George Bush co-sponsored the Comprehensive Head Start Child Development Act in Congress and has been a long-standing supporter of the program. President Bush stated during the campaign that he would like to expand Head Start to all eligible 4-year-olds. The expansion would require coordinated planning between health, education, and social welfare agencies. Head Start is administered by the Department of Health and Human Services, not the Department of Education. We do not take part in budget planning for the program at this point, therefore, I can supply no timeline at this point.

We are, however, working closely in planning and implementing new activities in early childhood education. For example, we are coordinating our study of child care providers with an HRSA-sponsored study of child care consumers. It is important to link early intervention programs, such as Head Start, with the elementary grades if we are to sustain the benefits of these programs.
Question: During the election campaign, President Bush proposed a $500 million program for "merit schools" designed to provide incentives to individual schools for raising academic standards, improving achievement levels, and lowering dropout rates. Won't this approach simply put money in the hands of schools that are already doing a good job? Will this put richer schools richer and poor schools poorer? 

Answer: "Merit schools" is an exciting new concept that President Bush introduced during the campaign. Such an approach would not simply put more money in the hands of schools that are already doing a good job. Rich schools would not necessarily get richer and poor schools get poorer. Legislation could be crafted in such a way that most or all of the schools selected could be ones serving significant populations of the disadvantaged and making significant educational improvements. In order not to simply reward schools that are already doing well, criteria could be established to determine if the merit school has demonstrated improvement in its programs from the baseline established when it was first selected. An example might be an inner-city school that was initially selected as a merit school because its dropout rate had been lowered from 58% to 55%. In order to continue to receive funding, the school must demonstrate that it has improved even further by, for example, further reduction in dropout rates or significant improvement in test scores. The Department is still working on the details of the merit school concept, but hopes to submit a bill to Congress.
Question: During the campaign, President Bush said that he would hold a governor's conference on education to meet and discuss problems facing the schools. He also promised to make an annual "State of American Education" address. When would you envision these events taking place?

Answer: At this time, I am not able to provide an estimate as to when these events would be held. The Administration is currently reviewing all of President Bush's campaign commitments and proposals, with a particular eye towards those relating to education. When this review is completed, we will begin the process of coordinating between the White House and the Education Department to make these proposals reality.
Question: President Bush has said he supports increased drug-education efforts. Will you be requesting increased funding for the Drug Free Schools program?

Answer: The Drug Free Schools program has been and will continue to be an important priority in the Department. The funding level of this program, as well as other priority areas, is currently under consideration and any changes will be announced on February 9 when President Bush presents his revised budget.
Question: One of the first concerns on our agenda will be the reauthorization of the Perkins Vocational Education Act. When will we have the Administration's reauthorization proposals? Can you give us some idea of what they will include?

Answer: We are in the process of putting the final touches on the Department's vocational education proposal and expect to have it ready to share with Congress prior to the reauthorization hearings that begin in the House of Representatives in March. It is important to me to share our ideas for making improvements in the Carl Perkins Act before you begin the process of drafting your proposal.

I did have an opportunity to shape the Department's legislative proposal with my own thoughts and priorities. However, it is not appropriate for me to reveal the specifics of that proposal before it is cleared by OMB.

I think it will suffice to say that I am committed to strengthening vocational education programs in our Nation's schools and community colleges, as evidenced by the increased funding request in the Department's FY 90 budget document. Generally, my priorities for the reauthorization include:

1) simplification of the funding structure of the Act to provide greater flexibility to meet local needs and priorities,

2) providing greater emphasis on high school vocational education programs to provide basic skills instruction and to prevent dropouts,

3) encouraging more business and private sector involvement,

4) building a labor force for the future so that our country can maintain a dynamic and competitive economy, and

5) requiring greater accountability for job attainment and educational attainment of vocational education graduates.
Question: President Bush has said that he wants to improve the targeting of Chapter 1 grants to school districts with the highest concentration of disadvantaged students. What changes do you have in mind?

Answer: I do not have any immediate changes in mind. Chapter 1 will be a priority for funding, as it was in the FY 1990 budget request to Congress, so that more disadvantaged children who need these remedial services are served. During the reauthorization of Chapter 1 last year, Congress adopted the Administration's recommendation to fund Concentration Grants, which target funds on counties with high concentrations of disadvantaged children. I will support a continuation of focusing these funds on children who need services most.
Question: You have recently spoken to the importance of early childhood education. At the present time, the Department of Education has almost no activities in this area. Do you foresee any initiatives by the Department of Education in this area?

Answer: I believe that it is essential to identify those youngsters in greatest need as early as possible and provide appropriate services for them. This year, the Department has requested funding for the Even Start program, so that illiterate parents and their preschool children have an opportunity to learn together. It is programs like this that deserve our support to combat illiteracy and to help those children in greatest need to have an opportunity to succeed in our society. Additionally, in response to changes made in the EHA Amendments of 1986, which relate to providing and expanding services to children, aged birth through five, with handicaps, the Department has funded a member of technical assistance, training and demonstration projects related to improving services for this population. In October 1987, the Department signed a memorandum of understanding with various agencies within HHS to form a Federal Interagency Coordinating Council to promote a coordinated approach to sharing federal information and resources for infants, toddlers, and preschool children with handicaps.

We are still exploring other areas to serve the preschool, "at risk" population. So, it is premature for me to outline specifics in this area. Currently, the Department administers several programs such as the Chapter I program which serves approximately 343,000 disadvantaged preschool children, about 70,000 handicapped infants and toddlers and about 48,000 handicapped three to five year olds. Education of the Handicapped programs serve 288,000 three to five year olds and we expect an additional 33,000 to be served in 1989. A new EHA program to serve developmentally delayed infants and toddlers is in the process of being implemented. Preschool children are also served through bilingual and migrant education programs.

In November, the Department of Education held a national conference on policy issues related to early childhood education and care, attended by 400 people from 36 states, including legislative and executive agency...
staff, early childhood professionals, public school administrators, teachers, and researchers. To plan to follow up the conference to its full potential, publication of Proceeding and conference papers, as well as regional meetings that focus on local, state, and regional priorities related to early education and care.

ED has awarded contracts for several major research projects in this area, including:

-- A profile of child care settings, begun in October 1988, which will provide nationally representative information on the characteristics of child care in different types of centers and licensed family day care homes. The study will be conducted through a study of child care providers and will include emphasis on programs for preschoolers and disabled children. It is being coordinated with a study on evaluating child care being undertaken by the Department of Health and Human Services, Head Start Bureau.

-- A study, also begun in 1988 of ways to return the benefits of preschool learning programs for disadvantaged children. The study will examine programs that bridge preschool with the early elementary grades and that promote better parental involvement with the schools. The study will survey school systems and selected schools to learn about transition program policies and practice. It will also conduct case studies of outstanding transition and early education programs.

The results of both studies will be available early in 1991.

Other projects under consideration in 90 are relevant to before and after-school care, the role of the public schools in providing and coordinating services for young children, and other topics relevant both to the mission of the Department and to improving the quality of education and care for young children.
In a speech last week, you said that "accountability" would be one of the themes emphasized by the Bush Administration. In the Reagan Administration, this theme often meant merit pay and teacher-testing plans. What will you do to ensure that the accountability theme does not simply become a notionally charged code word?

**Answer:** Accountability will be a central theme of the Bush Administration, and I intend to do everything possible to carry out this principle at the federal level and to encourage States and localities to do the same.

The Department is vigorously implementing the congressional mandate for program improvement in the Chapter 1 program for the Nation's disadvantaged children as well as the strengthened accountability provisions under the Drug-Free Schools and Communities Act.

The Department is also reviewing its own operations to ensure that Federal aid supports education activities that give the greatest promise of success. As the President has advocated, we intend, within authority granted by Congress, to put a new emphasis on accountability in federally-funded programs—to continue funding those projects that are successful, to redirect unsuccessful projects into more promising paths, and to discontinue funding if redirection does not get results. The Department will present the Congress with appropriate legislative proposals, where necessary, to give authority and direction to the program accountability and improvement initiative.

An essential part of the Department's agenda during the Bush Administration will be to make sure that Federal dollars for education are wisely and effectively spent.
Question: One issue on the teacher shortage is that there is something in the skills of teachers motivation and retention. Does the Administration have any information on this subject?

Answer: The Department of Education supports efforts to raise standards for teachers and promote the professionalization of the Nation's teaching force. Through these efforts, we believe more high-quality candidates will enter the teaching profession and good teachers will be encouraged to stay in the profession. The following initiatives present current areas of Federal involvement:

1. The Department will support innovative programs to raise teacher standards and quality through the newly-created Fund for the Improvement of Schools and Teaching (FIST). Among its objectives, FIST is designed to improve the performance of teachers by providing opportunities to improve the professional status of teachers. $59.9 million has been appropriated for FIST.

2. The Mathematics and Science Education Program (ESEA Title II) provides grants to states to improve teacher training and instruction in the areas of mathematics and science. In the past, grants supported specific projects to upgrade teacher quality in these fields.

3. To increase the number of minorities entering the teaching profession, we must concentrate on improving the quality of education that minority youth receive. Improving elementary and secondary education will reduce dropout rates and increase the number of minority students completing college. To attract minority teachers, we must improve their working conditions, particularly in urban schools.
Question: Many private non-profit and student controlled student loan companies encourage students to finance their education, especially dental and medical students, into especially large debt. According to the Association of American Medical Colleges, the young borrower graduates with about $100,000 in educational debt. Twenty-four percent of the borrowers are more than $100,000. I am concerned that the prospect of repaying large amounts of money would affect one's plans to medical school in all avenues. I propose that we should examine the student debt management problem.

I shall you work closely with the Advisory Committee to carrying out this study. As you believe student loan debt borrowing reasonable in order to finance their education, do you believe that we should examine the existing student debt management problem?

In the event the National Advisory Committee on Student Financial Assistance undertakes a study of the issue of medical and dental student loan assistance, the department will certainly cooperate in that effort.

The cost of medical and dental education in very high, the driving up the level of borrowing, and do not appear to be driving graduate to medical school. In addition, we have no evidence that there is a significant rate of default among medical students.

Clearly, unless it is established that there is a problem in this area, it would be premature to begin an examination substantially different from one that medical and dental students face.

At the present time, the present situation in the proposals to government for a loan program that would make debt easier for the young as well as the older person. It would be a major "help patient" based on mandatory entitlement and not on those years.
Question: Mr. Secretary, I'm pleased that you are supportive of "choice". I also know that President Bush intends to ask for $50 million in additional money for magnet schools programs. These schools have been a noted success. Thus, I would hope that their scope could be expanded so they are available to more and more students. As a result, do you think that President Bush's proposal will allow for more districts and more students to be eligible and permit such funds to be used for purposes in addition to desegregation efforts?

Answer: I am very supportive of expanded choice in education, and this will certainly be one of the priorities of the Bush-Quayle Administration. Although I cannot address specifics of President Bush's magnet school proposal, we are giving serious consideration to the issue of whether Federal support for magnet schools should be extended to districts not undergoing desegregation.
The CHAIRMAN. Thank you very much, Mr. Secretary.

I want to commend you for your statement. There are a number of things in here which we can perhaps get into in the questioning. We will include your full statement in its entirety since you were good enough to provide that to us yesterday so we had a chance to review it last evening.

You talk about educating everyone to their fullest potential. That is, of course, an ambitious undertaking which is going to take, as we know, considerable resources as well as the resources we are now providing. Then you emphasized, as President Bush has, the FIRST Program, which came out of our committee, and have requested $6 million for that program. This tries to provide the development awards for magnet schools, encourages teachers to be more creative and involved in terms of strengthening the curriculum in their various classes, and finally aims to find out what is working well at the local level and expand that opportunity so that we at the national level can benefit. So I am glad you mentioned FIRST, and I hope we will see some expansion.

I think the involvement of parents is crucial. As you know, we passed Senator Bradley’s bill, H.R. 5, last year to provide greater opportunities for involving parents. It appears self-evident, but we have yet to do as much as we can in this area. I think those who have been involved in the educational system understand its importance; and to try and get some encouragement, which you clearly mentioned, I think is hopeful.

Your emphasis on the dropout problem is obviously a key. Then, in the latter part of your statement, you addressed measuring accountability. This is something that I think all of us are very much committed to. We are going to need the resources to find out what does and does not work to obtain reliable accountability.

For too long, I think, the general public’s concern of Federal programs is that we have not had accountability, and that is certainly part of our responsibility in terms of an oversight. But you mentioned that we are going to have to assure there are adequate resources, again, in that area to try and fulfill what I think has been an excellent point made in your statement.

We will follow the ten-minute rule. For our newer members, we go to the chairman and the ranking member. After the ranking minority member, I go to the chairman of the subcommittee, and then proceed.

I see Senator Kassebaum here. If she would like to make any opening statement, we would be glad to have that.

Senator KASSEBAUM. Thank you, Mr. Chairman. I will just do that in the context of my questioning.

The CHAIRMAN. That would be fine.

So we will start with ten-minute rule now.

President Bush talked during the course of the campaign about the improvement and reform of schools and teaching, the FIRST program, and he mentioned a larger financial commitment.

Let me go back one step, Mr. Secretary. Can you give us any assurances—or, what can you tell us, or can you tell us—whether there will be any change in President Reagan’s budget when President Bush sends up his message to the Congress in mid-February? Can we be hopeful about that?
Secretary CAVAZOS. Let me say, Mr. Chairman and members of the committee, first of all that we are currently working with the White House, trying to shape that budget, which will be submitted early next month. So many of the things that the President talked about during the campaign will hopefully be reflected in that budget. We are doing the best that we can in that area, and I think you can see from the statement I have made today, and certainly many of the positions that I have taken over the last few months, as well as in my confirmation, that we will continue to push as best we can to fund those specific areas where we think we can make a difference.

The CHAIRMAN. Well, that is certainly encouraging and gives us all some sense of hope, and perhaps responds to some of my questions. I wanted to address such issues as the improvement and reform of schools and teachers, the FIRST program, which you mentioned, President Reagan's $6 million budget, and President Bush's talk of a larger sum. I suppose that program is one of those being considered.

Secretary CAVAZOS. Yes sir, it is.

The CHAIRMAN. You mentioned that President Bush also talked about eliminating adult illiteracy in eight years. I do not know many liberals who could make a statement like that. I do not know whether there is anything you would like to add to that. We have talked about some of the literacy programs that each of us have been interested in, and you are familiar with some. Would you address that, please?

Secretary CAVAZOS. Yes, Mr. Chairman, I would be delighted to address that.

I think certainly if we stop and think about the fact that we have 27 million illiterate adults in this Nation, and that there are probably another 40 to 50 million Americans that we will call "marginally literate"—perhaps at the fourth-grade level in terms of comprehension—and that we also have figures indicating that this pool of illiteracy grows by about 1.5 million Americans per year—that illiteracy is a devastating, extremely serious problem.

I am so pleased that the First Lady, Mrs. Bush, has chosen illiteracy as one of her prime areas of interest, and we look forward to working with her in extending current programs.

This effort to combat illiteracy must be a nationwide effort. It cannot just be the Department of Education. We certainly are going to work with this committee, with the Congress and with the White House in coming up with the necessary initiatives. However, we are going to have to involve the State and the local level.

I come back to the point that we spend $330 billion on education in America, and the Federal Government brings to the table only 6 percent of that amount. So therefore, our efforts must be coordinated in making sure that this is high on the agenda.

I will add one other place where many people still, perhaps, do not address this problem, and that is in the workplace. We must involve businesses and corporations. I have met with many people from the business community who continue to say, "Illiteracy is a pressing problem. We are starting our own programs." I respond that we must work together on this problem.
What I am saying, Mr. Chairman, is that we must bring everyone together to focus on illiteracy. I do not believe there is any one, simple approach. We have some funding in the programs operating within the Department, some things that we hope to do to encourage the States to contribute to the effort, but it is going to require all of us. It must be on the front burner of America's concerns.

The CHAIRMAN. Well, I am glad you are familiar with it. We have 11 million college students, and we ought to get them involved in this program too.

Secretary CAVAZOS. Yes.

The CHAIRMAN. And the principal block, as we have talked, is the fact that they do in some of the universities as voluntary programs, but for some academic credit in the liberal arts program which I think is completely justified, as various colleges and universities have demonstrated. For example, as I mentioned before, we now have six programs in the greater Boston area funded by the business community and having an important impact in terms not only for the young people involved in them, but the colleges themselves. We have $5 million dollars invested in that program, and we can start it in over 200 colleges next year, in addition to what we might be able to do in terms of the private sector. Those 11 million Americans, they should be doing something for this country, too. But we should utilize these universities to begin, in a creative and imaginative way that is consistent with their academic traditions of excellence, to involve themselves. We will be talking or visiting on that, because I think there is a great area of need.

Can you tell us about the student loan default programs. We have been around with the Department in the previous Administration on this issue. We will pass legislation here—I know the House has a different position and wants the Department to take on most of the responsibility but we have had a different position on it, and we have developed a strong consensus.

Can you tell us what your views are on that?

Secretary CAVAZOS. As you are aware, back in the fall one of the first things I did as Secretary of Education was to delay the implementation of those regs until we had a chance to get more input from everyone relative to this vital issue.

First of all, the default issue is a tremendous concern of ours. We must be accountable for those federal dollars, because defaults are eating away at monies available for other students. So we are committed to collecting that money.

I wrote to at least 1,000 universities and asked for their input. I asked them to tell me about what they saw in these proposed regulations, and what their ideas were as to how we could resolve the default problem. I am pleased to report that 900 of them responded. We received 1,200 additional responses to our request for comments on our regulations. What that tells us, of course, immediately is that there is a vital interest out there, and we must take our time finalizing these regulations in the next few weeks. We are going to meet our deadline—what is that date?

Mr. KOLB. The Notice of Proposed Rulemaking is still on the table, with comments coming in at the end of February. But once we have received and reviewed all of those comments, Mr. Chair-
man, we hope to have comprehensive proposals to address this. I think at some point in March.

The CHAIRMAN. So we are moving; in other words, what I am getting at here, sir, is we have gone out, and we really have listened to the universities, the proprietary schools, and all the people who are involved with this. So we will have those ready at that time and try to move them ahead. I am committed to that.

You have recently spoken about the importance of early childhood education. The Department has very little going in this area. Could you expand your thoughts on this issue?

Secretary CAVAZOS. I really believe as I have studied this more and more that if we are going to affect, for example, the dropout problem—as your chart so eloquently shows in a visual sense—we must start in the early childhood years, long before they get into traditional school systems. Therefore, it is our expectation that we will work with the other Federal agencies that have these early childhood programs already in place. Where they are looking at daycare and some other things, we must also look at the possibility of significant learning experiences for these youngsters before they reach traditional schooling.

It is in these early years, when they are two and three years old, that children start developing their own expectations of themselves and how they conduct themselves and their motivations and drives and skills. We should capitalize on that, and we have not been doing that. I really would like to see us come together and move into not just the daycare aspect of it. And I do not care which agency does this, but let's talk about learning care, let's talk about making that really a learning kind of situation.

The CHAIRMAN. That is excellent, and we look forward to working with you.

Finally, because my time is almost up, on the vocational education reauthorization—we are catching you awfully quickly in terms of your term here—could you give us some insight as to how you think that might be altered or changed to try and encourage the development of new skills to deal with some of the new challenges?

Secretary CAVAZOS. First of all, Mr. Chairman, I am very committed to vocational-technical education. I think it is an important part of what we do in this country, and I have already made it clear to the Department that this commitment is one that also expects those students going through high school to be educated completely, not to distinguish in terms that perhaps one is college-bound and one is going in another direction toward vocational-technical. I still think the fundamentals of mathematics, English and history and other subjects need to be there. And I would hope that in any bill we shape, that on emphasis on fundamentals is a piece of that.

The second thing I would say keep in mind is that there is data that indicates that people will make major changes in their careers, four, five, six times in a lifetime, after they leave high school. We want to prepare those people so that they can make these kinds of career shifts.

You will find me very supportive of vocational-technical education. I think it is vital that we work with industry as well as with other groups to move ahead.
Do you have anything on the regulations, on the timing?

Mr. Kolb. On the timing of the proposal, Mr. Chairman, we are now working with OMB, and I hope we are at the final stages of putting the last-minute touches on the Administration's proposal. But we hope to have something up to you shortly for consideration during the reauthorization process.

The Chairman. Thank you very much.

Senator Pell?

Senator Pell. Thank you very much.

One thing that struck me is whether our children are getting the amount of education they can absorb. The longer I have been exposed to education problems, the more I realize that the children are not absorbing all that they should be able to absorb and can absorb if they are properly taught.

One thought here would be that we ought to lengthen the school year. In this regard I was looking at some of the competitor nations. We have 180 days a year, Sweden has 200, Canada, 200, Thailand, 220; East Germany, 210; the USSR, 210.

I was just curious what your thinking is about a general program to lengthen the school year. As of now, just half the days of the year are used for education, the other half are used for television, play, sleeping and eating.

Secretary Cavazos. And I think in the last part of your statement is the critical message, Senator Pell. When we talk about lengthening the school year—certainly, people say if we do more, it is bound to be better—but I would approach it another way and ask, what are we doing now, and how can we improve what we are doing now so that they do not get themselves into a situation where they are spending the afternoon in nonintellectual pursuits?

So I think we need to do two things. One, we need to be sure that what we are doing now is of academic quality and of significance and really challenges the young people in terms of their education. I think this is the first thing we must do. And then, having done that, we then can say, well, would it be even better now if we lengthened the school year? But then I would ask the next question—what are we going to teach? How are we truly going to make that a significant educational experience?

It is not enough just to simply say that if we keep them in school longer, they are going to learn more. I would go back exactly to your point, sir, and say let us be sure that what we are teaching them is vital and helps them at this stage, and then let us think about if we could do some more. I agree with you.

Senator Pell. What is your thinking, Mr. Secretary, on the connection between student aid and national service? There are a variety of national services proposals. Some of us are supporting a demonstration program, others have a more Draconian approach. I was just curious what your own thinking was.

Secretary Cavazos. Well, actually, we are just starting to get a formal review of all of this. Let me say that I have always encouraged community service, I think all of us recognize that. But I really want to be cautious at this time about proposing any complete overhaul of the federal student aid system. It may work, but it has other implications that bother me. I have not, frankly, re-
solved in my own mind such issues as equity, access, and what happens in these cases.

So I certainly want to state on the record that I am supportive of public service. I just want to make sure that if we go in that direction it will not hold somebody back one or two years before they can actually enter into the system, making it less competitive for them.

In other words, if this sounds like a rather vague answer, it is because—sure, all of us are in support of people working and doing these other good things, but let us make sure that as we arrive at these programs, we do not hurt people or programs. Let us think through that a little more. I will be glad to put it down for you in writing.

Senator Pell. I appreciate that, and I think you are very right that we tend to tinker and change things too often. Very often, I think the community gets used to a particular program, and sometimes it is better not to tinker with it if it is working. But this is a new concept that is arising, I think, that some form of national service is a good idea. Personally, I like the idea, I would like to see it compulsory—but that is very unpopular and would never be, and I recognize that. But I would hope this would happen, carrying out our chairman's brother's words, "Ask not what the country can do for you; ask what you can do for the country." That concept is very much lost sight of, I think.

I have another question about the rationale behind the abrupt difference between 12 years of education, finishing high school and then moving on to college. Shouldn't there be more of a continuum where the process goes on and there is less of a sharp divide between high school and college?

Secretary Cavazos. Yes, Senator, there really should, and I think we should seek ways of finding that continuum. I have already had a number of sessions with university presidents. Sometimes I try to stay away from wearing that hat, but I fall back into it from time to time and meet with those people and point out to them that there are certain expectations that, frankly, I hope we all have about higher education. And this is really what I believe to that point. I really believe that the universities must make an effort to take down their ivory-covered walls, to open themselves to the community and to be a part of that community.

Sometimes in my former life as a university president, I would say why in the world are these students coming here, they are not prepared for the university, they are going to get in trouble and so on. What I really should have asked, Senator, was why don't we move out into the community, work with the primary and secondary schools, ease that transition and prepare these students so they do see it as a continuum, exactly as you are pointing out.

I have already asked my colleagues and friends in the higher education community to start thinking about that, and I must say, to their credit, it has been very well-received.

Senator Pell. I think Admiral Watkins, when he was working in some of these fields before taking on his present responsibilities, was very much of the idea that Navy people, military people, could be encouraged and would volunteer to help ease this transition and teach kids on a voluntary basis, on weekends and things of that
sort. And I believe the educational community saw that almost as a threat and discouraged it. What is your view?

Secretary Cavazos. I would encourage anything that would help students learn. I think we must do that and make an education available to everyone. I have talked to teachers and others professionals, and it seems that everyone is feeling the same pressures that we are feeling. We want to educate these people, but I think we are groping a little bit right now with how to accomplish this task.

But I think, Senator, I can reassure you that this country is coming together on this issue. Everything I read makes me believe that we are going to go through a little period of time here where perhaps some proprietary interests are going to be involved, but those are going to be set aside.

I have lost track of the number of organizations and people I have met—an entire spectrum of people involved in education. parents, teachers, superintendents, people who head up national organizations at all levels—and I have said let us come together on these issues, and let us focus on th.m. We are going to agree most of the time, and sometimes, we are going to disagree. We want to understand why we disagree and work out our differences.

Senator, I truly sense that we are going to enter a new time in America when people will set aside these differences and really consider one thing. What is best for the education of our children. If we can keep that in the forefront I think we can solve the other problems.

Senator Pell. Thank you very much. As I said to you privately, I think the country is very fortunate to have you in the job where you are.

Thank you very much.

Secretary Cavazos. Thank you, Senator. That is very kind.

The Chairman. I would just mention there is an interesting Navy program in Florida where they are utilizing retired naval officers by moving them into the school system, and it is working. It is sort of a trial, but I have been rather interested by what has been done.

Secretary Cavazos. Excuse me, Senator. May I perhaps point out one other thing?

The Chairman. Of course.

Secretary Cavazos. We are very interested in alternative certification. It often falls back into the same group where people, particularly in the service or other areas, have had a lot of experience. We have a dreadful shortage of minority teachers, particularly a shortage of math and physics teachers. We are looking at a number of strategies of which alternative certification is one of them.

The Chairman. Very good.

Senator Kassebaum?

OPENING STATEMENT OF SENATOR KASSEBAUM

Senator Kassebaum. Thank you, Mr. Secretary.

I just want to say I thought your opening statement was very thoughtful and clearly showed your dedication to quality education.
I consider quality education to be one of our most important goals, and I am very pleased that President Bush has put that at the top of his agenda. More than just dollars that come from the Federal Government to education is the ability to use that office as a “bully pulpit”. The same is true for you, Mr. Secretary, and for us.

As a new member of this committee, I am very pleased to have the opportunity, an opportunity I actively sought, to be ranking member of the Education Subcommittee, because my only previous elected office was to the Maize, Kansas, School Board. Some of my colleagues may wish I had had further experience in the legislative arena, but it is something of which I am very proud. I have worked closely with education issues as my own children have gone through public schools, and, with some relief, I say now they have completed their educations.

You mentioned several things and touched on, of course, all of the important issues. One you mentioned was the choice of schools. And choice, as you well know, means many different things to many people, from magnet schools to vouchers. Having come from, a relatively small rural school district, I am curious about some of the questions that have been raised about choice, and I am pleased that you think it is important to study those initiatives in States and districts that are undertaking them.

There has been concern expressed that various arrangements providing for educational choice offer great opportunities to those who are fairly well-off, but perhaps hamper the disadvantaged and place them in a difficult position.

Do you believe this is a valid concern?

Secretary CAZAVOS. I think this is something we need to be careful does not happen. I am not so sure that this is the overriding concern for me because choice, in the way that we have envisioned it, really opens up an opportunity for parents to have more say in selecting those schools—particularly magnet schools and other programs, where their children could move ahead in terms of their own education.

Obviously, one thing that is going to enter into this is the matter of competition between schools. Schools will have to tow the mark and excel in different areas if they are going to compete with the school down the road or across the country. And ultimately, if they do not meet this challenge, then I think those schools will be in trouble, some of them probably will close, and if they are not of quality, they should close. We really should not permit those kinds of schools to go on, because that is a disservice to all youngsters.

Therefore what we want to do is to make sure—and I come back to the point that I have made about access, I have talked about the expectations and the access and the accountability—that students have access to the very, very best. And one of the issues is how are we going to get them across town or move them in, whereas some of the parents cannot afford that. We need to look and to make sure that there is provision for those kinds of things.

But the first standard that we must have is the quality of the school. If it does not meet the competition, if it is not of high quality, it should not remain open. I think that is the essence of choice itself, the kind of thing you build into it.
Senator Kassebaum. Is there a district that has had a voucher system in operation for a long enough period of time to be able to make any judgments about it? Minnesota, I know, is just beginning to put a program permitting choice in place.

Mr. Kolb. I think there are a number of examples that are out there at work now, and we have been asked by the President to follow that and to report on exactly what is going on——

Secretary Cavazos. But specifically on vouchers, though.

Mr. Kolb. I do not know.

Secretary Cavazos. I do not know of one, but certainly, the Minnesota program seems to be really moving ahead very, very well. There is one opening up now in the Boston area, and the idea is starting to move across the Nation. The President has asked us to follow that very closely, and we are doing so. I do not know of one that is utilizing vouchers, though.

Senator Kassebaum. There was something you said in your opening comments about which I could not agree with you more, and that is seeing teachers as professionals. I think this is very important to quality education.

I have long believed teachers have not been given the recognition in our society, along with doctors and lawyers, that should be given. When we look at many other countries, as a matter of fact, we see that their teachers do have great status. In Japan, teachers are held in higher professional regard than lawyers. I think we need to do that.

You mentioned working in partnership with the States in this area, and I wonder what you envision in this regard.

Secretary Cavazos. First of all, to the issue of the professionalization of the teaching profession, as I call it, to really make program in that area, I think there are several things that need to be done. We first need to reward the excellence of teachers where we can really identify them and help them out, that help coming from the Federal Government but also at the State level and that other part.

The second piece is fair compensation, to truly pay them according to their responsibility. They have a grave responsibility. They are professionals. So we would like to see that done.

Certainly, one of the other aspects that gets into the whole issue is the quality of the teacher itself, there is the accountability aspect of that issue.

So we are working with the States now, through our FIRST program and some other innovative kinds of things, to say what is the best format in terms of helping these teachers. I also mentioned alternative certification.

So I think we need to constantly remind the general public of the teaching profession, that it is a noble and fine profession. They need to be compensated, and that they are also going to be accountable for the kind of quality they produce. And we will work with the States to bring that about, to really move that to the fore-front.

Senator Kassebaum. There are some other things that I would like to explore, but my time is up.

Thank you, Mr. Secretary.

Secretary Cavazos. Thank you, Senator.
The CHAIRMAN. Mr. Secretary, in light of the Senator's request, as I understand there was a Department of Education funded voucher experiment in the Seventies in California, and perhaps you might have someone in the Department at a review of that or an evaluation and make it available to Senator Kassebaum and the members of the committee.

Secretary CAVAZOS. We certainly will.

The CHAIRMAN. Senator Cochran?

Senator COCHRAN. Mr. Chairman, with your permission, I will yield my time to Senator Coats, who was here before I was.

The CHAIRMAN. Senator Coats?

OPENING STATEMENT OF SENATOR COATS

Senator COATS. Thank you.

Mr. Secretary, you presented what I thought was a very impressive statement. I read your statement, and underlined and starred a bunch of things. Sometimes I wonder if I like statements because they say what I agree with—though I do try to be objective. I was impressed with your thoughts and I look forward to your service as our new Secretary of Education and to working with you.

I wanted to take this opportunity to acquaint you with some education initiatives that I have proposed in the House and hope to work on here—not that they are the ultimate answer to the educational problems that we face, but I think they draw on some innovative and creative efforts that have been undertaken in some of our communities and States.

I noticed with interest your interest in reaching out to various low programs, trying to identify what is working, and then using the Federal Government as a basis for spreading the good news, so to speak, to other school districts.

We attempted to do that on the Children, Youth, and Families Committee over in the House, realizing that there were a lot of things going on in the country that were meritorious and deserved further examination. We looked into some of those programs and tried to evaluate the ones which were most effective. We then tried to come up with a program whereby we could, through some Federal seed money, demonstration grants, referral centers, just simply using the Federal Government as a spokesperson so to speak, advocating, and getting people to take a look at these programs, spread that good news. I introduced a number of those initiatives under a title called the American Family Act—if the substance of the 21 bills in the Act is half as good as the title, we may have some success with that.

One of those initiatives was drawn on a program initiated in Missouri under then Governor—now Senator—Kitt Bond and also picked up in Minnesota, called "Parents as Teachers". I was particularly interested in your statement where you identified—and I think our Nation is identifying—the very critical role of parents in the educational process. The early involvement parents in the whole aspect of understanding the value of education, of transmitting that value to their children and working with them as partners, so to speak, of serving as a model, is proven to be critical to the success of a child and child's involvement in education. Involv-
ing those parents at a very, very early age generally results in involvement of the parents throughout the educational process of the child and transmits a very important message to the children.

Are you familiar with the Parents as Teachers Program, have you had a chance to examine it, and does your Department have any thoughts about advocating other districts and schools using this?

Secretary Cavazos. I have talked a number of times in my public statements about the Missouri program where they bring professionals in early on to start working with the parents. This is when the children are still two years old or so. They teach them, certainly, parenting skills, but they also teach them how you start educating these children at the very, very early stage—kind of what I have talked about, the learning cycle.

Now, they have found that this is a very successful program and that, as they have followed these students, they do better, regardless of ethnicity, regardless of socioeconomic condition, that they perform better than those who have not been in that kind of system.

So therefore I think that is one of the models we need to look at, and hopefully, we can see some more States moving in that direction.

Part of our job, Senator, as you point out so eloquently, is that we must call attention, telling the other States that here is a program that works, and you must start thinking about that kind of approach. Or, as we move into rewarding excellence, that if you move in these different directions, good things will come about.

I see that as a responsibility of this Department, to identify those programs that have that potential, and we keep coming back to it. I am so pleased that, as I move about this Nation, we are finally coming back to the cycle now and saying parents must be involved. And that is why I said if we talk about the teacher being a professional in education, the parent is also a professional in education, with all of the loving care they bring to that child as well.

So you are going to hear quite a bit more, I think, about parental involvement out of our Department.

Senator Coats. I am pleased to hear that. I think the successful programs have shown that where parents have an investment in the decision as to where their children go to school, again those parents become more involved, and the children become more involved, and it is not just simply an assignment that this is where your children will go to school, but you have made an active decision. Sometimes this means some sacrifice in terms of time, in getting your child to that school in the morning and home in the afternoon, and travelling greater distances. It is not necessarily always as convenient. But that very critical involvement in even making the choice of the school your child goes to results in the parents wanting to make sure that that choice is a good one, so they invest their time and effort and energy into the process.

The other point I wanted to discuss with you was that in developing our package, the American Family Act, we tried to identify what we thought were some important underlying principles. We have evaluated programs on the basis of whether or not they addressed some of these principles, which were basically three.
One, we asked the question do the programs strengthen families? Do they involve the family? Do they reach out to the family, to the parents? Do they not divide or erode the family structure or the involvement of the family in the process, but rather do they strengthen families?

Secondly, do they promote character? Is there some value basis to the program? And I think on this second point, there have been a number of programs, some of which I am sure you are familiar with—the Institute for Character Education, based in San Antonio, has developed some basic materials which I think are often disseminated through the Jefferson Institute in California, Baltimore has a program that is receiving national publicity, and St. Louis and Dade County also have variations of this. Governor Cuomo and Governor Kean have initiated programs in New York and New Jersey.

I am not advocating a national program. I do not think it is appropriate for us to sit down and say these are the kinds of values and character education programs that ought to be in place in our various communities. Those are going to differ all across the spectrum. What might work in Fort Wayne, Indiana may not work in Miami, and what might work in Baltimore might not work in Indianapolis and so forth.

What are our thoughts about encouraging schools and systems to look at developing character education programs as part of their curriculum? And what role do you see this playing in the whole effort that you are looking at?

Secretary Cavazos. I think it is an important role, and as I have mentioned in my testimony as well, those values and things that we think are an important part of character and the development of character. When young people come to school in addition to learning certainly the academic side, it is really an education for life and how one lives within a society itself and relates to that society. So I think it is important that they do that.

At the same time, I would come back to another point that I would like make, and that is I come back to the parents being involved in those kinds of discussions with the teachers. I would like to see more and more of the teachers and parents coming together to make decisions about what are we teaching, how are we going to handle these things. If we are going to make them accountable for it, let us give them the responsibility for what they are teaching and the decisions they are going to make. So we should encourage those things.

In fact, in a number of talks that I have given about education and in the area of character and the development of values, perhaps it is a little old fashioned, but I keep coming back to the term "virtue". I talk about "virtue" as doing what is right, and reminding people that it has three components—justice and courage and temperance—and that those three things, if you think about so many of the problems we face in society today, in temperance, drugs and alcohol and these other kinds of things, justice, obviously, we want for everyone, and courage, to learn and to move ahead and to be a part of that.

So I will continue to advocate character education, sir, and to also work with the States to develop approaches that will fit best
within the local community. I do not think it would be appropriate for me to say we need to teach this—but to think about that, it is an important part of what we do.

Senator Coats. Thank you. My time is up, Mr. Secretary. I am glad you are here, and I look forward to working with you.

Secretary Cavazos. Thank you very much, Senator Coats.

The CHAIRMAN. Senator Cochran?

OPENING STATEMENT OF SENATOR COCHRAN

Senator Cochran. Thank you very much, Mr. Chairman.

Mr. Secretary, welcome to the committee.

Secretary Cavazos. Thank you, Senator.

Senator Cochran. Let me congratulate you on the statement that you presented to the committee this morning. I think you have really identified the appropriate role for the Federal Government in the area of education, particularly in targeting the resources that we have to the places where they are needed the most. We are talking about disadvantaged children, the handicapped, minorities, those who are having a difficult time catching up educationally and economically in our society. I think that is a very appropriate goal for us to work on this year.

I know in my State of Mississippi, about 35,000 students benefit from the Chapter I program, and it is working. The achievement scores in math and reading and other basic educational disciplines are up. We are very proud of that, and we hope that the Federal Government and your Department particularly will continue to be sensitive to the needs for additional assistance. We must concentrate additional effort and expertise to try to bring these students up to an appropriate level of skill and understanding and appreciation.

I am also interested in the Merit Schools Program. I do not know the details, but it sounds as though it is a good program. Could you tell us a little bit more about how you are specifically going to get the involvement of the private sector, businesses and others in trying to help improve the quality of the schools?

Secretary Cavazos. We certainly think the Merit School Program in many ways could be the flagship of where we are going in this endeavor, to reward excellence in terms of what schools do and in a way to be a stimulus to other schools to perform better in these areas. One could, for example, set certain criteria as to how to measure merit in schools. If, during a period of time, for example, they are able to decrease dropouts from a baseline, if they are able to—not just do the same thing and do it well—but to do a better job in terms of elevating test scores. There are a variety of things that I am sure educators can develop in terms of quantitative methods for measuring merit and rewarding those schools in a significant fashion with funds that would be used within that school for extending the merit even further. And I think on top of that, the national recognition that a Merit School receives is a help.

So we have been asked by the White House to develop that idea more, and we are working with them on putting this program together. But those are some of the examples of the things I think we
can quantify to move schools ahead. You reduce dropout rates, you increase literacy, you have so many students go on to higher education, to a university, you have successful students go through vocational-technical programs as they move from one to the other—there are a variety of these types of things that can be done, and it is time that we do that.

Now, we should work as a partner, always as a partner, with the States and with the local groups to move this thing ahead.

If I may for a moment, Senator, just also touch on Chapter I—and I certainly very much appreciate your comments about that. We are deeply committed to Chapter I in our Department, and in our proposal—I believe we have a 52 percent increase in concentration grants, those parts of Chapter I where there are so-called heavily-impacted areas that need more help. We had to make some tough decisions about our dollars, so we tried to move them into those areas where we thought they could help, exactly down the line that you are proposing, Senator.

Senator COCHRAN. Well, I think those are good decisions, and I applaud you for them. Those are dollars well-spent. I can remember growing up in Mississippi, in a schoolteacher family—both of my parents are retired educators, as a matter of fact, I have a grandmother, too, who taught for 50 years in the public school system of Mississippi as well. So I feel very close to those who are involved in education, and I feel that I understand the problems they face every day. I think one of the biggest rewards from teaching is to see the progress and the success of students who maybe started school without the benefit of family role models or situations that you would normally expect to produce a bright, successful student, but to see other parents and teachers work with those children to help motivate them and make them be everything they can be, like the Army advertises, is really a great joy and a sense of true satisfaction for those in the teaching profession and in education.

This helps them because it gives them some additional tools to work with to achieve those goals. So I think it is a very important program, and I am glad to hear that you are interested in pushing it forward and in making it even more successful in the future.

I have no other questions, Mr. Chairman, but I do intend to stay around, and some others may come to me as we go forward here. Thank you very much.

The CHAIRMAN. Senator Thurmond?

OPENING STATEMENT OF SENATOR THURMOND

Senator THURMOND. Thank you, Mr. Chairman.

Mr. Secretary, I want to take this opportunity to join with others in welcoming you here this morning.

I understand that you have made a good impression in the work that you are doing at the Department of Education. I have heard many nice remarks about you, and I wish you well.

I was a teacher for six years and a superintendent of education for four years, and there is no one more interested in education than I am, it is the hope of our Nation.
I want to make this point, however, that under the Constitution, education is a field reserved to the States, it is their chief responsibility. We must not let the States get out of that responsibility. The Federal Government does not have the funds to operate the school systems as a Nation; the States must do it chiefly.

There are certain programs the Federal Government can assist in, and I assume that it is those that you are going to emphasize and do all you can to help with.

I, am very interested in the high school dropout problem, for instance, and I am interested in special courses in math and science, which I felt that we need from a survival standpoint in conjunction with defense and other things.

I would like to know, what in your opinion is the key to the present dropout situation, and what do you see as the role of the Federal Government in connection with that?

Secretary CAVALOS. First of all, I agree entirely with what you have said, sir, in terms of the responsibility of the States, that is where it must rest, and we are getting guidance and direction in what works.

In terms of the dropout problem itself, I think that there is no one key. In other words, we have to do a variety of things, working with the States. For example, we can fund programs with our limited dollars back into the States, demonstration models to show how you keep youngsters in school—one, whether you start with the early childhood kinds of proposals have been talking about here in this committee, or how you work with students as they progress a little further down the line and make sure that they stay in school, counseling, guidance, parental involvement—all of these must be a part of the solution, and we must raise the expectations of the children in terms of where they are going to go.

Let me give you an example. Recently, it has been made very, very clear to me that if we raise expectations of children—if we tell them you can achieve this, or this should be your goal, or what-have-you—that they will tend to meet that expectation. For example, in the high school I know about, they had a very high dropout rate and the achievement was not terribly good, and they came in and said, well, we will help you go on to college, or we will find ways for you to go through—this is a local initiative. And it quadrupled the number of students who were doing well within that system, raising expectations.

I think the other thing we need to do is to make sure that the local people understand the seriousness of the national dropout issue. People say, well, that is an obvious thing. Well, if it is so obvious, why do we continue to see the numbers go on and on? We are getting worse and worse in this area. So we have to initiate those programs and give local educators some examples of the kinds of things that work to keep kids in school. And we will do that, Senator, but you are so correct, it has to be at the local initiative, and we will work with them.

Senator THURMOND. Another thing I would like to mention is that whatever we can do to help the minorities, within our Constitutional provisions, I think we should try to do it. For instance, I mentioned to you some time ago, a black college in my State, that is about to lose its accreditation because it does not have a physical...
education building, and if it does, loose its accreditation, that will probably close the institution. I have taken this up with the Chairman, and he was very helpful last year, we got a bill through the Senate and the House. However, the Conference did not agree on it. I think as much we need to reassess our assistance to minorities and try to help them all that we can.

Secretary CAVAZOS. Yes, sir.

Senator THURMOND. Thank you.

The CHAIRMAN. Thank you very much.

Mr. Secretary, I am going to submit some other questions. We tried yesterday with Secretary Dole to review the demography of the future to determine what skills will be necessary in order to supply American enterprise with the kind of individuals who are going to be able to fit the needed skills of the future. We had hoped to be able to develop that theme a little more today, because I think it is going to require coordination between of your Department and her Department, working together to really deal with this issue.

Secretary CAVAZOS. Very much so.

The CHAIRMAN. I think for the first time, given where we are going, we can free ourselves from unemployment and hopefully provide some opportunities for people who have been left out and left behind, whether it is the handicapped, or inner-city, or people who live in rural America. It is that combination, that point which was brought out during the Labor Department study on the labor force in the year 2000 that we want to focus on, and to try and raise these skills. It is, in sense, a shared responsibility between you and the Secretary of Labor, and we want to try and look at our overall responsibility as part of the Legislative Branch in the committee to see what the various elements are that are going to permit us to respond to our Nation's needs in the year 2000.

So I will submit some other written questions. We want to welcome you, Mr. Secretary, to the committee. He has indicated an interest in remaining through the course of our hearing. In the 26 years I have been in the Senate, this is a first, and I think it is a further indication of the Secretary's interest in the whole issue, ...d it is indeed a compliment, most importantly, I feel, to him and the Department for indicating that interest. So we want to welcome you very much, and if you would be good enough, we would ask you to come up here and join us.

Secretary CAVAZOS. Senator, I would be very comfortable sitting right back over here.

Thank you very much.

The CHAIRMAN. Thank you. Fine.

Secretary CAVAZOS. In closing, Mr. Chairman and members of the committee, I want to thank every one of you for this opportunity to share our views with everyone as to where we are going in the Nation, and I promise you I will work with you very closely. I am so pleased that we have an education President who wants to move ahead in this arena, I think we can make a lot of progress.

The CHAIRMAN. Thank you very much.

Our second witness is Governor Booth Gardner from the State of Washington.
Booth, it is good to see you again. I meant to come over and welcome you personally, but I want to say what a pleasure it is to have you here. You have done an extraordinary job in the areas of early education in the State of Washington, and it is really becoming one of the recognized models that indicate early education can have an important impact in terms of many of the concerns that we have—dropout, drug abuse, and the rest of these issues.

I know you had to alter your schedule to join us today, so you are here, I know, at very considerable inconvenience, but we are delighted to have you here both professionally and personally, and we look forward to your testimony.

STATEMENT OF HON. BOOTH GARDNER, GOVERNOR, STATE OF WASHINGTON

Governor Gardner. Thank you very much, Senator Kennedy and members of the committee.

I appreciate the opportunity to share my views with you today about the important issue with which we are all concerned.

Today’s children represent tomorrow’s future, and what we need in this country is a new partnership between the Federal, State and local governments and our communities to set a national direction that places education, youth service and early childhood education and development as a high priority.

We need this new partnership to invest in programming helping young children, especially children at risk. The proposed Smart Start program which this committee is considering appears to offer great hope that such partnership soon may be forged.

You are to be commended on the focus of this proposal, Senator Kennedy. It has focus on parent involvement. It has focus on expanding and upgrading existing early childhood education programs. It has focus on flexibility. It has focus on leveraging State and local funds to increase availability of services to our young children. And it has focus that makes it clear that education, including early childhood education, is a State responsibility, but is a Federal concern and a local function. This is exactly the kind of focus and partnership that I believe we are required to pursue to ensure the success of our joint ventures.

Let me talk about Smart Start as it relates to early childhood education in our particular State. We stepped up to this issue in 1985 and funded at the State level an early childhood education program. We started out serving very few children, this year, we are serving over 2,000 children, next year, we will be up over 4,000 children. We have an identified need of children at risk, of around the 26-30,000 range. So you can see that we are barely touching our obligation.

Smart Start will help us reach our goal more quickly. Our early childhood education program does some of the obvious and then goes beyond that. It provides children the educational services, such as emotional, cognitive, social and physical development skills, and prepares children and their families for the transition to kindergarten. It also provides health services in that we identify and correct the problems of medical and dental care.
It provides social services, because we deal particularly with the issue of literacy. When we find parents who need help, then we reach out into those families and pursue that issue of literacy training and general education degrees and job training for the parents.

We also teach parenting skills through this program.

We operate in over 60 communities throughout the State of Washington, and our theme is that we believe that children who can do for themselves will do for their communities when they reach adulthood. This is our particular vision in our State and it is a vision that can and will form an effective partnership with Smart Start.

Early childhood is clearly one of the most crucial periods in the development of the entire lifespan. How a child develops during the critical period will have long-term consequences. We have watched dramatic shifts in the undergirding of our society and our family structure and our ability to compete in the new global society and in our educational system, which is straining to meet the needs of dysfunctional families and children. We risk losing our entire generation because our investments have been too small and too sporadic.

That is why I believe now is the time to reverse those trends and to set a national direction that places education and early childhood development as a priority investment. It is, in my opinion, the most cost-effective means of prevention.

While I have your attention, Mr. Chairman, I would like to touch on two other points.

I would like to express my support for a new range of initiatives which are coming forward to encourage and increase participation by young people in community services. This was mentioned in the questioning that came from your committee members.

We have addressed this issue in our State in a small way but we have for lack of a better term what we call the Governor's School, which is a month-long school in which 100 high school juniors from throughout the State participate in a month-long program which builds in them a commitment and understanding of the needs and joys of helping others. They learn community service, they have a variety of functions that they perform during that month program, and then they have a year's commitment to their communities, developing food banks, tutoring in schools, working with illiterates, the whole range of subjects that you have mentioned in some of the questions you posed to the Secretary.

Another issue that I would like to raise is that I would like to urge consideration that in all current and future Federal initiatives in the area of education, that more flexibility in regulation be achieved so we can allow our teachers and schools to be more creative and innovative in serving the needs of children. We need to shift the focus to results rather than regulation. We need to look at outcome-based education instead of input-based education. We need to ensure that our children get the best from our teachers, and that means that we trust them and put our faith in the teachers' abilities to do the job.

We have in the State of Washington designed a program, again for lack of a better name, that we call Schools for the 21st Century.
We now have 20 schools and 2 school districts involved in this program, in which we waive the rules and regulations that inhibit schools from doing what they might otherwise like to do, and in return, from them we receive a program of objectives they are going to try to achieve that we can measure by at the end of the trial period. But we are taking risk and allowing the professionals in the field, working with the parents and the community, to design the programs that they think best fit the needs of the children in those particular communities.

I have included in part of my written statement to the committee members discussion of this particular program if you have further interest in pursuing that.

Thank you, Mr. Chairman and members of the committee.

[The prepared statement of Governor Gardner (with an attachment) follows:]
Chairman Kennedy and Members of the Committee:

Thank you for the opportunity to share my views today about an important issue confronting all of us.

Today's children represent tomorrow's future.

We need a new partnership in this country between federal, state, and local governments and our communities to set a national direction that places education, youth service and early childhood education and development as a high priority.

We need this new partnership to invest in programs helping young children, especially children at risk.

The proposed Smart Start program, which this committee is considering, appears to offer great hope that such a partnership will soon be forged.

Senator Kennedy is to be commended for the focus on this proposal.

It has a focus on parent involvement.

It has a focus on expanding and upgrading existing early childhood programs.

It has a focus on flexibility.

It has a focus on leveraging state and local funds to increase availability of services to our young children.

And it has a focus that makes it clear that education — including early childhood education —

Is a state responsibility,

Is a federal concern, and

Is a local function.

This is exactly the kind of focus and partnership that I believe, as Governor, is required to ensure the success of our joint efforts.

And I am pleased that you are talking to the governors of our states as you develop these new programs. Because that is also a crucial step that is required to ensure success of our joint efforts.

Smart Start will coordinate quickly and effectively with the efforts we have begun in the State of Washington to address the needs of our young children at risk.

In 1985, I asked our Legislature to invest in Washington's future. They responded and we created a state-funded, but community-based and locally-run program called the Early Childhood Education and Assistance Program.
We now serve over 2,000 children each year. We expect to increase that to 4,000 by next year. And we plan on a continued and sustained expansion until all our children who need our help, get our help.

Smart Start will help us reach that goal much quicker.

Our Early Childhood Education and Assistance Program promotes preschoolers' development through a comprehensive program that involves the family and includes four major components:

EDUCATIONAL SERVICES - provides for children's emotional, cognitive, social, and physical development and prepares children and their families for the transition to kindergarten.

HEALTH SERVICES - provides medical and dental care to identify and correct problems that could prevent children from achieving their full academic potential.

SOCIAL SERVICES - supports children's and families' dignity and self-esteem, including literacy training, general education degrees and job training.

PARENT PARTICIPATION - teaches parenting skills and involves parents in their child's education.

ECEAP is implemented by a variety of local agencies in over 30 community sites around our state.

Each program needs community support from both the private and public sector to help this effort keep its promise.

We ask local communities to take ownership in the welfare of their young children because we believe children that can do for themselves, will do for their communities when they reach adulthood.

This is our vision of the future.

And that is a vision that can and will form an effective partnership with Smart Start.

Early childhood is clearly one of the most crucial periods of development in the entire life span. How a child develops during this critical period will have long-term consequences.

We have watched dramatic shifts in the under-girding of our society.

In our family structure, in our ability to compete in a new global economy, and in our education system, which is straining to meet the needs of dysfunctional families and children.

We are losing an entire generation because our investments have been too small and sporadic.

That is why I believe that now is the time to reverse those trends and to set a national direction that places education and early childhood development as a priority investment.
It is the most cost-effective means of prevention.

I would like to make two final points, Mr. Chairman.

First, I would like to express my support for a new range of initiatives which are coming forward to encourage and increase participation by young people in community service.

While it is important that we help our children now — because they are our future — when they become young men and women they need to begin to repay society by offering of themselves their service to others.

In our state, we have many examples of youth who are serving others. We have a program called the Governor's School, which is run by the Washington Leadership Institute, which takes high school juniors for a month in the summer and builds in them a commitment and understanding of the needs and joys of helping others. And the results have been spectacular.

This is another area, Mr. Chairman, where a new partnership between federal, state, and local governments and our communities can and should be forged.

And finally, I would urge consideration that in all current and future federal initiatives in the area of education that more flexibility in regulations be achieved so as to allow our teachers and schools to be creative and innovative in serving the needs of kids.

We need to shift the focus to results rather than regulation.

We need to shift the focus from inputs to outcomes.

We need to insure that our children get the best from our teachers, and that means we must trust them and put our faith in their ability to do the job.

We have begun a six-year school restructuring project in our state called the Schools for the 21st Century, which makes such trust a reality. Our education reform efforts are based on the premise that teachers are more talented, creative and committed than we have allowed them to be. Where others might stress greater control, increased testing or teacher-proof curricula, we have chosen to invest in people.

Education is the key to both quality of life for individuals and economic development for our state and nation. We believe the best education system can be developed by freeing people to pursue their passion for teaching and learning.

I have included as part of my written statement to the Committee a discussion of our Schools for the 21st Century.

Thank you Mr. Chairman and members of the Committee.
WASHINGTON'S APPROACH
TO SCHOOL REFORM

TESTIMONY TO THE
U.S. SENATE LABOR & HUMAN RESOURCES COMMITTEE
SENATOR EDWARD KENNEDY, CHAIR

BY THE HONORABLE BOOTH GARDNER
GOVERNOR OF THE STATE OF WASHINGTON

January 27, 1989
INTRODUCTION

As our nation approaches the 1990's, we face issues unprecedented in our history, both economic and quality of life issues so fundamental to our national identity that our responses will determine the strength and character of our country well into the 21st century. Among the key issues, the issues to be addressed are quality of life for all Americans and our role in the swiftly developing world economy.

Addressing these two areas is vital to the future well being of our society because we have led the world in our commitment to education and advancement of all citizens. While we have constantly struggled to achieve basic rights and access to those rights for everyone, we have also led the world in providing education for all through the high school level, and by working to assure equal opportunity in the workplace, and indeed throughout society. While no one would argue that America has been perfectly successful in achieving these goals, we have been noteworthy in our commitment to pursue them at all costs.

In 1989, the very goals and aspirations of our society are at risk due to a combination of factors and conditions both within our society and worldwide. In our country, the socioeconomic and class differences among citizens which have been so difficult to change threaten to create a "two-class" society in the 1990's, with a burgeoning "underclass" which is chronically under-educated,
unemployed, and so disaffected that they live out their lives captive to social welfare and correctional systems over which they have no control. Further, demographers tell us that this underclass is likely to grow in the near future. Without heroic interventions, we can expect the "quality of life" gap to grow between the "have" and the "have nots." Unless we are willing to change our very character as a nation dedicated to advancement of all citizens, we cannot let this trend continue unabated.

As we struggle to address these major issues regarding the well-being of our citizenry, we must also face new realities relating to our place in the world economy. The Task Force on the Teaching Profession of the Carnegie Forum on Education and the Economy has described very well the changing nature of the world economy and the challenges we face in defining our role in it. Briefly put, if we want to maintain a prominent niche as a producer of goods for the world, we must be prepared to compete with other countries who produce those goods cheaply by paying substandard wages and requiring 60-80 hour work weeks. Given that, we will not be willing to return to such working and living conditions. For a large segment of our society, future production techniques to keep competitive will require fewer people in low paying production jobs and more mechanized forms of production. The future work force will need to be broadly educated, technologically literate, and capable of lifelong learning and complex problem solving. Further, those who are not prepared for such a demanding workplace
will be even further removed from the mainstream of societal opportunities than they are today, and will most probably be a part of the "underclass" I described earlier.

If in fact the future well-being of our society is dependent on our addressing these issues successfully, how do we proceed? Obviously, any program to deal with such complex, multi-facted problems must involve all segments of society. We must mobilize government, private industry, private citizens, and a variety of public service agencies and institutions to renew our commitment to the basic goals of American society, and to reorient our economic, social and educational efforts.

Key to all of our responses to these challenges is the system of public education in the United States. Education has historically been a key to personal well-being and advancement in the United States, and it will continue to be in the 21st century. Obviously, it would be unfair to ask the public schools to bear the full burden of solving the problems just described, but it would be equally naive to assume that progress can be made without a fundamental commitment to improving the educational system for all of our children. We have made that commitment in Washington.
Early Childhood Education

In 1975 we asked the Legislature to invest in Washington's future. They responded and we created a state funded, but community-based and locally run, program called the Early Childhood Education and Assistance Program.

We now serve over 2,000 children each year, expect to reach 4,000 by next year, and plan on a continued substantial increase each school year. Our children at risk are provided services.

ECEAP promotes preschoolers' development through a comprehensive program that involves the family and includes these four components:

**Educational Services** -- provides for children's emotional, cognitive, social, and physical development; prepares children and their families for the transition to kindergarten.

**Health Services** -- provides medical and dental care to identify and correct problems that could prevent children from achieving their full academic potential.

**Social Services** -- supports children's and families' dignity and self-esteem; helps parents access community resources, including literacy training, general education degrees, and job training.

We now serve over 2,000 children each year, expect to reach 4,000 by next year, and plan on a continued substantial increase each school year. Our children at risk are provided services.

ECEAP promotes preschoolers' development through a comprehensive program that involves the family and includes these four components:

**Educational Services** -- provides for children's emotional, cognitive, social, and physical development; prepares children and their families for the transition to kindergarten.

**Health Services** -- provides medical and dental care to identify and correct problems that could prevent children from achieving their full academic potential.

**Social Services** -- supports children's and families' dignity and self-esteem; helps parents access community resources, including literacy training, general education degrees, and job training.
Parental Participation -- teaches parenting skills, involves parents in their child's education.

The program is implemented by a variety of local agencies in 62 community sites around the state. Each program needs community support from both the private and public sector to help ECEAP keep its promise.

ECEAP asks local communities to take ownership in the welfare of their young children. Children that "can do" for themselves, "will do" for their communities when they reach adulthood. That's ECEAP's vision of the future.

SCHOOLS FOR THE 21ST CENTURY

If education is a key to the future success of Washington and its citizens, how can we assure that it will meet the challenge of the next decade, indeed of the next century? The national education reform movement of the 1980's demonstrates that there are many possible answers to this question. One answer is to further regulate the education profession -- developing new graduation requirements, mandating new and expanded testing systems for students and teachers, and increasing the negative consequences of faring poorly on such tests. Other regulatory approaches to reform include increased standardization of the school curriculum, mandating a return to the "basics" of reading, computation and
memorization of facts, and systematic teaching of a well defined body of information and facts which "every well educated American should know."

While there are many worthwhile goals in the preceding paragraph, they have all too often been translated into reform agendas designed to limit the creative efforts of professional educators, control their behavior, and create "uniform" processes and products in education. "Quality control" of educational products has been sought using prescriptive methods which are out of vogue in modern industry. The fact is, if we want students to develop as creative problem solvers, they must be taught by teachers who have the opportunity, ability and encouragement to display these same traits. Highly regulatory approaches to education reform can be counterproductive if they encourage "compliance" thinking by educators. Federal, state and local regulations are designed to define minimum levels of performance, but if implemented in a bureaucratic manner, they will eventually become the maximum we expect of the system. Such has too often been the case in public education.

Based on the need to return creativity and local problem solving to the schools, as well as a basic commitment to the (often oppressed) creative potential of professional educators, I proposed to the state legislature in 1987 a bill to create schools for the 21st Century in Washington. The legislation was designed to
"enable educators and parents of selected schools or school districts to restructure certain school operations and to develop model school programs which will improve student performance." The program was based on the following assumptions:

1. All students can learn;

2. Schools are overregulated, resulting in a disincentive for creative thinking and innovative action by educators and parents;

3. Given the opportunity to innovate, educators will respond positively;

4. The current structure of virtually all schools dictates against truly professional behavior by educators, and restructuring of the workplace is essential to building effective schools of the future;

5. A key element which is essential for creative behavior and professional functioning, and which is missing in the lives of most teachers, is time; time to plan and interact with other educators apart from the day-to-day instructional demands of the classroom;
6. The basic purpose of all schooling is student learning. While current assessment instruments might be inadequate for measuring progress toward complex cognitive educational goals, all Schools for the 21st Century must commit themselves to evaluation of student progress.

It must be pointed out that the latter assumption does not distinguish selected schools from all other schools, but given the nature of their goals and activities, such evaluation will necessarily be more complex and less mechanical than existing student achievement testing programs.

The legislation called for an appointment by the Governor of a Task Force on Schools for the 21st Century, to "assist and cooperate with the State Board of Education in the development of the process, and review and selection of projects." Further, it called for applications from schools and school districts throughout the state, with up to 21 schools and, or districts to be chosen for designation for a six year period as Schools for the 21st Century. Application elements are deliberately stated in a general form, since the basic notion was for schools and school districts to define their vision and their plans for achieving that vision under the auspices of this program. Basic proposal elements involved description of district vision and implementation plans, commitments from all parties to work cooperatively to accomplish the desired ends (including necessary waivers of local rules and
bargained agreements), budget plans, use of technical resources (in particular, collaboration with institutions of higher education and educational service districts was encouraged), evaluation and accountability procedures, and statements of support from all relevant parties in the school or district.

In addition to these basic elements, the legislation specified that all teachers and other professional and classified staff involved in implementation of the proposal were to be employed for a minimum of ten additional days each school year, and that proposals should identify state statutes or administrative rules which would need to be waived in order to assure success in implementation. With only a few specified exceptions, the legislation called for a waiver of such rules upon approval of the State Board of Education, as well as assistance from the state in seeking exceptions to federal regulations which limited the school or district in pursuing its vision. Further, the legislation included new state funding for the six-year project period for the extended contract days and for portions of the technical assistance needed.

The bill was enacted into law in June, 1987, with the intention of identifying the 21 selected schools and districts to begin their work by the beginning of the 1988-89 school year. Thus began the process of restructuring schools in Washington to educate
our young people to meet the challenging demands of life in the next century.

PROFESSIONAL TEACHER PREPARATION

While the Schools for the 21st Century program is the primary focus of this discussion, it is important to note that it was one of a two-part legislative package, with the second section focusing on improvement of teacher preparation. Recruitment and preparation of quality teachers and administrators is basic to the long term improvement of schools, and the investment in reform of teacher preparation in our colleges and universities must equal the investment in restructuring of schools. Further, the salary structure, career patterns and working conditions available to teachers must be conducive to recruiting and keeping our most able citizens in the education profession.

The Teaching as a Profession Act, adopted into law at the same time as Schools for the 21st Century, stresses the importance of teachers having a firm grounding in the academic disciplines they teach, and assures that after 1992, all teachers who qualify for the professional continuing teaching certificate will have earned a master's degree in either education or the arts, sciences, and humanities. In addition, the act establishes the Master in Teaching degree as a new career entry pattern for individuals with undergraduate degrees in the arts and sciences who want to become teachers. This year we are proposing substantial financial and
technical support for our universities to redesign their graduate teacher education programs to meet these new standards of quality and rigor.

IMPLEMENTING SCHOOLS FOR THE 21ST CENTURY

Once the legislation was enacted, the first task was to appoint the Task Force on Schools for the 21st Century. These were key appointments, since this group would largely shape the values surrounding the program. The Task Force was to consist of ten private citizens and four legislators. The ten citizen representatives consisted of three teachers, a principal, a superintendent, two deans of education, one from a state university and one from a private college, a state PTA officer, a representative of the business community and a former teacher who is a private educational consultant. More important than "constituent representation," however, was the fact that these individuals were known to be independent thinkers who were not afraid to take risks in their own lives. At the first meeting of the group, I stressed that they were chosen not because of what they are (i.e., their professional roles), but of who they are and the orientation they bring to problem situations. Their job was (and is) to be good thinkers and problem solvers, not to "represent" a particular constituency. This orientation has characterized all of the task force deliberations.
The first several meetings of the task force were pivotal, since it was in these meetings that the legislation and its intentions came alive. Their first job was to bring to life the values which were to guide implementation of the program. These values evolved as a result of extended discussions not only of the legislation itself, but also of the nature and needs of education in Washington. All of these discussions were held in meetings open to the public, with opportunities for input from any citizens who wanted to attend.

These early Task Force meetings resembled educational seminars, with discussion ranging broadly across many issues. Always, however, the focus eventually returned to what principles were essential in implementation of this program. Examples of concepts which resulted from these discussions are:

1. Instructions to schools and districts preparing proposals should be kept as general as possible, encompassing only those elements specified in the original legislation. Neither format nor content should be overspecified, since the focus is on local development of vision and plan, not conformance to state-developed proposal guidelines.

2. Schools and districts should be given maximum flexibility in determining the format in which proposals are prepared. It was not assumed that all proposals would
be in traditional paper format, and in fact, several schools used multi-media presentations to augment the print proposal. Task force members would resist any inclination to tell schools "how to do it" or "what we really want."

3. There was to be no predetermination of specific proposal evaluation criteria or weighting to be given to various factors. The task force would use its collective professional judgment in determining the most promising proposals to be recommended for approval.

4. The schools and districts selected are not considered to be conducting "experimental projects." Rather, they are being allowed and encouraged to engage in a broad range of new activities aimed at fundamental restructuring of the school as a place for work and learning, in effect to become "living laboratories" for a six year period.

5. Schools and districts should be encouraged to take risks, with value placed on creating an atmosphere of innovation. Success or failure of any particular aspect of the process is less important than creation of a climate of change and risk-taking in the school.
6. The purpose of the entire endeavor is not to produce "model" project activities for export to other schools, but to encourage and support school-based innovation. The ultimate outcome should be greater latitude for all schools, not imposition of "successful" practices across the state.

7. The focus should not be on innovation for its own sake, but on innovation to increase student learning and teacher professionalism. The "student learning" focus of the legislation should be stressed constantly as the major purpose of school restructuring.

These are but a few of the agreements reached in the early Task Force meetings. While they might seem rather straightforward, several are in direct contrast to traditional approaches to school improvement. The Task Force was thus instrumental in setting the early tone and the agenda for the entire endeavor.

When the deadline had arrived for submission of proposals, 136 schools and school districts had risen to the challenge and requested approval as Schools for the 21st Century. This number was itself cause for celebration, since each proposal represented a commitment to fundamental change at some level. In fact, many schools which submitted proposals were emphatic that they would pursue their dreams whether or not they were "officially" chosen.
The very fact of putting the program in place had made innovation more acceptable, and had "allowed" and encouraged schools to dare to be different.

Each member of the task force read and reviewed all 136 proposals submitted, and individual and group ranking processes were used to reduce the list to 31 finalists. Representatives of each of these 31 schools and districts were then invited to meet with the task force for an interview. Two full days were devoted to interviewing. The applicants were provided no guidelines on who to bring to the interview, and the participants ranged from a superintendent appearing alone to represent the district, to a room full of 75 people representing every segment of the school and community!

Following the interviews, the Task Force reached consensus on the 21 proposals to be recommended to the State Board of Education for approval. These 21, which were ultimately approved, and are now in the first stages of implementation, include nine elementary schools, six secondary schools and six school districts. The selected schools and districts are located in every part of the state, ranging from Colton, a small rural school district in the southeastern part of the state, to an elementary school and a consortium of 21 schools in the Seattle School District.
It is impossible to summarize, or even characterize, the many commitments to innovation in the selected schools and districts. Several focus directly on programs for "at risk" students, to raise the level of learning for those students least apt to benefit from their school experiences. Others involve the introduction of state of the art technology in the schools. Still, others stress global education, parental involvement in the schools, extended school year, multicultural education, early childhood education, restructuring of the school day, community involvement in the schools, and improved coordination of school and social services to families at risk. All selected schools and districts have multiple targets for improvement and a commitment to continuous evaluation and modification of plans and activities as necessary.

One aspect of the process which surprised many observers was the seemingly small number of waivers from state rules and statutes which were requested. Some have said that this is an indication that the negative impact of alleged overregulation of our schools is exaggerated, and that our laws and rules do not, in fact, serve as a deterrent to innovation. An alternative explanation, however, is that schools cannot be expected to know most of the rules which are troublesome until they encounter them in the natural course of events. This would lead one to expect requests for waiver throughout the life of projects, not only (or principally) at the time of application.
Washington's first 21 Schools for the 21st Century began their official activities in August 1988. These schools are important not only for what they do, but for what they symbolize, and they are being afforded great respect and admiration. A special conference was held in October featuring nationally renowned speakers and an opportunity to interact with people from other selected schools. It is my observation that it will take time for many of the educators and parents involved to realize the complete range of freedom and opportunity for innovation which they have earned. This is imperative that frequent opportunities for interaction and expansion of ideas and possibilities be provided. THE FUTURE - WHAT COMES NEXT?

Thus far we have taken the first steps in reforming and restructuring Washington's schools. While most of what has happened thus far is symbolic and "stage setting," we are committed for the long run. Future activities related to the schools for the 21st Century program will be of three types: continued support and nurturing of the original 21 schools and districts, doubling of the number of sites involved; and systematic analysis of the entire range of statutes and regulations governing education in Washington, with an eye toward minimizing state rules and maximizing both opportunity for innovation and accountability for student learning in local schools.

With regard to the current schools for the 21st Century, we must maintain the principles for change which have guided our
efforts thus far. It could be naive to assume that the change process which has been in these schools will be easy or straightforward. The six year approval process is a critical element, because fundamental restructuring of schools cannot be done quickly. We must assure that all elements of state government and the education community maintain a helpful, supportive posture toward the schools and value risk-taking even when it is uncomfortable to do so.

Our second thrust will begin in the 1989 legislative session, in which I have proposed that the number of schools for the 21st Century be doubled. This will provide the opportunity for more schools and districts to describe and implement their visions for the schools of tomorrow. It will also be the occasion for a continuing statewide dialogue about the principles which must guide school improvement in Washington.

Ultimately, of course, every school must be a School for the 21st Century. To accept less is to admit that some schools will not serve the needs of students, and will be a party to producing young adults who are unprepared for the demands of life in the next century. We intend to contribute to the redefinition of schooling and the restructuring of schools by modifying the statutory and regulatory base to allow and encourage creativity. The Task Force on Schools for the 21st Century is undertaking a complete analysis of our state rules and laws, and will recommend which ones can be
eliminated without adverse effect on quality of education or violation of students' rights.

The importance of reducing state and federal regulation of schools goes beyond the elimination of particularly troublesome, limiting, and sometimes archaic requirements. The complexity of current state and federal rules and laws, even if they were all deemed important creates such a stifling effect that teachers and administrators focus more on compliance than on schooling -- as a society, seeking the highest quality in all their efforts. A regulatory focus in any service delivery system results in undue attention to minimum standards, rather than maximum quality. In effect, our schools are being "ruled" in a way designed to control the least effective educators, whereas the overriding need is to provide support, encouragement and freedom to those who are most effective and most creative. We intend to do all that is possible to create such a system of education in Washington.

Education reform efforts in our state are based on the premise that educators are more talented, creative and committed than we have allowed them to be. Where others might stress greater control, increased testing or "teacher-proof" curricula, we have chosen to invest in people. Education is the key to both quality of life for individuals and economic development for our state. We intend to create the best education system in the country by freeing people to pursue their passion for teaching and learning,
by assuring that our system for teacher education and continuing professional development is rigorous and relevant to the needs of modern teachers, and by creating a professional career pattern and reward structure designed to make teaching attractive to our most able and committed citizens.
The CHAIRMAN. I am sure there will be interest in that as well as your program to involve the juniors in that month-long program. Hopefully, you will be kind enough to give us additional information on that. It is extremely interesting.

Let me ask you this. Has the business community been involved in the development of this program in terms of early childhood education?

Governor GARDNER. Yes. They have been extremely supportive of this issue. When I assumed the responsibilities I currently hold, my message to the community was if we did not do the job educationally, everything else we were doing would pale by comparison, and that to do the job effectively, we had to concentrate on the front end.

So the business community and the community at-large has been supportive both of early childhood education—a project we call Even Start, which is the program where we identify children that are lackadaisical in school, wearing the same clothing for a week at a time, have lice in their hair, all of those symptoms that you can identify. Then we literally go into the homes, identify the parents, meet with them, work with them and get them into programs that are either job training or literacy programs.

These programs have been supported very significantly by the community and have helped us get legislation passed.

The CHAIRMAN. Do you have any suggestions as to how we get the business community involved in the support of this program at the national level?

Governor GARDNER. Yes. I think it is going to be very easy to solicit the support of the Governors. Education, as Senator Thurmond said before he left, is a responsibility of the States but a concern of the Federal Government, and you have expressed that concern very well. I would be glad to carry that message, as would others in my responsibility, to the Governors’ Association, but I think speaking with the opportunity we have as a bully pulpit, to take that message forth, that we can be very strong advocates for this program.

Senator Kennedy, very candidly, this program builds on many fine State programs.

The CHAIRMAN. How do you answer the argument that if the States are already doing it, why should we bother?

Governor GARDNER. I mentioned in my testimony, Senator Kennedy, that we are now lucky to be addressing 4,000 students out of an identified 30,000 children from ages two to five being in severe need of this program. We are not even touching those that most of us might on a rational basis consider also to have need for this program. I think it will be very easy to ask for this type of partnership.

The CHAIRMAN. You use a variety of delivery systems. How has this worked in the State of Washington? You work through Head Start, through the educational system, you have a lot of flexibility. We have included that concept in our proposal, and there are some who think it should be targeted more toward particular delivery systems. You have a variety of them. How has that worked?

Governor GARDNER. It has worked extremely well. We went to the stakeholders. We went to the teachers association, we went to
the PTA, we went to the administrators in the schools, the superintendents. And we all agreed that a menu programming that was targeted at dealing with specific issues would give us a much better focus on what works and what does not. We decided it was time to take some risk, recognizing full well that when you take some risk you make some mistakes. But the issue of education is so critically important to this country today that we had to do it on a broad menu of programming.

The CHAIRMAN. Have you evaluated the program in terms of—
Governor GARDNER. We have not evaluated it yet because most of what I have talked to you about is in very formative stage. But we have and are prepared to pursue a longitudinal study on the programs which we have.

The CHAIRMAN. Finally, could you tell us a little bit about your Governor's School Program?
Governor GARDNER. It is a program that is privately funded primarily by the business community, supported by what we call the Washington Institute for Community Service. It is held at one of the universities in the City of Seattle. We promote it throughout the State. We work with the principals, write letters, call. We are looking not just for traditional students, but we are looking for mavericks who have leadership capability, and we get a fair number of those. It is intensively staffed by teachers who contribute their time—they are paid, but they could do much better if they were looking for other types of jobs in the summertime—and they carry these students through a wide range of activities both in and outside the school building that we use, including going down and identifying and working in community service projects, interviewing street people, interviewing public employees. They get a wide range of challenges which they are there to pursue and that have a great deal of intention.

The CHAIRMAN. Let me ask you about these programs in early education—I know this was one of your initiatives going back to 1985—has this, to your own knowledge, been accepted and supported by the parents as well as the communities?
Governor GARDNER. Yes, it has. We have no resistance to increasing this program. Frankly, our constraints are not just monetary, they are how well we can expand the program and do it on a quality basis.

The CHAIRMAN. Senator Pell?
Senator PELL. Thank you, Mr. Chairman.
Governor, as you know, the Federal share of education has gone down from about 9 percent to 6 percent, currently. I think I am correct in saying that presently 20 percent of the share of money for higher education for student aid comes from the Federal Government, and 5 or 6 percent is the Federal share for elementary and secondary education. These have been radically reduced over the last eight years. How has that affected the programs in your States? Have you been able to compensate for it in your State?
Governor GARDNER. We have had no choice, Senator. We have an obligation to educate. Because the percentage of funding has always been relatively small, we have basically been self-sufficient. But what is intriguing to us is an opportunity to have a partnership on a program such as this, which will merge with the pro-
grams which we are currently pursuing in a way which will allow some expansion and perfection of the opportunity. It would be nice to have more money in that regard. We have made do with what we have, I think, creatively, because I think in these days you have to think creatively and not always traditionally.

Senator Pell. Do you feel that in the last eight years that the investment you have made in education has declined, been static, or increased?

Governor Gardner. It has basically been static in the State of Washington. What we have had to do is re prioritize, and what we have said to ourselves, as was mentioned by the Secretary, is that if we can do the job in the formative years—and that begins almost at the prenatal period—and make sure a child can get through the third or fourth grade competitively, then there is a significant chance they will survive the balance of their school education and be constructive citizens.

Senator Pell. I think we all need, as you have just pointed out, to recognize the importance of investing in early childhood education. There are two current programs, Chapter I and Head Start, serving the preschool population. But both programs are only able to serve a small percentage of the children eligible for these services. And as we look into the possibility of new initiatives, should we be looking at ways to protect and expand the current programs prior to taking new initiatives? What would be your view?

Governor Gardner. No. My view is that the new initiatives are compatible and need to be pursued, because they provide greater opportunity to deal with a broader range of problems which have been identified such as the social problems, the health problems and the nutrition problems, which initially at the formation of Head Start were not as focused as was just the educational issue.

Secondly, for better or for worse, in the issue of Head Start, it has been around long enough that it has begun to build some bureaucracy into it and has lost some of its flexibility, and I think a program such as Smart Start, which merges with the State early childhood education programs, will shake that a little bit and allow us to be creative and flexible in dealing with the changing economies out there with which we have to compete.

And on the issue of Title I, there is a situation where, when I spoke of the issue of flexibility and opportunity to deal with the issue of regulations, we need to address that, because some of these programs which I have discussed, such as Schools for the 21st Century, where we are allowing schools to take the programming that is there and remodel it to meet the needs of those communities, have to have the flexibility to do so. And when they have to take a certain number of students and treat them a certain way because of Federal regulations which were right at the time of the inception of the program, but which may no longer be pertinent, that means you take a block of students, they are rigid, and you lose your flexibility in dealing with the rest.

I think what we have found is that a variety of programs, creatively administered, with measurements, is the way to proceed.

Senator Pell. Thank you very much, Governor, for being with us and for your courtesy in your answers.

Governor Gardner. Thank you, Senator Pell.
The CHAIRMAN. Senator Kassebaum?

Senator KASSEBAUM. Governor Gardner, I think you point out very well why education thrives best at the State and local level. It is due to Governors such as you who, with support in the State, are willing to try new initiatives to address problems and to enhance the educational system and opportunities in your State.

I would like to pursue for just a moment some of the questions that Senator Pell asked regarding Head Start and how it fits in with Smart Start. You say they complement each other, or because, basically, they both have the same goals.

Governor GARDNER. The goals are relatively the same. First of all, we are not serving nearly the number of children who have been identified as at-risk children from low-income circumstances. So early childhood and Smart Start first off allows States to expand their capabilities to serve an identified population currently being unserved, and those are your most at-risk students with the highest incidence of dropout in later years. So just from the standpoint of providing greater service, that is extremely important.

Secondly, Head Start when it was originally implemented was more focused—not totally, but more focused—simply on the educational component. But we have learned since that we have to deal with the issues of health, nutrition, parenting, and those types of supplementary situations.

Senator KASSEBAUM. Head Start has changed a bit, I think, in that regard.

Governor GARDNER. Yes.

Senator KASSEBAUM. Now, you fund Smart Start through corporate contributions; is that right?

Governor GARDNER. No. Early childhood education, we fund through State general fund; some private, but very small.

Senator KASSEBAUM. Would it be envisioned that, if we enacted Federal legislation, this effort would be taken over and supported by Federal funds?

Governor GARDNER. No. It would be matched. I think my understanding was that a program such as is being proposed would be a matching program, and I believe that is as it should be, and that it should be supplementing an existing system.

Senator KASSEBAUM. When you go into a community, some children, I assume, are in Head Start. Do you then pick up others who should be in the other program?

Governor GARDNER. Yes, that is correct—but also, many of the communities which we were able to access with our early childhood education program did not have Head Start programs for one reason or another.

Senator KASSEBAUM. Like Senator Pell, I wonder whether we should improve and expand what we have in place, or if something else is needed that could complement it. I think that is what we will have to explore.

I would like to go for just a moment to the community service concept, and you mentioned an innovative program. I have long believed that service is something that should be undertaken in the community rather than as a national program. I believe that high schools should require their senior classes before graduation to give...
an hour a week in community service, or something along those lines. Many high schools do that now. It is not always mandated; it can be voluntary. I think even a mandated program helps students to understand the needs of their communities, whether it is repairing and painting older homes, helping senior citizens, or tutoring. It is in one’s own community where one gains understanding and builds ties. As evidently is happening in your program, one also learns where Government fits in and sees the relationship between community needs and governmental assistance.

Governor Gardner. We have legislation now currently before the Legislature to follow on what Senator Pell was saying earlier, which will allow credit for tutoring for students who come back into the system and wish to help out at the middle school or elementary school level if they are high school students and/or college students who wish to come back. We are even going to provide some funding so that we can make sure that the supervision of that is sufficient.

Senator Kassebaum. Do any of your high schools make it a requirement to do community service before graduation?

Governor Gardner. It is voluntary at the local level, but not mandated, no. But it is an ethic that has to be developed.

Senator Kassebaum. Yes, and it takes a lot work on the part of the community, as well as teachers, to work it in—

Governor Gardner. That is correct. When we started the Governor’s School, we reached out and brought 100 juniors in. We have had three summers of that now. The next step, and the one we are moving to now, is to continue the 100 juniors and try to expand on that, although 100 seems to be a great number to work with, but during the course of the year, have subdivisions, if you will, in various communities, so some of the students who have now been through this program can work within their schools and schools in the community to expand the opportunity and work with students and give them the opportunity to serve.

Senator Kassebaum. Thank you very much, Governor Gardner.

The Chairman. Governor, just to get back to Head Start, as I understand it, the greatest emphasis has been on social services. Some of them have an educational component. There is one program in Boston that uses the High Line curriculum of the Perry Preschool Program. But I have two questions.

In our Smart Start program, we can either use it through the Head Start—we have a lot of flexibility and a variety of delivery services, so it could be through the Head Start program—or, you have some areas, as Senator Pell pointed out, communities where, even though you have children who are eligible, we still do not have the resources to provide that, and by a variety of different services, using education services or other types of delivery services, we may be able to have some impact with an education component, which I think is part of the attraction of this program. And, as you pointed out, we are attempting to leverage the States to move, and encourage them to move in this direction.

But the more basic question is, How are you able to deal with the Head Start community? Quite frankly, have you been able to convince them this is not really a replacement for Head Start?
Governor Gardner. Yes. If I could just go back to the issue that we are not beginning to scratch the surface of those who need that type of service. So they were, frankly, quite supportive of our effort to get this passed legislatively.

The Chairman. Well, that is interesting, and that would be what I would consider the normal reaction. I think in some communities there is some indication that we are trying to substitute Head Start. But I think all of us believe, as I think Secretary Dole pointed out, that it is this combination of different services that can really effectively, hopefully, jump-start these kids into the whole educational system.

Isn't that our objective?

Governor Gardner. That is how we feel, yes.

The Chairman. Okay. Well, I want to thank you. You have gone to considerable trouble to be here, and I hope you will keep us abreast as you find out more about your own program. We will be enormously interested in it.

Thank you very much for taking the time to be here.

Governor Gardner. Thank you, Senator.

The Chairman. Our third panel includes Bettye Caldwell, Ernest Boyer and Joseph Fernandez, if they would be good enough to come up.

Dr. Caldwell is Professor of Education at the University of Arkansas at Little Rock, and is also Director of the University's Children Center. She served as President of the National Association of the Education of Young Children and on the Governing Board of the Society for Research in Child Development. We are glad that she is here.

Our second witness is Ernest Boyer, President of the Carnegie Foundation for the Advancement of Teaching, a familiar face to the Labor Committee. Prior to serving as President of the Carnegie Foundation for the Advancement of Teaching, Mr. Boyer was U.S. Commissioner of Education, and before that, he was Chancellor of the State University of New York, the largest university in the country; Senior Fellow of the Woodrow Wilson School of Princeton University, and education columnist for the London Times. Under Dr. Boyer's guidance, the Carnegie Foundation has become the most influential foundation in the Nation. His recent books, "High School" and "College", have helped shape much of the recent debate about American education. Today, he will tell us about the Foundation's most recent publication, "The Condition of Teaching", the third survey of this issue that he has directed in the 1980's.

Our final witness is Joseph Fernandez, Superintendent of Dade County Schools, the fourth-largest school district in the United States. Dr. Fernandez has worked in the Dade County public schools for 25 years. He will discuss recent reports written by The Council of Great City Schools and the Institute for Educational Leadership that describe some of the challenges urban school districts face in recruiting and keeping high-quality teachers. He will also discuss the extensive program Dade County is employing to address these challenges.

Dr. Caldwell?
STATEMENT OF DR. BETTYE CALDWELL, PROFESSOR OF EDUCATION, UNIVERSITY OF ARKANSAS, LITTLE ROCK, AR; DR. ERNEST BOYER, PRESIDENT, CARNEGIE FOUNDATION FOR THE ADVANCEMENT OF TEACHING, PRINCETON, NJ; AND DR. JOSEPH FERNANDEZ, SUPERINTENDENT, DADE COUNTY SCHOOLS, ON BEHALF OF THE COUNCIL OF GREAT CITY SCHOOLS, MIAMI, FL

Dr. CALDWELL. Thank you, Mr. Chairman and members of the committee. It is a pleasure to be here and to have heard the presentations so far.

I have a longer statement that I am submitting, and I will try to be brief. I have entitled my remarks, “Needed. A Comprehensive Early Childhood Program for America’s Children”. Actually, I have felt this need for probably 25 years now, and it seems to me that the time is ripe for beginning to develop one. There are at least two reasons for this.

The first reason is that over the past quarter-century, we have accumulated a great deal of information pointing to the value of early intervention programs for the intellectual, social, emotional development of the children as a protection against many of the ills of society and so on. We now have an impressive array of such studies to which we can point with pride.

The second reason, though, that we need this system so desperately is that during the same quarter-century when those studies have been done, America’s families have been changing and changing dramatically. We now have more working mothers, more single-parent families, and we now have to face the fact that the early years of life, which our data show are critical, have to receive a great deal of very careful attention, and we have to develop programs that can serve these children if they are not to be deprived of vital and essential growth-fostering experiences. So that we have data now, and we clearly have the need, and it is essential that we move forward.

Now, in view of these twin conditions, it seems that it ought now to be possible to design a system of early childhood programs which can meet the needs, hopefully, of all children, not just select groups; but I would certainly like to go on record as saying that I feel that the needs of the disadvantaged should always have priority as funding patterns are set.

I offer in my remarks some five suggestions or recommendations that I think we need to keep in mind in developing such a system.

The first recommendation is that early childhood programs have got to be integrative and have got to be comprehensive. Several of the other speakers have referred to that in some form or another. We cannot at all compartmentalize little children, it is hard enough to do it with those of us who are adults. But the little child who is hungry cannot learn, the child who is not loved is not interested in extra stimulation and so on. We must deal with them as total human beings.

Now, in view of these twin conditions, it seems that it ought now to be possible to design a system of early childhood programs which can meet the needs, hopefully, of all children, not just select groups; but I would certainly like to go on record as saying that I feel that the needs of the disadvantaged should always have priority as funding patterns are set.

I offer in my remarks some five suggestions or recommendations that I think we need to keep in mind in developing such a system.

The first recommendation is that early childhood programs have got to be integrative and have got to be comprehensive. Several of the other speakers have referred to that in some form or another. We cannot at all compartmentalize little children, it is hard enough to do it with those of us who are adults. But the little child who is hungry cannot learn, the child who is not loved is not interested in extra stimulation and so on. We must deal with them as total human beings.

Now, I think that what we have tended to do historically is develop service patterns that are for one or another aspect of what we see as important components of the development of a child. In particular, in the early childhood field, we have had two major
service programs that have developed. They both have long and distinguished histories, and they both have long and sad histories in some way.

One of these services, we have tended to call “daycare”. In earlier generations, they were called “day nurseries”, sometimes today, it is called “child care”. But if you look at the historical and informative literature about what these services were supposed to be, they were essentially for parents, they were for working mothers, mothers who were ill or had some kind of social pathology that kept them from caring for their children. They have a long history of minimal and inadequate funding, and throughout much of their existence, society referred to them as “custodial” or “institutional” care.

On the other hand, we had a system that we called “early childhood education”. It does not go back as far as the day nurseries in America, but this has been an area full of intellectual excitement, if you will, and many great ideas that bear fruit in the data from the Perry project and other studies like that have come from this field. But it has been described as being for children, basically middle-class children, mainly for social and emotional development, if you will, although parents have noted that their children have received a great deal of impressive cognitive stimulation in these programs, and have wanted them.

One of the things that has been interesting to me during my years in the field has been how hard people have tried to make the case that these are two separate services and have denied that early childhood education is not daycare, and daycare, on the other hand, is not real education. That is a fallacy, and continuing to advocate it and maintain it has been a deterrent to the development of a comprehensive early childhood program in this country.

I think that one of the things we need to do is change the vocabulary, and I have introduced a term—Dr. Boyer has heard me say this—I am calling these programs “educare”—and if you do not want to use that label, I hope that in the design of legislation to support them, you will think that way, because there is no way to educate a young child without also providing care and protection. And you certainly cannot provide adequate care and protection without offering education. To try and do otherwise would be seriously to handicap the children and not to help them.

So we have to have integrative and comprehensive services.

A second thing that this system needs, it seems to me, is that any new programs should network with existing services. We have already heard this morning about Head Start, about a variety of State programs, Chapter I programs, Title XX programs, and so on. They are out there. We do not have to start a new program from scratch, but I do think we need to abandon this sort of patchwork mentality that we have had and do some strategic planning—to use the term that is popular in business now—in order to avoid competition and unnecessary duplication.

In this context, Senator, one of the reasons I am very enthusiastic about Senate Bill 123 is that it does allow for coordination between the programs which it will fund and existing programs such as Head Start and programs already in operation in the public schools. And I especially like the fact that it really talks about
"educare" because the funds can be used for extended day programs and summer programs.

If we create early childhood programs that do not offer those services, they will not meet the needs of America's families, and they will not be popular, and they will not be successful. We have to do that.

In this context of talking about cooperation, though, I would like to say—and I hope that the Secretary will make note of this—that I am a strong advocate of more early education programs in our public schools. Now, many of the people who represent the establishment in my field for some reason are opposed to that, on some of the terms that we have heard here this morning. They are worried about what has already happened in schools, and they say, well, we certainly do not want to give them our young children, do you.

I ran for 10 years in Little Rock, Arkansas an example of the sort of comprehensive and integrative program that we need. We accepted children as young as six months, and the school operated up through the sixth grade. In other words, it was a combination early childhood/elementary complex. It was set up to allow the gains such as those shown in the Perry project not to wash out or fade away if the children moved away from a creative early childhood program into a primary school that was not set up to help sustain those gains. But quite apart from this continuity, it ran year-around—not 180 days—it was open from 6:45 in the morning until 6:15 in the afternoon. Different staff covered different hours. And in other words, we tried simply to design a program that would meet the needs of children all day, not overwork them, not give them plenty of recreation, but that at the same time would serve the needs of their families and allow their parents to go to school, to work and so on.

So I am very strongly in favor of having new programs such as Smart Start work closely with the public school system in order to facilitate this kind of truly comprehensive and integrative program.

My third recommendation is one—and I am delighted to have heard others touch on this this morning—a system of early childhood programs must include children who are younger than three, four and five. Now, as 123 moves down, as it should, down one notch on the chronological age scale from where we have the largest number of early childhood programs, namely, kindergartens for five-year-olds, four-year-olds clearly need to be served. But if you look at those data on that chart, they do not come from studies on five-year-olds; they really came from studies on three- and four-year-olds. And the child development theory that led to the development of those programs talks about the importance of early experience during the first three years of life, not necessarily during the second three years of life.

So it is very important to realize that we have to have programs for very young children as well as four- and five-year-olds.

Now, Secretary Cavazos mentioned the importance of that, and Senator Kennedy, the comprehensive child development programs that you initiated and submitted will indeed do this. They allow for
the development of programs for children one through five which are comprehensive, as I have already referred to.

If you take the demographics that I referred to in my introduction, the sharpest rise in the incidence of working mothers is not in mothers of threes, fours and fives, it is in mothers of children under three. In 1950, only 12 percent of mothers who had children younger than three were in the work force. Today, that figure is estimated to be 52 percent, and by the end of the century, just a little more than 10 years away, it is probably going to be 65 to 70 percent.

So we have to have concern for these very young children. Historically in this country we acted as though we should not do it because basically we did not advocate it. And I think we used the "ostrich" approach. If we did not develop programs and did not advocate them and fund them, they would go away. They do not go way. Rather, mothers and fathers tend to use programs which are of poor quality, which are unmonitored and unregulated, and which are simply not good for the children.

My fourth recommendation is obviously that programs have got to be of high quality. We have had a tendency to compromise all over the place in developing early childhood. There were some remarks earlier about whether the Washington State program and others would duplicate Head Start. The figures on the incidence of eligible children served by Head Start are roughly only 25 percent of the eligible children are in Head Start programs. We still have a desperate need for them. And sometimes program operators have wanted to compromise on quality simply to deal with those large numbers of children who tend still to be unserved.

But we now know what represents quality, and we all know and agree that the stakes are high, and that we have to stop compromising on that. And in anticipation of some of what Dr. Boyer might say and what the Secretary has said about teachers, teachers and their assistants in this field are the most poorly-paid people in virtually any kind of employment that you can think of, and you cannot have quality programs without quality adults who operate them, and you are not going to get and keep quality people until we offer more meaningful salaries for the people who provide this.

I also would like to endorse the idea of character—I am not going to say "education"—in early childhood, but character formation. That is a lot of what the programs are about—learning to care for one another, learning a sense of responsibility, learning to control your own impulses and realizing that other children want the same things you want and so on.

Also, early childhood programs make an excellent place for the use of this community service that has been talked about this morning.

My fifth point, I will be very brief on, because it is one that has been discussed, and we all endorse it. That is that early childhood programs must welcome and accommodate parent input. This is the most basic thing. We have learned a great deal about this over the past 25 years, but it has to be made explicit. We really have to refer to it. Senator Coats referred to this, the tremendous importance of early involvement. And I think we all recognize that one of the byproducts of it, the happy fallout of it is that as many par-
ents are involved with programs for their young children—and they are less scared when their children are little; they are less afraid to tangle with a director of an early childhood program than they are with the school principal or the school superintendent—and in the process, they do learn how to empower themselves; they learn how to talk at meetings; they learn how to go to the school, and if they do not feel welcome immediately, to wait until they get seen, until they get heard and listened to.

There is much now to show that this kind of early involvement stays with the parents. They take it as their children go through the remainder of their school years and then, of course, many of them do begin to enroll themselves in educational programs, which is going to benefit those children, the adults themselves and our total society.

I would like to summarize with just a very brief comment about your bill. I think that Senate 123, with its provisions for children younger than five, with its mandates for comprehensive and integrative services, with its concern for parent involvement, with its ability to bring the public schools into a closer alliance with the “educare” establishment, with its mandated Federal and State fiscal collaboration, can indeed lead the way in the development of the comprehensive early childhood system we need and are at last ready for in America.

The CHAIRMAN. Thank you very much, Dr. Caldwell.

[The prepared statement of Dr. Caldwell follows:]
NEEDED: A COMPREHENSIVE EARLY CHILDHOOD PROGRAM
FOR AMERICA'S CHILDREN
Bettye M. Caldwell
Donaghey Professor of Education
University of Arkansas at Little Rock
Little Rock, Arkansas 72204

To one who has worked in early childhood for 25 years, the level of recognition and acceptance now accorded the field is gratifying indeed. In spite of an impressive accumulation of evidence of the importance of the first few years of life for the full realization of the human potential, the experiences of the early years have somehow not been taken quite seriously as deserving of the careful planning that we put into what are referred to as "the school years." Organized group programs for children during these early years are often referred to by the oxymoron "preschool." Furthermore, there has been resistance to the development of a national system of early childhood programs on the mistaken assumption that such programs somehow violate and subvert parental rights.

At this juncture in history, facts have refuted assumptions and evidence has superseded myth. We have an impressive knowledge base upon which to base programs and the public policy which supports them. We now know such things as the following:

- Poor children who participate in a quality early childhood program do indeed arrive at first grade with an opportunity for an "equal start," if not the "head start" promised by the title of the field's most famous program.
- The degree to which programs focus on language development is associated with favorable outcomes.
- Health and nutritional status are improved.
- Participating children have higher self-esteem and achievement motivation.
- Parents uniformly value the programs and find evidence of ways in which their children have benefitted.
- Children who participate in high quality programs are less likely to be placed in special education classes or to repeat a grade in school.
- There is some evidence that such programs reduce delinquency.

These are a few of the "facts" which have accumulated over the past 25 years. We have come a long way toward complete validation of the hypotheses formulated 24 years ago in the famous "White Paper" that led to the establishment of Head Start. That document suggested that the most meaningful way to ameliorate the
educational and social problems often seen in older children from poverty backgrounds was to provide enrichment for the through the medium of a national early childhood program. In our enthusiasm, and in our eagerness to prove our merits, we have sometimes promised too much. Whenever that happens, the field (and the children and families we represent) suffered. But now we have enough knowledge to be more realistic about our limitations as well as more optimistic about our contributions.

Family Changes

Meanwhile, as these data have been accumulating from year to year, their relevance has been increasing from day to day by virtue of rapidly changing family demographics. In fact these changes have been so precipitous that figures are obsolete almost by the time they appear in print. Present estimates (just one year before a major census) are that roughly 60% of mothers with children younger than six are in the work force, with approximately 92% of mothers of children younger than three working outside the home. Furthermore, one child out of five is now born into a one-parent family (with that ratio being one out of two in some subgroups of the population). If these mothers are to escape the gridlock of poverty and dependence, if they are to be able to participate in training or actual employment, some sort of national program which gives careful attention to how and where their children spend their early years is essential.

Whatever these demographics might have to say to us about the numbers of children needing public policy attention, they certainly bespeak one important reality: the norm for how young children spend their early years has changed from what has been considered "traditional child rearing" in America. An interesting thing happens when a norm changes—attitudes subtly but significantly change. This has now happened throughout America. Parents—including those whose own parents might have worried about that early childhood experiences outside the home might be "family-weakening"—now acknowledge that such programs represent a real family support.

Thus it seems to me that we now have two essential ingredients for planning a successful national system of early childhood programs: (1) an adequate knowledge base; and (2) public endorsement and support. Having reached this point, we are now ready to plan the kind of system we need. I should like to suggest five conditions that need to be met in the system to develop.

Five Components of a National Early Childhood System

1. The system should establish comprehensive programs. Children are not easily fractionated at any age; when they are young, it simply cannot be done. Their development cannot easily be separated into neat compartments like health and nutrition, cognition, social and emotional development, motor development, and so on. They come all of a package. If they are hungry or
poorly nourished, they can't pay attention. If they are not given
love and affection, they won't learn language. If they don't get
enough rest, they won't have the energy to use the toys and
equipment provided them. If their families and the people who
design and operate group programs don't have the same objectives
and values, they'll be so confused they won't know what to do and
when to do it.

In spite of this need for comprehensive, integrative early
childhood programs, we have tended to allow services to develop
along different tracks which hopefully would never meet and which
we even pretended were totally different. In particular, we have
had one type of program which we called "early childhood
education" which was: mainly for social development (but with a
great deal of appropriate cognitive stimulation thrown in),
available mainly to middle class children (because public funds
were never allotted to such programs), operated generally for only
a few hours each day, and had ample parent support and perhaps
volunteer help from the children's non-employed mothers. Whatever
else such programs might offer, they presumably provided develop-
mentally appropriate education to the children.

On the other track, we had something that professional groups
originally called "day nurseries" and which today we call either
"day care" or "child care," depending on which term is current,
in favor. If this type of service was offered in someone's home,
the general public called it "baby sitting," no matter what sort
of fancy 'abel we tried to assign it. If it was offered in a
small group setting, it was often labeled with a pejorative
description such as "institutional care" or "custodial care." These
programs were often described as established for parents
(mainly mothers) with some sort of social pathology such as
poverty, mental illness, or, believe it or not, maternal
employment: they were not for the children who they offered the
children was presumably care and protection, not education, and
these services were offered only to poor, not middle class,
children.

The field of early childhood has long been burdened with a
nomenclature that does a poor job of communicating just what its
programs offer. One reason for this is that we have chosen to be
identified by labels which describe only part of what we do. I am
convinced that we need to coin a new term that will more
accurately convey the meaning of the service we offer, and I have
suggested the term: educare. Although we might like it to be
otherwise, there is much in a name. This blended word, with a
prefix representing one half of our identity and a suffix
representing the other half (and no hyphen allowed), we should be
able to make it clear that we stand for this comprehensive and
integrative approach to services.

2. Any new programs should network with existing services.
At present we have a patchwork of early childhood services, with
none having adequate funding or covering enough territory, to serve
all the children by itself. Diversity of auspice is not bad in
and of itself. However, if it leads to turf-guarding and to accusations that one or another group is unfit to offer quality programs, then diversity can be inimical to progress.

One especially laudable feature of S 123 is that the funds which will become available through the legislation may be channeled through a variety of existing organizations. This is good, in that it will minimize delays that might otherwise be occasioned by the necessity to create and develop a new administrative structure through which a program could operate.

I am especially pleased to note that it is expected that public school districts would be eligible to become program sponsors. Although many people appear uneasy about such sponsorship, fearing that school personnel neither want such involvement nor have the qualities necessary to do a good job, I consider it the most advantageous arrangement possible for the development of a true systems approach to early childhood.

As evidence that it is workable, let me describe briefly Kramer School, an early childhood/elementary education program which I had the privilege of developing in Little Rock, Arkansas some 20 years ago. In the first place, Kramer opened at 6:45 in the morning and remained open until 6:15 in the afternoon year round, in order to provide "care and protection" for the children who attended the school. (Remaining in school for some of the extended hours and during the summer was an option arranged individually according to family need.) The age range covered was from six months to 12 years. Thus at the end of the early childhood years it was possible to continue to offer childcare and family support services that facilitated developmental continuity and the sustaining of any gains that might have been induced during the early years. The school also had an active family service program and an affiliated health maintenance program.

In spite of the unique schedule and age range served, Kramer had to function within the framework of the policies set by the Board of Education of the Little Rock School District. That precluded research luxuries such as random assignment to the school and to some other designated control school. Furthermore, mobility of the low-income population served by the school was so great that extended follow-up of the children was not feasible. Thus findings from Kramer cannot be cited alongside the impressive data from other more rigorously conducted research. However, Kramer served as a crucible of reality in which it could be demonstrated that education and care can be merged, early and elementary education can establish meaningful linkages with one another, and parents can feel empowered to influence what goes on in the school. It is precisely because of my experience as principal of Kramer School that I look ahead with optimism to Start Start affiliations with public education.

All of us await eagerly results from projects such as Giant Step, the program for four-year-olds in New York City. This project has been carefully designed so as to provide not only
outcome evaluation data but vital information about the process of having pre-kindergarten children in public schools. From such efforts will come valuable cues as to how such programs can best be administered in order to achieve optimal benefits for the participating children.

One other comment about S 123 is pertinent here. That is its provision for full-day and full-year programs. Educare is coming increasingly to be understood as an economic as well as a human service issue. As reflected in the recent report, Children In Need, quality early childhood programs are absolutely essential if we are to prepare a more competent work force for our future. They are also needed to allow women to make their contribution to the work force of today. Early childhood programs which do not provide for extended day and summer coverage fall short of truly serving today's families. S 123's provisions in this area are commendable and exemplary.

3. Programs for very young children must be included in the comprehensive system. This recommendation is less relevant to the current legislation than it is to the need for us not to forget what I sometimes call "earlier child development." Certainly we must consider the needs of children from birth onwards if we are to have a comprehensive early childhood system. S 123 moves as it should--down one notch on the chronological age scale from where we have the largest number of early childhood programs (five-year-olds). Four-year-olds clearly need to be included in publicly funded programs. At present this is true mainly for programs such as Head Start and Title I which have clear income eligibility guidelines. Again, an exemplary component of S 123 is its provision for all children whose parents desire to enroll them in the service, with a sliding fee schedule which will allow all children to participate who meet the age guidelines.

As reflected in the recent report, Children In Need, quality early childhood programs are absolutely essential if we are to prepare a more competent work force for our future. They are also needed to allow women to make their contribution to the work force of today. Early childhood programs which do not provide for extended day and summer coverage fall short of truly serving today's families. S 123's provisions in this area are commendable and exemplary.

planning for a comprehensive system, we have to keep in mind that the sharpest increase in the incidence of working mothers is in the category of mothers with children younger than three. In 1959 only about 12% of such mothers were in the work force. Today they are slightly more than 50%. Demographers estimate that, by the end of this century, probably 75% or more of children younger than three will have mothers who work part- or full-time. This means that we actually don't have a lot of time to get a machinery in process for providing appropriate early childhood experiences for very young children. If we avoid this process, this does not mean that the children will not be exposed to some type of alternate care. Rather it simply means that they will be placed in unmonitored and unregulated care.

1. Programs must be of high quality. I shall write little about this, as the language of S 123 makes explicit that programs funded under the provisions of the bill will respect indicators of quality such as trained personnel, a low adult:child ratio, small group size and exemplary health and sanitation regimens. Certainly we cannot afford to create a system that will not have the potential to foster the development of the participating children.
The demographic changes of the last quarter of a century which have fueled a dramatic rise in demand for early childhood services have alarmed many people—and rightly so, for how its children are reared is undoubtedly the touchstone of any society. However, these alarms have been based to some extent on false assumptions. They have assumed that all home environments for young children are warm and nurturant and supportive. Lamentable findings such as statistics on child abuse have opened our eyes to the fact that this is not always the case. Likewise, we have tended to assume that all alternate care situations are grim and depriving. This may well have been the case when heavy usage began to strain the system.

Now, things are changing for the better. All 50 states have licensing laws and regulations. We have research evidence of child outcomes associated with different levels of quality. The National Association for the Education of Young Children has developed an accreditation procedure which attempts to recognize and reward centers which go beyond minimal standards in their quest for quality. The National Institute of Child Health and Human Development has just launched a multi-site research project which will carefully monitor the social, emotional, and cognitive outcomes associated with infant child care. In short, we have in place a number of procedures which will help ensure that quality programs can occur. What is needed now is a level of funding that will not mandate compromise on important determinants of quality.

5. Programs must welcome and accommodate parent input. This point is so important and so basic that it could have been inferred as present in all the other recommendations. However, it needs always to be made explicit. And in the making of public policy, we need to be aware that parents are the strongest supporters of quality early childhood programs. They recognize that the educare provided their children through programs such as the one proposed in Smart Start does not diminish the importance of their role as parents or mean that they are "turning their kids over to someone else to raise." Rather, young parents of today simply accept as a given the fact that such programs supplement, not supplant, what they as parents offer the child. They accept, they endorse it, and need it. And what is amazing to one of my generation, they do not even seem to agonize over it. Regardless of whether they know that they norm has changed, they are reasonably comfortable with it.

One of the most felicitous aspects of early childhood programs is that they give us an opportunity to get parents happily involved in the education of their children—an involvement which can then help sustain the subsequent educational careers of the children and possibly stimulate the parents themselves to engage in further educational endeavors. When this happens, the benefits fall out over the entire family and indirectly over us all.

In summary, S 123—with its provisions for children younger than five, with its mandates for comprehensive and integrative services, with its concern for parent involvement, with its
ability to bring the public schools into a closer alliance with the educare establishment, with its mandated federal and state fiscal collaboration—can lead the way in the development of the comprehensive early childhood system we need and are ready for in America.
The CHAIRMAN. Dr. Boyer?

DR. BOYER. Thank you, Mr. Chairman, for the opportunity to testify before this distinguished committee. Your work is vital to the Nation's future. And may I also extend my thanks to the Secretary of Education for the vision and the spirit with which he is leading us in education.

This morning I wish to talk about teaching in America, which was the second of your priorities in the introduction. The quality of education in this country can be no greater than the dignity we assign to teaching. And yet the harsh truth is that during the past half-dozen years while academic standards have been raised and while salaries have increased, morale among teachers has been going down.

Last year, the Carnegie Foundation surveyed thousands of teachers from coast-to-coast, and we were distressed to learn that only 23 percent said that since 1983 teacher morale had gotten better; 49 percent said it has gotten worse.

Recently, Carnegie in a larger survey—and I think perhaps the largest survey of public school teachers ever conducted in this country—polled 22,000 teachers, and what we learned was both disturbing and revealing.

Specifically, we found that well over half the Nation's teachers have less than one hour per day for preparation. Nearly 30 percent had 10 or more class preparations every week. Nearly 40 percent of today's teachers rate the security at their school only fair or poor, and the physical conditions below average.

Perhaps most significant is the sense of powerlessness among teachers. Ninety-three percent are not involved in selecting new teachers at their school. Ninety percent are not asked to participate in teacher evaluation. More than half of today's teachers are not even asked to participate in the crucial decision about which students should be tracked into special classes. And more than half of the teachers we surveyed said that respect for teachers in their community is worse than they expected.

Mr. Chairman, many teachers in our survey also noted with alarm the rising trend to expect schools to do what families and communities and churches have not been able to accomplish. Ninety percent report that lack of parental support is a problem at their school, and 56 percent expressed disappointment in the unwillingness of parents to be involved.

One teacher wrote that she had 22 students in her class this year, and only three parents had visited the class all year.

Also, we found that 89 percent of today's teachers say that abused and neglected children are problems at their school. Seventy percent report that poor health among students is a problem. And more than two-thirds of the teachers we surveyed identified undernourished children as a problem, which leads me to insert a growing conviction that we have, I think, not just a school problem but a family and young problem in this Nation, and unless we look at these as interlocked, it is impossible for the school to be an island of excellence in a sea of indifference. So I would strongly urge the connectedness between parenting and indeed the issue of youth service.
In fact, many of the teachers spoke about the sense of anonymity and apathy among their students—not just neglect, but a sense of drift. And it is for that reason, Senator Kassebaum, that in our 1983 report on high school, we proposed a new Carnegie unit, and we suggested that all students be asked to complete a community service term during their four years in college.

I should say for the record that our Foundation has the unhappy record of having invented the Carnegie unit 60 years ago which was an attempt to standardize academic study. I think it was about 135 hours of seat time, and then you get a Carnegie unit.

We suggested another kind of unit in which you get out of your seat and engage in service. That, to me, is urgently involved in what I think is the revitalization and renewal of the Nation’s schools.

And I might say parenthetically, I think colleges have the same obligation to show the linkages between learning and the investment in the lives of others. That connection urgently should be made, and academic credit should be awarded for such service.

Mr. Chairman, I have more data in a report called “The Condition of Teaching”, and I have attached some charts as well as the testimony of teachers in my full testimony.

Let me simply summarize here to say that the picture presented by the teachers is pretty bleak. In fact I must tell you it was darker than I expected. But there is some remarkably good news here. We found that with all of the indignities and frustrations, the vast majority of teachers we surveyed said they planned to stay in the profession, more than that, the vast majority say they are glad to be a teachers, and overwhelmingly they said that the awards of this profession come, as we heard from a Senator earlier today, from seeing children’s lives changed and the impact that that means because of service they render.

But I must say this morning that I think we are living on borrowed time. I think we cannot impose excellence from above. And it is my conviction, Mr. Chairman, that in the next phase of school renewal, we must first work on the working conditions of the teachers and see that they have a sense of dignity and purpose, we must strengthen the partnership between the family and the schools, because the teachers cannot do it all alone, and third, we must focus on the growing needs of children especially in the early years.

If we could get those three priorities in place, most especially at the State and local levels, I am convinced we could build the best education in the world.

But may I conclude by saying a word about the Federal role and leave a suggestion or two for your consideration. It is my belief, as has been said this morning, that education is primarily a State and local obligation, but that does not excuse, in my judgment, the partnership at the Federal level, too. I have had a long conviction that the Federal Government has two primary obligations. One is to help achieve equity, which I think is a constitutional and moral obligation—...3 Chapter I, thus handicapped, thus bilingual. And also, I think the Federal Government has an obligation to involve itself in emergencies when they arise. After all, if the Nation is at risk, I think the Nation should respond. And I propose three-
point strategy that focuses especially on what I think is the urgent crisis around teaching in this country.

The three-point program— and without being too cute, may I call it "the Three Rs"— first comes recognition. This Nation simply must celebrate the dignity of teaching. In this regard, President Bush and the Secretary have, I think, sent a powerful signal by meeting with teachers even before they officially began office. I suggest, if I might be so bold, that the President might build on this tradition by hosting a dinner in the White House for the 50 men and women designated by their States as "teachers of the year." After all, we give recognition to visiting dignitaries from abroad; why not give recognition to visiting dignitaries from classrooms in Kansas?

On this occasion, the President could invite teachers to discuss the inspiration of their work and to heighten the impact. The event might even be televised nationally, prime time.

Congress also could affirm the dignity of teaching by inviting teachers to share their experiences in a public forum such as this one. Teachers are isolated. They are rarely asked to speak about improving education even though they are the most knowledgeable and the most committed. I believe that holding a special congressional hearing exclusively for teachers would be instructive and inspirational.

These moves are symbolic, but the older I get the more I am convinced that we live by symbols. And to celebrate teaching in the Nation's Capitol would send a powerful message to every classroom in this country. Having a White House dinner is not sufficient, but it surely is a good beginning. [Laughter.]

Dr. Boyer. Second, the Federal strategy should focus not only on recognition, but on renewal.

Thirty years ago, in response to Sputnik, President Eisenhower proposed the National Defense Education Act, a Federally-funded teacher enrichment program. What I find ironic, 30 years later, when I go around the country, I still meet teachers who are enthusiastic, almost reverential, of their NDEA fellowship when they went off to a university of their choice to be renewed. Even though a handful of teachers were involved, it sent signals to every teacher that they were the answer— the solution, not the problem. I suggest, therefore, a 1989 version of Eisenhower's NDEA to focus on renewal. Teachers need time in libraries and in laboratories to be intellectually renewed. The Christa McAuliffe Teacher Fellowship Program is a wonderful step in the right direction. As I understand it, 500 teachers are now involved, one in every congressional district. I urge this program be extended.

Further, I think you might consider summer teacher institutes, controlled by teachers in each of the regions of the country. I think a model is the Yale-New Haven Institute which, as you know, Senator, enables teachers from New Haven to study with faculty based on a curriculum they themselves develop. Teachers have told me that they stayed in the New Haven public schools because of this institute, which enriches them and which they control.
I also suggest a Distinguished Teaching Fellows Program. Why not give an annual fellowship to a handful of master teachers in every State and allow them to move from school to school as master teachers, holding seminars with colleagues? Not only do you honor the great teachers but you enrich the ones in the classroom.

All of these programs, frankly, would be small change, but they would be powerful and enduring in terms of the status that we affirm to teaching.

Finally, to my third "R", I think we should give high priority to recruitment. I am much less concerned about the certification arrangements, and even the teacher preparation arrangements, unless we get good people in the pipeline to begin with. To rearrange and educate mediocrity is not the solution; it is attracting the most gifted into teaching.

In 1984, this Congress passed a scholarship program for gifted high school students who plan to enter teaching. These Paul C. Douglas Scholarships, I think, should be expanded—perhaps with extra support for those who plan to teach in urban schools or to educate the rural poor.

After all, we have a wonderful Peace Corps to send Americans overseas—which incidentally inspired, I think, every young generation in the last 30 years. Why not also attract the brightest and the best to teach in inner cities and in poverty areas here at home?

Martin Luther King said on one occasion, "Everyone could be great because everyone can serve." And I believe that to encourage service among this generation to work with other young people who are needy would provide a powerful inspiration for us all.

One final point. Recruiting future teachers, I think must begin with students while they are still in school, especially among those from minority populations, because in the future, the public schools will have a large number of black and Hispanic, and need not only good teachers; they need, frankly, models in the classroom.

So why not fund in selected regions of the country summer institutes for gifted junior and high school students who could have a week or two on a college campus, talking about what it means to be a teacher, and have someone say to them, "You are good enough to be a teacher."

Again, Mr. Chairman, the quality of education in this country can be no greater than the dignity we assign to teaching. I am convinced that focusing on the three Rs—the recognition of the teacher, the renewal of the teacher, and the recruitment of the teacher—we can strengthen the vitality of teaching and in the process can ensure a better future for our children and for our Nation.

I might say that in addition to the charts and, incidentally, the actual transcriptions of the letters we got from teachers, on our survey of 22,000, we ask at the end, "Is there anything else you want to tell us?" Eleven thousand teachers took the time to answer. And we are going to publish these in a book in the next year called "Teachers Speak." And I can only say if every person in America would pause to read these comments, which have flowed from the intelligence and concern of teachers, I think they would know more about the nature of our problem and have a
greater sense about solution than any other instruction they could have.

This full report of the survey that we just completed is available for the committee, as you wish.

Thank you, Mr. Chairman. I will respond to any questions you may have.

The CHAIRMAN. Excellent. We will include the report as part of the file.

[The prepared statement of Dr. Boyer follows:]
THE CONDITION OF TEACHING

Testimony of
Ernest L. Boyer
President

The Carnegie Foundation for
the Advancement of Teaching

The Senate Committee on Labor and Human Resources
January 27, 1989
Thank you, Mr. Chairman, for the opportunity to testify before this distinguished committee. Your work is vital to the nation’s future.

This morning, I wish to talk about teaching in America. Teachers are the key to effective schools. The quality of education can be no greater than the dignity we assign to teaching. And yet, the harsh truth is that, during the past half-dozen years, while academic standards have gone up and salaries have increased, morale among teachers has gone down.

Last year, the Carnegie Foundation for the Advancement of Teaching surveyed thousands of teachers from coast to coast to get their reaction to school reform. We were distressed to learn that only 23 percent said that, since 1983, teacher morale had gotten better; 49 percent said it had declined.

Recently, Carnegie—in a larger survey—polled 22,000 teachers across the nation, and what we learned about the working conditions of teachers was both revealing—and disturbing. Specifically, we found that:

- Three teachers in five have less than one hour a day for preparation.
- Twenty-eight percent report they have ten or more class preparations every week.
- Nearly four in ten teachers rate the security at their school as only “fair” or “poor.”
More than a third say the physical condition of their school is "fair" or "poor."

One-fourth of today's teachers do not have study space of their own.

Perhaps most significant is the sense of powerlessness among teachers:

- Ninety-three percent are not involved in selecting new teachers at their school.
- Nine in ten are not asked to participate in teacher evaluation.
- Fifty-seven percent are not even asked to help plan their own in-service programs.
- Two-thirds are not involved in setting student promotion and retention policies at their school.
- Fifty-three percent are not consulted about student behavior.
- And more than half do not participate in the crucial decision about which students should be tracked into special classes.
We also found that more than half say respect for teachers in the community is worse than they expected, and more than one-third express disappointment about their opportunities for advancement.

Mr. Chairman, the evidence reveals that, with all the talk about school reform, the teaching profession in America remains troubled. And, while new academic regulations have been imposed on schools, the heart of the enterprise—the teachers—has been largely overlooked. Today, teachers are dispirited, confronting working conditions that leave them more responsible, but less empowered.

At the end of our survey, we asked teachers if they had anything else to say about their work. Half the teachers—11,000—responded to this invitation, and their comments added powerful, even poignant, insights into the problems teachers face.

Listen to the voices of two teachers:

"I find myself continually bringing my tongue and pounding my head against the wall. Public support and parental support as a whole seem to be at an all time low. Teachers are no longer held in high esteem. ... I worry about the future of education."
Another said:

"We are overworked, underpaid, and sometimes treated as second-class citizens. Teachers do not get recognition for the good they do, but are the first to get the blame if a child has a problem in the school.... How sad that people do not value someone with such influence over their children's lives."

Teachers also are frustrated by the lack of support they receive from parents. And many noted, with alarm, the growing trend to expect schools to do what families, communities, and churches have been unable to accomplish.

In our survey:

- Nine teachers in ten report that the lack of parental support is a problem at their schools.
- Fifty-six percent expressed disappointment in parents' willingness to be involved.

One teacher wrote:

"I'm sick and tired of seeing my bright first-graders fade into the shadows of apathy and trouble by age 10. They need parents who care and who appreciate. Teachers simply cannot do it all."
Another said:

"My main concern with education today is the role and involvement of parents. In my school's community, both parents must work.... Out of twenty-two students, I have had three parents visit the class. Said!"

Another problem is the concern teachers have about the well-being of their students. Large majorities of teachers find poverty, poor health, undernourishment, and neglect to be problems at their schools. They describe their students as "emotionally needy" and "starved for attention and affection."

We found that:

- Eighty-nine percent of teachers say abused or neglected children are a problem at their school.

- Nearly seven teachers in ten report that poor health among students is a problem.

- More than two-thirds identify undernourished children as a problem.

- Nearly 90 percent of today's teachers say that student apathy is a problem.

- Eighty-three percent say absenteeism is a problem.
Nearly nine in ten teachers say disruptive behavior in the classroom is a problem at their school.

And consider these written comments from teachers:

"I am not trained to be a counselor, but my third-graders have so many personal problems that interfere with learning that a lot of my time is taken up helping children and their parents cope. ... Children come to school sick because there is no one at home to care for them, so the teacher does it."

Another wrote:

"I am concerned by the growing numbers of young people who are socially desperate. They seem to hunger for close relationships. They seem impelled to receive or write a note, to leave class to comfort or be comforted by a friend. ... Many need more help than I can give."

Mr. Chairman, I'm troubled that teachers are so unimpressed by the reform actions taken since 1983.

Still, I'm encouraged that, with all of the indignities and frustrations, the vast majority of teachers remain committed to their careers—and to their students. Most teachers we surveyed
said they plan to stay in the profession. Most express satisfaction with teaching. And, by a wide margin, teachers say their expectations have been met regarding their ability to help students learn.

But, frankly, we are living on borrowed time. In the push for quality in education, there is just so much that can be accomplished by directives from above. In the next phases of school renewal, the working conditions of teachers must improve, partnerships between the family and school must be strengthened, and we must focus increasingly on the growing needs of students.

I also am convinced that the federal government, even with a budget crisis, has an important role to play. After all, if the nation is at risk, the nation must respond, and I propose three strategies for your consideration.

First, recognition. This nation simply must celebrate the dignity of teaching and our most influential leaders must lead the way. In this regard, President George Bush has already sent a powerful signal to the nation by meeting with teachers even before he was sworn into office. "Education will be on my desk and on my mind right from the start every day," he told a group of teachers who assembled here last week for a day of special recognition.

I suggest that President Bush build on this commitment by hosting a dinner in the East Room of the White House for the fifty men and women designated by their states as Teachers of the Year. On this occasion, the President would invite teachers to
discuss the inspiration of their work. To heighten the impact, the event could be televised nationally, prime time.

Mr. Chairman, Congress also could affirm the dignity of teaching by inviting several teachers to share their experiences in a public hearing such as this. Teachers are isolated and rarely are they asked to speak about improving education, even though they are the most knowledgeable and most committed. Holding a special Congressional hearing for teachers would be both informational and instructive to the nation.

These moves are symbolic, to be sure, but our priorities as a nation are reflected in our symbols. And I'm convinced that to celebrate teaching in the nation's capital would send a powerful signal of inspiration to every classroom across the country. It's not sufficient, but it surely is a good beginning.

Second, the federal strategy should focus, not only on recognition, but on renewal, too.

Thirty years ago, in response to Sputnik, President Dwight Eisenhower proposed the National Defense Education Act, a federally-funded teacher enrichment program. What I now suggest is a 1989 version of Eisenhower's NDEA to focus on the renewal of the teacher.

Specifically, I propose that the federal government provide fellowships to teachers in all fifty states. Teachers need opportunities to spend time in libraries, laboratories, with other teachers. The federal teacher fellowship program named in honor of Christa McAuliffe is a step in the right direction, and I urge that the program be expanded.
Further, summer teacher institutes—controlled by teachers—might be established in every region of the country. A model is the Yale-New Haven Institute, which enables teachers from the New Haven school to study with senior members of the faculty at Yale during the summer, based on a curriculum teachers themselves have put in place. Teachers say the program has been a key factor in persuading them to stay in teaching.

Also, I suggest a Distinguished Teaching Fellows program in which several master teachers in every state would be awarded an annual fellowship so they could move from school to school, holding seminars with colleagues. All of these programs would be a powerful investment in renewing teachers who meet with children every day.

Finally, we should give high priority to recruitment. The quality of schooling in this country will stand or fall on our ability to attract into the classroom the brightest and the best.

In 1984, Congress passed a scholarship program for gifted high school students who plan to enter teaching. These Paul C. Douglas Scholarships should be expanded—with perhaps extra support for those who plan to teach in urban schools or educate the rural poor. After all, we have a Peace Corps to send Americans overseas, why not also attract the nation’s most gifted students to teach in inner cities and poverty areas here at home?

One further point. Recruiting future teachers must begin with students still in school and especially among those from minority populations. Why not fund, in selected regions of the
country, summer institutes for gifted high school students who are considering a career in teaching?

Mr. Chairman, the quality of American education can be no greater than the dignity we assign to teaching. The time has come for this nation to identify great teachers and give them the credit they deserve. And through recognition, renewal, and recruitment, I'm convinced we can strengthen the vitality of the nation and ensure a better future for all children.
The CHAIRMAN. We will hear from Dr. Fernandez now.

Dr. FERNANDEZ. Thank you, Mr. Chairman.

On behalf of The Council of the Great City Schools, I want to thank the committee for inviting us to participate. We have submitted to the committee members a document called "Teaching and Leading in the Great City Schools" along with our testimony.

I would like to focus on two areas in terms of improving the availability of teachers and how it impacts the large urban school district. And with my apology and your permission, I would like to focus in on my county to give you some examples. But basically, I want to talk about attracting teachers and retaining teachers.

All of us in large urban school districts are to leave our areas to go and recruit. There are just not enough teachers. Last year, for example, in the State of Florida we needed 9,000 new teachers to fill vacant positions due to people leaving and due to increase in student enrollment. Overall there were a little over 3,500 teachers, which mean that cities like Miami-Dade County, Hillsborough, other areas, had to leave the State to go and recruit. And when we went to the recruiting fields, we found ourselves in competition with our colleagues from other urban areas. And it came down to who was going to be offering the better job, and what were the conditions under which you were going to try to get these teachers to come to your area.

We tried other things. As you all know, our pool is diminishing. In the past, females, which was a large source of teachers for us, is no longer there. They could be teachers or nurses, now there are a lot of other opportunities for females—thankfully so. In the University of Miami Law School, for example, there are more females registered there this year than there are males. In the University of Florida Business School, there are more students in the business school than there are in the school of education. So these are the kinds of things that we are facing.

We have attempted to create teaching magnets; we have two teaching magnets in the district. We have created a Future Educators of America Club in every junior high school and every senior high school in our district to try to encourage students to be interested in teaching. We have created compacts with the local universities to come up with creative programs to try to provide scholarships to students who might be interested in teaching.

And in fact you will be glad to know that we have signed agreements with the Peace Corps and even with the Department of the Army, as they return from their tours of duty for those who are interested in teaching to come to the Miami area, and we will do an alternative training program with the local university for alternative certification, and try to get those people into the teaching profession.

But that by itself will not do it. The numbers just are not there. We found out in our district that what we had to do was to do what Dr. Boyer was talking about and "professionalize the profession", if you will—make people feel that the teaching profession is the place to be.

One way that we went about it was empowering teachers; involving teachers in the decisionmaking; involving teachers at the local level in determining what the curriculum should be like; involving
teachers in things like selecting other teachers who are going to be joining their faculties, involving them in the evaluation of the administrative staff, involving them in the selection of the administrative staff—just simple things like, when we are building new schools, in the design of schools. In the past, architects would tell us what the schools should look like. We never went to the users and asked them what should a school look like, what should a mathematics classroom look like, and where should it be located in the school. These are the kinds of things that we felt we had to start doing if we really going to treat teachers as professionals and get their input.

As a result of that, we created what we called school-based management shared decisionmaking schools, where teachers along with the administrative staff literally created cadres that made the decisions as to how they were going to expend the budget at the school, how they were going to make a difference to the school and the children who went to that school.

We felt every school had its own culture, every school had a different community it was serving, and their needs were different, and they should be in a better position to identify those needs than anyone else, and that if we could give them latitude with the budget as to how to get at identifying those problems and resolving those problems, we felt that we would have a better chance of professionalizing the profession.

Lo and behold, when we did that, it was just like we opened up a magic lamp, if you will. Everything started to happen. Where we previously had no pre-K for three- and four-year-olds, in our first year, six schools offered pre-K; today, we have pre-K in 107 schools—merely by redirecting the resources at their schools.

They expanded the school year. Sixty of my schools today have half-day Saturday school. That is an additional 30 days that the students in my district go to school. So those students in those schools have a 270-day school year.

If you couple that with our 30-day summer school session, we have some students who are going 300 days, which is more than any country in the world.

The CHAIRMAN. Excuse me. How have the parents reacted to the Saturday school?

Dr. FERNANDEZ. Very, very positive. In fact, we have many parents who have volunteered to come in and assist in the program as aides. I have lawyers, acti; as tutors from the business community. We have other students who are doing community service, going in and tutoring. It has just been very positive throughout the community.

The CHAIRMAN. I heard Senator Pell ask the question—and I do not want to interrupt your presentation—but Senator Pell asked the question about the extended school year. I think there is at least a sense out there among many people that conceptually, parents are for it, but when it is really proposed, there is a lot of resistance to it. Now, I do not know the extent to which that is accurate.

Dr. FERNANDEZ. I think that is partially true. We have found that when you mandate the extended school year where there is, say, one-quarter of the year—the premise for extending the school year.
year primarily come for relieving schools of overcrowding and providing more space. It came for all the wrong reasons. And we have found that when you mandated that students had to be off a certain quarter which was not the summer quarter, that was when you met with resistance. But when you expand the school year for everybody, not just for the fact that you want to utilize the facility a little bit better in terms of capability, when you expand it by saying that all students are going to have a longer school year, the opposition from the community we have found to be nonexistent. The opposition comes in when you are doing it for the other reason, and that is to create more space, and you are mandating a certain portion of the year students have to be off.

Anyhow, continuing when we created these school-based management schools, we also created, for example, satellite centers where we went and took the school to the workplace, for the children of the employees, where we provide the kindergarten through second grade program at no expense for the district except for the educational portion, which we would have to pay anyhow. The business community provides the location. The business community pays for the utilities. They pay for any security services or upkeep. It is a tremendous advantage to the employer and certainly to the employee, and it gets us in a situation where we are closer to that parent, because in many of the businesses—we have it in three locations right now, with five more on the drawing board—in the businesses that we have, the employers give the employees time off, where they can go and spend time right in the classroom, because the classroom is on the worksite. The parents can go there during lunch. We have after-school care programs so that the child goes home with the parent. We save on transportation. At we have had parents tell us that the quality time they spend with their children now in these satellite centers, particularly by the time they get back and get ready for the next day, with the hustle and bustle of preparing the meal and getting the kids ready for bed, that that quality time they spend at the satellite center, and just in transporting their kids—because when they are going to work, they are taking their child with them—that quality time, they say they cannot put a value on, it is so important to them.

The morale on the part of the employees, obviously, is much better, because they are very close to their children at the work location.

One of the companies where we have the satellite learning center, America Bankers Insurance Group, just opened up a $400,000 four-classroom facility at no cost to the taxpayers that will serve four classrooms, K through two. And they tell me that they used to have a turnover of about 11 percent, and that every year they spent approximately half a million dollars in retraining the people because of the turnover. The employees who have their children in the satellite learning center, the turnover rate there is down to about 4 percent. Absenteeism has been reduced on the part of the employees, tardiness on the part of the employees, and the morale is tremendously high. And they have saved money in terms of retraining because they have more continuity with their work force.
We just opened another one at Miami International Airport. If any of you are ever flying through Miami, you have to go and see it. It is really state-of-the-art. And these facilities are being built without cost to the taxpayer.

Community service—we are piloting right now a requirement in Dade County that any student who goes through our high schools will have to do community service as a graduation requirement. It is conceptual in nature right now, but one of the reasons we wanted to do that, quite honestly—we went out and passed the largest bond referendum for capital construction in the history of this country—$980 million—which past March, and 72 percent of our senior citizens voted for that bond referendum. Without that vote, we would not have accomplished what we are doing, which will allow us to build 49 new schools and modernize 260 schools. Like most urban school districts, we have had deferred maintenance on all of our schools, so this will really bring us into the 21st century.

But without the senior citizens who voted for it, 72 percent, larger than any other group, we would not have been able to do that.

The CHAIRMAN. How did you get them to do it?

Dr. FERNANDEZ. We took them into our schools, Senator. We put them on buses, we fed them lunch, we took them into our schools, we let them interact with our children and with our teachers, and they walked away with a different message. They walked away recognizing that schools were important. We opened it up.

We created a VIP Program. Very Important Person Program, where we gave them a "gold card" that allows them into any of our athletic events or drama productions or music productions. They can have breakfast and lunch in our schools. And the only trade-off is they have to volunteer to do something in our schools. It has worked extremely well.

The CHAIRMAN. Are some working?

Dr. FERNANDEZ. Oh, yes. We have over 20,000 volunteers in our school right now. That is another thing. If you were to put a dollar value on what are gaining from those senior citizens that are volunteering in our schools, it is just tremendous.

My point, the is that the reason this is all happening is because we have opened up to the teachers and let teachers come up with creative and innovative ideas.

We did this first, and I think as a result of that, the bond referendum passed. And we just passed a landmark contract—in Dade County today, with the doctorate degree in the field after 14 years, you can get $70,000 a year, with a bachelor's degree, you can get $35,000 a year. We just passed a landmark contract. The impact of that contract—last year, I had to hire 2,500 teachers, and my ratio was one-to-two, which meant we were probably hiring some people who we normally would not hire. You know, you do not have to have a teacher shortage, you just keep lowering your standards. This year, after the bond referendum, after professionalization, after the salary contract, my ratio was one-to-nine. So you know we are getting the best and the brightest people. And we believe sincerely that the teacher makes the biggest difference. If you get a good teacher, that is going to equate into achievement on the part of the students down the road.
So we recognize the jury is still out on this thing, but we feel we are going down the right path. Every day—it is more exciting to be in education in Dade County right now than it has ever been. There are so many innovative things going on. We have delegation on a day-to-day basis going through Dade County to see some of the things that are going on. And I think we have a source there that we are not tapping, and that source is the teachers and the administrators out in the field, the people out on the front lines. And part of the problem is that we have strapped them. We have really put too many restrictions on them in terms of regulations, not just from the Federal Government, but certainly from the State and the local—even from the Superintendent’s office—too many restrictions.

I think once we started going down this path, we are not going to be able to go back, and I see this as the window of opportunity for us in public education. The business community has supported us because they see some changes going on. Certainly, governmental leaders like yourselves and other people are speaking in terms of doing something for education. If we do not take advantage of it now, I really think this is our last shot.

Thank you, Senator.

[The prepared statement of Dr. Fernandez follows:]
Mr. Chairman, my name is Joseph Fernandez. I am the Superintendent of the Miami-Dade County Public Schools, the nation's fourth largest public school district. I am pleased to appear before you today on behalf of the Council of the Great City Schools.

Currently in its 33rd year, the Council of the Great City Schools is a national organization comprised of 45 of the nation's largest urban public school systems. Our Board of Directors is comprised of the Superintendent and one Board of Education member from each city, making the Council the only education group so constituted and the only one whose membership and purpose is solely urban.

The Council's membership serves over five million inner-city youth, or approximately 12% of the nation's public school enrollment. About one third of the nation's Black children, 27% of the Hispanic children and 20% of the Asian children are being educated in our schools. Almost one third of these children come from families receiving public assistance.

Mr. Chairman, I thank you for the invitation to speak before this crucial Committee on possible federal activity in the area of teachers and teaching.
Before I start, I would like to call your attention to a report that the Council published last fall, *Teaching and Leading in the Great City Schools* which should be in your materials. It describes not only the major challenges facing city schools in the area of teaching but presents an extensive overview of what urban schools, including my own and those in Boston, are doing to meet them.

Mr. Chairman, I would like to do three things in my remarks this morning: 1) outline the major challenges that schools, particularly urban schools, face in the area of teaching, 2) describe some of what my own district is doing to address those needs, and 3) suggest how the Congress might be helpful with legislation.

a) Educational Challenges for Teaching:

First of all, the challenges. We see them falling into three broad categories: attracting teachers, retaining teachers and training teachers.

1) Attracting Teachers: While researchers quibble over whether the country faces a general teacher shortage, the problem of finding and attracting teachers to urban schools is here and now. Our problems are fivefold:

   (i) Persistent Teacher Shortages: Teacher shortages are four times higher in urban areas than in other areas of the country, and by 1992 the annual national teacher vacancy rate of 7% may quadruple in our largest cities, according to the National Education Association. In general, our teachers are older, have more teaching experience and have been in-system longer than average. At the same time, our new teachers turn-over more rapidly than average. My own system hires about 2500 teachers a year, Los Angeles needs to hire about 1400 a year just to fill vacancies created by enrollment increases, normal turnover and retirements.
If not a single teacher retired in Wake County, North Carolina, the expected enrollment increase alone would require that system to hire 545 new teachers to fill demand. Half the teachers in D.C. will reach retirement age by 1993. Yet the numbers of individuals in-training to be teachers is insufficient.

(11) Specialized Area Shortages: Sometimes, however, the numbers of vacancies are deceptive because districts may have enough teachers overall but suffer from shortages of specialized teachers. Shortages of math and science teachers are common but the need for teachers of special education and bilingual education has reached crisis proportions. In Los Angeles, for instance, 52.5% of the students are Hispanic but only 10% of the teachers are and only one-third of the teachers are fully-certified in bilingual education. The result is often that districts must assign teachers out-of-field or issue emergency certificates, strategies often unacceptable to unions.

(iii) Shortages of Minority Teachers: Moreover, the nation's schools are experiencing a well-documented shortage of minority teachers. Black teachers have now fallen below 7% of the nation's total teacher pool at the same time the percentage of Black students has risen to about 17%. The truly dramatic disparities are in our own cities which often lead the nation in opportunities for minority educators. In the aggregate the student enrollment in the Great City Schools is about 70% minority, 30% non-minority. Yet, the teaching force in urban schools is about 32% minority, 68% non-minority: almost the reverse. Unfortunately the education reform movement is unwittingly hurting our efforts to recruit minority teachers. Teacher competency exams, now required for certification in 26 states, are closing the gates on minority candidates. Any legislation this body considers regarding the National Teacher Standards Board...
### Selected Statistics on Urban School Teachers

- **Number of teachers in Great City public school systems:** 272,084
- **Percentage of teachers in Great City Schools who are minority:** 85.978 (32%)
- **Average years of experience of teachers in Great City Schools:** 15
- **Average pupil/teacher ratio in Great City Schools:** 18.7:1
- **Average salary of teachers in Great City Schools, 1987-88:** $29,218
- **Percentage of nation's minority teachers working in Great City Schools:** 56%
- **Average number of days on duty for teachers in Great City Schools:** 186
- **Average number of students more per day a big city teacher teaches than a small-district teacher teaches:** 23 more students
- **Average number of hours per week urban teachers spend on instructional duties without pay:** 9.2 hours
- **Percentage of urban schools where teachers rate professional development opportunities as inadequate:** 58%
- **Percentage of teachers in Great City Schools working in inadequate buildings:** 52%
- **Average number of students more per day a big city teacher teaches than a small-district teacher teaches:** 23 more students
- **Percentage of current education majors who report being inadequately trained to deal with "at-risk" students:** 29%
- **Percentage of urban schools where teachers report poor student discipline:** 77%
- **Average number of new minority teachers that would have to be produced annually to fill the current demand for minority teachers (based upon the percentage of minority students):** 50,000
- **Approximate number of minority college students graduating with degrees in education annually:** 14,000
- **Percentage of minority education students who want to teach in an urban school as their first assignment:** 16%
- **Percentage of general teaching force that will be Black in 1990:** 5%
- **Extent of teacher shortages in central city schools as compared to the extent of teacher shortages in all schools:** 2.5 times the shortage
- **Percentage of current teachers who feel respected by society:** 39%
- **Percentage of teachers who would not teach if they could earn over:** 13%
- **Percentage of urban teachers who report having no say in selecting textbooks or materials:** 36%
- **Percentage of urban schools where teachers report working in inadequate buildings:** 52%
- **Percentage of urban schools where teachers report poor student discipline:** 77%
- **Percentage of urban schools where teachers report inadequate resources:** 81%
- **Percentage of current education majors who report being inadequately trained to deal with "at-risk" students:** 29%
- **Percentage of urban schools where teachers report poor student discipline:** 77%
should keep this in mind.

(iv) Lack of Interest in Urban Teaching: The sad truth is that most new teachers would rather teach almost anywhere other than the inner-city. One explanation is that 80% of new teachers want to teach within 50 miles of their home, and only 1 in 20 call a big-city home. The upshot is that only 16% of current teacher education students want to teach in an urban school. The problem is only made worse by negative perceptions about urban schools. One solution, of course, is for us to grow our own teachers. But dropout rates of 25%-to-40% in many cities eliminate many candidates; others move into vocational and technical trades; some pursue college but only half finish — and those who do usually pick other careers. By that time, the teaching pipeline has narrowed to a soda straw.

(v) Disappearing Salary Differentials and Low Pay: Urban schools have relied for a long time on higher salaries to coax teachers into positions and to compensate them for the higher cost of living. But this differential has almost closed, as states responded to calls for reform by uniformly raising teacher salaries, negatively affecting cities. In 1980-81, urban schools paid their teachers about 10.6% more than the national average; in 1987-88 they paid them just 3.5% more. Teachers in general however, continue to be paid well below their value to society — and it damages education's ability to attract qualified people.

2) Retaining Teachers: While many — if not most -- of our teachers are pleased with their career choice, urban teaching is not easy and it makes difficult our ability to keep good instructors. We cannot gloss over our substandard facilities, overstretched resources, students with profound problem, and the unbelievable social problems outside the school-yard.
(i) Inferior Working Conditions: A recent study by the Institute for Educational Leadership (IEL) of urban schools concluded that urban teachers work under conditions that are dramatically worse than other teachers. These conditions include cramped and crumbling buildings and facilities, heavier workloads and larger class-sizes than usual, fewer resources and books, and more student discipline problems. All of these make it more difficult for urban districts to keep the teachers they have recruited.

(ii) Lack of Professionalism: Perhaps even more important, however, are professional frustrations: lack of respect and recognition, limited opportunities for collegiality, inadequate professional development, and lack of decision-making authority. In fact, the absence of professionalism is second only to salary as the reasons teachers give for leaving teaching.

3) Enhancing Skills of Teachers: For our teachers to meet the demands facing us in the future, they will have to be highly qualified professionals, knowledgeable about their subjects and adept at teaching. Recent reform reports -- including Carnegie's -- suggest we are far from achieving that goal. Too often, low ability students are filling schools of education, and once they graduate and are hired schools often do little for their professional growth.

(i) Inadequately Prepared Teachers: Still, today's teacher is better educated, more experienced and works harder and longer than the teacher of a decade ago. Even so, the training teachers receive is rarely adequate to qualify them as excellent urban teachers. Most teachers, in fact, rate their education courses as inadequate in preparing them for life in a big city school. At the same time, studies like that done by IEL show an even greater need for professional
development, and in-service training in their subject area, special student needs, and teaching techniques.

(ii) Poorly Performing Teachers: Finally, we cannot overlook teachers who perform below expectations, are in need of training to teach up-to-standard, or simply shouldn't be in a classroom. While there are fewer such teachers now, urban schools continue to need to replace or upgrade them.

b) What We Are Doing About the Teaching Challenges:

These challenges, at first blush, appear insurmountable but there is much that we as urban schools are doing to address them. Again, I call your attention to our report, Teaching and Leading in the Great City Schools, which describes over 180 programs throughout our large city schools operating to boost the pay, the status, and the performance of teachers. Let me take a moment to describe what we in Dade County are doing by way of example:

1) First of all, the Dade County Public Schools are in the fifth year of a program which requires teachers and administrators to decide jointly on academic goals for each school and develop a joint plan for implementation.

2) Secondly, every one of our schools is required to have a faculty council which meets regularly with the principal to discuss issues of mutual concern.

3) In addition, we have instituted a Teacher Assessment and Development System (TADS) which outlines detailed expectations for teachers and involves classroom observations and evaluations by other teachers and administrators, standards for which are defined by the system and its teachers.
4) We also offer credential-payments to teachers with advanced degrees in their teaching field, and provide salary supplements for teaching in critical staff shortage areas or in high-need locations.

5) Moreover, our beginning teacher program assigns and compensates veteran or Lead teachers to work with new instructors for up to a year on teaching techniques, district policy and personal support.

6) Our school-based management program, now operating in 45 schools, is one of the most advanced in the nation — giving each site a greater voice in curricula, scheduling, budgeting and operating decisions. The effort spans all school personnel at all grade levels, each with its own committee of teachers and staff to propose structural, policy, regulatory and instructional changes in the schools's operation.

7) Our Dade Education Compact is a collaborative effort between ourselves, the teacher union, and the University of Miami — to provide teacher recruiting, alternative teacher certification, graduate programs for teachers, dropout prevention services and research.

8) We have also instituted Satellite Learning Centers in Dade County, supplying a Lead Teacher to initiate and implement decisions and to coordinate activities of the union, the school and the private sector.

9) Dade County has also implemented a Future Educators of America Program to encourage bright secondary students, particularly minority students, to pursue
teaching as a career. The project encourages students exploring teaching as a career to tutor other students as a way of getting practical experience.

10) Finally, we have established an Academy for the Teaching Arts to provide teachers system-wide with a mini-sabbatical to energize and revitalize them through seminars, clinics, internships, research and updates in subject area.

Mr. Chairman, I think you can see that we are working, through these efforts, to redefine our own education delivery system. If we are successful, we will improve the way teachers teach, administrators manage, and most importantly, the way students learn. And in the process, we will have created an environment designed to attract and keep the very best educators for our schools.

c) What the Federal Government Can Do:

The Congress has an important role to play in helping us meet the challenges of recruiting, training and keeping qualified teachers. As you may know, Senator Pell -- the Chair of the Subcommittee on Education, Arts and Humanities -- introduced at the request of the Council of Great City Schools the "Teachers' Professional Development Act" last year and plans to reintroduce it again by request this session. This proposal has many of the components we think Congress should consider enacting in any comprehensive teacher legislation. They include:

1) Teacher Professional Pilot Grants: These would be competitive grants to LEAs to test and evaluate efforts to enhance the professional status, governance role and satisfaction of teachers, including such efforts as incentive pay, school-based management, research and dissemination, master or mentor teachers career
ladders and the like.

2) Teacher Recruitment Incentives: These would involve competitive grants for LEAs and institutions of higher education to support local recruitment programs, and joint school system/university teacher preparation programs. Priority for such grants should be given to projects aimed at recruiting and training minority individuals and could include tuition assistance for current teacher aides to earn full teacher credentials, support for Future Teacher of America chapters, and fifth year training programs for prospective teachers.

3) In-service Teacher Training: In addition, the federal government could be helpful by authorizing funds for LEAs to support in-service teacher training projects, particularly in shortage areas like math, science, foreign languages, technology, and humanities. Other activities might include efforts to entice former teachers back into the profession or to recruit private sector individuals to fill vacancies temporarily.

4) Teaching Academies: Congress could also authorize National Teaching Academies, state-wide academies, or local Teacher Centers to serve as clearinghouses for research, evaluation, and model programs regarding professional development, recruitment, and training of teachers.

5) Teacher Loan Forgiveness: Finally, the Council suggests a provision to forgive GSL loans for teachers employed in LEAs with minority enrollments exceeding 50%. We would propose waiving 20% of each loan for every year a teacher is employed in such LEAs.
Mr. Chairman, this concludes my testimony. I would be pleased to answer questions on this crucial educational issue. Before I close, however, I would lend the Council's enthusiastic support for another bill that this Committee should pass at the earliest possible date: S.123, "Smart Start". That bill would help fill another critical need in our cities for early childhood education services.

Finally we would like to thank the Chairman for this opportunity to testify and Senator Pell for sponsoring the Council's proposals on teacher recruitment, training and retention.
The CHAIRMAN. Well, this has been an excellent panel.

I want to apologize for Senator Kassebaum. She has, I believe, Secretary Kemp up in the other committee, and she was going up there to inquire, but she will be back here later on.

I want to ask Dr. Boyer and perhaps the others will respond—I am strongly for national service, and we have tried to work with our literacy corps program where we have now funded, where we are dealing with six colleges up in the Greater Boston area and supported by the Greater Boston business community. There have been a number of proposals which have been advanced. One of the proposals would utilize the funding for that program and take it out of the various education-funded programs.

I would be interested Dr. Boyer if you or the others would wish to make any comment about that particular approach. I perhaps could state it more delicately, but no matter how you read it, I think that is about where it comes out. I did not know whether there was anything you wanted to say on that.

Dr. BOYER. First, I am enthusiastic about the current attention locally and nationally on service. I think its potential to help renew not just education, but a sense of vitality among the Nation's youth, is remarkable.

The second point, Senator, the service efforts can occur at different levels. I have indicated the educational, academic, volunteer within communities, but I am also fascinated by the national strategy of the service corps. But I would have to say that I would be enormously uncomfortable if we were to use that as a replacement strategy for the historically-developed student aid based upon the need for equality of access. I think that would be mixing two very different policies. And I think to try to fund a student service program nationally, at the same time begin to undermine equity through the Pell Grants and the loan program, would be, frankly, winning one war while we are losing another.

So I would be enormously—if I might be so bold—cautious about seeing the funding of the service program, because in my opinion they are serving two very different public policy responsibilities, and I think it would be a shame to see us start to erode this equity commitment that we have around an equally important interest we have to renew students and also to add energy in the Nation's service.

The CHAIRMAN. I do not know whether Dr. Fernández or Dr. Caldwell wish to make any comment on this.

Dr. FERNÁNDEZ. We are very much in favor of community service. We think it adds character, and certainly it is important. As I told you earlier, we are mandating it as a graduation requirement in Dade County.

In terms of it coming from above, I do not know—our feeling is that the less restraints and restrictions we have on the local level, the better off we are going to be. Obviously, we would like the resources, but the less restrictions we have, the better off we are going to be. That is the whole essence of what we are doing in school-based management; it is a bottom-up philosophy, not a top-down philosophy. But we are very much in favor of community service.
The CHAIRMAN. Let me just inquire into the need for the recruitment of minority teachers. We will get into the flow line in terms of graduate schools. Generally, there has been a significant decline. We are seeing various changes in the school population. What ideas do you have about how we might address that particular issue?

Dr. FERNANDEZ. You recognize, I know, that we have a danger in our urban centers of ultimately ending up with a minority population and a non-minority teacher population with no role models for those children. That is one of the dangers that we are facing right now.

We have to do more at the bottom level, and that is, I think, some of the things we were talking about in terms of encouraging students, improving the profession so that it is something that those students want to go into. There is no encouragement, no enticement for those children now.

Through the Future Educators of America chapters, through the things that Dr. Boyer was talking about in terms of these summer institutes for students—all of these programs are the types of things that I think are going to help entice some of these children to go into teaching. We have to get our share of those kids who are going to become doctors and lawyers and Senators, if you will, we have to get them to come into education. And they are not going there now because of the salary, because of the way they were being treated, and because of the facilities. And I think once you start addressing those three issues, it is going to turn some of those things around.

Dr. BOYER. I wanted to say that I think this is perhaps one of our most urgent challenges and, maybe on the dark side, ominous trends. We just cannot have increased numbers of black Hispanic children in the schools unserved by teachers who also represent good education and good role models.

You know the recently released data regarding black males going on to college, if they do not go on to college, they certainly are not going to be able to choose teaching as an option.

And the longer I think about this, the more I think this must become a sharply-focused strategy, beginning, I believe, in junior and senior high school. We have to say to minority students there, “You can go to college, and you are good enough to be a teacher.” But that is not enough. I think we have to capture some of the climate that surrounded the so-called Eugene Lang, “I have a dream”. That did not succeed because he said, “We will pay you to go to college”, it succeeded because he stuck with it and became a friend, and somebody cared.

So I keep vaguely groping for the possibility of combining that national challenge with the issue of service. Maybe we could have college students, as a part of their service, become mentors to 50 junior and senior high school kids and spend a year or two with them, meeting regularly, and then match that with some summer retreats and seminars so that the issue can be encouraged, and perhaps even take some minority teachers and let them spend some time in schools. We use athletes and others to indicate successes. We have great teachers from all of our cultural and ethnic backgrounds.
So as was just said by Dr. Fernandez, these need to be, I think, identified early and then encouraged continuously. And if we can find that strategy, perhaps through service, older high school students as mentors, college students as mentors, good teachers who have succeeded as mentors, I think we will begin to inspire young people who otherwise are not well-motivated. They are attracted to other, more short-term gains, and this is a long-term kind of deferred gratification, and it is almost in a world they do not understand. So it needs to become both real and inspiring.

The CHAIRMAN. We will hear Dr. Caldwell in just a minute. I just wanted to finish up.

Dr. Boyer, what we have got moving up in Boston is this literacy program at the cost of $25,000 at each college. And the Boston business community has put up $150,000. We have six colleges that are participating now—Boston College, and I think Harvard will start it next spring. The students do six hours of tutoring, and the tutoring has to be carefully-supervised and tied into their other academics.

The principal problem we have is getting the academic institutions to give any kind of academic credit. They want to review this very carefully—as they should—to find out how it can be tied into the whole educational experience in the liberal arts area. But they are finding out, with very careful supervision, that this is useful and important and academically justifiable.

And the things that you have mentioned, I think, can be put into practice in a way that the universities and colleges could be challenged as to how they can provide credit in ways that are consistent with academic standards and give an opportunity to kids. We get a percent that will volunteer—in the old Phillips Brooks House up at Harvard, which I did, and so on—but to try and get it so they can be a part of this whole process, I think is something that needs further thinking as well. And to the extent that you, with the resources that you have, would be thinking that through, it would be helpful if you would be willing to help us in dealing with the universities. I think you could be enormously helpful. I think all the things you have said make a lot of sense.

Dr. Boyer. Could I just say, for it to be given academic credit, and colleges need to feel confident about that, it has to not only include the notion of service, which I celebrate, but also what you learn from that service. And that would involve perhaps writing papers, holding seminars, so that you come back to the educational community, and it becomes circular. So you go out to serve, but it has a certain relationship to what you have learned. It is closing that loop that I think gives it academic legitimacy.

And in response to your suggestion, we might try to develop some both descriptions, analysis of, and maybe examples of how that has worked.

The CHAIRMAN. I will talk or visit with you later about it. I appreciate it.

Dr. Caldwell?

Dr. CALDWELL. I wanted to make a point that the early childhood field has given an important model of ways of drawing minorities into the field. I mentioned the low salaries earlier, and since we use a lot of aides and assistants, many of them are minorities who
did not finish high school and so on—or maybe they had high school and nothing beyond.

The early childhood field has had this alternate training program called CDA, Child Development Associate, which is a competency-based curriculum that allows individuals to demonstrate their competencies without necessarily having had the regular credentials.

What happens with many of these is, like I said about the parents earlier, they become more motivated for their own education. And I have personally hired many who have come in as aides, who have then enrolled in an education program and have moved into positions as regular teachers with better salaries and so on.

But the field has to be willing to give them a chance.

The CHAIRMAN. Thank you.

Senator Pell?

Senator Pell. I just want to follow up a little bit with Dr. Boyer and say that we do plan to introduce some legislation dealing with teachers, as I think you are aware, particularly with the recruitment of new teachers and the upgrading of the present ones. That would be an opportunity to have a hearing in which perhaps only teachers would be there. So that is sort of on the griddle, I do not know when exactly.

Then, also, I will introduce legislation will be introduced that will address this issue.

Dr. Fernandez. Senator Kennedy, I would be remiss if, on behalf of my 44 colleagues from The Council of the Great City Schools, we did not thank both of you for the legislation that you are proposing. I know it is very important to those five million students that we represent.

Senator Pell. Thank you very much.

The CHAIRMAN. Thank you all very much.

We want to note that the hour is well on, and we see Dr. Cavazos necessarily has to absent himself, but we have been delighted to have him here, and we have really appreciated his strong commitment to working with us. We look forward to it.

Senator Pell. We hope that not figuratively, lights turn out as he leaves—

The CHAIRMAN. But the sunshine came in, Claiborne.

Thanks a lot.

We welcome our last two witnesses. Neither witness needs an introduction; both have been here many times before.

Harold Howe is Senior Lecturer at Harvard Graduate School of Education. Dr. Howe had been involved in education for 40 years. In his distinguished career, he has been U.S. Commissioner of Education, and Vice President of the Ford Foundation.

Joining Dr. Howe is Robert Atwell, President of the American Council on Education. Mr. Atwell is a leading spokesman for American higher education on a wide variety of issues. He has been involved in efforts to preserve and expand Federal funding for higher education and increase educational opportunities for minority citizens. Prior to joining the American Council on Education, he was the President of Pitzer College in Claremont, California.

Dr. Howe, we look forward to hearing from you.
STATEMENT OF DR. HAROLD HOWE II, SENIOR LECTURER, GRADUATE SCHOOL OF EDUCATION, HARVARD UNIVERSITY, CAMBRIDGE, MA, ACCOMPANIED BY SAM HALPERIN, STUDY DIRECTOR, YOUTH AND AMERICA'S FUTURE; AND DR. ROBERT ATWELL, PRESIDENT, AMERICAN COUNCIL ON EDUCATION, WASHINGTON, DC

Dr. Howe. Mr. Chairman, it is good to be here again.

I cannot help think of many other occasions when this committee was looking at very significant legislation and passing an immense amount of it—the catalogue is so long, it would take too much time to recite it here.

But in all the work that you have done—you said you have been at it for 26 years in this committee a little earlier, I think I have been at it for 24—I think you have managed to establish, really, a reputation for two significant ways of doing business. One is to pay absolutely clear attention to the question of equal opportunity in the United States in the field of education. And your legislation has kept that issue alive, made progress under the banner of that issue and will continue to do so. And we are all in your debt.

The other thing that this committee has done over the years and is still doing is to make that equal opportunity effort possible by conducting these conversations in the spirit of bipartisanship. It has been an immense contribution to the legislative processes of the United States, the spirit in this committee. I think back to Wayne Morse and Jack Javits and a bunch of other people who were here, who really contributed in powerful ways, sometimes with great individuality to an extent that they stuck out from all the other members of the committee who disagreed with them about various things. But in the course of it, the bipartisanship always emerged, and I think it is a powerful tradition to hang onto.

I am here because I have chaired for the last couple of years a group of Americans, taking a look at youth in American society. We have prepared a report and we have submitted it to you, and you have copies called "The Forgotten Half"—a somewhat disheartening title.

We think there are grounds for that title when you look at youth, say, age 16 to 24 in American society in terms of the attention that youth have gotten from both State and national government.

If you take a look at what is done for college-going youth in this society, there is absolutely no comparison. They are vastly more helped by Government at both levels than are youngsters who do not go to college.

Through this committee, a number of programs that serve youngsters who do not go to college have emerged, but in terms of dollar support, in terms of pervasiveness, in terms of access, in terms of availability throughout the land, those programs for the "forgotten half" are much less significant.

This is a major finding of this group of bipartisan Americans who spent two years looking at the subject.

By way of solution to this kind of thing, we come up with many of the matters that you have discussed here this morning. We believe that there is on the books right now a lot of very useful, very
successful legislation which, in some cases, slightly amended, but in most cases, just properly funded, a revolution could be made in this land about the opportunities of the bottom half. And again, these items have been discussed here this morning, but let me catalogue them for you, because it is interesting to look at them in this perspective.

Head Start—which everybody likes—services 19 percent of its eligible population.

The Job Corps, which has been very well-evaluated in a number of different significant studies, serves near one percent.

Chapter I, which now almost everybody likes—and I was delighted to hear the Secretary say that he is going to support that more deeply—serves about half the youngsters who are eligible.

The Joint Training Partnership Act serves about 5 percent of the people who are eligible. It is newer legislation, it has some faults, it has some real successes to recommend it. And it is a program that ought to be continued. It is a hard-headed effort to decentralize the business of getting training programs developed at the local level, and it is one of the real contributions of the Reagan Administration.

The Vocational Education Act, with which you will be dealing shortly, I understand, has eroded by about 30 percent of its funding through the process of inflation in the last eight years. So here we have a group of programs which have been shown to do a good job for the people they serve, which have been accused from time to time in the heat of the political process of throwing money at problems—which clearly they are not—and here is a group of programs we do not need to pass legislation on in large part. We need to fund them adequately. We know they work. They will make an immense change in the lives of the young.

Our commission came up with a round number of $5 billion a year that ought to be added to these programs, and we have them listed specifically in our report, for a period of five years in order to make the kind of difference that is needed.

Now, you asked me in my testimony to say a word or two about the Vocational Education Program because you were getting to that soon in your business. We found in this study that after a certain amount of vacillation, our commission wanted to come out strongly in favor of vocational education, but to recommend some emphases in it that need more attention than they are getting. Those emphases hang around the general idea of work-study combinations of various kinds, apprenticeship arrangements, on-the-job training.

These kinds of suggestions are a reaction on our part to what seems to have happened in the school reform movement in the United States. What seems to have happened is there has been so much attention to improving learning for kids who are going to college that the ways of learning that help young people not going to college have tended to be ignored. And you have a certain kind of backfire from the school reform movement in the sense that in many places, the increasing of standards for academic performance have resulted in more dropouts.

We think that turning the Vocational Education Act in the direction of learning by doing further than it is can probably do a lot to
improve the opportunities of youngsters who are not going to college.

Now, in emphasizing this not going to college business, I do not want to cast any shadow at all on my neighbor, Bob Atwell, who represents the higher education institutions. We are not in any way suggesting that support of the federal Government for higher education be diminished. We are simply saying that there is a reasonable argument that there is a "forgotten half" in the United States that very much needs attention.

Then I would comment on one other point, and ask my colleague, Sam Halperin, to comment on a final one. I want to bring up this community service conversation that has occurred several times this morning. Our report has an entire chapter on that subject. Our commission favored it powerfully as really a mode of developing healthy citizenship.

But our commission, after debating the subject, did not come out for a national youth corps; it came out for community service and for the encouragement of community service by the Federal Government through providing various kinds of technical assistance, through encouraging States or cities which wish to develop community service activities, either on an organized youth corps basis or on any other basis that they wish, to get some help from the Federal Government in getting things going, but keeping it at the level of local initiative with some Federal encouragement.

The question of requiring people who got aid to go to college to do community service was discussed in our commission, and we decided not to recommend that. I thought that Ernie Boyer's answer to that query was just right; I do not think it is a good idea. I think it is sort of a "Star Wars" kind of idea. It sounds good, but after you look into it, you find it is just beset with all kinds of problems, not the least of them being the equity problem.

So that my comment on that would be to try to find in the Government, particularly in collaboration with President Bush's speech in California on this subject a while ago and his interest that is now, I understand, being pursued in an organized way to try to define what might be done, I think getting together with that kind of approach to this is going to be more constructive than trying to build a massive central Federally-involved enterprise.

Now, we had some other legislation we suggested, and I would like to ask Sam to say a word about that, if I might.

The CHAIRMAN. Mr. Halperin?

Mr. HALPERIN. Mr. Chairman, as we well know, the State and the Federal Government have been involved for a very long time in creating structures. The structures, however, do not treat the entire human being. They treat a problem here and a problem there. Quite often, the resources are frittered away because they do not hold together. So collaboration, cooperation, and integration are words that need to be turned into actual working institutions on the ground.

The commission considered for a long time what was the secret of the I Have a Dream Foundations, the Trio Programs, and it was that they utilized a series of resources across-the-board.

And so in Chapter 7 of our final report, we suggested something called "Fair Chance", which does not provide additional student fi-
nancial aid to try to increase college-going and college completion, vocational education and technical education, but which tries to pull together the support services, the mentoring, the academic remediation, the motivation. Without these, all of the student financial aid in the world will not help many young people. Indeed, we have a horrendous problem of dropout, you might call it, attrition, lack of retention, in higher education and in vocational and technical education, generally.

So we ask you to look at your leisure at the proposals which try to create voluntary mechanisms in demonstration areas in every State of the Union, to see what can be done to bring together the resources that are already out there—the "glue" money, the gap-filling money is a very essential part of the proposal.

The CHAIRMAN. Thank you.

[The prepared statement of Dr. Howe (with an attachment) follows:]

YOUTH AND AMERICA'S FUTURE:
The William T. Grant Foundation Commission on Work, Family and Citizenship

STATEMENT OF

HAROLD HOWE II

Chairperson, Youth and America's Future: The William T. Grant Foundation
Commission on Work, Family and Citizenship
Senior Lecturer, Harvard Graduate School of Education;
Former US Commissioner of Education

accompanied by

SAMUEL HALPERIN
Study Director, Youth and America's Future
U.S. Senate Committee on Labor and Human Resources
January 27, 1989

Mr. Chairman and Members of the Committee:

My colleague, Mr. Halperin, and I have been appearing before this distinguished Committee for over a quarter of a century. It is true, not hyperbole, to remind the nation that over these years this Committee has been responsible for authorizing programs that have literally changed the face of the nation — and very decidedly for the better. It is difficult to imagine what America would be like today without Head Start, Job Corps, the Elementary and Secondary Education and Higher Education Acts, Pell Grants, Bilingual Education, Vocational Education, and the Job Training Partnership Act, and the many statutes to protect the rights and advance the welfare of all of America's citizens, of all ages, races, genders, and conditions of life.

It was in this Committee, too, that strong traditions of bipartisanship in education and training were fashioned over two decades ago. All the great Senators of both parties — Lister Hill, Jacob Javits, Wayne Morse, Winston Prouty, the Kennedy Brothers, Robert Stafford, Claiborne Pell, and many others — understood that the ultimate wealth and power of the United States is summarized by the very apt title of this Committee on Labor and Human Resources.
As you proceed to shape your legislative agenda for the 101st Congress, I hope that you will bear this historical perspective in mind and not become entangled in the minutia of one bill or another. For you have crafted a priceless legacy for America's children and students of all ages, making genuine progress toward the goals I believe we all share with our new President, not only a kinder and gentler nation, but also a more skilled, competent, and resilient people.

My other hope for this Committee is that, in your various deliberations, you will not overlook the potential contributions of what our Commission on Youth and America's Future has called "The Forgotten Half." From the National Defense Education Act of 1958 to the school reform movement of the 1980's, the strong tendency in American education and training has been to focus on approximately half our population that is headed for college and to under-invest in, if not totally ignore, the needs of the approximately 20 million 16-24-year-olds who are unlikely to pursue formal academic training beyond high school.

What our bipartisan commission of 19 accomplished Americans concluded from its two-year survey of research and evaluation studies can be summed up quite briefly:

First, America shortchanges half of its youth -- the half that doesn't go to college. These young people receive negligible assistance in starting their adult lives, compared with their high school classmates entering higher education. All too often, the non-college-bound move from school to work in the economic limbo of unemployment, part-time jobs with few or no employee benefits, and only poverty-level incomes.

Changes in families -- brought on by changes in the work patterns of women, shifts in the labor market, and the sharp growth of poverty in the under-25 age group -- increase the difficulties that non-college youth confront. Communities and
schools have had a difficult time responding to these upheavals in work and family. Taken together, these disruptions in the lives of older youth and young adults justify the title our Commission has given its interim and final reports. The Forgotten Half, Non-College Youth in America and The Forgotten Half, Pathways to Success for America’s Youth and Young Families (Copies of both reports have been made available to the Committee along with a variety of summary material.)

Second, the American people are not acting decisively on the knowledge we have of how to help the Forgotten Half become successful as workers, parents and citizens in the community. While society doesn’t have all the answers it needs, extensive experience and evaluation assure us that many programs -- e.g., Head Start, Job Corps, Job Training Partnership Act, all of which were first crafted by this Committee of the Congress -- work reasonably well. They can be further improved, and they should be extended to serve those who most need them.

Consider for a moment that the well-researched and almost universally admired Head Start program -- which saves society $4 to $5 for every dollar invested in it -- even today reaches only 19 percent of the children who are eligible for its services.

Consider that the Job Corps, probably the most-evaluated, large-scale social intervention for at-risk youth -- which reclaims young people for one-third the cost of a single year’s incarceration -- that same Job Corps can accommodate only one percent of the youth for whom the program was designed.

Consider that the Job Training Partnership Act -- another of the programs pioneered by this Committee -- today reaches only five percent of the young persons who could be helped by it to live lives of dignity, responsibility, and self-sufficiency. Even the lucky five percent, however,
receive only 16-18 weeks of training at a cost of $1,800-$2,300. This is hardly enough to compensate for a lifetime of inadequate preparation, and it compares most unfavorably with the $20,000 public/private subsidy that society offers to its college-bound youth over a four-year period.

And consider that the purchasing power of federal funds appropriated for vocational education has actually fallen 31 percent from 1980 to 1988.

And the list of programs that work goes on and on. The point to be stressed is that lack of knowledge about how to deal with tough problems must not be used as a cover-up for our lack of political will. This Committee has pointed the way. It is time to stop blaming our young, blaming our schools, blaming everyone but ourselves for failing to get on with the job of building a world-class workforce that, in turn, can support the quality of life and opportunities for self-improvement that have long been equated with the American Dream.

***

In a country committed to the value of education, it has become nearly an article of faith that a college education is the best route, and perhaps the only route, to success in America. Certainly college-going pays off handsomely in higher earnings. (See, for example, Appendix E in our Commission’s final report, The Forgotten Half: Pathways to Success for America’s Youth and Young Families.) But a college degree is not the only way to develop the talents of tomorrow’s workers and, for some, it is far from the best.

Young people without a college credential are in danger of being locked out of a society that desperately needs their talents -- to build our homes, drive our buses, repair our automobiles, maintain and serve our offices, schools, and hospitals.
and keep the production lines of our mills and factories moving. However, stable, good-paying jobs that do not require advanced training are rapidly disappearing. Between 1979 and 1985, the United States suffered a net loss of 1.7 million manufacturing jobs, a decline mirrored in the transportation, communication, utilities and agriculture sectors as well.

It is easy to ignore these changes given the current optimistic, but dangerously misguided, belief that low overall unemployment means a healthy economy. While it is true that our fast-changing economy has created millions of new jobs in the service and retail sectors, the fact remains that many of these are low-skill positions, only part-time in character, and offer few health benefits or opportunities for career advancement. Moreover, the vast majority pay wages at only half the level of a typical manufacturing job. Indeed, a recent report of the Senate Committee on the Budget found that half of all the new jobs paid poverty-level wages or below. (Wages of American Workers in the 1980s: Senate Print 100-124.)

The long-term decline in the economic prospects of young workers in the 18-24-year-old age group now leaves non-college youth with a shaky launching pad for their working lives. The impact of these changes on young families will be felt for decades to come.

Since 1973, young workers have experienced sharply declining real income, unemployment or underemployment, and increased participation in jobs without a future and without medical insurance and other essential employee benefits. In 1986, nearly 33 of every 100 families with children headed by a person under 25 had below poverty-level incomes -- a rate more than double that of 1967 and triple the 10.9 percent rate of all American families in 1986. Those from minority groups have sunk most rapidly, but compared to other groups in American society, all
young people, especially the non-college-bound, have lost ground.

Without specialized skills, non-college youth simply cannot compete for the good jobs in today’s labor market. But opportunities to acquire advanced training are often not available. While each student enrolled in an institution of higher education can expect to receive a combined public and private subsidy of approximately $20,000 during a four-year college career, youth not going on to college, but who need other forms of education and training, are starved for support. Only about five percent of those eligible for federally-supported job training under the JTPA receive it, then only for about four months — rather than four years — at a public subsidy of $1,800 to $2,300 per student. For the most part, young people not going on to college are left to sink or swim on their own.

Although we have found alarming evidence of the declining economic fortunes of American youth, we have also found evidence that many communities are taking new and imaginative steps to insure the healthy development of their youth. Not all of these activities on behalf of young people and young families have been rigorously evaluated, we hope that many more will be. In the meantime, we believe that the examples our Final Report offers of what communities are doing on behalf of young people — often in genuine partnership with them — are sufficiently promising to warrant much greater public attention.

We appreciate the opportunity to outline here the principal findings and recommendations of Youth and America’s Future. The William T. Grant Foundation commission on Work, Family and Citizenship and to underscore the need for elected officials — from the Congress to the White House and in state and local governments — to ensure a fair chance for the non-college-bound.

Ultimately we believe that the American people should set the improvement of
employment and earning levels for all workers as a conscious goal of public policy. In pursuit of that desired outcome, we recommend better opportunities for education, training, community service, strengthened relationships with adults, and increased family and community supports as means to achieve a more equitable balance in the Forgotten Half's odds for success.

1. A central premise of our report is that the schools cannot do it all. Young people's lives are shaped by their experiences at home, in the community, and at work, as well as at school. It makes no sense at all to expect schools alone to repair the damage done to young people handicapped by wholesale changes in families and communities. But that is what we are doing. Learning in school is only one means of educating young people for life; it is essential, but not sufficient. Every bit as valuable are the opportunities for hands-on learning offered in youth organizations, community service activities, and in the workplace. But we often find that vocational education is stigmatized in the schools and that other valuable educational laboratories are overlooked, underutilized, underfunded, and certainly under-appreciated.

Educators have become so preoccupied with those going on to college that they have increasingly lost sight of those who do not. The aim of the current school reform movement must not be the pursuit of excellence at the expense of equity. Research confirms that young people learn in different ways. If schools--and their students--are to succeed, schools must develop greater flexibility in their teaching methods even as they strive to develop a challenging core of common learning. Whether aiming for college or the workplace, instruction that builds thinking skills, rather than reliance on rote memorization, a * that emphasizes experiential learning and cooperative work strategies best prepares young people to succeed in a complex world.
As your Committee considers the reauthorization of the Carl T. Perkins Vocational Education Act, our Commission would urge that you do all in your power to reduce the stigma that, unfortunately, attaches to so much of vocational education. Vocational and technical education must not be regarded as a "dumping ground" for those who are regarded as "too dumb" to succeed in an academic program.

The truth is that virtually all students could benefit from schooling that blends strong emphasis on academic fundamentals with practical, hands-on application of knowledge. Not everyone learns best with the typical school methodology of abstract, conceptual lecturing, and textbook instruction. When learners are exposed to the laboratory, to the workshop, to apprenticeship training, to the field station, and to other "real world" learning sites, their curiosity is kindled and they find effective new ways to master skills.

Properly conceived, vocational-technical education can reduce the dropout rate by illustrating the relevance of learning and skills acquisition to success in the workforce, and can encourage young people to continue their education and training beyond high school. Thus, we support pending proposals to link high schools with community colleges and technical institutes in a four-year continuum of vocational-technical preparation. Vocational education must not be seen as a "dumping ground" but rather as a central stream that leads many students to success as workers and as lifelong learners. Students within it should be encouraged to assume that college attendance can be part of their future, as it is today for many workers in the 25-40 year age group and older who attend college part-time.

We repeat: schools cannot do it all. But by working together, schools and community learning institutions can greatly expand young people's access to a wide variety of time-tested opportunities for sound learning. To this end, we recommend...
renewed consideration and wider replication of work-study, apprenticeships, cooperative education, service-learning, peer tutoring, internships, youth-operated enterprises, on-the-job training, and adult mentorship. In particular, we hope that states will be encouraged to develop stronger links between apprenticeship programs and voc-tech education, for both have much to contribute to the development of a world-class workforce.

2 Our Commission also gives strong support to the notion of citizenship through service. We recommend that all 16,000 school systems in the US either make community service for credit an integral part of their education programs or require a specified amount of such service as a graduation requirement. In addition, we recommend that schools develop appropriate service-learning curricula in all grades beginning in kindergarten, so that service to others becomes ingrained in our young as one of the responsibilities of citizenship.

A major unmet need of many young Americans is for more rewarding association with adults and participation in activities valued by adults. Youth service connects young people to the real world, to activities that adults care about. Anytime any of us do something that others, whose approval we seek, think important, we are likely to do it again and again. It is from this crucible of learning -- good citizenship by doing good citizenship -- that the next generation can prepare itself for the large challenges that face us.

While a central value of youth service is its role in citizenship education, there are other reasons to support youth service activities -- school and campus-based, as well as full-time year-round and intensive summer programs. Great numbers of our youth have idealism and energy. The efforts of tens of millions of young people -- tutoring, working with older people, working to clean up the environment, feeding the hungry, rehabilitating housing for the homeless -- can
make an important and measurable difference. The nation’s needs are great, but the talents embodied in our youth are nearly endless. We must mobilize and tap those boundless resources.

Community service, we also believe, is one of the most effective ways known to bridge the economic, social, racial, ethnic, and other social divisions that still plague our society. At its best, service brings together youth of all backgrounds in the pursuit of solutions to common problems.

Finally, youth service helps equip young people to be productive workers. Every genuine employability skill that is a priority for most employers—punctuality, teamwork, discipline, following directions, accepting responsibility—is present in any decent youth community service assignment. Thus, once again, we stress that schools cannot do it all alone. Service is also an invaluable way to help our youth grow in competence and self-esteem.

President Bush’s commitment to help establish a national foundation, with $120 million in federal funds and matching private funds, to provide strong national leadership for the significant expansion of locally-designed and operated youth service programs that serve local agendas demonstrates the kind of presidential leadership we need. We hope the YES Foundation initiative will be a high priority of the new Administration and that the Congress will agree to authorize it.

3. Young people want and need adult support, especially from their parents. Collaborative school and community efforts on behalf of young people work best when they supplement the support of strong families. Although the vast majority of families, including those of the Forgotten Half, labor long and hard to give their children and adolescents the material care and guidance they need to finish school and prepare for good jobs, social and economic changes have made it harder for many, especially single-parent families and families with both parents working, to
meet these obligations. Once again, community supports and the active participation of employers to provide adequate childcare and after-school care, parent education and counseling are needed to help families guide the development of young people. Families living in poverty need far more assistance, often over an extended period of time.

4. Until major changes have occurred in our schools, families, and communities, we will continue to need "added chance" opportunities for those who are out of school and out of work. The evidence is clear that it is never too late to help an individual improve his or her chances for a happier and more productive life. Yet, the best, most cost-effective strategy to alter the course of poverty is one of multiple interventions beginning at the earliest stages of life. Thus, we recommend a combined strategy of preventive and remedial services. Its fundamental elements are already in place; they need only to be strengthened.

0 Head Start's blend of integrated health, education, and social services to both child and parent has not only evened up the odds for children entering school from poverty backgrounds, it has also had positive long-term effects on grade retention and school completion. It needs to be expanded far beyond the 19 percent of eligible children it now serves.

0 Chapter 1 educational services to school-age children have been widely successful in keeping at-risk elementary school children from falling further behind. With our growing experience, we can now devise more instructionally effective programs than ever before. For example, peer tutoring and cross-age tutoring, in which youth are viewed as resources (rather than as "problems to be fixed"), deserve far greater application in our schools. Chapter 1 assistance also needs to be extended to high schoolers, who are virtually unserved under existing appropriations levels.
Job Corps' residential program of basic and remedial instruction, vocational and technical training, work-maturity skills, health and nutritional counseling, job placement, and related supports offers the comprehensive and intensive services that research shows can help disadvantaged young people overcome educational and economic barriers to success. Far more than the 40,500 slots now available could be filled by young men and women who would benefit from Job Corps' special brand of education and training.

Making the most of what we have also means fine-tuning and expanding the Job Training Partnership Act. Despite a clear Congressional mandate to target the special needs of dropouts, the tendency of local programs has been to direct assistance to the easiest to enroll, train, and place quickly in jobs. Greater incentives are needed to encourage local programs to exercise their option to adopt alternative performance standards that stress academic attainment and dropout prevention measures, rather than the more immediate goal of job placement. Experience has shown that the greatest long-term social benefits accrue from enabling trainees to receive intensive treatment and a range of comprehensive services in order to overcome their large skills, health, and other accumulated deficits. What is needed now is a vigorous replication effort to help communities adopt practices that have been demonstrated to be effective.

Because it makes sense to build on given strength, and because it takes time to reap a fruitful harvest, the Commission recommends that these and other existing successful programs be expanded through additional federal funding of five billion dollars annually for the next 10 years.
Organizations that serve youth require new collaborative mechanisms to guarantee that they reach all young people. Carefully planned networks -- schools, youth organizations, job-finding services, counseling agencies, and providers of special help with drugs and other entrapments -- are essential. These new networks must be planned and coordinated at the community level. When agencies providing these services are not in touch with each other, and not working together, too many youth fall through the gaps.

To stimulate the development of integrated systems for meeting the education and training needs of all young people, and to convey an explicit message of hope and opportunity to members of the Forgotten Half, the Commission proposes Fair Chance: The Youth Opportunities Demonstration Act. Fair Chance is based upon extensive experience with student financial aid programs, academic support services (like the federal TRIO programs), newer efforts like the I H - A Dream Foundations, and a variety of urban scholarship guarantee programs. We now know that student financial aid alone is insufficient to help many young people enter and succeed in college and other forms of postsecondary education. Young people, particularly those from poor families, need to be motivated to believe that they can successfully complete a program of advanced studies or training. And they often require remediation to overcome prior skills deficits. Above all, they require counseling and career development, mentorship, and encouragement to stay the course of their studies. When these supports are in place, student financial aid is most effective; when they are not, discouragement is frequent and attrition takes a heavy toll.

The Fair Chance proposal would create a state-approved, locally-administered national demonstration designed to increase access to education, training, and supportive services (including counseling and career development) for youth living in
the targeted demonstration areas. The federal funds would flow to state governors who would select appropriate state agencies to prepare and carry out plans for a demonstration that could be in a rural or urban area. Every Demonstration Act grantee's program should be broad enough to support the complete range of education and training, two- and four-year collegiate studies leading to an appropriate degree, vocational-technical or career training leading to a certificate or diploma, and skills training, remediation, and counseling designed primarily for the unemployed and underemployed. Each local grantee would be required to mount a coordinated and comprehensive program that (1) meets the broadest range of young people's needs, and (2) effectively mobilizes the full range of existing education and training service providers in its area. Through Fair Chance, we believe that many more young men and women will be able to acquire the education and training that are their best hope of building careers of dignity and contribution to American society.

6. Finally, and perhaps most important, the Commission conclude that America must develop a new perspective on our youth. Too often, we think of the Forgotten Half as failures, as "second rate," simply because they do not attend college. Instead, we must learn to see them as a vital half of tomorrow's citizens who need and deserve our help today so that they may contribute to America tomorrow. Continued disregard for the Forgotten Half's potential is unfair to the 20 million young 16-24-year-olds who are unlikely to attend college and wasteful and dangerous to the nation. Equity and common sense demand that we must act now to create responsible policies -- in the private and nonprofit sectors and at the local, state, and national levels -- to regain this vital half of our nation's store of young talent.

We underline the fact that the largest proportion of our study's
recommendations concentrate on initiatives in the family, the community (especially in schools and workplaces), and in the states. We have emphasized in this testimony those aspects that involve federal action.

... 

As attachments to this statement, we include:

3. A Fact Sheet to accompany the report.

4. Seven (7) key charts to accompany the report.
Between 1973 and 1986, young families lost over one-quarter of their income, much more than families in any other age group.

- Between 1973 and 1986, young families headed by a 20-24-year-old experienced a 27.4 percent decline in income -- equal to the drop in personal income during the Great Depression from 1929 to 1933.

- During that same period, income for all families dropped by about one percent.

Early struggles are a predictable part of a family's life cycle, but the gap between young families and the rest of America's families has widened by nearly one-third in the last 20 years.

- In 1967, the median income of families headed by 20-24-year-olds was equal to about 77 percent of the median income of all US families, that proportion fell to 52 percent in 1986 -- a 32 percent decline.

Starting out far behind the generation that preceded them, today's young families have little hope of catching up.

- In contrast to the gains of 1947-73 -- when real median family earning grew over three percent annually, thus doubling in purchasing power -- the inflation-adjusted median before-tax income of all families stagnated between 1973 and 1986 -- dropping $300 overall in that 13-year stretch.

- Given current trends, young men and women can expect to earn an average of 25 percent less throughout their lifetimes than the generation 10 years earlier.

As a result, most young families are working more to take home less.

- Over one-half of all mothers with children under six and nearly 70 percent of mothers with children between the ages of 6 and 17 are working or looking for work; yet,

- Families headed by females age 24 or younger lost 32.4 percent of their real median income from 1973-86.

- Even married couple families headed by a person under 25 lost 11 percent of their real incomes in these same years.
As young males' real earnings have sharply deteriorated in the last 15 years, so have marriage rates. The less education completed, the lower one's earnings; the lower one's earnings, the greater likelihood that young people will not marry.

- In 1986, 20-24-year-old males' real mean earnings were one-quarter less than those of an identical age group 13 years earlier -- down from $12,166 (in 1986 dollars) to $9,027, only 43.6 percent of these young men were able to support a family of three above the poverty level in 1986, one-quarter less than the 58.3 who were able to do so in 1973.

- During the same years, the proportion of all 20-24-year-old males who were married and living with their spouses fell nearly 50 percent, from 39.1 percent in 1974 to 21.3 percent in 1986. Blacks, Hispanics, and those with the least education were hardest hit. The marriage rate for black high school dropouts fell by two-thirds.

While all young families had less income in 1986 than in 1973, minority and single-parent families under 25 fared the worst.

- Young, female-headed families with no spouse present lost 32.4 percent--three times as much as married couple families.

- Among all families -- married couple and single-parent:
  - White (non-Hispanic) families lost 19.4 percent of their income;
  - Hispanic families lost 18.5 percent; and
  - Black (non-Hispanic) families lost 46.7 percent -- almost two and a half times as much as white or Hispanic families.

In proportions far greater than we can accept, the families and children of the forgotten half are nearing the edge. For many, unemployment, an unexpected child, or a rent hike can spell disaster.

Health Insurance

- In late 1985, 21.4 percent of all 16-24-year-olds -- 7.4 million young people -- were not covered by health insurance, one-third more than the 13.3 percent proportion of the total uninsured civilian population.

- Only about 55 percent of 16-24-year-olds are covered by employers' health benefits while about 75 percent of middle-aged workers are so insured.

- Younger families that gain or lose members through births and deaths incur health care costs averaging $2,854 annually (in 1980 dollars), considerably higher than more stable families which spend $1,771. Forty-two percent of such young families had hospital expenses averaging as much as $4,300.

Housing

- Among all households headed by a person under age 25, only 16.1 percent owned their homes in 1987, down almost one-third from 23.4 percent in 1973. Home ownership among married household heads under age 25 with children also fell sharply, from 38.9 percent to 29.1 percent in 1987 -- a decline of 25 percent. The proportion of single parents able to afford home ownership over these same 14 years fell by over half, from 13.7 to 6.3 percent.
Adjusted for general inflation, rents today are at their highest level in two decades, having risen 14 percent higher than the general cost of living since 1981. It is estimated that families headed by a single-parent under 25 would have had to pay 81.1 percent of their income to afford decent rental housing in 1987.

While poverty among all families was one-quarter higher in 1986 than it had been in 1973, the poverty rate among young families more than doubled during those same years. Poor 20-24 year olds as a group do not "automatically grow out of their parents' farms."

Poverty among all major groups of American families (except over 65) was higher in the first half of the 1980s than in the first half of the 1970s. By 1986, the family poverty rate had edged down from its 1982 high of 12.2 percent to 10.9 but it was still well above its 1973 low of 8.8 percent.

In 1986, nearly 33 of every 100 families headed by a person under 25 had below poverty level incomes -- a rate more than double that of 1967 and triple the 10.9 rate of all American families in 1986. In families headed by a white person under age 25, the poverty rate more than doubled from 10 percent in 1973 to 24 percent in 1986. Black families were two and one-half times as likely as whites to be poor. Their poverty rate rose from 44 percent in 1973 to 62 percent in 1986.

While real incomes were markedly higher for families headed by 25-29-year-olds, their 1986 poverty rate was still 66 percent higher than in 1967.

Regardless of race or ethnicity, earnings are highly correlated with years of schooling.

Young males with less than a high school diploma took a 42 percent cut (measured in 1986 dollars) in their annual earnings, high school graduates earned 28.2 percent less; those with some college experienced a 16.4 percent drop while, for college graduates, the loss in annual earnings was 6 percent.

Among full-time, year-round male workers age 25 and older in 1985, those with less than a high school diploma earned a median income of $18,881; high school graduates earned $23,853; college graduates, $32,822.

For female full-time, year-round workers in the same age group, the earnings differentials across educational attainment levels were comparable but the amounts earned at any level were around 40 percent lower: $11,836, $15,481, and $21,389.

The financial assistance that most young people need in order to take advantage of college opportunities is increasingly in short supply.

While rates of degree-credit college entry rose by one-third or more for high school graduates of medium and lower socioeconomic background and academic skills during the 1960s and 70s, the proportion of students from blue collar families enrolling in college from 1980 to 1986 dropped by
one-fifth. Black enrollment fell from 34 percent in 1976 to 25 percent in '85, and Hispanic enrollment declined from 36 to 27 percent.

- Since 1980, tuition and fees at public colleges have risen 70 percent. Private colleges have had a 90 percent increase.

- During the same period, federal student financial aid, adjusted for inflation, grew by just three percent. In 1980, the maximum federal Pell Grant covered over 40 percent of the average tuition bill. Today, it covers only about 29 percent.

- Guaranteed student loans now account for 66 percent of all federal student aid as compared with only 21 percent in 1976; student indebtedness has increased by 60 percent.

As constrained as financial aid for college has become, a greater inequity exists in the sharp contrast between current policies designed to support the college-bound and those that provide alternative education and training opportunities for the forgotten half.

- Students enrolled in an institution of higher education can typically expect a combined public and private subsidy of about $5,000 per academic year -- totalling $20,000 or more per student -- through scholarships and grants, subsidized and guaranteed loans, free or publicly-subsidized college tuition, and other forms of aid.

- Young people not going to college are starved for support of their education and training needs. Only about five percent of those eligible for federally-supported job training receive it, usually for only about four months, totalling only $1,800 to $2,300 per student.

During the economic recovery of 1983-1986, families headed by persons under 25 were the only major age group to experience no increase in real median income and no reduction in poverty rate. Unemployment is still a significant problem for young workers.

- As of August 1988, unemployment among 20-24-year-old workers remains substantial:
  - 6.8 percent for whites;
  - 11.0 percent for Hispanics;
  - 20.3 percent for blacks.
Dr. ATWELL. Mr. Chairman, thank you very much.

In light of the hour, I would ask that my written testimony be included in the record, and with your permission I would like to summarize it.

I, too, would like to say that I think Secretary Cavazos has breathed new life into the relationship between the higher education community and the Department of Education, and we are very grateful.

It is also especially appropriate that this committee examine the serious shortfalls in the participation of minorities and disadvantaged students in higher education.

And in view of the committee's interest in the needs of the American work force, I would like to call your attention to the report issued last month by the Council on Competitiveness, which recognized the relationship between higher education and global competitiveness and offered a comprehensive list of policy options for the Federal Government to remedy current economic ills, the budget deficit, and pave the way for future growth in productivity.

Economic competitiveness cannot simply be maintained or improved without additional investment in higher education. But there are other strong reasons in addition to competitiveness for the Nation to extend educational opportunity to a broader spectrum of our citizens—societal change, the preservation of our cultural heritage, and the advancement of knowledge through research and public service.

Now, our current Federal student aid programs were developed over the past three decades to help achieve the national goal of equal opportunity, and there is no question that they have served this purpose effectively and have served millions of students.

But while we have seen major progress, a substantial opportunity gap remains, and it is clear that the Federal Government must take the lead in closing that gap. Previous testimony referred to the Federal role in education as being about 6 percent of total expenditures. I would mind the committee that if we are talking about student aid, the Federal role is about three-fourths of the dollars.

It is also clear that the Federal effort to meet the goal of post-secondary opportunity has faltered during the 1980's. We have been increasingly concerned about the impact on low income students and particularly low-income minority students of the reduced value of grant awards and the shift in emphasis in Federal aid from grants to loans. In the past 10 years, we have seen an alarming decline in the rate of participation of our largest minority groups, blacks and Hispanics, in higher education, and we believe that is related to the declining value of Federal student aid of a grant sort and the shift to loans.

Finding ways to improve the educational performance and participation of minority students is now the top priority of the American Council on Education. Working with the education commission of the States, we formed a commission on minority participation in American education in American life, and we found that America is moving backward, not forward, in its efforts to achieve the full participation of minority citizens in the life and the prosperity of
the Nation, and we offered strategies for each major sector of society to reverse that trend.

Last month, ACE participated in a joint venture with some K through 12 associations, led by a colleague of mine in this room, Gordon Ombaugh, of the Council of Chief State School Officers, in putting before Secretary Cavazos a series of recommendations for Federal action to increase the numbers of minorities in elementary and secondary teaching. The task force was formed by organizations representing both higher education and K through 12 and is a response to the Secretary’s specific invitations, which he reiterated again this morning, to submit recommendations on this important topic.

Next week at a press conference with Secretary Cavazos, we will be issuing a handbook for colleges and universities that will provide practical guidance and numerous examples to help them make their campuses more hospitable to minorities and to develop effective strategies to recruit and retain greater numbers of minority students, faculty, and administrators.

Higher education leaders are committing their time and energy and their institutional resources to expanding opportunities. However, despite an increase in institutional aid and a strong statutory commitment by the Federal Government to the goal of educational opportunity, we are still a long way from its achievement. Several Federal student aid programs currently authorized indicate that Congress supports broad access to post-secondary education, but we cannot reach that goal without a further budgetary commitment.

And I might say, since the subject of national service has come up, Mr. Chairman, that I endorse the comments made by Ernie Boyer and by “Doc” Howe and others here, and simply say that through this Nation, through means of a device called Campus Compact and other means, volunteerism is increasing on our campuses all the time, and we welcome that expansion of volunteerism. I think the kind of Federal role that is appropriate here is the sort envisioned in the legislation introduced by Senator Pell—demonstration grants.

We would not in any way want to see Federal student aid or access to Federal student aid linked to national service legislation, and in that sense I completely agree with the previous speakers.

Thank you very much, Mr. Chairman.

[The prepared statement of Dr. Atwell follows:]
TESTIMONY BY ROBERT H. ATWELL
PRESIDENT, AMERICAN COUNCIL ON EDUCATION

BEFORE THE

COMMITTEE ON LABOR AND HUMAN RESOURCES

UNITED STATES SENATE

JANUARY 27, 1989
Mr. Chairman and Members of the Committee:

I appreciate the opportunity to testify today on behalf of the American Council on Education. ACE is the umbrella association for the nation's colleges and universities. Our membership includes over 1400 institutions of higher education and about 200 educational associations representing all sectors of higher education.

It is especially appropriate that this Committee examine the serious shortfalls in the participation of minorities and disadvantaged students in higher education.

In view of the Committee's interest in the needs of the American work force, I would like to call your attention to the report issued last month by the Council on Competitiveness, of which I am a member. The report, entitled "Reclaiming the American Dream: Fiscal Policies for a Competitive Nation," recognized the relationship between higher education and global competitiveness, and offered a comprehensive list of policy options for the federal government to remedy current economic ills and pave the way for future growth and productivity.

I won't go into detail on the specific suggestions for reducing the federal budget deficit and improving our trade posture, but I would like to cite the observation made by the authors of the report, who include the leaders of some of our foremost corporations, labor unions, and educational institutions, that "over the long term, the nation will not be able to maintain or raise its standard of living without attending to problems such as its troubled education system, deteriorating physical infrastructure and declining technological leadership."

The report recommends that the federal government expand its commitments in four areas devoted to human resources. First, the report says, "more funding is needed to help bring disadvantaged youth into the mainstream of society. Second, additional funds are needed for special programs in math and science to produce individuals qualified to operate in an increasingly complex technological society. Third, programs must be expanded to broaden access to post-secondary educational institutions. Fourth, funding is needed to retrain dislocated workers so that they can again become productive members of the work force."

Quite obviously, our colleges and universities have an important stake and an essential role in each of these areas. Economic competitiveness simply cannot be maintained or improved without additional investment in higher education.

However, I would point to other strong reasons besides competitiveness for the nation to extend educational opportunity to a broader spectrum of our citizens. Economists may debate whether the benefits of education redound primarily to the individual or to society, but, in the words of Henry M. Levin of Stanford University:
... education represents the dominant path for social mobility in our society, particularly as other routes for attaining higher occupational status and income have been closed off. ... [Reduction of government subsidies to education would be particularly troublesome at a time when the higher education system has just opened up to the less advantaged.]

Debate over the relative benefits of higher education to the individual and to society also tend to ignore its contributions to societal change, the preservation of our cultural heritage, and the advancement of knowledge through research and public service. The most comprehensive study of the individual and social value of American higher education was conducted by the distinguished economist Howard R. Bowen. The conclusions of his landmark Investment in Learning, issued in 1977 by the Carnegie Council on Policy Studies in Higher Education, were as follows:

"First, the monetary returns from higher education alone are probably sufficient to offset all the costs. Second, the nonmonetary returns are several times as valuable as the monetary returns. And third, the total returns from higher education in all its aspects exceed the cost by several times. In short, the cumulative evidence leaves no doubt that American higher education is well worth what it costs."

Our current federal student aid programs were developed over the past three decades to help achieve the national goal of equal opportunity. There is no question that they have served this purpose effectively.

In the 1950s, before the federal role had been established, only about 40 percent of low-income high school graduates with good academic ability went on to college. Today, after three decades of federal assistance, about 60 percent of these students attend college.

While this is major progress, it also represents a substantial remaining opportunity gap that challenges our nation. When you break down the figures on participation, you find that about 90 percent of high-income high school graduates with good academic ability go on to postsecondary education. And these high-income students are much more likely to persist and earn a baccalaureate than students with comparable ability but fewer financial resources.

It is clear that the federal government must take the lead in closing the opportunity gap. Federal student aid programs today provide 75 percent of total student assistance funds, including the value of federally-insured loans. Institutional aid accounts for about 19 percent, and the states provide the remaining 6 percent.

It also is clear that the federal effort to meet the goal of postsecondary opportunities has faltered during the 1980s. While funding for the programs has increased 28 percent, the value of federal aid for individual students has seriously eroded over the decade. The Pell Grant maximum award, which represented 40 percent of total average college costs in 1980, provided only 26 percent in 1988.
Relative to the CPI, the maximum Pell award declined 13 percent in real dollars during this period. By the same measure, other important student aid programs have declined more sharply: Supplemental Educational Opportunity Grants by 21 percent; College Work-Study by 26 percent; Perkins Loans by 57 percent; and State Student Incentive Grants by 38 percent.

The American Council on Education has been increasingly concerned about the impact on low income students, and particularly low-income minority students, of the reduced value of grant awards, and also of the shift in emphasis of federal aid from grants to loans. In the past 10 years, we have seen an alarming decline in the rate of participation of our largest minority groups — blacks and Hispanics — in higher education. This trend is even more alarming because these groups constitute an increasing proportion of the nation’s population — and its work force.

Currently, 20 percent of American children under age 17 are members of minority groups. By the year 2000, one-third of all school-age children will be minority students. And between now and then, minority workers will make up one-third of the net additions to the U.S. labor force. By the turn of the century, 21.8 million of the 140.4 million people in the labor force will be non-white.

In view of these facts, it is particularly disturbing that participation by black males in higher education has slipped alarmingly since the mid-1970s. The Seventh Annual Status Report on Minorities in Higher Education issued two weeks ago by ACE’s Office of Minority Concerns reveals that enrollment of black males has fallen from 4.3 percent of college enrollment in 1976 to 3.5 percent in 1986 — the largest decline of any racial or ethnic group. While total enrollment grew from 11 million to 12.5 million over this period, black male enrollment fell from 470,000 to 436,000. I submit a copy of the report for the record.

Finding ways to improve the educational performance of minority students and to broaden their participation in higher education is now the top program priority of the American Council on Education. Two years ago, our board of directors authorized a minority initiative designed to help us regain the lost momentum of minority progress. This has involved a wide range of activities.

To push this topic to the top of the agenda of college and university presidents, these issues have been a major focus at our annual meeting for the past two years.

Working with the Education Commission of the States, we formed a blue-ribbon Commission on Minority Participation in Education and American Life. The group was chaired by Dr. Frank Rhodes, the president of Cornell University, and former Presidents Gerald Ford and Jimmy Carter served as honorary co-chairs. The commission included 37 leaders from business and education, former cabinet members, and state and local elected officials, and last May they issued a report entitled "One-Third of A Nation."

The report was concise and straightforward. The Commission found that "America is moving backward — not forward — in its efforts to achieve the full participation of minority citizens in the life and prosperity of the nation," and it offered strategies for each major sector of American society to reverse that trend. I have submitted a copy of the report for the record.
To help renew and strengthen higher education’s efforts to increase minority recruitment, retention, and graduation, ACE and the American Association of State Colleges and Universities sponsored a working conference on “Educating One-Third of A Nation” last July. The conference drew over 500 representatives from more than 120 institutions. Participants used the three days to compare programs now in place at different campuses and to work as teams to come up with new plans for their own institutions.

Last month, ACE participated in a special Task Force on Minority Teachers that prepared and submitted to Secretary of Education Lauro Cavazos a series of recommendations for federal action to increase the number of minorities in elementary and secondary teaching. The Task Force was formed by the Forum of Educational Organization Leaders, representing elementary and secondary education, and the Washington Higher Education Secretariat in response to the Secretary’s specific invitation to submit recommendations on this important topic.

Other activities currently are under way or are planned to continue this initiative. Next week, at a press conference with Secretary Cavazos, we will issue a handbook for colleges and universities that will provide practical guidance and numerous examples to help colleges and universities make their campuses more hospitable to minorities and develop effective strategies to recruit and retain greater numbers of minority students, faculty, and administrators.

We also will be issuing a study sponsored by the Mellon Foundation that will identify and evaluate those university programs that are granting above-average numbers of doctorates to blacks, Hispanics, and American Indians.

Because a large percentage of the minority students enrolled in higher education begin their experience at the community college level, we are sponsoring a project designed to promote more effective transfer programs to baccalaureate degree-granting institutions. Pilot programs involving four community colleges were begun this fall.

That is a brief summary of what in truth is a very extensive program. But let me make this abundantly clear. Higher education leaders are committing their time and energy — and their institutional resources — to expanding opportunities, not only for minority students, but for all citizens. The latest figures show that between 1934 and 1986, institutions increased financial aid awards from their own sources by 22 percent — almost twice the average tuition increase and nearly four times the rate of inflation for that period.

However, despite this increase in institutional aid, and a strong statutory commitment by the federal government to the goal of educational opportunity, we are still a long way from its achievement. The several federal student aid programs currently authorized indicate that Congress supports broad access to postsecondary education, but we cannot reach that goal without a further budgetary commitment.

The federal government, the states, and institutions must develop a partnership in providing the financial resources and educational programs that will enable all our citizens to develop to their full potential. Such a partnership will produce a more competitive nation, as well as one that is more decent and caring for its people.
The CHAIRMAN. Thank you very much.
I have just two questions. First, Dr. Atwell, in your testimony, you point out the decline in minority students in graduate schools over the period of the last 10 years. Do you have any reasons as to why you believe that has developed, and suggestions as to how to deal with it?

Dr. ATWELL. I think there are many reasons, Senator, but I think the single most important one has to do with the student aid factors that I described—the shift from grants to loans, which is clearly a deterrent. I think also we have work to do on our own campuses in making these institutions more hospitable, and paying a great deal more attention to the retention of students as well as their recruitment than we have in the past, and that is the point of this minority handbook that we will be issuing with the Secretary next week.

The CHAIRMAN. In reference to Eugene Lang's "I Have a Dream" program in New York City—is there some lesson from that program that you think has national application?

Dr. ATWELL. I think that ultimately, we ought to think about expanding the Federal student aid concept to the point where commitments could be made below the 12th grade level; I think there is no question about that. And I would hope that as the committee gets into reauthorizing the Higher Education Act two or three years from now, considerations of that type could be before you.

The CHAIRMAN. Dr. Howe, one of the things we were looking at yesterday with Secretary Dole was the skills that we are going to need in the year 2000. We have a situation where, from a demographic point of view, we are declining in terms of eligible and available employees. We have a critical mass who are living outside of involvement and participation in the economic system, and we need to try to develop what will bring those individuals into the economy. There are a variety of different factors. We saw from her point of view yesterday some various studies. But one key element is to try to provide those individuals with skills so that they will be able to participate.

Do you have any specific ideas as we address the reauthorization of the voc-ed bill about how the bill ought to be altered or changed to try and take into consideration both the changed opportunities and needs of young people in the country—and old people, I suppose, and handicapped people?

Dr. HOWE. Well, you already have my point about trying to reach for more experience-based education, which I testified on a moment ago, so I would certainly start with that.

But I want to make a general point about dealing with that problem. First of all, there is no magic bullet about that. There is nothing you can do quickly that is going to solve that problem. Secondly, the least expensive, most effective way to start dealing with that problem is to start with the things that have been suggested today, here at this hearing, in early childhood, because you are dealing with prevention rather than with cure. Cure in the medical business is always more expensive than prevention, and cure in the education business is more expensive than prevention.

For roughly $3,500 per youngster, you can do an immense amount in the age four, age five categories. For about $18,000 per
person, you can do something in the Job Corps. But the cost goes up, and the percentage of success is lower. The Job Corps is successful with about 50 percent of the people who go to it, at very high cost—yet it is a valuable program, it is a rescue program; it is a cure program.

We need to think in terms and strategies of prevention. Therefore, things that affect families and the way kids grow up in the early years, things that affect the way youngsters get treated in institutions in early years, are going to have a lot more leverage to them in the ultimate solution of this problem.

The CHAIRMAN. Senator Pell?

Senator PELL. Thank you very much.

I have no questions, but would just welcome you both here.

The CHAIRMAN. Senator Kassebaum?

Senator KASSEBAUM. Just briefly, Dr. Atwell, I have been very supportive of community colleges, and I believe ACE has a pilot project to see how transfers from community colleges to four-year institutions could be improved.

Dr. ATWELL. Yes, we do. That program is just getting underway, and we are hoping for some substantial foundation support.

Half the blacks and Hispanics in American higher education are in community colleges, and they rarely move from there to four-year institutions. So for that reason alone, we need to improve articulation or educational mobility, but we need to do it for other reasons as well. Educational mobility is a real problem in this country, particularly but not exclusively between two- and four-year institutions, and we would hope that project would make some dent in that problem.

Senator KASSEBAUM. I am glad. You probably do not have any statistics on it yet. Didn't it just start this fall?

Dr. ATWELL. We haven't really gotten that program underway. We have a major proposal before a couple of foundations.

Senator KASSEBAUM. Well, I think it is very worthwhile. I think a number of the four-year institutions have been reluctant to be as cooperative as they might be, and I think that all the way around there could be a greater sharing in the system.

Dr. Howe, in your testimony, you touch on the stigma that is often attached to vocational education. I, too, am a strong believer in vocational education. I worried when my own children were in high school that frequently students just did not want to think about a vocational technical program. As they go on from high school, they do not see it as an option.

How do we get around this stigma, and does the Federal Government have any role in changing that perception?

Dr. Howe. One of the things about vocational education that is interesting in this era is that learning skills—reading, writing, literacy—have become vocational skills. And vocational education is going to have to address itself somewhat more to the improvement of learning skills rather than strictly—not that it ever did it strictly—but rather than with as much emphasis as is placed on manipulative skills, apparatus skills, machine handling skills, doing things with things.

But the trick for vocational education is the melding of those two categories of learning, the business of learning mathematics togeth-
er with the business of doing something on the job, and marrying those things in a way that is effective.

There is an interesting article in the New York Times this morning. A bunch of mathematicians have found out that kids in the United States are not learning very much mathematics. They went to a lot of work to find that out; I think a lot of people could have told them ahead of time. But one of the observations they make in the Times report is that a reason the kids in the United States do not know very much about mathematics is it is taught in a way that it tends to be totally theoretical and removed from the real world.

Vocational education offers the chance to learn mathematical things while you are building something or repairing something or working on something, whether you are cooking it or making it. And that kind of experiencing of learning real mathematical literacy while you are on a job is something vocational education needs to emphasize more.

There are a bunch of people around in the United States called the “experiential” educators. I do not know if you have heard of them; they hide pretty well, but they are interesting, and they are right. They have the view that learning through experience is probably the most important way of learning, where learning through academic routes is somewhat less significant.

Now, a good many people in universities would contest that. In vocational education, that is the name of the game.

Senator Kassebaum. I suppose, like many of the things we have touched on here, it goes back to a recognition of the importance of this field, which is key to the development of the skilled work force for the 21st century that Senator Kennedy has mentioned. Certainly, this is a major concern of the committee. There needs to be greater recognition of the important role of vocational education in this effort.

Dr. Howe. One of the favorite indoor sports among some educators is criticizing vocational education and diminishing it. I do not think they are right.

If you go around the world and look at various models of vocational education, some of them attached to factories, some of them being interesting places where kids are brought to school by their parents, the parents work there, and learn in the school but also in the factory—these models are around for us to look at, and they are the basis for the preparation of the people who do all sorts of important work in a modern society. And I think we are dependent on vocational education. I do not think we ought to be tearing it to bits. I think we ought to be building it up.

So I just cannot see the notion of seeing this as a second-class citizen at the education table, which it frequently unfortunately is.

Senator Kassebaum. Thank you, Mr. Chairman.

The Chairman. Dr. Atwell, I asked you about the Lang proposal. As I understand, in a community or in a school district where you have a 50-percent dropout rate, they graduate 95 percent—even seven young women who were pregnant.

Dr. Atwell. Something like that, Senator, yes.

The Chairman. A great percentage of them went on to college—I guess the level of compensation was what the cost would be for tu-
tion in New York—but they had a very high percentage. But it certainly would appear that there must be important lessons learned from that as well.

I think we have covered a variety of thoughts here this morning, and that is certainly always an impressive fact.

I want to thank all of you very much for your presence today and for your testimony.

[Additional material supplied for the record follows.]
STATEMENT OF
THE
AMERICAN SOCIETY FOR PERSONNEL ADMINISTRATION
submitted to the
COMMITTEE ON LABOR AND HUMAN RESOURCES
UNITED STATES SENATE

January 26, 1989
INTRODUCTION

The American Society for Personnel Administration, ASPA, is the world's largest organization dedicated to excellence in human resource management. With over 41,500 members, ASPA includes managers from a cross-section of American businesses, from large corporations to smaller, family operations. We estimate that ASPA members work for companies which collectively employ more than 41 million people.

As part of ASPA's ongoing effort to be a leader in the human resource field, ASPA regularly conducts surveys of its membership to examine the membership's views on important, timely topics relevant to the human resource profession. Last year, for example, ASPA provided this Committee with the results of such a survey on members' views on the issues of child care and parental leave.

Last year ASPA identified the growing labor shortage as another issue meriting further examination. Research reports such as the U.S. Department of Labor's "Workforce 2000" study had revealed that employers in this country could anticipate workforce shortages in coming years. Additionally, ASPA was experiencing an increase in anecdotal information for its members reporting cases of such shortages.
In order to gather first-hand information on the extent of the problem - both current and future, and to learn what methods and strategies human resource managers are using to combat this problem, ASPA surveyed its members late last year. In September, 1988 a sample of 4,470 was randomly selected from the ASPA membership for a survey addressing the labor shortage problem. By the October 17th deadline, 707 usable responses were received, for a response rate of 16%.

The survey was designed to identify the occupational categories in which companies are currently experiencing shortages, and, also, to identify those occupations in which future recruiting difficulties (during the next 3-5 years) are anticipated. In addition, information was compiled about specific jobs which respondents have the most difficulty filling.

The survey also gathered data about the recruiting methods and strategies companies use to recruit their employees, and the success of these approaches.

Although the final results of the survey have not yet been published, we would like to share a summary of the results with the Committee. We will, of course, provide the Committee with copies of the final survey upon publication.
I. EXTENT OF THE LABOR SHORTAGE PROBLEM

Respondents were asked to identify those occupations in which their company is currently experiencing labor shortage difficulties. For all occupational categories listed, at least half of all respondents report having moderate or great/very great difficulties recruiting qualified applicants. In fact, for technical and skilled/craftsman positions approximately two thirds report having at least moderate or great/very great problems.

Positions in the executive/administrative/managerial and sales categories appear least affected by the labor shortage. Few respondents report great or very great difficulties recruiting applicants for these categories (11 and 17 percent, respectively). No major regional differences were found in these two occupational classifications.

For the professional, office/clerical, and unskilled categories approximately one quarter of respondents report great/very great difficulties recruiting qualified applicants. According to the survey results, some regional differences for these occupations are evident:

Professional

* The West is having the greatest problems recruiting for professional positions. Forty two percent report
moderate and 35 percent report great/very great difficulties.

* The Northwest is having the least problem, with 18 percent reporting moderate and 18 percent reporting great/very great difficulty recruiting qualified professionals.

Office/Clerical
* The Northeast is having particular difficulty recruiting for jobs requiring office/clerical skills. Fifty percent report great/very great difficulty recruiting qualified applicants.
* The Northwest, midwest, and South-Central regions are having considerably fewer problems, with only 4, 12, and 14 percent (respectively), reporting great/very great difficulty.

Unskilled
* Again, the Northeast is the region having the hardest time recruiting for unskilled positions. Half report great/very great difficulty recruiting these applicants.
* The South-Central region has been least affected, with about three quarters reporting little or no difficulty in finding unskilled applicants.
Survey findings indicate technical occupations and skilled-craftsman positions are the two occupational categories respondents report hardest to fill. For jobs in the technical field, one third report great/very great difficulty, one third report moderate difficulty and one third report very little or no difficulty recruiting qualified applicants. Labor shortage problems for technical occupations are generally consistent nationwide - few regional differences were found.

In recruiting applicants for skilled/craftsman positions companies are again split into thirds regarding the extent of the shortage. However, in this case, regional differences were found.

* Over three quarters of the Northeast and Southeast respondents report moderate, great, or very great difficulty recruiting qualified skilled workers.
* The Northeast is particularly affected, with well over half (62%) reporting great/very great difficulty, and 19 percent reporting moderate difficulty.
* In the Southeast, 37 percent report great/very great difficulty and 39 percent report moderate difficulty.

II. ATTRACTING AND MOTIVATING THE WORKFORCE

Of the methods and/or organizations companies normally use to recruit employees, newspaper advertising and employee referral are
used by the vast majority, and are perceived to be at least somewhat successful by almost everyone. Walk-ins and unsolicited resumes are also used by more than 80 percent of companies, although they are not perceived to be as successful as the top two methods.

When asked what recruitment strategies their company has adopted to help alleviate the labor shortage, 74 percent report that they have increased help-wanted advertisements and other publicity to recruit applicants, most with at least some success. Two-thirds report an increase in hiring of part-time or temporary workers, and half state they participate in job fairs and career open houses. Another 46 percent have increased cooperation with educational and training institutions, most with at least some success.

Students, retirees, and homemakers are the top three "non-traditional" applicant pools companies have begun to actively seek out (53, 43 and 36 percent of respondents respectively). The more novel "non-traditional" groups are being targeted with less frequency. The physically handicapped and economically disadvantaged are being sought by about 30 percent of companies, while immigrants and the mentally handicapped are targeted by less than 19 percent.

Over half of the responding companies state they have had to
increase wages in an effort to attract applicants and motivate/retain their current workforce. About one third have increased health benefits. The next two most popular benefits introduced to attract and retain the workforce are tuition assistance (52%) and section 401(k) savings plans (44%).

III. SKILLS MOST LACKING AND COMPANY TRAINING EFFORTS

Almost half of the total sample believe that writing skills are seriously lacking in their company's applicant pools. The next two skills most lacking are job specific/technical skills (43%) and verbal communication skills (42%).

About half of the sample has introduced or expanded training programs for employees to address the skill deficit problem. Of those with training programs, 52 percent address computer skills, and 40 percent teach work processing skills. Verbal communication and writing skills course are offered by about one third.

Most respondents (88%) report they use an in-house training department to develop and implement their training programs. Fifty eight percent use outside consultants, and 51 percent use community colleges and universities.

When asked what business and the government could do to help alleviate the shortage of qualified workers, the key, according to
many respondents, is better education and training. Working with schools to gear the curriculum toward skills needed by the business community, and providing financial and other assistance to educational institutions are suggests as ways to help provide more qualified workers for the future.

CONCLUSION

ASPA appreciates the opportunity to share the results of this survey with the Committee, and applauds the Committee for holding this hearing and directing the public's attention to the emerging issues associated with the growing labor shortage.
The CHAIRMAN. The committee will stand in recess. 
[Whereupon, at 1:07 p.m., the committee was adjourned.]
Changes in the American economy and in the nature and organization of work fundamentally challenge the educational system and have implications for the Federal Government's role. Case studies of the insurance, banking, and textile industries demonstrate the following changes in the nature and structure of work: (1) both service and manufacturing industries are moving from a production orientation to a product and customer orientation, from mass production to flexible production; and (2) computerization usually increases skill demands. The following disconnections between education and the economy are discussed: (1) mismatches between school and non-school settings in the structure of knowledge used and the social structure of its use; (2) differences between employers' and educators' perceptions of problems; (3) problems with the signalling systems between school and work settings; and (4) organizational differences between schools and industries. The following economic changes that affect post-secondary education and training are discussed: (1) conflict between labor demand and supply; (2) employers' training investment patterns and their consequences; and (3) changing patterns of employer training investment. The following recommendations for the federal role in education are discussed: (1) reconceptualize the federal role in education; (2) lead efforts to revitalize education; (3) invest in educational research and development; (4) eliminate narrow job-specific vocational education at the secondary level, integrate academic and vocational learning, and extend this integration through the elementary grades; (5) unify education and training policy; and (6) think through a policy on training vouchers for workers. A list of 51 references is appended. (FMW)
EDUCATION AND THE ECONOMY: A DIAGNOSTIC REVIEW AND IMPLICATIONS FOR THE FEDERAL ROLE

Occasional Paper No. 1

This paper was prepared for the Seminar on the Federal Role in Education, The Aspen Institute, Aspen, Colorado, July 31 - August 10, 1988.
PREFACE

This paper depends heavily on research funded by the Office of Research, of the Office of Educational Research and Improvement, U.S. Department of Education. This support was a five-year grant for the conduct of the National Center on Education and Employment, the National Center is based at the Institute on Education and the Economy, Teachers College, Columbia University, in New York City.

The Aspen Conference on the Federal Role in Education took place in Aspen, Colorado, from July 31 to August 10, 1988. The funders were: the Carnegie Corporation, the Ford Foundation, the Hewlett Foundation, the Primerica Foundation, and the Rockefeller Brothers Foundation.
ACKNOWLEDGEMENTS

This paper was prepared for the Seminar on the Federal Role in Education, The Aspen Institute, Aspen, Colorado, July 31 - August 10, 1988. This Seminar was sponsored by The Carnegie Corporation, The Ford Foundation, The Hewlitt Foundation, The Primerica Foundation, and The Rockefeller Brothers Foundation. This paper is based heavily on, and could not have been written without, research conducted under the auspices of The National Center on Education and Employment, funded by the Office of Research, Office of Educational Research and Improvement of the U.S. Department of Education. The paper also relies on research funded by the National Assessment of Vocational Education.

I. A FRAME OF REFERENCE

This paper takes changes in the American economy and in the nature and organization of work as its points of departure, treating these realities as forcing events relative to our educational system. However, economic changes and the educational challenges that they pose are symptomatic of broader changes in the rules of engagement that govern relations between the United States and other nations. Slacks to our economy, attributable in part to aggressive international competition, represent simply the most recent assault on the American sense of safety and ability to control the world, an earlier instance being the Soviet Union's successful A- and H-bomb tests, which, together with intercontinental ballistic missiles, shattered our sense of invulnerability to foreign wars that we had not chosen to enter. On several fronts—not just economically, but also politically, socially, environmentally, and normatively—the United States is being forced to function as part-of-the-world, rather than as separate-from (American isolationism) or in-control-of-the-world (American hegemony). It is this broader change that challenges our educational system most fundamentally. From this perspective, changes in our economy can be seen simply as a language or metaphor for talking about these changes.

At the same time and for obvious reasons, economic changes and their challenges to our educational system are real and urgent. Four perspectives frame the body of this paper.

First, labor is only one input to the production of goods and services. Therefore, changes in the quality of labor—and changes in education that affect the quality of labor—can have only limited effects on productivity and economic growth. Economists disagree on how limited "limited" is—some, such as Baily and Chakrabarti (1988), argue for small effects, others, such as Thurow (1986), for substantial ones. However, economists agree that multiple factors, such as the quality of technology, level and type of corporate R&D investments, and the quality of corporate management, as well as the quality of labor, drive the performances of American firms, industries, and the economy. They also usually agree that these factors are highly interdependent: the effects of improvements in one factor will depend on the nature and level of other factors. Thus, marked improvements in American productivity and economic growth rates require improvements in all factors of production, not just in one or two.

---

1 As Lester Thurow (1986) noted, "There is no such thing as the 'national' economy in the sense that we used to talk about it 20 or 30 years ago...it is becoming fully integrated with the rest of the world."
Second, this paper approaches education from the perspective of human capital development—in terms of the development of generic (but not narrow job-specific) work-related skills and orientations. Institutions other than schools shape this nation's human capital development, and schools have functions other than human capital development. However, this paper assumes that our schools represent major engines of human capital development and assesses the implications of economic changes for them.

In the past this perspective has been criticized—quite properly, I think—as too narrow a lens through which to see education. Implicit in this critique has been the image of educating the hand, not the head; of teaching specific and limiting rather than general principles; of socializing (breaking?) the individual to hierarchical and restrictive economic institutions that contravene democratic ideals of equality and freedom.

Ironically, these critics are right about how economic activity often used to be organized in this country and how elementary and secondary schooling is often stil organized. However, perhaps for the first time in our history, the different objectives of education seem to imply similar curricula and pedagogy. In other words, we may not have to choose—the education needed to function effectively in labor markets in both high and low skill jobs looks similar to that needed to participate effectively as citizens, to work through the terrible moral dilemmas posed by a comatose aged parent, or to make intelligent purchases of often complex goods and services, such as housing, education, insurance, financial investments, and health care. The educative challenge common to these disparate activities is to prepare individuals for thoughtful choice and judgment. From this perspective, variations in curriculum and pedagogy should have less to do with variations in educational objectives than with variations in how different customers of the schools learn.

Third, the skill requirements of the economy need to be distinguished from our educational objectives. The skills that jobs require are not necessarily those that individuals require. This point is aimed at two frequently voiced arguments: either that the net effect of the American economic transformation is to decrease skill requirements, or that many—especially low skill—jobs are unaffected by the transformation. For both of these arguments, the often unstated implication for education is "business as usual"—in other words, a continuation of "tracked" education into what can be termed elite versus mass education.
These arguments are faulty in both their reading of the economy and their implicit conclusions for education. Our increasingly solid understanding of changes in the American economy partly supports one of these arguments—not all jobs are restructuring. For example, janitor, waitress, or bartender jobs today look like these jobs twenty or forty years ago. However, the interpretation of this fact is what is at issue. Historical occupational data for the civilian and military sectors show a clear, long-term employment shift toward higher skill jobs (U.S. Bureau of the Census, 1975; 1983; and 1987; Binkin, 1986; Berryman, 1988). Although recent industry case studies show little or no change in some lower skill jobs, a major story of these studies is the restructuring especially of lower skill work—and in ways that blur distinctions between lower and higher skill work. Further, where we find companies that are not changing how they produce—and therefore not restructuring jobs, we often find marginal companies that will be vulnerable to any future economic shakeout of their industries (e.g., Bailey, 1988).

Let us now turn to the implications for education. If our social objectives for schooling are to give every child his or her best shot at riding the crest of a changing economy, we owe these children the education increasingly required across jobs of many types, if not by all types of jobs. There has been a great deal of discussion about "dead end jobs". Without denying that discrimination—whether based on race, ethnicity, gender, age, or handicap—is still alive and well in labor markets, the power of discrimination to "box" or "trap" individuals in bad jobs, regardless of their capabilities, has waned over the last quarter century. Increasingly, jobs are becoming "dead end" because people are "dead end"—they lack the education to move into better jobs or to accommodate an "upskilling" of their old jobs. Recent industry studies, discussed below, show that companies are relying increasingly on lateral entry workers, selected for the education and training that they bring into the firm. This strategy "strands" the less educated component of the company's work force, from bank tellers to textile mill operators. Since external hires fill the higher level slots, the less educated workers do not receive either the training or the work experience associated with moving up through the firm. Promotion and therefore wage growth depend on obtaining more education and training.²

² Noyelle (1987) uses the terms professionalization and para-professionalization of jobs to describe this pattern of mobility that seems to have become more occupation- than firm-driven. In other words, access to jobs beyond the established professions seems to depend increasingly on the kinds of investments typical of the professions: (1) individual investments in education and training to obtain control over a body of knowledge and practice; and (2) the sale of this expertise in a self-employment context, market-mediated work arrangement, or through lateral entry into the firm.
Finally, educational expenditures—most of it public sector—are enormous. In 1985 the elementary, secondary, and post-secondary bill alone was $222 billion, or 5.5 percent of a GNP of $4,010 billion. If we add the costs of government employment-related training programs, a conservative estimate of military training costs, costs of government-provided formal training for its civilian employees, and a very conservative estimate of the costs of corporate-provided formal training ($25 billion), the percent of GNP increases to 6.8 (Office of Technology Assessment, 1988, Table 3-26, p.129). With numbers like these, productivity improvements in this sector can yield big payoffs.

This paper is organized into four parts: changes in the economy that have implications for the elementary and secondary educational system; elementary and secondary education as a picture of disjunctures; economic changes that affect the post-secondary educational system; and implications for the federal role. Sections of the paper differ in their evidentiary base. Some derive directly from the research, some spark across gaps, and some put together unlikely ideas to ask whether they might suggest something new to us. The paper describes the knowledge base for different sections.
II. THE TRANSFORMATION OF THE AMERICAN ECONOMY

HOW DO WE KNOW WHAT IS HAPPENING?

Two data sources tell us about the skill implications of changes in the American economy. (1) data on employment by occupations, past and projected, available for the nation (and, under some circumstances, for geographic subunits) from the U.S. Bureau of Labor Statistics (BLS) and the U.S. Bureau of the Census; and (2) industry and occupational case studies that reveal qualitative changes in the nature and structure of work that occupational titles conceal.

The BLS and Census data tell us about past and projected employment by occupational categories or names. *Occupational "names" contain no information about job content or skill requirements*, whatever we know about occupational content and skill requirements, we know from other sources. For example, the name of an occupation can remain the same, but its content can change—sometimes dramatically, as in the case of the claims adjuster job. (See below.) Similarly, knowing an occupation’s job content does not tell us about skill requirements, content still has to be translated into what workers have to learn in order to perform the job.

"Economic restructuring" essentially means a fracturing of old relationships between occupational titles, job content, and skill requirements. It is under these conditions that occupational and industry case studies become critical complements to statistics on employment by occupation. These case studies describe what an occupational name means in terms of its job content and skill requirements, how content and required skills are changing, and how these might vary, depending on the nature of the industry or the type of company in which the occupation occurs. The problem with these studies is that, in practice, they can give us only partial knowledge about the occupational structure of the economy. Case studies are costly to conduct and to update. Thus, they will always fill in only some of the "cells" of the occupational structure. Accordingly, case studies present a constant generalizability challenge.

The rest of this section discusses: (1) what historical occupational employment data in civilian and military sectors tell us about skill requirements; (2) what illustrative industry case studies reveal about changes in the nature and structure of work; and (3) how results of these studies map against occupational projections.
SKILL TRENDS IN EMPLOYMENT BY OCCUPATION

Census and BLS statistics show a clear change between 1900 and 1980 in employment shares by broad occupation group. If we are willing to use our gross understanding of the skill levels of these very broad occupation groups, these data show a clear long-term increase in skill requirements. For the experienced civilian labor force, Table 1 shows the ratio of employment in each occupational group to the total experienced civilian labor force. These ratios are only approximate; occupational categories shift across time, although these shifts are less problematic at the level of the broad categories that we are using. In the first 80 years of this century, the biggest occupational shifts were from the farmer and laborer (farm and non-farm) categories to the white-collar occupations (professional/technical, managers/officials/proprietors, clerical, and sales). The craft, operative, and even the service occupations were quite stable in their shares of the total labor force between these two points in time.

In terms of the educative implications of these shifts, perhaps the most dramatic change occurred in the highest and lowest skill jobs. In 1900 about .30 percent of the labor force worked as laborers, either farm or non-farm; about 10 percent, in either professional, technical, or manager occupations. By 1980 these percents had roughly reversed, about 6 percent working as laborers and 26 percent as professionals, technicians, or managers.

The military occupational structure shows similar upward shifts in skill requirements (Binkin, 1986; Berryman, 1988). In the forty years between 1945 and 1985, the share of the enlisted force in white collar occupations shifted from 28 to 47 percent, a shift primarily attributable to an increase in technical personnel from 13 to 29 percent. Blue collar employment declined from 72 to 53 percent, most of this decline being absorbed by the supply and service occupations (17 to 10 percent) and general military (including combat) occupations (24 to 16 percent).

When we turn to occupational projections for the period between 1986 and 2000, the forty occupations expected to evidence the largest job growth during this period include traditionally low skill jobs such as retail salespersons, waiters and waitresses, and janitors and cleaners (Table 626, Statistical Abstracts: 1988, 1987). However, Bailey's (1988) analysis of the BLS projections for the total occupational structure indicate that higher skill occupations will account for a slightly larger share of total employment by the year 2000 than in 1986. In other words, employment in these

The experienced labor force is defined as all those employed plus those unemployed who are not new entrants to the labor force. Thus, the difference between the number participating in the labor force and the experienced labor force is the number of new entrants. The occupation of the experienced labor force is defined as the occupation of the current job for those working and the occupation of the last job for those unemployed.

occupations will grow slightly more than employment in lower skill occupations, their 1986 employment share being 39.8 percent and their projected 2000 employment share being 40.7 percent.

INDUSTRY CASE STUDIES: CHANGES IN THE NATURE AND STRUCTURE OF WORK

Research on changes in the nature and structure of work bears on what schools should teach. In the context of a National Center on Education and Employment research program, Columbia University economists, Drs. Thierry Noyelle and Thomas Bailey (Noyelle, 1987, 1988; Bailey and Noyelle, 1988; Bailey, 1988), document these changes in different types of industries: service and manufacturing, top-of-the-product cycle and bottom-of-the-product cycle, high technology and low technology.

The concept of flexible production is central for understanding all three cases. In fact, from the point of view of human capital development and schooling, the key change in the economy for both the manufacturing and service sectors is a shift from mass production to flexible production. Key to flexible production is the functional flexibility inherent in computer software. When production depends on "hard" automation, the retooling required to produce varied output is very costly. Under a "hard" technological regime, the objective is long production runs that drive down per unit cost. Ever since Henry Ford mobilized the labor of low skilled factory workers through the assembly line to replace teams of skilled workers, "hard" technology has almost always been synonymous with the specialization of labor.

As technologies become computer-based, they become "flexible" in that retooling simply requires reprogramming, thus allowing shorter production runs and more varied or customized production. Under a flexible production regime, the objective is to combine the customizing implicit in craft production at the cost savings of mass production. Flexibility has usually been achieved by reversing Ford's process: moving back up the range of skill levels, shifting from specialized to general purpose tools and machines, and reorganizing how people get the work done.

---

3 Bailey categorized as higher skill the executive, administrative, managerial, professional, technical, and precision production, craft, and repair occupations. The lower skill occupations included the sales, administrative support (including clerical), service, private household service, operator, fabricator, and laborer occupations.
Computerization in the insurance industry has caused five distinct jobs to be folded into one. These five jobs were:

- messenger
- file clerk
- customer assistance clerk
- claims adjuster, and
- policy writer.

When the insurance industry ran on paper, it required file clerks to categorize the paper and messengers to move it among offices. Computerization virtually eliminated these jobs and combined the other three jobs. The customer assistance clerk had been essentially an order-taker; he or she answered the telephone, recorded what the customer needed, and routed that request to either a claims adjuster or to the policy writing group. With the advent of computers, the person who now answers the telephone is expected to complete these routine and not-so-routine interactions during one call. He or she works with a computer terminal and software that give him or her access to claims settlement files and to information about the nature of and rates for insurance coverage that the company offers. The computerization of policy writing rules and the printing speed of laser printers allow—and therefore require—the person to customize insurance contracts.

Today the person who performs this combined job is often called a claims adjuster. However, the skills required to perform this job are greater than those associated with any one of the original five jobs. The job occupant is less an order taker than an advisory analyst. He or she has to have good communication skills and be able to help diagnose the customer's needs through an analytic series of questions and answers. The person needs less specific and splintered knowledge and more systematic and abstract knowledge—the ability to understand multiple arrays of information, the rules governing them, and the relationships between arrays. He or she also needs to be able to frame answers to less standardized requests. Insurance companies used to hire high school dropouts or graduates for the five jobs. They now hire individuals with at least two years of college for the restructured claims adjuster job.

This case provides us with a warning about using occupational projections to infer future skill requirements. The name of a job can remain the same—as has the job of claims adjuster—but change dramatically in content and skill requirements.
The banking industry has been subject to three forces:

- increased international competition;
- increased domestic competition as the result of deregulation; and
- computerization.

Before computerization and de-regulation, banking involved few services or "products", and its mode of operation was a mass production mode—the rapid and accurate processing of millions of a small number of different types of transactions. During this era, top bank management consisted of college graduate generalists; the bank branches operated with a branch manager, assistant manager, head teller, tellers, and clerk/typists who did the routine paperwork for activities such as opening accounts. The tellers were usually high school graduates with traditional accounting skills, and promotions to low level management came from this group.

In the last decade, bank de-regulation has generated an explosion of services—from three or four to as many as 35, as banks compete for market shares. This explosion drives banks toward a market and customer orientation—toward customizing. In other words, it has forced banks out of a mass production mode toward a flexible production strategy, with consequent changes in skill requirements and staffing patterns.

Today the teller job is highly routinized, simply a human alternative for customers who do not like to use automated banking services. The desk jobs, previously the clerk/typist jobs, are still the jobs that deal with customers' service needs. However, individuals in these jobs now must be able to analyze a much wider array of the customer's financial needs, understand the array of the bank's financial services, and, if possible, produce a match—in other words, make a sale. Banks find that they can hire part-time and less educated help for the highly routinized teller jobs, but must hire college graduates for what used to be the clerk/typist jobs. Banks find that they need people who can analyze and deal systematically with an array of data. Promotions now come out of the desk jobs, not the teller jobs—in fact, tellers are essentially isolated from promotion opportunities in the bank. At the same time, the skill requirements at the top of the bank have also changed. Banks now need, in fact, college graduate generalists, but highly trained specialists—financial analysts and computer systems analysts, for example.

The textile industry competes on the basis of cost, quality, service, and product choice. During most of the post-war era, the U.S. textile industry focused on cost-cutting through the rationalization of the production of long runs of fabric. In the face of aggressive foreign...
competition, U.S. firms entered a new wave of technological modernization and automation, the industry moving from fourth-eighth out of sixty-one manufacturing industries in 1960 in average age of equipment to second by 1980.

However, developments in textile markets—indeed, in markets for almost all goods and services (recall banking)—have put limits on the industry's ability to use a mass production strategy. The greater segmentation of markets and the faster changing of styles have shrunk the market for large production runs of identical fabric. Even such a mass-produced commodity as denim now comes in dozens of weaves, colors, and finishes. Faster changing seasons have also had their effect. In apparel, styles become obsolete much more rapidly. Thus, apparel makers are less likely to order large quantities of the same material. The changes in styles are reflected in increases in stock-outs and markdowns. Forced markdowns, which are necessary when retailers fail to sell items during the appropriate season, have increased by 50 percent during the last decade. Industry estimates suggest that losses from stock-outs, which occur when retailers run out of hot items, amount to 8 percent of sales.

Among U.S. textile producers it has now become an article of faith that the textile industry must become more "market driven"—that is, the industry must be capable of producing shorter runs of many more styles. Managers of every mill studied reported increases in the number of styles produced—for example, from three to thirty-five in two years; from one hundred to three hundred in five years.

In other words, although there will always be a market for basic textiles produced in long runs, the industry as a whole must also be able to produce a wider variety of goods, on shorter notice, and at a reasonable cost—in other words, must increase flexible production. The development of flexibility in production is fundamentally a process of reducing the cost differential between standardized goods produced in long runs and a more varied output produced in smaller batches. Custom-made products could always be acquired at a price. Ever since Henry Ford mobilized the labor of low skilled factory workers through the assembly line to replace teams of skilled workers, technological innovations, at least in the United States, have almost always been synonymous with specialization of labor and mass production. Flexibility has usually been achieved by reversing Ford's process, moving back up the range of skill levels, shifting from specialized to general purpose tools and machines, and reorganizing how people get the work done.
What has happened to skill requirements in the textile industry? In this industry most jobs are machine operator jobs (lower skilled) or machine maintenance jobs (higher skilled). The ratio between the two is changing, from 4.2 operators to one technician in 1975 to 3.5 operators to one technician in 1985. For the operator jobs, technological innovation means that each particular task is easier. However, this narrow conception of skills is misleading; many operator jobs today are more demanding. First, modern looms, winders, open-ended spinning frames, and programmable knitters are much more expensive than the equipment they replaced. Operators must now try to prevent machine stoppages—"down-time" is now much more costly. This requires a broader understanding of the production process within which the operator works. It is no longer enough for individuals just to understand the particular task to which they are assigned.

Second, because of the increase in the number of styles produced by each mill, many operators are likely to be engaged in a greater variety of activities and in more of the activities necessary for changing styles. Their jobs are less well-defined than they used to be, and the tempo of production places a greater burden on operators to function within this uncertainty. As one personnel manager for a plant noted, "Our operations change too fast to be able to spell everything out. Operators have to be better able to figure things out for themselves."

Third, textile firms are also becoming more actively involved with working jointly with clients in developing new styles and fabrics. So far, at least in the firms visited for this project, this strategy does not seem to have had much of an impact on the shop floor, but forward-looking firms are starting to consider how the operators could contribute. The same could be said for ongoing technological innovations. Many of the most important changes have been small adaptations of existing machines, and operators could make important contributions to these efforts.

The higher level positions in the mills also need greater skills and educational preparation than they did in the past. In the textile industry, the skilled occupations involve machine repair. In the past, textile machines were intricate, but the mechanical principles underlying their construction were not complicated. How these machines operated could be visually observed, and experience that many workers had in their own homes working on automobiles or farm machinery was relevant to fixing them. Loom fixers and mechanics in spinning and knitting mills were almost always promoted from the ranks of machine operators. Working around the machines had already given them a feel for what was necessary, and the additional training needed to become a fixer was acquired on the job with little or no formal instruction.
This situation has now changed. Most machines now have microprocessors and other electronic components, as well as sophisticated sensors and yarn splicers and knotters. This equipment is well beyond the experience that most workers get in homes and on farms. Since important machine components are not visually observable, operating the machines does not provide much of a sense of what it takes to repair and maintain them. In other words, to understand, diagnose, and fix the new machines, technicians have to be able to represent their structures and processes symbolically in their heads. To do this they have to be able to follow complicated manuals, diagrams, and updates provided by the manufacturers. Literacy requirements have accordingly shot up. The mills can no longer fill many technician slots from their traditionally semi-literate operator labor pool. They are adjusting to the problem in different ways. Some, reluctant to disrupt their internal promotion patterns, are paying for employees’ literacy training. Others are violating these promotion patterns by hiring better educated labor in lateral moves into the technician jobs. This response strands operators, just as tellers who do not obtain more education are cut off from the promotion opportunities of the bank. However, whatever the mill response, states in which the mills are concentrated, such as the Carolinas, suddenly have mill owners’ support for higher quality elementary and secondary education.

In sum: In both the service and manufacturing industries we are moving from a production-oriented to a product-oriented and customer-oriented world, from mass production to flexible production. In all of the industries studied, Bailey, Noyelle, and other researchers have found that increased competition, volatility, and uncertainty in the market have created strong pressures on all levels of the production process to be more responsive to changes in tastes and demand—to "customized consumption" (Noyelle, 1987). Indeed, it has become increasingly difficult to separate the marketing and product development functions from the production process itself, and this has profoundly disrupted the traditional production technologies.

Industry case studies clearly settle the debate over “upskilling” and “downskilling”—in other words, a debate over whether computerization increases or decreases the skill demands of jobs. Computerization usually—not always—increases skill requirements for two reasons. First, the most efficient use of the technology encourages the reintegration of tasks once distributed among several

4 When computerized equipment is first introduced into a firm, it can sometimes be used initially in a way that reduces the total skill requirements of the job. However, when this occurs, the effect seems short-lived.
echelons of workers. And second, as intelligent machines take over processing functions, workers are left with diagnostic and problem-solving functions (Noyelle, 1987).

Although the ability to work on new machines is important, many of the most important changes cannot be understood as quantitative. Asking whether the work requires "more" or "less" skill inevitably focuses the analysis on limited and often secondary aspects of the transformation underway. Productivity gains are coming as much from changing the way that workers work together, their orientation towards their work, and the nature of their responsibility for and involvement in the firm's changing strategy and orientation towards the market as from applications of new technology. While many jobs used to be based on the repetition of a particular set of well-defined tasks, jobs now are more likely to demand varied and unpredictable responses to a variety of stimuli and information. Employment now involves interaction in constantly changing ways with production technology. The spread of micro-electronics and related technologies does not just result in new machines that must be mastered, but in a much deeper change in the way production is organized and the ways that workers relate to the production process and to each other.

RECONCILING OCCUPATIONAL COUNTS AND INDUSTRY CASE STUDY RESULTS

Reconciling these two data sources is theoretically possible, but in practice very difficult. Bailey (1988) has begun to try to create an approximate cross-walk between occupational counts and industry case studies.

Using the 1980 decennial census categories, he first split the occupational structure into high and low skill occupations. "High skill" jobs were classified as executive/administrative/managerial, professional, technical and related support, precision production, and craft and repair workers; "low skill", as salesworkers, administrative support (including clerical), service workers, private household workers, operatives, fabricators, and laborers. He then disaggregated the low skill occupations into two categories: "middle skill" and "low skill". He defined middle skill jobs as ones that at least potentially could be involved in the transformations documented in industry case studies. He defined low skill jobs as ones unlikely to be reorganized or transformed significantly. Thus, fast food counter workers were left in the low skill group; operators in manufacturing plants or clerical workers who manage information were classified in the "middle skill" group.
In terms of 1986 employment numbers, this exercise fairly evenly split those employed in the original low skill group into middle and low skill jobs. Thus, for 1986, 39.8 percent were employed in high skill jobs; 29.5 percent, in middle skill jobs; and 30.7 percent, in low skill jobs.
From the perspective of education and the economy, the American elementary/secondary system presents a picture of disconnections. Four important ones are: (1) mismatches between school and non-school settings in the structure of knowledge used and the social structure of its use; (2) differences between employers' and educators' perceptions of our human capital problems; (3) problems with the signalling system between school and work settings; and (4) organizational differences between schools and energetic industries and successful companies in businesses similar to that of schools (knowledge and communication). This section of the paper concentrates on the first of these four, the other three being only briefly discussed.

WHAT DO WE NEED TO TEACH? TO WHOM? WHEN? HOW?

As the educational implications of the restructuring America's economy become clearer, the incomplete--sometimes perverse--nature of current educational reforms emerges. Those reforms targeted at improving students' academic skills are clearly appropriate--up to a point, academic and work-related curricula should be the same. However, documented changes in the nature and structure of work and advances in cognitive science argue for a second wave of reform that involves fundamental changes in what we teach, to whom we teach it, when we teach it, and how we teach it. In other contexts I have talked about this second wave of reform as "shadows in the wings", for the simple reason that--to shift metaphors--this airplane is not yet ready to fly. The issues raised here pose formidable research, development, and evaluation challenges in areas such as curriculum (and associated textbook or software materials), pedagogy, the preparation of teachers, concepts and measures of accountability, and school structure.

What Do Students Need to Learn?

What do industry studies imply about the core skills that students need to learn? Economic changes certainly imply the need for good academic skills. Perhaps the most profound educational implication of computers in the workplace is that they force a replacement of observational learning with learning acquired primarily through symbols, whether verbal or mathematical (e.g., Scribner and Cole, 1973; Bailey, 1988).
The textile case yielded one example, technicians now having to represent the structures and processes of their machines symbolically in their heads. Another example lies in machining, an occupation that employs about 2 million or two percent of the nation's workforce. In traditional machining, responsibility for part dimensions and tolerances, metal properties, and tool use is literally in the hands of the machinists whose knowledge of part geometry, metallurgy, output requirements, and tool functioning is extensive. Computerized numerical control (CNC) machines radically alter these processes of set-up, control, and operation, a decisive transformation being that they replace manual set-up and control with set-up by symbolic command. The symbol command system is a computer program which guides the movement of the machine parts and its operational tools through electronic impulse. This program does not mimic the manual movements of the machinist, but describes movements in a Cartesian space in which the point of origin is the machine itself. Whereas the machinist working on a traditional machine reads an engineer's blueprint and then manually adjust dials and levers to set up a particular operation, a machinist on the CNC machine reads the blueprint and then creates commands in a programming language to govern the machine's operations (Scribner, 1988b).

A third example lies in a family of technological systems known as manufacturing resource planning (MRP), which is carrying much of the burden of positioning American industries to compete. Thus, their effective integration into the workplace becomes critical. The MRP is a computer-based integrated information system that coordinates data about all aspects of a company's operations. It uses computer programs organized around functional modules such as inventory management, product control, and costing. MRP systems support such manufacturing innovations as "just-in-time" inventory and small batch customized production. Although initially restricted to large corporations, MRP is now spreading through middle and small-size firms in all branches of production.

From the perspective of academic skills, what is important about the MRP is that it is a content-free, formal, closed conceptual system that workers at all skill levels within the firm have to use. As such, it has many of the characteristics of "school" subjects, such as mathematics or grammar, and departs in significant ways from the traditional systems of knowledge that reflect accumulated managerial and production wisdom (Scribner, 1988a).

Changes in the economy, especially flexible production and changes in the time frame for production, combine to increase the need for higher order cognitive thinking, even for jobs that we
usually conceive of as lower skill. Time has become an important competitive weapon (Stalk, 1988; Bailey, 1989), companies that can respond to product or service demand quickly having a competitive edge. If the variation in product and service associated with flexible production multiplies the number of decisions that must be made, the time element makes it difficult to buck these decisions up and back down supervisory lines. Decisions are necessarily having to be made more frequently on the shop floor. Thus, work increasingly requires employees both in higher and lower skill jobs to deal with uncertainty, the unfamiliar, and discontinuity; to understand the firm’s market environment and the organizational context in which the job is embedded in order to make decisions that are increasingly being delegated to the shop floor; to understand their technologies well enough to generate initial hypotheses about the source of breakdown for maintenance technicians so as to minimize delays in the production process. In sum, there is a stunning parallel between the cognitive requirements of today’s workplace and the defining characteristics of higher order thinking, and this parallel affects workers in lower as well as higher skill jobs.

The forces just described are also flattening out company hierarchies, eliminating supervisory and middle management positions. Supervisory functions are being increasingly delegated to the worker and/or to the team, requiring of previously supervised workers, not only the ability to make the decisions previously delegated to supervisors, but also the ability to self-regulate or self-direct.

Changes in the economy imply the need to know how to learn—in other words, how to organize social and technological resources to transform what is unfamiliar into the mastered, a process that requires knowing how to identify the limits of one’s own knowledge, how to ask germane questions, how to penetrate poor documentation, and how to identify sources of information. The volatility of markets produces a volatility in job tasks—witness the profound transformation of the claims adjuster job, the teller job, the job of operator in textile mills, a story that is repeated in other industries, such as electronics manufacturing, apparel manufacturing, retail sales, and business services. As Noyelle (1987) observes, “We are moving into an era in which the

Resnick (1987a) defines higher order cognitive thinking as: being nonalgorithmic—the path of action is not fully specified in advance; being complex—the total path is not mentally “visible” from any single vantage point; often yielding multiple solutions, each with costs and benefits, rather than unique solutions; involving nuanced judgment and interpretation; requiring the application of multiple, sometimes conflicting, criteria; involving uncertainty—not everything bearing on the task is known; involving self-regulation of the thinking process, not regulation by others; involving imposing meaning, finding structure in apparent disorder; and being effortful (p.3).
traditional separation between working and learning is disappearing, with learning becoming increasingly integrated into a person's work life."

Finally, changes in the economy require teamwork abilities and the ability to resolve conflicts. Under mass production, employees, especially those in factory floor and "back office" jobs, often worked alone, albeit in physical proximity to each other. As job responsibilities broaden and increasingly intermesh, workers have to function collaboratively--and classic research in social psychology shows that individual competence does not generalize to team competence. For example, pilot error accounts for an increasing percent of fatal airline crashes worldwide, and many analyses have pinpointed poor team performance as an important component of that error.⁶

As the labor force becomes increasingly multicultural and job content changes rapidly and in confusing ways, communication problems also increase between workers, generating the need for interpersonal communication and conflict resolution skills. These problems self-evidently reduce productivity; more subtly, they interfere with an important social mechanism for learning on the job--peer help (Scribner, personal communication).

Who Should Learn?

The skills just described are generic in that, in general, they cut across industries and occupations. Thus, everyone needs to learn them, not just some people. This does not mean that everyone needs to learn them in the same way. It does mean that, for these skills, our educational objectives for everyone need to be roughly the same.

This idea has been most problematic for higher order cognitive thinking. Like other industrialized nations, the United States has harbored two quite distinct educational traditions--one concerned with elite education, the other with mass education. As Resnick (1987a) points out, these traditions conceived of schooling differently, had different clienteles, and held different goals

---

⁶ As a recent New York Times article on cockpit error observed, "Two- and three-man airline flight crews...often don't work well together." In one example, the article noted a sharply critical FAA report on a major airline that had recently experienced several serious near accidents: "There is no evidence that Delta crews are (on the whole) either unprofessional or purposefully negligent...Rather...crew members are frequently acting as individuals rather than as members of a smoothly functioning team." (William Stockton, "Trouble in the Cockpit," New York Times Magazine, March 27, 1988, pp.38-40, 60, 63, 66-67.)
for their students. Thus, although "...it is not new to include thinking, problem solving, and reasoning in someone's curriculum, it is new to include it in everyone's curriculum." (p.7) This becomes one of the challenges facing compulsory American schooling- to make thinking and problem solving a regular part of a school program for all of the population, even rural populations, even minorities, even non-English speakers, even the poor--to assume that all individuals, not just an elite, can become competent thinkers.

When Should They Learn?

Early. We usually think about preparing students for the labor market during high school. However, we are talking generic work-related skills here, not occupationally-specific ones, for these, high school is too late. It is implausible to think that high school sophomores educated in a passive learning regime for the first nine years of their schooling can learn to self-regulate their learning in the tenth year. We can make analogous arguments about learning how to learn, about learning how to function effectively in teams, or about learning how to resolve conflicts.

For example, as Resnick (1987a) notes, the most important single message of modern research on the nature of thinking is that the kinds of activities traditionally associated with thinking are not limited to advanced levels of development.

"[T]hese activities are an intimate part of even elementary learning... In fact, the term "higher order" skills is probably itself fundamentally misleading, for it suggests that another set of skills, presumably called "lower order," needs to come first. This assumption ....[i]mplicitly ....justifies long years of drill on the "basics" before thinking and problem solving are demanded....[R]esearch suggests that failure to cultivate aspects of [higher order cognitive] thinking may be the source of major learning difficulties even in elementary school. (p.8)

How Should These Skills be Taught?

From the perspective of schooling, the "whats" that should be taught do not necessarily translate into courses. They may have more implications for how material is presented than with what is presented. I am not an educator, but my hunch is that transforming the "how" will yield as much payoff as transforming the content of courses. The "how" strikes me as the toughest
challenge ahead for the educational research, policy, and practitioner communities. We know how to implement some of these ideas, although they are not commonly implemented—for example, how to use team and collaborative contexts for teaching and learning (e.g., Slavin, et al., 1985). However, other ideas, such as finding ways to teach content-free symbol systems within meaningful contexts, are still on the drawing boards.

This section relies heavily on pioneering work in cognitive psychology, cognitive science, and cognitive anthropology on non-school learning and its implications for how we structure formal learning. At the heart of this research is the presumption that intelligence and expertise are built out of interaction with the environment, not in isolation from it. This work implicitly challenges our traditional distinctions between "head" and "hand", between "academic" and "vocational" education, between "education" and "training", and between school-based and work-based learning.

Coming out of this stream of research is a much clearer sense of how school-based learning and non-school learning differ from each other. In a bravura synthesis of the work in this field, Lauren Resnick (1987b) delineates four broad contrasts between in-school and out-of-school mental activity that raise profound questions about the utility and effectiveness of schooling for all non-school activity, including work of all types and for all learners, whether at-risk or not-at-risk. They stimulate us to rethink—radically rethink—how we teach in school.

The first contrast is between individual cognition in school versus shared cognition outside. Although group activities occur in school, students are ultimately judged on what they can do by themselves. Much of the core activity of the school—homework or in-class exercises—is designed as individual work. For the most part, students fail or succeed at a task independently of what other students do (aside from grading on a curve). By contrast, a great deal of activity outside of school is socially shared: work, personal life, and recreation take place in social systems in which what one person is able to do depends fundamentally on what others do and in which "successful" functioning depends upon the mesh of several individuals' mental and physical performances. This contrast argues for much more team and co-operative learning, the student being held accountable for both individual and team performance.

---

7 This section relies especially on the work of Sylvia Scribner (e.g., 1974, 1981, 1984, 1986), who helped launch this research direction in the early 1970s and now pursues it in the context of a research program for the National Center on Education and Employment.
The second contrast is between pure mentation in school versus tool manipulation. In school, the greatest premium is placed on "pure thought" activities—what individuals can do without dependence on "external crutches"—whether books and notes, calculators, or other complex instruments. While some of these tools may be used, even encouraged, during "learning", they are almost always absent during tests of performance. Thus, school becomes an institution that values thought that is independent of the physical and cognitive tools that are a vital and defining part of virtually all practical activity. Out of school, by contrast, most mental activities are intimately involved with and shaped by the physical and intellectual tools available, and the criteria for competence include the expert use of tools.

This contrast suggests that student performance be judged relative to the student's abilities to make effective use of tools, not independent of them.

The third contrast is between symbol manipulation in school versus reasoning about things and situations that make sense to people outside of school. School learning is mostly symbol-based, to such an extent that connections to the things being symbolized are often lost. Outside of school, actions are intimately connected with things and events, and because one is engaged with things and situations that make sense to people, people do not fall into the trap of forgetting what their calculations or their reasoning is about. Their mental activities make sense in terms of their immediate effects, and their actions are grounded in the logic of immediate situations. In school, however, there is a very large tendency for symbolic activities to become detached from any meaningful context. School learning then becomes a matter of learning rules and saying or writing things according to the rules. This focus on symbols detached from their referents can create difficulties even for school learning itself. For example, it can lead to systematic and persistent arithmetic errors of a kind that seem virtually absent in practical arithmetic.

This tendency for school knowledge to be disconnected from real life is not limited to mathematics—although it is particularly easy to draw clear examples from mathematics learning. The process of schooling seems to encourage the idea that the "game of school" is to learn symbolic rules of various kinds, that there is not supposed to be much continuity between what one knows outside school and what one learns in school. There is growing evidence, then, that not only may schooling not contribute in a direct and obvious way to performance outside school, but also that knowledge acquired outside school is not always used to support in-school learning. Schooling is coming to look increasingly isolated from the rest of what we do.
This contrast between in-school and out-of-school mental activity suggests that school-based learning is not strongly related to out-of-school activity for any individual. However, the disjuncture between school and non-school settings would seem to be particularly detrimental for at-risk learners. We frequently assume that at-risk and not-at-risk populations differ in how they learn most effectively. Although it is an empirical question, variations in learning performances may attest partly to individual differences in the willingness to tolerate or in the ability to make sense out of a school-based or school-like experience that is relatively isolated from non-school experience.

Howard Gardner, author of *Frames of Mind*, noted in an interview with the *New York Times* that "We subject everyone to an education where, if you succeed, you will be best suited to be a college professor." If a student cannot envision participating in adult futures that are highly academic in content, two things happen. First, the individual cannot look to the school for his or her sense of ultimate place and trajectory—he or she must look elsewhere, and the school, in a basic sense, has lost that individual. And second, instruction in academic skills will become "irrelevant" to the person—or, in decision theory terms, without "utility". Decision theory presumes and countless studies show that individuals—children and adults, at-risk and not-at-risk, do things that have utility for them—that connect to what they want and where they expect to be going. From this perspective, traditional schools and schooling may be creating their own problems in reaching their own learning goals and helping to produce the "at-risk" learner.

This contrast, then, suggests instruction in the context of what makes sense to people. Especially for the academically less inclined, schools try to introduce "things and situations that make sense to people" either by putting the student in vocational education or by linking schooling to outside jobs, as in organized part-time work and part-time school ventures. There can be good reasons for doing either of these things, but not as a way of compensating for the often impoverished learning contexts of academic courses.

---

1 I define at-risk learners as those who do not perform well in traditional schools or training programs arranged like traditional schools, either because they are not very good at standard academic subjects or—and this is an exceedingly important "or"—because they do not want to be or do not see the point of being good at them. It is important to note that although at-risk learners come disproportionately from poor families, almost every family either has a child of this sort or friends with a child of this sort.

If earlier I argued that all students, not just the academically inclined, need to master higher order cognitive skills, now I am arguing that all students, not just the academically disinclined, need contextualized learning. I am talking about "vitalizing," not "vocationalizing," schooling. I think that working out what this means, how to do it, understanding how individual schools and teachers are already approximating it, represents one of the most exciting challenges ahead of us.

We are not starting from ground zero. The best teachers in our best schools already instinctively "vitalize" even the most "academic" of subjects, such as the fifth grade teacher in a McLean, Virginia school who runs a simulation of a small economy in the classroom to give her students experience with fundamental economic concepts such as competition, monopolies, bankruptcy, rents, or taxation. Reading a discussion of markets, sellers, and competition in a textbook means much more to the student who, just the previous day, waged a price war with a seatmate to corner the market on hot dog sales. "Taxation" means much more when another seatmate who represented government has bought the classroom door, forcing everyone to pay taxes every time they need to go in or out of the room—for example, to get water to boil their hot dogs.

Our vocational-technical, theme, or magnet schools hold important clues—many of these explicitly organize around meaningful activities that real people do in the real world, such as business careers, the performing arts, or science.

Another clue lies in the new information technologies. As the Office of Technology Assessment (1988) notes:

[With the new information technologies, it] may soon be possible to manipulate images and sounds as easily as the printed word. This means being able to break some of the barriers of abstraction that separate "scholarship" from the world people see, hear, and understand....

These innovations can radically change the performance and structure of the educational system. The new generation of technologies...are qualitatively different from the film strips, television shows, and other techniques that have been used in limited ways to augment instruction in the past. They represent something fundamentally new....

24
There is also much to be learned about the role that games play in learning. In traditional societies, where children could see much of the work done by adults, play mimicked life. Skills learned in play...translated gracefully into the practical world....In principle, simulations can mix work with instruction and instruction with play in entirely new ways...After centuries without practical alternatives, people have become accustomed to think about communication in terms of words and books. New visual technologies, however, can provide a means of communication that is in many areas more powerful than language... It is obvious that words in a geography text are a poor substitute for a visit to Brazil....This power to imitate reality can have a helpful role in education....

Pictures are a "second class" resource in any library. Technology now emerging can change this status by making it nearly as easy to retrieve, make, and modify images as words. (pp.242-245)

Many of us, myself included, glaze when we hear about "new information technologies." We have lived through generations of "silver bullet" computer-based instructional programs that whizzed by, only to bury themselves in the wall. We have seen the numbing, pedestrian ways in which the schools manage to use computers. However, I think that the OTA is right this time about the potential. The problem is getting from here to there. A sustained investment will be required to develop these technologies for pedagogic purposes. A major restructuring of the schools will be required to integrate these technologies into schooling. The information technologies do not parachute successfully into any organization, whether firm or school. Their effective integration into the organization always requires organizational restructuring.

The fourth contrast is between generalized learning in school versus situation-specific competencies outside. In school we aim for general, widely usable skills and theoretical principles. Indeed, the major claim for school-type instruction is, usually, its generality and power of transfer. Yet outside, to be truly skillful, people must develop situation-specific forms of competence. The "packages" of knowledge and skill that schools provide seem unlikely to map directly onto the clusters of knowledge that students will actually use in their work. This seems true even for highly technical knowledge, where schooling is intended to provide direct professional training. Studies of expert radiologists, electronic trouble-shooters, and lawyers all reveal a surprising lack of transfer of
theoretical principles, processes, or skills learned in school to professional practice. For example, Morris and Rouse (1985) found that extensive training in electronics and troubleshooting theories provided very little knowledge and fewer skills directly applicable to performing electronic troubleshooting. All of this points toward the possibility that very little can be transported directly from school to out-of-school use. Both the structure of the knowledge used and the social structure of its use may be more fundamentally mismatched than we had previously thought.

This contrast seems to me to pose a challenge to the research community before it does to the schools. Resnick notes that situation-specific learning is limiting. Studies have shown that when the situation is changed from the familiar—for example, by asking bookies in Brazil to accept unusual bets that cannot be constructed from their tables (Schliemann and Acioly, in press)—unschooled individuals have a great deal of difficulty and may fail entirely. Schooled people do better, although—and this is an important point—they rarely use the supposedly general algorithms that they have been taught in school and instead invent new solutions specifically appropriate to the situation at hand. However, what do they invent? How and why? Expert radiologists interpret X-rays using mental processes different from those taught in medical courses, textbooks, and even hospital teaching rounds (Lesgold, et al., in press). What processes do experts use? How did they learn them? Can they be taught? How? Do they bridge the worlds of the specific and the general? These studies raise questions that seem at the heart of the dilemma for schools.

A contrast that Resnick does not identify is mastery of and retrieval from a defined body of structured knowledge in school versus the mastery of uncodified, emergent and evolving systems outside of school. Increasingly, non-school settings demand that we cope with the unprecedented and with information that is neither limited nor orderly. This reality puts a premium on the ability to create structure—on knowing how to learn—and on skills at locating and organizing

---

10. Scribner's work centers on this problem. In studies of workers in jobs that vary substantially in their symbolic and physical requirements, she found a set of attributes common to expert performance in all of the jobs: (1) flexibility in modes of solution to formally identical problems; (2) creative shortcuts that simplify and economize on mental and physical effort ("least effort" basis for organizing work); and (3) fine-tuning to the environment and effective utilization of setting-specific knowledge. She is now trying to understand how experts create expertise—for example, how less skilled workers learn manufacturing resource planning (MRP) systems, a computer integrated information system analogous to the closed, logical systems of school, such as grammar or mathematics. Less skilled workers often did not handle closed systems well when they were in school. How do they learn the MRP? What facilitates the learning? Do the processes of moving from novice to expert in the plant have implications for teaching closed systems in school?
social and technological resources to expedite learning. This contrast suggests that school should include learning situations where students are evaluated, not for having the "right" answer, but for figuring out how to obtain and structure the knowledge needed to create an orderly basis for action.

**Vocabulary and Accountability**

This previous discussion underlines the need for a new vocabulary. I used the term "academic" skills in the discussion of generic skills, but this term connotes decontextualized symbols and symbolic rules. "Basic" skills is worse, connoting workbooks and routine drill. "Contextualizing" connotes "vocationalizing," which is often used to imply the headless hand. "Higher order" cognitive thinking implies "lower order" cognitive thinking. We need a new language for thinking and talking about changes in who gets taught what, when, and how.

This section also implies rethought measures of school accountability. For example, the methods now being used to hold schools accountable--student scores on multiple choice tests of basic skills--militate against structuring the learning of subject matter to encourage the development of higher order cognitive thinking. As we know, we usually get the performance we test for. Multiple choice tests, although cheap to score, implicitly presume that "competence" is the ability to retrieve the "right" facts from a cognitive warehouse of facts, encouraging routine drill in bits and pieces. By definition, there are no right or wrong answers in the higher order cognitive world--only better and worse thinking.

**EMPLOYERS AND EDUCATORS: ARE THEY LOOKING THROUGH THE SAME GLASSES?**

Do economic and educational actors have similar views of our human capital problems? Is there a common ground for talking about solutions? A shared perspective is not a sufficient, but would seem a necessary, condition for reforming the schools.

In 1984 the Gallup Poll asked public school teachers and the general public to rate the importance of eight alternative goals of education on a scale of one to ten. Of these goals, the greatest differences emerged for the economic objectives of education, the teachers not endorsing an economic role for education. Whereas 56 percent of the public gave the highest rating to the goal, "To develop an understanding about different kinds of jobs and careers, including their requirements..."
and rewards," only 20 percent of the teachers rated this as very important. Similarly, 46 percent of
the public, but only 6 percent of the teachers, gave the highest rating to the goal, "To help students
get good/high-paying jobs." (Phi Delta Kappan, 1985)

Other, albeit fragmentary, data indicate a disturbing difference between employers' and
educators' views of schooling success.11 We find that educators and employers may use the same
words in describing what skills employers need and students need to be taught.12 However,
although there is usually some variance in each group—primarily among teachers, in general
employers and educators differ in their assessment of whether or not the schools are
successfully meeting these needs. Employers, citing statistics on the skills of those they see in the
hiring process, consistently identify a major gap between the skills that they get and those that they
need.13 Educators, on the other hand, often do not see much, if any, gap; they feel that the schools
are doing quite well—and are doing better—at meeting employers' needs.

Employers chronically and routinely complain about the quality of labor available to them
(Hollister, 1984). However, these complaints seem more valid today. First, we see employers
acting on their stated concerns, as evidenced by their increasingly aggressive efforts to improve the
schools.14 Second, the industry case studies and cognitive studies of learning in non-school settings

---

11 I would not go to court on the basis of these data, but they do square with my
observations in two-and-a-half years of meetings, conferences, seminars, and work sessions with
educators and employers. They also square with Kearns' mail response to his speeches about the
schools. See the simultaneously hilarious and sad chapter, "The Postman Rings and Rings," in
Kearns and Doyle (1988).

12 I deliberately use the term "same words" because it is by no means clear that the words
mean the same thing to different employers and educators or that employers or educators know
what they mean by the words. Surveys of employers about their skill needs are fraught with these
problems (Natriello, 1988).

13 For example, New York Telephone Company reports that only 20 percent of applicants who
take the test for the position of telephone operator pass. Michigan Bell Telephone Company reports
that only two out of 15 applicants for clerical positions pass both the written and typing tests. The
Campbell-Mithun Company of Minnesota finds applicants generally below minimum standards in
reading and writing: they have to interview 20 applicants to hire one secretary and 10 applicants to
hire one supply or mail clerk. The Motorola Company of Illinois reports that only 20 percent of
their applicants can pass a seventh grade English comprehension test or fifth grade mathematics test.

14 These efforts include well-known partnership arrangements, such as the Boston Compact.
However, these are starting to give way to or be supplemented by political action—as in the
California Business Roundtable's activities or the corporate takeover of a Chicago school.
independently document mismatches between school and non-school settings in the structure of knowledge used and the social structure of its use. In fact, employers' concerns seem consistent with the results of the shocking NAEP literacy study of young adults 21 to 25 years old in 1986 (Kirsch and Jungeblut, 1986; Venezky, Kaestle, and Sum, 1987), a study that assessed individuals' abilities to handle the verbal, tabular, graphic, and numerical materials and problems encountered routinely in non-school settings. Educators' views, on the other hand, seem to reflect trends in student scores on the various achievement and competency tests that are administered routinely within schools but are not systematically benchmarked against non-school performance demands.15

THE SIGNALLING SYSTEM BETWEEN SCHOOLS AND LABOR MARKETS

Information theorists and economists talk about "signalling" in markets—things or events that function as indicators or signs of something else. For example, rapidly increasing wages for recent engineering graduates signals a labor shortage of young engineers. Studies of markets indicate that changes in wage levels function to equilibrate labor supply and demand—in other words, labor responds to these signals. A third disjuncture between schools and labor markets lies in the lack of such signalling—or reference—systems between high schools and employers comparable to that which exists between high schools and colleges or between colleges and graduate schools. These systems convey useful information to those selecting among students. They also clarify for students (and their teachers) the selection criteria against which school performances and behaviors are judged by those institutions into which students will funnel.16

I wrote about the absence of such systems between high schools and employers in another Aspen Institute paper almost a decade ago (Berryman, 1980), and John Bishop has examined this question in the subsequent years (e.g., Bishop, 1987). As Bishop observes, non-college youth receive economic benefits for staying in high school, but not for what they do while they are in

---

15 In the NAEP literacy study, performance increased when the problems were presented in forms familiar from school. For example, 80 percent of white and 40 percent of black 21 to 25 year olds were able to do simple sums when they had the form of school arithmetic tests. Only about 30 percent of the whites and two percent of the blacks succeeded in solving problems that required taking a simple percentage. Very few people could translate a practical problem into quantitative terms.

16 Schools have a chance to observe—and students to manifest—several behaviors relevant to employers, such as academic performance, attendance, completing work assignments, or the harmony and effectiveness of relationships with supervisors and peers.
school, whether measured by grades, courses taken, attendance, or teacher character references. It also reports a study of the experience of a major Columbus, Ohio, employer, Nationwide Insurance, that tried to set up a signalling system comparable to the transcript/teacher reference system that operates for college-bound youth. Nationwide obtained written permission from each job applicant to obtain their high school records. They sent over 1,200 such signed requests to high schools in 1982 and received only 93 responses. Those responses that were received almost always took more than two weeks. Since a 1982 employer survey shows that 83.5 percent of all jobs are filled in less than a month and 65 percent in less than two weeks, response time lags either jeopardize candidates' chances of getting jobs, or employers have to proceed without relevant information on candidates.

THE STRUCTURE OF INDUSTRIES AND THE RESTRUCTURING OF AMERICAN COMPANIES: ANY LESSONS FOR RESTRUCTURING SCHOOLS?

Usually policymakers, researchers, and the public treat public elementary and secondary education as a sui generis institution, effectively isolating our thinking about it from our theoretical and empirical knowledge about the nature and structure of and change in other economic institutions. In fact, public elementary and secondary education is a service industry, whose units (school districts and schools) are structurally analogous to firms and establishments. Can we learn anything about restructuring the public educational system: (1) by comparing its organization to that of other industries; and (2) by examining the experiences of American companies that have had to restructure to stay competitive?

The Structure of Industries

In its report on the American economy, the OTA introduces the concepts of scale and scope as key to describing how business networks are owned and managed, "scale" referring to the size and "scope" to the product mix of their operations. The OTA argues that different patterns of scale and scope "shape the ability of a business to compete in international markets, dictate the quality and stability of the jobs offered, and determine the success with which new technologies can be exploited." (p.177) The questions that issues of scale and scope raise include: (1) which structures are more aggressive in their pursuit of invention and innovation, and which will be more likely to adopt innovations when they occur? (2) which will be more or less likely to match resources efficiently to demand? (3) which will be more attractive to employees in that they permit greater stability, higher pay, or more unpaid benefits?
All of these questions are relevant to education, but the first may be the most urgent: the ability to innovate, invent, and adopt innovations when they occur. OTA observed that the network of operations leading to educational services remains astonishingly unchanged by the forces that have reshaped other part of the economy engaged in the transfer of information. They pointed out the impoverished information, analysis, development, and demonstration base for the massive education enterprise: "While a private information company typically spends several percent of gross revenue on research, virtually nothing is allocated for research directed at the real problems of teaching and learning. If the fraction of gross expenditures invested in research were the same for education as for the average privately owned business in the United States, about $9 billion a year would be spent for education research. This is 60 to 90 times more than the present allocation." (p.49)

Although the OTA notes that there is no good vocabulary for describing the variety of ways that business networks in an economic sector are organized, one of the several organizational patterns that they describe seems particularly relevant to education:

sectors dominated by small firms operating independently, which are either nominally independent, but constrained by their product or by a lack of research to behave as though they were producing mass-produced commodities (e.g., farms, schools, and home construction); or independent entrepreneurs, providing imaginative responses to new markets and new production technologies. Such firms may pool research or marketing through trade associations (e.g., semiconductor industry in Silicon Valley). (OTA, 1988, pp.177-178)

If public education is properly described as a small firm industry of a particular type, why has agriculture, also a small firm industry, achieved remarkable productivity gains, whereas public education and the home construction industry have not? At the federal level, it is fashionable to blame lack of innovation or adoption of innovation in our schools on the research community. This community is seen as an important source of innovation and felt to have failed to "communicate" or "disseminate" their findings to schools--in other words, schools would adopt these innovations if they only knew of them. Without denying that our research infrastructure could be better organized to serve the educational system, would that the problems lie primarily here. In fact, there seem two much more serious problems.

First, the model of change implicit in this frequent critique of research is very simplistic. If we look at the process by which a new aircraft moves from drawing board to the fleets of
airlines, we find several steps between research into aerodynamics or properties of materials and the purchase and use of the physical embodiment of these ideas: development and testing of prototypes, modifications based on the results of tests, marketing, sales, and followup training of pilots and maintenance crews in flying and maintaining the new aircraft. A new aircraft does not leap, fullblown from the head of Zeus, into a airline's fleet, and it seems implausible to expect research on learning and the educational enterprise to make such a leap into the practices of teachers and schools. New educational practices are technologies just as new aircraft. We cannot do it on the cheap, trying to cut out the intermediate and expensive steps between the knowledge base, the embodiment of this knowledge into technologies, the evaluation or testing and modifications of these technologies, their marketing and sales through strategies such as demonstrations, and training in them. If we return to our question about why the small firm industry of agriculture achieved such remarkable productivity gains, we have to confront the remarkable, federally-sponsored infrastructure that surrounded this industry, from agricultural research through the agricultural extension agent network.

The second serious problem is that you have to have a market--customers--for innovations before you can sell them. Those of us who have criss-crossed the country, speaking to educational audiences about the educational implications of changes in the economy, have been struck by not having anything to plug into. Where's the socket? If these audiences rejected one set of ideas because another set proffered them was more compelling, this would be fine--one aircraft company simply built a better airplane and beat out its competitor. The frightening thing is that these audiences are not really searching for ways to improve the effectiveness and efficiency of the educational enterprise. This gets us to the need to provide the motivation to search for improvement, a need that has been recognized in discussions about and policies to introduce old-fashioned competitiveness and survival into the public educational system, whether in the form of choice, vouchers, or whatever, and in discussions of school-based management and shared decision making.

The Restructuring of American Companies

American corporations are going through painful restructuring. Can we learn anything from these corporate struggles for restructuring our schools, especially from companies in a business similar to that of schools--knowledge and communication? Or does the analogy between corporate and school restructuring break down almost immediately?
Major cross-national and domestic secular forces affect all American institutions—public and private, not just our corporations. For some obvious reasons, our companies had to walk into the buzz saw of these forces earlier. The questions are what effective institutions look like in this very changed environment; whether effective institutions have common features, regardless of industry and public versus private context; whether the processes which successfully restructuring corporations have used to reshape themselves have commonalities; and whether any such commonalities can reasonably be extended to the public sector education "industry".

Certainly there are striking similarities in what restructuring companies and educational reformers are trying to do. For example, corporate hierarchies are flattening out, and responsibility and authority for the production of goods and services are being pushed down to the shop floor level. This process is mirrored in attempts to downsize and restructure the functions of centralized school district administrations, pushing responsibility and authority down to the principal and teacher level. Restructuring companies and educational reformers have also encountered similar barriers. Corporate executives find that employees used to routinized activity and supervision are afraid of new authority and responsibility and have few habits of self-direction. Similarly, at least one school board that tried to decentralize authority and responsibility found many teachers afraid of taking responsibility for the children's learning (O'Keefe, personal communication).

Kearns and Doyle (1988) most recently publicized and popularized the idea that corporate restructuring had some lessons for schools. However, the almost simultaneously released Office of Technology Assessment volume (1988) independently works with some of the same ideas.

OTA points out that the disappointment with the pedestrian ways in which schools use computers mirrors initial corporate experiences with computers. Through painful experience, companies found that they could not parachute computers into the organization if they wanted to exploit their capacities. Work and employee relationships had to be restructured in order to realize the stunning potential of the new information technologies. As OTA (1988) observes, "...firms ranging from insurance underwriters to producers of metal parts have found that the potential efficiency gains from new information technology cannot be captured without a profound change in management strategies. Education will be no different." (p.49)
They point out that schools face a challenge similar to that confronting our service and manufacturing industries: the shift from mass production to flexible production. "...[M]odem production equipment makes it easier to serve niche rather than mass markets. The American system of education, however, continues to deliver a relatively uniform level of instruction...."(p.244) "At first blush, the system appears to be highly decentralized and capable of tailoring instruction to individual needs. But closer examination indicates that decentralization has created stunning uniformity. A survey of 1,000 classrooms across the United States found unexpected uniformity in what was being taught, in how it was being taught, and in the texts from which it was being taught." (p.250)

They cite revealing statistics on industry variations in physical capital investments: "We invest less in physical capital in education per employee than in any other industry. In 1985 gross capital stock per employee was $2,000 in 1987 dollars; the industry with the next lowest physical capital investment was legal services at $10,000 per employee--five times as much." (Table 10.9, p.354)
IV. ECONOMIC CHANGES THAT AFFECT POST-SECONDARY EDUCATION AND TRAINING

The implications of economic changes in the U.S. for the postsecondary system are not entirely clear. The economy's turbulence prevents the consolidation of or makes it difficult to discern emerging relationships between workers, employers, and the postsecondary system. The postsecondary system itself is also complex, varying markedly in types of providers, educational programs, financing and governance arrangements, and student characteristics, such as age and educational objectives. The new welfare reform act has even introduced a compulsory quality into what had been a voluntary system. States vary in their "stocks" and uses of postsecondary institutions. Although we have microdata on individuals' use of the system, these are just now being extensively analyzed. Within the next six months, research being conducted under the auspices of the National Assessment of Vocational Education, the National Center for Education, and Employment, and the National Center for Research on Vocational Education, now based at the University of California at Berkeley, will both tell us substantially more about relationships between student characteristics, the courses they take, institutional characteristics, and economic payoffs. At the same time, data on the postsecondary educational providers are poor. For some, such as proprietary postsecondary institutions, we know almost nothing.

However, a clear post-secondary issue is the training/retraining of the experienced labor force. This section maps demographic factors that will force the country to focus in an unaccustomed way on the human capital development of adult workers, employers' traditional training investment patterns, and possible changes in those patterns that could generate serious policy problems of differential access to education and training.

COLLISION BETWEEN HUMAN CAPITAL DEMAND AND SUPPLY

Section II documents the tempo of change in the nature and structure of work in American industries and the consequent pressure on the experienced labor force to learn. The nation's demographics increase this pressure. Historically, employers have been able to fill their demands for greater human capital by replacing each retiring cohort of workers with a better educated and usually larger cohort.

17 "Post-secondary education and training" refers to all formal human capital investment that occurs after high school. Thus, it includes, not just two year or four year college, graduate school, and professional school programs, but also post-secondary proprietary vocational programs, employer-sponsored in-house training, military training, and public sector training programs.
We can no longer do this. By 1990 the U.S. population will be growing more slowly than at any time in the nation's history, except for the decade of the Great Depression. The nation's workforce is also growing more slowly, and its growth rate will continue to fall. Between 1970 and 1980 the workforce—the number of people working or looking for work—grew at about 2.5 percent annually; between 1980 and 1990, it will have grown by about 1.5 percent annually, and between 1990 and 2000, it is projected to grow at about one percent annually. As a result the workforce is aging. Between 1985 and 2000, the population will grow by 15 percent, but the number of people between the ages of 35 and 47 by 38 percent and those between 48 and 53 by 67 percent. The number of those between 16 and 19 years of age is declining absolutely, and the share of the workforce between 20 and 34 is falling (Hudson Institute, 1987).

Compounding the numbers problem is that the smaller replacement cohorts will consist increasingly of individuals from less educated groups—the poor and recent immigrants. In 1970 nearly half of the new entrants were white men; between now and the year 2000, white men are projected to constitute only 15 percent of the new entrants; white women, 42 percent. Non-whites—who constitute 10 percent of today's labor force, will make up 20 percent of the new entrants; immigrants, who constitute about 7 percent of today's workforce, about 22 percent (Hudson Institute, 1987).

These realities mean that employers' human capital needs will have to be met more by retraining existing workers. Who will employers pick to retrain? Who will get left out? In other words, old questions become more urgent. The level, nature, access, and consequences of employer-financed training for the experienced labor force. The next two sections look at this question. The first summarizes what we know about empirical patterns of training investments. The second looks at recent changes in companies' human resource strategies and their implications for changes in employers' training patterns.

EMPLOYERS' TRAINING INVESTMENT PATTERNS AND THEIR CONSEQUENCES

Analyses of longitudinal and cross-sectional data bases reveal certain employer training investment patterns and consequences. These data bases cover the years 1966 to 1983.
- **Education begets training.** In every data base, years of formal schooling emerges as one of the most important determinants of postschool training investments—employers train the most trainable (Mincer, 1988; Lillard and Tan, 1986; Tan, 1988). Those with limited formal schooling thus face limited training opportunities. Since training is strongly and independently related to on-the-job wage growth (Tan, 1989; Mincer, 1989)\(^{18}\) and employment stability (Mincer, 1989),\(^{19}\) those with less formal education also face lower wage growth and higher probabilities of unemployment.

- **Training begets training.** Workers who are more apt to receive training in one job are more apt to receive training in subsequent jobs (Mincer, 1989).

**Losers in the training game:** those with a poor initial education. A poor education has cascading economic consequences for the individual and for the society. The less educated have more difficulty getting a job, and, even when they are employed, employers are also less apt to invest training in them, thus depriving them of the wage growth and employment stability associated with employer training investments.

- **The younger the age of the equipment, the greater the share of more educated workers.** This effect of new equipment is magnified in R&D intensive industries (Bartel and Lichtenberg, 1987; Gill, 1988). However, as technology ages, the share of more educated workers declines (Mincer, 1989).

- **In the short run, technological innovation in a sector increases the share of that sector’s educated workers without significant initial effects on on-the-job training.** In the longer run, training increases, whether the technology ages or grows at a steady rate (Mincer, 1989). These results seem consistent with those of Lillard and Tan (1986): in the short run, productivity growth increases outside (classroom) training, leaving on-the-job training unaffected or decreasing it, in the

\(^{18}\) Tan (1988) shows that the effects of training on earnings and earnings growth vary by source and type. Company training has the greatest positive effect on earnings, and this effect persists for over 13 years. The effects of training from other sources are much smaller and persist for between 8 and 10 years. When types of training are considered, managerial training increases earnings the most, but its effects are less enduring (12 years) than the effects of semi-skilled manual training (15 years).

\(^{19}\) Training increases firm tenure, even for employees with a history of mobility prior to entering the firm in which the training occurs (Mincer, 1988).
long run, productivity growth increases in-house training and decreases outside or classroom training.

- Relative to low-technology industries, high-technology industries increase the probability that those with more education will get more company training. They decrease the probability that those with less education will get company training (Tan, 1989).

Losers in high productivity growth industries: again, those with a poor initial education. These data also underscore the interactions between new technologies, productivity growth, and a well-educated labor force. All else equal, a less educated labor force constrains the process by which companies absorb new technologies—and, therefore, the speed with which they yield productivity payoffs.

- The cumulative probability of receiving training after labor force entry increases rapidly after the first year of work and continues to increase, although at a declining rate (Tan, 1988; Mincer, 1988). However, the pattern varies by occupation: in some, such as the professional and technical occupations, training is concentrated in the first few years in the labor market, in others, such as management, it is acquired more slowly. Company training increasingly displaces training acquired in business or technical schools as the worker’s years in the labor market increase.

- Employer training investments vary by occupation and industry. Among white collar occupations, they invest the most heavily in professional and technical workers, followed by those in administrative and managerial jobs. Those in the service occupations receive the least training. Among the blue-collar occupations, employers invest the most heavily in craft and precision workers, followed by machine operators. They invest the least in laborers. Among industries, the least investment occurs in agriculture, forestry, and fishing; non-durable manufacturing, and retail. Industries with higher levels of training investment include durable manufacturing, transportation, communications, and utilities, finance, insurance, and real estate; professional services; and public administration.

- With few exceptions, relative to white males, non-white males are significantly less likely to get most kinds of post-school training, even when analyses control for a comprehensive set of observable worker characteristics. This result is especially striking for company training, regular schools, and undefined “other” training sources. The differences are less pronounced among
younger men than among older men, and race has much less effect on female than on male training experiences (Tan, 1988).

- In general and for these data bases, union membership has a negative effect on the probability of most sources of training, including company training (Tan, 1988; Mincer, 1988).

Losers in the training game: older workers; black male workers; workers in lower skill occupations; union members.

ARE EMPLOYER TRAINING INVESTMENT PATTERNS CHANGING?

As noted above, these employer training investment patterns are based on data collected between 1966 and 1983. Are these patterns changing? We know that some unions are changing their relationships with management, in some cases trading wage gains for training opportunities. Tan's analysis shows greater race effects on training for older than for younger males. Is this difference just an age effect—in other words, as these younger cohorts age, will the training gap widen? Or does it reflect a structural shift toward greater training equity between the races?

However, there may be another and broader change occurring. Employers' commitments to employees may be changing, opening up new training "holes" by altering the mechanisms of intra-firm and inter-firm mobility and employer incentives to invest in training. These changes have particular implications for less skilled workers and for our traditional and non-traditional post-secondary education and training system.

Until recently, the twentieth century trend in the United States had been towards stronger attachments of workers to their firms and more highly developed internal labor markets (Gordon,
These markets arose primarily in the core sector of the economy and primarily because firms in this sector operated in an oligopolistic or monopolistic environment—for example, the steel, automobile, local gas and electric utilities, and telephone industries (Noyelle, 1987). An important feature of these markets has been that they offer job security and advancement even to those with limited skills.

There is growing evidence that internal labor markets may be weakening, implying less committed employer-employee relationships (Noyelle, 1987; Abraham, 1988; Office of Technology Assessment, 1988) and a potential shift of the training burden from the employer to the employee, especially those with the least initial education and most limited financial resources to purchase more. Although employer-sponsored training occurs both in-house and through independent post-secondary educational and training institutions, any shift from employer-sponsored to employee-sponsored training would seem potentially to shift, not just the financial burden from employer to employee, but also the location of training from the corporation to the post-secondary education and training system.

The tie between employer and worker seems to be loosening in three ways. The first is extensive and increasing substitution of market-mediated work arrangements for direct employment relationships, "market-mediated transactions" including the use of agency temporaries, short-term hires, on-call workers, and contracting out ("out-sourcing") of production and support services—for example, high skill business services and low skill services such as maintenance and security.

Abraham (1988) estimates that in 1986 about 10 percent of total employment was market-mediated. Her data also suggest more rapid growth in all categories of market-mediated work than in other types of employment. With the exception of high skill business services, such as

---

Abraham (1988) describes characteristics of these markets: "Within an internal labor market, the compensation and allocation of labor are governed by administrative rules and procedures, rather than determined in direct response to market forces. Insulation from immediate market pressures has some significant potential advantages....[A]dministrative decisionmaking economizes on market transaction costs. Many internal labor markets are characterized by the presence of career ladders that encourage long-term employment relationships. Such relationships permit the development of firm- or industry-specific skills that workers who change employers frequently do not acquire, thereby enhancing workforce productivity. In addition, they may make it possible to structure compensation over the work life in ways that strengthen employees' incentives for good performance." (p.1)
accounting firms, workers in market-mediated arrangements are less skilled. They also usually work in small firms, such as temporary help agencies, that typically do not invest in worker training.

The second way in which employer-employee ties seem to be weakening is the increased use of high turnover part-time help. Part-time workers are also usually less skilled and less apt to receive training. Ceteris paribus, employers invest in training when they expect to capture its benefits for the firm, and they usually see a part-time employment relationship as too tenuous to warrant training investments.

The third way is increased recruiting of educationally credentialed and technically trained personnel in the external labor market, a strategy that expands the number of lateral ports of entry into firms, reduces employers' training investments in less skilled employees, and severely disrupts the old system of internal promotion. Noyelle (1987) uses the terms professionalization and para-professionalization of jobs to describe this pattern of mobility that seems to have become more occupation- than firm-driven. In other words, access to jobs that are not traditionally considered "professional" jobs seems to depend increasingly on the kinds of investments typical of the professions: (1) individual investments in education and training to obtain control over a body of knowledge and practice; and (2) the sale of this expertise in a self-employment context, market-mediated work arrangement, or through lateral entry into the firm. To the extent that Noyelle's observations for the industries that he has studied generalize broadly, the postsecondary system should be assuming a new importance even for medium skill jobs, in that an increasing number of jobs require completing post-secondary programs of study.

The apparent increase in lateral entry workers, selected for their education, has implications for the economic opportunities and lifetime earnings of less educated workers and for the postsecondary system. It increases the need for externally obtained credentials and "strands the less educated component of the company's work force. (Recall bank tellers and mill operators.) Since external hires fill the higher level slots, the less educated workers do not receive either the training or the work experience associated with moving up through the firm. If internal markets are disrupted by increased numbers of lateral entry ports, promotion and therefore wage growth depends on obtaining more education and training, often outside of and not paid for by the company.
In trying to understand the future implications of these current shifts, it has to be remembered that the American economic restructuring process involves experiment and short- as well as long-run adjustments. The three trends just outlined may not continue; they may stabilize or reverse. However, education and training policymakers need to monitor them. The industry case studies described in Section II all show the routine and continuous need for education and training. The trends just listed exacerbate employers' traditionally lower training investments in the less educated, in that all three trends tend, not only to shift the education and training burden to the individual, but often to those with the least initial education and most limited financial resources to purchase more. In other words, depending on what happens as restructuring continues, we may be confronted simultaneously with a greater need for post-secondary education and training and a growing policy problem of differential access to education and training.

It has been argued that, given the demographics, employers will have to compensate for experienced workers' or new entrants' poor initial education. In other words, employers will close the gap between skill demand and supply; it will not end up as a public policy problem. This strikes me as illusory. Traditionally employers do not invest training in the poorly educated, they are shifting increasingly toward the credentialed; and, impressions to the contrary, the most recent estimate of what the corporate sector actually spends on training basic skills in their employees--in other words, compensating for their employees' initially poor education--is only eight-tenths of one percent of the corporate training investment (A. Carnevale, personal communication).

---

21 For example, Noyelle's (1987) case study of the retail garment industry reveals both increasing use of part-time sales personnel and the emergence of a two-tiered hiring process separated by a college education. However, he also found that companies such as R. H. Macy & Co. are recognizing that the limited attachment of the sales force to the firm reduces work quality. They see that the next jump in productivity requires increasing quality. How companies will achieve this jump is not clear, but it may require changing policies such as relying on high turnover part-time sales help. This example illustrates the role of employers in creating a quality workforce. Quality problems attributed to the schools are sometimes a joint function of school and employer failures. In some cases the fault lies almost entirely with employers--they get what they select, pay for, and signal. Nordstrom's, a West Coast retail firm that has just expanded into Eastern markets, recognized a market niche for high quality service. It has differentiated itself from other retail firms by delivering service, achieved through recruiting, training, compensation, promotion, and firing policies that reinforce one another to communicate, encourage, and enforce corporate service standards within the company.

22 If the total investment is estimated at $30 billion, the bill for basic skills is $40 million, which is relatively small.
V. EDUCATION AND THE ECONOMY: WHAT IS THE FEDERAL ROLE?

This paper has certain implications for the federal role in education.

- Reconceptualize the federal role in education. We all "know" that adults engage in substantial educational and training activity—and, in fact, in 1986 those 25 years and older constituted 38.6 percent of all enrollments in institutions of higher education (*Condition of Education*, 1988, Table 2:17-1). We also know that large sectors of our post-secondary system, especially the community college system, thrive by serving these individuals. However, our thinking about the federal role in education continues to be driven by traditional images of "education" as a young person’s, not an experienced worker’s, activity and as preparation for, not as integrated with, adulthood. For example, older students only show up in enrollments by age (25 years and older) in the Department of Education’s statistical profile of education, the *Condition of Education*. We have various words for adult educational activity—"continuing" education, "adult" education, "recurrent" education. Within the traditional educational policy community these terms all have a marginal ring—they do not denote "real" education, although for those educational institutions supplying this market, these activities are anything but marginal.

Our demographics and economic changes both imply a reconceptualization of the federal role in education as earlier (early childhood education, especially for children from poor families) and later (retraining), rather than as an activity that a child starts in the first grade (kindergarten in some states) and that a young person completes, with or without a secondary or post-secondary degree.

- Lead efforts to revitalize elementary and secondary education. This paper underscores the critical importance of a high quality elementary and secondary education for all students, whether we are talking about access to employment, employment stability, or access to employer-sponsored training, with its independent effects on wage growth. However, something is deeply and systemically wrong with public elementary and secondary education, exceptional schools or districts notwithstanding. The federal government can force questions and debate about the system’s organization, governance, financing, performance objectives, accountability indicators, human resource policies, and "protected market" status. If it is to remain a small firm industry, the federal government, in conjunction with the states, can consider whether and how to create a
research, development, testing/modification, and demonstration infrastructure that can make empirically grounded improvements available in a form that schools can "see" and use.

- Invest in educational R&D. Research and development is a natural, economies of scale activity for the federal government. This paper argues for several candidate investments: (1) develop, experimentally implement, and evaluate new information technologies for schools; (2) accelerate research on how people learn in non-school settings and on how to map the research implications back into school curricula and pedagogy; (3) develop, advertise, and lobby for accountability measures more congruent with the skills that we want students to acquire—for example, higher order cognitive skills, learning how to learn; and (4) invest in stronger and more complete statistics on students and the educational system.

- Eliminate narrowly job-specific vocational education at the secondary level, integrate academic and vocational learning at the secondary level, and extend this integration down through the elementary grades. In some respects, skill requirements for jobs are becoming more generic and less job-specific. The need for all students to acquire generic work-related skills argues against secondary occupationally-specific programs unless these are well integrated with symbolically-based learning. Consider moving from tracked curricula in comprehensive high schools to magnet, theme, or strong technical high schools to contextualize symbolically-based learning for all students. Push contextualized learning down into the elementary grades to give meaning to and involve at-risk and not-at-risk learners in symbolic learning.

- Work on the Balkanization of Education and Training Policy. Issues of human capital and productivity cut across schools and the workplace, students and workers. For example, workers rely heavily on the postsecondary system. However, traditionally, the Department of Education restricts its vision to the schools; the Department of Labor, to the labor force. This balkanization shows up in vocabulary, policy, and program, helping to maintain the disconnects discussed earlier. For example, as long as many of the federal mop up programs are located in the Department of Labor, but the need for them and potential alternatives to them lie in the Department of Education's jurisdiction, the issue never gets joined.

- Think through a Policy on Training Vouchers for Workers. The need for continuous education and training and corporate training investment patterns open up the subtle but pernicious possibility of losers and winners. We already know that the better educated are much more apt to
receive formal corporate training (e.g., Lillard and Tan, 1986). Corporate training interests are not necessarily those of individual workers or the public. When we look at the full array of federal legislation that finances training, including the tax laws, what "coverage" holes do we find? Do they matter? What would a hypothetical voucher system look like—for example, who pays, who receives?
